When Charles II lay dying "upon Thursday the fifth of February, 1684-5, between 7 and 8 o'clock in the evening" the Duke of York brought Huddleston to his bedside, saying, "Sire, this good man once saved your life. He now comes to save your soul." Charles received him gladly, declaring that he wished to die in the faith and communion of the Holy Roman Catholic Church. Huddleston then heard the King's confession, reconciled him to the Church and absolved him, afterwards administering Extreme Unction and the Viaticum. On the accession of James II, Huddleston continued to reside with the Queen Dowager at Somerset House. Shortly before his death his mind failed and he was placed in the charge of "the Popish Lord Feversham", one of the few persons present at Charles II's reconciliation to the Church, who managed his affairs as trustee. To this arrangement is probably due the unusual circumstance that the probate of his will was obtained the day before his funeral. He was buried in the churchyard of St.

Mary le Strand (Parish Register, MS.). Snow's "Necrology of the English Benedictines" gives 22 September as the date of his death, but this is obviously wrong. Numerous contemporary writers, including Anthony à Wood and Samuel Pepys, mention Huddleston with respect and there seems no reason for Macaulay's statement that he was ignorant and illiterate. He published "A short and Plain Way to the Faith and Church" (London, 1688), a little treatise written by his uncle Richard Huddleston, O.S.B., and read by Charles II in manuscript while hiding at Moseley. The volume also contains the famous "Two papers written by the late King Charles II", found in his closet after his decease, and "A brief account of Particulars occurring at the happy Death of our late Sovereign Lord King Charles II". At the end, under a separate title page, is "A summary of Occurrences Relating to the Miraculous Preservation of our Late Sovereign Lord King Charles II after the Defeat of his Army at Worcester in the Year 1651. Faithfully taken from the express testimony of those two worthy Roman Catholics, Thomas Whitgreave . . . Esq., and Mr. John Huddleston, Priest of the Order of St. Benet". The whole work was reprinted by Dolman (London, 1844) as vol. II of the "English Catholic Library" edited by Canon Tiernay, and again later (London, 1850). The account of the death-bed of Charles II is also reprinted in the "State Tracts" (London, 1692-3); its truth in every detail is confirmed by the rare contemporary broadside "A true Relation of the late King's death, by P(ère) M(anuete) A C(apuchin) F(riar), Chaplain to the Duke".

Several portraits of Huddleston exist; the best, by Houseman, 1685, "ætatis suæ anno 78", is still preserved at Hutton John; another at Sawston Hall, Cambridgeshire, was engraved for the "Laity's Directory" of 1816. Father Huddleston seems to have spelled his name with a single or double "d" indiscriminately, and at times to have used the name "Denys" (Dionysius) after John, having presumably adopted it on receiving the Benedictine habit.

Hudson, JAMES. See JAMES THOMPSON, BLESSED.

Hueber, FORTUNATUS, Franciscan historian and theologian. b. at Neustadt on the Danube; d. 12 Feb., 1706, at Munich. He entered the Bavarian province of the Franciscan Reformati on 5 November, 1654. On account of his excellent character and great learning he was appointed to different offices in the order. He was general lector in theology; cathedral preacher in Freising from 1670 to 1676; then in 1677 Provincial of Bavaria. In 1679 he was definitor-general and chronologist of the order in Germany, and in 1698 was proclaimed *scriptor ordinis*. He was also confessor to the ancient and renowned convent of the Poor Clares at Munich, called St. Jacob on the Anger. As commissary of the general of the order in 1675 and 1701 he

visited the Bohemian province, and in 1695 the province of St. Salvator in Hungary. He was highly esteemed by the nobility and by royalty, especially by the dukes of Bavaria. The Elector of Cologne appointed Hueber as his theologian. He left after him over twenty works, amongst them some of great importance. The best known and most valuable is "Menologium Franciscanum" (Munich, 1698), lives of the beatified and saints of the Franciscan order, arranged according to months and days. He also published a smaller work in German on the same subject, under the title "Stammenbuch und jährliches Gedächtniss aller Heiligen aus denen dreyen Ordens-Ständen . . . S. Francisci" (Munich, 1693). His "Dreyfache Chronick von dem dreyfachen Orden . . . S. Francisci. so weith er sich in Ober- und Nider-Deutschland erstrecket" (Munich, 1686) is very important for the history of the Franciscans in Germany. Amongst his other important works are: "Libellus Thesium de mirabilibus operibus Domini" (Munich, 1665); "Homo primus et secundus in mundum prolatus" (Munich, 1670); "Leben des hl. Petrus von Alcantara" (Munich, 1670); "Seraphische Schule des hl. P. von Alc." (Munich, 1670); "Ornithologia per discursus predicabiles exhibita" (Munich, 1678), in fol. Written in the same style, but not printed, were his spiritual discourses, "Zoologia moralis", and "Ichthyologia moralis", each in two vols.; "Candor lucis aeternæ seu Vita S. Antonii de Padua" (Munich, 1670); "Sanctuarium Prælatorum . . . pro visitationibus" (Munich, 1684); "Quodlibetum Angelico-Historicum" (Augsburg, 1697), published in Latin and German, is a contribution dealing with the history of the cult of the angels.

MICHAEL BIHL.

Huelgas de Burgos.—The royal monastery of Las Huelgas de Burgos was founded by Alfonso VIII at the instance of his consort, Doña Leonor of England, about the year 1180, and, upon the completion of the work necessary for their installation the first nuns were brought to it, conformably with the wishes of its founders, from the monastery of Tulebras in Navarre. Doña Misol, or María Sol, was its first abbess, and to her was addressed the charter of foundation, in which Alfonso VIII granted to the community the lordship of sundry villages and territories, entire exemption from taxes, numberless immunities and franchises, and the enjoyment of its possessions under the king's own privilege. These grants were augmented until, at the end of the fourteenth century, no feudal lord in Castile, except the king, had a larger number of vassals. In 1199 the monastery was solemnly incorporated with the Cistercian Order and became the burial-place of the royal family; the general chapter of the order made this monastery the mother-house of all the monasteries of Cistercian nuns established in Castile and Leon, and the annual meeting-place of the abbesses for the holding of their chapter. In 1212, two months before the battle of Las Navas, Alfonso VIII made the King's Hospital, with all its dependencies, subject to the Abbess of Las Huelgas. Immediately after its foundation, ladies of the noblest families began to take the habit at Las Huelgas, following the example of the Infanta Doña Costanza, daughter of the founder, and another Doña Costanza, sister of St. Ferdinand, his daughter Doña Berenguela, Doña Blanca of Portugal, and others. The most auspicious events took place here, such, for example, as the knightly consecration of St. Ferdinand and his successors, the nuptials of Doña Leonor (Eleanor of Castile) with Prince Edward, heir to the throne of England, and of the Infante Don Fernando de la Cerda with Blanche, second daughter of St. Louis, the coronations of Alfonso XI, Henry II,

and John I, and the proclamation of the coming of age of Henry III. Here, too, were buried Alfonso VII, Sancho III, and many *infantes* and *infantas*, and the monastery was often visited by, and received gifts from, the kings and queens.

The characteristic peculiarity, however, which made this monastery famous was its abbess's exercise, for some centuries, of the *vere nullius* ecclesiastical jurisdiction, until, in 1873, all exempt jurisdictions were abolished by the Bull "Quæ diversa". The abbesses of Huelgas, in consequence of this privilege, issued faculties to hear confessions, to say Mass, and to preach; they nominated parish-priests, appointed chaplains, granted letters dimissory, took cognizance of first instance in all causes, ecclesiastical, criminal, and relating to benefices, imposed censures through their ecclesiastical judges, confirmed the abbesses of their subject houses, drew up constitutions, visited monasteries—in a word, they possessed a full ecclesiastical jurisdiction. Don Amancio Rodríguez, who has made a special study of Huelgas, assures us that there never was any pontifical Bull in which these rights were specifically granted; but there certainly was the tacit consent of the popes, without which the practical exercise of the jurisdiction would never have been possible under the eyes of the bishops of Burgos and the papal nuncio. Besides, not only the nuncio, but the Roman Curia confirmed the abbess's decisions on appeal and rejected appeals unduly made, in order that the abbess might deal with the cases as in first instance. The origin of this privilege, then, must be sought in the king's intervention in the affairs of the Church, in the protection accorded by the abbots of Cîteaux and by the Roman pontiffs, and in the fact that several *infantas* were nuns in the monastery. The royal foundation fell somewhat into decay in the time of Charles I, but afterwards recovered some of its ancient splendour, chiefly in the beginning of the seventeenth century, when Doña Ana de Austria, natural daughter of Don John of Austria, brother of Philip II, became its abbess in perpetuity. From the time of the secularization of church property (*Leyes de Desamortización*) its support and conservation has been the care of the sovereigns of Spain.

Writers of moral theology usually treat of the extraordinary jurisdiction of the Abbess of Huelgas. See also FLÓREZ, *España sagrada*, XXVII; MANRIQUE, *Annales Cistercienses*, III; MUÑIZ, *Medula Cisterciense*, V; CALVO, *Apuntes históricos sobre el célebre Monasterio de las Huelgas*; AGAPITO Y REVILLA, *El Real Monasterio de las Huelgas de Burgos*; RODRÍGUEZ LÓPEZ, *El Real Monasterio de las Huelgas de Burgos y el Hospital del Rey*—a recent and excellent work, issued under the auspices of the Real Academia de la Historia.

RAMÓN RUIZ AMADO.

Huesca, DIOCESE OF (OSCENSIS), embraces parts of the province of Huesca in north-eastern Spain, seven parishes in the Broto valley and three within the limits of the Archdiocese of Saragossa, one parish being situated in the city of Saragossa itself. Its date of origin cannot be definitely ascertained; the earliest evidence of its existence is the signature of Gabinius, Bishop of Huesca, to the decrees of the council held at Toledo in 589. Isidore of Seville, writing in the seventh century, (*De viris illustr.*, c. xxxiv) mentions the presence of Elpidius, Bishop of Huesca, at an earlier council, but this is not considered authoritative. After 589 we next hear of the diocese through a synod held there in 598 which ordered annual diocesan conferences and enacted various disciplinary measures. The Moorish invasion of 710 rapidly worked toward Huesca; when the city was taken in 713 the bishop fled, and the diocese was directed from Aragon. In 1063 the see was moved to Jaca, where it remained till 1096 when Huesca was retaken and the original see restored by Pedro I. The history of the Diocese of Huesca is from this time on closely associated with that of the present Diocese of Barbastro, which in 1571 was erected out of part of Huesca and, though formally joined with it again in

1851, has ever since been administered by a vicar Apostolic. From 1848 to 1851 the See of Huesca was vacant. The present bishop is the Right Rev. Mariano Supervia y Lostalé.

The episcopal city of Huesca was long a centre for education and art. Ancient Osca was the seat of the famous school of Sertorius. After the failure of his plans at Perpignan, Pedro IV in 1354 established a university at Huesca, which was maintained by a tax laid on the city's food, and which pursued a steady if not a brilliant existence until it was eclipsed by the great college at Saragossa. The church of St. Peter at Huesca, erected between 1100–1241, is one of the oldest Romanesque structures in the Peninsula, and the Gothic cathedral which dates from the fifteenth century is one of the architectural landmarks of northern Spain. It contains a magnificent high altar of alabaster carved to represent the Passion. About the present Huesca is a double line of ancient walls. In the immediate neighbourhood are several old monasteries, that of Monti-Arajon containing in its crypt the tomb of Alfonso I. The institute for secondary education occupies the building formerly devoted to the old university, and in one of its vaults is the famous "Bell of Huesca", said to have been constructed from the heads of insurgent nobles who were executed by King Ramiro II. The Diocese of Huesca comprises 181 parishes and 15 subsidiary parishes, with 240 priests and 50 churches and chapels. It has a Catholic population of 87,659.

Huet, PIERRE-DANIEL, a distinguished savant and celebrated French bishop; b. 8 February, 1630, at Caen (Normandy), where his father, a convert from Calvinism, was sheriff; d. at Paris, 26 January, 1721. He was left an orphan at an early age. While quite young he displayed a great zeal for study, especially for Latin poetry, geometry, and mathematics. After finishing his humanities, he attended lectures in law and acquired a very solid knowledge of it, as his letters testify. He became a passionate admirer of Descartes's philosophy, and when the Protestant minister at Caen, Samuel Bochart, the Oriental scholar, published his "Géographie sacrée", he was powerfully attracted to Biblical studies. Forthwith he began to learn Greek and Hebrew, and formed a friendship with Bochart, who assisted him in his studies. When this savant was called to Sweden by Queen Christina (1652), he brought young Huet with him. They did not remain there long, but Huet discovered at Stockholm some fragments of a manuscript of Origen, which inspired him with the idea of publishing the exegetical works of the great Alexandrian Doctor. He gave himself up entirely to this labour for fifteen years and hardly ever left Caen, except for a month or two annually, when he went to Paris to study and to renew his acquaintance with members of the learned societies. By his letters, his Latin poems, and his visits he kept up a friendship with Rapin, Chapelain, Labbe, Cossart, Conrart, Pellisson, Vossius, Francius, and Cuyper. Queen Christina, who had become a Catholic and resigned her crown, tried in vain to get him to come to Rome, or to undertake the education of her successor, Charles Gustavus. He could not be induced to leave Caen, where he had founded an Academy of Science and was devoting himself to chemistry, astronomy, and anatomy, in addition to studying Arabic and Syriac and engaging in controversy with his old master, Bochart.

In 1670, however, Louis XIV called him to the Court to assist in the education of his son, the Dauphin, with the title of assistant-tutor, Bossuet being

the tutor. While holding this office, he drew up the plan and directed the preparation of the famous edition of the ancient classics *ad usum Delphini*. He was elected to the French Academy in 1674. A little later he decided to embrace the ecclesiastical state and was ordained priest in 1674, receiving from the king the Abbey of Aunay, in Normandy. He retired to Aunay as soon as the Dauphin's education was completed (1680), and, giving himself up to his studies, wrote a number of works which are mentioned below. In 1685 he was named to the See of Soissons, but before being preconized by the pope, he exchanged it for the See of Avranches. On account of the difficulties that arose between France and the Holy See, after the Assembly of 1682 (see GALLICANISM), he did not receive his Bulls from Rome until 1692. From that time, notwithstanding his zeal for study, Huet fulfilled his episcopal duties most conscientiously. He made a visitation of his diocese on several occasions, in spite of the difficulties of travelling, and the memorandum of his ordinances is a witness to his zeal. Nothing was neglected; he shows his anxiety for public morality, the education of the young, the care of the churches, the welfare of the hospitals. At the same time he put his seminary in charge of the Eudist Fathers and reformed his clergy, giving them three collections of synodal decrees. Further he provided them with an edition of the Breviary, for which he himself composed the hymns. After seven years' work in this ministry, the rigorous climate and his failing health compelled him, to the great regret of his clergy, to tender his resignation. The king, in return, presented him with the Abbey of Fontenay, near Caen; he took up his residence in the house of the professed Fathers of the Society of Jesus at Paris. Here his time was spent in exercises of piety, in interviews with the learned men of the day, and in composing his works. He died twenty years later, at the age of ninety-one, bequeathing his magnificent library to the Jesuits, and leaving the reputation of being one of the most brilliant minds of the century.

He owed this reputation to the immense number of his writings, which were as varied as were his studies. His literary works show him to have inherited and developed the spirit of the sixteenth century, rather than to have identified himself with the mind of the seventeenth century. He has the polish and, at times, the charm of the latter age, with his somewhat antiquated tendencies; he has the old literary style of Scudéry, Ménage, and Chapelain, rather than the refined taste and brilliant diction of Bossuet and Fénelon, whom he was destined to survive. His historical writings and his works in exegesis display great learning and immense reading, but he does not exhibit in them the critical sense of a Mabillon, the penetration of Richard Simon, nor the talent of Bossuet. Part of his philosophical writings are directed against Descartes, part against the worship of human reason. He reproaches Descartes with a want of logic in his method and with an anti-religious tendency. Bossuet, who was not an admirer of Descartes's theory, protested, nevertheless, against the injustice and irrelevancy of some of the criticisms of his learned friend. But it was his posthumous work on the limitations of the human mind that drew forth serious protest. In it Huet is a pure fideist. For him, as for Pascal, reason and sense are incapable of bringing us to truth with certainty; that can be done only by faith. The Jesuits refused at first, in the "Mémoires de Trévoux", to believe in the authenticity of the work. In this they were mistaken; it certainly was Huet's; but they were right when they declared that, by decrying human reason as it did, such a work was more likely to weaken than to strengthen the foundations of faith, as its author had intended.

The following is a list of Huet's writings: (a) Literary.—"De interpretatione libri duo" (Paris, 1661); "L'origine des romans" (Paris, 1670), translated into English (London, 1672); "Carmina latina et græca" (Deventer, 1668); "Lettre à Perrault sur le parallèle des anciens et des modernes" (Paris, 1672); "Lettre à M. Foucault sur l'origine de la poésie française" in the "Mémoires de Trévoux" (1711); "Lettres inédites ou publiées" in "Mémoires de l'Académie de Caen" (1900-1). (b) Historical.—"Les origines de la ville de Caen" (Rouen, 2nd ed., 1706); "Histoire du commerce et de la navigation des anciens" (Paris, 1716); "Commentarius de rebus ad eum pertinentibus" (Amsterdam, 1718), translated into English by John Aikin (London, 1726). (c) Exegetical or theological.—"Origenis commentaria in sacram scripturam" (Rouen, 1608); "Demonstratio evangelica" (Paris, 1679); "Quæstiones Alnetanæ de concordia rationis et fidei" (Caen, 1690); "De la situation du paradis terrestre" (Paris, 1692); "Statuts synodaux pour le diocèse d'Avranches" (Caen, 1693), with supplements 1695, 1696, 1698; "De navigationibus Salomonis" (Amsterdam, 1698). (d) Philosophical.—"Censura philosophiæ cartesianæ" (Paris, 1689); "Nouveaux mémoires pour servir à l'histoire du cartésianisme" (Paris, 1692); "Traité philosophique de la faiblesse de l'esprit humain" (Amsterdam, 1723).

D'OLIVET, *Huetiana* (Paris, 1722); NICÉRON, *Mémoires pour servir à l'histoire des hommes illustres*, I (Paris, 1729); D'ALEMBERT, *Histoire de l'Académie Française* (Paris, 1779); BARTHOLOMÆSS, *Huet, ou le scepticisme théologique* (Paris, 1849); FLOTTES, *Etude sur Daniel Huet* (Montpellier, 1857); TROCHON, *Huet, Evêque d'Avranches in the Correspondant* (1876-7); URBAIN AND LEVESQUE (ed.), *Correspondance de Bossuet* (Paris, 1909).

ANTOINE DEGERT.

Hüffer, HERMANN, historian and jurist; b. 24 March, 1830, at Münster in Westphalia; d. at Bonn, 15 March, 1905. Having finished his classical education in his native city, he went to Bonn and applied himself to the study of philology, the history of literature, and history. He was compelled to take up jurisprudence in consequence of a serious disease of the eye, but never lost his fondness for history. In the year 1853 he graduated at Breslau with the dissertation: "Justinianische Quasi-Pupilar-Substitution", and, after a long educational tour in Italy and France, qualified as lecturer on canon and Prussian civil law at Bonn. In 1860 he became professor extraordinary, and in 1873 ordinary professor. From 1865 to 1870 he was a member of the Prussian Chamber of Deputies, and from 1867 to 1870 of the North German Reichstag, but did not affiliate with the Catholic "party" because the formation of a party on sectarian lines appeared to him a hazardous experiment. In fact in accordance with his ideal views he always sought to find a higher unity in religious, civil, and social life; in his opinion the important and decisive question was not that which divides parties, nations, and creeds, but that which binds them together. In addition to numerous essays in periodicals and a few rather unimportant juristic professional treatises, he published several works on the history of literature as well as on historical subjects—works planned on a large scale and elaborated down to the smallest detail. Among the former class his writings on Heine (*Aus dem Leben Heinrich Heines*, 1878) and on "Annette von Droste-Hülshoff und ihre Werke" (1887) are particularly worthy of mention. His contributions to history are confined to a period of scarcely ten years, namely, the early years of the French Republic. They reveal, however, not only a wonderful knowledge of his subject from every point of view, but also the mind of a profound and acute scholar, the master of diplomatic and historical research. He threw new light on many hitherto unsolved problems, and created an entirely new conception of the relations of the

two great German powers to the Revolution and to each other, and accordingly of the dissolution of the Holy Roman Empire of the German Nation. His principal work is entitled: "Diplomatische Verhandlungen aus der Zeit der französischen Revolution" in three volumes (1869-79), of which the first treats of the hostility of Austria and Prussia to the French Revolution down to the Treaty of Campo Formio, while the second and third deal with the Congress of Rastatt and the second coalition. Worthy of mention among his other works are "Der Krieg von 1799 und die 2. Koalition" (2 volumes, 1904) and "Quellen zur Geschichte des Zeitalters der französischen Revolution" (2 vols., 1900-).

HERRMANN in *Biographisches Jahrbuch*, X (1907), 210-22; IDEM in *Annalen des historischen Vereins für den Niederrhein*, LXXX (1906), 1-78.

PATRICIUS SCHLAGER.

Hug, JOHANN LEONHARD, a German Catholic exegete, b. at Constance, 1 June, 1765; d. at Freiburg im Br., 11 March, 1846. After finishing his studies at the gymnasium of his native town he went to the University of Freiburg in 1783. He was ordained priest in 1789, and in 1791 became professor of O. T. exegesis in his university; a year later the chair of N. T. exegesis was also assigned to him. His chief works are: "De antiquitate Codicis Vaticani commentatio" (Freiburg, 1810); "Einleitung in die Schriften des N. T." (Stuttgart, 1808—, 4th ed., 1847); "Das hohe Lied" (Freiburg, 1818); "De Pentateuchi versione Alexandrinâ commentarius" (Freiburg, 1818); "Gutachten über das Leben Jesu von D. F. Strauss" (Freiburg, 1844); "Erfindung der Buchstabenschrift" (Ulm, 1801). Hug was an independent thinker, a keen student, a man who went to the very roots of things. He entered fearlessly into the camp of the critics of the Semler set. He treated N. T. problems from the historical standpoint. From this their own standpoint he struck hard at the critics. His method was to insist on the truly historical study of the New Testament, and to do away with all subjective criticism; the conjectures that one makes should ever have some foundation in the historical facts of either N. T. or other study. Hug brought his historical criticism to its fullest development in his great work on N. T. introduction. Besides the four German editions of this splendid work various translations appeared. Cellerier edited it under the title: "Essai d'une Introduction Critique au N. T." (Geneva, 1823). The third edition of Hug's work was translated into English by Wait under the title: "An Introduction to the writings of the N. T." (London, 1827). Hug fought single-handed the critics belonging to Semler's school. Each new edition met the new protagonists of the opposite camp. Every destructive theory and hypothesis were mercilessly attacked by him. The fourth edition of the "Einleitung" was posthumous, but had been got ready by Hug for the press. Therein he made clear his conviction that the destructive criticism of his time had run its course. In Germany no Biblical scholar had more influence in stemming that destructive tide than had Hug. Not only his books but numerous articles by Hug, especially in the Freiburg "Zeitschrift", kept up a constant attack on the arbitrary methods and questionable tactics of the negative critics. Even to-day the historical studies that Hug made in the New Testament are of value to the thorough student of Holy Writ.

MAIER, *Gedächtnisrede auf Hug* (Freiburg, 1847).

WALTER DRUM.

Hugh, SAINT, called LITTLE SAINT HUGH OF LINCOLN, was the son of a poor woman of Lincoln named Beatrice; b. about 1246; d. in 1255. The Jews of Lincoln are said to have crucified him, his body, bearing the marks of crucifixion, being found some days after his death, at the bottom of a well belonging to a Jew named Copin. Copin was accused of having

enticed the child into his house. A large number of Jews were gathered together, and they are said to have tortured the child, to have scourged and crowned him with thorns, and crucified him in mockery of Christ's death. The story goes on to say that the earth refusing to cover Hugh's body, it was cast into a well. Some time after the child had been missed, his playfellows told his mother how they had seen him follow the Jew. On going to Copin's house, she discovered the body. Copin was accused of murder, confessed the crime when threatened with death, and stated that it was a Jewish custom to crucify a boy once a year. Miracles were said to have been wrought at the child's tomb, and the canons of Lincoln translated the body from the church of the parish to which Hugh belonged, and buried it in great state in the cathedral. Copin was put to a cruel death and eighteen Jews were hanged at Lincoln, while about ninety were imprisoned in London. These were found guilty and condemned to death, but they were released on the payment of a large fine.

The martyrdom of St. Hugh became a very popular subject for the ballad poetry of the Middle Ages, and we find a reference to it in Chaucer's "Prioresses Tale". Whether there was any basis of truth in the accusation against the Jews there is now no means of ascertaining. There seems to be little doubt that such accusations were sometimes made for the purpose of extorting money. A discussion of the question will be found in the article on St. William of Norwich. The feast of "Little St. Hugh" was held on 27 July. *Acta SS.*, July, VI, 494; *MATTHEW PARIS*, V, 516-19, 546, 552 in *Rolls Series*; *Annales Monast.*, *Annals of Burton and of Waverley*, *ibid.*; *Letters of Henry III*, 2, *ibid.*

R. URBAN BUTLER.

Hugh Capet, King of France, founder of the Capetian dynasty, b. about the middle of the tenth century; d. about 996, probably 24 October. He was the second son of Hugh the Great, Count of Paris, and Hedwig, sister of Otto I, German Emperor, and was about ten years old when he inherited from his father the Countship of Paris and the Duchy of France. About 970 he married Adelaide of Aquitaine, and as early as 985 the famous Gerbert wrote: "The Carolingian Lothair governs France only in name. The king of France is Hugh." When Louis V died, 21 May, 987, the assistance of Adalberon, Archbishop of Reims, and of Gerbert, brought about the election of Hugh. The electoral assembly of Senlis listened to a discourse of Adalberon: "Crown the Duke", he said. "He is most illustrious by his exploits, his nobility, his forces. The throne is not acquired by hereditary right; no one should be raised to it unless distinguished not only for nobility of birth, but for the goodness of his soul". A unanimous vote ratified this discourse, and Hugh Capet was crowned at Noyon, 3 July, 987. Thus his accession, as M. Luchaire says, was above all "an ecclesiastical achievement". Hugh possessed towns and estates in the vicinity of Paris, Orléans, and in the district of Senlis and Chartres, Touraine and Anjou, but on the whole these were restricted domains, as his vassals on the borders of the Seine and the Loire contested his authority. His military power was mediocre, and he had frequently to seek military aid in alliance with Normandy. But he possessed moral power and a political influence which reached the most remote parts of the kingdom and was felt even by foreigners. His chief concern was to maintain over the Archdiocese of Reims, whose jurisdiction comprised nearly the whole of northern and north-eastern France, a continuous, immediate, and uncontested authority. The Archdiocese of Reims possessed a double importance, first because the archbishop had the right to elect and crown the kings of France, and next because of its geographical situation between France and Germany. The death of Adal-

beron, proved by M. Lot to have taken place 23 January, 989, disturbed the new king, and Arnoul, the new archbishop whom he accepted at the end of March, 989, as successor to Adalberon, attempted a restoration of the Carolingians (Sept., 989), and Charles of Lorraine, their heir, was for a short time master of Reims and Laon. Arnoul refused to appear at the Council of Senlis (beginning of 990), but the imprisonment of Charles of Lorraine and of Arnoul (29 March, 991), and the deposition of Arnoul pronounced at the Council of St. Basle, fixed by M. Lot at 17 and 18 June, 991 (and not 993), assured the maintenance of the Capetian dynasty. Gerbert became Archbishop of Reims (21 June, 991).

This revolution accomplished by a council was received by the papacy with reserve. When Hugh Capet requested the Holy See to legitimize the action of the council, John XVI was silent; later, under the influence of Germany, the pope refused formally to recognize the election of Gerbert. Then began the difficulties which led the bishops devoted to Hugh to profess certain "Gallican principles". Nevertheless, Hugh must not be represented as wishing to found a State Church; what he wished was to maintain the Archdiocese of Reims under the domination of France, and to remove it from the influence of the German emperors. If his attitude towards the papacy was often suspicious, it was not due to a Gallican theology, but because he feared that the popes of the time were too subservient to the policy of the emperors; hence his relations with the Holy See were merely an episode in his general policy, destined to bring about the cessation of the powerful influence which the Saxon dynasty had exercised over France during the tenth century.

His domestic policy was very favourable to the development of monastic life and the autonomy of the monasteries. He defended their property against lay tyranny; he sought to remove them from episcopal jurisdiction while upholding the royal right to confirm abbatial elections; he supported all the liberties of the monks in the exercise of their electoral rights; he renounced the custom of distributing abbeys as benefices to laymen. Because of its political importance he wished to retain effective direction over the Abbey of St. Martin of Tours, and even under the reign of the Plantagenet Henry II the Capetians preserved considerable influence at Tours and along the Middle Loire. Apropos of Hugh Capet it is worthy of note that because the Dukes of France had in their possession the famous cope (*cappa*) of St. Martin, certain authors give to Hugh the Great and to his son Hugh the surname of Capet, which in history is reserved exclusively for the subject of this article. Hugh Capet in his religious policy applied and favoured the ideas of reform upheld by the monks of Cluny.

GEORGES GOYAU.

Hughes, JOHN, fourth Bishop and first Archbishop of New York, b. at Annalough, Co. Tyrone, Ireland, 24 June, 1797, of Patrick Hughes and Margaret McKenna; d. in New York, 3 January, 1864. His father, a farmer of limited means, emigrated to the United States in 1816, and settled at Chambersburg, Pa. John's early education was received at a school in Augher, and later in Auchnacloy, near his native village. Though he felt called to the priesthood, circumstances did not permit him to continue his studies; being disinclined to farm life, he was placed

with a friend of his father to study horticulture. He followed his father to America in 1817, landed at Baltimore, and soon after went to Chambersburg, where he aided his family for a year or more. His ardent desire to become a priest brought him in 1819 to Mount St. Mary's College, Emmitsburg, Md., which he entered as an employee, being received a year later as a student. Ordained to the priesthood 15 October, 1826, by Bishop Conwell, in St. Joseph's Church, Philadelphia, he laboured first at St. Augustine's, Philadelphia, later at Bedford, Pa., finally returning to Philadelphia to become pastor of St. Joseph's, and afterwards of St. Mary's, whose trustees were in open revolt against the bishop, and were subdued by Father Hughes only when he built St. Joseph's church, 1832, then considered one of the finest in the country. Previous to this, in 1829, he founded St. John's Orphan Asylum. About this period he was engaged in a religious controversy with Rev. John A. Breckenridge, a distinguished Presbyterian clergyman, with the result that Father Hughes's remarkable ability attracted widespread attention and admiration. His name was mentioned for the vacant See of Cincinnati and for the Coadjutorship of Philadelphia. On 7 January, 1838, however, Father Hughes was consecrated Bishop of Basileopolis and Coadjutor of New York, by Bishop Dubois, in St. Patrick's Cathedral, Mott Street, New York. In 1839 he became administrator Apostolic of New York, and on the death of Bishop Dubois succeeded to the vacant see, 20 December, 1842. He was raised to the dignity of first Archbishop of New York, 19 July, 1850, receiving the pallium personally from Pius IX at Rome, 3 April, 1851.

The abolition of trusteeism in New York marked the beginning of his episcopate. He confronted a critical diocesan condition arising from differences between Bishop Dubois (q. v.) and the lay trustees whose control of church revenues was working injury to religion, and had encumbered the ten churches then in the city with a debt of \$300,000, a crushing burden in those days. Bishop Hughes's experience in Philadelphia with trusteeism served him well in taking up the defence of Bishop Dubois. He appealed directly to the people, before whom he forcefully defended the Divine authority to govern granted by Christ to the hierarchy, and clearly exposed the viciousness of lay domination in the administration of church matters. The people readily passed a resolution condemning the cathedral trustees who gave way to a new board well disposed to obey ecclesiastical authority. The bishop convoked in 1841 the first Diocesan Synod of New York, which enacted timely legislation affecting spiritual matters, and devised for the tenure and administration of church property wise regulations which placed the rector of the church in control of temporals as well as spirituals. His triumph over the trustee system would have been complete and final at the very outset had the trustees of St. Louis's church, Buffalo, been as prompt to submit as all others. Their attitude brought the archbishop, as late as 1855, into a controversy with Erastus Brooks, editor and state senator, who assailed in the Legislature the archbishop's plan of holding church property. Unfavourable legislation followed, but was soon repealed, and prepared the way for the present satisfactory religious corporation law of the State of New York.

Returning from Europe, whither he had gone in 1839 to seek aid for his diocese, Bishop Hughes found his flock involved in a movement to modify the existing common school system, which, professing to be non-sectarian, was undermining, in fact, the religious belief of Catholic children. The bishop immediately placed himself at the head of the movement, and deemed it incumbent on him to oppose the Public School Society, a private corporation controlling the management of the schools and the distribution of the

school fund provided by the municipality. He based his objection to this society on the ground that it violated a fundamental American principle, namely, freedom of conscience. Catholics could not accept any system of education which ignored, undermined, or opposed the religious faith their conscience dictated to be true. After a two years' unceasing contest, he finally brought about the overthrow of the Public School Society. He had hoped, and Governor Seward was kindly disposed, that the Legislature might be so truly American as to sanction and support separate Catholic schools. Religious animosity proved too bitter. The bishop's hopes were not realized. The establishment of the present public schools followed, which, likewise failing to satisfy Catholic conscience, led the bishop to lay the foundation, on a firm basis, of the existing Catholic school system in New York. An anti-Catholic outbreak of the "Native American" political party occurred in 1844, in Philadelphia, where churches and convents were destroyed. A meeting of this party was announced to take place in New York City. Apprehensive that the result would be riot and bloodshed, the bishop called personally on the mayor of the city to prevent the meeting, warning him of the consequences if any anti-Catholic outrage were attempted. He at the same time solemnly cautioned his flock against violence, but took measures to resist any possible attacks against church property. His fearless and determined attitude prevented the holding of the meeting and averted disturbance of the peace. Ten years later the "Know-nothing" faction became active. He again advised his people to keep aloof from centres of trouble. He was deeply convinced that all such movements, being as anti-American as they were anti-Catholic, could not possibly thrive in the United States.

Few public men of his day possessed a more statesmanlike grasp of the genius of the American Republic. He had unbounded confidence in its institutions, when their very existence was precarious. He looked upon America as a land of promise opened by a beneficent Providence to the oppressed of the nations. No one could question his own abiding love of his native soil; but he would not permit this love to make him lament as an exile of Erin when he might rejoice as an American citizen. Thus he taught his people. So far-seeing was he in this respect that he looked with disfavour on national churches, lest they might perpetuate racial differences and foreign customs. All must be formed into a common people; and no influence could do this better for the American people, he contended, than the Catholic Church sent by Christ to teach all nations. Archbishop Hughes will ever rank among America's foremost citizens. His towering character, genius for government, and intense patriotism won for him the respect and often the admiration of his opponents, the esteem and even the life-long friendship of distinguished statesmen. President Polk, through Secretary Buchanan, in 1846, proffered him a diplomatic mission to Mexico, which he was unable to accept. On invitation of John Quincy Adams, Stephen A. Douglas, and John C. Calhoun, he lectured in 1847 before Congress in the Capitol, Washington, his topic being "Christianity the only Source of Moral, Social, and Political Regeneration". At the outbreak of the Civil War, although not an abolitionist, he boldly sustained the Union cause, and was in frequent communication with William H. Seward, Secretary of State, to whom he offered useful suggestions on the conduct of the war. President Lincoln, in an autograph letter, expressed his appreciation of the counsel given. Secretary Seward, desiring to hold France in a friendly attitude towards the Federal Government, entrusted the archbishop with an important mission to the Court of Napoleon III, who received him most graciously, and was dissuaded by him from recog-

nizing the Confederacy. On this visit to Europe, wherever he went, he left nothing undone to create sympathy for the Union side. During the Draft Riots of 1863 in New York City, Governor Seymour invoked the aid of the archbishop to suppress disorder, to which invitation, though he was fatally broken in health, he willingly responded, addressing a large assemblage from the balcony of his residence.

His loyalty to his adopted country was well balanced and finely adjusted to the duties and responsibilities of his sacred office. He exercised the strictest vigilance lest American liberty might engender liberal influences tending to minimize the doctrine and discipline of the Catholic Church. He unsparingly condemned those who, through fear of anti-Catholic feeling, were disposed to conciliate their opponents by seemingly harmless concessions. He was intolerant of the slightest modification or innovation in religion unless sanctioned by the Supreme Head of the Church. He believed that adherence to Catholic faith should be bold, fearless, outspoken, and uncompromising in the extreme, and especially so in the face of opposition. Pius IX, exiled in 1848, and again threatened in 1860, found

MOST REV. JOHN HUGHES

the archbishop one of the staunchest defenders of the Holy See. Strong agencies of power and influence were conspiring against the temporal sovereignty of the pope, and this alarming condition intimidated not a few Catholics into a policy of silent and ineffective sympathy; others somewhat less timid favoured action, but of a conservative character. The archbishop approved of no such methods, and boldly proclaimed himself an uncompromising supporter of the Vicar of Christ and his lawful patrimony. By appeal, sermon, lecture, and pastoral letter he aroused his flock at home to unbounded enthusiasm, and stirred Christendom abroad in a masterly vindication of the temporal independence of the sovereign pontiff. He raised in 1860 the princely sum of \$53,000, as an offering from his diocese to the Holy Father; and his pastoral letter, circulated throughout Europe and translated into Italian, afforded solace to the afflicted soul of Pius IX.

Conjointly with all this prominence and activity demanded by public and vital interests of Church and nation, the archbishop followed faithfully and zealously the exacting life of a hardworking missionary bishop in the upbuilding of a rapidly growing diocese. In 1842 there were some forty priests, fifty churches, and 200,000 Catholics scattered over his jurisdiction, which embraced the State of New York and the eastern part of New Jersey. Bishop McCloskey, later the first Bishop of Albany, was Coadjutor of New York from 1844 to 1847. Albany and Buffalo were erected into episcopal sees in 1847; Brooklyn and Newark in 1853. Besides these four separate dioceses made within the original territory of the Diocese of New York, the archbishop before his death in 1864 ruled 150 priests, 85 churches, 3 colleges, 50 schools and academies, and over 400,000 people. He stated in 1858 that he had dedicated his ninety-ninth church. As metropolitan, created in 1850, he presided over New York, New Jersey, and all New England, with suffragan sees at Albany, Buffalo, Brook-

lyn, Newark, Boston, Burlington, Hartford, and Portland. The First Provincial Council of New York was convened in September, 1854, after which the archbishop journeyed to Rome and he was present at the proclamation of the dogma of the Immaculate Conception.

During his administration institutions of charity and higher learning grew apace with churches and schools. The seminary was moved in 1840 from Lafargeville to Fordham, where a college also was opened a year later. The Jesuits assumed charge of it in 1846, but in 1855 the archbishop withdrew the seminary from Fordham, and in 1862 secured property at Troy, New York, for the establishment of St. Joseph's Provincial Seminary. He also proved to be one of the warmest supporters of the North American College, Rome, projected by Pius IX in 1855, and successfully opened in 1859. To meet diocesan needs he introduced into New York the Christian Brothers, the Religious of the Sacred Heart, the Sisters of Mercy, the Ursulines, the Sisters of Notre Dame, and the Sisters of the Good Shepherd. Finding the Sisters of Charity of Emmitsburg, Maryland, who were labouring in New York, restricted by their rule to a limited field and restrained from undertaking certain good works which the archbishop desired, he organized an independent diocesan community of the Sisters of Charity, who, to-day, are managing a variety of educational, charitable, protective, and industrial institutions, and form one of the most flourishing and successful sisterhoods in the United States. Foreseeing the future greatness of his diocese and cathedral city, he planned the erection of a cathedral which would be commensurate with the importance of the city and See of New York, and would express in enduring stone the faith of his flock. He laid the corner-stone of St. Patrick's Cathedral, Fifth Avenue, 15 August, 1858; this lofty and inspiring pile stands a monument to his genius and prevision.

He lived and passed away amid stirring times; it was providential for Church and country that he lived when he did. His natural gifts of mind and heart, independent of his education, were of a high order and made him pre-eminent in leadership; not only was he a great ruler of an important diocese in a hierarchy remarkable for distinguished bishops, but also a master-builder of the Church in the United States and one of the most helpful and sagacious of the makers of America. Church and nation are indebted forever to the prelate and citizen whose strong personality, indomitable courage, and invaluable service constituted him the man needed in his day to meet critical conditions. He was resolute, fearless, far-sighted, and full of practical wisdom based on the sanest and soundest principles. To bring out the innate power within him required but the opportunity presented by the Church struggling for a footing in a rather hostile community, and by the nation endeavouring to cope with harassing questions at home and impending trouble abroad. His failures were few; his achievements many and lasting. He was feared and loved; misunderstood and idolized; misrepresented even to his ecclesiastical superiors in Rome, whose confidence in him, however, remained unshaken. Severe of manner, kindly of heart, he was not aggressive until assailed.

He was a forceful, impressive, and convincing speaker, an able, resourceful, and talented controversialist, a clear, logical, and direct writer. His writings were usually hastily done, as occasion required, but commanded general attention from friend and opponent. His works are published in two volumes, which contain lectures, sermons, and pamphlets on historical and doctrinal subjects; open letters to public men like Horace Greeley, General Cass, Mayor Harper, Senator Brooks; and "Kirwan Unmasked", a series of six letters to a Presbyterian

minister, writing under the assumed name of Kirwan; these letters are considered models of good English and are among the best written by the archbishop. His mortal remains were interred in old St. Patrick's, but were transferred, 30 January, 1883, to their final resting-place under the sanctuary of the cathedral in Fifth Avenue. His death elicited a general expression of sympathy and respect, and his memory was honoured by tributes from President Lincoln, Secretary Seward, Governor Seymour, and the Common Council of New York.

P. J. HAYES.

Hugh Faringdon (vere COOK), BLESSED, English martyr; b. probably at Faringdon, Berkshire, date unknown; d. at Reading, 15 November, 1539. The name of his probable birthplace is also the surname by which he is generally known, but he bore the arms of Cook of Kent. He was elected Abbot of Reading in July, and confirmed, 26 Sept., 1520. Henry VIII was his guest on 30 January, 1521, and he later became one of the royal chaplains. Among Henry's New Year gifts in 1532 was £20 in a white leather purse to the Abbot of Reading. Faringdon sat in Parliament from 1523 to 1539. In 1536 he signed the articles of faith passed by Convocation at the king's desire, which virtually acknowledge the royal supremacy. On Sunday, 4 November, 1537, he sang the requiem and dirge for Queen Jane Seymour, and was present at the burial on 12 Nov. As late as March, 1538, he was in favour, being placed on the commission of the peace for Berkshire; but in 1539, as he declined to surrender the abbey, it became necessary to attain him of high treason. As a mitred abbot he was entitled to be tried by Parliament, but no scruples troubled the chancellor, Thomas Cromwell. His death sentence was passed before his trial began. With him suffered John Eynon (or Onyon), a priest of St. Giles's, Reading, and John Rugg, a former fellow of the two St. Mary Winton colleges and the first holder of the Wykehamical prebend "Bursalis" at Chichester, who had obtained a dispensation from residence and was living at Reading in 1532.

J. B. WAINWRIGHT.

Hugh of Digne, Friar Minor and ascetical writer; b. at Digne, south-east France, date uncertain; d. at Marseilles about 1285. His close friend and fellow-religious, Fra Salimbene, to whom we are indebted for a great deal of what is known of his life, refers to him in his Chronicle as "one of the most renowned clerics of the world, a great preacher and in favour both among the clergy and the people; ever ready to dispute, he was possessed of a fluent speech, and a voice like that of a trumpet; he was a spiritual man *ultra modum*, so that on hearing him preach one would believe that he was listening to another St. Paul or another Elias." Salimbene also tells us that he was called Hugh of Bareola and that the Lombards knew him as Hugh of Montepesulano. Joinvilliers, in his life of Louis IX (*Acta SS.*, August, V, xxvii), records the visit of Hugh of Digne to the king, who was so impressed with his preaching that he endeavoured to retain him at court, but the saintly friar refused to remain; and on the

following day set out again on his tour of evangelization. It was while on a similar journey that he wrote to Blessed John of Parma, who was then at Greccio, prophesying in his letter, among other things, the death of the pope and of St. Bonaventure, and the extinction of the Order of the Templars.

Whatever may be said of the influence of the prophetic writings of the Abbot Joachim of Flora upon Hugh of Digne, which as in the case of his friend Salimbene in his early days was perhaps not inconsiderable, it is certain that he took an active and prominent part in the movement of the "Spirituals". This is evidenced not only from his preaching, but more particularly from his exposition of the Rule of St. Francis and from his other ascetical writings. Among the latter may be mentioned the "Tractatus de triplici via in sapientiam perveniendi", attributed to him by Bartholomew of Pisa in his "Conformities", but not to be confounded with the "Incendium Amoris" of St. Bonaventure, which in several codices bears a similar title. He likewise drew up a set of rules or constitutions for his sister, Blessed Douceline, and other pious women, who formed a sort of religious community known as the Dames de Roubaux, with Blessed Douceline as their superioress or mistress. A brief biographical sketch of Hugh of Digne in Spanish, which is of indifferent critical value, was published in the "Chronica Seraphica" by Damian Carnejo, who asserts that Hugh of Digne died at Marseilles, where his remains now rest in the Franciscan church of that city beside those of his sister, Blessed Douceline.

SBARALEA, *Supplementum et Castigatio ad Scriptores Ordinis Minorum* (Rome, 1908), 281-2. WADDING, *Annales Minorum*, IV, 401; V, 54, 113; *Analecta Franciscana* (Quaracchi, 1885-1906), III, 404-6; IV, 317, 341, 379, 539, 540; CARNEJO, *Chronica Seraphica*, II (Madrid, 1684), 639-40. On Blessed Douceline, see *Analecta Franciscana*, III, 405-6; and *Archivum Franciscanum Historicum*, fasc. II and III (Quaracchi, 1903), 491-92. STEPHEN M. DONOVAN.

Hugh of Flavigny, Benedictine monk and historian; b. about 1064, probably at Verdun (Lorraine); d. before the middle of the twelfth century. He belonged to a prominent family, and received his education at the monastery of St-Vannes at Verdun, where he afterwards took the habit of a Benedictine novice. As Bishop Dietrich of Verdun was a supporter of the emperor and his antipope, Clement III, the Abbot of St-Vannes, who supported the pope, was forced to leave his monastery. He went to the Abbey of St-Bénigne at Dijon, where he was followed by nearly all of his monks, including Hugh. While at Dijon the latter made his vows before the Abbot Jarento, a strong adherent of the ecclesiastical party and an enthusiastic personal friend of Pope Gregory VII. Abbot Jarento soon gave Hugh his entire confidence; Archbishop Hugh of Lyons was also most friendly towards the young monk and often requisitioned his services. In 1096, notwithstanding his youth, Hugh was elected Abbot of Flavigny, but soon became involved in disputes, not only with the Bishop of Autun, in whose diocese he was, but also with his own monks, who wished to make use of all, even dishonest, means in the pope's behalf. On account of these differences, he was obliged on two occasions to flee, and finally to abdicate, although the Council of Valence (in 1100) ordered him to be reinstated. These bitter experiences gradually brought about a complete change in his politico-religious views on the question of investitures. From a zealous, self-sacrificing champion, he became a determined adversary of the papal claims, even going so far in his opposition as to accept from Bishop Richard of Verdun, a follower of the emperor, the dignity of Abbot of Verdun, after Abbot Laurentius, who supported the pope, had been quite illegally dispossessed. But he only succeeded in maintaining this position from 1111 to 1114, after which he seems to have lived in strict seclusion at Verdun as a simple monk.

As early as his sojourn at Dijon, probably at the instance of Abbot Jarento and Archbishop Hugh, he had begun a chronicle of the world's history from the birth of Christ down to his own times (*Chronicon Virdunense seu Flaviniacense*). This we possess in two books: the first, which extends to the year 1002, is little more than a loosely planned compilation, and its importance is entirely due to the fragments of older lost works which it contains; the second covers the years from 1002 to 1112 and is valuable especially for the history of Lorraine, and also for the ecclesiastical history of France. With wide erudition he collected a great mass of materials, and, where his facts became too unwieldy, he abandoned the annalistic form for full and detailed narrative. In this manner he brings out in relief the "Acta Gregorii VII"; "Series Abbatum Flaviniacensium"; "Vita beati Richardi, abbatis S. Vitori", and "Vita S. Magdalvei". His account of the election of Victor III is a masterpiece for his period. In general, however, he cannot be said to control his materials. Making no attempt at arrangement, he quotes original documents, his own experiences, or the testimony of others, to whose tales he often gives more credit than they deserve. A complete edition of the Chronicle is given in the "Mon. Germ. Hist.: Script.", VIII, 288-502, and in Migne's P. L., CLIV, 21-404.

PATRICIUS SCHLAGER.

Hugh of Fleury (called also HUGO A SANCTA MARIA, from the name of the church of his native village), Benedictine monk and ecclesiastical writer; d. not before 1118. He is known only by his writings. (1) In 1109 he compiled an ecclesiastical history in four volumes, up to the death of Charles the Great (814). In the following year he made another edition of the work in six volumes, arranging the contents in a better manner, adding notes, especially of a theological nature, and omitting a few things, bringing it up to 855. It appeared in print for the first time at Münster, in 1638, edited by Bernhard Rottendorf. This contains also a letter to Ivo of Chartres and a preface to King Louis the Fat. It is in Migne, P. L., CLXIII. (2) A book narrating the "acts of the Frankish kings" (842-1108). (3) A chronicle of the kings of France from Pharamond, the legendary first king, to Philip I (1108). In French this is in the Guizot collection, VII, 65-86. This and the next work were formerly ascribed to Ivo of Chartres. (4) An abbreviated chronicle of the kings of France, written for King Louis VI, in the work of Rottendorf. (5) "De regia potestate et sacerdotali dignitate", addressed to King Henry II of England, during the controversy on investiture, opposing Hugh of Flavigny who upheld the ideas maintained by Pope Gregory VII. With great freedom Hugh of Fleury tries to settle the dispute and advances views later embodied in the concordats [see Sackur in "Neues Archiv" (1891), 369; Mansi, II, 184-197]. (6) Remodelling of a life, previously written by someone else, of St. Sacerdos, Bishop of Limoges. (7) Continuation of a work "De miraculis S. Benedicti Floriaci patris". Great credit must be given Hugh of Fleury for his labour in collecting material and for systematic arrangement of the same. He has been frequently confounded with another Hugh of Fleury, who became Abbot of Canterbury and died in 1124.

HURTER, *Nomenclator*; BIHLMEYER in BUCHBERGER, *Kirchl. Handlex.*, s. v. *Hugo*, No. 11; MITTERMÜLLER in *Kirchenlex.*, s. v. *Hugo von Fleury*.

FRANCIS MERSHMAN.

Hugh of Lincoln, SAINT, b. about the year 1135 at the castle of Avalon, near Pontcharra, in Burgundy; d. at London, 16 Nov., 1200. His father, William, Lord of Avalon, was sprung from one of the noblest of

Burgundian houses; of his mother, Anna, very little is known. After his wife's death, William retired from the world to the Augustinian monastery of Villard-Benoît, near Grenoble, and took his son Hugh with him. Hugh became a religious and was ordained deacon at the age of nineteen. In about the year 1159 he was sent as prior to the cell, or dependent priory, of St-Maximin, not far from his ancestral home of Avalon, where his elder brother William had succeeded his father. At St-Maximin Hugh laboured assiduously in preaching and in whatever parochial duties might be discharged by a deacon. Becoming more and more desirous to give himself to the complete contemplative life, he visited in company with the prior of Villard-Benoît the solitude of the Grande Chartreuse. Dom Basil was then head of the Chartreuse, and to him Hugh confided his desire of submitting to the Carthusian rule. To test his vocation the prior refused him any encouragement, and his own superior, alarmed at the idea of losing the flower of his community, took him back quickly to Villard-Benoît, and made him vow to give up his intention of joining the Carthusians. He submitted and made the promise, acting, as his historian assures us, "in good faith and purity of intention, placing his confidence in God, and trusting that God would bring about his deliverance"; his call to a higher life was yet doubtful, his obedience to one who was still his superior was a certain duty, and not a "sinful act", as thinks his modern Protestant biographer. Realizing that his vow, made without proper deliberation and under the strongest emotion, was not binding, he returned to the Grande Chartreuse as a novice in 1153. Soon after his profession the prior entrusted him with the care of a very old and infirm monk from whom he received the instruction necessary to prepare him for the priesthood. He was probably ordained at thirty, the age then required by canon law. When he had been ten years a Carthusian he was entrusted with the important and difficult office of procurator, which he retained till the year 1180, leaving the Grande Chartreuse then to become prior of Witham in England, the first Carthusian house in that country. It was situated in Somerset and had been founded by Henry II in compensation for his having failed to go on the crusade imposed as a penance for the murder of St. Thomas of Canterbury. The first two priors had succumbed to the terrible hardships encountered at the new foundation, where the monks had not even a roof to cover them, and it was by the special request of the English king that St. Hugh, whose fame had reached him through one of the nobles of Maurienne, was made prior. His first attention was given to the building of the Charterhouse. He prepared his plans and submitted them for royal approbation, exacting full compensation from the king for any tenants on the royal estate who would have to be evicted to make room for the building. Long delay was occasioned by the king's parsimony, but the Charterhouse, an exact copy of the Grande Chartreuse, was at last finished. Henry placed the greatest confidence in St. Hugh, frequently visiting Witham, which was on the borders of Selwood forest, one of the monarch's favourite hunting-places. The saint was fearless in reproofing Henry's faults, especially his violation of the rights of the Church. His keeping of sees vacant in order to appropriate their revenues, and the royal interference in elections to ecclesiastical posts evoked the sternest reproach from St. Hugh.

In May, 1180, Henry summoned a council of bishops and barons at Eynsham Abbey to deliberate on affairs of state in general. The filling of vacant bishoprics was determined on, and, among others, the canons of Lincoln, who had been without a bishop for about sixteen years, were ordered to hold an election. After some discussion, their choice fell on the king's nominee, Hugh, prior of Witham. He refused the

bishopric because the election had not been free. A second election was held with due observance of canon law—this time at Lincoln, and not in the king's private chapel—and Hugh, though chosen unanimously, still refused the bishopric till the prior of the Grande Chartreuse, his superior, had given his consent. This being obtained by a special embassy from England, he was consecrated in St. Catherine's chapel, Westminster Abbey, on 21 September, 1181, by Archbishop Baldwin of Canterbury. He was enthroned in Lincoln cathedral on 29 Sept. The new bishop at once set to the work of reform. He attacked the iniquitous forest laws, and excommunicated the king's chief forester. In addition to this, and almost at the same time, he refused to install a courtier whom Henry had recommended as a prebendary of Lincoln. The king summoned him to appear at Woodstock, where the saint softened the enraged monarch by his ready wit, making him approve of his forester's excommunication and the refusal of the prebend's stall. He soon became conspicuous for his unbounded charity to the poor, and it was long remembered how he used to tend with his own hands people afflicted with leprosy then so common in England. His was a model episcopate. He rarely left the diocese, became personally acquainted with his priests, held regular canonical visitations, and was most careful to choose worthy men for the care of souls; his canons were to reside in the diocese, and if not present at Lincoln were to appoint vicars to take their places at the Divine Office. Once a year he retired to Witham to give himself to prayer, far from the work and turmoil of his great diocese.

In July, 1188, he went on an embassy to the French king, and was in France at the time of Henry's death. He returned the following year and was present at Richard I's coronation; in 1191 he was in conflict with Longchamp, Bishop of Ely and justiciar, whose unjust commands he refused to obey, and in 1194-5 was a prominent defender of Archbishop Geoffrey of York, in the dispute between that prelate and his chapter. Hugh was also prominent in trying to protect the Jews, great numbers of whom lived in Lincoln, in the persecution they suffered at the beginning of Richard's reign, and he put down popular violence against them in several places. In Richard I Hugh found a more formidable person to deal with than his predecessor had been. His unjust demands, however, he was resolute in opposing. In a council held at Oxford, in 1198, the justiciar, Archbishop Hubert, asked from the bishops and barons a large grant of money and a number of knights for the king's foreign wars. Hugh refused on the ground that he was not bound to furnish money or soldiers for wars undertaken outside England. His example was followed by Herbert of Salisbury, and the archbishop had to yield. Richard flew into one of his fits of rage, and ordered the confiscation of Hugh's property, but no one dared to lay hands on it. The saint journeyed to Normandy, met Richard at Château-Gaillard and, having won the monarch's forgiveness and admiration by his extraordinary courage, proceeded to rebuke him fearlessly for his faults—his infidelity to his wife, and encroachments on the Church's rights. "Truly", said Richard to his courtiers, "if all the prelates of the Church were like him, there is not a king in Christendom who would dare to raise his head in the presence of a bishop." Once more St. Hugh had to oppose Richard in his demands. This time it was a claim for money from the chapter of Lincoln. Crossing again to Normandy he arrived just before the king's death, and was present at his obsequies at Fontevault. He attended John's coronation at Westminster in May, 1199, but was soon back in France aiding the king in the affairs of state. He visited the Grande Chartreuse in the summer of 1200 and was received everywhere on the journey with tokens of extraordinary

respect and love. While returning to England he was attacked by a fever, and died a few months afterwards at the Old Temple, the London residence of the bishops of Lincoln. The primate performed his obsequies in Lincoln cathedral, and King John assisted in carrying the coffin to its resting-place in the north-east transept. In 1220 he was canonized by Honorius III, and his remains were solemnly translated in 1280 to a conspicuous place in the great south transept. A magnificent golden shrine contained his relics, and Lincoln became the most celebrated centre of pilgrimage in the north of England. It is not known what became of St. Hugh's relics at the Reformation; the shrine and its wealth were a tempting bait to Henry VIII, who confiscated all its gold, silver, and precious stones, "with which all the simple people be moche deceived and broughte into greates superstieion and idolatrye". St. Hugh's feast is kept on 17 November. In the Carthusian Order he is second only to St. Bruno, and the great modern Charterhouse at Parkminster, in Sussex, is dedicated to him.

Like most of the great prelates who came to England from abroad, St. Hugh was a mighty builder. He rebuilt Lincoln cathedral, ruined by the great earthquake of 1185, and, though much of the minster which towers over Lincoln is of later date, St. Hugh is responsible for the four bays of the choir, one of the finest examples of the Early English pointed style. He also began the great hall of the bishop's palace. St. Hugh's emblem is a white swan, in reference to the beautiful story of the swan of Stowe which contracted a deep and lasting friendship for the saint, even guarding him while he slept.

R. URBAN BUTLER.

Hugh of Remiremont (surnamed CANDIDUS or BLANCUS), cardinal, born of a noble family, probably in Lorraine, died soon after 1098. He became a Benedictine at Remiremont, whence he was summoned to Rome by Leo IX and created Cardinal-Priest of San Clemente in 1049. He was a shrewd diplomat, but was loyal to the pope only as long as it was to his own advantage. After the death of Nicholas II in 1061 he adhered to the antipope Cadalous, but submitted to the lawful pope, Alexander II, in 1067. A year later he was sent as legate to Spain. On his way thither he presided over synods at Aueh, Toulouse, Gerona, and Barcelona. In Spain he was successful in enforcing celibacy among priests and introducing the Roman in place of the Mozarabic Liturgy, but being accused of simony he was recalled to Rome. In 1072 he was sent as legate to France, where he again committed acts of simony. He succeeded, however, in exculpating himself before Alexander II and his successor Gregory VII. He had wielded great influence upon the election of the latter and was sent by him as legate to France and Spain in 1073. On this embassy he committed new acts of simony, and in consequence was deposed by Gregory VII. From this time on he was a bitter antagonist of Gregory VII. He took a prominent part in the anti-Gregorian synods at Worms in 1076 and at Brixen in 1080 and was repeatedly excommunicated by Gregory VII. The last years of his life are veiled in obscurity.

MICHAEL OTT.

Hugh of St-Cher (Lat. DE SANCTO CARO; DE SANCTO THEODORICO), a Dominican cardinal of the

thirteenth century; b. at St-Cher, near Vienne, in Dauphiné (France), about 1200; d. at Orvieto (Italy), 19 March, 1263. He studied philosophy, theology, and jurisprudence in Paris, and next taught law in the same city. In 1225 he entered the Order of St. Dominic, and soon discharged therein the office of provincial, and next (1230) that of prior of the Dominican monastery in Paris. He became the confidant and adviser of several bishops, and the trusty envoy of Gregory IX to Constantinople (1233). In 1244 Innocent IV raised him to the cardinalate, and was greatly helped by him at the Council of Lyons (1245). The same pontiff entrusted him with various important affairs, approved whatever changes Hugh suggested in the altogether too strict rule which Albert, the Patriarch of Jerusalem, had wished to impose on the Carmelites, and after the death of the Emperor Frederiek II, sent him as his legate to Germany. Alexander IV appointed him one of the examiners of the so-called "Evangelium Æternum". Chiefly through Hugh's exertions, the Dominicans were provided with a new Biblical "Correctorium", which is still extant in MS., and which is still known as "Correctorium Hugonis" and "Correctorium Prædicatorum". His "Postillæ in universa Biblia juxta quadruplicem sensum, litteralem, allegoricum, moralem, anagogicum" has often been printed, and bears witness to his untiring industry as a compiler of explanations of the Sacred Text. He is justly regarded as the first author of a verbal "Concordance" to Holy Writ, a work which became the model for all following publications of the kind (see CONCORDANCES OF THE BIBLE). Cardinal Hugh composed also numerous shorter works, among which may be mentioned: "Speculum Sacerdotum et Ecclesiæ"; "Sermones dominicales"; "Sermones de Tempore et Sanctis"; "Commentarius in IV. libros Sententiarum".

FRANCIS E. GIGOT.

Hugh of St. Victor, medieval philosopher, theologian, and mystical writer; b. 1096, at the manor of Hartingham in Saxony; d. 11 March, 1141. The works of Derling and of Hugonin leave no doubt that Mabillon was mistaken in declaring his birthplace to be Ypres in Flanders. He was the eldest son of Conrad, Count of Blankenburg. His uncle, Reinhard, who had studied in Paris under William of Champeaux, had on his return to Saxony been made Bishop of Halberstadt. It was in the monastery of St. Pancras, at Hamerleve near Halberstadt, that Hugh received his education. In spite of the opposition of his parents, he took the habit of the Canons Regular of St. Augustine at Hamerleve; before his novitiate was completed, the disturbed state of the country led his uncle to advise him to go to the monastery of St. Victor in Paris, where he arrived about 1115. William of Champeaux, its founder, on his election to the See of Châlons, in 1112, had been succeeded by Gilduin, under whom it lost none of its reputation for piety and learning. Under his rule and guidance Hugh spent the rest of his life, studying, teaching, and writing. On the tragic death of Thomas (20 Aug., 1133), Hugh was chosen to succeed him as head of the School of St. Victor, and under his direction it attained to brilliant success. He is sometimes spoken of as *alter Augustinus*, because of his familiarity with the works of the great Father of the Church.

His own works cover the whole range of the arts and sacred science taught in his day. Until a few years ago, however, most historians of philosophy put him down as a narrow-minded mystic out of touch with the world of thought and study, who hampered

rather than helped scientific progress, and whose fantastic symbolism misled subsequent generations. A careful examination of his works has led to a truer appreciation of one whom Harnack (*History of Dogma*, tr. London, 1899, VI, 44) terms "the most influential theologian of the twelfth century". A great mystical writer, he was also a philosopher and a scholastic theologian of the first order. Primarily, he was a great lecturer, and that fact accounts for the early dispersal of his works as his hearers dispersed, their frequent incorporation in later treatises, and the publication under his name of so many unauthentic treatises. His teaching was one of the foundations of Scholastic theology, and his influence has affected the whole development of Scholasticism, for he was the first who after synthesizing the dogmatic treasures of the patristic age systematized them and formed them into a coherent and complete body of doctrine. That was the work of a genius. But his great merit as head of the school of St. Victor is that, when the heterodoxy and doctrinal temerity of Abelard endangered the new method which was being applied to the study of theology, Hugh and his followers, by their prudent moderation and unimpeachable orthodoxy, reassured alarmed believers and acclimatized the new scientific method in the Catholic schools.

The work of theological classification made great progress in the time of Abelard, and in the "Summæ" were condensed encyclopedic summaries of the whole of theology. Abelard's "Sic et Non" traced the lines upon which the "Summæ" were built up; but they reproduced the drawbacks of the parent work in that the difficulties stated in the pros and cons were frequently left unsolved. The introduction of more strictly logical processes culminated in the fusion of patristic erudition and rational speculation in the new constructive dialectical method. After the dogma had been established by the interpretation of the Scriptures and the Fathers, the assistance of philosophy was sought to show the rational character of the dogma. That application of dialectics to theology led Abelard into heresy and theologians of the twelfth century were deeply divided as to its legitimacy. It was defended by the Abelardian and Victorian Schools, and from them is descended what is properly known as Scholastic theology. The Abelardian School of theology continued to exist even after its founder's condemnation in 1141, but was influenced by the Victorian School, which in turn felt the influence of the Abelardian School, but kept well within the limits of orthodoxy. Thus both contributed to the triumph of Scholasticism.

Any attempted synthesis of Hugh's teaching should be preceded by a critical examination of the authenticity of the treatises which have been included in the collected edition of his works, and some of the most authoritative historians of philosophy and theology have gone astray through non-observance of this elementary precaution. Others again have concentrated their attention on his writings on mystical theology, where the supernatural reigns supreme—to attempt to appreciate an author's philosophical teaching upon data furnished by his endeavours to explain what passes in the soul possessed of perfect charity can only lead to confusion. Hugh has left us sufficient material, philosophical and theological, in which rational explanations stand side by side with revealed teaching, to enable us to form a sound opinion of his position as a philosopher, a theologian, and a mystic.

As a *Philosopher*, he has a clear idea, frequently emphasized, of the subject-matter of a purely rational science, different from theology: and the two orders of knowledge are as clearly differentiated in his writings as in those of St. Thomas. By philosophy he meant the whole range of knowledge attained by

natural reason. The assigning of a definite place to philosophy in the plan of studies was the result of a long and gradual process; but its place above the liberal arts and below theology is clearly defined by Hugh in the "Eruditionis Didascalîa". Abandoning the old outgrown framework, Hugh sets forth a new division of knowledge: "Philosophia dividitur in theoreticam, practicam, mechanicam et logicam. Haec quatuor omnem continent scientiam."—"Philosophy is divided into theoretical, practical, mechanical, and logical. These four [divisions] comprise all knowledge."—(*Erud. Didasc.*, II, 2). This new division of knowledge into speculative science, concerned with the nature and laws of things, ethics, the products of man's activity, thoughts and words, is well and logically thought out. The whole of his exposition of what is meant by knowledge, its object, divisions, and the order in which they ought to be dealt with, is a study unique in the Middle Ages before the second half of the twelfth century, and had Hugh never written more than the early books of the "Didascalîa", he would still deserve a place among the philosophers of Scholasticism. It is interesting to note that, although the question of universals in his day filled the schools, and at St. Victor's William of Champeaux had many faithful followers, Hugh systematically avoids the whole question, although in places he rejects some of the principal arguments put forward by the Realists. The markedly psychological trend of the whole of his philosophical system has recently been the subject of careful study by Ostler. Hugh's teaching concerning God has been fully analysed by Kilgenstein, and gives us the key to the whole of his teaching: by the use of reason man can and must arrive at the knowledge of God: *aseitas*, pure spirituality, absolute simplicity, eternity, immensity, immutability of being and of action—such are the conceptions he discovers in his Maker, and which furnish him with a synthetic and well-reasoned idea of the Divine essence. At the same time he maintains the moral necessity of revelation, so that the teaching of St. Thomas, as set forth in the early chapters of the "Contra Gentiles", adds nothing to Hugh. It is interesting to note that, following St. Anselm's "Monologium", he takes the human soul as the first element of observation as to the contingency of nature, and thence rises to God. (See P. L., CLXXXVI, 824.)

As a *Theologian*.—His valuable work as a sound thinker has already been mentioned; he had a keen appreciation of the merits of much of Abelard's theological work and always cites him with respect; at the same time he combated his errors. Thus, when Abelard, in treating of creation, had replaced the freedom and omnipotence of God by a most exaggerated Optimism, Hugh attacked the error in his "De Sacr.", Bk. I, P. II, c. xxii. His Christological teaching is marked by a semi-Apollinarian error in attributing to the humanity of Christ not only the uncreated knowledge of the Word, but omnipotence and other Divine attributes. But he vigorously combats Abelard's erroneous conceptions of the hypostatic union which led to a revival of Adoptionism that troubled the schools until its condemnation 18 Feb., 1177, by Alexander III (1164-77). Hugh's sacramental teaching is of great importance in that he begins the final stage in the formulation of the definition of a sacrament; synthesizing the scattered teaching of St. Augustine, he set aside the Isidorian definition and gave a truer and more comprehensive one, which, when perfected by the author of the "Summa Sententiarum", was adopted in the schools. His works contain an extensive body of moral doctrine based upon a solid patristic basis, in the grouping of which the influence of Abelard is visible; but in his accurate analysis of the nature of sin, he combats Abelard's error as to the indifferent character of all acts in themselves apart from the will of the doer. At the same

time he held an erroneous view as to the reviviscence, after a fall, of previously pardoned mortal sins (De Sacr., Bk. II, P. XIV, c. viii).

As a Mystic.—Historians of philosophy are now coming to see that it betrays a lack of psychological imagination to be unable to figure the subjective co-existence of Aristotelian dialectics with mysticism of the Victorine or Bernardine type—and even their compenetration. Speculative thought was not, and could not be, isolated from religious life lived with such intensity as it was in the Middle Ages, when that speculative thought was active everywhere, in every profession, in every degree of the social scale.—After all, did not the same mind give us the two “Summæ” and the Office of the Blessed Sacrament?—Hugh of St. Victor was the leader of the great mystical movement of which the School of St. Victor became the centre, and he formulated, as it were, a code of the laws governing the soul’s progress to union with God. The gist of his teaching is that mere knowledge is not an end in itself, it ought to be but the stepping-stone to the mystical life—through thought, meditation, and contemplation; thought seeks God in the material world, meditation discovers Him within ourselves, contemplation knows Him supernaturally and intuitively. Such are the “three eyes” of the rational soul. Hugh’s mystical teaching was amplified by Richard of St. Victor, whose proud disdain for philosophy has been wrongly attributed to Hugh.

Hugh’s chief works are:—

(1) “De Sacramentis Christianæ Fidei” (c. 1134), his masterpiece and most extensive work, a dogmatic synthesis similar to, but more perfect than, the “Introductio ad Theologiam” of Abelard (c. 1118), which was only concerned with the knowledge of God and of the Trinity. It is of a more literary character: in it the first place belongs to the argument from authority, but the utilization of the dialectical method binds the discussion together. It is at once a summary and a corrected version of his earlier works. The work is divided into two books comprising twelve and eighteen parts respectively each containing numerous chapters. The following analysis of its contents will convey some idea of its range: Book I: 1. The Creation; 2. The end of man’s creation; 3. The knowledge of the Triune God; 4. The will of God and its signs; 5. Angels; 6. Man before the Fall; 7. The Fall and its consequences; 8. The restoration of man and the use of sacraments; 9. The sacraments in general; 10. Faith; 11. The sacraments in particular and primarily those of the natural law; 12. Sacraments of the written law. Book II: 1. Incarnation of the Word; 2. Grace and the Church; 3. The orders of the ecclesiastical hierarchy; 4. A mystical explanation of the sacred vestments; 5. Dedication of churches (in which the sacraments are conferred); 6. Baptism; 7. Confirmation; 8. Holy Eucharist; 9. The lesser sacraments (sacramentals); 10. Simony; 11. Matrimony; 12. Vows; 13. Virtues and vices; 14. Confession and absolution; 15. Extreme unction; 16. The state of souls after death; 17. Christ’s second coming and the resurrection of the dead; 18. The state of things to come.—It is the first complete theological work of the schools.

(2) “Eruditionis Didascalie, libri septem” comprises what we should now speak of as encyclopedics, methodology, introduction to Sacred Scripture, and an indication of how we may rise from things visible to a knowledge of the Trinity.

(3) Scriptural commentaries (important both for his theological and mystical doctrines): “Adnotationes Elucidatoriæ in Pentateuchon”; “In librum Judicum”; “In libros Regum” (notes on the literal meaning of the texts); “In Salomonis Ecclesiasten Homiliæ xix” (practical rather than exegetical); “Adnotationes Elucidatoriæ in Threnos Jeremiæ”; in Joëlem prophetam” (working out the literal, alle-

gorical, and moral meanings); “Explanatio in Canticum Beate Mariæ” (allegorical and tropological). The “Questiones et Decisiones in Epistolas S. Pauli”, printed among his works in Migne, are certainly posterior to Hugh.

(4) “Commentariorum in Hierarchiam Coelestem S. Dionysii Areopagitæ secundum interpretationem Joannis Scoti libri x.”

(5) His chief mystical works are: “De Arcâ Noe Morali et Mysticâ”; “De Vanitate Mundi”; “De Arrhâ Animæ”; “De Contemplatione et eius speciebus” (first published by Hauréau as an appendix to his book in 1859).

(6) As regards the “Summa Sententiarum”, usually ascribed to Hugh of St. Victor, considerable discussion has recently taken place. Hauréau, Mignon, Gietl, Kilgenstein, Baltus, Ostler attribute it to Hugh. Denifle, arguing from the anonymity of the MSS., left the question open. But Portalié, basing his argument upon important doctrinal differences, appears to have shown that it is not the work of Hugh, although it belongs to his school. The general line of his argument is that the “Summa Sententiarum” is certainly posterior to the “De Sacramentis”, upon which it frequently draws; doctrines, methods, and formulæ show evident progress in the “Summa”. It would seem that it is absolutely impossible that Hugh should have written the “Summa” after the “De Sacramentis”, for the “Summa” borrows from the Abelardian School errors Hugh would not have taught, and even errors and formulæ which he expressly attacked. De Wulf agrees with this, and Pourrat has brought additional evidence, based upon an examination of the sacramental teaching of the two works, in support of the same thesis. None of the writers cited above, as being in favour of Hugh’s authorship, have dealt with Portalié’s evidence.

The best edition of the works of Hugh of St. Victor is that of the Canons of St. Victor, printed at Rouen in 1648. It is not a critical edition, however, and genuine, spurious, and doubtful works are found side by side. It was republished in 1854, with slight modifications, by the Abbé Migne in P. L., CLXXV–CLXXVII, but it is neither complete nor critically satisfactory, and should be used in conjunction with J.-B. Hauréau’s “Hugues de St-Victor et l’édition de ses œuvres” (Paris, 1859) and the same writer’s “Les Œuvres de Hugues de Saint-Victor: Essai Critique” (Paris, 1886), in which he supplements and corrects many of the conclusions of the earlier work. But Hauréau’s rationalistic bias renders his exposition of Hugh’s doctrine unreliable, without careful checking.

EDWARD MYERS.

Hugh of Strasburg, theologian, flourished during the latter half of the thirteenth century. The dates of his birth and death are unknown. His prominence in the history of medieval theology is due to the fact that he is now considered to be the author of the famous “Compendium theologiæ” or “Compendium

theologicae veritatis", which, on account of its scope and style, as well as its practical arrangement, was for 400 years used as a text-book. By reason of its extensive use and wide circulation it was often copied and later more often printed and reprinted. The work consists of seven books which treat of the Creation, the Fall, the Incarnation, Grace, the Sacraments, and the Four Last Things.

In the entire medieval literature there is probably no work whose composition has, till very recently, been attributed to so many different authors. The incunabula of Venice, Lyons, Strasburg, Ulm, and Nuremberg enumerated by Hain (*Repert. bibliogr.*) are without the author's name. Some attribute it to the Dominican Ulrich of Strasburg. Bach in the "Kirchenlexikon" (I, 427) makes Albert of Strasburg the author, but recent researches go to show that such a person never existed. Thomas Dorinberg, who supplied the edition of 1473 with an index, was for a long time looked upon as the author; others attributed it to St. Thomas Aquinas. In the magnificent edition of Lyons (1557), furnished with notes and index by the Franciscan John of Combes, it is credited to the Dominican Albert the Great and is placed in the folio edition of the latter's works published at Lyons (1651). Again, some held St. Bonaventure to be its author, with the result that the "Compendium" found a place in the appendix of the eighth volume of his works (Rome, 1588-96).

Among other great theologians to whom it was ascribed are Hugh of Saint Cher, Alexander of Hales, Aureolus, the Oxford Dominican Thomas Sutton, Peter of Tarantasia and others. Recent investigations go to show, however, that the "Compendium" cannot be the work of any of these, but was most probably, if not certainly, written by Hugh of Strasburg. Other works attributed to him are: "Commentarium in IV libros sententiarum"; "Quodlibeta, questiones, disputationes et variae in divinis libris explanationes".

JOSEPH SCHROEDER.

Hugh the Great, SAINT, Abbot of Cluny, b. at Semur (Brionnais) in the Diocese of Autun, 1024; d. at Cluny, 28 April, 1109.

HIS EARLY LIFE.—The eldest son of Count Dalmatius of Semur and Aremburge (Aremburgis) of Vergy, Hugh was descended from the noblest families in Burgundy. Dalmatius, devoted to war and the chase, desired that Hugh should adopt the knightly calling and succeed to the ancestral estates; his mother, however, influenced it is said by a vision vouchsafed to a priest whom she consulted, wished her son to dedicate himself to the service of God. From his earliest years Hugh gave indication of such extraordinary earnestness and piety that his father, recognizing his evident aversion from the so-called gentle pursuits, entrusted him to his grand-uncle Hugh, Bishop of Auxerre, for preparation for the priesthood. Under the protection of this relative, Hugh received his early education at the monastery school attached to the Priory of St. Marcellus. At the age of fourteen he entered the novitiate at Cluny, where he displayed such religious fervour that he was allowed to make his vows in the following year without completing the severe novitiate usual at this monastery. The special privilege of the Cluniac congregation enabled him to become deacon at eighteen and priest at twenty. In recognition of his wonderful zeal for the discipline of the order, and of the confidence awakened by his conspicuous talent for government, he was quickly, in spite of his youth, chosen grand prior. In this capacity he was charged with the whole domestic direction of the cloister in both spiritual and temporal affairs, and represented the abbot during his

absence (cf. D'Achéry, "Spicilegium", 2nd ed., I, 686). On the death of St. Odilo on 1 January, 1049, after a prolonged administration of nigh upon half a century, Hugh was unanimously elected abbot, and was solemnly installed by Archbishop Hugh of Besançon on the Feast of the Chair of Peter at Antioch (22 February), 1049.

HUGH AS ABBOT.—Hugh's character bears many points of resemblance to that of his great contemporary and friend, St. Gregory IX. Both were animated with a burning zeal to extirpate the abuses then prevalent among the clergy, to crush investiture with its corollaries, simony and clerical incontinence, and to rescue Christian society from the confusion into which the reckless ambition and avarice of rulers and the consequent political instability had thrown it. The emperor claimed the right to appoint bishops, abbots, even the pope himself (see *INVESTITURES, CONFLICT OF*), and in too many cases his selection was swayed entirely by political motives to the exclusion of every thought of religious fitness. To prevent the Church from lapsing into a mere appanage of the State and to re-establish ecclesiastical discipline were the great objects alike of Gregory and Hugh, and if, in certain cases, Gregory allowed his zeal to outstrip his discretion, he found in Hugh an unflinching ally, and to the Benedictine Order, particularly the Cluniac branch, belongs the chief credit of promulgating among the people and carrying into effect in Western Europe the many salutary reforms emanating from the Holy See. In founding Cluny, in 910, and endowing it with his entire domains, William the Pious of Aquitaine had placed it under the direct protection of Rome. Thus Cluny, with its network of daughter-foundations (see Cluny, Congregation of; Gallia Christ., II, 374), was a formidable weapon for reform in the hands of the successive popes. Hugh entrusted the election of the superiors of all cloisters and churches subject to him into spiritual hands, promised them—in addition to the privileges of the congregation—the support and protection of Cluny, and thus saved hundreds of cloisters from the cupidity of secular lords, who were very loath to interfere with the rights of a congregation so powerful and enjoying such high favour with emperors and kings. To secure this protection numbers of cloisters became affiliated with Cluny; new houses were opened in France, Germany, Spain, and Italy, while under Hugh was also founded at St. Pancras near Lewes the first Benedictine house in England. (See, however, *AUGUSTINE OF CANTERBURY, SAINT; DUNSTAN, SAINT.*) Since the superiors of most of these houses were either directly or indirectly nominated by Hugh, and since, as abbot, he had to ratify the elections, it is easy to understand how important a rôle he played in the great struggle between imperialism and the Holy See.

As early as 1049, at the age of twenty-five, Hugh appeared at the Council of Reims. Here, at the request and in the presence of Leo IX, he expressed himself so energetically against the reigning abuses that even the simoniacal bishops could not withstand his zeal. This advocacy contributed largely to the passing of many remedial ordinances concerning church discipline (cf. Labbe, "Conc.", IX, 1045-6), and led Leo IX to take Hugh with him to Rome that he might have the assistance and advice of the young abbot at the great council to be held in 1050, at which the question of clerical discipline was to be decided and the heresy of Berengarius condemned (cf. Hefele, "Concilien-gesch.", IV, 741). Leo's successor, Victor II, also held Hugh in the highest esteem, and confirmed in 1055 all the privileges of Cluny. On Hildebrand's arrival in France as papal legate (1054), he hastened first to Cluny to consult with Hugh and secure his assistance at the Council of Tours. Stephen IX, immediately on his elevation, summoned Hugh to Rome, made him the companion of his journeys, and finally

died in his arms at Florence (1058). Hugh was also the companion of Nicholas II, and under him took part in the Council of Rome which promulgated the important decree concerning papal elections (Easter, 1059). He was then sent to France with Cardinal Stephan, a monk of Monte Cassino, to effect the execution of the decrees of the Roman synod, and proceeded to Aquitaine, while his colleague repaired to the north-west. The active support of the numerous cloisters subject to Cluny enabled him to discharge his mission with the greatest success. He assembled councils at Avignon and Vienne, and managed to win the support of the bishops for many important reforms. In the same year (1060) he presided over the Synod of Toulouse. At the Council of Rome in 1063 he defended the privileges of Cluny which had been recklessly attacked in France. Alexander II sent St. Peter Damian, Cardinal Bishop of Ostia, as legate to France to adjudicate in this and other matters, meanwhile ratifying all the privileges held by Hugh's predecessors. After a stay at Cluny, during which he conceived the high admiration and veneration for the monastery and its abbot reflected in his letters (cfr. "Epist.", VI, 2, 4, 5, in P. L., CXLIV, 378), the legate held a council at Châlons, which decided in favour of Hugh.

Scarcely had Hildebrand ascended the Chair of Peter as Gregory VII when he wrote to Cluny to secure Hugh's co-operation in promoting his various reforms. Hugh was entrusted to deal with the delicate case of the unworthy Archbishop Manasse of Reims, as well as with commissions in connexion with the expedition of Count Evroul of Roucy against the Saracens in Spain. Frequently urged by Gregory to come to Rome, Hugh was unable to leave France until after the lamentable occurrences of 1076 (see GREGORY VII), but then hastened to visit the pope at Canossa. With the assistance of Countess Mathilda, he managed to bring about the reconciliation—unfortunately of but short duration—between Gregory and Henry IV, who had already addressed a letter full of affection to the abbot declaring his great desire for the peace of the Church (cfr. "Hist. Lit. de la France", loc. cit. infra). Hugh was subsequently engaged with the papal legate in Spain in the matter of ecclesiastical reform, and, as a result of his diligence and the high favour he enjoyed with Alphonsus VI of Castille, the Mozarabic was replaced by the Roman Ritual throughout that monarch's realm. Thanks to the assistance of the many Cluniac foundations in Catalonia, Castille, Leon, Aragon, etc., and the many bishops chosen from their inmates, he was also enabled to give a great impetus to ecclesiastical reform in these countries. In 1077 he was commissioned to preside over the Council of Langres, and later to undertake the removal of the Bishop of Orléans and the Archbishop of Reims. Gregory wrote him many affectionate letters, and at the Roman synod in 1081 referred to Hugh in terms of praise seldom used by a successor of Peter concerning a living person. That this appreciation was not confined to the Holy Father is evident from the fact that, when asked by Gregory whether his opinion was shared by them, all present answered: "Placet, laudamus" (Bullar. Clun., p. 21).

On the revival of the quarrel between Henry IV and the Holy See, Hugh set out immediately for Rome, but was seized on the way and conducted before the monarch. So earnestly did he urge Henry to make his submission to Peter's successor that he seemed again to have bridged the quarrel, if this were not another example of the king's well-known duplicity. It is scarcely necessary to state that Hugo's intimacy with the Holy See continued unchanged under Urban II and Paschal II, since both issued from the ranks of his monks. Surrounded by cardinals and bishops, Urban consecrated on 25 October, 1095, the high altar of the new church at Cluny, and granted the monastery new privileges, which were augmented by Paschal

during his visit in 1107. At the great Council of Clermont in 1095, whose decision to organize the First Crusade was a clear indication of the great religious enthusiasm resulting from Gregory's and Hugh's labours, the abbot performed most valuable services in the composition and promulgation of the decrees, for which he was specially thanked by the pope. Until the death, in 1106, of Henry IV, who in that year addressed two letters to his "dearest father", begging for his prayers and his intercession with the Holy See (cfr. "Hist. Lit. de la France", loc. cit. infra), Hugh never relaxed his efforts to bring about a reconciliation between the spiritual and temporal powers.

In the spring of 1109, Hugh, worn out with years and labours, and feeling his end approaching, asked for the Last Sacraments, summoned around him his spiritual children, and, having given each the kiss of peace, dismissed them with the greeting: *Benedicite*. Then, asking to be conveyed to the Chapel of our Blessed Lady, he laid himself in sackcloth and ashes before her altar, and thus breathed forth his soul to its Creator on the evening of Easter Monday (28 April). His tomb in the church was soon the scene of miracles, and to it Pope Gelasius II made a pilgrimage in 1119, dying at Cluny on 29 January. Elected at the monastery on 2 February, Callistus III began immediately the process of canonization, and, on 6 January, 1120, declared Hugh a saint, appointing 29 April his feast-day. In honour of St. Hugh the Abbot of Cluny was henceforth accorded the title and dignity of a cardinal. At the instance of Honorius III the translation of the saint's remains took place on 23 May, 1220, but, during the uprising of the Huguenots (1575), the remains and the costly shrine disappeared with the exception of a few relics.

HUGH'S PERSONALITY AND INFLUENCE.—In the case of comparatively few of our saints has the decision of their own and subsequent ages been so unanimous as in that of St. Hugh. Living in an age of misrepresentation and abuse, when the Church had to contend with far greater domestic and external inimical forces than those marshalled by the so-called Reformation, not a single voice was raised against his character—for we disregard the criticism of the French bishop, who in the heat of a quarrel pronounced hasty words afterwards to be recalled, and who was subsequently one of Hugh's panegyrists. In one of his letters Gregory declares that he confidently expects the success of ecclesiastical reform in France through God's mercy and the instrumentality of Hugh, "whom no imprecation, no applause or favours, no personal motives can divert from the path of rectitude" (Gregori VII Registr., IV, 22). In the "Life of Bishop Arnulf of Soissons", Arnulf says of Hugh: "Most pure in thought and deed, he was the promoter and perfect guardian of monastic discipline and the regular life, the unfailing support of the true religious and of men of probity, the vigorous champion and defender of the Holy Church" (Mabillon, op. cit. infra, sæc. VI, pars II, p. 532). And of his closing years Bishop Bruno of Segni writes: "Now aged and burdened with years, revered by all and loved by all, he still governs that venerable monastery [sc. Cluny] with the same consummate wisdom—a man in all things most laudable, difficult of comparison, and of wonderful sanctity" (Muratori, "Rerum Ital. script.", III, pt. ii, 347).

Emperors and kings vied with the sovereign pontiffs in bestowing on Hugh marks of their veneration and esteem. Henry the Black, in a letter which has come down to us, addresses Hugh as his "very dear father, worthy of every respect", declares that he owes his own return to health and the happy birth of his child to the abbot's prayers, and urges him to come to the Court at Cologne the following Easter to stand sponsor for this son (the future Henry IV). During her widowhood Empress Agnes wrote to Hugh in terms no less respectful and affectionate, asking him to pray for the

happy repose of her husband's soul and for the prosperous reign of her son. Reference has been already made to the letters sent to Hugh by Henry IV, who, notwithstanding his prolonged struggle to make the Church subservient to the imperial power, seems never to have lost his affection and profound respect for his saintly godfather. In recognition of the benefits derived from the Cluniac foundations, Ferdinand the Great of Castille and Leon (d. 1065) made his kingdom tributary to Cluny; his sons Sancho and Alfonso VI doubled the tribute, and the latter, in addition to introducing the Roman Ritual at Hugh's request, carried on a most affectionate correspondence with the abbot. In 1084 Hugh was chosen by the kings and princes of the various Christian kingdoms of Spain as arbiter to decide the question of succession. When Robert II of Burgundy refused to attend the Council of Autun (1065), at which his presence was necessary, Hugo was sent to summon the duke, and remonstrated with him so eloquently in the interests of peace that Robert accompanied the abbot unresistingly to the council, became reconciled with those who had put his son to death, and promised to respect thenceforth the property of the Church.

William the Conqueror of England, shortly after the Battle of Hastings (1066), made rich presents to Cluny and begged to be admitted a *confrater* of the abbey like the Spanish kings. He subsequently begged Hugh to send six monks to England to minister to the spiritual needs of the Court, and renewed his request in 1078, promising to appoint twelve of the Cluniac Congregation to bishoprics and abbaties within the kingdom. Hugh disabused his mind on the subject of ecclesiastical appointments, and, when founding a little later the Priorate of St. Pancras at Lewes, took every precaution to secure in the case of it and its dependent cloisters freedom of election and respect for canon law. How necessary this precaution was, the Investiture war, which broke out under William's sons, clearly indicated. The champion of the Church in this struggle, St. Anselm of Canterbury, was one of the many bishops who consulted Hugh in their difficulties and trials, and on three occasions—once during his exile from England—visited the abbot at Cluny.

For the monks under his care Hugh was a model of fatherly forethought, of devotion to discipline and prayer, and unhesitating obedience to the Holy See. In furtherance of the great objects of his order, the service of God and personal sanctification, he strove to impart the utmost possible splendour and solemnity to the liturgical services at Cluny. Some of his liturgical ordinances, such as the singing of the *Veni Creator* at *Terce* on Pentecost Sunday (subsequently also within the octave), have since been extended to the entire Roman Church. He began the magnificent church at Cluny—now unfortunately entirely disappeared—which was, until the erection of St. Peter's at Rome, the largest church in Christendom, and was esteemed the finest example of the Romanesque style in France. For the part played by Cluny in the evolution of this style and for its special school of sculpture, the reader must be referred to treatises on the history of architecture. Hugh gave the first impulse to the introduction of the strict cloister into the convents of nuns, prescribing it first for that of Marcigny, of which his sister became first prioress in 1061 (Cucherat, *op. cit. infra*), and where his mother also took the veil. Renowned for his charity towards the suffering poor, he built a hospital for lepers, where he himself performed the most menial duties. It is impossible to trace here the effect which his granting of personal and civic freedom to the bondsmen and colonists feudatory to Cluny, and the fostering of tradesmen's guilds—the nuclei from which most of the modern cities of Europe sprang—have had on civilization.

Although his favourite study was the Scriptures, St. Hugh encouraged science in every possible way, and

showed his deep interest in education by teaching in person in the school attached to the monastery. Notwithstanding the exceeding activity of his life he found time to carry on an extensive correspondence. Almost all his letters and his "Life of the Blessed Virgin", for whom as well as for the souls in purgatory he had a great devotion, have been lost. However, his extant letters and his "Sermon" in honour of the martyred Saint Marcellus are sufficient to show "how well he could write and with what skill he could speak to the heart" (*Hist. Lit. de la France*, IX, 479).

The sources for Hugh's biography are the *Vita* of RAINALD, HILDEBERT, the monk HUGO, GILO, and ANONYMUS PRIMUS and SECUNDUS. The *Vita* of Rainald and Anonymus Primus, together with a metrical *Synopsis* of the former also by Rainald are given in *Acta SS.*, III, Apr., 648-58; those of Hildebert, HUGO, and Anonymus Secundus in *Bibliotheca Cluniacensis*, ed. MARRIER AND DU CHESNE (Paris, 1614), 413-38; 447-62, 557-60. LEHMANN, *Forschungen zur Gesch. des Abtes Hugo I von Cluny* (Göttingen, 1869) is a careful consideration of the information contained in all the above *Vita* except that by Gillo. The *Vita* of GILO was first edited by L'HUILLIER, *Vie de St. Hugues* (Solesmes, 1888), probably the best biography yet written. For the Cluniac discipline see HERGOTT, *Vetus disciplina monastica* (Paris, 1726), 371 sqq., and P. L., CXLIX (Paris, 1882). The following works may also be consulted: DUCKETT, *Chartes and Records of Cluni* (Lewes, 1890); IDEM, *Record-Evidences among Archives of the Ancient Abbey of Cluni from 1077 to 1537* (Lewes, 1886), containing documents in connexion with the foundation of the order in England; MABILLON, *Annales O. S. B.*, III-V (Paris, 1703-38); SAINTE-MARTE, *Gallo Christ.*, IV (Paris, 1728), 1117; HÉLYOT, *Hist. des ordres religieux*, V (Paris, 1792); CHAMPLY, *Hist. de Cluny* (Mâcon, 1866); *Hist. Lit. de la France*, IX, 465 sqq.; HEIMBUCHER, *Die Orden u. Kongreg. der kath. Kirche*, I (Paderborn, 1896), 116 sqq.; BAUMER in *Kirchenlex.*, s. v.; BOURGAIN, *Chaire Française*, XII^e s. Gebiete im 11. Jahrhundert* (Wesel, 1870).

THOMAS KENNEDY.

Hugo, CHARLES-HYACINTHE, b. 20 Sept., 1667, at St. Mihiel (Department of Meuse, France); d. 2 August, 1739. He entered the Norbertine novitiate at Pont-à-Mousson, where he pronounced his vows on 28 Aug., 1685, receiving the name of Louis in religion. He went through his course of philosophy and theology at the Abbey of Jovillier, near Bar-le-Duc, and afterwards at the University of Bourges, where he graduated as Doctor of Theology in 1690 or 1691. Having taught theology in the Abbey of Jandeaures, and later in that of Etival in Lorraine, he was named prior of St. Joseph's at Nancy in 1700, where he remained until 1713, although in 1708 he had been elected coadjutor of the Abbey of Flabémont, then held in *commendam* by Nicholas Brisacier, doctor of the Sorbonne, a secular priest. On 12 August, 1710, Hugo was chosen coadjutor to Simeon Godin, Abbot of Etival (Stivagium), and the choice having been ratified by Clement XI, he was installed with the title of Abbot of Fontaine-André, a suppressed Norbertine abbey in Switzerland, by the Prince-Bishop of Basle, on 23 July, 1712. Ten years later Abbot Simeon resigned the direction of the abbey, and Hugo was unanimously elected in his place, 22 October, 1722. Though now at the head of one of the largest abbeys in Lorraine, Hugo found time to co-ordinate the numerous documents he had collected and the notes he had made with a view to the publication of three of his most important works, the "*Sacra antiquitatis monumenta*", the "*Annales Ordinis Præmonstratensis*", and the "*History of Lorraine*". In order to give his personal attention to their publication, he even favoured the erection of printing presses at Etival itself.

A regrettable conflict respecting the right of exemption which the Abbot of Etival claimed for his abbey arose at that time between the abbot and the Bishop of Toul. The cause was brought to Rome, where Cardinal Lercari, secretary of state, warmly upheld the contention of Hugo. In order to put an end to this lamentable incident Benedict XIII named

Hugo Bishop of Ptolemais *in partibus* in the consistory of 15 Dec., 1728.

Hugo had long planned to write a full and detailed history of the Norbertine Order, and in 1717 the general chapter of the order had encouraged him to carry out his plan by naming him historiographer of the order and by requesting all the abbots to give him all the information they possessed concerning their abbeyes. The first two volumes of the "Annales" had already been published and the third was in the hands of the royal censor when Hugo died.

That Hugo was a strenuous, learned, and conscientious worker may be judged from the number and the importance of the books he has published or prepared for publication. His style is elegant and harmonious, and, as Aug. Digot says with reference to the "History of Lorraine", it surpasses that of Dom Calmet, whose style is heavy and diffuse. In 1699 Hugo published a "Refutation of the system of Faydit on the Blessed Trinity"; it was a solid work, according to Paquot. He is also the author of some books on the Order of Canons Regular, one of which is favourably referred to by Benedict XIV; likewise of several dissertations on seals, coins, or medals, on persons and historical matters appertaining to the ducal house of Lorraine. On 17 March, 1708, he was made by Duke Leopold a member of his privy council and requested to write the history of Lorraine. Hugo set to work with his usual energy and the work was ready in 1713, but Leopold, fearing that, owing to Hugo's previous writings, this history might too much displease the royal house of France, asked Dom Calmet, Abbot of Senones, to write the history instead of Hugo. Hugo's "Vie de St. Norbert, fondateur des Prémontrés" (Luxembourg, 1704) is remarkable for the elegance of its style and the important documents it contains. His two monumental works are: (1) "Sacrae antiquitatis monumenta historica, dogmatica, diplomatica, notis illustrata", in two volumes. The first volume was published in 1725; the second, after Hugo's death, in 1744; (2) "Sacri et Canonici Ordinis Præmonstratensis Annales", in two volumes, giving in alphabetical order the history of each abbey. There are two more volumes of *probationes*, such as charters, etc., respecting each abbey. The third volume, with the title "Annales Ordinis Præmonstratensis Sæculum Primum (1120-1220)", which was to be followed by four more volumes, was ready for the press when Hugo died. After Hugo's death the Abbey of Etival was given *in commendam* to the Bishop of Toul, and for one reason or another the third volume has, unfortunately, never been printed. Hugo's manuscripts, forming eighteen volumes in folio, each of from 500 to 600 pages, are now preserved in the seminary of Nancy. They are fully described by M. Vacant, professor at the seminary, in "La Bibliothèque du Grand Séminaire de Nancy" (1897).

Works of Hugo, *passim*; preface to *Annales*; GOOVAERTS, *Dictionnaire Bio-bibliographique des Ecrivains, Artistes et Savants de l'Ordre de Prémontré* (Brussels), III, 110-29. Goovaerts gives the best and fullest description of Hugo's books and MSS. Digot, *Charles Louis Hugo in Mémoires de la Société Royale des Sciences etc. de Nancy* (1842), 99-169; also reprinted; LIENHART in *Spiritus Literarius Norbertinus*, s. v. (Augsburg, 1771); KESSEL in *Kirchenlex.*, s. v. *Hugo, Ludwig Karl*.

F. M. GEUDENS.

Hugo Etherianus. See ETHERIANUS.

Huguccio (HUGH OF PISA), Italian canonist, b. at Pisa, date unknown; d. in 1210. He studied at Bologna, probably under Gandolphus, and taught canon law in the same city, perhaps in the school connected with the monastery of SS. Nabore e Felice. In 1190 he became Bishop of Ferrara. Among his pupils was Lothario de' Conti, afterwards Innocent III, who held him in high esteem as is shown by the important cases which the pontiff submitted to him, traces of which still remain in the "Corpus Juris" (c. *Coram*, 34, X, I, 29). Two letters addressed by Innocent III to

Huguccio were inserted in the Decretals of Gregory IX (c. *Quanto*, 7, X, IV, 19; c. *In quâdam*, 8, X, III, 41). Besides a book, "Liber derivationum", dealing with etymologies, he wrote a "Summa" on the "Decretum" of Gratian, concluded according to some in 1187, according to others after 1190, the most extensive and perhaps the most authoritative commentary of that time. He omits, however, in the commentary on the second part of the "Decretum" of Gratian, *Causæ* xxiii-xxvi, a gap which was filled by Joannes de Deo.

SARTI, *De claris archigymnasii Bononiensis professoribus*, I (Bologna, 1896), 353 sq.; SCHULTE, *Geschichte der Quellen und Literatur des canonischen Rechts* (Stuttgart, 1875-80) I, 156-70; GILLMANN, *Paucapalea und Paleæ bei Huguccio in Archiv für katholisches Kirchenrecht*, LXXXVIII (Mainz, 1908), 466-79.

A. VAN HOVE.

Huguenots, a name by which the French Protestants are often designated. Its etymology is uncertain. According to some the word is a popular corruption of the German *Eidgenossen* (conspirators, confederates), which was used at Geneva to designate the champions of liberty and of union with the Swiss Confederation, as distinguished from those who were in favour of submission to the Duke of Savoy. The close connexion of the Protestants with Geneva, in the time of Calvin, might have caused this name to be given to them a little before the year 1550 under the form *eigenots* (or *aignots*), which became *huguenots* under the influence of *Hugues*, Bezanson Hugues being one of their chiefs. Others have maintained that the word was first used at Tours and was applied to the early Lutherans, because they were wont to assemble near the gate named after Hugon, a Count of Tours in ancient times, who had left a record of evil deeds and had become in popular fancy a sort of sinister and maleficent genius. This name the people applied in hatred and derision to those who were elsewhere called Lutherans, and from Touraine it spread throughout France. This derivation would account for the form *Hugonots*, which is found in the correspondence of the Venetian ambassadors and in the documents of the Vatican archives, and for that of *Huguenots*, which eventually prevailed in the usage of Catholics, conveying a slight shade of contempt or hostility, which accounts for its complete exclusion from official documents of Church and State. Those to whom it was applied called themselves the *Réformés* (Reformed); the official documents from the end of the sixteenth century to the Revolution usually call them the *prétendus réformés* (pseudo-reformed). Since the eighteenth century they have been commonly designated "French Protestants", the title being suggested by their German co-religionists, or *Calvinists*, as being disciples of Calvin.

ORIGIN.—French Protestantism received from Calvin its first organization and the form which has since become traditional; but to Luther it owed the impulse which gave it birth. That the ideas of these two Reformers were to a certain degree successful in France was due in that country, as elsewhere, to the prevailing mental attitude. The Great Western Schism, the progress of Gallican ideas, the Pragmatic Sanction of Bourges, and the war of Louis XII against Julius II had considerably weakened the prestige and authority of the papacy. The French clergy, owing to the conduct of many of its members, inspired but little respect. After the Pragmatic Sanction (1438) the episcopal sees became the object of ceaseless rivalry and contention, while too many of the bishops ignored their obligation of residence. In spite of some attempts at reform, the regular clergy languished in inactivity, ignorance, and relaxation of discipline, and all their attendant imperfections. The humanism of the Renaissance had created a distaste for the verbose, formalistic scholasticism, still dominant in the schools, and had turned men back to the

cult of pagan antiquity, to naturalism, and in some cases to unbelief. Other minds, it is true, were led by the Renaissance itself to the study of Christian antiquity, but, under the influence of the mysticism which had shortly before this become current as a reaction from the system of the schools and the philosophy of the *litterati*, they ended by exaggerating the power of faith and the authority of Holy Scripture. It was this class of thinkers, affected at once by humanism and mysticism, that took the initiative, more or less consciously, in the reform for which public opinion clamoured.

Their first leader was Lefèvre d'Étaples (q. v.), who, after devoting his early life to the teaching of philosophy and mathematics, became when nearly sixty years old an exegete and the editor of French translations of the Bible. In the preface to his "Quincuplex Psalterium", published in 1509, and in that to his commentary on the Epistles of St. Paul, published in 1512, he ascribes to Scripture an almost exclusive authority in matters of religion, and preaches justification by faith even to the point of counting good works as naught. Furthermore, he sees in the Mass only a commemoration of the one Sacrifice of the Cross. In 1522 he published a Latin commentary on the Gospels, the preface to which may be regarded as the first manifesto of the Reformation in France. Chlitolé, Farel, Gérard Roussel, Cop, Etienne Poncher, Michel d'Arande rallied around him as his disciples. Briçonnet, Bishop of Meaux, constituted himself their protector against the Sorbonne, and called them to preach in his diocese. None of these men, however, intended to carry their innovations to the point of breaking with the Church; they meant to remain within it; they accepted and they sought its dignities. Lefèvre became Vicar-General to Briçonnet; Gérard Roussel was made a canon of Meaux, then by papal appointment Abbot of Clairac, and eventually Bishop of Oloron; Michel d'Arande became Bishop of Saint-Paul-Trois-Châteaux (*Tricastrensis*). Their aim, for the time being, was only to "preach the pure gospel", and thereby lead the people back to the genuine religion of Christ, which, as they said, had been corrupted by the superstitions of Rome. They were powerfully aided in their undertaking by Margaret, Queen of Navarre, who favoured both them and their ideas; she was their advocate with her brother Francis I, and, when necessary, their protectress against the Sorbonne.

This learned body soon began to feel concern at the progress of the new ideas. Its syndic, Bêda, was a man of narrow mind, of violent and sometimes ill-timed zeal, but of profound convictions, clear insight, and undeniably disinterested aims. Under his guidance the Sorbonne, aided only by the Parliament, took the lead in the struggle with heresy, while the king hesitated between the parties or changed his attitude according to his political interests. Since 1520 the writings of Luther had been spreading in France, at least among the educated, and his books were selling in Paris by hundreds. On 15 April, 1521, the faculty of theology formally condemned Luther's doctrines. Stimulated by this faculty and armed by the pope with special powers for the suppression of heresy, the Parliament of Paris was preparing vigorous measures against Lefèvre d'Étaples, but the king interfered. When Francis I was imprisoned at Madrid, the Parliament, on which the queen-regent placed no restraint, inaugurated in 1523 sanguinary measures of repression; not a year passed but some heretic was arrested and scourged or burned. The most famous of the victims in these early times was Louis de Berquin, a nobleman of Artois and a friend and councillor of the king; several Lutheran writings were found in his possession. At this energetic action of the Parliament the Meaux group took fright and scattered. Briçonnet retracted and wrote pastorals against

Luther. Lefèvre and Roussel escaped to Strasburg or to the dominions of the Queen of Navarre. Chlitolé wrote against Luther, Farel rejoined Zwingli in Switzerland. But all this time Lutheranism continued to spread in France, disseminated chiefly by the students and professors from Germany. Again and again the king complained in his edicts of the spread of heresy in his kingdom. Since 1530 there had existed at Paris a vigorous group of heretics, recruited principally from the literary men and the lower classes, and numbering from 300 to 400 persons. Some others were to be found in the Universities of Orléans and Bourges; in the Duchy of Alençon, where Margaret of Navarre, the suzerain, gave them licence to preach, and whence the heresy spread in Normandy; at Lyons, where the Reformation made an early appearance owing to the advent of foreigners from Switzerland and Germany; and at Toulouse, where the Parliament caused the arrest of several suspects and the burning of John of Cahors, a professor in the faculty of law.

After condemning the works of Margaret of Navarre, who was inspired with the new ideas, the Sorbonne witnessed the banishment of Bêda and the appointment of Cop to the rectorship of the University of Paris, although he was already suspected of sympathizing with Lutheranism. At the opening of the academic year, 1 November, 1533, he delivered an address filled with the new ideas. This address had been prepared for him by a young student then scarcely known, whose influence however upon the French Reformation was to be considerable; this was John Calvin (q. v.). Born in 1509 at Noyon in Picardy, where his father was secretary of the bishopric and *promoteur* to the chapter (an ecclesiastical office analogous to the civil office of public prosecutor), he obtained his first ecclesiastical benefice there in 1521. Two years later he went to study at Paris, then to Orléans (1528) and to Bourges for the study of law. At Bourges he became acquainted with several Lutherans—among others his future friend Melchior Wolmar, professor of Greek. His cousin Olivétan had already initiated him into their ideas; some of these he had adopted, and he introduced them into Cop's rectorial discourse. This address called forth repressive measures against the two friends. Cop fled to Switzerland, Calvin to Saintonge. The latter soon broke with Catholicism, surrendered his benefices, for which he received compensation, and towards the end of 1534 betook himself to Basle in consequence of the affair of the "placards"—i. e. the violent manifestos against the Mass which, by the contrivance of the Lutherans, had been placarded in Paris (18 October, 1534), in the provinces, and even on the door of the king's apartments. Francis I, who until then had been divided between his will to meet the wishes of the pope and the expediency of winning to himself the support of the Lutheran princes of Germany against Charles V, made up his mind to defer on this occasion to the demands of the exasperated Catholics. In the January following he took part in a solemn procession during the course of which six heretics were burned; he let the Parliament arrest seventy-four of them at Meaux, of whom eighteen were also burned; he himself ordered by edict the extermination of the heretics and of those who should harbour them, and promised rewards to those who should inform against them. But before the end of the year the king reversed his policy and thought of inviting Melancthon to Paris. It was at this juncture that Calvin entered upon his great rôle of leader of French Protestantism by writing his "Institutio Christianæ Religionis" (Institutes of the Christian Religion), the preface to which, dated 23 August, 1535, took the form of a letter addressed to Francis I. It was published in Latin (March, 1536), and was at once an apology, a confession of faith, and a rallying signal

for the partisans of the new ideas, who were no longer Catholics and were hesitating in their choice between Luther, Zwingli, and the other chiefs of the Reformation. Calvin became famous; many Frenchmen flocked to him at Geneva, where he went to reside in 1536, making that city the home of the Reformation. Thence his disciples returned to their own country to spread his writings and his ideas, and to rally old partisans or recruit new ones. Alarmed at their progress, Francis I, who had just concluded a treaty with the pope (June, 1538), thenceforward took a decidedly hostile attitude towards Protestantism, and maintained it until his death (31 March, 1547). In 1539 and 1540 the old edicts of toleration were replaced by others which invested the tribunals and the magistrates with inquisitorial powers against the heretics and those who shielded them. At the instance of the king the Sorbonne drew up first a formula of faith in twenty-six articles, and then an index of prohibited books, in which the works of Dolet, Luther, Melancthon, and Calvin appeared; the parliaments received orders to prosecute anyone who should preach a doctrine contrary to these articles, or circulate any of the books enumerated in the index. This unanimity of king, Sorbonne, and Parliament, it may be said, was what prevented the Reformation from gaining in France the easy success which it won in Germany and England. The magistrates were everywhere extremely zealous in enforcing the repressive edicts. At Paris, Toulouse, Grenoble, Rouen, Bordeaux, and Angers, numbers of heretics and hawkers of prohibited books were sent to the stake. At Aix the Parliament passed a decree ordering a general massacre of the descendants of the Waldenses grouped around Mérindol and de Cabrières, its enforcement to be suspended for five months to give them time for conversion. After withholding his consent to this decree for five years the king allowed an authorization for its execution to be wrung from him, and about eight hundred Waldenses were massacred—an odious deed which Francis I regretted bitterly until his death. His successor, Henry II, vigorously maintained the struggle against Protestantism. In 1547 a commission—the famous *Chambre Ardente*—was created in the Parliament of Paris for the special purpose of trying heretics; then in June, 1551, the Châteaubriant Edict codified all the measures which had previously been enacted for the defence of the Faith. This legislation was enforced by the parliaments in all its rigour. It resulted in the execution of many Protestants at Paris, Bordeaux, Lyons, Rouen, and Chambéry, and drove the rest to exasperation. The Protestants were aided by a certain number of apostate priests and monks, by preachers from Geneva and Strasburg, by schoolmasters who disseminated the literature of the sect; they were favoured at times by bishops—such as those of Chartres, of Uzès, of Nîmes, of Troyes, of Valence, of Orlon, of Lescar, of Aix, of Montauban, of Beauvais; they were supported and guided by Calvin, who from Geneva—where he was persecuting his adversaries (e. g. Cartellion), or having them burnt (e. g. Servetus)—kept up an active correspondence with his party. With these helps the Reformers penetrated little by little into every part of France. Between 1547 and 1555 some of their circles began to organize themselves into churches at Rouen, Troyes, and elsewhere, but it was at Paris that the first Reformed church was definitely organized in 1555. Others followed—at Meaux, Poitiers, Lyons, Angers, Orléans, Bourges, and La Rochelle. All of these took as their model that of Geneva, which Calvin governed; for from him proceeded the impulse which stimulated them, the faith that inspired them; from him, too, came nearly all the ministers, who put the churches into communication with that of Geneva and its supreme head. It lacked only a confession of faith to ensure the union of the churches

and uniformity of belief. In 1559 there was held at Paris the first national synod, composed of ministers and elders assembled from all parts of France; it formulated a confession of faith, drawing inspiration from the writings of Calvin.

CREED AND INSTITUTIONS.—From this moment the French Reformation was established; it had its creed, its discipline, its organization. Of the forty articles of its creed those alone are of interest here which embody the beliefs peculiar to the Huguenots. According to these, Scripture is the rule of faith, and contains all that is necessary for the service of God and our salvation. The canonical books of which it is formed (all those in the Catholic canon except Tobias, Judith, Wisdom, Ecclesiasticus, Baruch, and Machabees) are recognized as such not by the common consent of the Churches, but by the internal testimony and persuasion of the Holy Spirit, Who causes us to discern them from other ecclesiastical books. The three symbols of the Apostles, of Nicæa, and of St. Athanasius are received as conformable to Holy Scripture.

Man fallen through sin has lost his moral integrity; his nature is utterly corrupt, and his will captive to sin. From this general corruption and condemnation only those are rescued whom God has elected of His pure bounty and mercy in Jesus Christ without consideration of their works, leaving the others under the said condemnation in order that in them His justice may be manifested. We are reconciled with God by the one sacrifice which Jesus Christ offered on the Cross, and our justice consists entirely in the remission of our sins assured to us by the imputation of the merits of Christ. Faith alone makes us sharers in this justice, and this faith is imparted to us by the hidden grace of the Holy Spirit; it is bestowed, not once for all merely to set us upon the way, but to bring us to the goal; the good deeds done by us do not enter into the reckoning as affecting our justification. The intercession of the saints, purgatory, oral confession, the Sacrifice of the Mass, and indulgences are human inventions. The institution of the Church is Divine; it cannot exist without pastors authorized to teach; no one should live apart from it. The true Church is the society of the faithful who agree to follow the word of God and the pure religion which is based thereon. It ought to be governed, in obedience to the ordinance of Christ, by pastors, guardians, and deacons. All true pastors have the same authority and equal power. Their first duty is to preach the Word of God; their second to administer the sacraments. The sacraments are outward signs and assured pledges of the grace of God. There are only two: Baptism and the Supper, in which, by the hidden and incomprehensible power of His Spirit, Jesus Christ, though He is in Heaven, spiritually nourishes and vivifies us. In Baptism, as in the Supper, God gives us that which the sacrament signifies. It is God's will that the world be governed by laws and constitutions; He has established the various governments; these therefore must be obeyed.

This profession of faith, the elements of which are borrowed from Calvin's "Institutio Christianæ Religionis", evidently takes for its basis Luther's principal doctrines, which are however here more methodically expounded and more rigorously deduced. The Huguenots added to the Lutheran theories only the belief in absolute predestination and in the certainty of salvation by reason of the inamissibility of grace. They also deviated from Lutheranism in the organization of their church (which is not, as with Luther, absorbed in the State) and in their conception—obscure enough indeed—of the sacraments, in which they see more than the empty and inefficacious signs of the Sacramentarians, and less than ceremonies conferring grace, the Lutheran conception of a sacrament.

The discipline established by the Synod of 1559 was also contained in forty articles, to which others

were very soon added. The primary organization with its successive developments may be reduced substantially to this: Wherever a sufficient number of the faithful were found, they were to organize in the form of a Church, i. e. appoint a consistory, call a minister, establish the regular celebration of the sacraments and the practice of discipline. A church provided with all the elements of organization was an *église dressée*: one which had only a part of these requisites was an *église plantée*. The former had one or more pastors, with elders and deacons, who composed the consistory. This consistory was in the first instance elected by the common voice of the people; after that, it co-opted its own members; but these had to receive the approbation of the people. Pastors were elected by the provincial synod or the conference after an inquiry into their lives and beliefs, and a profession of faith; imposition of hands followed. The people were notified of the election, and the newly elected pastor preached before the congregation on three consecutive Sundays; the silence of the people was taken as an expression of consent. The elders, elected by those members of the Church who were admitted to the Supper, were charged with the duty of watching over the flock, jointly with the pastor, and of paying attention to all that concerned ecclesiastical order and government. The deacons were elected like the elders; it was their office to administer, under the consistory, the alms collected for the poor, to visit the sick, those in prison, and so on.

A certain number of churches went to form a conference. The conferences assembled at least twice a year. Each church was represented by a pastor and an elder; the function of the conference was to settle such differences as might arise among church officers, and to provide generally for all that might be deemed necessary for the maintenance and the common good of those within their jurisdiction. Over the conferences were the provincial synods, which were in like manner composed of a pastor and one or two elders from each church chosen by the consistory, and met at least once a year. The number of these provincial synods in the whole of France was at times fifteen, at other times sixteen. Doctrines, discipline, schools, the appointment of pastors, erection and delimitation of parishes fell within their jurisdiction. At the head of the hierarchy stood the national synod, which, in so far as possible, was to meet once a year. (As a matter of fact, there were only twenty-nine between 1559 and 1660—on an average, one every three years and a half). It was made up of two ministers and two elders sent by each provincial synod, and, when fully attended, it had (sixty or) sixty-four members. To the national synod it belonged to pronounce definitively upon all important matters, internal or external, disciplinary or political, which concerned religion.

The complement of these various institutions was the translation of the Bible into the vernacular. In 1528 Lefèvre d'Étaples had already completed a translation from the Vulgate, making use of Jean de Roly's already existing translation, but suppressing the glosses. His translation was improved by going back to the original texts in the four editions which appeared successively before the year 1541. But the first really Huguenot version was that of Olivetan, a relation of Calvin's. It was called the "Bible de Sevières"—the Sevières Bible—from the locality where it was printed. For the protocanonical books of the Old Testament it goes to the Hebrew; for the deuterocanonical, it is in many places content with a revision of Lefèvre's text. Its New Testament is translated from the Greek. Calvin composed its preface. In 1540 there appeared an edition of it revised and corrected by the pastors of Geneva. Again there appeared at Geneva, in 1545, another edition in which Calvin had a hand. A more thorough re-

vision marks the editions of 1553, 1561, and 1563, the last two with notes taken from Calvin's commentaries. Finally, Olivetan's text, more or less revised or renewed by Martin and Osterwald, became the permanent basis of the Bibles in use among French Protestants.

It was from Calvin, too, and from his book "*La forme des prières et des chants ecclésiastiques*" (1542), that the Huguenot liturgy was taken. Like Luther's, it embraces the suppression of the Mass, the idea of salvation by faith, the negation of merit in any works, even in Divine worship, the proscription of relics and of the intercession of saints; it attaches great importance to the preaching of God's word and the use of the vernacular only. But the breach with Catholicism is much wider than in the case of Luther. Under pretext of returning to the earliest ecclesiastical usage, Calvin and the French Protestants who followed him reduced the whole liturgy to three elements: public prayers, preaching, and the administration of the sacraments. In the Divine service for Sunday prayers were either recited or chanted. At the beginning there was the public confession and absolution, the chanting of the Ten Commandments or of psalms, then a prayer offered by the minister, followed by the sermon and a long prayer for princes, for the Church and its pastors, for men in general, the poor, the sick, and so on. Besides these, there were special prayers for baptism, marriage, and the Supper, which last was under certain circumstances added to the Divine service.

HISTORY.—(1) *Militant Period.*—The history of French Protestantism may be divided into four well-defined periods: (1) A Militant Period, in which it is struggling for freedom (1559–98); (2) the Period of the Edict of Nantes (1598–1685); (3) the Period from the Revocation to the Revolution (1685–1800); (4) the Period from the Revolution to the Separation (1801–1905). The organization of their discipline and worship gave the Huguenots a new power of expansion. Little by little they penetrated into the ranks of the nobility. One of the principal families of the kingdom, the Coligny, allied to the Montmorency, furnished them their most distinguished recruits in d'Andelot, Admiral Coligny, and Cardinal Odet de Chatillon. Soon the Queen of Navarre, Jeanne d'Albret, daughter of Margaret of Navarre, professed Calvinism and introduced it into her dominions by force. Her husband, Antoine de Bourbon, the first prince of the blood, appeared at times to have gone over to the Huguenots with his brother the Prince de Condé, who, for his part, never wavered in his allegiance to the new sect. Even the Parliament of Paris, which had so energetically carried on the struggle against the heresy, allowed itself to become tainted, many of its members embracing the new doctrine. It was necessary to deal severely with these; many were imprisoned, Antoine du Bourg among others. But at this point Henry II died, leaving the throne to a delicate child of sixteen. Nothing could have been more advantageous for the Huguenots. Just at that time they formed a numerous group in almost every district of France. Certain provinces, such as Normandy, contained as many as 5000 of them; one day 6000 persons at the Pré-aux-clercs, in Paris, sang the Psalms of Marot which the Huguenots had adopted; Basse-Guyenne, it was said, had seventy-six organized churches. Two years later, Bordeaux counted 7000 of the Reformed; Rouen, 10,000; mention is made of 20,000 at Toulouse, and the Prince de Condé presented a list of 2050 churches—which, it is true, cannot be identified. The papal nuncio wrote to Rome that the kingdom was more than half Huguenot; this was assuredly an exaggeration, for the Venetian ambassador estimated the district contaminated with this error at not the one-tenth part of France; nevertheless it is evident that the Huguenots could no longer

be regarded as a few scattered handfuls of individuals, whose case could be satisfactorily dealt with by a few judicial prosecutions. Organized into churches linked together by synods, reinforced by the support of great lords of whom some had access to the councils of the Crown, the Calvinists thenceforward constituted a political power which exerted its activity in national affairs and had a history of its own.

After the accession of Francis II, and through the influence of the Guises, who were all-powerful with the king and strongly devoted to Catholicism, the edicts against the Huguenots were rendered still more severe. Antoine du Bourg was burned, and a royal edict (4 September, 1559) commanded that houses in which unlawful assemblies were held should be razed and the organizers of such assemblies punished with death. Embittered by these measures, the Huguenots took advantage of every cause for discontent afforded by the government of the Guises. After taking counsel with their theologians at Strasburg and Geneva, they resolved to have recourse to arms. A plot was formed, the real leader of which was the Prince de Condé, though its organization was entrusted to the Sieur de la Renaudie, a nobleman of Périgord, who had been convicted of forgery by the Parliament of Dijon, had fled to Geneva, and had there become an ardent Calvinist. He visited Geneva and England, and scoured the provinces of France to recruit soldiers and bring them together about the Court—for the plan was to capture the Guises without, as the conspirators said, laying hands on the king's person. While the Court in order to disarm Huguenot hostility was ordering its agents to desist from prosecutions, and proclaiming a general amnesty from which only preachers and conspirators were excepted, the Guises were warned of the plot being hatched, and thus enabled to stifle the revolt in the blood of the conspirators who were assembling in bands about Amboise, where the king was lodged (19 March, 1560). The resentment aroused by the severity of this repression and the appointment as chancellor of Michel de L'Hôpital, a magistrate of great moderation, soon led to the adoption of less violent counsels; the Edict of Romorantin (May, 1560) softened the lot of the Protestants, who had as their advocates before the "Assembly of Notables" (August, 1560) the Prince de Condé, the chancellor L'Hôpital, and the Bishops of Valence and Vienne.

The accession of Charles IX, a minor (December, 1560), brought into power, as queen regent, his mother Catharine de' Medici. This was fortunate for the Huguenots. Almost indifferent to questions of doctrine the ambitious regent made no scruple of granting any degree of toleration, provided she might enjoy her power in peace. She allowed the Condé and the Coligny to practise the reformed religion at court, and even summoned to preach there Jean de Mouluc, Bishop of Valence, a Calvinist scarcely concealed by his mitre. At the same time she ordered the Parliament of Paris to suspend the prosecutions, and authorized Huguenot worship outside of the cities until such time as a national council should have pronounced on the matter. An edict promulgated in the month of April, while prohibiting religious manifestations, set at liberty those who had been imprisoned on religious grounds. In vain did the Parliament of Paris try to suspend the publication of this edict; a judiciary commission composed of princes, high officers of the Crown, and members of the Royal Council, granted the Huguenots amnesty on the sole condition that they should in future live like Catholics. In the hope of bringing about a reconciliation between the two religions Catharine assembled Catholic prelates and Huguenot ministers at the Conference of Poissy. For the latter Théodore de Bèze spoke; for the former, the Cardinal of Lorraine. Each party claimed the victory. In con-

clusion the king forbade the Huguenots to hold ecclesiastical property, and the Catholics to interfere with Huguenot worship. In January, 1562, the Huguenots were authorized to hold their assemblies outside of the towns, but had to restore all property taken from the clergy, and abstain from tumults and unlawful gatherings. This edict, however, only exasperated the rival factions; at Paris it occasioned disturbances which obliged Catharine and the Court to flee. The Duke of Guise, on his way from Lorraine to rejoin the queen, found at Vassy in Champagne some six or seven hundred Huguenots holding religious worship (1 March, 1562), which according to the Edict of January they had no right to do, Vassy being a fortified town. Their singing soon interfered with the Mass at which the Duke of Guise was assisting. Mutual provocations ensued, a quarrel broke out, and blood was shed. Twenty-three Huguenots were slain and more than a hundred wounded.

Forthwith, at the call of the Prince de Condé, there began the first of the civil wars called the "wars of religion". The Huguenots rose, as they said, to enforce respect for the Edict of January, which the Duke of Guise was trampling under foot. Everywhere the mutual animosities found vent in acts of violence. Huguenots were massacred in one place, monks and religious in another. Wherever the insurgents gained the mastery, churches were sacked, statues and crosses mutilated, sacred utensils profaned in sacrilegious burlesques, the relics of saints cast into the flames. The most serious encounters took place at Orléans, where the Duke of Guise was treacherously assassinated by a Huguenot. The assassin Poltrot de Méré declared that he had been urged on by Bèze and Coligny. Finally, although Condé and Coligny had not been ashamed to purchase support from Queen Elizabeth of England by delivering Havre over to her, the victory remained with the Catholics. Peace was established by the Edict of Amboise (19 March, 1563), which left the Huguenots freedom of worship in one town out of each bailiwick (*bailliage*) and in the castles of lords who exercised the power of life and death (*haute justice*). Four years later there was another civil war which lasted six months and ended in the Peace of Longjumeau (23 March, 1568), re-establishing the Edict of Amboise. Five months later hostilities recommenced. Condé occupied La Rochelle, but he was killed at Jarnac, and Coligny, who succeeded to his command, was defeated at Moncontour. Peace was made in the following year, and the Edict of Saint-Germain (8 April, 1570) granted the Huguenots freedom of worship wherever their worship had been carried on before the war, besides leaving in their hands the four following refuges—La Rochelle, Montauban, La Charité, and Cognac.

On his return to Court, Coligny found great favour with the king and laboured to win his support for the revolted Netherlands. The marriage of Henry, King of Navarre, with the king's sister, Margaret of Valois, soon after this brought all the Huguenot lords to Paris. Catharine de' Medici, jealous of Coligny's influence with the king, and it may be in collusion with the Duke of Guise who had his father's death to avenge on the admiral, plotted the death of the latter. But the attempt failed; Coligny was only wounded. Catharine, fearing reprisals from the Huguenots, suddenly won over the king and his council to the idea of putting to death the Huguenot leaders assembled in Paris. Thus occurred the odious Massacre of St. Bartholomew, so called from the saint whose feast fell on the same day (24 August, 1572), Admiral Coligny being slain with many of his Huguenot followers. The massacre spread to many provincial towns. The number of victims is estimated at 2000 for the capital, and 6000 to 8000 for the rest of France. The king explained to foreign courts that

Coligny and his partisans had organized a plot against his person and authority, and that he (the king) had merely suppressed it. Thus it was that Pope Gregory XIII at first believed in a conspiracy of the Huguenots, and, persuaded that the king had but defended himself against these heretics, held a service of thanksgiving for the repression of the conspiracy, and commemorated it by having a medal struck, which he sent with his felicitations to Charles IX. There is no proof that the Catholic clergy were in the slightest degree connected with the massacre. Cries of horror and malediction arose from the Huguenot ranks; their writers made France and the countries beyond its borders echo with those cries by means of pamphlets in which, for the first time, they attacked the absolute power, or even the very institution of royalty. After St. Bartholomew's the Huguenots, though bereft of their leaders, rushed to arms. This was the fourth civil war, and centred about a few fortified towns, such as La Rochelle, Montauban, and Nîmes. The Edict of Boulogne (25 June, 1573) put an end to it, granting to all Huguenots amnesty for the past and liberty of worship in those three towns. It was felt that the rising power of the Huguenots was broken—that from this juncture forward they would never again be able to sustain a conflict except by allying themselves with political malcontents. They themselves were conscious of this; they gave themselves a political organization which facilitated the mobilization of all their forces. In their synods held from 1573 to 1588 they organized France into *généralités*, placing at the head of each a general, with a permanent council and periodical assemblies. The delegates of these *généralités* were to form the States-General of the Union, which were to meet every three months. Special committees were created for the recruiting of the army, the management of the finances, and the administration of justice. Over the whole organization a "protector of the churches" was appointed, who was the chief of the party. Condé held this title from 1574; Henry of Navarre after 1576. It was, so to say, a permanently organized revolt. In 1574 hostilities recommenced; the Huguenots and the malcontents joined forces against impotent royalty until they wrested from Henry, the successor of Charles IX (30 May, 1574), by the Edict of Beaulieu (May, 1576) the right of public worship for the religion, thenceforth officially called the *prétendue réformée*, throughout France, except at Paris and the Court. There were also to be established chambers composed of equal numbers of Catholics and Huguenots in eight Parliaments; eight *places de sûreté* were to be given to the Huguenots; there was to be a disclaimer of the Massacre of St. Bartholomew, and the families which had suffered from it were to be reinstated. These large concessions to the Huguenots and the approbation given to their political organization led to the formation of the League, which was organized by Catholics anxious to defend their religion. The States-General of Blois (December, 1576) declared itself against the Edict of Beaulieu. Thereupon the Protestants took up arms under the leadership of Henry of Navarre, who, escaping from the Court, had returned to the Calvinism which he had abjured at the time of the Massacre of St. Bartholomew. The advantage was on the Catholic side, thanks to some successes achieved by the Duke of Anjou, the king's brother. The Peace of Bergerac, confirmed by the Edict of Poitiers (September, 1577), left the Huguenots the free exercise of their religion only in the suburbs of one town in each bailiwick (*bailliage*), and in those places where it had been practised before the outbreak of hostilities and which they occupied at the current date.

The national synods, which served to fill up the intervals between armed struggles, give us a glimpse

into the forces at work in the interior life of the Huguenot party. The complaints made at their synods show clearly that the fervour of their early days had disappeared; laxity and dissensions were finding their way into their ranks, and at times pastors and their flocks were at variance. It was necessary to forbid pastors to publish anything touching religious controversies or political affairs without the express approval of their conferences, and the consistories were asked (1581) to stem the ever-widening wave of dissolution which threatened their church. A Venetian ambassador writes at this period that the number of Huguenots had decreased by seventy per cent. But the death of the Duke of Anjou on 10 June, 1584, the sole surviving heir of the direct line of the Valois, revived their hopes, since the King of Navarre thus became heir presumptive to the throne. The prospect thus opened aroused the League; it called upon Henry III to interdict Huguenot worship everywhere, and to declare the heretics incapable of holding any benefices or public offices—and consequently the King of Navarre incapable of succeeding to the throne. By the Convention of Nemours (7 July, 1585) the king accepted these conditions; he revoked all previous edicts of pacification, ordered the ministers to leave the kingdom immediately and the other Huguenots within six months, unless they chose to be converted. This edict, it was said, sent more Huguenots to Mass than St. Bartholomew's had, and resulted in the disappearance of all their churches north of the Loire; it was therefore impossible for them to profit by the hostilities which broke out between the king and the Guises, and resulted in the assassination of the Guises at the States-General of Blois (23 December, 1588) and the death of Henry III at the siege of the revolted city of Paris (1 August, 1589). Henry of Navarre succeeded as Henry IV, after promising the Royalist Catholics who had joined him that he would seek guidance and instruction from a council to be held within six months, or sooner if possible, and that in the meantime he would maintain the exclusive practice of the Catholic religion in all those places where the Huguenot religion was not actually being practised. Circumstances prevented him from keeping his word. The League held Paris and the principal towns of France, and he was forced into a long struggle against it, in which he was enabled to secure victory only after his conversion to Catholicism (July, 1593), and, above all, after his reconciliation with the pope (September, 1595). The Huguenots had meanwhile been able to obtain from him only the measure of tolerance guaranteed by the Edict of Poitiers; they had profited by this to reopen at Montauban (June, 1594) the synods which had been interrupted for eleven years. They soon completed their political organization in the Assemblies of Saumur and Loudun, they extended it to the whole of France and claimed to treat with the king as equal with equal, bargaining with him for their help against the Spaniards, refusing him their contingents at the siege of Amiens, withdrawing them in the midst of a campaign during the siege of La Fère. Thus they brought the king, who was besides anxious to end the civil war, to grant them the Edict of Nantes (April-May, 1598).

(2) *Under the Edict of Nantes.*—This edict, containing 93 public and 36 secret articles, provided in the first place that the Catholic religion should be re-established wherever it had been suppressed, together with all the property and rights previously enjoyed by the clergy. The Huguenots obtained the free exercise of their religious worship in all places where it actually existed, as also in two localities in every bailiwick (*bailliage*), in castles of lords possessing the right of life and death, and even in those of the ordinary nobles in which the number of the faithful did not exceed thirty. They were eligible for all

public offices, for admission to colleges and academies, could hold synods and even political meetings; they received 45,000 crowns annually for expenses of worship and support of schools; they were given in the Parliament of Paris a tribunal in which their representatives constituted one-third of the members, while in those of Grenoble, Bordeaux, and Toulouse special chambers were created, half of whose members were Huguenot. One hundred *places de sûreté* were ceded to them for eight years, and, while the king paid the garrison of these fortresses, he named the governors only with the assent of the churches. If many of these provisions are nowadays recognized by common law, some on the other hand would seem incompatible with orderly government. This condition of benevolent and explicit tolerance was entirely new for the Huguenots. Many of them considered that too little had been yielded to them, while the Catholics thought that they had been given too much. Pope Clement VIII energetically complained of the edict to Cardinal d'Ossat, the king's ambassador; the French clergy protested against it; and many of the parliaments refused for a long time to register it. Henry IV succeeded finally in imposing his will on all parties, and for some years the Edict of Nantes ensured the religious peace of France. The Huguenots, possessing at that time 773 churches, enjoyed during the reign of Henry IV the most perfect calm; their happiness was marred only by the efforts of the Catholic clergy to make converts among them. Cardinal du Perron and many of the Jesuits, Capuchins, and other religious engaged in this work, and sometimes with great success. Upon the death of Henry IV (1610) there was at first no change in the situation of the Protestants. They did indeed raise numerous complaints in their assemblies of Saumur, Grenoble, La Rochelle, and Loudun, but in reality they had no grievances to allege except those due to popular intolerance with which the Government had nothing to do. Truth compels the less prejudiced among their historians to admit that the Huguenots, who complained so much of Catholic intolerance, were themselves just as intolerant wherever they happened to be the stronger. Not only did they retain the church property and the exclusive use of the churches, but, wherever possible (as at Béarn), they even opposed the enforcement of those clauses of the Edict of Nantes which were favourable to Catholics. They went so far as to prohibit Catholic worship in the towns that had been ceded to them. It was with the greatest difficulty that Sully, the minister of Henry IV and himself a Protestant, could obtain for Catholic priests permission to enter the hospitals of La Rochelle, when summoned to administer the sacraments, and authorization to bury, with never so little solemnity, their dead co-religionists. To this intolerance, which often explains the attitude of the Catholics, they added the imprudence of showing themselves ever ready to make common cause with the domestic enemies of the State, or with any lords who might be in revolt. In 1616, in Guyenne, Languedoc, and Poitou, they allied themselves with Rohan and Condé, who had risen against the queen regent, Marie de' Medici. They again got restless when the king, conformably with the Edict of Nantes, re-established Catholicism at Béarn. An assembly, held at La Rochelle despite the king's prohibition, divided the realm into eight military circles, and among other matters provided for plundering the king's revenues and the goods of the Church. To deal with this condition of affairs the king was obliged to capture Saumur, Thouars, and other rebellious towns. He laid siege to Montauban, which city, defended by Rohan and La Force, repelled all his assaults. Lastly he invested Montpellier and had no better success; nevertheless peace was signed there (October, 1622), according to which the Edict of Nantes was con-

firmed, political meetings were forbidden, and the cities which had been won from the Protestants remained in the king's hands. Cardinal de Richelieu, when he became prime minister, entertained the idea of putting an end to the political power of the Huguenots while respecting their religious liberty. Rohan and Soubise, on the pretext that the Edict of Nantes had been violated, quickly effected an uprising of the South of France, and did not hesitate to make an alliance with England, as a result of which an English fleet of ninety vessels manned by 10,000 men endeavoured to effect a landing at La Rochelle (July, 1627). The king and Richelieu laid siege to this stronghold of the revolted Huguenots; they drove off the English fleet, and even made its approach to the place impossible in future by means of a mole about 1640 yards long which they constructed. In spite of the fanatical heroism of the mayor Guiton and his co-religionists, La Rochelle was obliged to capitulate. Richelieu used his victory with moderation; he left the inhabitants the free exercise of their religion, granted them a full amnesty, and restored all property to its owners. Rohan, pursued by Condé and Epernon, kept up the war, not disdaining to accept succour from Spain, but he was at last obliged to sign the Peace of Alais, by which the Edict of Nantes was renewed, an amnesty promised, the cities taken from the Huguenots, and the religious wars brought to an end (June, 1629). Subsequently Protestantism disappeared from the stage of politics, content to enjoy in peace the advantages of a religious character which were still accorded to it. The strife was transferred to the field of controversy. Public lectures, polemical and erudite writings, were multiplied, and preachers and professors of theology—such as Chamier, Amyraut, Rivet, Basnage, Blondel, Daillé, Bochart—demonstrated their industry, learning, and courage. The Church in France, more and more affected by the beneficent influence of the Council of Trent, opposed them with vigorous and learned controversialists, with prudent and zealous preachers, such as Sirmond, Labbe, Coton, St. Francis de Sales, Cospéan, Lejeune, Sénault, Tenouillet, Coeffeteau, de Bérulle, Condren, whose success was manifested in numerous conversions. These conversions took place especially in the higher circles of society; the great lords abandoned Calvinism, which retained its influence only among the middle classes. Excluded from the public service, the Huguenots became manufacturers, merchants, and farmers; the number of their churches decreased to 630; their religious activity lessened; between 1631 and 1659 they held only four synods. Without being sympathetic towards them, the public authorities respected the religious liberty guaranteed by the Edict of Nantes. Richelieu judged that the scope of that edict should not be widened, nor should the liberties there granted be curtailed, and even Protestant historians pay tribute to his moderation. Louis XIV being a minor at his accession, his mother, Anne of Austria, began her regency by promising to the Protestants the enjoyment of their liberties. Mazarin abstained from disturbing them. "If the little flock," he said, "feeds on evil weeds, it does not wander away" (*Si le petit troupeau broute de mauvaises herbes, il ne s'écarte pas*). It is indeed true that some of the feudal lords, the Duc de Bouillon among others, when they gave up Calvinism, caused the temples within their jurisdictions to be closed; but the Edict of Nantes permitted this, and the Government had neither the right nor the inclination to prevent it. In 1648, when Alsace with the exception of Strasburg was reunited with France, liberty of public worship was maintained for all the new subjects who were of the Augsburg Confession. In 1649 the Royal Council, dealing with certain complaints of the Huguenots, declared that those of the "pseudo-reformed" (*prétendue réformée*)

religion should not be disturbed in the practice of their worship, and ordered the reopening of some of their temples which had been closed. Thus the Protestant minister Jurieu could write that the years between the Rising of the Fronde and the Peace of the Pyrenees were among the happiest within the memory of his creed.

In proportion as Louis XIV got the reins of government into his own hands, the position of the Huguenots became increasingly unfavourable. After 1660 they were forbidden to hold national synods. At that time they counted 623 churches served by 723 pastors, who ministered to about 1,200,000 members. A commission, established in 1661 to inquire into the titles on which their places of worship were held, brought about the demolition of more than 100 churches, for which no warrant could be found in the provisions of the Edict of Nantes. A royal order of 1663 deprived relapsed persons—i. e. those who had returned to Protestantism after having abjured it—of the benefit of the Edict of Nantes, and condemned them to perpetual banishment. A year later, it is true, this order was suspended, and proceedings under it were arrested. Then, by another ordinance, parish priests were authorized to present themselves with a magistrate at the domicile of any sick person and to ask whether such person wished to die in heresy or to be converted to the true religion; the children of Protestants were declared competent to embrace Catholicism at the age of seven, their parents being obliged to make an allowance for their separate support conformably with their station in life. The Protestants soon saw themselves excluded from public office; the chambers in which the parties were equally represented were suppressed, Huguenot preaching was restrained and emigration was forbidden under pain of confiscation of property.

These measures and others of less importance were taken chiefly in response to demands made by the Assemblies of the Clergy or by public opinion. Their efficacy was augmented by the controversial works, those of Bossuet, "Exposition de la doctrine catholique", "Avertissement aux Protestants", "Histoire des variations des Eglises protestantes", being conspicuously brilliant, to which the ministers—Claude, Jurieu, Pajon—replied but feebly. Meanwhile the commissioners (*intendants*) were working with all their might to bring about conversions of Protestants, to which end some of them made as much use of dragoons as they did of missionaries, so that their system of making converts by force rather than by conviction came to be branded with the name of *dragonnade*.

(3) *From the Revocation of the Edict of Nantes to the Revolution.*—Trusting in the number and sincerity of these conversions, Louis XIV thought it no longer necessary to observe half measures with the Huguenots, and consequently revoked the Edict of Nantes on 18 October, 1685. Thenceforward the exercise of public worship was forbidden to the Protestants; their churches were to be demolished; they were prohibited from assembling for the practice of their religion in private houses. Protestant ministers who would not be converted were ordered to leave the kingdom within fifteen days. Parents were forbidden to instruct their children in Protestantism, and ordered to have them baptized by priests and sent to Catholic schools. Four months' grace was granted the fugitive Protestants to return to France and recover their property; after the lapse of this period the said property would be definitively confiscated. Emigration was forbidden for men under pain of the galleys, and for women under pain of imprisonment. Subject to these conditions Protestants might live within the realm, carry on commerce, and enjoy their property without being molested on account of their religion. This measure,

which was regrettable from many points of view, evoked in France unanimous applause from Catholics of all classes. With the exception of Vauban and Saint-Simon, all the great men of that period highly approved of the revocation. This attitude is explained by the ideas of the time. Tolerance was almost unknown in the sixteenth and seventeenth centuries, and, in those countries where they had the ascendancy, the Protestants had been long inflicting upon Catholics a treatment harder than they themselves underwent in France. At Geneva and in Holland Catholic worship was absolutely forbidden; in Germany, after the Peace of Augsburg, all subjects were bound to take the religion of their prince, in accordance with the adage: *Cujus regio ejus religio*. England, which even forced those who dissented from the Established Church to seek religious liberty in America, treated Catholics more harshly than did Turkey; all priests were banished from the country; should one of them return and be caught in the exercise of his functions, he was condemned to death; a heavy tribute was imposed upon Papists, as though they were slaves.

The Revocation did not produce the effect intended by its author. Scarcely had it been published when, in spite of all prohibitions, a mighty movement of emigration developed in the provinces adjacent to the frontiers. Vauban had to write that the "Revocation brought about the desertion of 100,000 Frenchmen, the exportation of 60,000,000 livres (\$12,000,000), the ruin of commerce; enemies' fleets were reinforced by 9000 sailors, the best in the kingdom, and foreign armies by 600 officers and 1200 men, more inured to war than their own." Those who remained took advantage of the last article of the Revocation to dispense with attendance at church and the reception of the sacraments at the hour of death. The king in his embarrassment consulted the bishops and the *intendants*, and their replies inclined him to relax the execution of the edict of revocation somewhat, without changing anything in its letter. On the other hand, a few preachers remained in spite of the Revocation, and clandestinely organized their worship in the fields and in remote places, or, as the Protestant historians express it, "in the desert". Of this number were Brousson, Corteiz, and Regnard. In the Vivarais the management of the churches passed into the hands of the *illumines*—fanatical preachers, peasants, and young girls—who stirred up the population with prophecies of the approaching triumph of their cause. Three armies and three marshals of France had to march against these insurgents (the *Camisards*), who were reduced to order only after a struggle of five or six years' duration (1702-1708).

From that time the churches lived only as secret associations, without religious worship and without regular gatherings. The ministers were hunted into hiding, those who were caught being mercilessly put to death. Still, some of them were not afraid to risk their lives: the best known of these, Antoine Court (1696-1760), spent nearly twenty years in this secret labour, travelling through the South, and distributing propagandist or polemical tracts, holding numerous meetings "in the desert", and even organizing semblances of provincial synods in 1715, and national synods in 1726. Retiring to Lausanne in 1729, he founded there a seminary for the education of pastors for the Protestant ministry in France. This condition of official persecution and hidden vitality lasted until after the middle of the eighteenth century. The authorities continued to hang ministers and destroy churches until 1762; but ideas of toleration had for some time been gradually finding their way into the mind of the nation; prosecutions for religious offences became unpopular, especially after the Calas affair. A Protestant of that name at Toulouse was charged with having killed one of his

sons to prevent his becoming a Catholic. Arrested and condemned on this charge by the Parliament of Toulouse (9 March, 1762), he was executed at the age of sixty-eight after a trial which created great excitement. His widow and children demanded justice. Voltaire took up their cause and succeeded by his writings in arousing the public opinion of France and of Europe against the Parliament of Toulouse. The Supreme Council (*Grand Conseil*) unanimously reversed the judgment of the Parliament, and another tribunal rehabilitated the memory of Calas. The Protestants derived great benefit from the trend of public feeling resulting from this rehabilitation. Without any legislative change as yet, the modification of public opinion incessantly tended to the improvement of their lot, and the Government treated them with a tacit toleration. At last, in 1787, a decided amelioration of their condition came with the Edict of Toleration, which granted to non-Catholics the right to practise a profession or handicraft without molestation, permission to be legally married before magistrates, and to have births officially recorded. In practice these liberties went even farther, and churches were openly organized. Two years later complete liberty and access to all employments were recognized as belonging to them, no less than to other citizens, by the "Declaration of the Rights of Man", voted by the Constituent Assembly (August, 1789). This legislative body, which for a short period (March, 1790) was presided over by the Protestant pastor Rabaud, went so far as to order that the property of those who had emigrated under the Revocation should be restored to their descendants, who might even recover their rights as French citizens on condition that they took up their residence in France. Protestants had to suffer, like Catholics, though infinitely less, from the sectarian and anti-religious spirit of the Revolution; churches vanished during the Reign of Terror; religious worship could not be reorganized until about the year 1800.

(4) *From the Revolution to the Separation (1801-1905).*—When order was restored the Huguenots were included in the measures initiated by Napoleon for pacifying the nation. They received from him an entirely new organization. At this time there were in France about 430,000 *Réformés*. By the law of 18 Germinal, Year X (7 April, 1802), there was to be a consistorial church for every 6000 believers, and five consistorial churches were to form a synod. The consistory of each church was to be composed of a pastor and the leading elders. They were entrusted with the maintenance of discipline, the administration of property, and the election of pastors, whose names had, however, to be submitted for the approval of the head of the State. Each synod was composed of a pastor and an elder from each of the churches, and had to superintend public worship and religious instruction. It could assemble only with the consent of the Government under the presidency of the prefect or the sub-prefect, and for not longer than six days. Its enactments had to be submitted for approval to the head of the State. There was no national synod. The churches of the Augsburg Confession, chiefly in Alsace, had, instead of synods, boards of inspection subordinate to three general consistories. Salaries were guaranteed to the pastors, who were exempt from military service. The old seminary of Lausanne was transferred to Geneva, at that time a French city, and then to Montauban (1809) and annexed to the university as a faculty of theology. For the churches of the Augsburg Confession, two seminaries or faculties were to be erected in the east of France. Politically, Protestantism had no further modifications to undergo, whatever changes of government there might be. In the early days of the Restoration its members had, indeed, a certain amount of rough usage to suffer in some of the cities

of the south, but this was the work of local animosity or of personal vengeance, and the public authorities had no part in it. The churches laboured to adapt themselves as well as possible to the system of organization that had been imposed on them.

In 1806, after Napoleon's conquests, there were 76 consistories with 171 pastors. The religious life of their churches was very languid; indifference reigned everywhere. At Paris, the pastor Boistard complained that out of 10,000 Protestants hardly fifty or a hundred attended worship regularly—two or three hundred at most during the fine season. The pastors, hastily prepared for their work at Geneva, brought back generally with them rationalistic tendencies; they were content to fulfil the routine duties of their profession. Their preaching dwelt upon the commonplaces of morality or of natural religion. Two tendencies in regard to dogma were beginning to reveal themselves. One of these was represented by Daniel Encoutre, dean of the theological faculty at Montauban, and was directed towards rigid orthodoxy, based firmly on dogmas and confessions; the other was championed especially by Samuel Vincent, one of the most respected pastors of the time, and put religious feeling above doctrine and morality, Christianity being according to this view a life rather than an aggregate of facts and revealed truths. The movement known as the *Réveil* (Awakening) helped to accentuate this divergence. The men who constituted themselves its propagators in France during the first years of the Restoration were disciples of Wesley. They insisted, in their sermons, on the absolute powerlessness of man to save himself by his own efforts, upon justification by faith alone, upon individual conversion, and were animated by a zeal for the saving of souls and the preaching of the Gospel which contrasted strangely with the indolence of the official Protestant pastors. The *Réveil* was ill received by the two sections into which French Protestantism was beginning to divide. The orthodox, while accepting its doctrines, did not sympathize with its efforts at a renewal of the spiritual life, of renunciation and sacrifice, and of zeal for saving souls. This they plainly showed at Lyons where they effected the removal of the pastor Adolphe Monod, who had wished to introduce *Réveil* practices. For the representatives of the liberal tendencies, the preaching of the *Réveil* was nothing but a collection of superannuated doctrines, in opposition alike to what they called the spirit of the Gospel and to the ideas and aspirations of modern society.

These three tendencies grew farther apart from day to day. The friends of the *Réveil*, sometimes called Methodists, severed their connection with the Reformed Churches of France, and organized in 1830 in the Rue Taitbout, Paris, a free Church of which Edmond de Pressensé soon became the most noted leader. In their profession of faith and their disciplinary regulations they emphasized the individual character of faith, the Church's independence of the State, and the duty of maintaining a propaganda. Some of them, with the periodical "*L'Espérance*" for their organ, refused to break with the National Church. The Liberals, who were at first called Latitudinarians or Rationalists, repudiated the earlier confessions of faith, predestination by absolute decree and illumination by irresistible grace, and the whole body of their doctrine—according to M. Nicolas, one of their number—consisted in "avoiding Calvinistic and Rationalistic exaggerations." A synod held in 1848, consisting of fifty-two ministers and thirty-eight elders, increased the existing divisions. The Liberals obtained the presidency, and, in deference to their wishes, the question of confessions of faith was set aside by an almost unanimous vote, the synod contenting itself with drawing up an address in which the majority set forth the principles

common to French Protestants, namely, respect for the Bible and the liturgies, and faith in historical and supernatural Christianity. But as the assembly refused to re-establish a clear and positive profession of faith, the pastors Frédéric Monod, Amal, and Cambon left the official Church, and issued an appeal to all the independent churches which had been formed by the labours of isolated evangelists. In 1849 they held a synod, in which thirteen of these already formed churches and eighteen which were in process of formation were represented, voted a profession of faith, and established the "Union of the Free Evangelical Churches of France" (Union des églises évangéliques libres de France).

All these divisions made a civil reorganization of the churches desirable; it was effected by a decree of Louis Napoleon, who was then President of the Republic. This decree reconstituted the parishes, placing them under a presbyterial council of pastors and elders. At the head of the hierarchy so constituted was a central council, the members of which were appointed by the Government; its function was merely to represent the churches in their relations with the head of the State, without possessing any religious or disciplinary authority. The Lutheran churches were placed under the authority of the Superior Consistory and of a Directory. The only subsequent modification in the status of these churches resulted from the Prussian annexation, after the War of 1870, of the Alsatian territories, where there were a great many Protestants; the Lutheran churches by this event lost two-thirds of their membership, and their faculty of theology had to be transferred from Strasburg to Paris, where it augmented the strength of the Liberal section. The gulf between the two parties still continued to widen. The Orthodox vainly endeavoured, by abandoning the formulæ of the old theology, and by rejecting all but the great facts and essential doctrines of Christianity, to maintain their position; the Liberals, following the lead of the "Revue de Strasbourg", displayed an ever greater readiness to welcome the most radical conclusions of German rationalistic criticism, particularly those of the Tübingen School. The authority of Holy Scripture, the Divinity of Christ, the idea of the Redemption, of miracles, of the supernatural, were successively abandoned. M. Pécaut, a representative of this tendency, even wrote in 1859 a book (*Le Christ et la conscience*) in which he called in question the moral perfection and holiness of Christ. Others—and among them pastors such as Athanase Coquerel the Younger, Albert Réville, and Paschoud—did not conceal their sympathy for Renan's "Vic de Jésus". The two last named of these, indeed, were deprived of their churches by the council; they of course asserted in defence of their ideas—as, for that matter, did all the Liberals—that they had only used the right of free inquiry—the right which constitutes the whole of Protestantism, since the Reformation was based on the right of every man to interpret the Scriptures according to his own lights. Their opponents replied that, if this were so, the Church was impossible; that a common worship presupposes common beliefs. This question brought on many lively discussions between the representatives of the two tendencies in the Press, at the conferences, and in the elections for the presbyterial councils. To restore peace, a general synod had to be convoked with the consent of the Government in June, 1872. Here the orthodox had a majority; a profession of faith was carried by sixty-one votes to forty-five, and subscription to it was made obligatory upon all the younger pastors. This decision became an insurmountable barrier between the two parties. The Liberals, not content with repudiating the notion of any obligatory confession of faith, refused, so long as it was maintained, to take any further part in the

synod of 1872, and have also abstained from participating in any of the general synods, which have been held about every three years since 1879, at Paris, Nantes, Sedan, Auduze and elsewhere, and from which the orthodox party have taken the name of "the Synodal Church." For all that, the Liberals had no intention of breaking with the organization recognized by the State. Numerous attempts have been made in the last thirty years, to bring about an understanding between the two parties, but have not succeeded in establishing doctrinal unity. The Separation seems calculated rather to increase the divisions, and already a third party has been formed by the fusion at Jarnac (1 October, 1906) of 65 Liberal churches and 40 Synodal under the name of the "Union des Eglises Réformées"

Divided among themselves on doctrinal questions, the Protestants have by no means lost their solidarity in regard to external activities. The movement of spiritual renovation which followed the Napoleonic wars was produced among them various propagandist, educational, and benevolent enterprises, such as the "Société biblique" (1819), the "Société des traités religieux" (1861), the "Société des missions évangéliques de Paris" (1824), the Society for the Promotion of Primary Instruction among Protestants (1829), the Institution of Deaconesses (1841), the agricultural colony of Sainte-Toy (1842), and divers orphanages, homes for neglected children, and primary schools. Of these last, the greater number (about 2000) have been closed since 1882. The missionary activity of the French Protestants has been chiefly exerted through the "Société des missions évangéliques de Paris", at Bassoutos (South Africa), where they count at the present time 15,000 adherents, with schools and a printing press; in Madagascar, where a large number of schools are dependent on them (117 schools, according to statistics for 1908, with 7500 pupils); in Senegal, in French Congo, in Zambesi, Tahiti, and New Caledonia. Some sixty missionaries are at work on these missions, and in late years they have received an annual grant amounting to about 320,000 dollars. At home their propaganda is carried on chiefly among the Catholic population by the "Société centrale protestante d'évangélisation", with a budget of 90,000 dollars per annum; by the "Société évangélique de France", which in some years has received as much as 24,000 dollars; by the "Mission populaire évangélique" (MacAll) without, however, any appreciable success.

Journalistic enterprise has not been overlooked. The first Protestant periodical, the "Archives du christianisme", was founded in 1818; then came the "Annales protestantes" in 1820, the "Mélanges de la religion" in the same year, the "Revue protestante" and the "Lien" in 1841, the "Evangéliste" in 1837, the "Espérance" in 1838, the "Revue de Strasbourg" in 1859, the "Revue théologique", the "Protestant", the "Vie Nouvelle", the "Revue chrétienne", and the "Signal", a political journal. Only the best-known periodicals are mentioned here; most of them have disappeared; many are, or have been, the organs of particular sections of the Protestants. There must still be, according to the "Agenda, annuaire protestant", more than 150 in existence, but the majority have only a restricted circulation, and, excepting the "Bulletin historique et littéraire de la société de l'histoire du protestantisme français" (1852), are practically without readers outside of the Protestant world.

At present Protestantism counts about 650,000 adherents in France—560,000 Réformés, 80,000 Lutherans, and 10,000 independents—that is a little less than one-sixtieth of the population. This seemingly negligible minority has, as every one admits, made for itself in politics and in the executive government a place out of all proportion to its numerical strength.

From a religious point of view Protestantism shows no indications of progress; its doctrines are daily losing ground, above all in educated circles. There, as recently declared by M. Edmond Stapfer, dean of the faculty of Protestant theology at Paris, in the "Revue Chrétienne", "people no longer want most of the traditional beliefs; they no longer want the dogmatic system, used by the Reformers and the *Réveil*, in which many 'evangelical' pastors still believe, or by their silence leave the faithful to conclude that they still believe. . . . The intellectuals will have no more of these antiquities, they do not go to hear the pastors preach; they are agnostics; they respectfully salute the ancient beliefs, but they get on without them, and have no need of them either for their intellectual or their moral life." Indeed it does not appear that the practice of religion has any more vitality among the masses than faith has among the intellectuals. Official reports made to the synods testify that "the number of mixed marriages is increasing, which proves that faith is diminishing. . . . In certain districts the number is sometimes as many as 95 per cent; even in the very Protestant districts, we know of 25 per cent in one place and 20 per cent in others, and as high as 50 per cent of unions of this kind." As for attendance at public worship: "Here", says one report made to the General Synod of Bordeaux (1899), "are the figures for a section of the country which must be classed among the best, that of the Pyrenees. The average of attendance is 32 per cent. It does not go so high everywhere; in Paris, for example, it reaches only 11 per cent, and in some churches of Poitou we must go still lower . . . to averages of 5 per cent. The same difference is found in the number of communicants: here it is 12 per cent; there, 4 or even 3 per cent." These are results which would doubtless have astonished and scandalized Calvin, but which are sufficiently explained by the theory of free inquiry and the intimate history of French Protestantism, especially during the last century.

ANTOINE DEGERT.

Hülshoff (DROSTE-HÜLSHOFF), ANNETTE ELISABETH, BARONESS VON, poetess; b. at Schloss Hülshoff near Münster in Westphalia, 10 January, 1797; d. 24 May, 1848. After the death of her father, Baron Clemens August von Droste-Hülshoff (1826), she passed most of her life at Rüschedhaus near Münster. The monotony of this lonely life was broken, however, by prolonged visits to her brother-in-law's estates at Meersburg on Lake Constance, where she died.

Born prematurely, the poetess had a powerful mind in a delicate, sickly frame, a condition from which she

suffered all her life. The most remarkable of her many mental gifts was an inexhaustible imagination combined with keen powers of observation and the faculty of reproducing her poetic concept in quaint and facile language. She was also stimulated in many ways by her congenial relations with both her maternal uncles, August and Werner von Haxthausen, who brought her in touch with the romantic movement. Her first training in poetic composition she received from the poet of the Hainbund, A. M. Sprickmann, professor of law at Münster, whose influence can be traced in many of the poems of her youth, which recall also those of Schiller. She owed still more to her friendship with Chr. B. Schlüter, professor of philosophy at Münster, for many years her mentor, and who, together with their common friend, W. Junkmann, subsequently professor of history at Breslau, first brought the poetess before the public by selections from her poetry, unfortunately not too happily chosen (Münster, 1838). We must not, however, overestimate the influence of her Münster friends on her poetic achievements, any more than that of Levin Schücking, with whom later she entered into friendly relations. Like all great minds, she followed her own course, and consequently the poems which she composed in the fruitful years she passed at Meersburg were the works of a finished poetess, who received from Schücking the right incentive at the right time.

ANNETTE FREIIN VON DROSTE-HÜLSHOFF

Annette turned her muse to almost all kinds of poetry. In her dramatic attempts, however, she got no further than the fragment "Berta" and the one-act play "Perdu". Her brilliant descriptive powers in prose are amply manifested in her numerous letters and stories, among which are: "Bei uns zu Lande auf dem Lande", "Bilder aus Westfalen" and, particularly, "Die Judenbuche". With equal skill she handled narrative verse. Poetic imagery and warmth of colouring and vigour such as we see in the "Schlacht im Loener Bruch", are not frequently met with in German literature. Her "Geistliches Jahr" is a unique work in which she gives expression to her religious thoughts and impressions. It is intelligible only to those who in judging it take into account not merely the individuality of the author but also the entire tendency of the period when it was written.

The fame of the poetess rests chiefly on her lyric poems, her pastorales, and her ballads. In the poetic representation of nature, few can equal her. The poetical works of Annette von Droste-Hülshoff are imperishable. What makes them so is their originality, the proof that they are the works of a genius. It is this too that gained for their author the well-earned title of "Germany's greatest poetess". Collective editions of her works have been edited by Levin Schücking (1879); Kreiten (4 vols., 1884-87; 2nd ed., 1900); and Arens (1905); supplements and corrections to these by Eschmann (1909). Her letters were edited by Schlüter (2nd ed., 1880) and Th. Schücking (1893), and an important collection edited by Dr. Cardauns is embodied in the collection of Dr. Foster entitled "Forschungen und Funde" (1909). Dr. Foster is also engaged (1909) on an edition of the "Geistliches Jahr", the concluding part of which was left in an unfinished state.

Biographies: by SCHÜCKING (1862) in vol. I of her works, ed. KREITEN, by HUFFER (2nd ed., 1897); by WORMSTALL (1897); by RUTER in the collection *Die Literatur*, edited by BRANDES, by BUSSE (1905); by SCHOLZ in the poetical collection edited by REMER (1904); by PELICAN (1906).
FRANCIS JOSTES.

Hulst, MAURICE LE SAGE D'HAUTEROCHE D', prelate, writer, orator; b. at Paris, 10 Oct., 1841; d. there, 6 Nov., 1896. After a distinguished course in the Collège Stanislas, he entered the seminary of Saint-Sulpice and later proceeded to Rome to finish his ecclesiastical studies. There he obtained the doctorate in divinity. On his return he was for some time employed on the mission as curate in the populous parish of St. Ambrose. During the war of 1870 he became a volunteer chaplain in the army. In 1873 Cardinal Guibert called him to take part in the administration of the diocese, but he was engaged principally in founding and organizing the free Catholic University, which the bishops opened at Paris after the passage of the law of 12 July, 1875, allowing liberty of higher education. He became its rector in 1880 and for fifteen years devoted himself to developing it in every branch of learning, and, while concerned for its orthodoxy, was no less anxious that it should meet the needs of scientific progress. In 1891 he succeeded Père Monsabré in the pulpit of Notre-Dame de Paris and preached the Lenten conferences there for six successive years, on the bases of Christian morality and the Decalogue. In 1892 he was elected deputy for Finistère on the death of Mgr Freppel. Although a royalist by family tradition, Mgr d'Hulst did not hesitate to give his loyal support to the republic when Pope Leo XIII requested the French Catholics to do so. In addition to all these labours, he was busily engaged as a spiritual director. He was able to undertake so much on account of his wonderful energy and capacity for work. He died while still active, after a short illness, and his death was a cause of sorrow to the whole French Church.

He was very intellectual and broad-minded, and was naturally inclined to philosophical studies. His word and pen were ever at the service of religion, education, and charity; but his chief efforts were directed towards encouraging higher studies, especially the study of the sacred sciences, among the French clergy. In connexion with this we must recall the great work he did in organizing and carrying out the International Scientific Congresses of Catholics. As an orator, his words were somewhat cold and didactic, but very clear, precise, and pregnant with sense. Besides two biographies, the "Vie de la Mère Marie-Thérèse" (Paris, 1872) and the "Vie de Just de Bretonnières" (Paris, 1892), he wrote "L'éducation supérieure" (Paris, 1886); "Le Droit chrétien et le Droit moderne", a commentary on the Encyclical "Immortale" of Leo XIII (Paris, 1886), a volume of "Mélanges philosophiques" (2nd ed., 1903); and also published two volumes "Mélanges oratoires" (Paris, 1891 and 1892) and the six volumes of his "Conférences de Notre-Dame" enriched with notes and appendixes (Paris, 1891-96). It is impossible to mention the many articles he contributed to the current reviews, but among the more important ones we may cite the "Examen de conscience de Renan"; "Une Ame royale et chrétienne" (a touching necrology of the Comte de Paris), and "La Question biblique". Most of his occasional discourses were collected and published by the Abbé Odelin in the four volumes entitled "Nouveaux Mélanges oratoires" (Paris, 1900-07). Mgr Baudrillart, his successor at the head of the Catholic University, after the rectorship of Mgr Péchenard, published a collection of "Lettres de Direction" of Mgr d'Hulst.

Under the title *Recueil de souvenirs à la mémoire de Mgr Le Sacré d'Hauteroche d'Hulst* the principal discourses and articles on Mgr d'Hulst after his death have been issued in one volume (Paris, 1898).

A. BOUDINON.

Humanism is the name given to the intellectual, literary, and scientific movement of the fourteenth to the sixteenth centuries, a movement which aimed at basing every branch of learning on the literature and culture of classical antiquity. Believing that a classical training alone could form a perfect man, the Humanists so called themselves in opposition to the Scholastics, and adopted the term *humaniora* (the humanities) as signifying the scholarship of the ancients. Though the interval between the classical period and their own days was regarded by the Humanists as barbarous and destructive alike of art and science, Humanism (like every other historical phenomenon) was connected with the past. The use of Latin in the Liturgy of the Church had already prepared Europe for the humanistic movement. In the Middle Ages, however, classical literature was regarded merely as a means of education; it was known through secondary sources only, and the Church saw in the worldly conception of life that had prevailed among the ancients an allurements to sin. On the rise of secularism these views underwent a change, especially in Italy. In that country the body politic had grown powerful, the cities had amassed great wealth, and civic liberty was widespread. Worldly pleasure became a strong factor in life and freer play was given to sensory impulse. The transcendental, unworldly concept of life, which had till then been dominant, now came into conflict with a mundane, human, and naturalistic view, which centred on nature and man. These new ideas found their prototypes in antiquity, whose writers cherished and extolled the enjoyment of life, the claims of individuality, literary art and fame, the beauty of nature. Not only ancient Roman culture but also the hitherto neglected Greek culture was taken up by the movement. The new spirit broke away from theology and Church. The principle of free, scientific inquiry gained ground. It was quite natural that the value of the new ideal should be exaggerated while the medieval national culture was undervalued.

It is customary to begin the history of Humanism with Dante (1265-1321), and Petrarch (1304-74). Of the two Dante, by reason of his poetic sublimity, was undoubtedly the greater; but, as regards Humanism Dante was merely its precursor while Petrarch initiated the movement and led it on to success. Dante certainly shows traces of the coming change; in his great epic classical and Christian materials are found side by side, while poetic renown, an aim so characteristic of the pagan writers yet so foreign to the Christian ideal, is what he seeks. In matters of real importance, however, he takes the Scholastics as his guides. Petrarch, on the other hand, is the first Humanist; he is interested only in the ancients and in poetry. He unearths long-lost manuscripts of the classics, and collects ancient medals and coins. If Dante ignored the monuments of Rome and regarded its ancient statues as idolatrous images, Petrarch views the Eternal City with the enthusiasm of a Humanist, not with that of a pious Christian. The ancient classics—especially his lodestars, Virgil and Cicero—serve not merely to instruct and to charm him; they also incite him to imitation. With the philosophers of old he declared virtue and truth to be the highest goal of human endeavour, although in practice he was not always fastidious in cultivating them. However, it was only in his third aim, eloquence, that he rivalled the ancients. His ascent of Mont Ventoux marks an epoch in the history of literature. His joy in the beauty of nature, his susceptibility to the influence of landscape, his deep sympathy with, and glorious portrayal of, the charms of the world around him were a break with the traditions of the past. In 1341 he gained at Rome the much coveted crown of the poet laureate. His Latin writings were most highly prized by his contemporaries, who ranked

his "Africa" with the "Æneid" of Virgil, but posterity prefers his sweet, melodious sonnets and *canzoni*. His chief merit was the impulse he gave to the search for the lost treasures of classical antiquity. His chief disciple and friend, Boccaccio (1313-75), was honoured in his lifetime not for his erotic and lewd, though elegant and clever, "Decameron" (by which, however, posterity remembers him), but for his Latin works which helped to spread Humanism. The classical studies of Petrarch and Boccaccio were shared by Coluccio Salutati (d. 1406), the Florentine chancellor. By introducing the epistolary style of the ancients he brought classical wisdom into the service of the State, and by his tastes and his prominence greatly promoted the cause of literature.

The men of the revival were soon followed by a generation of itinerant teachers and their scholars. Grammarians and rhetoricians journeyed from city to city, and spread the enthusiasm for antiquity to ever-widening circles; students travelled from place to place to become acquainted with the niceties of an author's style and his interpretation. Petrarch lived to see Giovanni di Conversino set out on his journey as itinerant professor. From Ravenna came Giovanni Malpaphini, gifted with a marvellous memory and a burning zeal for the new studies, though more skilled in imparting inherited and acquired knowledge than in the elaboration of original thought. In another way the soul of literary research was Poggio (1380-1459), a papal secretary and later Florentine chancellor. During the sessions of the Council of Constance (1414-18) he ransacked the monasteries and institutions of the neighbourhood, made valuable discoveries, and "saved many works" from the "cells" (*ergastula*). He found and transcribed Quintilian with his own hand, had the first copies made of Lucretius, Silius Italicus, and Ammianus Marcellinus, and, probably, he discovered the first books of the "Annals" of Tacitus. About 1430 practically all the Latin works now known had been collected, and scholars could devote themselves to the revision of the text. But the real source of classic beauty was Greek literature. Italians had already gone to Greece to study the language, and since 1396 Manuel Chrysoloras, the first teacher of Greek in the West, was busily engaged at Florence and elsewhere. His example was followed by others. In Greece also, a zealous search was instituted for literary remains, and in 1423 Aurispa brought two hundred and thirty-eight volumes to Italy. The most diligent collector of inscriptions, coins, gems, and medals was the merchant Ciriaco of Ancona. Among those present from Greece at the Council of Florence were Archbishop (afterwards Cardinal) Bessarion, who presented to Venice his valuable collection of nine hundred volumes, also Gemistos Plethon, the celebrated teacher of Platonic philosophy, who subsequently relapsed into paganism. The capture of Constantinople by the Turks (1453) drove the learned Greeks, George of Trebizond, Theodoros Gaza, Constantine Lascaris, etc., into Italy. One of the most successful critics and editors of the classics was Lorenzo Valla (1407-57). He pointed out the defects in the Vulgate, and declared the Donation of Constantine a fable. Despite his vehement attacks on the papacy, Nicholas V brought him to Rome. Within a short period, the new studies claimed a still wider circle of votaries.

The princely houses were generous in their support of the movement. Under the Medici, Cosimo (1429-64) and Lorenzo the Magnificent (1469-92), Florence was pre-eminently the seat of the new learning. Its worthy statesman Mannetti, a man of great culture, piety, and purity, was an excellent Greek and Latin scholar, and a brilliant orator. The Camaldolese monk Ambrogio Traversari was also a profound scholar, especially versed in Greek; he possessed a magnificent collection of the Greek authors, and was

one of the first monks of modern times to learn Hebrew. Marsuppini (Carlo Aretino), renowned and beloved as professor and municipal chancellor, quoted from the Latin and Greek authors with such facility that his readiness was a source of wonder, even to an age sated with constant citation. Although in matters of religion Marsuppini was a notorious heathen, Nicholas V sought to attract him to Rome to translate Homer. Among his contemporaries, Leonardo Bruni, a pupil of Chrysoloras, enjoyed great fame as a Greek scholar and a unique reputation for his political and literary activity. He was, moreover, the author of a history of Florence. Niccolo Niccoli was also a citizen of Florence; a patron of learning, he assisted and instructed young men, dispatched agents to collect ancient manuscripts and remains, and amassed a collection of eight hundred codices (valued at six thousand gold gulden), which on his death were, through the mediation of Cosimo, donated to the monastery of San Marco, to form a public library, and are to-day one of the most valued possessions of the Laurentiana Library at Florence. The aforesaid Poggio, a versatile and influential writer, also resided for a long time at Florence, published a history of that city, and ridiculed the clergy and nobility in his witty, libellous "Facetiæ". He was distinguished for his extensive classical learning, translated some of the Greek authors (e. g. Lucian, Diodorus Siculus, Xenophon), appended scholarly and clever notes, collected inscriptions, busts, and medals, and wrote a valuable description of the ruins of Rome. His success in seeking and unearthing manuscripts has already been mentioned. Plethon, also mentioned above, taught Platonic philosophy at Florence.

Bessarion was another panegyrist of Plato, who now began to displace Aristotle; this, together with the influx of Greek scholars, led to the foundation of the Platonic academy which included among its members all the more prominent citizens. Marsilio Ficino (d. 1499), a Platonic philosopher in the full sense of the term, was one of its members, and by his works and letters exerted an extraordinary influence on his contemporaries. Along with his other literary labours he undertook the gigantic task of translating the writings of Plato into elegant Latin, and accomplished it successfully. Cristoforo Landino, a pupil of Marsuppini, without sharing his religious ideas, taught rhetoric and poetry at Florence and was also a statesman. His commentary on Dante, in which he gives the most detailed explanation of the allegorical meaning of the great poet, is of lasting value. Under Lorenzo de' Medici, the most important man of letters in Florence was Angelo Poliziano (d. 1494), first the tutor of the Medici princes and subsequently a professor and a versatile writer. He was pre-eminently a philologist, and gave scholarly translations and commentaries on the classical authors, devoting special attention to Homer and Horace. He was, however, surpassed by the youthful and celebrated Count Pico della Mirandola (1462-94), who, to use Poliziano's phrase, "was eloquent and virtuous, a hero rather than a man". He noticed the relations between Hellenism and Judaism, studied the Cabbala, combated astrology, and composed an immortal work on the dignity of man. An active literary movement was also fostered by the Visconti and the Sforza in Milan, where the vain and unprincipled Filiofo (1398-1481) resided; by the Gonzaga in Mantua, where the noble Vittorino da Feltre (d. 1446) conducted his excellent school; by the kings of Naples; by the Este in Ferrara, who enjoyed the services of Guarino, after Vittorino the most celebrated educationist of Italian Humanism; by Duke Federico of Urbino, and even by the profligate Malatesta in Rimini. Humanism was also favoured by the popes. Nicholas V (1447-55) sought by the erection of buildings and the collection of books to restore the glory of Rome. The

ablest intellects of Italy were attracted to the city; to Nicholas mankind and learning are indebted for the foundation of the Vatican Library, which in the number and value of its manuscripts (particularly Greek) surpassed all others. The pope encouraged, especially, translations from the Greek, and with important results, although no one won the prize of ten thousand gulden offered for a complete translation of Homer.

Pius II (1458-64) was a Humanist himself and had won fame as poet, orator, interpreter of antiquity, jurist, and statesman; after his election, however, he did not fulfil all the expectations of his earlier associates, although he showed himself in various ways a patron of literature and art. Sixtus IV (1471-84) re-established the Vatican Library, neglected by his predecessors, and appointed Platina librarian. "Here reigns an incredible freedom of thought", was Filelfo's description of the Roman Academy of Pomponio Leto (d. 1498), an institute which was the boldest champion of antiquity in the capital of Christendom. Under Leo X (1513-21) Humanism and art enjoyed a second golden age. Of the illustrious circle of *literati* which surrounded him may be mentioned Pietro Bembo (d. 1547)—famous as a writer of prose and poetry, as a Latin and Italian author, as philologist and historian, and yet, in spite of his high ecclesiastical rank, a true worldling. To the same group belonged Jacopo Sadoleto, also versed in the various branches of Latin and Italian culture. The chief merit of Italian Humanism, as indeed of Humanism in general, was that it opened up the real sources of ancient culture and drew from these, as a subject of study for its own sake, the classic literature which till then had been used in a merely fragmentary way. Philological and scientific criticism was inaugurated, and historical research advanced. The uncouth Latin of the Scholastics and the monastic writers was replaced by classic elegance. More influential still, but not to good effect, were the religious and moral views of pagan antiquity. Christianity and its ethical system suffered a serious shock. Moral relations, especially marriage, became the subject of ribald jest. In their private lives many Humanists were deficient in moral sense, while the morals of the upper classes degenerated into a pitiable excess of unrestrained individualism. A political expression of the humanistic spirit is "The Prince" (Il Principe) of Niccolò Machiavelli (d. 1527), the gospel of brute force, of contempt for all morality, and of cynical selfishness.

The pillaging of Rome in 1527 gave the death-blow to Italian Humanism, the serious political and ecclesiastical complications that ensued prevented its recovery. "Barbarian Germany" had long since become its heir, but here Humanism never penetrated so deeply. The religious and moral earnestness of the Germans kept them from going too far in their devotion to antiquity, beauty, and the pleasures of sense, and gave the humanistic movement in Germany a practical and educational character. The real directors of the German movement were upright scholars and professors. Only Celtes and a few others are reminiscent of Italian Humanism. School and university reform was the chief aim and the chief service of German Humanism. Although German interest in ancient literature began under Charles IV (1347-78), the spread of Humanism in German countries dates from the fifteenth century. Eneas Sylvius Piccolomini, afterwards Pius II, was the apostle of the new movement at the court of Frederick III (1440-93). The renowned scholar Nicholas of Cusa (d. 1464) was versed in the classics, while his friend Georg Peuerbach studied in Italy and subsequently lectured on the ancient poets at Vienna. Johann Muller of Königsberg (Regiomontanus), a pupil of Peuerbach's, was familiar with Greek, but was chiefly renowned as an astronomer and mathematician. Though Germany

could not boast of as many powerful patrons of learning as Italy, the new movement did not lack supporters. The Emperor Maximilian I, Elector Philip of the Palatinate, and his chancellor, Johann von Dalberg (later Bishop of Worms), Duke Eberhard of Würtemberg, Elector Frederick the Wise, Duke George of Saxony, Elector Joachim I of Brandenburg, and Archbishop Albrecht of Mainz were all supporters of Humanism.

Among the citizens, too, the movement met with favour and encouragement. In Nuremberg it was supported by the above-mentioned Regiomontanus, the historians, Hartmann Schedel and Sigmund Meisterlein, and also by Willibald Pirckheimer (1470-1528), who had been educated in Italy, and was an indefatigable worker in the antiquarian and historical field. His sister, Charitas, the gentle nun, united with true piety a cultivated intellect. Konrad Peutinger (1465-1547), town clerk of Augsburg, devoted his leisure to the service of the arts and sciences, by collecting inscriptions and ancient remains and publishing, or having published by others, the sources of German history. The map of Ancient Rome, named after him "Tabula Peutingeriana", was bequeathed to him by its discoverer, Conrad Celtes, but was not published until after his death. Strasburg was the earliest German stronghold of humanistic ideas. Jacob Wimpheling (d. 1528), a champion of German sentiment and nationality, and Sebastian Brant were the chief representatives of the movement, and attained a wide reputation owing to their quarrel with Murner, who had published a paper in opposition to Wimpheling's "Germania", and owing to the controversy concerning the Immaculate Conception. As in Italy so in Germany learned societies sprang up, such as the "Donaugesellschaft" (Danubiana) in Vienna—the most prominent member of which, Johann Spiesheimer (Cuspinian, 1473-1529), distinguished himself as an editor and an historian—and the "Rheinische Gesellschaft" (Rhenana), under the above-mentioned Johann von Dalberg. Closely associated with the latter was Abbot Johannes Trithemius (1462-1516), a man of universal attainments. The life of these two chief societies was Conrad Celtes, the fearless and unwearying apostle and itinerant preacher of Humanism, a man of the most varied talents—a philosopher, mathematician, historian, publisher of classical and medieval writings, and a clever Latin poet, who celebrated in ardent verse his ever changing lady-loves and led a life of worldly indulgence.

Into the universities, too, the representatives of the "languages and belles-lettres" soon found their way. In Basle, which, in 1474, had appointed a professor of the liberal arts and poetry, the movement was represented chiefly by Heinrich Glareanus (1488-1563), celebrated as geographer and musician. The best known Humanist of Tübingen was the poet Heinrich Bebel (1472-1518), an ardent patriot and an enthusiastic admirer of style and eloquence. His most widely-known work is the obscene "Facetia" Agriкола (d. 1485), in the opinion of Erasmus a perfect stylist and Latinist, taught at Heidelberg. The inaugurator of Humanism in Mainz was the prolific author, Dietrich Gresemund (1477-1512). The movement secured official recognition at the university in 1502 under Elector Berthold, and found in Joannes Rhagius Aesticampianus its most influential supporter. In the itinerant poet Peter Luder, Erfurt had in 1460 one of the earliest representatives of Humanism, and in Jodokus Trutfetter (1460-1519), the teacher of Luther, a diligent writer and conscientious professor of theology and philosophy. The real guide of the youth of Erfurt was, however, Konrad Mutianus Rufus (1471-1526), a canon at Gotha, educated in Italy. A zeal for teaching coupled with a pugnacious temperament, a delight in books but not in their making, religious latitudinarianism, and enthusiasm

for the antique were his chief characteristics. The satirist Crotus Rubianus, Euricius Cordus, the witty epigrammatist, and the elegant poet and merry companion, Eobanus Hessus, belonged also to the Erfurt circle.

In Leipzig also, the first traces of humanistic activity date back to the middle of the fifteenth century. In 1503, when the Westphalian Hermann von dem Busche settled in the city, Humanism had there a notable representation. From 1507 to 1511 Æsticampianus also laboured in Leipzig, but in the former year von dem Busche removed to Colognc. From the beginning (1502) Wittenberg was under humanistic influence. Many were the collisions between the champions of the old philosophy and theology and "the poets", who adopted a somewhat arrogant attitude. About 1520 all the German universities had been modernized in the humanistic sense; attendance at the lectures on poetry and oratory was obligatory, Greek chairs were founded, and the scholastic commentaries on Aristotle were replaced by new translations. The most influential of the humanistic schools were, that of Schlettstadt under the Westphalian Ludwig Dringenberg (d. 1477), the teacher of Wimpfeling, that of Deventer under Alexander Hegius (1433-98), the teacher of Erasmus of Rotterdam, Hermann von dem Busche, and Murellius, and that of Münster, which underwent humanistic reformation in 1500 under the provost Rudolf von Langen (1438-1519), and which under the co-rector, Joannes Murellius (1480-1517), the author of numerous and widely-adopted textbooks, attracted pupils from such distant parts as Pomerania and Silesia. Good academic institutions also existed in Nuremberg, Augsburg, Strasburg, Basle, etc.

The humanistic movement reached its zenith during the first two decades of the sixteenth century in Reuchlin, Erasmus, and Hutten. Johann Reuchlin (1455-1522), the "phoenix of Germany", was skilled in all the branches of knowledge that were then cultivated. Primarily a jurist, an expert in Greek, a first-rate authority on Roman authors, an historian, and a poet, he nevertheless attained his chief renown through his philosophical and Hebrew works—especially through his "Rudimenta Hebraica" (grammar and lexicon)—in the composition of which he secured the assistance of Jewish scholars. His model was Pico della Mirandola, the "wise count, the most learned of our age". He studied the esoteric doctrine of the Cabbala, but lost himself in the maze of its abstruse problems, and, after having become, in academic retirement, the pride and glory of his nation, was suddenly forced by a peculiar incident into European notoriety. This occurrence has been not unjustly termed the culminating point of Humanism. Johann Pfefferkorn, a baptized Jew, had declared the Talmud a deliberate insult to Christianity, and had procured from the emperor a mandate suppressing Hebrew works. Asked for his opinion, Reuchlin on scientific and legal grounds expressed his personal disapprobation of this action. Enraged at this opposition, Pfefferkorn, in his "Handspiegel", attacked Reuchlin, in reply to which the latter composed the "Augenspiegel". The theologians of Cologne, particularly Hochstraten, declared against Reuchlin, who then appealed to Rome. The Bishop of Speier, entrusted with the settlement of the strife, declared himself in favour of Reuchlin. Hochstraten, however, now proceeded to Rome; in 1516 a papal mandate postponing the case was issued, but finally in 1520, under the pressure of the Lutheran movement, Reuchlin was condemned to preserve silence on the matter in future and to pay full costs.

But more important than the lawsuit was the literary warfare that accompanied it. This strife was a prelude to the Reformation. All Germany was divided into two camps. The Reuchlinists, the "foster-

ers of the arts and of the study of humanity", the "bright, renowned men" (*clari viri*), whose approving letters (*Epistolæ clarorum virorum*) Reuchlin had published in 1514, predominated in numbers and intellect; the Cologne party, styled by their opponents "the obscurantists" (*virī obscuri*), were more intent on defence than attack. The most important document of this literary feud is the classical satire of the Humanists, "The Letters of the Obscurantists" (*Epistolæ obscurorum virorum*, 1515-17), of which the first part was composed by Crotus Rubianus, the second substantially by Hutten. Ostensibly these letters were written by various partisans of the Cologne University to Ortwin Gratius, their poet and master, and were couched in barbarous Latin. They purport to describe the life and doings of the obscurantists, their opinions and doubts, their debaucheries and love affairs. The lack of culture, the obsolete methods of instruction and study, the perverse expenditure of ingenuity, the pedantry of the obscurantists, are mercilessly ridiculed. Although the pamphlet was dictated by hatred and was full of reckless exaggeration, an inimitable originality and power of caricature secured its success. The Humanists regarded the dispute as decided, and sang the "Triumph of Reuchlin". The latter, however, ever remained a true supporter of the Church and the pope.

Desiderius Erasmus of Rotterdam (1467-1536) was termed the "second eye of Germany". Vivacious, acute, and witty, he was the leader and literary oracle of the century, while his name, according to the testimony of a contemporary, had passed into proverb: "Whatever is ingenious, scholarly, and wisely written, is termed erasmic, that is, unerring and perfect." His extraordinarily fruitful and versatile literary activity as profound Latinist and incomparable revivalist of Greek, as critic and commentator, as educator, satirist, theologian, and Biblical exegete, it is impossible to dwell upon here (see ERASMUS, DESIDERIUS). Ulrich von Hutten (1488-1523), a Franconian knight, and enthusiastic champion of the liberal sciences, was still better known as politician and agitator. The strengthening of the emperor's power and war against Rome were the chief items of his political programme, which he preached first in Latin and subsequently in German dialogues, poems, and pamphlets. The jurists and the Roman Law, the immorality and illiteracy of the clergy, the fatuity of unpractical pedantry, were mercilessly scourged by him, his aim being of course to make himself conspicuous. Finally, he enlisted in the service of Luther and celebrated him in his last writings as a "hero of the Word", a prophet and a priest, though Luther always maintained towards him an attitude of reserve. Hutten's death may be regarded as the end of German Humanism properly speaking. A still more serious movement, the Reformation, took its place. The majority of the Humanists set themselves in opposition to the new movement, though it cannot be denied that they, especially the younger generation under the leadership of Erasmus and Mutianus Rufus, had in many ways paved the way for it.

The progress of Humanism in other lands may be reviewed more briefly. In France the University of Paris exerted a powerful influence. By the end of the fourteenth century the students of this institution were already conversant with the ancient authors. Nicolas de Clémanges (1360-1434) lectured on Ciceronian rhetoric, but the earliest real Humanist in France was Jean de Montreuil (d. 1418). In 1455 Gregorio of Città di Castello, who had resided in Greece, was installed in the university to lecture on Greek and rhetoric. Subsequently, there came from Italy scholars and poets—e. g. Andreas Joannes Lascaris, Julius Cæsar Scaliger, and Andreas Alciati—who made France the docile daughter of Italy. Among the leading scholars in France may be mentioned Budé (Budæus), the first Hellenist of his age (1467-

1540), the accomplished printers Robert (1503-59) and Henri (1528-98) Estienne (Stephanus), to whom we are indebted for the "Thesaurus linguæ Latinæ" and the "Thesaurus linguæ Græcæ"; Joseph Justus Scaliger (1540-1609), famed for his knowledge of epigraphy, numismatics, and especially of chronology; the philologist Isaac Casaubon (1559-1614), well known for his excellent edition of the classics, and Petrus Ramus (1515-72), a profound student of Greek and medieval philosophy.

Classical learning was naturalized in Spain through Queen Isabella (1474-1504). The school system was reorganized, and the universities entered on a new era of intellectual prosperity. Of Spanish scholars Juan Luis Vives (1492-1540) enjoyed a European reputation. In England Humanism was received with less favour. Poggio, indeed, passed some time in that country, and young Englishmen, like William Grey, a pupil of Guarino's, later Bishop of Ely and privy councillor in 1454, sought instruction in Italy. But the troubled conditions of English life in the fifteenth century did not favour the new movement. In the spread of classical learning William Caxton (1421-91), the first English printer, played an important part. The learned, refined, charitable, and courageous chancellor Thomas More (1478-1535) was in a way an intellectual counterpart of Erasmus, with whom he was on terms of closest intimacy. Of special importance was the foundation of such excellent schools as Eton in 1440, and St. Paul's (London) in 1508. The founder of the latter was the accomplished Dean John Colet (1466-1519); the first rector was William Lilly (1468-1523), who had studied Greek in the Island of Rhodes, and Latin in Italy, and was the pioneer of Greek education in England. During the sojourn of Erasmus at Oxford (1497-9) he found kindred hellenistic spirits in William Grocyn and Thomas Linacre, both of whom had been educated in Italy. From 1510 to 1513 Erasmus taught Greek at Cambridge.

Humbert of Romans (DE ROMANIS), fifth master general of the Dominican Order, b. at Romans in the Diocese of Vienne about 1194; d. 14 July, 1277, or 15 January, 1274, at Valence. He is mentioned as a student at Paris in 1215. In 1224 he entered the Order of St. Dominic, was professor of theology at the school of his order at Lyons in 1226, and prior at the same place from 1236 to 1239. In 1240 he became provincial of the Roman, and in 1244 of the French, province of Dominicans. After holding the latter office ten years he was elected master general of his order at the general chapter held at Budapest in 1254. In 1263 he voluntarily resigned this office at the general chapter held in London, and retired to the monastery of Valence where he spent the rest of his life. During his generalate the liturgy of the Dominican Order received its permanent form. Humbert's humility did not permit him to accept the Patriarchate of Jerusalem, which was offered him after he had resigned as master general. He is the author of various ascetical treatises, some of which were collected and edited by Berthier: "Opera B. Humberti" (2 vols., Paris, 1889). In a treatise entitled: "Liber de tractandis in concilio Lugdunensi 1274" he severely criticizes the faults of the clergy. Parts of it were

edited by Martène in "Veterum Script. et monument. ecclesiasticorum et dogmaticorum ampl. collectio" (Paris, 1724-33), VII, 174-98.

MICHAEL OTT.

Humeral Veil.—This is the name given to a cloth of rectangular shape, about 8¼ ft. long and 1½ ft. wide. The "Cæremoniale Romanum" (l. I, c. x, n. 5) requires that it should be of silk. The edges are usually fringed, while a cross, with the name "Jesus", or some other representation adorns the centre. Humeral veils for use on festivals are often richly embroidered. To prevent too rapid wearing out by usage, pockets or flaps (wings) are provided well under the lower edges, towards the ends. These are then used instead of the veil itself to hold the object which is to be covered by the latter. Flaps (wings) are not advisable; but there can be no serious objection to pockets. The humeral veil is worn so as to cover the back and shoulders—hence its name—and its two ends hang down in front. To prevent its falling from the shoulders, it is fastened across the breast with clasps or ribbons attached to the border. The humeral veil is used: (1) at solemn high Mass, by the subdeacon, who holds the paten with it from the close of the Offertory until after the Pater Noster ("Ritus celebr.", vii, 9, in "Missale Rom."; "Cæremon. Episc.", l. I, c. x, n. 6; II, viii, 60); (2) at a pontifical Mass, by the acolyte, who bears the bishop's mitre, unless he be wearing the cope (Cæremon. Episc., I, xi, 6); (3) by the priest or bishop in processions of the Blessed Sacrament, in giving Benediction, in carrying the Host to its repository on Holy Thursday, and bringing it back to the altar on Good Friday, and finally in taking the Viaticum to the sick (see rit. for Fer. V. in Cæna Domini, and Fer. VI. in Parasceve, in "Miss. Rom."; "Cæremon. episc.", l. II, c. xxiii, n. 11, 13; xxv, 31, 32; xxxiii, 27; "Rituale Rom.", Tit. IV, c. iv, n. 9; IX, v, 3). In processions of the Blessed Sacrament, and at Benediction given with the ostensorium, only the hands are placed under the humeral veil; in other cases it covers the sacred vessel which contains the Host. In the cases mentioned under the third heading the humeral veil must always be white. No specific colour is prescribed in the case of the mitre-bearer, but the veil worn by the subdeacon who bears the paten must be of the same colour as the other vestments. There is no black humeral veil, for the reason that at Masses for the dead, as well as on Good Friday, the paten remains on the altar.

History.—It is impossible to determine when the Roman Ritual first prescribed the use of the humeral veil on the occasions mentioned above, under (3). It was probably towards the close of the Middle Ages. The custom is first alluded to in "Ordo Rom. XV" (c. lxxvii). In many places outside of Rome the humeral veil was not adopted for the aforesaid functions until very recent times. It was prescribed in Milan, by St. Charles Borromeo, for processions of the Blessed Sacrament and for carrying Holy Viaticum to the sick. Its use at high Mass dates back as far at least as the eighth century, for it was mentioned, under the name of *bindon*, in the oldest Roman Ordo. It undoubtedly goes back to a more remote antiquity. But, in those days, it was not the subdeacon who held the paten with it; this office was performed by an acolyte. Moreover, not only this particular acolyte, but all acolytes who had charge of sacred vessels wore the humeral veil. That of the paten-bearer was distinguished by a cross. One may find an interesting reproduction of acolytes with alb and humeral veil (*bindon*) in a ninth-century miniature of a sacramentary (reproduced in Braun, "Die liturgische Gewandung", p. 62), in the seminary of Autun. Some time in

the eleventh century the custom was inaugurated of having the paten borne, no longer by an acolyte, but by the subdeacon; this was especially the case at Rome. The subdeacon then had no humeral veil, but rather held the paten with the pall (*mappula*, *palla*, *sudarium*), the forerunner of our chalice veil, the ends of which were thrown over the right shoulder. Thus it is prescribed by "Ordo Rom. XIV" (c. liii), and so it may be seen in various reproductions. The acolyte continued, even in the later Middle Ages, to use a humeral veil (*palliolum*, *sondon*, *mantellum*) when carrying the paten, and the present Roman custom, according to which the subdeacon is vested in the humeral veil when holding the paten, originated at the close of the Middle Ages. It was slow in finding its way into use outside of Rome, and was not adopted in certain countries (France, Germany) until the nineteenth century. The veil used by the mitre-bearer is mentioned as far back as "Ordo Rom. XIV" (c. xlviii).

Humiliati.—I. A penitential order dating back, according to some authorities, to the beginning of the eleventh, but more probably to the beginning of the twelfth century, to the reign of Emperor Henry V, who, after quelling a rebellion in Lombardy, led the principal nobles of the cities implicated back to Germany as captives. Converted from the vanities of the world, these assumed a penitential garb of grey and gave themselves up to works of charity and mortification, whereupon the emperor, after receiving their pledges of future loyalty, permitted their return to Lombardy. At this time they were often called Baretini, from the shape of their head-dress. Their acquaintance with the German woollen manufactures enabled them to introduce improved methods into Italy, thus giving a great impetus to the industry, supplying the poor with employment and distributing their gains among those in want. On the advice of St. Bernard, in 1134, many of them, with the consent of their wives, withdrew from the world, establishing their first monastery at Milan. They exchanged their ashen habit for one of white. Some years later, on the advice of St. John Meda of Oldrado (d. 1159), they embraced the Rule of St. Benedict, adapted by St. John to their needs; they received papal approbation from Innocent III about 1200, and from many succeeding pontiffs. The order grew rapidly, gave many saints and blessed to the Church, assisted in combating the Cathari, formed trades associations among the people, and played an important part in the civic life of every community in which they were established. In the course of time, however, owing to the accumulation of temporal goods and the restriction of the number of members admitted (for at one time there were only about 170 in the 94 monasteries), grave abuses crept in, which St. Charles Borromeo was commissioned by Pius V to reform. His fearless efforts roused such opposition among a minority that a conspiracy was formed and a murderous assault made on him by one of the Humiliati, a certain Girolamo Donati, called Farina, which, though it was unsuccessful, was responsible for the execution of the chief conspirators and the suppression of the order by a Bull of 8 Feb., 1571. The houses and possessions were bestowed on other religious orders, including the Barnabites and Jesuits, or applied to charity.

II. The wives of the first Humiliati, who belonged to some of the principal families of Milan, also formed a community under Clara Blassoni, and were joined by so many others that it became necessary to open a second convent, the members of which devoted themselves to the care of the lepers in a neighbouring hospital, whence they were also known

as Hospitallers of the Observance. The number of their monasteries increased rapidly, but the suppression of the male branch of the order, which had administered their temporal affairs, proved a heavy blow, involving in many cases the closing of monasteries, though the congregation itself was not affected by the Bull of suppression. The nuns observed the canonical Hours, fasting rigorously and taking the discipline at stated times. Some retained the ancient Breviary of the order, when other houses adopted the Roman Breviary. The habit consists of a robe and scapular of white over a tunic of ashen grey, the veils being usually white, though in some houses black. The lay sisters, who retain the name of Baretine, wear grey. There are still in Italy five independent houses of Humiliati.

F. M. RUDGE.

Humility.—The word *humility* signifies lowliness or submissiveness and it is derived from the Latin *humilitas* or, as St. Thomas says, from *humus*, i. e. the earth which is beneath us. As applied to persons and things it means that which is abject, ignoble, or of poor condition, as we ordinarily say, not worth much. Thus we say that a man is of humble birth, or that a house is a humble dwelling. As restricted to persons, humility is understood also in the sense of afflictions or miseries, which may be inflicted by external agents, as when a man humiliates another by causing him pain or suffering. It is in this sense that others may bring about humiliations and subject us to them. Humility in a higher and ethical sense is that by which a man has a modest estimate of his own worth, and submits himself to others. According to this meaning no man can humiliate another, but only himself, and this he can do properly only when aided by Divine grace. We are treating here of humility in this sense, that is, of the virtue of humility.

The virtue of humility may be defined:—"A quality by which a person considering his own defects has a lowly opinion of himself and willingly submits himself to God and to others for God's sake." St. Bernard defines it:—"A virtue by which a man knowing himself as he truly is, abases himself." These definitions coincide with that given by St. Thomas:—"The virtue of humility", he says, "consists in keeping oneself within one's own bounds, not reaching out to things above one, but submitting to one's superior" (*Summa Contra Gent.*, bk. IV, ch. lv, tr. Rickaby).

To guard against an erroneous idea of humility, it is necessary to explain the manner in which we ought to esteem our own gifts in reference to the gifts of others, if called upon to make a comparison. Humility does not require us to esteem the gifts and graces which God has granted us, in the supernatural order, less than similar gifts and graces which appear in others. No one should esteem less in himself than in others these gifts of God which are to be valued above all things according to the words of St. Paul:—"That we may know the things that are given us from God" (I Cor., ii, 12). Neither does humility require us in our own estimation to think less of the natural gifts we possess than of similar, or of inferior, gifts in our neighbours; otherwise, as St. Thomas teaches, it would behove everyone to consider himself a greater sinner or a greater fool than his neighbour; for the Apostle without any prejudice to humility was able to say:—"We by nature are Jews, and not of the Gentiles sinners" (Gal., ii, 15). A man, however, may generally esteem some good in his neighbour which he does not himself possess, or acknowledge some defect or evil in himself which he does not perceive in his neighbour, so that, whenever anyone subjects himself out of humility to an equal or to an inferior he does so because he takes that equal or inferior to be his superior in some respect. Thus we may interpret the humble

expressions of the saints as true and sincere. Besides, their great love of God caused them to see the malice of their own faults and sins in a clearer light than that which is ordinarily given to persons who are not saints.

The four cardinal virtues are prudence, justice, fortitude, and temperance, and all other moral virtues are annexed to these either as integral, potential, or subjective parts. Humility is annexed to the virtue of temperance as a potential part, because temperance includes all those virtues that refrain or repress the inordinate movements of our desires or appetites. Humility is a repressing or moderating virtue opposed to pride and vainglory or that spirit within us which urges us to great things above our strength and ability, and therefore it is included in temperance just as meekness which represses anger is a part of the same virtue. From what we have here stated it follows that humility is not the first or the greatest of the virtues. The theological virtues have the first place, then the intellectual virtues, as these immediately direct the reason of man to good. Justice is placed in the order of the virtues before humility, and so should obedience be, for it is part of justice. Humility is, however, said to be the foundation of the spiritual edifice, but in a sense inferior to that in which faith is called its foundation. Humility is the first virtue inasmuch as it removes the obstacles to faith—*per modum removens prohibens*, as St. Thomas says. It removes pride and makes a man subject to and a fit recipient of grace according to the words of St. James:—"God resisteth the proud, and giveth his grace to the humble" (James, iv, 6). Faith is the first and the positive fundamental virtue of all the infused virtues, because it is by it we can take the first step in the supernatural life and in our access to God: "For he that cometh to God, must believe that he is, and is a rewarder to them that seek him" (Heb., xi, 6). Humility, inasmuch as it seems to keep the mind and heart submissive to reason and to God, has its own function in connexion with faith and all the other virtues, and it may therefore be said to be a universal virtue.

It is therefore a virtue which is necessary for salvation, and as such is enjoined by Our Divine Saviour, especially when He said to His disciples:—"Learn of me, because I am meek, and humble of heart: and you shall find rest to your souls" (Matt., xi, 29). He also teaches this virtue by the words, "Blessed are the poor in spirit: for theirs is the kingdom of heaven" (Matt., v, 3), and again, "Blessed are ye when they shall revile you, and persecute you, and speak all that is evil against you, untruly, for my sake: Be glad and rejoice, for your reward is very great in heaven" (Matt., v, 11-12). From the example of Christ and His Saints we may learn the practice of humility, which St. Thomas explains (*Contra Gent.*, bk. III, 135): "The spontaneous embracing of humiliations is a practice of humility not in any and every case, but when it is done for a needful purpose: for humility being a virtue, does nothing indiscreetly. It is then not humility but folly to embrace any and every humiliation: but when virtue calls for a thing to be done it belongs to humility not to shrink from doing it, for instance not to refuse some mean service where charity calls upon you to help your neighbours. . . Sometimes too, even where our own duty does not require us to embrace humiliations, it is an act of virtue to take them up in order to encourage others by our example more easily to bear what is incumbent on them: for a general will sometimes do the office of a common soldier to encourage the rest. Sometimes again we may make a virtuous use of humiliations as a medicine. Thus if anyone's mind is prone to undue self-exaltation, he may with advantage make a moderate use of humiliations, either self-imposed, or imposed by others, so as to check the elation of his spirit by putting himself on a level with the lowest class of the community in the doing of mean offices."

The Angelic Doctor likewise explains the humility of Christ in the following words: "Humility cannot befit God, who has no superior, but is above all. Though the virtue of humility cannot attach to Christ in His divine nature; it may attach to Him in His human nature and His divinity renders His humility all the more praiseworthy, for the dignity of the person adds to the merit of humility; and there can be no greater dignity to a man than his being God. Hence the highest praise attaches to the humility of the Man God, who to wean men's hearts from worldly glory to the love of divine glory, chose to embrace a death of no ordinary sort, but a death of the deepest ignominy" (*Summa Contra Gent.*, tr. Rickaby, bk. IV, ch. iv; cf. bk. III, ch. cxxxvi). St. Benedict in his rule lays down twelve degrees of humility. St. Anselm, as quoted by St. Thomas, gives seven. These degrees are approved and explained by St. Thomas in his "*Summa Theologica*" (II-II, Q. clxi, a. 6). The vices opposed to humility are, (1) pride: by reason of defect, and (2) a too great obsequiousness or abjection of oneself, which would be an excess of humility. This might easily be derogatory to a man's office or holy character; or it might serve only to pamper pride in others, by unworthy flattery, which would occasion their sins of tyranny, arbitrariness, and arrogance. The virtue of humility may not be practised in any external way which would occasion such vices or acts in others.

ARTHUR DEVINE.

Humphrey Middlemore, BLESSED, English Carthusian martyr, date of birth uncertain; d. at Tyburn, London, 19 June, 1535. His father, Thomas Middlemore of Edgbaston, Warwickshire, represented one of the oldest families in that county, and had acquired his estate at Edgbaston by marriage with the heiress of Sir Henry Edgbaston; his mother was Ann Lyttleton, of Pillaton Hall, Staffordshire. Attracted to the Carthusian Order, he was professed at the Charterhouse, London, ordained, and subsequently appointed to the office of procurator. Although few details of his life have come down, it is certain that he was greatly esteemed for his learning and piety by the prior, Father John Houghton, and by the community generally. In 1534 the question of Henry VIII's marriage with Anne Boleyn arose to trouble conscientious Catholics, as the king was determined that the more prominent of his subjects should expressly acknowledge the validity of the marriage, and the right of succession of any issue therefrom. Accordingly, the royal commissioners paid a visit to the Charterhouse, and required the monks to take the oath to that effect. Father Houghton and Father Humphrey refused, and were, in consequence, imprisoned in the Tower; but, after a month's imprisonment, they were persuaded to take the oath conditionally, and were released. In the following year Father John was executed for refusing to take the new oath of supremacy, and Father Humphrey became vicar of the Charterhouse. Meanwhile, Thomas Bedyll, one of the royal commissioners, had again visited the Charterhouse, and endeavoured, both by conversation and writing, to shake the faith of Father Humphrey and his community in the papal supremacy. His efforts left them unmoved, and, after expostulating with them in a violent manner, he obtained authority from Thomas Cromwell to arrest the vicar and two other monks, and throw them into prison, where they were treated with inhuman cruelty, being bound to posts with chains round their necks and legs, and compelled so to remain day and night for two weeks. They were then brought before the council, and required to take the oath. Not only did they refuse, but justified their attitude by able arguments from Scripture and the Fathers in favour of the papal

claims. They were accordingly condemned to death, and suffered at Tyburn with the greatest fortitude and resignation.

H. G. WINTERSGILL.

Humphreys, LAURENCE, layman and martyr, born in Hampshire, England, 1571; died at Winchester, 1591. Of Protestant parentage, he was a studious youth, well read in the Bible and in religious works. At the age of eighteen he sought to enter the lists of religious controversy and had several meetings with Father Stanney, who soon succeeded in making him a convert. He was a virtuous and good-hearted youth, who delighted to visit prisoners and sick persons, to instruct the ignorant, and generally to exercise the corporal and spiritual works of mercy. In 1591 he was taken seriously ill, and in his delirium he called Queen Elizabeth a harlot and a heretic. He was overheard by some Protestants, and before he was quite convalescent was arrested and committed to Winchester jail. At his trial he solemnly averred that he could not recollect having used opprobrious epithets about the queen, but that he did not dispute the evidence of the witnesses who had overheard him, and that he was willing to suffer for his words, though unconscious of them. And for these words alone, spoken in delirium, he was condemned and executed.

Hungarian Catholics in America.—The Kingdom of Hungary (Magyarország) comprises within its borders several races or nationalities other than the one from which it derives its name. Indeed the Hungarians are in the minority (or perhaps a bare majority) when contrasted with all the others combined; but they outnumber any one of the other races under the Hungarian Crown. It therefore frequently happens that immigrants to the United States coming from the Kingdom of Hungary, no matter of what race they may be, are indiscriminately classed as Hungarians, even by persons fairly well informed. The Kingdom of Hungary, which is separate from Austria except in matters affecting foreign relations, comprises within its borders not only the Hungarians proper, but also the Slovaks, Ruthenians, Rumanians, Slavonians, and Croatsians, as well as a large number of Germans and some Italians. Representatives of all these races from the Hungarian Kingdom have emigrated to America, and articles concerning them will be found under other headings. Those immigrants from Hungary who are of the Greek Rite, but who may be of Hungarian education and language, have already been mentioned in the article GREEK CATHOLICS IN AMERICA. This article is devoted to those immigrants who are of the Hungarian race and language and who are of the Roman Rite. Their mother tongue is of Asiatic origin and is quite unlike any of the Indo-European languages in its vocabulary, structure, and grammatical forms. All its derivative words are made up from its own roots and for the most part are wholly native. Although it is surrounded and touched in social and business intercourse on every side by the various Slavonic tongues and by the Italian, German, and Rumanian languages, besides having the church liturgy and university teaching in Latin, the Hungarian (Magyar) language has nothing in it resembling any of them and has borrowed little or nothing from their various vocabularies. It remains isolated, almost without a relative in the realm of European linguistics. This barrier of language has rendered it exceedingly difficult for the Hungarian immigrant to acquire the English language and thereby readily assimilate American

VII.—35

ideas and customs. Notwithstanding this drawback the Hungarian Americans have made progress of which every one may well be proud. Although Count Beldy and his three companions, Bölöni, Wesselényi, and Balogh settled in America in 1831, immigration to the United States from Hungary may be said to have set in, after the revolution of 1848–49 in Hungary, by the coming of Louis Kossuth to the United States in December, 1851, on the warship Mississippi, after the failure of his struggle for Hungarian liberties. He was accompanied by fifty of his compatriots and many of these remained and settled in various parts of the country. During the Civil War and the wars between Germany and Austria, more and more Hungarian immigrants arrived, but they were then for the most part reckoned as Austrians.

It was not until 1880 that the Hungarian immigration really set in. Between 1880 and 1898 about 200,000 Hungarians came to America. The reports of the Commissioner of Immigration show that the number of Hungarian (Magyar) immigrants from the year 1899 to July, 1909, amounted to 310,869. The greatest migration year was 1907, when 60,071 arrived. There are now about three-quarters of a million of them in the United States. They are scattered throughout the country from the Atlantic to the Pacific and fill every walk in life. This immigration, while caused in a great measure by an effort to better the condition of the Hungarian of humbler circumstances, has been largely stimulated by the agencies of the various European steamship companies, who have found it a paying business to spread tales of easily earned riches among dissatisfied Hungarian labourers. Peculiar political conditions, poverty among the agricultural classes, and high taxes have contributed to cause such immigration. But it cannot be said that a desire to emigrate to other lands is natural to the real Hungarian, for his country is not in the least overcrowded and its natural resources are sufficient to afford a decent livelihood for all its children. There are but few Hungarians emigrating from the southern, almost wholly Magyar, counties. They come either from the large cities or from localities where the warring racial struggles make the search for a new home desirable. While a very large part of this immigration to the United States is Catholic, yet the combined Protestant, Jewish, and indifferentist Hungarian immigrants outnumber them, so that the Catholics number not quite one-half of the total. The Hungarians in the City of New York are said to number over 100,000. They are numerous in New Jersey and Connecticut; and every city, mining town, iron works, and factory village in Pennsylvania has a large contingent; probably a third of the Hungarian population resides in that State. Cleveland and Chicago both have a very large Hungarian population, and they are scattered in every mining and manufacturing centre throughout Ohio, Indiana, and Illinois, while West Virginia has numbers of them in its mining districts.

For a long time after the Hungarian immigration began no attention was paid, from the racial standpoint, to their spiritual needs as Catholics. They worshipped at German and Slavic churches and were undistinguishable from the mass of other foreign Catholics. During the eighties their spiritual welfare was occasionally looked after by priests of the Slavic nationalities in the larger American cities, for they could often speak Hungarian and thus get in touch with the people. About 1891 Bishop Horstmann of Cleveland secured for the Magyars of his city a Hungarian priest, Rev. Charles Böhm, who was sent there at his request by the Bishop of Vác to take charge of them. The year 1892 marks the starting-point of an earnest missionary effort among the Hungarian Catholics in this country. Father Böhm's name is connected with every temporal and spiritual effort for the

benefit of his countrymen. Being the only priest whom the Hungarians could claim as their own, he was in demand in every part of the country and for over seven years his indefatigable zeal and capacity for work carried him over a vast territory from Connecticut to California, where he founded congregations, administered the sacraments, and brought the careless again into the church. He built the first Hungarian church (St. Elizabeth's) in Cleveland, Ohio, as well as a large parochial school for 600 pupils, a model of its kind, and also founded the two Hungarian Catholic papers, "Szent Erzsébet Hírnöke" and "Magyarok Vasárnapja". The second Hungarian church (St. Stephen's) was founded at Bridgeport, Connecticut, in 1897, and the third (St. Stephen's) at McKeesport, Pennsylvania, in 1899. Besides those named, the following Hungarian churches have been established: (1900) South Bend, Indiana; Toledo, Ohio; (1901) Fairport, Ohio; Throop, Pennsylvania; (1902) McAdoo and South Bethlehem, Pennsylvania; New York City, New York; Passaic, New Jersey; (1903) Alpha and Perth Amboy, New Jersey; Lorain, Ohio; (1904) Chicago, Illinois; Cleveland (St. Imre's) and Dillonvale, Ohio; Trenton and New Brunswick, New Jersey; Connellsville, Pennsylvania; Pocahontas, Virginia; (1905) Buffalo, New York; Detroit, Michigan; Johnstown, Pennsylvania; (1906) Dayton, Ohio; South Norwalk, Connecticut; (1907) Newark and South River, New Jersey; Northampton, Pennsylvania; Youngstown, Ohio; (1908) East Chicago, Indiana; Columbus, Ohio; (1909) Philadelphia, Pennsylvania. There are about thirty Hungarian priests who minister to the spiritual wants of these congregations, but more priests are urgently needed in order effectually to reach their countrymen. Although there are nearly half a million Hungarian Catholics in the United States, including the native born, only thirty-three churches seem a faint proof of practical Catholicity; yet one must not forget that these Hungarian immigrants are scattered among a thousand different localities in this country, usually very far apart and in only small numbers in each place. Only in a few of the larger places, such as New York, Cleveland, Chicago, Bridgeport, is there a sufficiently large number to support a church and the priest in charge of it. Besides it has been found extremely difficult to procure Magyar priests suitable for missionary work among their countrymen here in America. An attempt has been made in various dioceses to supply the deficiency. In the Diocese of Columbus, Ohio, Rev. Roderic McEachen, of Barton, and Rev. Joseph Weigand, of Steubenville, have devoted themselves to the Magyar language and have become sufficiently conversant with it to meet the religious needs of their Hungarian parishioners. In Pocahontas, Virginia, Rev. Anthony Hoch, O. S. B., is familiar with this difficult language, having spent over a year in Hungary at the request of his superiors, in order to learn the Hungarian tongue. The late Bishop Tierney of Hartford, in order to meet the wants of his diocese, sent eight of his young clerics about two years ago to study theology and the Magyar language in Hungarian seminaries [six to Budapest and two to Karlsburg (Gyulafehérvár)] where they are preparing for the priesthood and learning the language and customs of the people. Two of them have just returned, having been ordained at Budapest. It is not intended by this policy to place American priests over Hungarian congregations, but to supply mixed congregations, where Hungarians are numerous, with priests who can speak their language and keep them in the practice of their religion.

While Catholic societies and membership in them are constantly increasing everywhere in this country the Hungarian element can boast of only a relatively small progress. The Magyars have one Catholic Association (Szűz Mária Szövetség), with headquarters at Cleveland, Ohio, which was founded in 1896

under the leadership of Rev. Charles Böhm, assisted by Joseph Pity, Francis Apáthy, and John Weizer. This association has 2500 members comprising about eighty councils in different States. Besides being a religious organization it is also a benefit association providing life insurance for its members. There are also several other Catholic Hungarian benefit societies throughout the country, the largest being at Cleveland, Ohio, the Catholic Union (Szent Erzsébet Unió), with 800 members. There are many other non-Catholic Hungarian societies, to which Catholic Hungarians belong, the two largest being the Bridgeporti Szövetség with 250 councils and Verhovai Egylet with 130 councils. The Hungarian Reformed Church has also a church association based upon the same lines as the Catholic societies and with about the same membership. In 1907 the Hungarian National Federation (Amerikai Magyar Szövetség), an organization embracing all Magyars of whatsoever creed, was founded with great enthusiasm in Cleveland, its object being to care for the material interests and welfare of Hungarians in America. Julius Rudnyánsky, a noted Catholic poet and writer, was one of the founders. Despite its good intentions it has failed to obtain the unqualified support of Hungarians throughout the country. The parochial schools established by the Hungarians have grown rapidly. The finest was built in Cleveland, Ohio, by Rev. Charles Böhm, and now contains 655 pupils. There are altogether (in 1909) twelve Hungarian parochial schools containing about 2500 children. No attempt at any institutions of higher education has been made, nor are there any purely Hungarian teaching orders (male or female) in the United States to-day.

The first Hungarian paper was a little sheet called "Magyar Száműzöttök Lapja" (Hungarian Exiles' Journal), which made its first appearance on 15 October, 1853, and lived a few years. The next one was "Amerikai Nemzetőr" (American Guardsman) in 1854, which has long since ceased to exist. The "Szabadság" (Liberty) was founded in 1891 in Cleveland, Ohio, by Tilmér Kohányi, and is a flourishing daily published there and in New York. Catholic Hungarian journalism in America presents but a meagre history. Soon after the arrival of Father Böhm he started a religious weekly at Cleveland called "Magyarországi Szent Erzsébet Hírnöke" (St. Elizabeth's Hungarian Herald). Two years later this weekly developed into a full-fledged newspaper of eight pages called "Magyarok Vasárnapja" (Hungarian Sunday News), and became quite popular. In the beginning of 1907 the Hungarian Catholic clergy, hoping to put Catholic journalism on a stronger foundation, held an enthusiastic meeting at Cleveland and took the "Magyarok Vasárnapja" under their joint control and selected as its editor Rev. Stephen F. Chernitzky, from whom in great part the facts for this article have been obtained. But notwithstanding his hard work in Catholic journalism the panic of 1907 deprived it of financial backing and it lost much of its patronage. At Cleveland there is also a Catholic weekly "Haladás" (Progress), started in 1909. Rev. Geza Messerschmiedt of Passaic, New Jersey, is conducting a monthly Catholic paper "Hajnal" (Dawn), and there is also another Catholic Hungarian monthly, "Magyar Zászló" (Hungarian Standard), published at McKeesport, Pennsylvania, by Rev. Colman Kovács. Other clergymen like Rev. Alexander Várlaky of Bethlehem, Pennsylvania, and Rev. Louis Kovács of New York City have undertaken the task of keeping alive small Catholic weekly papers for the benefit of their countrymen.

A great many of the Hungarians in America are indifferentists and free-thinkers and from them the Liberals and Socialists are recruited. But a large number are Protestants of a Calvinistic type, some-

what similar to the various Presbyterian denominations in this country. Although actually less numerous than the Catholic Hungarians, they have more churches here. There are forty in all, consisting of thirty-nine Reformed churches and one Hungarian Lutheran congregation. One division of the Reformed Church is aided by the Reformed Board of Missions in Hungary, having under its control 19 churches and 20 ministers, while eight churches of the other division are controlled and supported by the Board of Home Missions of the Reformed Church in America, and twelve by the Presbyterial Church of America. The Lutheran congregation is located at Cleveland, Ohio. Too short a time has elapsed since the establishment of Hungarian Catholic churches in America to speak of the distinguished participants therein, except as they have been incidentally mentioned above, since nearly every one of those interested in spreading and keeping the Faith among the Hungarian immigrants is still alive and engaged in active work. There is also a slowly growing settlement of Hungarian colonists in three provinces of British Canada, Alberta, Saskatchewan, and Manitoba, with head-quarters at Winnipeg. Two of these farming centres have been named Esterház and Kaposvár, after towns in south-western Hungary. Rev. M. Erdújhelyi undertook in 1908 to found churches in the country places for them, but was unsuccessful because of the great distances between their respective settlements. The spiritual welfare of the Magyar farmers and settlers has been chiefly taken in charge by three Canadian born priests, Rev. Agapite Pagé, Rev. Joseph Pirot, and Rev. Francis Woodcutter, who undertook to acquire the Hungarian language and thus put themselves in close communication with the immigrant settlers.

Hungary.—GEOGRAPHY AND MATERIAL CONDITIONS.—The Kingdom of Hungary, or "Realm of the Crown of St. Stephen", situated between 14° 25' and 26° 25' E. longitude, and between 44° 10' and 49° 35' N. latitude, includes, besides Hungary Proper and Transylvania, the Kingdom of Croatia-Slavonia and a territory known as the Military Frontier. The total area is 125,430 square miles, of which 16,423 belong to the Kingdom of Croatia-Slavonia. Of a population of 19,254,559 (census of 1900) 51.5 per cent were Catholics. The population of the capital, Budapest, situated on both sides of the Danube, is about 800,000.

The southern boundary of the kingdom is the River Save, which separates it from Bosnia and Servia as far east as the Rumanian frontier, from which point the artificial boundary of Rumania continues along the south, turning north-east, and then north. On the north lies Galicia; on the north-west, Moravia; on the west Lower Austria, Styria, and Carniola. Some 43,000 square miles are occupied by the Great and the Little Hungarian Alföld, two great plains enclosed by the Alps and the Carpathians. The country is drained by the Danube and its tributaries the Save and Drave, on the right bank, and, on the left, the Theiss, which in its turn receives the waters of the Maros. The chief industry is agriculture (including forestry), which supports nearly 13,000,000 persons. The chief crops are wheat and maize. Manufacturing industries employ 12.8 per cent of the wage-earning population. Mining (lignite, pig iron, coal, and gold

being the chief items) in 1906 employed 72,290 persons and produced a revenue of 116,000,000 Kronen (\$23,200,000). Grazing also contributes largely to the national wealth.

HISTORY.—(1) *From Early Times to the Battle of Mohács (1526).*—Even in the earliest ages the territory of the present Kingdom of Hungary was the abode of various races of men. The remains from prehistoric times show that the country was inhabited when the present Hungarian lowlands were covered by the ocean. Half a century before Christ the Thracians occupied Hungary east of the Danube, while Hungary west of the Danube was the home of Celtic and Illyrian tribes. At the opening of the Christian Era the sway of the Romans extended as far as the Danube; Pannonia formed part of the Roman Empire for 400 years, and Dacia for about 150 years. After Rome fell, Hungary, like the other provinces, was affected by the migrations. First came the Huns who built up under King Attila, called "the Scourge of God", the powerful Hunnish Empire. After the empire of the Huns went to pieces German tribes ruled in Hungary for about 100 years, and they were followed by the Avars. During the supremacy of the Avars, a period of over two hundred years, began the migration of the Slavonic tribes. Moravians, Bulgars, Croato-Serbian, and Poles all sought to overthrow the Avars, but their power was not broken until Charlemagne appeared. The decline of the kingdom of the East Franks, after the death of Charlemagne, was favourable to the development of a great Slavonic power, and Swatopluk, ruler of Great Moravia, thought to establish a permanent Moravian kingdom, but the appearance of the Magyars put an end to these schemes.

There are two opposing theories as to the origin of the Magyars, or native Hungarians. Arminius Vámbéry and his supporters hold to a Turkish origin of the Magyars, while Pál Hunfalvy and his followers place them in the Finno-Ugrian division of languages of a Ural-Altai stem and look for the original home of the race in the region of the Ural mountains, or the district between the rivers Obi, Irtysh, Kama, and Volga. The presence of Turkish words in the language is explained by the theory that, after leaving their former home, the Hungarians dwelt for some time near Turkish tribes, who were undoubtedly on a higher level of civilization, and from whom these words were borrowed. About the middle of the ninth century, when the Byzantine writers first speak of the Hungarians, calling them "Turci", the Hungarians were in Lebedia, in the territory on the right bank of the Don. From this point they carried on their marauding excursions into the district of the Lower Danube and on these expeditions they sometimes advanced into Germany. Being exposed to attack by the Bisseni, the Hungarians left Lebedia, some returning to the district on the further side of the Volga, while others went towards the west and settled near the Danube, between the Dniester, Sereth Pruth, and Bug Rivers. The Byzantine writers called this region Atelkuzu (Hungarian, Etelköz). While in this neighbourhood the Hungarians undertook an expedition under Arpád in 893 or 894 against Simeon, ruler of the Bulgars. The expedition was successful, but Simeon formed an alliance with the Bisseni, and a fierce attack was made on the Hungarians in which their land was devastated. The Hungarians, therefore, withdrew from this region, went westward, and reached the country where they now live. The date of their entry into Hungary is not certain, apparently it was 895 or 896; neither is the point from which they came positively ascertained. It is not improbable that they entered Hungary from three directions and arrived at different periods. The chronicle of the "anonymous notary of King Béla" (*Anonymus Belæ regis notarius*) has preserved the history of the first

occupation of the country, but modern historical investigation shows that little credence can be given the narrative.

The Magyars settled in the neighbourhood of the Danube, and especially in the district on the farther side, as best suited to their occupation, that of cattle-raising. In this region were founded their first towns, the most important of the country, namely, Gran, Székes-Fehérvár, and Buda. At about the same time, under their leader Árpád (d. 907), they began once more their marauding expeditions and attacked the countries west of them; these forays, which went as far as Germany, Italy, and France, were continued under Zoltán (907-47), and Taksony (947-72), and did not cease until the land was converted to Catholicism in the reign of Géza. When the Hungarians took possession of the country where they now live, they found a strong Slavonic Catholic Church already in existence in the western part, in Pannonia, where the Christian Faith had been spread partly by German and partly by Italian priests. Methodius, the author of the Slavonic liturgy, endeavoured to introduce the use of the new liturgy here also, but with his death (855) these efforts came to an end. Consequently, the Magyars received their knowledge of Christianity partly from the Catholic population already existing in the country, and partly from the ecclesiastics whom they captured in their marauding expeditions. These forays into the territories farther to the west, which lasted into the tenth century, were a great obstacle to the spread of Christianity, and at the same time the national pride of the Hungarians prevented the acceptance of the religion of the conquered population. Their defeats near Merseburg, in 933, and on the Lech, in 955, put an end to these western expeditions and made the Hungarians more favourable to Christianity.

The opinion that the first efforts for the conversion of the Hungarians were made from Constantinople, because the Magyar commanders Bulcsu and Gyula accepted the Greek faith at Constantinople, rests, as has been proved, on the inventions of Byzantine chroniclers. The conversion of the land to the Catholic Faith was effected, in reality, from the west, and the change began in the ruling family. Duke Géza, who from 970 had been the sole ruler of Hungary, perceived the danger which threatened Hungary, surrounded as it was by Catholic countries, if it continued pagan. He saw that, if Hungary persisted in shutting out Catholicism, it would sooner or later be the prey of the neighbouring peoples. His marriage with Adelaide, sister of the Polish Duke Mieczo-

(Mieczyslaw), brought him closer to the Church, and his conversion is to be attributed to Adelaide's influence. It was through Adelaide's efforts that St. Adalbert, Archbishop of Prague, came to Hungary and, in 985, baptized Géza and his son Vaik; the latter took the name of Stephen in baptism. A large number of the most prominent of Géza's retainers and of his people embraced the Catholic Faith at the same time. Evil results arose, however, from the fact that Adalbert did not at once establish an ecclesiastical organization for Hungary. Moreover, a large proportion of the newly converted adopted the new faith only in externals and retained their heathen customs, offering sacrifices to the old gods. Yet, notwithstanding all this, the new religion continued to spread among the people.

The actual conversion of the country and its ecclesiastical organization was the work of St. Stephen, son of Duke Géza, who succeeded his father in 997. His marriage with Gisela, sister of Duke Henry of Bavaria, gave a powerful impulse to the spread of Catholicism. From Germany came large numbers of priests, nobles, and knights, who settled in Hungary and aided Stephen in converting the country to Christianity. Many obstacles were encountered, and the new religion was spread by the sword. The advance of Christianity was regarded as endangering national interests, and the influx of strangers, together with the favour shown these new settlers by the ruler, seemed to set aside the national influences in the government. Consequently, soon after the accession of Stephen, a revolt led by Koppán broke out, but it was quickly suppressed, with

the aid of the foreign knights; in this way the reputation both of Stephen and of the Church was established in the regions on the farther side of the Danube. To show his gratitude for this victory Stephen built the monastery of Pannonhalma (Martinsberg). Stephen's victory was also followed by the coming of large numbers of German, French, and Italian ecclesiastics to Hungary, which greatly aided the spread of Christianity.

Stephen now undertook the task of providing the land with the necessary ecclesiastical organization. To secure the independence both of the country and of the Church in his dominions, he petitioned Pope Sylvester II, through Abbot Astricus, for the royal dignity and the confirmation of his ecclesiastical acts and ordinances; he also placed his dominion under the protectorate of the Holy See. Sylvester acceded to Stephen's request, sent him a royal crown, and confirmed his ecclesiastical regulations. According to tradition, Stephen also received the title of

Apostolic King and Apostolic Legate, the right to have a legate's cross carried before him, and other privileges, but modern investigation has shown that the Bull of Pope Sylvester bestowing these honours is a forgery of the seventeenth century. After the return of Abbot Astricus, Stephen was crowned King of Hungary with the crown sent by the pope at Gran, 17 August, 1001. In settling the organization of the Church he placed at its head the Archdiocese of Gran, giving it as suffragans, Győr (Raab), Veszprém, Pécs (Funfkirchen), Vác (Waitzen), and Eger. About 1010 he founded a second archdiocese, that of Kalocsa, which had as suffragans the Dioceses of Bihar, Transylvania, and Marosvár (later Csanád) which was founded in 1038. In this way the land was divided into ten dioceses, the Archdiocese of Gran being the metropolitan. The Benedictines settled in Hungary during this reign, and Stephen founded the Benedictine monasteries of Pannonhalma (Martinsberg), Zobor, Pécsvárad, Zalavár, and Bakonybél; he also founded numerous other religious houses, including the convent for Greek nuns near Veszprém.

In order to provide for the support of the clergy, Stephen issued edicts concerning church tithes; he ordained that each tenth township should build a church and provide the priest with suitable land and servants for his support. The king was to supply the churches with all the necessary equipment, while the bishop selected the priests and provided the books needed. The laws of King Stephen also contain ordinances regarding attendance at Mass, observance of the church fasts, etc. With the aid of these laws, Stephen brought over almost all of his people to the Catholic Faith, although during this reign measures had often to be taken against pagan movements among the population—as against his uncle Michael (1003), against the Bulgarian prince Kean, and (1025) against Ajton. These revolts, although political in character, were also aimed more or less at the Catholic Faith. Stephen was able to suppress these insurrections, and could, therefore, hope that the Church would meet with no further antagonism. The confusion and wars over the succession, which followed the death of Stephen, and the stormy reigns of Kings Peter and Aba Samú (1038–46) soon brought about a decline of Christianity. A part of the nation sank back into the old heathenism, and in 1046 there was a revolt against the Catholic religion which led to the martyrdom of Bishop Gerhard, who was thrown by the insurgents from the Blocksberg at Buda into the river. The new king, Andrew I (1047–60), either

could not or would not act energetically at first, and it was not until after his coronation that he took strong measures against those who had fallen away from the Faith. After his death a small part of the population that was still pagan broke out into revolt, but this rebellion was quickly suppressed by King Béla I (1060–63). The internal disorders during the reigns of King Solomon (1064–74) and King Géza I

(1074–77) did great damage to the Christian Faith; ecclesiastical discipline decayed, and many abuses crept into the Church.

During the reigns of St. Ladislaus (1077–95) and Koloman (1095–1114) the Church was reformed and many ordinances were passed against the prevailing abuses. In particular the synod of Szabolcs (1092) took decided measures against the marriage of priests. Married priests, as a special act of grace, were per-

THE HOLY CROWN OF HUNGARY

mitted to exercise priestly functions, but a new marriage was regarded as concubinage and such unions were to be dissolved. The synod also passed ordinances concerning the indissolubility of marriage and the observance of church festivals and Sundays. Other decisions were directed against the still existing pagan manners and customs. After the conquest of Croatia Ladislaus founded the Diocese of Zágráb (Agram). He transferred the see of the Archdiocese of Kalocsa to Bács, and that of the Diocese of Bihar, founded by St. Stephen, to Grosswardein (Nagyvárad). He founded new churches and monasteries and took measures for the conversion of the Bisseni and Saracens (Ishmaelites) who had settled in Hungary. Ladislaus successfully resisted the invasion of the pagan Cumans. During the reign of Koloman the Church was largely under the influence of the royal authority. Koloman claimed the investiture of the bishops for himself, made laws concerning the property of the Church, obliged the bishops to perform military service, etc. At a later date, at the synod of Guastalla, Koloman yielded the right of granting investiture and agreed that the chapters should have freedom in the election of bishops. The reforms of Gregory VII were also adopted in Hungary. The clergy were withdrawn from secular jurisdiction, marriage was regarded as valid only when entered into before a priest, celibacy was enforced, and a number of ordinances beneficial to the religious life were passed.

The chief feature of the reigns of Koloman's successors Stephen II (1114–31), Béla II (1131–41), Géza II (1141–61), and Stephen III (1161–73), was the struggle of Hungary with the Byzantine Empire for national independence. These wars, however, did not check the growth of the Church. One of the most important events of this period was the synod at Gran (1169). It enacted that bishops could not be transferred without the consent of the pope, took the administration of vacant dioceses out of the hands of the laity, and obtained a promise from the king that the property of the Church should only be

taken in time of war and then not without the consent of the bishop. It was in this period that the Cistercians, Premonstratensians, and Knights of St. John settled in Hungary; in the thirteenth century these orders were followed by the Dominicans and Franciscans. About 1150 Saxon colonists, of the Catholic Faith, settled in upper Hungary and in Transylvania. The Cistercians grew rapidly in Hungary during the reign of Béla III (1173-96) as the king granted the order the same privileges as it enjoyed in France. Fresh disorders sprang up in Hungary after the death of King Béla III. King Emeric (1196-1204) was engaged in war with his brother Andrew, who coveted the throne, until Emeric's death put an end to the fratricidal struggle.

BASILICA, BUDAPEST

Andrew II (1205-35), who was now king, was soon involved in a struggle with the oligarchy. At his accession he was obliged to swear to protect the liberties of the land and the independence of the royal dignity. When he failed to observe these obligations, the nobles forced him to issue the Golden Bull (1222), the Magna Charta of Hungary. This instrument confirmed the rights of the nobles and gave them the privilege to take up arms against the king when he failed to observe the conditions here agreed upon, but it did not fulfil the hopes it had raised; its provisions were not carried out, and the disorders continued. Neither did Andrew, who in 1217 took part in an unsuccessful crusade to the Holy Land, observe the agreement confirming the liberty of ecclesiastics, and the Catholic Church saw itself endangered by the continually growing influence exerted over the king by the Ishmaelites and Jews. After all warnings to the king had failed, Archbishop Robert of Gran placed Hungary under an interdict (1232), in order to force the king to put an end to the prevailing abuses and to guard the interests of the Church. The king promised the correction of the abuses and, especially, to guard the interests of the Catholic Church, but he was too weak a man for energetic action. His son Béla IV (1235-70) endeavoured to restore order, above all he tried to carry out the provisions of the Golden Bull, but his efforts were interfered with by an invasion of the Tatars, which nearly ruined the country. After the battle near Muhi (1241), they devastated the entire land; thousands of the inhabitants were massacred, hundreds of churches were plundered and razed to the ground, and six of the dioceses were nearly destroyed. Consequently, when the Tatars left the country, King Béla was obliged to take up the reorganization both of ecclesiastical and secular affairs. The damage suffered was repaired through the self-sacrifice of the royal family and the people; new monasteries and churches were built, those that had been destroyed were restored, and colonists were brought in to repair

the losses in population. These colonists were partly Catholic Germans and Bohemians, and partly pagan Cumans. Those of the Cumans who lived apart from the others were soon converted, but the majority held to paganism and did not become Christians until the middle of the fourteenth century.

The last years of the reign of Béla IV were disturbed by a quarrel with the Curia concerning the appointment to the vacant Diocese of Zágráb (Agram), and by the revolt of his son Stephen, who succeeded him. Stephen V reigned only two years (1270-72); he was followed by his son Ladislaus IV (1272-90) who, when he came to the throne, was still a minor. In this reign efforts were made to restore church discipline that had fallen into decay during the disorders of the previous years. For this decline of church discipline and of ecclesiastical conditions the pagan Cumans were largely responsible; they wandered about the land plundering and damaging the churches. The king was on good terms with them and maintained relations with Cumanian women; his example was followed by others. It is not surprising that under the circumstances disorders broke out once more in Hungary, and that the authority of the Church suffered. Philip, Bishop of Fermo, came to Hungary in 1279 as papal legate and held a great synod at Buda (Ofen), where various decisions were reached concerning the preservation of the interests of the Church and the restoration of canon law, but the synod was forcibly dissolved by the king, and its members driven away. The appeals made by the Hungarian bishops and the Holy See to the king were in vain; Ladislaus promised, indeed, to act differently, and to reform the disordered political and ecclesiastical conditions, but he failed to keep his word. After the murder of Ladislaus, the last of the Arpád dynasty, Andrew III, grandson of Andrew II, became king. During his reign of ten years (1290-1301) he was engaged in a constant struggle with foreign claimants to the throne, and could give no care to the internal and ecclesiastical conditions of the country. Rudolf of Hapsburg endeavoured to wrest Hungary from Andrew for his son Albrecht, and the grandson of Stephen V, Charles Martell of Naples, also claimed it. After the death of the latter, who had the support of the Holy See, his son, Charles Robert, maintained the father's claims, and from 1295 assumed the title of King of Hungary.

After the death of Andrew III a series of wars broke out over the succession. A part of the people and clergy held to King Wenceslaus, another to Otto, Duke of Bavaria, and still another to Charles Robert. The Holy See strongly espoused the cause of Charles Robert and sent Cardinal Gentile to Hungary. Notwithstanding these efforts in his favour, it was not until 1309 that Charles Robert (1309-42) was able to secure the throne of Hungary for himself. There now began for the country a long period of consolidation. The new king regulated the internal administration, brought the state finances into good order, imposing for this purpose in 1323 a land tax, reorganized the army, and sought to increase his dynastic power by forming connexions with foreign countries. In church affairs he encroached largely on ecclesiastical rights; he filled the vacant sees and the church offices without regard to the electoral rights of the cathedral chapters. He claimed the revenues of vacant benefices for himself, confiscated the incomes of other benefices, granted large number of expectancies, and forced those appointed to ecclesiastical benefices to pay a larger or smaller sum before taking office. In 1338 a part of the Hungarian episcopate sent a memorial to the Apostolic See, in which, with some exaggeration, they presented an account of the encroachments of the king. The pope notified the king of the memorial, an act which created no ill-feeling between the two; the Holy

THE CATHEDRAL OF KASCIAU (KASSA)

Father contented himself with admonishing the king in a paternal manner to remove the abuses and to avoid infringing on the rights of the Church.

During the reign of Louis I, the Great (1342-82), the son of Charles Robert, Catholicism reached the height of prosperity in Hungary. Numerous monasteries and other religious foundations came into existence in this reign; above all, the Hermits of St. Paul enjoyed the king's special favour. In 1381 Louis obtained from the Republic of Venice the relics of St. Paul the Hermit, which were taken with great ecclesiastical pomp to the Pauline monastery near Buda. Among his pious acts must be counted the building of the church at the place of pilgrimage, Gross-Mariazell in Styria, and of the chapel dedicated to St. Ladislaus at Aachen. Splendid churches were also built in Hungary, as at Gran, Eger, and Grosswardein (Nagy-Várad). In filling ecclesiastical offices the king was careful that the dioceses should receive well-trained and competent bishops. In order to promote learning he founded the university at Pécs (Fünfkirchen). Louis also sought to bring about the conversion of the Slavonic peoples living to the south of Hungary, who held to the Greek Church, the Serbs, Wallachians, and Bulgarians. His attempts to convert them led to repeated conflicts with these races. In this reign began the struggle with the growing power of the Turks, against whose assaults Hungary now became the bulwark of Europe. Internal disorders broke out again in the reign of Maria (1382-95), the daughter of Louis, in which the Church suffered greatly in the southern part of the kingdom, especially in Croatia. In Hungary proper the queen sought to further the interests of the Church. The most important measures passed at a synod at Gran were decisions regarding the training of the clergy. Maria built several churches of the Perpetual Adoration. From 1387 her rule was merely nominal, her husband Sigismund being the real ruler. After Maria's death he became her successor.

In one of the first years (1397) of Sigismund's reign (1395-1436), the decrees of the Diet of 1387 were renewed. These declared that no ecclesiastical benefice could be bestowed on a foreign ecclesiastic. Sigismund, however, paid little attention to this regulation. Immediately on entering upon his reign Sigismund came into conflict with the Hungarian oligarchy. This led to open war, and even, for a time, to the imprisonment of the king. In 1403, King Ladislaus of Naples appeared as rival king; nevertheless, Sigismund was able to maintain himself on the throne. His reign was coincident with a large part of the Great Western Schism, and the two great reforming Councils of Constance and Basle were held while he was on the throne. In the Great Schism, Hungary adhered to the obedience (or party) of the Roman claimant to the papacy. Louis I, the Great, had supported Urban VI, and his successors, Maria and Sigismund, also sided with the Roman Curia. Sigismund, indeed, in 1403 renounced Boniface IX, because this pope supported the rival King Ladislaus, yet he did not recognize Benedict XIII. At a later date he recognized Innocent VII and subsequently supported the Roman Curia. In 1404 the Diet declared that in future ecclesiastical benefices in Hungary could only be bestowed by the king, consequently the rights both of spiritual and secular patrons were annulled, and the *ius placeti* introduced, according to which papal Bulls and commands could only be accepted and proclaimed in Hungary after they had received the royal approval. Supported by these enactments Sigismund at once asserted his right to appoint bishops. Naturally, the Curia did not recognize this claim and refused to give the investiture to the bishops chosen by Sigismund. Upon this Sigismund, in 1410, appealed to John XXIII, from whom he requested the recognition

of this right. John did not accede to this request, although he granted investiture to the bishops appointed by the king and thus tacitly recognized the royal right of filling benefices, a right which, as a matter of fact, the king continued to exercise.

After his election as King of the Romans, Sigismund endeavoured to bring the schism to an end. The unity of the Church was restored by the Council of Constance, and the concordat made with Germany was also authoritative for Hungary. While the council was in session, after the deposition of Benedict XIII, Sigismund obtained for himself and his successors the right of naming the bishops. This right was, indeed, not put into documentary form, but Stephen Werboczi, in his collection of the Hungarian laws, "*Opus Tripartitum juris consuetudinarii regni Hungariæ*", asserted that this right was conceded to the King of Hungary at the Council of Constance, and Cardinal Peter Pázmány also referred to it at a later date. The council further decided that in Hungary ecclesiastical cases should be tried in the country itself, and not brought before the Roman Curia, that only appeals could be taken to Rome. After the council had closed Sigismund claimed to the fullest extent the rights which had been conceded to him by the council. The Republic of Venice having seized Dalmatia, the Archdioceses of Spalato and Zara, with their suffragans, were lost to Hungary. This

CATHEDRAL, EGER (SEE AGRIA)

is the reason why in Hungarian official documents for many years these dioceses were given as vacant. In Hungary proper the Church maintained itself with difficulty in the northern districts, on account of the incursions of the Hussites, who traversed all upper Hungary, plundering the churches and laying waste the country. They also gained adherents in the southern districts, where, however, the movement was soon suppressed, thanks to the missionary activity of the Franciscan monk James of the Marches.

The chief source of anxiety to the government of Hungary in Sigismund's reign was the growing power of the Turks. Since 1389 when Serbia was conquered by the Osmanli power at the battle of Kosova (also called *Amselfeld*, "Field of the Blackbirds"), the Turks had slowly but steadily advanced against Hungary. In 1396 Sigismund undertook a campaign on a large scale against them, but met with a severe defeat at Nicopolis. To safeguard the Hungarian frontier, Sigismund obtained from Stephen Lazarevics, ruler of Serbia, by the Treaty of Tata (Totis), in 1426, the Servian fortresses on the border of the two countries, but he was not able to hold them against the Turks. The siege of the fortress of Galambóc (1428) ended with his defeat and narrow escape from death. The power of the Turks steadily increased, and Sigismund's successors were only able to check momentarily the westward advance of the Ottoman Empire. Sigismund was succeeded by his

son-in-law Albert (1437-39); in this reign the influence of the Hungarian nobility was again paramount. The Turks recommenced their inroads, entering the country near Szendrő. After Albert's death a dispute as to the succession arose between Wladislaw I (Wladislaw III of Poland) and the adherents of Albert's posthumous son Ladislaus. In the end Wladislaw I (1442-44) became ruler; his short reign is chiefly noted for the wars with the Turks, in which the Hungarian forces were led by János Hunyady (see HUNYADY, JÁNOS). Wladislaw I fell in battle with the Turks at Varna, Bulgaria, where he was defeated; after his death Hungary was thrown into confusion by the quarrels among the ruling nobles. To put an end to these disorders the inferior nobility undertook to bring the country again into unity and made Hunyady governor during the minority of Ladislaus V, Posthumus, appointing with him an administrative council. While at the head of the government, Hunyady fought successfully against the Turks. During his control of affairs also, the appointment to ecclesiastical benefices was considered the prerogative of the Crown, and it was accordingly exercised by him and his council. During the reign of Ladislaus V (1453-57) the leading nobles regained control; this led once more to disturbances, especially after the death of Hunyady. While Ladislaus was king, Constantinople was taken by the Turks (1453), who now turned all their strength against Hungary. Hunyady won, indeed, the brilliant victory over them at Belgrad (1456), but he died a few days later. The hatred of the great nobles against him was now turned against his sons, one of whom, Ladislaus, was executed. When King Ladislaus died, Hunyady's son, Matthias I, Corvinus, became king.

Matthias I (1458-90) was almost continually engaged in conflict with the Ottoman power. Pope Pius II promised the most vigorous support to the king in this struggle, but the efforts of the Holy See to organize a general European crusade against the Turks proved unavailing because of the pope's death. Notwithstanding the lack of help from other countries, Matthias battled for a time with success against the Turks in Bosnia, and to him it is due that their advance was temporarily checked. In 1463 Bosnia was conquered by the Turks, and with this the dioceses in Bosnia ceased to exist. On account of the Turkish invasion the see of the Bishop of Corbavia had to be transferred to Modrus as early as 1460. Up to 1470 Matthias maintained friendly relations with the Catholic Church, but after 1471 his policy changed. The second half of his reign was characterized by a number of serious blunders. Notwithstanding the enactments of the law he gave a number of dioceses to foreigners; in 1472 he appointed John Beckensloer Archbishop of Gran (Esztergom), in 1480 he gave the archdiocese to the seventeen-year-old John of Aragon, and in 1486 to Ippolito d'Este, who was seven years old. Foreigners were also appointed to the Dioceses of Grosswardein (Nagy-Váradi), Pécs (Fünfkirchen), and Eger (Erlau). Matthias also rewarded political services with ecclesiastical offices, and treated the property of the Church as though it belonged to the State. His relations with the Holy See, originally friendly, gradually grew strained, and he went so far as to threaten to join the Greek Church. In 1488 Angelo Pecchinoli was sent to Hungary by the pope as legate. Probably through the influence of his wife Beatrice, the king was led into more peaceful relations with the papacy, so that there was a better condition of affairs in the last years of his reign.

It was while Matthias was sovereign that Humanism appeared in Hungary. The king himself was a vigorous supporter of the Humanistic movement and the remains of his renowned library at Buda, the *Bibliotheca Corvina*, still excite wonder. The king's

example led others, especially the bishops, to cultivate the arts and learning. Among the ecclesiastics who competed with the king in the promotion of learning were Joannes Vitéz, Urban Dóczy, and Thomas Bakács. At times, however, the ardour with which Matthias supported learning slackened, thus he did not give his aid to the universities already existing at Pécs (Fünfkirchen) and Pozsony (Presburg), so that later they had to be closed. After the death of Matthias there were once more several claimants for the throne. Matthias had sought in the last years of his life to have his illegitimate son Joannes Corvinus recognized as his successor. After his death the nation divided into two parties; one was influenced by the Queen-Dowager Beatrice, who wanted the crown for herself, the other desired a foreign ruler. Finally the King of Bohemia, Wladislaw II (1490-1516), of the Polish House of Jagellon, obtained the throne. In this reign the power of Hungary rapidly declined. Naturally vacillating and indolent, Wladislaw had not the force to withstand the determination of the great Hungarian nobles to rule, and the royal power became the plaything of the various parties. The antagonisms of the different ranks of society grew more acute and led, in 1514, to a great peasant revolt, directed against the nobles and clergy, which was only suppressed after much bloodshed. The Diet of 1498 passed enactments correcting the ecclesiastical abuses that had become prevalent during the reign of Matthias and prohibited particularly the appointment of foreigners to ecclesiastical positions. Among other enactments were those that forbade the granting of church offices to any but natives, the holding of ecclesiastical pluralities, and the appropriation of church lands by the laity. Wladislaw, however, was too weak to enforce these enactments. One of the particular evils of his reign was the holding of church dignities by minors; this arose partly from the granting of the royal right of patronage to different families. One of the most prominent ecclesiastical princes of this period was Thomas Bakács, who was first Bishop of Győr and Eger, and later Archbishop of Gran. His eminent qualities made him for a time a candidate for the papal see. It was owing to his efforts that the offices of primate and *legatus natus* were permanently united with the Archbishopric of Gran.

Under the successor of Wladislaw, Louis II (1516-26), Hungary sank into complete decay. The authority of the sovereign was no longer regarded; energetic measures could not be taken against the incursions of the Turks, on account of the continual quarrels and dissensions, and the fate of the country was soon sealed. In 1521 Belgrad fell into the hands of the Turks, and Hungary was now at their mercy. In 1526 the country gathered together its resources for the decisive struggles. At the battle of Mohács (29 Aug., 1526) Louis II was killed, and Catholic Hungary was defeated and overthrown by the Turks. The universal political decline of Hungary in the reign of Louis II was accompanied by the decline of its religious life. The education of the clergy sank steadily, and the secular lords grew more and more daring in their seizure of church property. Ecclesiastical training and discipline decayed. The southern part of Hungary was almost entirely lost to the Church through the advance of the Turks. Thousands of the inhabitants of the southern districts were carried off as prisoners or killed, monasteries and churches were destroyed, and the place of the Catholic population was taken by large numbers of Serbs who were adherents of the Orthodox Greek Church. The Serbs had begun to settle in Hungary in the time of Matthias I, so that during the reign of Louis II several Orthodox Greek bishops exercised their office there. In the first half of the sixteenth century the weakened condition of the Church in Hungary offered a favour-

able opportunity to the Lutheran Reformation. The new religion gained adherents especially in the cities where the bishops had been obliged to give the management of ecclesiastical affairs to others; the control had thereby passed into the hands of the city authorities, who in the course of time claimed for themselves the right of patronage. Luther's German writings soon found a ready reception among the inhabitants of the cities, and before long Lutheran preachers appeared; these came largely from Silesia, which had active intercourse with Hungary, and soon settled even in Buda and in the neighbourhood of the king. Exceedingly severe laws were passed by the Hungarian Diets of 1523 and 1525 against Lutherans; in 1523 the penalty of death and loss of property was enacted, and in 1525 the Diet condemned Lutherans to death at the stake. Owing to these laws Lutheranism did not gain much headway in Hungary

extended into the other parts of this division of the country. In western Hungary, on the farther side of the Danube, larger or smaller centres of Lutheranism sprang up under the protection of the nobility and distinguished families. These beginnings of the new doctrine grew rapidly under such encouragement. Catholicism in Hungary was not in a position to oppose this movement at the outset; a properly trained clergy were lacking, on account of the difficulties in the way of education caused by the political confusion. In the first decades there was no open rupture between the Catholic and Lutheran Churches, outwardly everything was Catholic, confession remained unchanged, and at the most Communion under both species was introduced, so that there was little apparent distinction between the two religions.

The Turkish occupation of Buda, in 1541, was a great blow to the Church in Hungary. A large part of

ROYAL CASTLE, BUDA

before 1526. However, in the confusion which followed the death of Louis II, the new religion steadily gained ground.

(2) *From the Battle of Mohács to the Treaty of Szatmár (1526-1711).*—Upon the death of Louis II, Hungary was once more a prey to disputes over the succession. Ferdinand of Austria claimed the crown on the ground of a compact between the Emperor Maximilian and Wladislaw II, while the national party elected John Zápolya as king. To these two opposing elements should be added the Ottoman power, which after the conquest of Buda (1541) ruled a large part of the land. The main result of the triple political division of Hungary was the almost complete disappearance of public order and of the systematic conduct of affairs; another was the evident decline of Catholicism and the rapid advance of the Reformation. The growth of the new religion was evident soon after the battle of Mohács. It was encouraged by the existing political conditions of Hungary: the dispute over the succession, with the accompanying civil war; the lack of a properly educated Catholic clergy; the transfer of a large amount of church land to the laity; and the claims made by both aspirants to the throne upon the episcopal domains. The foreign armies and their leaders, sent by Ferdinand I to Hungary, also aided in the spread of the new doctrine, which first appeared in the mountain towns of upper Hungary and then

the country was now under Turkish sovereignty; Mohammedanism gained a footing in these districts, and the bishops and chapters had to withdraw. The churches gained by the Turks were changed into mosques, and Mohammedan preachers settled in the country. The faith of Islam, however, did not take real hold on the population; conversions were relatively few. On the other hand, the Turkish occupation promoted Protestantism both directly and indirectly. During this period Protestantism entered Transylvania and soon gained ascendancy there. The Hungarian Diets of 1542, 1544, and 1548 passed far-reaching enactments for the protection of the Catholic Faith, such as banishment of the foreign preachers, the return of the sequestered church lands, etc., but, owing to the confused state of public affairs, these laws were not carried out. Besides Lutheranism, Calvinism also took root in Hungary at this time, and from 1547 were added the teachings of the Anabaptists, who won adherents in the western counties of upper Hungary and in Transylvania. In 1556 the districts on the farther side of the Theiss accepted the Reformed religion. The revival of the Catholic Church began under Nicholas Oláh, Archbishop of Gran (1553-68), who for this purpose held a national synod in 1561. He founded a seminary for boys at Nagy-Szombat (Tyrnau), and put the Jesuits in charge of it. His example was followed by other

bishops, but the death (1564) of Ferdinand I put an end for a time to the efforts for reform in the Church. The religious indifference of Ferdinand's successor, Maximilian II (1564-76), worked great injury to the Church. In his earlier years Maximilian had been strongly inclined to the new creed, a fact of which the preachers of these doctrines took advantage, so that towards the end of his reign a majority of the great nobles of Hungary had become Protestants, thereby greatly encouraging the spread of the new doctrines. Maximilian's failure to fill the archiepiscopal See of Gran, which fell vacant in 1573, caused a further decline of the Catholic religion, nor did his successor, Rudolf II, fill the vacancy until some time after ascending the throne. In the first years of the reign of Rudolf II (1576-1608) religious conditions changed but little; later, the position of the Catholic clergy improved after the entrance of the Jesuits, who improved the education of the clergy. Thus, at the end of the seventeenth century the Catholic clergy were ready to carry on the struggle against Protestantism in public disputations.

In this reign began the reclaiming of the churches, founded by Catholics, which had been occupied by Protestants. At the same time also began, although slowly, the conversion of the Protestant nobility, but the revolt of Stephen Boeskey again led to a decline of Catholicism. The Treaty of Vienna, of 1606, secured freedom for the Lutheran and Reformed faiths, as well as for the Catholics. In the reign of Matthias II (1608-19) the Treaty of Vienna of 1606 was confirmed by the Diet of 1608, and religious freedom was extended to the cities and villages. The Diet also granted the Protestants the right to elect their own administrative heads, so that the Protestants could now organize as an ecclesiastical body. The highest political honour of Hungary, the dignity of Palatine (president of the Diet and representative of the king) was in this era held by Protestants. Stephen Illésházy and George Thurzó followed each other in this office and, as was natural, defended their religion.

To this period also belong the taking of a more determined position by the Catholic Church against Protestantism and the beginning of the Counter-Reformation. Francis Forgách, Bishop of Nyitra (Neutra), later Archbishop of Gran, took up the struggle against Protestantism. Together with his clergy, he protested, although in vain, against the ordinances of the Diet of 1608; the Diet of 1609 rejected his protest. It also opposed Peter Pázmány, later Archbishop of Gran, who, as a member of the Society of Jesus, had developed a remarkable activity. In 1613 appeared his chief work, "Hodegus", that is, "Guide to Divine Faith", to which for a long time no reply was made by Protestantism (see PÁZMÁNY, PETER). Through the efforts of Pázmány and his fellow-Jesuits, the Catholics formed a majority in the Diet of 1618. At this Diet the Protestants endeavoured to get control of the village churches also, and tried to have an enactment passed giving a Protestant village the right to the church against the will of the lord of the manor, but they did not succeed. In 1619 a revolt for the preservation of Protestant interests broke out; it was led by Gabriel Bethlen, ruler of Transylvania, whose cause was espoused by the Protestant nobles of Hungary. The insurrection spread rapidly; Kassa (Kaschau), the chief town of upper Hungary, was captured by Bethlen, who by the end of 1619 was seeking to become King of Hungary. A threatened attack by the Turks forced Bethlen in 1620 to agree to an armistice with the king. A Diet was held at Besztercebánya (Neusohl) by Bethlen in July and August, 1620, which elected him King of Hungary. The Diet confiscated the domains of the Church and suppressed all dioceses except three. Bethlen, however, was not able to

maintain himself long and was obliged, by the end of 1621, to agree to peace with Ferdinand II (1619-35) at Nikolsburg. In religious affairs the treaty was based on the Treaty of Vienna of 1606 and the enactments of the Diet of 1608.

The Catholic Church now steadily increased. Thousands of those who had fallen away returned to the Faith. This at times led to renewed struggles when the Protestants were not willing to consent to the return of the churches. Their efforts at the Diets to retain the churches when the lord of the manor was converted, and the serfs remained Protestant, failed, as what they desired was contrary to the provision of the civil law. During the reign of Ferdinand III (1635-57) occurred, in 1644, the insurrection for the defence of the rights of the Protestants, led by George Rákóczy I; the war came to an end with the Peace of Linz (1645). This treaty secured complete religious freedom even to the serfs, and contained ordinances concerning the use of the churches, cemeteries, and bells; the expulsion of the Protestant ministers from the towns and villages was forbidden, etc. The Diet of 1646 went thoroughly into the religious question. The final decision of the king gave the Protestants 90 of the 400 churches they claimed; where they were not given the church they obtained suitable land for building. To carry out these ordinances, however, proved very difficult; strong opposition was manifested, and conditions remained very much the same up to 1670. A great change in religious affairs was caused by the discovery of the conspiracy of Francis Wesselényi and his companions, to make Hungary independent of Austria. A large number of the conspirators were Protestant; thus it came about that the civil war that broke out after the discovery of the conspiracy soon became a religious war. The Government succeeded in suppressing the rebellion and erected at Pozsony (Presburg) a special court for the conviction of the Protestants. The revolt of Emeric Thököly, in 1678, once more injured the Catholic cause; up to 1684 Thököly had control of a large part of the country, and the Protestants took up arms against the Catholics. In 1681 the Diet was summoned to put an end to these disordered conditions. The Protestants, however, laid before it a list of demands; some of them were conceded by the king, but the Protestants were not satisfied, and the struggle between Catholics and Protestants did not cease for a long time. These continual dissensions brought internal affairs into great disorder, the tension between the two religions showed itself also in social life, and the decline in moral character was evident among the population. The Catholic Church suffered great losses, churches and schools fell into decay, the regular clergy were driven away, their possessions and lands confiscated, etc. The judgments pronounced by the courts against the Protestants gave foreign Protestant princes the opportunity to interfere in the internal affairs of the country, which naturally brought inconvenience with it.

The recovery of Buda (Ofen) from the Turks led to a change very favourable to the Church. There were no longer Protestant revolts, and, as the Turks were driven out, the Church regained possession of its lost territories. Ecclesiastical affairs in these districts were now reorganized, new churches were built, new clergy sent, etc. In claiming its former property the Church met with the opposition of the Government, which would not consent to the restoration of ecclesiastical lands without legal proof. The relations of the denominations were settled by the Diet of 1687 on the basis of the enactments of the Diet of 1681; freedom of conscience was granted, with safeguards of the rights of lords-of-the-manor, the return of the banished Protestant ministers was permitted, the Protestant nobles were allowed to build churches for their private use, etc. These enactments, however,

soon proved insufficient, and what was lacking was settled by royal edict as cases requiring decision appeared. The Diet of 1687 also acknowledged the Hungarian Crown to be hereditary in the Hapsburg family and in addition to this renounced the free election of the king.

The opening of the eighteenth century was signalized by the outbreak of a revolution headed by Francis Rákóczy II. The only damage which this did to the Church was that the work of consolidation and reorganization was delayed for a time. The revolt was purely political and did not degenerate into a religious war; in the districts which sided with Rákóczy the Catholic clergy also supported the prince. In 1705 Rákóczy held a Diet at Szécsény which passed laws regarding religious questions; the religious ordinances of the Diets of 1608 and 1647 were renewed; religious freedom was granted to serfs; in those places

Catholic Hungary was undisturbed. During this era the reorganization and strengthening of the Catholic Church could be vigorously carried on. The colonization of the regions regained from the Turks in the later decades of the seventeenth century, and of the districts surrounding the River Temes, began after 1716. The colonists were foreigners, largely Germans, who held the Catholic faith. As a result of this and other settlements, the Catholic population rapidly increased, so that in 1805 there were 5,105,381 Catholics to 1,983,366 Protestants. The number of the parishes also grew greatly, especially in the country formerly under Turkish rule. The churches in the hands of the Protestants were reclaimed anew, but this once more led to intense friction. In order to restore religious peace, Emperor Charles VI, who was Charles III of Hungary (1711-40), appointed a commission for religious affairs, the decisions of which,

HOUSE OF PARLIAMENT, BUDAPEST

where the population was of both religions the one to which the majority of the inhabitants belonged received the church, while the minority had the right to build one for itself. After the session of the Diet of Onod, 1707, where the independence of Hungary was declared, and the Hapsburg dynasty deposed, political conditions were for a short time unfavourable to the Church, as Protestantism was granted larger influence in the affairs of the Government, but this soon passed away. King Joseph I held a Diet at Pozsony (Presburg) in 1708, at which the religious question was again brought forward, but no agreement was reached. The Protestants made large demands, but the Government would not concede more than was contained in the laws of 1681 and 1687. Soon after this the revolt headed by Rákóczy came to an end and in the Peace of Szatmár (1711) the country once more obtained rest from political disorder. The regulations of the treaty in regard to religion were that the Government should maintain the laws of 1681 and 1687 which granted the free exercise of religion to persons of every denomination; consequently religious freedom was conceded the Protestants.

(3) *From the Peace of Szatmár (1711) to the Present Time.*—For a long period after the Peace of Szatmár

however, were not sanctioned until 1731. These enactments, called *Resolutio Carolina*, confirmed the laws of 1681 and 1687 regarding religious affairs. Protestants were permitted the public exercise of their religion in the western districts of the country, according to the provisions of the law of 1681, and the private exercise of it everywhere. The Protestant ministers were forbidden to live outside of the places legally designated, but the members of their faith could seek them where they abode. The authority of the superintendents over the pastors was limited to disciplinary matters; in secular matters the pastors were subject to the civil jurisdiction. Matters pertaining to marriage were placed under the control of the bishop; the decision, however, was given in accordance with Protestant enactments. In regard to mixed marriages, it was enacted that the marriage must be entered upon before the Catholic priest, and the children be brought up in the Catholic religion.

Regarding church buildings the enactments of the laws of 1687 were declared to be in force. These are the more important ordinances of the *Resolutio*, which were supplemented later by various royal decisions. Charles VI was the last male descendant of the Hapsburgs, and he sought to have the succes-

sion to the throne secured to the female line; this was enacted by the Diet of 1723. When Charles died his daughter Maria Theresa (1740-80), on the strength of this law, succeeded him on the Hungarian throne. During her reign the ordinances of the *Resolutio Carolina* were strictly enforced; in reply to the complaints brought against it by the Protestants, the queen said that she did not intend to make any concessions outside of those contained in the law. The Catholic Church rapidly developed in this reign. There was no longer a lack of priests for parish work, and the bishops sought to train up capable and well-educated persons for the pastorate. The religious orders increased so largely under Maria Theresa that enactments were issued in 1770 to check the growth of their numbers. According to a census of this year, there were in Hungary 3570 male religious, including 191 hermits; this number was made by law the maximum which was not to be exceeded. Great stress was also laid upon the development of education, new schools and institutions for education were established, and the queen directed her attention also to advanced instruction. The university at Nagy-Szombat (Tyrnau), founded by Peter Pázmány, was completed in 1769 by the addition of a medical faculty; it was removed in 1776 to Buda, and in 1780 to Pest; in 1777 the *Ratio educationis* was issued, which regulated the entire system of education.

The suppression of the Jesuits occurred during the reign of Maria Theresa, and the order ceased to exist in Hungary. Its possessions, which became the property of the Crown, were used for the promotion of education. New dioceses were also formed at this time; in 1776 the Dioceses of Besztercebánya (Neusohl), Rozsnyó (Rosenau), and Szepes (Zips) were founded; in 1777 the Dioceses of Szombathely (Steinamanger), and Székes Fehérvár (Stuhlweissenburg). In regard to the filling of the bishoprics, Art. XV of 1741 enacted that only natives should be appointed to the sees. This decree was contrary to the custom followed by the predecessors of Maria Theresa, under whom it frequently happened that ecclesiastical dignities were bestowed on foreigners. From 1770 the queen also reserved to herself the appointment of canons. The taxing of ecclesiastical benefices, which had existed from 1717, and had received at that time the papal confirmation, was later renewed from decade to decade, and finally, in 1765, was treated as a permanent tax.

The Church suffered greatly during the reign of Joseph II (1780-90), the son and successor of Maria Theresa. The Edict of Toleration, which annulled the *Resolutio Carolina*, was issued 25 October, 1781. This decree made large concessions to the Protestants; thus it was enacted that wherever there were one hundred Protestant families they could freely exercise their religion and might build churches without steeples or bells in such places. The Protestants were also permitted to hold public offices; it was further enacted that they could not be forced to take an oath opposed to their religious convictions and were re-

leased from observing the Catholic feast days. Matters connected with the marriage of Protestants were placed under the control of the secular courts. All the children of a mixed marriage were to be brought up as Catholics when the father was a Catholic; if he were not, then only the daughters were to be Catholics. These ordinances worked much harm to the Catholic Faith; moreover the Emperor Joseph interfered in various other ecclesiastical matters. He reserved to himself the right of founding new parishes; diocesan seminaries were replaced by state institutions, ecclesiastical affairs were put under the control of a special Hungarian commission; edicts were also issued in regard to the administration of church lands etc. These ordinances were a source of much damage to the Church, but the emperor went even further. With a few exceptions—the teaching orders and those who had the cure of souls—he suppressed all the religious orders in Hungary and confiscated their property. He also provoked a rupture with the Holy See, and even the journey of Pope Pius VI to Vienna

did not produce any change in the ecclesiastical policy of the emperor. The universal discontent which the edicts of the emperor had called forth obliged Joseph, who had refused to be crowned King of Hungary, to withdraw before his death (1790) all his enactments, with the exception of the edict of toleration and the decree concerning the serfs.

In the reign of Leopold II (1790-92), the Diet of 1790-91 granted the Protestants complete independence in the management of their ecclesiastical

affairs. Liberty of religious belief was recognized, and the enactments of the Government were not allowed to affect any matters concerning Protestant churches and schools. In regard to mixed marriages it was decreed that these should be solemnized before a Catholic priest, who was not permitted to prevent such a marriage. The children of a mixed marriage were to be brought up in the Catholic Faith when the father was a Catholic; when he was not, then only the sons were trained in the religion of the father. While this decree gave the Protestants various advantages, and especially guaranteed their autonomy, the Catholic Church suffered much damage. The administration continually sought to secure greater influence in its affairs; in the years of war it demanded increasingly greater aid from the Catholic clergy and allowed a number of the wealthiest ecclesiastical benefices to remain vacant in order to enjoy their revenues during vacancy. Thus, for example, the archiepiscopal See of Gran remained vacant for nearly twenty years. During the reign of Francis I (1792-1835) there was no change for a long period in ecclesiastical affairs. For this the king was largely responsible; he looked with no friendly eye on clerical activity in politics, although the clergy, on account of their position in the country and their wealth, were well fitted to take part in political affairs. The Dioceses of Kassa (Kaschau) and Szatmár were founded in 1804, and at a later date the Diocese of Eger (Erlau) was raised to an archdiocese with the Dioceses of Szepes (Zips), Rozs-

CATHEDRAL, KASCHAU (KASSA)

nyó (Rosenau), Kassa (Kaschau), and Szatmár as suffragans. In 1802 the Benedictine, Cistercian, and Premonstratensian Orders were re-established. In order to elevate religious life and ecclesiastical discipline, the Prince Primate Alexander Rudnay held a great national synod in 1822, at which ordinances in regard to the improvement of the schools were passed.

It was not until the Diet of 1832-36 that the affairs of the Church were again brought up. The occasion was the question of mixed marriages and of changes to the Protestant religion. In regard to the latter, Art. XXVI of 1791, Sec. 13, decreed that the change to Protestantism could only take place with royal permission and after six weeks' instruction. The Protestants made strenuous efforts to have this article of the law annulled, but for a long time they were not successful. It was not until the Diet of 1844 that the Protestants secured a settlement of the matter in accordance with their wishes; Art. III of 1844 repealed the requirements of the royal consent and the six weeks' instruction, and decreed instead that the change of faith must be twice notified to the parish priest within four weeks in the presence of two witnesses. If the parish priest refused to grant a certificate of this fact, the witnesses could draw it up.

The second question that arose in this period, that of mixed marriages, had been last regulated by the Diet of 1790-91. The law contained enactments, as mentioned above, concerning the religion of children of mixed marriages, but the cases increased in which the parents made a formal declaration promising to bring the children up as Catholics. In 1793 there was a Protestant agitation against this declaration, and when, in the years 1830-40, the question of mixed marriages was discussed in Germany the controversy in that country influenced conditions in Hungary. In mixed marriages the Catholic clergy continued to demand the signing of a formal declaration. The Bishop of Nagy-Várad (Grosswardein) was the first bishop to order (1839) that only those mixed marriages could have the blessing of the Church in which the religion of the children was settled by a declaration in favour of the Catholic Faith. The Protestants demanded again from the Diet of 1839-40 the suppression of the declaration. The pastoral letter of 2 July, 1840, of the Hungarian bishops bound the clergy to passive assistance in mixed marriages in which Catholic interests were not guarded—that is, where the formal declaration was not made. This ordinance aroused much feeling, and several ecclesiastics were fined on account of passive assistance. The bishops now turned to Rome, and the Holy See confirmed the pastoral letter, with the addition that mixed marriages were indeed forbidden, but that such marriages were valid, even when not entered on before a priest, if two witnesses were present. The Diet of 1843-44 allowed mixed marriages to be entered upon before Protestant clergy; the Catholic mother, however, received the right, with the permission of the father, to bring up all of the children in the Catholic Faith.

The agitation of 1848 and the Hungarian Revolution of 1848-49, besides changing political and social conditions, also affected the interests of the Church. The Diet of 1848 decreed the equality and reciprocity of all recognized confessions. In 1849 the minister of education and public worship, Horváth, desired to grant Catholic autonomy, but after the suppression of the Hungarian Revolution it came to nothing. Large numbers of the Catholic clergy took part in the Hungarian Revolution, a fact which in the following years of absolutism led to their persecution by the Government. During the period of autocratic rule the ordinances of the Austrian Concordat of 1855 were made authoritative for Hungary also, and in accordance with its enactments provincial synods for settling various ecclesiastical affairs were held in

1858 and 1863. Although the Concordat granted greater freedom to the Hungarian Church, yet the administration of the fund for religion and education remained in the hands of the Government. In 1853 political reasons led to the elevation of the Diocese of Zágráb (Agram) to an archdiocese having as suffragans the Sees of Diakovár, Zengg-Modrus, and Körös, and later to the founding of the Archdiocese of Főgaras. The creation of this archdiocese violated the rights of the Primate of Hungary; this led to repeated, but ineffectual, protests.

The period of absolutism in Hungary came to an end with the coronation of Francis Joseph I as King of Hungary (8 June, 1867), and the laws of 1848 were once more in force. The responsible parliamentary Government and Parliament exercised much influence on the affairs of the Church. The first laws touching ecclesiastical questions undoubtedly worked much injury to the Church, as the Common School Law of 1868 (Art. XXXVIII), which left to the inhabitants of a community the decision as to whether the common school was to be denominational or communal;

CATHEDRAL, WAITZEN (VÁC), HUNGARY

also Art. XLVIII which, in regard to divorce in mixed marriages, enacted that such cases might be brought by the respective parties before the competent spiritual authorities recognized by each, and that each must be bound by the decision of his, or her, own spiritual authority. This enactment led many to change to the Protestant religion. Art. LIII of 1868 enacted, in regard to the children of mixed marriages, that the children should follow the creed of the parent of the same sex, and that this must be enforced even after the death of the parent, as, for example, after the death of the Protestant father, the Catholic mother could not bring up in the Catholic Faith the minor children belonging to the Protestant confession. It was also decreed that, when one of the parents changed his religion, the child could not follow this change unless under seven years of age. These enactments led later to a bitter ecclesiastico-political struggle.

Various efforts were made in Parliament, between 1869-72, to injure the Church, as in the bills introducing civil marriage, civil registration, complete religious liberty, etc. However, of these measures, those regarding civil marriages, the keeping of the registers by civil officials, etc., were not enforced until a much later date. Serious complications arose upon the promulgation of the dogma of Infallibility by the Vatican Council in 1870. The Government, supported by the *jus placeti*, forbade its publication; a royal reproof was sent in 1871 to the Bishop of Székes-Fehérvár (Stuhlweissenburg), Jekelfalussy, who officially published the dogma. The *Kulturkampf* in Germany (1872-75) produced in Hungary a movement hostile to the Church. Agitation was also

caused by the passing of Art. XI of 1879; it enacted that the reception into another religious denomination, in so far as it was contrary to Art. LIII of 1868, was subject to legal penalty. The difficulties arising from the interpretation of this law lasted for a long time. In 1883 a bill on the marriage of Catholics and Jews was laid before the Parliament, but was twice rejected by the Upper House and finally withdrawn by the Government. The ministry of Koloman Tisza, which lasted longer (1875-89) than any other since 1867, inflicted further damage upon the Catholic Church. Protestantism spread in all directions and received active support from the Government. The revision of the constitution of the Upper House (House of Magnates) in 1885 (Art. VII) excluded Catholic auxiliary bishops from membership, with the exception of the Auxiliary Bishops of Nándor-Fehérvár and Knin (Tinin). According to this law, the dignitaries of the Catholic Church, both of the Latin and Greek Rites, entitled to membership in the

BENEDICTINE ABBEY, TIHANY, HUNGARY

Upper House since that time are the prince-primate and the other archbishops and diocesan bishops, the Auxiliary Bishops of Nándor-Fehérvár and Knin, the Archabbot of Pannonhalma (Martinsberg), the Provost of Jászó (Premonstratensian Order), and the Prior of Auranien; the representatives of the Orthodox Greek Church are the Patriarch of Karloca (Karlowitz), the Metropolitan of Gyula-Fehérvár (Karlzburg), and the diocesan bishops; of the Protestant Churches, their highest clerical and lay dignitaries.

In the first years of the last decade of the nineteenth century a far-reaching movement threatened the Church in Hungary. An ecclesiastico-political conflict began, caused by the decree of the Minister of Education and Public Worship, Count Csáky. This decree provided that any priest who performed a baptism according to Art. LIII of 1868 must send a certificate of baptism to the legally responsible clergyman within eight days. Neglect to obey this law was to be considered a misdemeanour, and punished accordingly. This decree, called the *Wegnahme* Decree (baptism away from the other side) marked the beginning of a new ecclesiastico-political conflict. According to this edict a Catholic priest when he baptized a child belonging to another faith must send the certificate of baptism to the minister of the other denomination; such an enactment was regarded by the Catholic clergy as contrary to conscience and the canonical ordinances. The bishops did not order that the law

be carried out, although they declared that for a time it could be tolerated; the greater part of the parish priests, however, refused to obey it. A Catholic agitation for the modification in the interest of the Church of Art. LIII of 1868, and for the repeal of the decree issued by Csáky, did not succeed, while the supporters of the Government soon made use of the movement to further the introduction of obligatory civil marriage, civil registration, and the free exercise of religion. These latter proposals became law during the premiership of Alexander Wekerle. In 1893 the ecclesiastico bills were laid before the Diet, and after long debates, being once rejected by the House of Magnates, they became law in 1894 and took effect 1 October, 1895. Articles XXXI and XXXIII of 1894 contain enactments regarding marriage and registration. Civil marriage is made compulsory, and government recognition is only given to civil registration. Article XXXII of 1894 enacts that the parents can enter into an agreement before the registrar as to the religion of the children. Registrars are appointed by the minister of the interior and are responsible to him; a parish priest cannot be appointed to this office. The Hungarian bishops protested against these laws and sent a memorial to the king requesting him not to sanction them; they were, however, unsuccessful. Article XLII of 1895 gave official recognition to the Jewish religion; at the same time the right to belong to no confession was granted.

A *Kulturkampf* did not, as had been feared, follow the passage of the ecclesiastico-political laws. Nevertheless, they led to the formation of a Catholic parliamentary party, the People's Party (*Volkspartei*), which made the revision of the ecclesiastico-political laws the chief measure of their programme. As early as the election for members of the Diet which followed the taking effect of these laws, the People's Party nominated candidates and up to the parliamentary election of 1906 it had 33 adherents among the members of the Lower House. The large proportions which the Catholic movement assumed in Hungary are due to this party. Catholic associations were founded in all parts of the land, and finally a union was formed which embraced the entire country. This reawakened Catholic consciousness led to the holding of national Catholic Congresses, which have now met for a number of years. These congresses have aided greatly in the strengthening and promulgation of Catholic opinions. The efforts of the Church in Hungary to gain autonomy for the protection of Catholic interests, especially in regard to the administration of Catholic foundations and schools, have so far been unsuccessful. The Diet of 1791 granted autonomy to the Protestants, but the Catholics neglected, at that time, to secure the same for themselves. It was not until 1848 that the first steps in this direction were taken by the holding of an episcopal conference to discuss the question. Nothing, however, resulted from these efforts, and the quickly following outbreak of the Revolution put the matter aside for the time being, nor was the question brought up during the period of absolutism. After the restoration of constitutional government the question of the autonomy of the Church was again raised, and in 1867 the bishops had a plan drawn up, which in 1868 was laid before a large assembly. In 1870 a congress for the promotion of autonomy was called, and a commission appointed which in 1871 presented its first report. According to the plan it outlined there were to be formed a national congress and an administrative council. The national congress was to be under the guidance of the prince-primate; subordinate to the congress were to be the diocesan conventions with a diocesan senate; below, there were to be the decanal and district senates, following which were the communal assemblies and the parishes. The incorporated autonomy council was to represent

the interests of Catholics, to administer the property of the Church, and to be the advisory council of the king in the appointment of church dignitaries. The Congress of 1871 accepted this plan and laid it before the king, but no practical results followed. After this but little was done in the matter until 1897, when a new congress for the promotion of autonomy was called. A commission was appointed which finished its labours in three years, and in 1900 the congress reassembled. The plan of the majority claimed autonomy almost entirely for the episcopate and left the administration of the property to the Government. The opposition party in the congress demanded the control of the funds, the schools, and the right of presentation for the congress. The discussions lasted through the years 1901-1902; in the latter year the congress closed its labours and laid the results before the king, who reserved his decision. Since then nothing more has been done in the matter.

In 1909, after long negotiations, the question of the equalization of clerical salaries was finally settled (Art. XIII of 1909). The principal provisions of this law fix the salary of pastors of recognized religions at 1600 Kronen (\$320) with a minimum of 800 Kronen (\$160); that of curates and assistant pastors at 1000 Kronen (\$200), with a minimum of 800 Kronen (\$160); the value of board and lodging is included in the salary of a curate or assistant, and this is reckoned at 500 Kronen (\$100). In order to meet the expenses of the equalization, the higher ecclesiastics of the Catholic Church are annually taxed to the amount of 700,000 Kronen (\$140,000), and the Hungarian fund for religion to the amount of 1,200,000 Kronen (\$240,000). Ecclesiastical affairs are under the control of the Hungarian Ministry of Education and Public Worship, in which a separate department, having one of the higher church dignitaries at its head, has been formed. The appointment of bishops, canons, abbots, etc. belongs to the king and follows upon the presentation of the names, with ministerial approval, by the minister of education and public worship. The bishops enter upon their office, take their seats in the House of Magnates, and receive their revenues without awaiting the papal confirmation. A royal edict of 1870 revived the old royal *ius placeti* and ordained that only after receiving royal approval could decisions, constitutions, and decrees of councils and popes be promulgated in Hungary. It should also be mentioned that the Bull "Ne Temere", recently issued by the Holy See in regard to mixed marriages, was not enforced in Hungary, owing to the representations of the Hungarian episcopate, but the provisions of the Constitution "Provida", issued for Germany in the same matter, 18 January, 1906, were also extended to Hungary.

ACTUAL CONDITIONS.—The Church in Hungary, in respect to organization, is divided into the three Arch-

dioceses of Gran (Esztergom), Kalocsa, and Eger (Erlau). The suffragans of Gran are the Dioceses of Besztercebánya (Neusohl), Győr (Raab), Nyitra (Neutra), Pécs (Fünfkirchen), Székes-Fehérvár (Stuhlweissenburg), Szombathely (Steinamanger), Vác (Waitzen), and Veszprém. The suffragans of Kalocsa are the Dioceses of Csanád, Transylvania, and Nagyvárad (Grosswardein). The suffragans of Eger (Erlau) are the Dioceses of Kassa (Kaschau), Rozsnyó (Rose-nau), Szatmár, and Szepes (Zips). The head of the Church is the Metropolitan Prince Primate, the Prince Archbishop of Gran (Esztergom). There is also in Hungary proper an abbey which is equal in rank to the dioceses, the Benedictine Abbey of Pannonhalma (Martinsberg). The Kingdom of Croatia-Slavonia has one archdiocese that of Zágráb (Agram). Its suffragans are the Dioceses of Diakovár (Bosnia, or

Diakovár and Szerem), and Zengg-Modrus. There are two Uniat Greek archdioceses in Hungary, Gran (Esztergom) and Gyula-Fehérvár-Fogaras. The suffragans of the Uniat Archdiocese of Gran (Esztergom) are Munkács and Eperjes; those of Gyula-Fehérvár-Fogaras are Lugos, Nagyvárad (Grosswardein), Szamos-Ujvar, and the Diocese of Körös (Kreuz) in Croatia.

The Reformed Church is divided into four districts; the Lutheran Church into five districts. The Orthodox Greek Church is governed by the Patriarch of Karlócza (Karlowitz), who has under him the Dioceses of Bács, Buda, Temesvár, and Versecz. The Orthodox Greek Church in Transylvania is governed by the Metropolitan of Nagy-Szeben (Hermannstadt), who has under him the Dioceses of Arad and Karánsebes. The Patriarch of

Karlócza (Karlowitz) has jurisdiction also over the Dioceses of Károlyváros (Karlstadt) and Pakrácz in Croatia. The Unitarian Church is divided into 9 dioceses with 113 mother-churches and 111 pastors; the see of their bishop is Kolozsvár (Klausenburg). The Jews are divided into three communities, the Congress, Status Quo, and Orthodox communities. In 1905 the Baptist Church was added to the legally recognized religions, but only the community at Budapest, which in 1907 had 190 stations, was sanctioned as an organized community.

According to the Hungarian census of 1900 the adherents of the different religions number as follows: (1) Civil population.—Catholic of the Latin Rite, 9,846,533; Uniat Greek, 1,843,634; Reformed, 2,423,878; Lutheran, 1,280,070; Orthodox Greek, 2,799,846; Unitarian, 68,005; Jewish, 846,254; other confessions, 14,180. Total, 19,122,400. (2) Population in active military service.—Catholic of the Latin Rite, 73,380; Uniat Greek, 10,509; Reformed, 17,324; Lutheran, 8872; Orthodox Greek, 15,867; Unitarian, 563; Jewish, 5124; other confessions, 580. Total, 132,219.

The Catholic dioceses of Hungary contain 21 cathe-

ST. MATTHIAS' CHURCH, BUDAPEST

dral chapters with 211 regular and 113 honorary canons; 23 diocesan abbeys, 51 exempt and 151 titular abbeys; 36 diocesan provostships; 3 exempt and 110 titular provostships; 72 archdeaconries and 392 vice-archdeaconries; 3249 mother-churches, 7590 dependent churches with not less than 50 souls, and 7594 dependent churches, with less than 50 souls. In Croatia-Slavonia there are 6 cathedral chapters with 60 regular and 30 honorary canons; 1 diocesan and 21 titular abbeys; 3 diocesan and 9 titular provostships; 24 archdeaconries and 65 vice-archdeaconries; 592 mother-churches and 360 dependent churches with at least 50 souls. The Uniat Greek Church in Hungary has 6 cathedral chapters, with 41 regular and 20 honorary canons; 1 abbey and 6 titular abbeys; 3 provostships; 23 archdeaconries; 106 vice-archdeaconries and 74 deaconries; 2116 mother-churches, 1596 dependent churches with at least 50 souls, and 1880 dependent churches with less than 50 souls; 1:36 parish priests, 676 assistant priests, 107 priests filling other positions, 302 ecclesiastical students; 46 priests retired from active work; 62 secular priests and 1 regular priest engaged outside the diocese. The Uniat Greek Church in Croatia-Slavonia has 1 cathedral chapter with 14 regular canonries and 1 honorary canonry; 1 provostship; 4 archdeaconries and 4 vice-archdeaconries; 24 mother-churches, 15 dependent churches with at least 50 souls; 11 parish priests, 16 assistant priests and 6 priests otherwise employed; 17 ecclesiastical students; 3 priests retired from active work, and 1 priest outside the diocese. There are also in Hungary 196 religious houses for men, with 2114 inmates, and 379 religious houses for women, with 5005 inmates; 2606 parish priests, 1770 assistant priests, and 713 priests otherwise engaged; 1224 ecclesiastical students; 260 priests retired from active work; outside the dioceses, 135 secular and 116 regular priests. In Croatia-Slavonia there are 30 religious houses for men, with 222 inmates, and 68 religious houses for women, with 690 inmates; 509 parish priests, 285 assistant priests, and 149 priests otherwise engaged; 189 ecclesiastical students; 47 retired priests and 45 priests outside the dioceses (see articles on the respective dioceses).

In German.—CSUDAY, *Geschichte der Ungarn* (2nd ed., Buda, 1899). The histories of Hungary of MAJLÁTH and FESSLER have been out of date for a long time. In Hungarian.—SZILÁGYI ed., *History of the Hungarian Nation* (10 vols., Budapest, 1896-97); the ecclesiastical history of Hungary is treated by BALICS, *History of the Roman Catholic Church in Hungary* (Budapest, 1885-90); a synopsis of ecclesiastical conditions in Hungary is given in the sumptuous work issued on the 300th anniversary of the union of Hungary and Austria, *Catholic Hungary*; a brief history of the Church in Hungary, KARÁCSONYI, *Church History of Hungary in Outline, 970-1900* (Grosswardein, 1906) contains a bibliography; Hungary's relations with the Holy See are set forth in FRANKOL, *Ecclesiastical and Political Connexion of Hungary with the Roman See* (Budapest, 1901-03). Among the collections of original authorities, of which a list is given by KARÁCSONYI, may be mentioned PÉTERFY, *Sacra concilia Hungaria* (2 vols., Vienna, 1742); THEINER, *Vetera monumenta hist. Hungarum sacram illustrantia* (2 vols., Rome, 1859-60), II; also the volumes of the *Monumenta Vaticana historiam Hungaria illustrantia* (8 vols., Budapest, 1887-91); further the large work in course of publication on the Reformation and Counter-Reformation in Hungary, *Monumenta ecclesiastica tempora innovata in Hungaria religionis illustrantia* (4 vols. published, Budapest, 1902). On the marriage law, REINER, *The Hungarian Marriage Law* (in Hungarian, Budapest, 1908). On autonomy, MELICHAR, *Die katholische Autonomie* (in Hungarian, Budapest, 1908). Cf. also bibliographies of the articles on the several Hungarian dioceses.

A. ALDÁSY.

HUNGARIAN LITERATURE.—The language which has prevailed in Hungary for nearly a thousand years and is spoken at the present day by about 12,000,000 persons, is a pithy and very pliant language, rich in vowel-sounds and fundamentally different from the majority of literary tongues. As was determined by the Jesuit Sajnovics in 1770, it is most nearly related to the Vogul-Ostiak, though the Hungarians have been separated for more than two thousand years from the people using that tongue. Together with the

Vogul-Ostiak, Hungarian, as well as Lappish, Finnish, Cheremis, Mordvin, and Samoied, belongs to the Ural group of languages, and further, together with Turkish and Mongolian—all of Asiatic origin—to the Ural-Altai group. The vocabulary of Hungarian has been greatly enriched by words borrowed from neighbouring peoples, as from the Persian and especially from the Turkish, even before the immigration into the present Hungary (896), so that it was for some time thought that Hungarian was most nearly allied to the Turco-Mongolian stock (Vámbéry). After the immigration, words were further borrowed from the Slav, German, Latin, and Italian languages. Hungarian, in spite of a certain harshness, is particularly well suited for oratory and for serious poetry, especially since it has been systematically developed and enriched by Révai, Kazinczy, and a school of so-called neologists, c. 1770-1800. Excluded from scientific and political life by the use of Latin until about 1840, Hungarian, during the course of the nineteenth century, came to be regarded more and more as a bond of national unity and a safeguard of political independence, and, as such, was zealously cultivated in spite of the Germanizing efforts of Austria. The oldest monument of the Hungarian language is a funeral oration, "Halotti beszéd", about 1230, and a hymn on the Virginity of Our Lady, c. 1300. Hungarian literature, a markedly national product, was always in closest contact with the historical development of the people, and accordingly may be divided into five periods.

(1) *The Pre-Reformation Period*, which in pre-Christian times, up to about A. D. 1000, produced chiefly popular epics, and after the introduction of Christianity, works chiefly of a religious character, such as legends and hymns, mystic meditations and lives of the saints. Amongst the latter the most noteworthy is that of the Hungarian princess, Blessed Margaret. Almost all of these were the work of religious, such as Temesvári Pelbart and Ráskai Lea. Contemporary with these are the sagas of the heroes and the chronicles. These latter are mostly in Latin and show especially the influence of the Renaissance, which was promoted largely by King Matthias Corvinus (1458-90), whose court became a centre of humanistic culture (Archbishop Vitéz; Bishop Janus Pannonius; the magnificent *Bibliotheca Corvina*). Culture and literature were suddenly brought to a standstill by the invasion of the Turks and the consequent devastation of bishoprics, monasteries, and schools, and later through the divisions and confusion of the Reformation.

(2) *Reformation and Counter-Reformation Period*.—Towards the middle of the sixteenth century began the printed controversial literature. The polemical warfare was commenced by the Protestants and was carried on more by means of personal abuse and railery than by argument; e. g. the Hungarian Reformers Dévai and Melius, later Gelczi-Katona, Alvinczi, and others. They were met on the Catholic side by Telegdi, Monoszlai, Balácsi, Veresmarti, and the Jesuits. These, however, were all far surpassed by Cardinal Peter Pázmány, S.J. (1570-1637), Primate of Hungary, one of the greatest figures in the history of Hungarian civilization and literature. Besides many controversial writings, spiritual books, and a large volume of sermons, his chief work is the great "Hodegus" or "Kalauz" (1613), a complete apology for Christianity and Catholicism, written in a clever manner suited to the times, displaying a very full acquaintance with the literature of the Reformation, often ironical and sarcastic, and above all full of sharp and caustic logic. This work became an arsenal which furnished weapons to the champions of the subsequent Catholic reorganization. The Hungarian Protestants were unable to answer him, and sent the great work, translated into Latin, to Wittenberg.

Balduinus, the dean of the Lutheran professors at this university, required ten years for his reply. To this Pázmány soon wrote a "counter-reply", which secured the final triumph of the Catholic cause in Hungary. This work led to the re-conversion of the greater part of Hungary, and to the end of the religious controversy, while it also brought about a great development of Hungarian as a literary language, and formed, according to Toldy, the father of Hungarian literary history, "the basis of the later Hungarian prose style". The Bible was also repeatedly translated into the vernacular. The monk Bathor (c. 1516) had translated the Bible in pre-Reformation times, and after him, towards the middle of the sixteenth century, Catholics like Komjati, Mizsér, Erdösi, and others preceded the Protestant translators. The first complete Protestant translation of the Bible was published in 1589 by Károlyi, and the first Catholic one in 1626 by Káldi, S.J.; both translations, the Catholic one revised by Tárkányi, 1865, are still in use. The profane literature of this period is represented by the epics of the wandering minstrel Tinódi (d. 1557), the lyric poet Balassi (d. 1594), and especially by Pázmány's disciple, the deeply religious Hungarian general, Nicolaus Zrínyi, who, in 1651, wrote the first Hungarian epic, "The Fall of Sziget", dealing with the heroic death of his grandfather and namesake at the destruction of the fortress of Sziget by the Turks. Gyöngyösi (d. 1704), besides lyric and epic poems, such as "Venus of Murány", also wrote religious verse, it is to be regretted that, like those of his master Ovid, his poems are frequently immoral. For the rest, the literature of this period breathes a spirit of glowing patriotism and deep religious feeling. Worthy of mention are the folk-songs, especially those belonging to the time of the wars for the liberation of Transylvania; amongst these is the "Rákóczy Song", which even to-day is often set to music by Hungarian composers. The drama, both in Latin and Hungarian, was cultivated in the numerous schools of the Jesuits and later in those of other religious orders.

(3) *Period of Peaceful Development.*—After the close of the Turkish and civil wars (Peace of Szatmár, 1711) began the age of peaceful development, in many respects under the influence of the flourishing literature of Western Europe. At this point, too, begins the literary treatment of the different branches of learning, which up to then had been confined to elementary school textbooks (Apáczai-Cseri). To history belongs the first place, especially to the works of the Jesuits Pray and Katona, the latter of whom composed an invaluable pragmatic history of Hungary in forty volumes. Second place must be given to the science of language, represented by the Piarist Révai (d. 1807). The Jesuit Faludi (d. 1779) wrote novels and moral essays; he is looked upon as the best stylist of his time. Mikes, the faithful companion in banishment of the hero of freedom, Francis Rákóczy II, wrote his classic-elegiac "Letters from Turkey", while Amade wrote lyrics. Bessenyei and others produced works closely modelled on French writers (Voltaire). These are unjustly regarded by modern anti-Catholic writers of literary history, such as Beöthy, as the starting-point and creators of modern Hungarian literature. The old classical models were followed by many members of religious orders, such as Baróti-Szabó, Virág, and others. In fact from the beginning Hungarian literature was much indebted to the religious orders. The most successful classicist was the lyric poet Berzsenyi (d. 1836). Kazinczy (d. 1831), the delicate critic and enthusiastic admirer of classicism, modelled himself on German writers, as did also the lyric poet and orator Kölcsey (d. 1838); who composed the national hymn "Isten áldd meg" (God Bless Hungary), and the freemason Kármán, who died young, in consequence of dissipation, and others. The naturalistic and often coarse writer of

lyric and comic verse Csokonay, the Piarist Dugonics, Gvadányi, and others strove after independence from Western influence.

(4) *The Augustan Age of Hungarian Literature* begins with the nineteenth century in Berzsenyi and Kölcsey and Alexander and Charles Kisfaludy. Alexander Kisfaludy wrote the "Minnelieder of Himfy", and Charles (d. 1830), besides writing lyric patriotic verse, produced especially national tragedies from national history, and popular comedy. Under the influence of national ideals which sprang up throughout Europe, and which were especially promoted in Hungary by Count Stephen Széchenyi (the "Greatest of Hungarians", and the founder of the Hungarian Academy of Sciences, 1825; he died in 1860), Hungarian literature reached its acme in the middle of that century. Michael Vörösmarty (1800–55) is regarded by many as the greatest lyric, epic, and dramatic poet of Hungary. Among his writings are "Zalén's Flight", "The Two Neighbouring Castles" etc. Katon (d. 1830) wrote the best Hungarian tragedy, "Banus Bank". Garay, the Benedictine Czuczor, Fáy, Bajza, Vajda, Kúthy, and others cultivated various forms of literature. The popular Alexander Petöfi (1823–49) is generally regarded as the greatest Hungarian lyricist. He fell, when still young, as a volunteer in the War of Freedom. His poems are full of glowing patriotism and love of liberty, of bold and original imagination, expressed in pure idiomatic and popular language. He is bright and lively, but at times somewhat trivial, and the love-theme plays too large a part in his verses. Among political orators before 1848, Louis Kossuth (d. 1894) is especially worthy of mention; after the Revolution, Francis Deák (d. 1876) was the most prominent orator.

(5) *Modern Period.*—In modern Hungarian literature the novel claims the foremost place. The patriotic historical romance was cultivated by the licentious Baron Jósika, and by the Barons Kemény (d. 1875) and Eötvös (d. 1871), both very expert in the delineation of character. To them belong "The Carthusian" and "The Village Notary", a satire on the Hungarian officialdom of the time, which was reformed as a result of the publication of this work. They were in some respects surpassed by the most prolific and capable of Hungarian novelists, Jókai (d. 1904), of whose more than one hundred novels most of the later ones are of minor literary value and are disfigured by passages offensive to morality and by an attitude hostile to the Church. His best novel is "Az új Földesúr" (The New Squire). In this period the lyric and epic poet John Arany (1817–82) may be looked upon as the most important representative of poetry proper. He stands unsurpassed in Hungarian literature for perfection of form and depth of thought and feeling. He is moreover distinguished for his pure patriotism and the grave character of the subjects he treats: he has not written a single love poem. He shows a special preference and ability for the employment of the ballad. Next to him ranks the deeply religious elegiac poet Tompa (d. 1868), whose favourite themes are folk-songs and poems about flowers. Worthy of mention as poets, chiefly lyrical, are Lévai, Szasz, Gyulai, Reviczky, and especially Mindszenty (d. 1877), by far the most gifted Catholic writer of religious lyrics in recent times. Other late Catholic writers of religious poems are Tárkányi, Sujánszky, Szulik, Rosty, Rudnyánszky, Kálmán, Erdösi. The peasants also still produce folk-songs of literary value. Dramatic poetry is represented in the modern period by Szigligeti, Tóth, Dóczy, Teleky, the apostate Csiky, and others. The first, especially, may claim credit for the revival and perfection of popular plays, with themes drawn from the healthy patriarchal life of the people. Madách produced a dramatic poem rich in psychological and historical delineation as well as in depth of thought, "The Tragedy of Mankind", which

has been translated into several languages. The stage of to-day in Hungary is but little concerned with literary excellence. Of recent novelists the most prominent are Herezeg, Mikszáth, Rákosi, Kincs, Andor, Gárdonyi, and as orators Cardinals Haynald, Schlauch, Samassa, Bishop Prohászka, Minister of State Apponyi, Ugron, Rakovszky, and others. Since the prevalence of modern infidelity, looseness of morals, and class feuds, Hungarian literature is abandoning its ancient ideals of patriotism, religion, and moral earnestness, and imitates the fashionable French and German writers.

PERIODICAL LITERATURE.—Historically we note two periods in Hungarian literature: the period before 1867 and that after. The first Hungarian newspaper, the "Magyar Hirmondó", appeared in 1780 in Pozsony, and the first literary magazine, the "Magyar Múza", in 1787. Literary periodicals edited by Kazinezy and Kisfaludy contributed much to the development of Hungarian literature. The first scientific magazine was the "Tudományos Gyűjtemény", founded in 1817 by the historian Canon Fejér. Kossuth's organ, the "Pesti Hírlap" (1841-48), exercised great influence on the events of the wars of freedom and on the period of the Revolution. The "Pesti Napló", edited by Kemény with the co-operation of Deák, was an important factor in the preparation of the settlement with Austria (1867). The political press, after the defeat of the national movement (1849), greatly degenerated, but after the settlement the revival of national independence, and the removal of political censorship, began the modern period of rapid development. In 1830 there were in all only 10 Hungarian newspapers and magazines; in 1840 there were 26; in 1848-49, the year of the Revolution, 86; only 9 in 1850; 52 in 1861; 80 in 1867 (year of the settlement); 140 in 1868; 368 in 1880; 636 in 1890; 1132 in 1900; 2069 in 1907. In 1909 the number of newspapers, not counting magazines, was 1384, publishing 152 million copies annually; of these 2 million were Catholic, of the remaining 150 million some are neutral, the majority anti-Catholic. The Catholic press is weak because, owing to the dominant position of the Church for centuries, the Catholics did not feel the advantage of a representative press as keenly as the minority, especially the Jews, who saw its financial advantages. Hence it comes that to-day the Hungarian press is overwhelmingly Liberal and Jewish, strongly hostile to the Church and to a terrible extent pornographic. To its influence, above all, is to be ascribed the growth of religious indifference amongst Catholics, by which the unchristian church laws of 1890 and the spread of Social Democracy were made possible. Catholics possess only one central daily paper of importance, the "Alkotmány", since 1895, which has a circulation of only 7000. Another old daily, "Magyar Allam", had to cease publication in 1908; a 2-heller daily [a heller=one-fifth of a cent], the "Uj Lap", since 1901, is making great progress, thanks to the powerful support of the Catholic Press Association of Hungary. The subscription list rose in a few months from 19,000 to 60,000, and the number of subscribers is increasing daily. The anti-Semitic "Magyarország" has 36,000 subscribers, and the Moderate Liberal "Budapesti Hírlap" 30,000; these are the only papers not hostile to the Church. Then come with outspoken anti-Christian character the Jewish dailies, such as the "Pesti Napló" with 40,000, the "Pesti Hírlap" with 42,000, the "Budapest" with 45,000, the pornographic scandal-chronicle "Nap" with 60,000, the "Kis Ujság" with 80,000, the "Fris Ujság" (a 2-heller daily) with 160,000 subscribers, and many others. Moreover, the literary journals also are mostly objectionable from a moral point of view, and the scientific periodicals (mostly in the hands of Liberal university professors) are for the most part anti-Catholic or indifferent. The lack of criticism, a result

of the linguistic isolation of Hungary, makes itself felt especially in this department. Two associations have undertaken to improve the literary position of the Catholics: the Society of St. Stephen, founded in 1847, and the still youthful Catholic Press Association. The former provides Catholic book and magazine literature, and possesses its own magnificent buildings and printing-press (annual income in 1908, \$260,000; membership, 20,000). The Press Association (up to May, 1909, with a capital of \$40,000) works chiefly for the improvement and spread of the daily press and is justly looked upon as the most important and most promising of Catholic institutions. There are on the Catholic side at present besides the 2 central dailies, 2 provincial dailies, 5 journals appearing several times in the week, and 25 weekly newspapers. Of the 60 Catholic periodicals, about 10 are scientific and literary in character, 9 religious, 16 devotional, and 6 juvenile. The most important are: "Katholikus Szemle" (Catholic Review) since 1887, with 15,000 subscribers; "Elet" (Life) since 1909; "Religio", the oldest existing Hungarian periodical, and "Zászlónk" (Our Flag) for the youth, with 22,000 subscribers. On religious questions the Catholic periodicals are strongly orthodox. In the United States 23 periodicals are published in Hungarian, including three daily newspapers, and 5 or 6 Catholic journals. Canada, also, has 1 Catholic periodical in Hungarian.

The best scientific Hungarian grammars are by SIMONYI, SZINNYEI, SZARVAS. Dictionaries: YOLLAND, *A Dictionary of the Hungarian and English Languages. English-Hungarian Part* (Budapest, 1908); scientific Hungarian dictionaries by CZUCZOR-FOGARASI, SZARVAS-SIMONYI, SZILY. Literature: RIEDL, *A History of Hungarian Literature* (London, 1906); BOWRING, *Poetry of the Magyars* (London, 1830); REICH, *Hungarian Literature* (London, 1898); Hungarian hand-books by TOLDY, BEÖTHY (anti-Catholic tendency), HORVÁTH, BARTHA, BEÖTHY-BADICS, and others. Life and works of Hungarian writers by SZINNYEI, at present 12 volumes. Periodical literature: *Magyar Könyvszemle* (Budapest, 1908).

ADALBERT BANGHA.

Hunolt, FRANZ, the most popular German preacher of the early part of the eighteenth century, b. 31 March, 1691, at Siegen; d. 12 September, 1746, at Trier. The name of this renowned preacher is spelled in various ways in the catalogues of the Society of Jesus—Hunold, Hunoldt, and (usually) Hunolt. At the age of nine years he entered the Jesuit college of his native town and six years later attended the Jesuit school at Cologne to study philosophy. Having completed the three years' course as master of arts, he entered the Society of Jesus there on 18 May. After a novitiate of two years at Trier he was sent to Geyst (near Münster, in Westphalia) for one year to prepare himself to teach. After this he taught in the gymnasium at Cologne and also at Aachen to the complete satisfaction of his superiors (*summá cum laude*), being at the same time spiritual director of the junior sodality. In this position he showed proofs of his remarkable oratorical talents. Having completed the theological course of four years and received Holy orders, he should then have made his tertianship, or third year of probation, but was, during most of that period, employed in giving popular missions, so great had his reputation as a preacher already become. His next appointment was to the chair of logic at Coblenz, where he made his profession, 15 August, 1724. It was not until after this year that he was able to follow his true vocation; he was assigned to the cathedral pulpit at Trier, and continued in that employment for nineteen years, to the satisfaction of his superiors and the spiritual advantage of the city. Besides this he was much sought after as a confessor and he also became chaplain of the city prison. His indefatigable activity required robust health, which, unfortunately, Hunolt had not. Chronic weakness of the heart rendered it impossible for him to preach; consequently, in 1743, he was trans-

ferred to the position of master of novices at Trier, and died there three years later.

Hunolt's great collection of sermons is still widely used. No fewer than six folio editions of the original work appeared between 1740 and 1813. After the latter date versions in more modern German began to be published; one in twenty-five volumes appeared at Ratisbon, 1842-47; another modern version appeared about the same time at Graz, in twenty-four volumes. There have been several editions of both the Ratisbon version and the Graz, while abridgments and selected sermons have frequently been published, and are even now republished with much success. Universally esteemed, the work was translated into Dutch, French, and Polish; an English version in twelve volumes was completed in 1898.

Hunolt's idea was to treat the entire field of morals in his sermons thoroughly and completely. Each of the six volumes contains seventy-six sermons, and the various divisions in each volume are indicated by sub-titles, such as "The Christian Attitude towards Life"; "The Wicked Christian"; "The Penitent Christian"; "The Good Christian"; "The Last End of Christians"; "The Christian's Model" This prodigious mass of material is distributed most appropriately over the entire ecclesiastical year. How popular, and at the same time profound, Hunolt's expositions are, is best proved by the fact that numerous excerpts are included in all anthologies and text-books of religious rhetoric as standards. A competent critic (Kraus) has eulogized Hunolt's sermons in the following words: "At a time when German pulpit oratory had degenerated into utter bad taste and brainless insipidity, these sermons are distinguished by noble simplicity, pure Christian sentiment, and genuinely apostolic ideas no less than by the felicitous use of Holy Writ, abundance of thought and pregnant language." And finally, we must call attention to the cultural value of Hunolt's work especially for the districts of Trier, inasmuch as we may gather therefrom a fairly correct picture of life in the Trier of his day.

SCHIED, Franz Hunolt, S. J., *ein Prediger aus der ersten Hälfte des 18. Jahrhunderts* (Ratisbon, 1906).

N. SCHIED.

Hunt, THOMAS. See SPROTT, THOMAS.

Hunt, THURSTAN, VENERABLE, an English martyr (March, 1601), who belonged to the family seated at Carlton Hall, near Leeds, and had made his course of studies at Reims, 1583, 1584. Robert Middleton, his fellow-martyr, a nephew of Margaret Clitheroe (q. v.), had also studied at Reims and at Rome, 1594-1598. In November, 1600, Middleton was arrested by chance near Preston, and an attempt to rescue him was made by four Catholics, of whom Hunt was one, but the attempt failed, and after a long and exciting tussle, Hunt was captured. They were then both treated with great inhumanity, and heavily ironed night and day until, by the order of the Privy Council, with their feet tied beneath their horses' bellies, they were carried in public disgrace up to London and back again to Lancaster, where they were condemned and executed for their priesthood. But the attempt to degrade them in public opinion failed. No one would let out his horse to drag them to the place of execution; they reconciled to the Church the felons condemned to die with them; their relics were eagerly carried off after their death; and a contemporary sang admiringly of

Hunt's hawtie corage staut,
With godlie zeale soe true,
Myld Middleton, O what tongue
Can halfe thy vertue showe!

POLLEN, *Unpublished Documents relating to the English Martyrs* (Catholic Record Society, 1908), V. 384-9; the remarkable *Open letter to Queen Elizabeth* (Ibid., 381-4) strongly recalls Hunt's "haughty courage stout", and is probably by him.

J. H. POLLEN.

Hunter, SYLVESTER JOSEPH, English Jesuit priest and educator; b. at Bath, 13 Sept., 1829; d. at Stonyhurst, 20 June, 1896. His father, the Rev. Joseph Hunter, himself descended from a long line of English Roundheads, was a Protestant dissenting minister, but is better known to posterity as an antiquarian writer and Shakespearian critic (see "Dict. of Nat. Biogr.", s. v. Hunter, Joseph). In 1833 Joseph Hunter removed with his family from Bath to London to assume the functions of Keeper of the Public Records, and in 1840 Sylvester Joseph Hunter entered St. Paul's School. While still a schoolboy, he was, at least indirectly, brought into relations with the Catholic Church by the conversion of two of his sisters. Having gained a scholarship at Trinity College, Cambridge, he entered that university in 1848 and, already remarkably proficient in classical literature, devoted himself mainly, if not exclusively, to the study of mathematics and physics. Graduating B.A. in 1852, he was placed eighth wrangler in the Mathematical Tripos for that year. Soon after this he entered Lincoln's Inn, London, as a law student.

In 1857 he was received into the Church by the same priest (Canon Oakeley) who, twelve years before, had received his two sisters. Within eight years of his graduation at Cambridge he had published two legal text-books ("The Suit in Equity" and "The Law of Trusteeships") which immediately attracted attention to his ability and professional attainments. His prospects at the chancery Bar were already morally assured when, in 1861, he decided to turn his back upon the world and try his religious vocation in the Society of Jesus. Entering the English Novitiate 7 September, 1861, he there passed through the regular *biennium* of probation, attended lectures in philosophy at St. Mary's Hall, Stonyhurst, for one year, taught for two years at Stonyhurst College, and thence passed on to his theological studies at St. Beuno's, where he was ordained priest in 1870. His career of inestimable usefulness to English Catholic education fairly began with his return, after ordination, to teach the higher classes at Stonyhurst. The requirements in physics and mathematics insisted upon by the University of London at that time constituted a formidable obstacle to Stonyhurst boys whose time had been almost monopolized by their Latin and Greek studies. Father Hunter's efforts to deal with this situation resulted in an increased number of Stonyhurst students mentioned in the London Honours Lists, as well as in two little books which he compiled to assist others in the same branch of teaching. His usefulness was widened when, in 1875, he took up the work of training Jesuit scholastics who were to teach in the colleges of the English Province. It was after ten years of this work that he was appointed rector of St. Beuno's, where he wrote the "Outlines of Dogmatic Theology" (3 vols., 1st ed., London, 1894) by which his name is now most widely known. Other spare moments were given to conducting the "Cases of Conscience" for the Diocese of Salford. During the last five years of his life, passed at Stonyhurst, he began a "Short History of England", which was left unfinished at his death.

Letters and Notices (of the English Province, S. J.).

E. MACPHERSON.

Hunting, CANONS ON.—From early times, hunting, in one form or another has been forbidden to clerics. Thus, in the "Corpus Juris Canonici" (C. ii, X, De cleric. venat.) we read: "We forbid to all servants of God hunting and expeditions through the woods with hounds; and we also forbid them to keep hawks or falcons." The Fourth Council of the Lateran, held under Pope Innocent III, decrees (can. xv): "We interdict hunting or hawking to all clerics." The decree of the Council of Trent is worded more mildly: "Let clerics abstain from illicit hunting and hawking" (Sess. XXIV, De reform., c. xii). The

council seems to imply that not all hunting is illicit, and canonists generally make a distinction between noisy (*clamorosa*) and quiet (*quieta*) hunting, declaring the former to be unlawful but not the latter. Ferraris (s. v. "Clericus", art. 6) gives it as the general sense of canonists that hunting is allowed to clerics if it be indulged in rarely and for sufficient cause, as necessity, utility, or honest recreation, and with that moderation which is becoming to the ecclesiastical state. Ziegler, however (De episc., l. IV, c. xix), thinks that the interpretation of the canonists is not in accordance with the letter or spirit of the laws of the Church. Nevertheless, although the distinction between lawful and unlawful hunting is undoubtedly permissible, it is certain that a bishop can absolutely prohibit all hunting to the clerics of his diocese. This has been done by synods at Milan, Avignon, Liège, Cologne, and elsewhere. Benedict XIV (De synodo dioceses., l. II, c. x) declares that such synodal decrees are not too severe, as an absolute prohibition of hunting is more conformable to the ecclesiastical law. In practice, therefore, the synodal statutes of various localities must be consulted to discover whether they allow quiet hunting or prohibit it altogether.

AICHNER, *Compendium juris eccles.* (Brixen, 1895); WERNZ, *Jus Decretalium*, II (Rome, 1899); LAURENTIUS, *Institutiones juris eccles.* (Freiburg, 1903).

WILLIAM H. W. FANNING.

Huntington, JEDEDIAH VINCENT, clergyman, novelist; b. 20 January, 1815, in New York City; d. 10 March, 1862, at Pau, France. He received his early education at home and at an Episcopalian private school. He entered Yale College and later the University of New York, where he was graduated in 1835. He then studied medicine at the University of Pennsylvania, received his degree in 1838, but never practised his profession. During the three years following he was professor of mental philosophy in St. Paul's Episcopal school near Flushing, L. I., and at the same time studied for the ministry. In 1841 he was ordained a minister of the Protestant Episcopal Church, resigned his professorship, and became rector of the Episcopal church at Middlebury, Vermont. At the end of five years he resigned because of doubts about his religious position, and went to Europe. The next three years he spent mostly in England and in Rome. He left England apparently a firm believer in the Anglican theory of the "Via Media". The authority of Rome outside the British possessions he readily accepted. Soon after his arrival in Rome, however, he became convinced that his duty lay in recognizing the exclusive authority of the Catholic Church. On speaking of the subject to his wife, he was agreeably surprised to learn that she was of one mind with him. Accordingly they were both received into the Church in 1849. Returning to America he lectured before learned associations in several of the large cities. He became editor of the "Metropolitan Magazine", a Catholic periodical published in Baltimore, and later edited "The Leader" published in St. Louis; each proved a failure. His life was, however, a literary life, and fairly successful. His first publication was a book of verse. He made several translations from the French, one of which, Ségur's "Short and Familiar Answers to Objections against Religion," is still doing service.

But Huntington is best known as a writer of fiction. His novels were widely read and received considerable notice in the leading journals in America and England. The criticism was often harsh and at times justly deserved, especially in the case of his first novel "Lady Alice" and its sequel "The Forest". Probably the best of his works is "Alban, or the History of a Young Puritan", which is practically the history of his own life. His last work, which is best known and which is the only one reprinted, is "Rosemary, or Life and

Death". The last few years of his life were spent at Pau, in the South of France, where he died of pulmonary tuberculosis in his forty-eighth year.

Records of the American Catholic Historical Society, 1905.

MATTHEW J. FLAHERTY.

Hunyady, JÁNOS (JOHN), governor of Hungary, b. about 1400; d. 11 August, 1456; the heroic defender of the Catholic Faith against the advance of the Osmanli; father of King Matthias I (Corvinus) of Hungary. The origin and parentage of his family was not ascertained until recently, when modern investigation cleared up the numerous legends which surrounded the Hunyadi family. The historian Bonfini derived the family from the Roman *gens* Corvina, or Valeriana, in order to flatter his king, Matthias Corvinus. Gáspár Heltai in his chronicle makes Hunyady the illegitimate son of King Sigismund and a Wallachian peasant-girl. Others try to establish the purely Hungarian origin of the family; others again put in a plea for its Serb or Wallachian origin. In view of modern investigations it may be taken as proved that the family of Hunyadi was of Rumanian origin; János Hunyady himself, however, may be regarded as a Hungarian from his birthplace; probably he spoke the Wallachian language only during his youth, and no doubt was born in the Catholic faith, which his father Vajk (Voik, Vuk) probably had already professed. The oldest ascertained member of the family was called Serbe, whose son, Vajk, the father of János Hunyady, was already in possession of the hereditary seat of the family, the castle Hunyad, before 1407. The parentage of the mother of Hunyady underwent an exhaustive scrutiny at the hands of modern critics. While formerly his mother, Elizabeth, was supposed to belong to the family of Morzsinay, it was recently shown by János Karácsonyi, that for various reasons the marriage of Hunyady's father with a member of the family of Morzsinay is inadmissible. However, the name of Hunyady's mother has not been ascertained up to the present time. The year of Hunyady's birth is either one of the last years of the fourteenth, or one of the first years of the fifteenth century. According to Count Joseph Teleki, the historian of the House of Hunyady, he was born in 1387. The birthplace of Hunyady is equally unknown.

Of his youth we know that in 1410-4 he was in the service of the family Ujlaky, in the southern part of the country, in Syrmia or in the Banat of Macsó. In 1414-27 he was in the service of the despot, Stefan Lazarevics of Servia, in one of whose Hungarian fortresses (perhaps Beceș), he was stationed. We find him in the military entourage of the King Sigismund and Albrecht, 1428-39. Sigismund rewarded Hunyady, who distinguished himself in the war against the Turks, during the siege of the castle of Szendrő, with large donations and made him one of his counsellors. The rise to power of Hunyady began after the death of Sigismund. In 1438, King Albert appointed him *Ban* of Szörény (Severin) and Count of Temes, in 1439 he received from the king another donation and the castle of Hunyad (his family seat), and was named as guardian of Albert's posthumous son, Ladislaus. After the death of Albert, Wladislaw III of Poland was elected King of Hungary, in order to give the country a strong ruler; Hunyady took a leading part in this election. By his support the new king firmly established himself on the throne. Through gratitude he made Hunyady commander of the fortress of Belgrade, and Voivode of Transylvania. This appointment was the beginning of the great wars, under Hunyady's leadership, against the Turks, who were threatening Hungary. In 1441 he gained the victory of Szendrő, in 1422 that of Maros-Szent-Imre, whereupon he invaded and conquered Wallachia. In 1443 Hunyady began the Bulgarian war, during which he advanced to Sofia,

and captured it. The sultan was forced to make peace in 1444. At the instigation of the papal legate, Cardinal Julian Cesarini, King Ladislaus I broke the peace and decided on a new campaign against the Turks. On 10 Nov., 1444, the Hungarian army was defeated at Varna, and the king himself met his death on the battlefield. After the battle, Hunyady fled, and fell into the hands of Drakus, Voivode of the Wallachians; however, he soon obtained his freedom. In 1445, the diet elected Hunyady one of the five governors of the country, and placed him over Transylvania and the districts beyond the Theiss.

In 1446, Hunyady was elected Governor of Hungary, and entrusted with its government in the name of the minor, Ladislaus V, until the latter's majority. The years 1446-8 were taken up with a war against Emperor Frederick III, who was ravaging the western part of Hungary, and with campaigns against the Turks. On 17-19 Oct., 1448, occurred the battle of the Amsfeldle (Kosovo Heath, in Servia), against the Turks, which ended in Hunyady's defeat. While fleeing, Hunyady fell into the hands of his deadly enemy the despot, Georg Brankovics of Servia; however, he soon succeeded in regaining his freedom through the intervention of the Hungarian magnates. Thereupon Hunyady turned his attention to the Husites, who, under the leadership of John Žiska, were devastating the upper part of the country. In 1450, he made warlike preparations against the despot, Georg Brankovics, but they came to a mutual agreement. As governor, Hunyady conducted the negotiations with the Emperor Frederick, the guardian of King Ladislaus, to enable the latter to go to Hungary. Ladislaus remained with the emperor, but the emperor recognized Hunyady as governor. In 1453, when Ladislaus came to the throne, Hunyady resigned as governor, and was appointed Captain-General of Hungary, and Count of Besztercze.

The last years of Hunyady's life were taken up with new campaigns against the Turks. In 1451, Sultan Mohammed II armed himself for a decisive campaign against Europe, conquered Constantinople in 1453 and then prepared for war against Hungary. In 1454, Servia fell into the hands of the Turks, but Hunyady gained a victory over them at Szendrő. The wiles and intrigues of his hereditary enemy, Ulric Czillej, caused Hunyady to resign all his dignities, and to retire into private life; but as the power of the Osmanli became more threatening, Hunyady came forward once more, reconciled himself with Czillej, and undertook the defence of the southern frontier of Hungary. After the preparations for war had been completed with all speed, Hunyady marshalled his army, united with the peasant forces of the Franciscan monk, John Capistran at Szeged, and set out against Sultan Mohammed. At Belgrade he gained a brilliant victory over the Turks, 21-22 July, 1456, but he survived this victory only a short time. The plague, which had broken out in the camp of the Christian army, carried him off. According to his wish, his body was buried at Gyulafejérvár.

Hunyady was married to Elizabeth Szilágyi, of Horogssey. Of the male issue of this marriage, Ladislaus, who was concerned in a conspiracy against King Ladislaus V, fell under the headman's axe, 16 March, 1457, at Buda. The second son, Matthias, succeeded to the Hungarian throne in 1458 at the death of Ladislaus V.

In Hungarian.—TELEKI, *Hudnyaiak kora Magyarországon* (The Age of Hunyady in Hungary), I-VI, X-XII (1852-7), and as continuation, the work of CZÁNKI, *Die historische Geographie Ungarns in Zeitalter des Hunyady's*. Also vol. IV of the great *Geschichte Ungarns*, ed. SZILÁGYI (Budapest, 1890); PÖR, *Johann Hunyady* (Budapest, 1873). On the origin of the family, the treatises of RÉTHY, CSÁNKI and KARÁCSONYI in *Turul* in the course of the years 1884 and 1901, and SZAZADOK in the course of the year 1887. Huron Indians.—The main divisions of the subject are:—

I. THE HURONS BEFORE THEIR DISPERSION.—1. Their Place in the Huron-Iroquois Family; (2) Their Name; (3) The Huron Country; (4) Population; (5) Government; (6) Their Religion; (7) Their History; (8) Missionaries in Huronia and Their Various Stations.

II. THE HURONS AFTER THEIR DISPERSION.—(1) Extinction of the Attiwandaronk or Neutral Hurons: (2) Migration to Quebec of the Hurons proper—at Quebec; on the Island of Orleans; back to Quebec; at Beauport; at Notre Dame de Foy; at Vicille Lorette; final removal to La Jeune Lorette; (3) Chronological Lists: (a) Jesuit Missionaries with the Hurons at Quebec, 1650-1790; (b) Secular Priests with the Hurons at Quebec, 1794-1909; Grand Chiefs, or Captains of the Quebec Hurons.

For III. Migrations in the West of the Petun, or Tobacco, Nation (Tionnontates, Etionnontates, Khionnontatehronon, Dinondadies, etc.) see PETUN NATION.

I. THE HURONS BEFORE THEIR DISPERSION.

I. *Their Place in the Huron-Iroquois Family*.—At some unknown date all the Iroquois and Huron tribes formed but one single people. This fact, noted more than two hundred and fifty years ago by Father Jérôme Lalemant, has since been acknowledged by every modern Indian philologist as fully established. If language may be taken as a fair criterion to go by, the Hurons proper were the original stock from which sprang all the branches of the great Iroquoian family, whether included in the primitive confederation of the Five Nations, or standing apart territorially, within historic times, as did the Tuskaroras, the Cherokees, and the Andastes. Father Chaumonot, who was thoroughly versed in the Huron and Iroquois tongues, and who had lived as missionary among both nations, says in his autobiography that "as this language [the Huron] is, so to speak, the mother of many others, particularly of the five spoken by the Iroquois, when I was sent among the latter, though at the time I could not understand their language, it took me but a month to master it; and later, after having studied the Onondaga dialect only, when present at the councils of the Five Nations assembled, I found that by a special help of God I could understand them all." It was for this reason that Father de Carheil, the Indian philologist, who had laboured among the Onondagas and Cayugas, chose the Huron idiom as the subject matter of his standard work. He compiled his "Radices Huronicæ", comprising some nine hundred and seventy verbal roots, as a text-book as well for future Iroquois missionaries as for Huron. A more modern authority, Horatio Hale, had no hesitation in saying that the Wyandots of the Anderdon Reserve used the most archaic form of the Huron-Iroquois speech that had yet been discovered. These Wyandots were for the most part descendants of the Petun Indians, the nearest neighbours of the Hurons proper, who spoke a dialect but slightly different from that of the latter.

2. *Their Name*.—Father Pierre Potier, whose works, still in manuscript, are appealed to as the weightiest authority in Huron linguistics, at the end of his "Elementa Grammaticæ Huronicæ" (1745) gives a list of the names of thirty-two North American tribes with their Huron equivalents, and in this list the term *Owendat* stands for *Huron*. It is the correct appellation, and was used as such by the Hurons themselves. The proper English pronunciation is Wendat, but the modified form of Wyandot has prevailed.

As for the etymology of the word, it may be said to derive from one of two roots, either *ahouinda*, meaning an extent or stretch of land that lies apart, or is in some way isolated, and particularly an island; or *ouenda*, a voice, command, language, idiom, promise, or the text of a discourse. That these two terms were all but identical, may be inferred from the fact that the compound word *skauwendat* has the twofold signification of "one only voice" and "one only island." *Skauwendat* is composed of the irregular verb, *at*, to be standing, to be erect, and of one or other of the above mentioned nouns, thus, *ouenda-at*, contracted (Elem. Gramm. Hur., p. 66) *ouwendat*. But the verb *at*, when it enters into composition, does so with a modified meaning, or, as Potier puts it, "*At . . . cum particula reiterationis significat unitatem unius rei*". The first example given is *Skat*, with the meaning of "one only thing" (Rad. Hur., 1751, 197); and, among several other examples which follow, the word *Skauwendat* occurs. Dropping the first syllable, formed with the particle of reiteration, *Ouwendat* remains, with the meaning "The One Language" or "The One Land Apart" or "The One Island". But which of the two substantives was combined in *ouwendat* had probably lapsed, in the course of time, from the memory of the Hurons themselves. Plausible reasons, however, may be alleged which militate in favour of both one and the other.

That the tribe should have styled themselves the nation speaking the one language, would be quite in keeping with the fashion they had of laying stress on the similarity or dissimilarity of speech when designating other nations. Thus, with them the Neutrals, a kindred race, went by the name of Attiouandaronk, that is, a people of almost the same tongue, while other nations were known as Akouanake, or peoples of an unknown tongue. On the other hand the probability of *Ouwendat* deriving from *ahouinda*, an island or a land by itself, seems equally strong. In the French-Huron dictionary, the property of Reverend Prosper Vincent Saouatanen, a member of the tribe, under the vocable *île*, the term *atihouendo* or *atihouendarack* is given with the meaning "les Hurons" with the explanatory note: "quia in insula habitabant". From this one might be led to conclude that the appellation was given to them, as a nation, only after their forced migration to Gahoendoe, St. Joseph's or Christian Island, or after their sojourn in the Ile d'Orléans. Nevertheless it is certain that, long before either of these occurrences, they were wont to speak of their country, Huronia, as an island. One instance of this is to be found in Relation 1638 (Quebec edition, p. 34; Cleveland edition, XV, 21), and a second in Relation 1648 (Q. ed., p. 74; Clev. ed., XXXIII, 237, 239). Nor is this at all singular as the term *ahouenda* might aptly be applied to Huronia, since it signified not only an island strictly speaking, but also an isolated tract, and Huronia was all but cut off from adjoining territory by Lakes Simcoe and Couchiching on the south and east, the Severn River and Matchedash Bay on the north, the waters of Georgian Bay on the west, and by the then marshy lands contiguous to what are now called Cranberry and Orr's Lake on the south-west. Corresponding to *Ouwendat*, as applied to the members of the tribe and to their language, the name *Ouwendake* denoted the region in which they dwelt. Potier, in his "Elementa", p. 28, while explaining the use of the perfect of the verb *en*, to be, that is to say, *ehen*, adds that it takes the place of the French word *feu* joined to the name of a person or a thing, as in English the word *late*, v. g. *Hechon ehen*, the late *Echon*, which was de Brébeuf's, and later Chaumonot's, Huron name. Then, among other examples, he gives *Ouwendake ehen*, "La défunte Huronie", literally "Huronia has been", recalling singularly enough the well known *Fuit Ilium*.

If Wendat, or the slightly modified English form

Wyandot, is the correct appellation of these Indians they were, notwithstanding, universally known by the French as Hurons. This term originated in a nickname given to a party of them who had come down to Quebec to barter. Though no hard and fast rule obtained in the tribe as to their head-dress, each adopting the mode which appealed for the nonce to his individual whim, this particular band wore their hair in stiff ridges, extending from forehead to occiput, and separated by closely shaven furrows, suggestive of bristles on a boar's head, in French *hure*. The French sailors viewed them with amused wonderment, and gave expression to their surprise by exclaiming, "Quelle hure!" Thereupon the name *Huron* was coined, and was later applied indiscriminately to all the nation. It has stood the test of time and is now in general and reputable use. Other names are to be met with which at various historical periods were used to designate the Hurons; they may be said without exception to be misnomers. Some are but the names of individual chiefs, others the names of particular clans applied erroneously to the whole tribe, as Ochasteguis, Attignauontans, etc.

3. *The Huron Country*.—Many theories have been devised to solve the problem as to what part of North America was originally occupied by the great Huron-Iroquois Family; much speculation has been indulged in to determine, at least approximately, the date of their dismemberment, when a dominant, homogeneous race, one in blood and language, was broken up and scattered over a wide expanse; surmises to no end have been hazarded relative to the cause of the disruption, and especially that of the fierce antagonism which existed between the Iroquois and the Hurons at the time when Europeans first came in contact with these tribes; in spite of all which, the solution is as far off as ever. For, unfortunately, the thoroughly unreliable folk-lore stories and traditions of the natives have but served to perplex more and more even discriminating minds. It would seem that the truth is to be sought not in the dimmed recollections of the natives themselves, but in the traces they have left after them in their prehistoric peregrinations—such, for instance, as those found in the early sixties of the last century in Montreal, between Mansfield and Metcalfe Streets below Sherbrooke. The potsherds and tobacco pipes, unearthed there, are unmistakably of Huron-Iroquois make, as their form and style of ornamentation attest, while the quantity of ashes, containing many other Indian relics and such objects as usually abound in kitchen-middens, mark the site as a permanent one. A discovery of this nature places within the realm of things certain the conclusion that at some period a Huron or Iroquois village stood on the spot. As for the unwritten traditions among the Red Men, a few decades are enough to distort them to such an extent that but little semblance to truth remains, and when it is possible to confront them with authenticated written annals, they are found to be at variance with well ascertained historical events.

In 1870, Peter Dooyentate Clarke, an educated Wendat, gave to the public a small volume entitled "Origin and Traditional History of the Wyandots". "The lapse of ages", he says in the preface, "has rendered it difficult to trace the origin of the Wyandots. Nothing now remains to tell whence they came, but a tradition that lives only in the memory of a few among the remnant of this tribe. Of this I will endeavour to give a sketch as I had it from the lips of such, and from some of the tribes who have since passed away. My sketch reaches back about three centuries and a half . . ." From the following passage, which is to be found on page 7, a judgment may be formed as to how much reliance may be placed on such traditions even when received from intelligent Indians, under most favourable cir-

cumstances, and pieced together by one of themselves: "About the middle of the 17th century, the Wyandots, on the Island of St. Joseph, were suddenly attacked by a large party of Senecas with their allies and massacred [by] them to a fearful extent. It was at this time, probably, that a Catholic priest named Daniels, a missionary among the Wyandots, was slain by the relentless savages. During this massacre, a portion of the Wyandots fled from the island to Michilimackinac. From there a portion of the refugees journeyed westward to parts unknown, the balance returned to River Swaba." This meagre, confused, and inaccurate account seems to be all that has been handed down in the oral traditions of the

eventually were forced to withdraw, not being backed by the rest of the Neutrals against the Senecas in their efforts to resist the encroachments of the latter. Huronia proper occupied but a portion of Simcoe County, or, to be more precise, the present townships of Tiny, Tay, Flos, Medonte, Orillia, and Oro, a very restricted territory, and roughly speaking comprised between 44° 20' and 44° 53' north latitude, and, from east to west, between 79° 20' and 80° 10' longitude west of Greenwich. The villages of the Petun, or Tobacco, Nation were scattered over the Counties of Grey and Bruce; but the shore line of their country was at all times chosen as a camping-ground by bands of erratic Algonquins, a friendly race who were often-

Wyandots in the West concerning the laying waste of their country two centuries and a half ago, and of the events, all-important for them at least, which preceded and accompanied their own final dispersion. As these occurrences were fully chronicled at the time they took place, the student of Indian history may, by comparison, draw his own conclusions as to the accuracy of Dooyentate's summary, and at the same time determine what credence is to be given to Indian traditions of other events, all certainly of minor importance.

With the opening years of the seventeenth century reliable Huron history begins, and the geographical position of their country becomes known when French traders and missionaries, at that epoch, penetrate the wilderness for the first time as far as what was then termed "the Freshwater Sea". The region then inhabited by the three great groups, the Hurons proper, the Petuns, and the Neutrals, lay entirely within the confines of the present Province of Ontario, in the Dominion of Canada, with the exception of three or four Neutral villages which stood as outposts beyond the Niagara River in New York State, but which

times welcomed even to the Petun villages of the interior. After the year 1639, owing to defeats and losses sustained at the hands of the Assistaeronnons, or Fire Nation, the Petuns withdrew towards the east and concentrated their clans almost entirely within the confines of the Blue Hills in Grey County, overlapping, however, parts of Nottawasaga and Mulmur townships in Simcoe. As for the Neutral Nation, its territory extended from the Niagara River on the east, to the present international boundary at the Lake and River St. Clair on the west, while the shores of Lake Erie formed the southern frontier. To the north, no one of the Neutral Villages occupied a site much beyond an imaginary line drawn from the modern town of Oakville, Halton County, to Hillsboro, Lambton County.

These geographical notions are not of recent acquisition; they have nearly all been in the possession of authors who have dealt seriously with Huron history. But what is wholly new is the systematic reconstruction of the maps of Huronia proper and of a small portion of the Petun country, an achievement which may be further perfected, but which, as it stands,

imparts new interest to Sagard's works and the Jesuit Relations, the only contemporaneous chronicles of these tribes from the first decades to the middle of the seventeenth century. The table on page 571 is the result of the very latest researches, and gives in alphabetical order the Huron villages etc. mentioned in Champlain, Sagard, the Relations, or by Ducreux. When their sites have been determined by measurements based on documentary evidence only, and where forest growth or other hindrances have prevented, for the time being, serious attempts to discover vestiges of Indian occupancy, the site is marked under the heading, "Near", v. g. "Ihonatiria, Tiny 6. XX, XXI", which should be read: "Ihonatiria stood near lot six of the twentieth and twenty-first concessions of Tiny township." But when remains of an Indian village have been unearthed on the spot indicated, the site is set down under the heading "On", v. g., Cahigué Landing, Oro, E. 1/2 20, X, that is: "Cahigué Landing occupied the east half of lot 20 in the tenth concession of Oro Township."

In the Neutral country there were about forty vil-

lages from the Iroquois; and the second, Oūntonistaston, which was the sixth in order journeying from the Petun country. With this all is said that can be said of the documentary data concerning the towns of the Neutral Nation and of their respective positions.

4. *Population*.—Father Jean de Brébeuf, writing from Ihonatiria, 16 July, 1636, says: "I made mention last year of twelve nations, all being sedentary and populous, and who understand the language of the Hurons; now our Hurons make, in twenty villages, about thirty thousand souls. If the remainder is in proportion, there are more than three hundred thousand of the Huron tongue alone." This, no doubt, is a very rough estimate, and included the Iroquois and all others who spoke some one of the Huron dialects. In his Relation of 1672 Father Claude Dablon includes a eulogium of Madam de la Peltrie. In it there is a statement for which he is responsible, to the effect that in the country of the Hurons the population was reckoned at more than eighty thousand souls, including the Neutral and Petun nations. No man had a more perfect knowledge of the Canada missions than

PETUN VILLAGE SITES

NAME	SITE
Ehouae or St-Pierre-et-St-Paul	Probably in Arran Township, Bruce County, to the north-east of Mount Hope.
Ekarenniondi or St-Mathias	Very little west or south of Standing Rock, lot 30, concession XII, of Nottawasaga Township, Simcoe County. The village should be in Grey County.
Etharita or St-Jean of the Petuns	About twelve miles in a southerly or south-westerly direction from <i>Ekarenniondi</i> or St. Mathias. No certain traces of it have as yet been discovered.
St-Mathieu	Probably less than six miles from St. Mathias in the direction of St. Jean, or Etharita.
St-Simon-et-St-Jude	Probably on lots marked 46 in concession X and XI, Lindsay Township, Bruce County; but certainly somewhere in the north-east part of this township.
St-Thomas	About 32 miles from <i>Ossossané</i> , measuring around Nottawasaga Bay, either near the meridian of Loree, Collingwood Township, Grey, or that of Meaford, but in Euphrasia Township.

lages, but all that Ducreux has set down on his map are the following: St. Michael, which seems to have stood near the shore of Lake St. Clair, not far from where Sandwich and Windsor now stand; Ongiara, near Niagara Falls; St. Francis, in Lambton County, east of Sarnia; Our Lady of the Angels, west of the Grand River, between Cayuga, in Haldimand County, and Paris, in Brant; St. Joseph, in Essex or Kent; St. Alexis, in Elgin, east of St. Thomas; and the canton of Otontaron, a little inland from the shore line in Halton County. Beyond the Niagara River, and seemingly between the present site of Buffalo and the Genesee, he marks the Ondieronon and their villages, which Neutral tribe seems to have comprised the Ouenróronon, who took refuge in Huronia in 1638.

When de Brébeuf and Chaumonot sojourned with the Neutrals in 1640-1641, they visited eighteen villages, to each of which they gave a Christian name, but the only ones mentioned are Kandoucho, or All Saints, the nearest to the Hurons proper; Onguiaahra, on the Niagara River; Teotongniaton or St. William, situated about in the centre of the country; and Khioetoa, or St. Michael, already enumerated above.

Add to this list the two villages mentioned by the Recollect, Father Joseph de la Roche de Dailon, though it is quite possible that they may be already included in the list under a somewhat different appellation. The first, Oūaroronon, was located the farthest towards the east, and but one day's journey

Dablon, and, as this was written fully a score of years after the dispersion of the Hurons, he made the statement with all the contemporaneous documents at hand upon which a safe estimate could be based. The highest figure given for the population of Huronia proper was thirty-five thousand, but the more generally accepted computation gave thirty thousand as the approximate number, occupying about twenty villages. The method adopted in computing the population was that of counting the cabins in each village. The following quotations will give a clear idea of the process followed: "As for the Huron country it is tolerably level, with much meadow-land, many lakes and many villages. Of the two where we are stationed, one contains eighty cabins, the other forty. In each cabin there are five fires, and two families to each. Their cabins are made of great sheets of bark in the shape of an arbour, long, wide, and high in proportion. Some of them are seventy feet long" ("Caryon, Première Mission, 170; Cleveland edition, XV, 153). The dimensions of the lodges or cabins as given by Champlain and Sagard are, for length, twenty-five to thirty *toises* (i. e. 150 to 180 feet), more or less, and six *toises* (about 36 feet) in width. In many cabins there were twelve fires, which meant twenty-four families.

As to the number of persons in a family, it may be inferred from a passage, in the Relation of 1640, relating to the four missions then in operation among the Hurons and the one among the Petuns: "In conse-

quence [of the round the Fathers made throughout all the villages] we were enabled to take the census not only of the villages and scattered settlements, but also of the cabins, the fires, and even, approximately, of the dwellers in the whole country, there being no other way to preach the Gospel in these regions than at each family hearth, and we tried not to omit a single one. In these five missions [including the Petuns] there are thirty-two villages and settlements which comprise in all about seven hundred cabins, two thousand fires, and about twelve thousand persons." The average here, consequently, was six persons to a fire, or three to a family, which seems a low estimate; but what the Relation immediately adds must be taken into account: "These villages and cabins were far more densely thronged formerly", and it goes on to ascribe the great decrease to unprecedented contagions and wars during a few preceding years. In a similar strain Father Jérôme Lalemant wrote from Huronia to Cardinal Richelieu, 28 March, 1640, deploring this depletion, attributing it principally to war. He states that in less than ten years the Huron population had been reduced from thirty thousand to ten thousand. But famine and contagion were also active agents in depopulating the Huron homes, as the writers of the Relations uniformly declare, and this decimation went on at an increasing ratio until the final exodus. The same writer under date of 15 May, 1645, seems to modify his statement somewhat, when he says: "If we had but the Hurons to convert, one might still think that ten and twenty thousand souls are not so great a conquest that so many hazards should be faced and so many perils encountered to win them to God." But evidently Father Jérôme Lalemant did not here pretend to give the exact figures, while the French expression may very well be rendered into English by "that ten and even twenty thousand souls" etc. But if, at the inception of the Mission, the Hurons, Petuns, and Neutrals numbered all together eighty thousand souls, and the Hurons alone thirty thousand, in what proportion, it may be asked, are the remaining fifty thousand to be allotted to the Neutrals and Petuns?

To answer this question satisfactorily, other statements in the Relations must be considered. On 7 August, 1634, Father Paul Le Jeune writes: "I learn that in twenty-five or thirty leagues of country which the Hurons occupy—others estimate it at much less—there are more than thirty thousand souls. The Neutral Nation is much more populous" etc. Again in Relation 1641 it is said: "This nation [the Neutral] is very populous; about forty villages and hamlets are

counted therein." If Huronia had twenty villages and a population of thirty thousand, other conditions being alike, the Neutral country with forty villages should have had a population of sixty thousand. This conclusion might have held good in 1634, but it is at variance with facts in 1641: "According to the estimate of the Fathers who have been there [in the Neutral country], there are at least twelve thousand souls in the whole extent of the country, which claims even yet to be able to place four thousand warriors in the field, notwithstanding the wars, famine, and sickness which, for three years, have prevailed there in an extraordinary degree", and in the following paragraph the writer explains why previous estimates were higher. In the country of the Petuns, or Tobacco Nation, contemporaneous records leave no doubt as to the existence of at least ten villages, and very probably there were more. This, in the proportion just given, supposes a population of at least fifteen thousand. However, all things considered, it would be no exaggeration to say that the Hurons proper, when the missionaries went first among them, numbered upwards of twenty-five thousand, the Petuns twenty thousand, and the Neutrals thirty-five thousand. This would be in keeping with Dablon's estimate of the sum total.

5. Government.—The form of government among the Hurons was essentially that of a republic. All important questions were decided in their deliberative assemblies, and the chiefs promulgated these decisions. But the most striking feature in their system of administration was that, strictly speaking, there was no constraining power provided in their unwritten constitution to uphold these enactments or to enforce the will of their chiefs. "These peoples [the Hurons]", says Bresani, "have neither king nor absolute prince, but certain chiefs, like the heads of a republic, whom we call captains, different, however, from those in war. They hold office commonly by succession on the side of the women, but sometimes by election. They assume office at the death of a predecessor, who, they say, is resuscitated in them. . . . These captains have no coercive power . . . and obtain obedience by their eloquence, exhortation, and entreaties"—and, it might be added, by remonstrance and oburgation, expressed publicly without naming the offenders, when there was question of amends to be made for some wrong or injustice done or crime perpetrated. That their powers of persuasion were great may be gathered from the words which a chief addressed to de Brébeuf, and reproduced by the Father in full in Relation 1636 (Queb. ed., 123; Clev. ed., X, 237).

counted therein." If Huronia had twenty villages and a population of thirty thousand, other conditions being alike, the Neutral country with forty villages should have had a population of sixty thousand. This conclusion might have held good in 1634, but it is at variance with facts in 1641: "According to the estimate of the Fathers who have been there [in the Neutral country], there are at least twelve thousand souls in the whole extent of the country, which claims even yet to be able to place four thousand warriors in the field, notwithstanding the wars, famine, and sickness which, for three years, have prevailed there in an extraordinary degree", and in the following paragraph the writer explains why previous estimates were higher. In the country of the Petuns, or Tobacco Nation, contemporaneous records leave no doubt as to the existence of at least ten villages, and very probably there were more. This, in the proportion just given, supposes a population of at least fifteen thousand. However, all things considered, it would be no exaggeration to say that the Hurons proper, when the missionaries went first among them, numbered upwards of twenty-five thousand, the Petuns twenty thousand, and the Neutrals thirty-five thousand. This would be in keeping with Dablon's estimate of the sum total.

That their eloquence was not less incisive and telling when, in denouncing a criminal action, they heaped confusion on the head of the unnamed culprit is evinced by a harangue recorded *verbatim* in Relation 1648 (Queb. ed., 79; Clev. ed., XXVIII, 277).

The Huron's intolerance of all restraint is corroborated by Father Jérôme Lalemant: "I do not believe that there is any people on earth freer than they, and less able to yield subjection of their wills to any power whatever, so much so that fathers here have no control over their children, or captains over their subjects, or the laws of the country over any of them, except in so far as each is pleased to submit to them. There is no punishment which is inflicted on the guilty, and no criminal who is not sure that his life and property are in no danger, even if he were convicted of three or four murders, or of being suborned by the enemy to betray his country. It

recesses of the forest when their deliberations demanded secrecy.

Their administration of public affairs was, as de Brébeuf explains at some length, and as one would naturally suppose, twofold. First, there was the administration of the internal affairs of the country. Under this head came all that concerned either citizens or strangers, the public or the individual interests in each village, festivals, dances, athletic games—lacrosse in particular—and funeral ceremonies; and generally there were as many captains as there were kinds of affairs. The second branch of their administration was composed of war chiefs. They carried out the decisions of the general assembly. "As for their wars," says Champlain, "two or three of the elders or the bravest chiefs raised the levies. They repaired to the neighbouring villages and carried presents to force a following." Of course other in-

is not that laws or penalties proportioned to the crime are wanting, but the guilty are not the ones who undergo the punishment, it is the community that has to atone for the misdeeds of individuals" etc.

Their legislative bodies consisted of their village councils and what might be called their states-general. The former were of almost daily occurrence. There the elders had control, and the outcome of the deliberations depended upon their judgment, yet every one who wished might be present and every one had a right to express his opinion. When a matter had been thoroughly debated, the speaker, in asking for a decision, addressed the elders, saying: "See to it now, you are the masters." Their general councils, or assemblies of all the clans of which the nation was made up, were the states-general of the country, and were convened only as often as necessity required. They were held usually in the village of the principal captain of all the country, and the council-chamber was his cabin. This custom, however, did not preclude the holding of their assemblies in the open within the village, or at times also in the deep

centives were also employed to excite the enthusiasm of the braves.

In the larger villages there were captains for times both of peace and war, each with a well-defined jurisdiction, that is, a certain number of families came under their control. Occasionally all departments of government were entrusted to one leader. But by mere right of election none held a higher grade than others. Pre-eminence was reached only by intellectual superiority, clear-sightedness, eloquence, munificence, and bravery. In this latter case only one leader bore for all the burdens of the state. In his name the treaties of peace were made with other nations. His relatives were like so many lieutenants and councillors. At his demise it was not one of his own children who succeeded him, but a nephew or a grandson, provided there was one to be found possessing the qualifications required, who was willing to accept the office, and who, in turn, was acceptable to the nation.

6. *Their Religion.*—The first Europeans who had occasion to sojourn any considerable time among the

Hurons seem to have held but one opinion concerning their belief in a Supreme Being. Champlain says that they acknowledged no deity, that they adored and believed in no god. They lived like brute beasts, holding in awe, to some extent, the Devil, or beings bearing the somewhat equivalent name of *Oqui* (*Oki*). Still, they gave this same name to any extraordinary personage—one endowed, as they believed, with preternatural powers like their medicine-men. Sagard is at one with Champlain in his deductions, though he adds that they recognized a good and a bad *Oki*, and that they looked upon one Iouskeha as the first principle and the creator of the universe, together with Eataentsic, but they made no sacrifice to him as one would to God. To their minds the rocks, and rivers, and trees, and lakes, and, in fine, all things in nature, were associated with a good or bad *Oki*, and to these in their journeyings they made offerings. Father Jérôme Lalemant incidentally states: "They have no notion of a Deity who created the world or gives heed to its governing." Father Jean de Brébeuf, who, during his long stay among the Hurons, had leisure and every opportunity to study their beliefs, customs, and codes, and consequently may be quoted as by far the best authority on all such matters, has this to say, which seems to put the question in its true light: "It is so clear and manifest that there is a Deity who created heaven and earth that our Hurons are not able wholly to disregard it; and though their mental vision is densely obscured by the shadows of a long-enduring ignorance, by their vices and sins, yet have they a faint glimmering of the Divine. But they misapprehend it grossly and, having a knowledge of God, they yield Him no honour, nor love, nor dutiful service; for they have no temples, nor priests, nor festivals, nor any ceremonies." This passage is to be found in the Relation of 1635 (Queb. ed., 34, 1; Clev. ed., VIII, 117). He proceeds immediately to explain briefly their belief in the supernatural character of one Eataentsic, or Aataentsic, and that of her grandson Iouskeha. But this myth with its several variants is developed at much greater length in the Relation of 1636 (Queb. ed., 101; Clev. ed., X, 127), where many more particulars are added illustrative of their belief in some Deity.

From a perusal of these two accounts, it may be gathered that the myth of Aataentsic and Iouskeha was accepted by the Hurons as accounting satisfactorily for their origin; that the former, who had the care of souls, and whose prerogative it was to cut short the earthly career of man, was reputed malevolent, while Iouskeha, presiding over the living and all that concerned life, was regarded as beneficent. They believed in the survival of the soul and its prolonged existence in the world to come—that is to say, in a vague manner, in its immortality—but their concept of it was that of something corporeal. Most of what might be called their religious observances hinged on this tenet of an after life. Strictly speaking, they counted on neither reward nor punishment in the place where the souls went after death, and between the good and the bad, the virtuous and the vicious, they made no distinction, granting like honours in burial to both.

De Brébeuf detected in their myths, especially in that of Aataentsic and Iouskeha, some faint traces of the story of Adam and Eve much distorted and all but faded from memory in the handing down through countless generations; so also, that of Cain and Abel, in the murder of Taouiscaron by his brother Iouskeha, who, in one variant, figures as the son of Aataentsic. In the apotheosis of Aataentsic and Iouskeha, the former was considered and honoured as the moon, the latter as the sun. In fact all the heavenly bodies were revered as something Divine; but in the sun, above all, was recognized a powerful and benign influence

over all animate creation. As for the great *Oki* in heaven—and it is not clear if he were regarded or not as a personality distinct from Iouskeha—the Hurons acknowledged a power that regulated the seasons of the year, held the winds in leash, stilled the boisterous waves, made navigation favourable—in fine, helped them in their every need. They dreaded his wrath, and it was on him they called to witness their plighted word. In so doing, as de Brébeuf infers, they honoured God unwittingly.

Since the object (*objectum materiale*) of the theological virtue of religion is God, the claim that the reverential observances of the Hurons, as described by de Brébeuf, should be deemed sufficient to constitute religion properly speaking, must be set aside, as there was a great admixture of error in their concept of a Supreme Being. But as the object (*objectum materiale*) of the moral virtue of religion is the complex of acts by which God is worshipped, and as these tend to the reverence of God Who, in relation to the virtue of religion, thus stands as its end, such acts, if practised among the Hurons, should be considered. Devotion, adoration, sacrifice, oblations, vows, oaths, the uttering of the Divine name, as in adjuration or invocation, through prayer or praise, are acts pertaining to the virtue of religion. It is not necessary for the present purpose to insist on each particular act of the series, but only on the most important, and such as fell under de Brébeuf's observation, and are recorded by him.

Aronhia was the word used by them for heaven, the heavens, sky; and from the very beginning was used by the missionaries in Christian prayers to designate heaven, as may be seen in the Huron or Seneca Our Father by de Carheil. "Now", de Brébeuf writes, "here are the ceremonies they observe in these sacrifices [of impetration, expiation, propitiation, etc.]. They throw *petun* (tobacco) into the fire, and if, for example, they are addressing Heaven they say: '*Aronhiaké, onné aonstanious tuten'*', 'Heaven, here is what I offer you in sacrifice, have mercy on me, help me!' or if it be to ask for health '*taenguiaens*', 'cure me'. They have recourse to Heaven in almost all their wants". When they meant to bind themselves by vow or by most solemn promise to fulfil an agreement, or observe a treaty, they wound up with this formula: "Heaven is listening to [or heeding] what we are now doing", and they are convinced, after that, says de Brébeuf, that if they break their word or engagement Heaven will indubitably punish them. Were some one accidentally drowned, or frozen to death, the occurrence was looked upon as a visitation of the anger of Heaven, and a sacrifice must be offered to appease its wrath. It is the flesh of the victim which is used in the offering. The neighbouring villages flock to the banquet which is held, and the usual presents are made, for the well-being of the country is at stake. The body is borne to the burial place and stretched on a mat on one side of the grave, and on the other a fire is kindled. Young men, chosen by the relatives of the victim, armed with knives, are ranged around. The chief mourner marks with a coal the divisions to be made and these parts are severed from the trunk and thrown into the fire. Then, amidst the chants and lamentations of the women, especially of the near relatives, the remains are buried, and Heaven, it is thought, is pacified.

Thus far, among the oblations to a supernatural being, no mention has been made of bloody sacrifices. Sacrifice, at least on account of the significance which is attached to it by usage among all nations (the acknowledging of the supreme dominion over life and death residing in the one for whom it is intended), may be offered to no creature, but only to the One Being to whom adoration (*cultus latria*) in its strictest sense is due. Such sacrifices of living animals were also in vogue among the Hurons. There was no day nor sea-

son of the year fixed for their celebration, but they were ordered by the sorcerer or magician for special purposes, as to satisfy *ondinons* or dreams, and were manifestly offered up to some evil spirit. These sacrifices are expressly mentioned in the Relation of 1639 (Queb. ed., 94, 1-2; 97, 2; Clev. ed., XVII, 195, 197, 211) and in that of 1640 (Queb. ed., 93, 1; Clev. ed., XX, 35). Nor were burnt offerings wanting, as may be seen recorded in the Relation of 1637 (Queb. ed., 108, 2; Clev. ed., XIII, 31) and that of 1642 (Queb. ed., St. 1; Clev. ed., XXIII, 159, 173).

The foregoing presentation of the religion of the Hurons, though by no means exhaustive, forcibly suggests two inferences, especially if taken together with the beliefs and observances of the other branches of the same parent stock and those of the neighbouring tribes of North American Indians. The first is that they were a decadent race, fallen from a state of civilization more or less advanced, and which at some remote period was grounded on a clearer perception of a Supreme Being, evinced by the not yet extinct sense of an obligation to recognize Him as their first beginning and last end. This would imply also a revelation vouchsafed in centuries gone by; shreds of such a revelation could still be discerned in their beliefs, several of which supposed some knowledge of the Biblical history of the human race, though that knowledge was all but obliterated. The second conclusion tends to confirm Father de Brébeuf's judgment, previously cited, that, while still retaining, as they did, a knowledge of God, however imperfect, the Hurons were the victims of all kinds of superstitions and delusions, which tinged the most serious as well as the most indifferent acts of their everyday life. But above all else, their dreams, interpreted by their soothsayers and sorcerers, and their mysterious ailments with the accompanying divinations of their medicine-men, had brought them so low, and had so perverted their better natures that the most vile and degrading forms of devil-worship were held in honour.

7. Their History.—Nothing is known of the history of the Hurons before the visit of Jacques Cartier to the shores of the St. Lawrence in 1535. It is at this date that conjecture begins to take the shape of history. The two principal villages which this explorer found, occupying respectively the actual sites of Quebec and Montreal, were Stadacona and Hochelaga. By far the most probable opinion is that these were inhabited by some branch of the Huron-Iroquois race. The Sulpician writer Etienne Michel Faillon, may be said to have transformed that theory into an almost absolute certainty. His proofs to this effect are based on the customs and traditions of both Algonquins and Hurons, and, what is most conclusive, on the two vocabularies compiled by Cartier, contained in his first and second relation, and which comprise about one hundred and sixty words. The Abbé Faillon states rival theories fairly and dispassionately, and, to all appearances, refutes them successfully. Another Sulpician priest, J. A. Cuoq, in his "Lexique de la Langue Iroquoise", following in the wake of Faillon develops at greater length the argument based on the similarity of the words in Cartier's lists to the Huron-Iroquois dialects, and their utter incompatibility with any form of the Algonquin tongue. Strongly corroborating this contention is the fact, to which reference has already been made, of the finding in 1860 of fragments of Huron-Iroquois pottery and other relics within the present limits of Montreal, and which at the time formed the subject matter of Principal (later Sir William) Dawson's monograph.

An interval of over sixty years elapsed between Jacques Cartier's expeditions and Champlain's first coming in 1603. A great change had taken place. Stadacona and Hochelaga had disappeared, and the tribes along the shores of the St. Lawrence were no longer those of Huron-Iroquois stock, but Algonquin.

The various details of how this transformation was effected are a matter of mere surmise, and the theories advanced as to its cause are too uncertain, too conflicting, and too lengthy to find place here. What is certain is that meanwhile a deadly feud had sundred the Hurons and the Iroquois. The Hurons proper were now found occupying the northern part of what is at present Simcoe County in Ontario, with the neighbouring Petun, or Tobacco, Nation to the west, and the Neutrals to the south-west. The hostile tribes of the Iroquois held possession of that part of New York State bordering on the Mohawk River and extending westward to the Genesee, if not farther. The Algonquins, who now inhabited the country abandoned by the Huron-Iroquois, along the Lower St. Lawrence, were in alliance with the Hurons proper.

Champlain, with a view of cementing the already existing friendship between the French and their nearest neighbours, the Algonquins and Hurons, was led to espouse their cause. Nor was this the only object of his so doing. Bands of Iroquois infested the St. Lawrence, and were a serious hindrance to the trade which had sprung up between the Hurons and the French. In 1609 he, with two Frenchmen, headed a party of Algonquins and Hurons, ascended the Richelieu River to Lake Champlain, named after him by right of discovery, met the enemy near what is now Crown Point, and there won an easy victory (30 July), thanks to the execution wrought by his fire-arms, to which the Iroquois were unaccustomed. A second successful encounter with the Iroquois took place 19 July, 1610, at Cap du Massacre, three or four miles above the modern town of Sorel. Though this intervention of Champlain was bitterly resented by the Iroquois, and rankled in their breasts, their thirst for vengeance and their hatred for both French and Hurons was intensified beyond measure by the expedition of 1615. This was set on foot in Huronia itself, and, headed by Champlain, penetrated into the very heart of the Iroquois Country. There the invading band, on 11 October, attacked a stronghold lying to the south of what is now Oneida Lake, or, to be precise, situated on Nichol's Pond, three miles east of Perryville, in New York State. The time of this raid, so barren in good results for the Hurons, coincided with the coming of the first missionary to Huronia, the Recollect Father Joseph Le Caron. He and Champlain had set out from the lower country almost together, the former between the 6th and 8th of July, the latter on the 9th. In the beginning of August, Champlain, before starting on his long march to the Iroquois, visited him at Carhagouha; and on the 12th of that month (1615) piously assisted at the first Mass ever celebrated in the present province of Ontario. This event took place within the limits of what is now the parish of Lafontaine, in the Diocese of Toronto.

The history of the Hurons from this date, until their forced migration from Huronia in 1649 and 1650, may be summarized as one continuous and fierce struggle with the Iroquois. The latter harassed them in their yearly bartering expeditions to Three Rivers and Quebec, endeavouring, as skilful strategists, to cut them off from their base of supplies. They lay in ambush for them at every vantage-point along the difficult waterways of the Ottawa and the St. Lawrence. When the Hurons were the weaker party, they were attacked and either massacred on the spot or reserved for torture at the stake; and when they were the stronger, the wily Iroquois hung upon their trail and cut off every straggler. At times the Hurons scored a triumph, but these were few and far between. Thus things went on from year to year, the Hurons gradually growing weaker in numbers and resources. Meanwhile they received but little help from their French allies, for the colonists, sadly neglected by their mother country, had all they could do to protect themselves. But a time came when the Iroquois

found their adversaries sufficiently reduced in strength to attack them in their homes. In truth, they had all along kept war parties on foot, who prowled through the forests in or near Huronia, to attack isolated bands, or at least to spy out the condition of the country, and report when the Huron villages were all but defenceless through the absence of the braves on hunting expeditions or for purposes of traffic. The first telling blow fell on Contarea (Kontarea, or Kontareia) in June, 1642. This was a populous village of the Arendarrhonons, or Roek Clan, lying to the extreme east, and one of the strongest frontier posts of the whole country. Neither age nor sex was spared, and those who survived the conflict were led off into captivity, or held for torture by slow fire. No particulars as to the mode of attack or defence are known, as there was no resident missionary, the inhabitants of Contarea never having allowed one within its pale; they had even more than once openly defied the Christian God to do His worst. Contarea stood about five miles south-west of the present town of Orillia.

It may be of interest to note here that all the great inroads of the Iroquois seem to have proceeded from some temporary strategic base established in the region east of Lakes Couchiehing and Simeoe, and to have crossed into Huronia at the Narrows so accurately described by Champlain. The next village of the Roek Clan, which lay nearest to Orillia, itself close by the narrows, was St-Jean Baptiste. Its braves had sustained many losses after the fall of Contarea, but the outlook became so threatening in 1647 that its inhabitants early in 1648 abandoned what they now considered an untenable position, and betook themselves to other Huron villages which promised greater security. By this move St. Joseph II, or Teanaostaiaë, a village of the Attignenonghae, or Cord, Clan, was left exposed to attacks from the east; nor were they slow in coming. At early dawn, on 4 July of that same year, 1648, the Iroquois band surprised and carried it by assault. Once masters of the place, they massacred and captured all whom they found within the palisade. Many, however, by timely flight had reached a place of safety. The intrepid Father Antoine Daniel had just finished Mass when the first alarm rang out. Robed in surplice and stole, for the administration of the Sacraments of Baptism and Penance, he presented himself unexpectedly before the stream of rushing savages. His sudden appearance and his fearless bearing overawed them for an instant, and they stood rooted to the ground. But it was only for an instant. Recovering themselves, they vented their fury on the faithful missionary who was offering his life for the safety of the fugitives. Shot down mercilessly, every savage had a hand in the mutilation of his body, which was at last thrown into the now blazing chapel. This diversion, the shepherd's death, meant the escape of many of his flock. The neighbouring village of Ekhiondastsaan, which was situated a little farther towards the west, shared at the same time the fate of Teanaostaiaë.

On 16 March of the following year St-Ignace II and St-Louis, two villages attended from Ste-Marie I, the local centre of the mission of the Ataronchronons (i. e. the People beyond the Fens), were in turn destroyed. The former, lying about six miles to the south-east of Fort Ste-Marie I, was attacked before daybreak. Its defenders were nearly all abroad on divers expeditions, never dreaming that their enemy would hazard an attack before the summer months. Bressani says that the site of this village was so well chosen, and its fortifications so admirably planned, that, with ordinary vigilance, it was impregnable for savages. But the approach was made so stealthily that an entrance was effected before the careless and unwatchful inhabitants were roused from their

slumber. Only two Hurons escaped butchery or capture, and, half-clad, made their way through the snow to St-Louis, three miles nearer to Fort Ste-Marie I, and there gave the alarm. The missionaries Jean de Brébeuf and Gabriel Lalemant, then present in the village, refused to seek safety in flight with the other non-combatants, pleading that it was their duty to remain to baptize, shrive, and comfort the dying. After a desperate resistance—the defenders being a mere handful when compared with the thousand attacking savages—this second village was taken and destroyed, while the captives were hurried back to St-Ignace to be tortured.

What the two captive missionaries endured is simply indescribable, and appears to be unparalleled in the long catalogue of martyrdoms, undergone for the Faith, in the annals of God's Church. The Iroquois were adepts in the diabolical art of inflicting the most excruciating tortures by fire, while so nursing the victim as to prolong to the utmost his hours of agony. Their hatred of the teachings of Christianity was manifested on this occasion by their thrice pouring boiling water on the mutilated missionaries in derision of holy baptism, while they mockingly exhorted the sufferers to be grateful to their tormentors for baptizing them so well, and for affording them such an occasion to merit by their sufferings greater joys in heaven, according to the doctrine they had preached. It must be remembered that many apostate Hurons were mingled with the Iroquois invaders. Father de Brébeuf, a man of powerful build, long inured to suffering, and who by his unconquerable zeal even in the midst of the flames had drawn upon himself the fiercest resentment of the heathens, succumbed after four hours of torture on the evening of 16 March. Father Gabriel Lalemant, a man of frail constitution, survived, in spite of all his suffering, until the following day.

As they dwelt farther west and north-west, no attack thus far had been made on the One-White-Lodge Clan at St-Michel (Scanonaenrat), nor on the Bear Clan (Attignaouantan, or Atinniaotenten), who occupied the region now forming Tiny Township, and whose principal stronghold was Ossossané, or La Conception. At that time this village was almost wholly peopled by fervent Christians. When the news reached them of the disasters befalling their country, they immediately took action. On the morning of 17 March a party of three hundred warriors, hastily gathered from Ossossané and Arenta (Ste-Madeleine), posted themselves in ambush in the neighbourhood of the stricken villages while awaiting reinforcements. Their advance party, however, fell in unexpectedly with some two hundred of the enemy who were reconnoitring in force in view of an attack on Fort Ste-Marie I. A skirmish followed in which the Huron detachment suffered severe loss and was driven back to within sight of the French fort. Meanwhile the main body of the Bear Clan had succeeded in intercepting a strong force of Iroquois, whom they compelled to seek shelter within the palisade of St-Louis, left intact when the village was destroyed. After an obstinate struggle the Hurons forced an entrance and, not counting the slain, captured about thirty warriors. Scarcely had they time to congratulate themselves on their success when the whole bulk of the Iroquois army, amounting even yet to nearly a thousand braves, was upon them, and they in turn found themselves beleaguered within St-Louis, the defences of which, taken and retaken within a few hours, could now offer but slight protection. Though reduced to about one hundred and fifty fighting men, the courage of the little band of Christians was not shaken. The uneven contest raged not only throughout the remainder of the day, but, as frequent sorties were made, and as renewed assaults followed each repulse, was prolonged far into the night. By sheer weight of

numbers, and owing more than all else to the great advantage the Iroquois had in having been equipped by the Dutch with fire-arms, the little garrison was finally overcome. The intruding horde of Iroquois found barely twenty Hurons alive within the ramparts, most of them wounded and helpless. This victory cost the invaders one hundred of their best men, and their leader, though he still lived, had been stricken down. On the other hand, the loss was an irreparable one for the Christian braves of Ossossané and Ste-Madeleine, who perished to a man.

On 19 March a sudden dread, wholly inexplicable, seized upon the Iroquois and they beat a hurried retreat from the Huron Country. An old Indian woman, who had escaped from the burning village of St-Ignace II, tardily brought to St-Michel (Scanonaenrat) the news both of the disaster and of the precipitous withdrawal of the victorious Iroquois. It seems inconceivable that no inkling of the terrible events, which were being enacted less than six miles from their village, should have reached this clan sooner, unless the fact be attributed to measures to intercept all communications taken by the astute invaders who in this particular, as in all others, showed themselves consummate tacticians. No sooner were they apprised of the situation than seven hundred braves of the One-White-Lodge set out from Scanonaenrat in hot pursuit of the retiring enemy. For two days they followed the trail, but whether it was that the rapidity of the retreat outstripped the eagerness of the pursuit, or that the much heralded avenging expedition was but a half-hearted undertaking from the very outset, the Iroquois were not overtaken. On their return to Huronia the braves of Scanonaenrat found their country one wide expanse of smouldering ruins. Every village had been abandoned and given over to the flames, lest it should serve at some future time as a repair for the dreaded Iroquois, for other events had taken place since their departure.

Forty-eight hours elapsed before Ossossané, the erstwhile centre of the flourishing mission of La Conception, heard of the annihilation of its contingent. The news reached its inhabitants at midnight, 19 March. The village lay but ten miles farther west than St-Louis, and a cry went up that the enemy were at their doors. The panic spread from lodge to lodge, and the old men, women, and children, a terror-stricken throng, streamed out upon the shores of Lake Huron. The bay (Nottawasaga) was still ice-bound; across it the fugitives made their way, and after eleven long leagues of weary march reached the Petun Nation. "A part of the country of the Hurons", writes Father Ragueneau at this date, "lies desolate. Fifteen towns have been abandoned, their inhabitants scattering whither they could, to thickets and forests, to the lakes and rivers, to the islands most unknown to the enemy. Others have betaken themselves to the neighbouring nations better able to bear the stress of war. In less than a fortnight our Residence of Ste-Marie [I] has seen itself stripped bare on every side. It is the only dwelling left standing in this dismal region. It is most exposed now to the incursions of the enemy, for those who have fled from their former homes set fire to them themselves to prevent their being used as shelters or fastnesses by the Iroquois". Reduced to these straits the missionaries resolved to transfer Ste-Marie I, the principal centre of the whole Huron mission, to some other location more out of reach of the Iroquois. Their attention was at first directed to the Island of Ste-Marie, now Manitoulin, but a deputation of twelve chiefs pleaded, on the part of the remnants of the nation, so long and eloquently in favour of the Island of St. Joseph (Ahouendoé), promising to make it "the Christian Island", that in the end it was chosen. Already a mission had been begun there in 1648, and Father Chaumonot had just

succeeded in leading back to its shores many who had sought refuge among the Petuns.

On 15 May, 1649, the whole establishment of Ste-Marie I, with its residence, fortress, and chapel, was given over to the flames by the missionaries, who, with an overpowering feeling of sadness and regret, stood by and witnessed the destruction in one short hour of what had cost ten years of labour to produce, while the promise of a year's rich harvest was also destroyed. On the evening of 14 June the migration to St. Joseph's Island was begun on rafts and on a small vessel built for the purpose. In a few days the transfer was completed, and none too soon, for a few belated stragglers were intercepted by lurking bands of Iroquois. Fort Ste-Marie II was commenced without delay and was completed by November, 1649. It was situated not far from the shores of the great bay on the eastern coast of the island, where the little that modern Vandals have spared of its ruins is still to be seen, as are the foundations of Ste-Marie I on the River Wye.

But the year was not to end without further calamities. Two Hurons, who had made good their escape from the hands of the enemy, brought word that the Iroquois were on the point of striking a blow either at Ste-Marie II or at the Petun villages in the Blue Hills, then called the Mountains of St-Jean. The Petuns were elated at the announcement, for they were confident in their strength. After waiting patiently a few days for the onslaught at Etharita, or the village of St-Jean, their strongest bulwark on the frontier nearest to the enemy, they sallied forth in a southerly direction, a quarter from which they expected their foes to advance. Coming, as was their wont, from the east, the Iroquois found a defenceless town at their mercy. What followed was not a conflict but a butchery. Scarcely a soul escaped, and Father Charles Garnier, who had begged his superior as a favour to leave him at his post, was shot down while ministering to his flock. Etharita was taken and destroyed on the afternoon of 7 December. Father Noël Chabanel had been ordered to return to Ste-Marie II, so as not to expose to danger more than one missionary at the post. He had left the ill-fated village a day or so before its fall; but on his way to St. Joseph's Island, near the mouth of the Nottawasaga River, he was struck down by an apostate Huron, who afterwards openly boasted that he done the deed out of hatred for the Christian Faith. The mission of St-Mathias, or Ekarenniondi, the second principal town of the Petun Nation, was carried on unmolested until the spring or early summer of 1650.

Meanwhile the condition of the Hurons on St. Joseph's or Christian Island was deplorable in the extreme. If the bastions of Ste-Marie II, built of solid masonry seventeen feet high, were unassailable for the Iroquois, these nevertheless held the island so closely invested that any party of Hurons setting foot on the mainland for the purpose either of hunting or of renewing their exhausted supply of roots or acorns—for they had been reduced to such fare and worse—were set upon and massacred. Nor were the fishing parties less exposed to inevitable destruction. The Iroquois were ubiquitous, and their attack was irresistible. Hundreds of Hurons were, in these endeavours to find food, cut off by their implacable foes, and perished at their hands in the midst of tortures. Finally so unbearable had the pangs of hunger become that offal and carrion were sought with avidity, and mothers were driven, in their struggle to prolong life, to eat even the flesh of their offspring. With one accord both the missionaries and what survived of their wretched flock, convinced that such a frightful state of things was no longer endurable, came to a final determination to withdraw forever—the former from the soil endeared to them by so many sacrifices, and watered with their sweat and very blood; the latter from the land of their sires, which—

not through any want of bravery but rather through lack of vigilance, unity of purpose, and preconceived action—they had shown themselves incapable of defending. The last missionaries had been called in from their posts, and, on 10 June, the pilgrim convoy pushed off from the landing of Ste-Marie II. Huronia became a wilderness, occupied by no tribe as a permanent home, but destined to lie fallow until the ploughman, more than a century and a half later, unread in the history of his adopted land, should muse in wonderment over the upturned relics of a departed nation.

The party included sixty Frenchmen—in detail, thirteen Fathers, four lay brothers, twenty-two *donnes*, eleven hired men, four boys, and six soldiers. The number of Hurons in the first exodus did not much exceed three hundred, and their purpose was to pass the remainder of their days under the sheltering walls of Quebec. Midway on their downward journey they met Father Bressani's party of forty Frenchmen and a few Hurons. These had set out from Three Rivers, 7 June, reaching Montreal on the 15th, and were hastening, with supplies and additional help, to the relief of the Mission. It was already too late. Informed of the appalling events of the preceding twelve-month, and of the utter ruin of the Huron country, they turned back, and both flotillas in company proceeded eastward. They reached Montreal safely, and on 28 July, 1630, landed at Quebec, after a journey of nearly fifty days.

The Neutral Nation, or Attiouandarok (also called Attiouandarons, Atiraguenek, Atirhangenrets, Attiouandarons, etc., or, in modern times, Attiwandarons), the third great branch of the Huron family, whose country, as has been said, extended from the Niagara Peninsula to the Detroit River and Lake St. Clair, had remained passive witnesses of the final struggle between the Iroquois, on the one hand, and the Hurons proper and the Petun Nation, on the other. In this they were but conforming to their traditional policy which had earned them their name. Mr. William R. Harris has advanced a plausible theory to account for this neutrality prolonged for years. Along the east end of Lake Erie, which was included within their territory, lay immense quantities of flint. Spear and arrow-heads of flint were a necessity for both Huron and Iroquois, so that neither could afford to make the Neutrals its enemy [Publications, Buffalo Hist. Soc., IV (1896), 239]. At all events, towards the middle of the seventeenth century, the Iroquois stood no longer in need of such implements of war. Thanks especially to the Dutch, they were fully provided with fire-arms, and this may have been the reason of their readiness to pick a quarrel with the Neutrals as early as 1647. The Senecas had even gone so far as to treacherously massacre or take captive nearly all the inhabitants of the principal Aondironnon town, which, though situated beyond the Niagara River (see Ducreux's map), then formed part of the Neutral Nation. A Seneca Indian, who the previous winter had struck out alone on the war-path, as frequently happened in Indian warfare, had succeeded in slaying several of his enemies. Hotly pursued by a band of Hurons, he was overtaken and made prisoner within the limits of the Neutral Nation, but before he could seek sanctuary on the mat of any Neutral lodge. This, according to accepted usage was deemed a lawful prize. Three hundred Senecas, dissimulating their resentment, repaired to the Aondironnon town and, as it was in time of peace, were given a friendly welcome. They adroitly managed to quarter themselves on different families, so that a feast was provided in every lodge. This had been planned beforehand in furtherance of their treacherous design. When rejoicing was at its height, at a given signal, they fell upon their unsuspecting hosts, who were unarmed, so that before any serious resistance could

be offered the Senecas had brained all within reach and had made off with as many prisoners as they could handle. The rest of the Neutral Nation ill-advisedly overlooked this outrage and continued to live on friendly terms with the Senecas, as if nothing had happened in violation of the peace existing between the two nations.

But this was not an isolated instance of a national wrong inflicted on the Neutrals. Similar happenings marked the autumn of 1638. The Ouenrôhronons, who until then had been acknowledged by the Neutral Nation as constituting an integral part of their federation, occupied the frontier territory on the side near the Iroquois. They may thus be presumed to have dwelt in one of the three or four villages beyond the Niagara River, in the region mapped by Ducreux as inhabited by the "Ondieronii", and having for chief town "Ondieronius Pagus". These Ouenrôhronons had been maltreated and threatened with extermination by their immediate Iroquois neighbours, the Senecas. As long, however, as they could count upon the support of the bulk of the Neutral Nation, they managed to hold their own; but when disowned and left to their own resources they had no choice but to forsake their homes and seek an asylum elsewhere. Having beforehand assured themselves of a welcome they set out, to the number of six hundred, on their journey to Huronia, lying some eighty leagues towards the north. There they were adopted by the Hurons proper and assigned to different villages, the greater number, however, accepting the hospitality of Ossossané, the principal town of the Bear Clan.

If ever a faint-hearted policy proved a short-sighted policy, it was in the case of the Neutrals. They had basely sacrificed their outlying posts beyond the Niagara, and had entered into no compact for mutual defence with the Hurons and the Petuns. There can be no doubt that with preconceived action the three great Huron nations could not only have driven back the more astute Iroquois, but could have made their tribal territory unassailable, so admirably was it protected by the natural features of its geographical position, even had there been no thought of retaliation by carrying the war into the heart of the Iroquois cantons. Their turn was now to come. The power of the Hurons proper and of the Petuns had been separately and effectually crushed, and the restless ambition of the Iroquois yearned for fresh conquests. What brought about the final clash with the Neutrals is not recorded, but the Relation (1651, Queb. ed., 4; Clev. ed., XXXVI, 177) informs us that the main body of the Iroquois forces invaded their territory. They carried by assault two of the frontier towns, Teotondiaton and probably Kandoucho, one of which too confidently relied on its sixteen hundred defenders. The first was taken towards the close of the autumn of 1650, and the second in the early spring of 1651. Bloody as had been the conflict, the slaughter which followed this latest success of the Iroquois was exceptionally ghastly, especially that of the aged and of the children who had not the strength to follow the enemy to their country. The number of captives was unusually large, consisting principally of young women chosen with a view of increasing the Iroquois population. The disaster to the Neutral Nation took on such proportions that it entailed the utter ruin and desolation of the country. Word of it soon reached the most remote towns and villages, and struck terror into every breast. Hastily all abandoned their possessions and their very fatherland. Self-condemned exiles, they fled in consternation far from the cruelty of their conquerors. Famine followed in the wake of war, and though they plunged into the densest forests, and scattered along the shores of far-distant lakes and unknown rivers, in their efforts to sustain life, for many of them the only respite to the misery which pursued them was death

itself. As for those of the Hurons proper who, when their own country was laid waste, longing for quiet for the remainder of their days, had chosen the Neutral country as their home, they were merged in the common ruin. Some met death on the spot, others were carried off into slavery, a few escaped to the Andastes or directed their flight towards the remote West, while a certain number journeyed down to Quebec and joined the Huron colony already established there.

8. *Missionaries in Huronia and Their Various Stations.*—In the three following tables the names of priests only and not of lay brothers are given. The

dates of arrivals and departures. The numbers preceding the names are used for reference in Tables II and III, and serve to show where each missionary was stationed in any given year.—Table II is a list of missionary stations from 1615 to the first taking of Quebec in 1629. The numbers in the vertical columns refer to the list of fathers in Table I, thus: the number 5, e. g., placed in the column under 1623, means that Father Nicolas Viel was in that year, 1622, at Toanché I, otherwise St-Nicolas.—Table III covers the interval between the return of the missionaries to Huronia in 1634 and the breaking up of the mission of Huronia in 1650. E. g., 7, placed in the column 1640–41, shows

* Gabriel Sagard, the Recollect historian, was a brother and not in Holy orders.

one exception is that of Gabriel Théodat Sagard, a Recollect lay brother, who, as first historian of the Huronia of his time, could not well be omitted. The names of the Jesuit lay brothers, of the *donnés*, and even of most of the hired men and boys and of a few of the soldiers, may be found in the work entitled "Owendaké Ehen", to be issued shortly by the Archives Department of the Provincial Government of Ontario.

Explanation of Tables.—Table I gives the names of all the missionary priests in alphabetical order with VII.—37

that Father Jean de Brébeuf was in the Neutral country at that time.

II. THE HURONS AFTER THEIR DISPERSION.—At the present day there are but three groups of Indians of Huron stock extant: one at La Jeune Lorette, near Quebec; the second in the neighbourhood of Sandwich, Essex County, Ontario; the third on the Wyandot Reservation in the State of Oklahoma, the late Indian Territory. The Quebec group is made up principally of the descendants of the Cord Clan of Huronia proper (Rel. 1657: Queb. ed. 20, 2; Clev. ed., XLIII, 191)

and of not a few Mohawks (Rels. Inéds, I, 158; Clev. ed., LVII, 25, 52; LX, 69). The Tohontaenrat, of the old village of Scanonaenrat, or St-Michel, and a considerable part of the Rock Clan had, as early as 1650 or 1651, gone over bodily to the Senecas (Journ. des Jés., 161; Clev. ed., XXXVI, 141, 143. Rel. 1651: Queb. ed., 4-5; Clev. ed., XXXVI, 179), while the remainder of the Rock Clan cast their lot in with the Onondagas, and the Bear Clan with the Mohawks (Rel. 1657: Queb. ed., 20, 2; Clev. ed., XLIII, 189-191), immediately after the massacre of a number of Hurons by the Iroquois on the Island of Orleans, 20 May, 1656 (Rel. 1657: Queb. ed., 5, 6; Clev. ed., XLIII, 115-117). This accounts for all the clans of Huronia proper save the Ataronchrons, who need not be considered, as they were but a congeries of other clans who, in the later years of Huronia's existence, had moved in small detachments nearer to Fort Ste-Marie

XXXVI, 118), under the date of 22 April, 1651, epitomizes the rumours afloat in Quebec relative to what was then happening in the West. It was said that 1500 Iroquois had invaded the Neutral country and had captured a village; that the Neutrals, headed by the Hurons of old St-Michel, had fallen upon the retiring Iroquois and had captured or slain two hundred; but that a second Iroquois force of 1200 braves had re-entered the Neutral country to avenge this loss. A second entry in the "Journal" of 26 April (151; Clev. ed., Id. 120) reduces the number given of the first Iroquois expedition to 600 warriors, who apparently had not been entirely successful, since 100 had returned during the summer to seek revenge. The arrival of four Neutrals at Montreal, on 27 May, with their budget of news, was deemed of sufficient importance to find a place in the Journal under date of 30 July (157; Clev. ed., XXXVI, 133). A still later entry, of

II. STATIONS OF MISSIONARIES IN HURONIA, 1615-29

Toanché I., St-Nicolas5		1, 7, 251, 7, 257

* Carhagouha was the Arontaen of the Relations. It must not be confounded with any of the Huron villages which bore the name of St-Joseph at the time when the Jesuits alone had charge of the Huron missions.

† La Rochelle, the French name for the village of St-Gabriel, serves to identify it with the Ossossoné, or La Conception, of a later period.

A. stands for Algonquins; N., for Neutral Nation.

‡ From the capitulation of Quebec to the English, July 19, 1629, until the retrocession of Canada to the French by the treaty of St-Germain-en-Laye, in 1632, the Huron Missions were necessarily suspended, as the Fathers had been sent back to France. In 1634, however, the missionaries returned to Huronia and resumed their work of evangelization.

on the Wye, and had occupied the country mainly to the north-east of Mud Lake, whence they derived their name of "People who dwelt beyond the Fens". The group now residing in the vicinity of Sandwich, Ontario, are the remnants of the Petun, or Tobacco Nation, with possibly a slight intermixture of Neutrals who, after many vicissitudes, had been induced to leave Michilimakinac when Detroit was founded. The third group, now settled on the Wyandot Reservation, Oklahoma, are the descendants of that portion of the Detroit Petuns who, under the war-chief Nicolas, had broken away from those of the Assumption Mission, between 1744 and 1747, and made Sandusky and other parts of Ohio and north-eastern Indiana their home. The once powerful Neutrals no longer exist as a distinct tribe. They have been completely merged in other Indian tribes, either Huron or Iroquois. The Relations and other contemporaneous documents refer to them seldom and but briefly in the years following the great dispersion. Nor must this seem strange, for the Relation 1660 (Queb. ed., 14, 1; Clev. ed., XLV, 241-43) makes the sweeping assertion: that the Iroquois, on a flimsy pretext, "seized upon the whole nation, and led it off in a body into dire captivity to their own country" Without taking this too literally, we find in it an explanation of the little said of them, and, precisely on account of these rare references, it seems advisable to treat them first.

1. *Extinction of the Attiwandarok, or Neutrals, during the Great Dispersion.*—John Gilmary Shea devoted a few pages to this vanished tribe in a paper contributed to Schoolcrafts' "History and Progress of the Indian Tribes" (IV, 204). Some of his references are not easily verified, while on the whole the paper is incomplete. What follows comprises nearly every reference to the nation in the records of the time.

1651.—The "Journal des Jésuites" (150; Clev. ed.,

22 September (161; Clev. ed. Id., 141, 143), records the fall of the Neutral town of Teotondiaton, the Teotongniaton, or St-Guillaume, of the Relations, and the devastation of the Neutral territory, while it further modifies the previous announcement concerning the Hurons of St-Michel, stating that both they and the Rock Clan remnants had gone over to the Senecas.

1652.—Rumours more or less conflicting continued to find their echo in Quebec. On 19 April, 1652, an entry in the "Journal" optimistically rehearses the news brought on 10 March, by an escaped Huron captive, to the effect that the Neutrals had formed an alliance with the Andastes against the Iroquois; that the Senecas, who had gone on the warpath against the Neutrals, had suffered so serious a defeat that the families of the Senecas were constrained to flee from Sonnotouan, and betake themselves to Onionen, otherwise Goioquen, a Cayuga town (Journ. des Jés., 166-67; Clev. ed., XXXVII, 97). The general dispersion of the Neutrals, following close on their disasters at the hands of the Iroquois, is described in Relation 1651 (Queb. ed., 4, 2; Clev. ed., XXXVI, 177); but the direction of their flight is not indicated, save by the words: "They fled still further from the rage and cruelty of the conquerors"—which means, no doubt, that the general trend of their precipitous retreat was towards the West. The great number of prisoners carried off by the Iroquois is mentioned particularly, and especially the young women led into captivity to become the wives of their captors.

1653.—There is mention made of a solitary Neutral boy of fifteen or sixteen, captive among the Onondagas, baptized by Father Simon Le Moyne (Rel. 1654: Queb. ed., 14, 1; Clev. ed., XLI, 103). But the "Journal" this year has a most important entry concerning the Neutrals, which would go to show that they were still as numerous as the remnants of the

other tribes of Hurons. An independent band of Petuns had wintered, in 1652-53, at Teapontofai; while the Neutrals, numbering eight hundred, had passed the winter at Skenchioë, in the direction of Teqchanon-tian. They were forming a league with all the Upper Algonquins. Their combined forces were already one thousand strong, and all were to foregather in the autumn of 1653, at Aotonatendé, situated in a southerly direction three days' journey beyond the Sault Skiaé (i. e. Sault-Ste-Marie) (Journ., 183-84; Clev. ed., XXXVIII, 181). As the Relations elsewhere state that a day's journey was between eight and ten leagues (Rel. 1641: Queb. ed., 71, 2; Clev. ed., XXI, 189) the position of Aotonatendé might be determined pretty accurately, were it not for the expressions "beyond the Sault Skiaé" and "in a southerly direction", which are at variance. If "beyond the Sault", the direction must be west, and consequently on the shores of Lake Superior. If we take *beyond* as meaning at a greater distance, and towards the south, the spot indicated should be located on the western shore of Lake Michigan.

1657.—Among the Onondagas there were three sodalities, one for the Hurons proper, one for the Neutrals, and one for the Iroquois (Rel. 1657: Queb. ed., 48-49; Clev. ed., XLIV, 41).

1660.—In an estimate of the strength of the Five Nations at this date, the Mohawks are credited with not more than five hundred warriors, the Oneidas with less than one hundred, the Cayugas and Onondagas with three hundred each, and the Senecas with not more than one thousand, while the greater part of their fighting men were a medley of many tribes, Hurons, Petuns, Neutrals, Eries, etc. (Rel. 1660: Queb. ed., 6-7; Clev. ed., XLV, 207).

1669.—Father Frémin mentions the presence of Neutral Indians among the Senecas, and informs us that the village of Gandongaraé had no inhabitants other than Neutrals, Onontioigas, and Hurons proper (Rel. 1670: Queb. ed., 69, 2; Clev. ed., LIV, 81).

1671.—In the village of Iroquois Christians, then called St-Xavier des Prés, which stood at that time about three miles below the Lachine rapids, on the south bank of the St. Lawrence, there were, besides Iroquois, Hurons, and Andastes, a number of Neutrals (Rel. 1671: Queb. ed., 12-13; Clev. ed., LV, 33-35). This seems to be the latest mention in the old records of the Attiwandaronk, once the most numerous of the three great Huron tribes, and occupying the most extensive and fertile territory. Their name was obliterated, but their blood still courses in the veins of many a reputed Iroquois or Huron.

2. *Migration to Quebec.*—The writers of the Relations have left us more than one retrospect of the wanderings of the Hurons. These may be found, in order of time, in Relation 1656: Quebec edition, 41, 2; Cleveland edition, XLII, 235;—1660: Quebec, 2, 2; 14, 1; Cleveland, XLV, 187, 243;—1672: Quebec, 35-36; Cleveland, LVI, 115;—Girault's Memoir of 1762, Cleveland, LXX, 205. The most helpful in the matter of research are the two last mentioned, the retrospect of 1672, for the migrations in the West, and that of Father Girault for the Hurons of Lorette.

1640.—About ten years before the great dispersion a good number of Hurons proper had, with Indians of other tribes, taken up their abode at Sillery near Quebec, which mission was established permanently in 1637 (Girault, Clev. ed., LXX, 207).

1649-51.—Years of the great dispersion.

1650.—On 10 June upwards of three hundred Hurons proper abandoned their country and, in company with sixty Frenchmen, including the missionaries, set out for Quebec (Rel. 1650: Queb. ed., 1, 2; 26, 1; Clev. ed., XXXV, 75, 197-9; Ragueneau to the general, Queb., 17 Aug., 1650, MS. p. 35). The French party was made up of thirteen priests, four

lay brothers, twenty-two *donnés*, eleven hired men, four boys, and six soldiers (Carayon, "Prem. Miss.", Clev. ed., XXXV, 9-10). The entire party, save a certain number of Hurons who remained over at Three Rivers (Rel. 1652: Queb. ed., 10, 2; Clev. ed., XXXVII, 180), reached Quebec 28 July, 1650 (Rel. 1650: Queb. ed., 28, 1; Clev. ed., XXXV, 207; Journ. des Jés., 142; Clev. ed., Id., 50). Four hundred Hurons camped under cover of the French fort (Rel. 1650: Queb. ed., 2, 1; Clev. ed., Id., 77), in the immediate vicinity of the Hôtel-Dieu hospital (Rel. cit.: Queb. ed., 51, 1; Clev. ed., XXXVI, 59).

1651.—On 29 March the Hurons moved from the town to the Island of Orleans, in sight of Quebec. The deed of the land to be occupied by them was signed by Eléonore de Grandmaison, the widow of François de Chavigny, on 19 March, and Father Chaumonot, their missionary, took formal possession of it on the 25th (Journ. des Jés., 149; Clev. ed., XXXVI, 117; cf. Rel. 1652: Queb. ed., 8; Clev. ed., XXXVII, 168; Rel. 1654, 20 sqq.; Clev. ed., XLI, 137). Thereupon all the Hurons who had previously settled at Sillery joined those of Quebec and, on 29 March, moved to the island. Their sojourn there lasted until 4 June, 1656 (Girault's Mem., Clev. ed., LXX, 207). Five or six hundred is the rough estimate given in a subsequent Relation (1660: Queb. ed., 14, 1-2; Clev. ed., XLV, 243) of their number at that time. On 26 September news reached Quebec that thirty-six canoes of Hurons were on their way from the west to join the new settlement (Journ. des Jés., 162; Clev. ed., XXXVI, 143), and their safe arrival is recorded in Relation 1651, where they are described as Christian Indians coming from Ekaentoton, now Manitoulin Island, and manning about forty canoes (Queb. ed., 7, 1; Clev. ed., XXXVI, 189).

1654.—On 26 April the greater part of the Hurons who had at different times settled at Three Rivers joined those at the Island of Orleans (Girault, Clev. ed., LXX, 205-07).

1656.—On Saturday, 20 May, forty canoes of Mohawks landed stealthily on the island and surprised the Hurons who were at work in their fields. There were seventy-one either killed outright or taken prisoners, and among the latter many young women (Rel. 1657: Queb. ed., 5, 6; Clev. ed., XLIII, 117). On 4 July the Hurons abandon the Island of Orleans and again seek shelter at Quebec. Their sojourn on the island had lasted from 29 March, 1651 (Girault, Clev. ed., LXX, 207). After this fresh misfortune the Hurons sue for peace, which is promised by the Mohawks, provided they consent to settle in the Mohawk country the following spring, there to live together as one people (Rel. 1657: Queb. ed., 19, 2; Clev. ed., XLIII, 187).

1657.—One hundred Mohawk warriors set out from their country in the spring of 1657 to carry out the agreement, thirty of whom enter the town of Quebec, and in presence of the French Governor summon the Hurons to follow them. A day and the following night were passed in deliberation. The Clan of the Cord, former inhabitants of the mission of Teanaostaiaé, or St-Joseph II, in old Huronia, positively refused to leave Quebec and thus separate themselves from their French allies. The Rock Clan, or Arendarrhonons, the former mission of St-Jean Baptiste, reluctantly chose the Onondaga country for their future home, while the Bear Clan half-heartedly resolved to throw in their lot with the Mohawks (Rel. 1657: Queb. ed., 20; Clev. ed., XLIII, 187, 191), and Father Simon Le Moyné, the "Ondesonk" of the Indians, volunteered to accompany them. On 2 June fourteen Huron women and many little children embarked in the canoes of the Mohawks, and set out with them for their newly adopted country (Journ. des Jés., 215; Clev. ed., XLIII, 49). About fifty Huron Christians of the Rock Clan left Quebec on 16

June for Montreal, where they were to await the arrival of the Iroquois flotilla which was to transport them (Rel. 1657: Queb. ed., 23, 2; Clev. ed., XLIII, 207). On 26 July this same party, with Father Ragueneau, set out with a band of fifteen or sixteen Senecas and thirty Onondagas for the country of the latter. On 3 August, while on the way, seven Huron Christians were treacherously set upon and murdered, and the women and children were made captives (Rel. 1657: Queb. ed., 54, 55; Clev. ed., XLIV, 69, 73). Elsewhere it is said that all were massacred, meaning, probably, all the men of the party (Rel. 1658: Queb. ed., 15, 2; Clev. ed., XLIV, 217). For other mention of this treacherous act see *passim* the same Relation (Queb. ed., 2, 2; 5, 1; 10; Clev. ed., Id., 155, 165, 191). On 21 August a party of Hurons, of the Bear Clan, left Quebec to join the Mohawks, under the impression that they were to be adopted into the tribe

and sixty of them were baptized. It is not stated explicitly that they joined the colony. On the contrary, from the wording of the passage it would rather seem that they were transient visitors, remaining, however, long enough to be thoroughly instructed. Father Girault (Clev. ed., LXX, 207) speaks of the next removal thus: "When the Hurons left the Island of Orléans, they came to live in Quebec. They remained there until the month of April, 1668, when they removed to Beauport, where they stayed about a year." The Relations note that at this date their mission of the Annunciation—for so it was called—was greatly reduced in numbers, and that, having become convinced that peace with the Iroquois was assured, they left the fort, which occupied a large open space in Quebec, and withdrew to the woods a league and a half from the town. Their object in so doing was to cultivate the land so as to be self-supporting, to

(Rel. 1658: Queb. ed., 9, 2; Clev. ed., XLIV, 189). On 26 August Father Le Moyne followed with the second party of the Bear Clan (*ibid.*). Both these bands, in violation of the most solemn pledges, were reduced to the vilest and most oppressive slavery (Id.: Queb. ed., 13, 1; Clev. ed., 205).

1660.—The Hurons continued to reside in Quebec under cover of Fort St-Louis, which the Sieur Louis d'Ailleboust de Coulonge had completed for their special protection. The position of this *Fort des Hurons* may be seen on the copy of a plan of Quebec, 1660, in the Report on Canadian Archives for 1905 (Part V, facing page 4). Towards the close of the winter 1659-60, forty chosen Huron braves went on the war-path. At Montreal they joined forces with Adam Désormeaux Dollard (Notary Basset's records—four autograph signatures—beginning, 12 Oct., 1658), who, with his sixteen heroic companions, not only held in check for ten days, at the foot of the Ottawa Long Sault, two hundred Onondagas and five hundred Mohawks, but also, at the sacrifice of his life, saved the colony from destruction (Rel. 1660: Queb. ed., 14 sqq.; Clev. ed., XLV, 245; Journ. des Jés., 284; Clev. ed. Id., 157).

1668.—In the Relation 1668 (Queb. ed. 25, 1; Clev. ed., LII, 19) it is affirmed that between the years 1665 and 1668 more than two hundred Iroquois came to the Huron mission at Quebec and received instruction,

and so to speak, start a new settlement (Rel. 1669: Queb. ed., 23, 24; Clev. ed. Id., 229). This site, says Father Chaumonot, was known as Notre-Dame des Neiges, and belonged to the Society of Jesus, and he adds that it was between Quebec and Beauport, a short league from the town (Chaumonot, "Autobiographie", 174).

1669.—Father Girault (*loc. cit.*) proceeds: "Afterward, towards the spring of 1669, they settled at the *Côte St-Michel* where they remained . . . until December 28th, 1673." This new station of their choice was distant one league from Quebec (Rel. 1671: title of ch. iv, Queb. ed., 7, 1; Clev. ed., LIV, 287), and was situated in the midst of a French settlement (Rel. 1672: Queb. ed., 2, 1-2; Clev. ed., LV, 249). Their numbers now stood at something like two hundred and ten (Rels. inéd., I, 296; Clev. ed. LVIII, 131). It will not be out of place here to remark that, among the French population of Canada, the word *côte* does not necessarily imply a rise in the land or a hillside, much less a coast or water front, but simply a highway on which the farms of the settlers front, and on which their homesteads and outhouses are generally built. As for the origin of the name *Notre Dame de Foy*, it is thus explained in the Relations. In 1669 a statue of the Madonna was sent from Europe to the Jesuit superior. It was carved out of the self-same oak as the miraculous statue of Notre Dame at Foy, a hamlet near the

Town of Dinant, then in the Liège country, now in the Province of Namur, Belgium. The understanding was that it should be placed in the Huron chapel, though it was the bishop's intention to have the chapel dedicated to the Blessed Virgin under the title of the Annunciation (Rel. 1670: Queb. ed., 22, 1; Clev. ed., LIII, 131. Cf. Rel. 1671: Queb. ed., 7, 1; Clev. ed., LIV, 287; Rels. Inéd. I, 149; and especially Chaumonot, "Autob.", 174-176). The wish of the bishop was carried out (Rel. 1670: Queb. ed., 15, 1; Clev. ed., LIII, 97), the village, however, for a long time bore the name of Notre Dame de Foy, and was constituted the centre of the parish of that name by Mgr. de Saint-Vallier, 18 September, 1698. It now goes by the name of Sainte-Foy, the original appellation of M. de Puiseaux's fief.

1673.—As the Huron colony was at this time steadily expanding, owing both to the great influx of Iro-

85) under the title of Notre Dame de Lorette (Rels. inéd., II, 14; Clev. ed., LIX, 81).

1697.—"Finally", says Father Girault, "from the autumn of 1697 till the present year 1762 [date of his memoir] the Hurons have lived at *Jeune Lorette*. *Jeune Lorette* has no dependencies. It is only a small piece of land in the *Côte Petit St-Antoine*, seigniory of St-Michel. On it the Jesuit Fathers, to whom the Seigniory belongs, allowed the Hurons to settle, towards the close of 1697" (Clev. ed., LXX, 207). And there they have remained till the present day.

1711.—Under date of 5 November, 1711, Father Joseph Germain, writing from Quebec, sends this report, through the general of the Society, to the Propaganda, concerning the Hurons of *Jeune Lorette*: "This mission is three leagues from Quebec and is made up of Hurons who are instructed by two of our Fathers, d'Avaugour and Descouvert [*sic*]. These

P, Petun Nation. * Final Exodus, 10 June, 1650.

quois Christians, especially from Tionnontoguen, the chief town of the Mohawks (Clev. ed., LVII, 25), and to natural increase, the missionaries determined to move from Notre Dame de Foy, where they were cramped for land and had little forest growth for fuel, to a more commodious site one league and a half further in the forest. There they planned to build a chapel modelled on that of Our Lady of Loreto, Italy (Rels. inéd., I, 295; Clev. ed., LVIII, 131, 149; cf. Clev. ed., LX, 68-81). The location was one league and a half from Notre Dame de Foy and three leagues from Quebec (Rels. Inéd., I, 305; Clev. ed., LVIII, 147). However, for some time after the removal of the village the Indians continued to cultivate their fields at Notre Dame de Foy (Rels. In., I, 296; Clev. ed., LVIII, 131). Including the late accessions from the Iroquois, the population now reached three hundred (Rels. inéd., II, 71; Clev. ed., LX, 26, 145). This last change of position is thus recorded in Father Girault's memoir: "They [the Hurons] remained there [at Côte St-Michel] from the spring of 1669 to the 23th [*sic*] of December of the year 1673. Thence they went to live at *Vieille Lorette* where they remained until the autumn of 1697" (Clev. ed., LXX, 207).

1674.—The corner-stone of the chapel was laid by the superior of Quebec, 16 July, 1674, and the structure was blessed on 4 November of the same year (Rels. Inéd., I, 309-10; Clev. ed., LVIII, 155; LX,

Indians are very fervent Christians, who are exceedingly assiduous at public prayers in their church and at private prayers in their cabins; constant in attendance at Holy Mass and in frequenting the Sacraments, in which they participate often with a devotion both tender and solid; they strictly observe the commandments of God and of the Church and lead most exemplary lives" (Clev. ed., LXVI, 203-05).

1794.—On 10 October, 1794, two days after the death of Father Etienne-Thomas-de-Villeneuve Girault, the last Jesuit missionary of the Hurons near Quebec, Reverend Joseph Pâquet, a secular priest, was appointed as his successor (Lionel St-George Lindsay, "Notre-Dame de la Jeune Lorette", 1900, 281), and on 15 November the Bishop of Quebec authorized the purchase of the land of Michael Bergevin, *dit* Langevin, for the site of a parish church (*ibid.*, 282).

1795.—The bishop, in April, 1795, gave his consent to the building of a presbytery with chapel annexed, and on 2 December, the work being completed, the chapel was blessed (*ibid.*, 282, 283).

1796.—On 6 October the limits of the parish were determined, and a pastoral letter assigned as patron St. Ambrose. The dimensions of the parish were six miles square. This took in part of the old fiefs of Gaudarville, St. Gabriel, L'Antienne Lorette and Charlesbourg (*ibid.*, 282, 290).

1815.—Bouchette, in his "Topographical Description of the Province of Lower Canada", has this to say of La Jeune Lorette and its population at this date: "The Indian village of La Jeune Lorette between eight and nine miles from Quebec, is situated on the eastern side of the River St. Charles, upon an eminence that commands a most interesting, varied and extensive view. . . . The number of the houses is between forty and fifty, which on the exterior have something like an appearance of neatness; they are principally built of wood, although there are some of stone. The inhabitants are about two hundred and fifty, descendants of the tribe of Hurons once so formidable even to the powerful Iroquois" (409-410).

1827.—The regular canonical erection of the parish of St. Ambroise de la Jeune Lorette took place on 18 September, 1827 (Lindsay, *ibid.*, 290).

1829.—Wenwadahronhé or Gabriel Vincent, third chief of the Hurons of Lorette, died 29 March, 1829, aged 57. He was the last full-blooded Huron—with absolutely no intermixture in his line, it is said, from the time of the exodus from Huronia in 1650. He was also the only Indian at Lorette who had reared his family in the language of his forefathers, the younger inhabitants of the village, at that date speaking the French language and not understanding their own (Queb. "Star", 8 April, 1829, quoted by the Abbé Lindsay, *op. cit.*, 269).

1835.—Civil recognition of the St. Ambrose parish was granted on 9 October, 1835, under the administration of Lord Gosford (*Id.*, *op. cit.*, 282).

1845.—On 21 May of this year there were among the Indians residing at Lorette sixty-one men, sixty-two women, and sixty-eight children, who were rightful recipients of "the King's Gifts". Down to as late a date as 1854 it was customary to distribute such gifts among most of the families of the village. In this latter year this distribution of promiscuous articles was abolished, and a subsidy for the maintenance of the resident pastor and of the village school was substituted for it (Lindsay, *op. cit.*, 273-4).

1861.—Father Julius Tailhan, S.J., who resided at Quebec at that time, states that in 1861 the Hurons of Lorette numbered two hundred and sixty-one. (See his "Mémoires sur les mœurs etc. par Nicolas Perrot", 1864, p. 311.)

SECULAR PRIESTS WITH THE HURONS OF QUEBEC, 1794-1909

NAME	SOJOURN
Joseph Pâquet	from Oct. 10, 1794 to Aug. 17, 1799
Michel Amyot	from 1799 to 1801
François-Ignace Ranvoyzé	from Sept. 10, 1801 to 1805
Antoine Bédard	from 1805 to 1817 and from 1819 to 1824
François-Germain Rivard Lorange	from 1817 to 1819
Thomas Cooke	from 1824 to 1833
Louis-Théophile Fortier	from Sept. 29, 1833 to 1843
François Boucher	from 1843 to Dec. 4, 1880
Guillaume Giroux	from Feb. 1870 to Dec. 1880 as Assistant; from Dec. 4, 1880 to Sept. 1881 in charge; from 1881 to Oct. 1904 as P.P.
Cléophas Giroux	from Oct. 1904

1901.—The official census, May, 1901, gives four hundred and forty-eight souls as the population of the Huron village of La Jeune Lorette. The tribe is still in possession of three reserves: the village itself, which covers thirty acres; the *Quarante Arpents* reserve, which, despite its name, contains one thousand three hundred and fifty-two acres; finally, the Rocmont Reserve, in the County of Portneuf, which is nine thousand six hundred acres in extent ("Bulletin des recherches historiques", cited by the Abbé Lindsay, *op. cit.* 275).

CHIEFS OF THE HURONS OF QUEBEC, 1650-1909

1. Shastaretsi, who died when the Hurons lived at Old Lorette.
2. Ignace Tsawenhohi, "The Vulture".
3. Paul Tsawenhohi, who died at New Lorette.
4. Thomas Martin Thodatowan.
5. José Vincent.
6. Nicolas Vincent Tsawenhohi, who was the nephew of the preceding. He was recognized after his election at the Great Council Fire of the Kanawokeronons or Iroquois of Caughnawaga. In 1819, called before the Committee of the Quebec Legislature, he explained the procedure followed in the election of the grand chief.
7. Simon Romain Tehariolian, acclaimed at the Great Council Fire of the Hurons, July 17th, 1845.
8. François Xavier Picard Tahourenché, succeeded as grand chief in June 1870. He had been war chief from 1840. He died in 1883.
9. Maurice Sébastien Aghionlian was elected in 1883. From the date of the passing of the Indian Bill in 1880, its prescriptions have been followed in the appointment of both the chiefs and the grand chiefs (Lindsay, *op. cit.*, 265-66).

[For the migrations in the west of the Petun, or Tobacco Nation (Tionnontates, Etionnontates, Khionontatehronon, Dinondadies, etc.) see PETUN NATION].

ARTHUR EDWARD JONES.

Hurst (or HERST), RICHARD, layman and martyr, b. probably at Broughton, near Preston, Lancashire, England, date unknown; d. at Lancaster, 29 August, 1628. He was a well-to-do yeoman, farming his own land near Preston. As he was a recusant, Norcross, a pursuivant, was sent by the Bishop of Chester to arrest him. The pursuivants had a slight fracas with Hurst's servants, in the course of which one of the pursuivant's men, by name Dewhurst, in running over a ploughed field, fell and broke his leg; but this accident was not in any wise caused by Hurst or his servants. The wound mortified and proved fatal, but before his death Dewhurst of his own free will made a solemn oath that his injury was the result of an accident. Nevertheless Hurst was indicted for murder, as the Government wished at that time to make some severe examples of recusants. Through Hurst's friends a petition was sent to King Charles I, which petition was also supported by Queen Henrietta Maria. But the Government was successful in procuring the judicial murder of Hurst, by grossly tampering with the very palladium of English liberties. No evidence controverting that of the dying Dewhurst having been adduced, the jury were unwilling to convict; but the foreman of the jury was actually told by the judge, in the house of the latter, that the Government was determined to get a conviction, that a foul murder had been committed, and that the jury must bring in a verdict of guilty. Hurst was accordingly convicted and sentenced to death; on the next day, being commanded to hear a sermon at the Protestant church, he refused, and was dragged by the legs for some distance along a rough road to the church, where he, however, put his fingers in his ears so as not to hear the sermon. At the gallows he was informed that his life would be spared if he would swear allegiance to the king, but as the oath contained passages attacking the Catholic Faith, he refused and was at once executed.

C. F. WEMYSS BROWN.

Hurtado, CASPAR, a Spanish Jesuit and theologian, b. at Mondejar, New Castile, in 1575; d. at

Alcalá, 5 August, 1647. He studied at the University of Alcalá de Henares, where in the examination for the doctorate he won the highest place from numerous competitors. He was at once appointed professor in the university, and was winning fame as a lecturer, when at the age of thirty-two, he resigned his chair and entered the Society of Jesus (1607). His talents lying mostly in the direction of theology, he lectured on this subject successively at Murcia, Madrid, and Alcalá. He died in 1647 as dean of the faculty of Alcalá, where he had professed for thirty years. His principal works are: "De Eucharistiâ, sacrificio missæ et ordine" (Alcalá, 1620); "De matrimonio et censuris" (Alcalá, 1627); "De incarnatione Verbi" (Alcalá, 1628); "De Sacramentis in genere et in specie, i. e. Baptismo, Confirmatione, Pœnitentia et Extrema Unctione" (Alcalá, 1628); "De beatitudine, de actibus humanis, bonitate et malitia, habitibus, virtutibus et peccatis" (Madrid, 1632); "Disputationes de sacramentis et censuris" (Antwerp, 1633); "De Deo" (Madrid, 1642). Of the Jesuits, Hurtado is one of the most distinguished for learning and piety. He was among the earliest to deviate from the method of St. Thomas, which till then had been followed by the majority of theologians, and he devised a system of his own. He is noted for the brevity, conciseness, and clearness of his exposition. He was a great orator and preached with abundant success before the Spanish Court.

A. FOURNET.

Hurter.—(1) FRIEDRICH EMMANUEL VON HURTER, convert and historian, b. at Schaffhausen, 19 March, 1787; d. at Graz, 27 August, 1865. From 1804 to 1806 he attended the University of Göttingen, and in 1808 was appointed to a country parish. The appearance in 1834 of the first volume of the life of Innocent III, on which he had been working for twenty years, caused a profound sensation in both Catholic and Protestant circles, and was soon translated into French, English, Italian, and Spanish. Hurter was chosen in 1835 *antistes* of the clergy in the canton of Schaffhausen, and later president of the school board, in which capacities he laboured with great zeal. During many years his manifest sympathy and intimacy with the Catholic clergy, including the Archbishop of Freiburg and the papal nuncios to Switzerland, and his disinterested efforts to assist Catholics roused the antagonism of his colleagues who took the first pretext to let loose a storm of abuse against Hurter. As a result he resigned his dignities in 1841, lived in retirement for three years, and in 1844 went to Rome, where on 16 June he made his profession of faith before Gregory XVI, his conversion being the signal for renewed attacks. In 1846 he was appointed imperial counsellor and historiographer at the Court of Vienna, and took up the task assigned him, the life of Emperor Ferdinand II, which, however, was withheld from the press by the court censors, but appeared later at Schaffhausen. The Revolution of 1848 involved the loss of Hurter's position at Court, to which, however, he was restored in 1852. Till his death he laboured for the spread of the Catholic religion, especially in connexion with the foreign mission field; he was also in close touch with the greatest scholars of the day. He was appointed by the pope a commander of the Order of St. Gregory, and was a member of the academies of Rome, Munich, Brussels, and Assisi. In addition to his "Leben Innocenz III" (4 vols., Hamburg, 1834-42), Hurter was the author of "Denkwürdigkeiten aus dem letzten Dezennium des 18. Jahrhunderts" (1840); "Geburt und Wiedergeburt" (Schaffhausen, 1845-46), an autobiography; "Geschichte Kaiser Ferdinands II. und seiner Eltern" (Schaffhausen, 1850-65); "Philipp Lang, Kammerdiener Kaiser Rudolfs II." (Schaffhausen, 1851); "Beiträge zur Geschichte Wallensteins" (Freiburg im

Br., 1855); "Französische Feindseligkeiten gegen Oesterreich zur Zeit des dreißigjährigen Krieges" (Vienna, 1859); "Wallensteins vier letzte Lebensjahre" (1862).

(2) HEINRICH VON HURTER, son of the preceding, b. at Schaffhausen, 8 August, 1825; d. at Vienna, 30 May, 1895. He was ordained to the priesthood in 1851, and later appointed to a benefice at Vienna. Besides volumes of sermons, his writings include: "Konzil und Unfehlbarkeit" (1870); "Schönheit und Wahrheit der katholischen Kirche" (9 vols., 1871-78); "Friedrich von Hurter und seine Zeit" (2 vols., 1876).

(3) HUGO VON HURTER, distinguished theologian; b. at Schaffhausen, 11 January, 1832; ordained priest in 1855. From 1849 to 1856 he studied at the Germanicum in Rome, where he was made doctor of philosophy and theology. In 1857 he entered the Society of Jesus, and in 1858 was appointed to the theological faculty of the University of Innsbruck. His chief works are: "Theologiæ dogmaticæ compendium" (3 vols., Innsbruck, 1876-78; 11th ed., 1903); "Nomenclator litterarius theologiæ catholicæ" (3 vols., Innsbruck, 1871-86; 3rd ed., 5 vols., 1903); "Medulla theologiæ dogmaticæ" (2 vols., Innsbruck, 1870; 7th ed., 1902). He also edited the collection "Selecta opuscula SS. Patrum" (54 vols., 1868-92).

HEINRICH VON HURTER in *Kirchenlex.*; HUGO VON HURTER, *Nomenclator*.

F. M. RUDGE.

Hus (Heb. חוּשׁ; Sept., Ὀῦς, ὄσ), the name of three persons, and a land mentioned in the Old Testament.

I. Hus, son of Aram and grandson of Sem (Gen., x, 23, Vulgate, Us; 1 Par., i, 17, Vulgate, Hus).

II. Ius, eldest son of Nachor and a nephew of Abraham (Gen. xxii, 21).

III. Hus, son of Dيسان, sprung from Esau of the land of Edom (Gen. xxxvi, 28; 1 Par., i, 42).

IV. HUS (LAND OF) (Sept., *Abôrîs*; Vulgate, Hus, Job, i, 1; Lam., iv, 21; Ausitis, Jer., xxv, 20) was the home of Job and a territory in which the descendants of one of the three above-named persons had likely settled. There is much difference of opinion as to the connexion of the three persons named Hus with each other and with the land of that name. Three times is this land named in the Old Testament. The chief mention is in Job, i, 1. The holy man lived in the land of Hus. Job's estate was open to attack from the Chaldeans and Sabeans (Job, i, 15 and 17); and lay to the north of the latter and to the west of the former folk, near to the edge of the great desert. This site explains the havoc made by the wind (Job, i, 19). We are led to this view also by the names of the native countries of the friends of Job. Eliphaz the Themanite had an Edomite name and came from an Edomite land. In Gen., xxxvi, 11, Theman is a son of Eliphaz and a descendant of Esau the Edomite. Hence Job's estate was in a land occupied by Edomites. Job's second friend, Baldad the Suhite, was from Shuah, a place that has been identified with Suḥu of Tigleth-pileser II. He says Suḥu lay one day's journey from Carchemish in the land of Ḥatti, i. e. one day's journey from the Euphrates on the way through the land of the Hittites. Hus would, then, seem to have been Uzza of Shalmanesar.

Uzza can readily have been Uz. Delitzsch places the land of Uzza W. and N.W. of Haleb (Alep). His conjecture is due to the fact that Shalmanesar II received tribute from a certain "son of the land of Uzza", whom he made king over Patinu. Local tradition puts the land of Hus in the Hauran, a little south of Nawa. Here is a monastery that bears the name of the saintly Job, *Deir cy-yub*; hard by the monastery, are the supposed site of his affliction *makim cy-yub* (Job's station), the very trough in which he washed thereafter, and the well from which he drew water for his purification. Such details are the usual apantage to local traditions in the Orient.

The Hauran is set down to be the land of Hus by St. Ephraem (Prol. in Job) and St. Jerome ("Onomasticon", ed. Larsow, 1862, p. 254). Josephus (Ant., I, vi, 4) sets down Trachonitis and Damascus; the Septuagint, in an epilogue at the end of its translation of Job, tells us he lived "in Ausitis on the confines of Edom and Arabia". Friedrich Delitzsch favours Tudmor (Palmyra) as the land of Uz spoken of in Assyrian inscriptions. He denies that Uzza was Uz.

WALTER DRUM.

Hus and Hussites.—JOHN (JAN) HUS, b. at Husinetz in Southern Bohemia, 1369; d. at Constance, 6 July, 1415. At an early age he went to Prague where he supported himself by singing and serving in the churches. His conduct was exemplary and his devotion to study remarkable. In 1393 he received the degree of Bachelor of Arts from the University of Prague and in 1396 the master's degree. He was ordained a priest in 1400 and became rector of the university 1402-03. About the same time he was appointed preacher in the newly erected Bethlehem chapel. Hus was a strong partisan on the side of the Czechs, and hence of the Realists; and he was greatly influenced by the writings of Wyclif. Though forty-five propositions of the latter were proscribed in 1403 by ecclesiastical authority, Hus translated Wyclif's "Trialogus" into Czech and helped to circulate it. From the pulpit he inveighed against the morals of clergy, episcopate, and papacy, thus taking an active part in the movement for reform. Archbishop Zbyněk (Sbinco), however, was not only lenient with Hus, but favoured him with an appointment as preacher to the biennial synod. On the other hand Innocent VII directed the archbishop (24 June, 1405) to take measures against the heretical teachings of Wyclif, especially the doctrine of impanation in the Eucharist. The archbishop complied by issuing a synodal decree against these errors; at the same time he forbade any further attacks on the clergy. In the following year (1406) a document bearing the seal of the University of Oxford and eulogizing Wyclif was brought by two Bohemian students to Prague; Hus read it in triumph from the pulpit. In 1408 Sbinco received a letter from Gregory XII stating that the Holy See had been informed of the spread of the Wycliffite heresy and especially of King Wenceslaus's sympathy with the sectaries. This stirred up the king to measures of prosecution and aroused the university to clear itself of the suspicion of heresy. At the June synod it was ordered that all writings of Wyclif should be handed over to the archdiocesan chancery for correction. Hus obeyed the order, declaring that he condemned whatever errors these writings contained.

About the same time a new conflict broke out on national lines. The king agreed to the "neutrality" plan proposed by the secessionist cardinals at the Council of Pisa (q. v.) and endeavoured to have it recognized by the university. The Czechs fell in with his wishes but the three other "nations" refused. The king then decreed (18 Jan., 1409) that in the university congregations the Czechs should have three votes, the other "nations" should have only one vote between them. In consequence the German masters and students in great numbers (5000 to 20,000) left Prague and went to Leipzig, Erfurt, and other universities in the North (see Rashdall, "Universities", II, 224 sq.). The king now forbade communication with Gregory XII and proceeded against those of the clergy who disregarded his prohibition. In consequence the archbishop placed Prague and the vicinity under interdict, a measure which cost many of the loyal clergy their position and property. Hus who had become once more rector of the university, was called to account by the archbishop for his Wycliffite

liffite tendencies and was reported to Rome, with the result that Alexander V, in a Bull of 20 December, 1409, directed the archbishop to forbid any preaching except in cathedral, collegiate, parish, and cloister churches, and to see that Wyclif's writings were withdrawn from circulation. In accordance with the Bull the archbishop at the June synod of 1410, ordered Wyclif's writings to be burned and restricted preaching to the churches named above. Against these measures Hus declaimed from the pulpit and, with his sympathizers in the university, sent a protest to John XXIII. The archbishop, 16 July, 1410, excommunicated Hus and his adherents. Secure of the royal protection, Hus continued the agitation in favour of Wyclif, but at the end of August he was summoned to appear in person before the pope. He begged the pope to dispense with the personal visit and sent in his stead representatives to plead his case. In February, 1411, sentence of excommunication was pronounced against him and published on 15 March in all the churches of Prague. This led to further difficulties between the king and the archbishop, in consequence of which the latter left Prague to take refuge with the Hungarian King Sigismund, but died on the journey, 23 September.

Hus meanwhile openly defended Wyclif, and this position he maintained especially against John Stokes, a licentiate of Cambridge, who had come to Prague and declared that in England Wyclif was regarded as a heretic. With no less vehemence Hus attacked the Bulls (9 Sept. and 2 Dec., 1411) in which John XXIII proclaimed indulgences to all who would supply funds for the crusade against Ladislaus of Naples. Both Hus and Jerome of Prague aroused the university and the populace against the papal commission which had been sent to announce the indulgences, and its members in consequence were treated with every sort of indignity. The report of these doings led the Roman authorities to take more vigorous action. Not only was the former excommunication against Hus reiterated, but his residence was placed under interdict. Finally the pope ordered Hus to be imprisoned and the Bethlehem chapel destroyed. The order was not obeyed, but Hus towards the end of 1412 left Prague and took refuge at Austi in the south. Here he wrote his principal work, "De ecclesiâ". As the king took no steps to carry out the papal edict, Hus was back again at Prague by the end of April, 1414, and posted on the walls of the Bethlehem Chapel his treatise "De sex erroribus". Out of this and the "De ecclesiâ" Gerson extracted a number of propositions which he submitted to Archbishop Konrad von Vechta (formerly Bishop of Olmütz) with a warning against their heretical character. In November following the Council of Constance assembled, and Hus, urged by King Sigismund, decided to appear before that body and give an account of his doctrine. At Constance he was tried, condemned, and burnt at the stake, 6 July, 1415. The same fate befell Jerome of Prague, 30 May, 1416. (For details see CONSTANCE, COUNCIL OF.)

HUSSITES.—The followers of Hus did not of themselves assume the name of Hussites. Like Hus, they

believed their creed to be truly Catholic; in papal and conciliar documents they appear as Wycliffites, although Hus and even Jerome of Prague are also named as their leaders. They wisely objected to the appellation of Hussites, which implied separation from the Universal Church; willing to venerate Hus as a holy martyr of the old religion, they refused to see in him the founder of a new one. Only about 1420, with the beginning of the Hussite Wars, does the new name occur, first in the neighbouring lands; then it gradually imposes itself as connoting both the original followers of Hus and the subsequent smaller sects into which they divided. The distinctive tenet of the Hussites is the necessity, alike for priest and layman, of Communion under both kinds, *sub utraque specie*, whence the term *Utraquists*. Hus himself never preached Utraquism. During his presence at the

JOHN HUS

Council of Constance, his successor in influence at the University of Prague, Jacobellus von Mies, taking his stand on the Bible as the supreme rule of faith and practice in the Church, persuaded the people that partaking of the chalice was of absolute necessity for salvation, this being expressly taught by Christ: "Amen, amen I say unto you: Except you eat the flesh of the Son of man, and drink his blood, you shall not have life in you." (John, vi, 54.)

Three parishes at once adopted the innovation. Former unauthorized sermons by Jacobellus, and trespasses on episcopal rights by the parish clergy, had prepared the ground in these particular places. The introduction of the lay chalice was regarded by many well-intentioned men as the outward sign of a nascent schism. These withdrew from the movement, but the people at large eagerly joined it as if the chalice were a panacea for all the evils of the time. Their eagerness is partly accounted for by a kind of crusade in favour of frequent and even daily Communion, and by a huge mass of eucharistic literature in Bohemia during the fourteenth century. As far back as 1380 a priest in Prague (Altstadt) is said to have preached to his parishioners the necessity of Communion under both kinds. Jacobellus was excommunicated, and Andreas von Brod confuted his teaching in a treatise; but he continued preaching and answered Andreas's tract by one of his own. Hus, then in Constance, was consulted. In a letter to the Knight von Chlum, he said: "it would be wise not to introduce such an innovation without the approbation of the Church." Soon, however, seeing how the council upheld the existing practice, he inveighed against it and maintained that Christ and the Apostle Paul should be obeyed by giving the chalice to the laity; he also entreated the Bohemian nobles to protect the lay chalice against the council. These last words of Hus, written in sight of his funeral pyre, aroused Bohemia. In Prague the priests faithful to the Church were driven out of their parishes and replaced by Utraquists; in the country the nobles likewise filled all the parishes in their gift with men of the new discipline.

The change caused many excesses. Bishop Johann of Leitomischl had all his possessions devastated by the neighbouring nobles because of his strenuous opposition to Hus at Constance. King Wenceslaus (Wenzel) did not interfere. He had a grudge against

the Emperor Sigismund for the rôle he played at the council, and he regarded the execution of Hus as an infringement of his royal rights. Meanwhile the fathers assembled in council at Constance sent earnest letters to the civil and ecclesiastical authorities in Bohemia, insisting on complete extirpation of the dangerous heresy (July, 1415); and gave ample powers to the Bishop of Leitomischl as legate for the same purpose. The Bohemian and Moravian nobles took up the gauntlet. Four hundred and fifty-two of them appended their seals to a joint answer to the council, setting forth their conviction that the sentence on Hus was unjust and insulting to their country; that there were no heretics in Bohemia, that any assertion to the contrary was itself a heresy of the worst kind. This document bears date 2 Sept., 1415. Three days later they formed an offensive and defensive league, by which they bound themselves for six years to grant on their estates to all priests applying for it freedom to preach the word of God, and protection against episcopal prosecutions for heresy, and against excommunication except from the local bishops. The clergy, however, should obey a lawfully elected pope in all things not contrary to God and God's law. The authority of the council was thereby set at naught; the Wycliffite principle that the laity should restrict and restrain the power of the clergy was fully applied.

The Catholics did not remain idle; episcopal ordinances of 5 Sept. enjoined the publication in all churches of the prohibition of the lay chalice; a decree of 18 Sept. inhibited vagrant, i. e. Utraquist, preachers; a league of Catholic lords was formed on 1 Oct.; it consisted mostly of the southern and northern gentry accessible to German influence. King Wenceslaus was on their side in word if not in deed. Before this favourable turn of events became known to it, the council, in its ordinary proceedings against Wycliffism, took a step of the gravest consequences, viz. the laying of the interdict on Prague for sheltering Johann of Jesenic, already excommunicated in 1412. Armed crowds of citizens invaded every church and monastery where Divine service had been suspended in obedience to the interdict, drove out all priests and monks unwilling to submit to the popular will, robbed them of their possessions and put Utraquist clergy in their places. The whole country followed the example of the capital; the king and the magistrates looked on without concern. The council's legate, Bishop Johann of Leitomischl, was powerless to stem the evil tide. Probably on his denunciation the four hundred and fifty-two signatories of the Utraquist covenant, together with Archbishop Conrad of Prague and Wenceslaus, Bishop of Olmütz, were summoned to appear before the council as suspected of heresy. Archbishop Conrad had been remiss in carrying out the conciliatory measures; in the beginning of 1416 he had, in concert with the king, suspended the interdict on the far-off chance of thus conciliating the dissidents. The council was even then (1416) determined to use the secular arm against the King of Bohemia and his unruly land, but Sigismund, with whom lay the execution, refused his aid, hoping, as he said, to come to an understanding with King Wenceslaus.

The University of Prague was preponderatingly Utraquist; the council, therefore, towards the end of 1416, suspended all its privileges and forbade, under excommunication, all further academical proceedings. The lecturers, however, continued to lecture as before; but the chancellor, Archbishop Conrad, refusing his co-operation, no new degrees could be conferred. Notwithstanding the turbulent spirit of many masters, the influence of the university as a whole was moderating. Thus, e. g. 25 Jan., 1417, when some fanatical country parsons had destroyed the images and profaned the relics of their churches, the university, in virtue of the teaching authority it claimed, sent to all the faithful an exhortation to abstain from innova-

tions and to hold fast to old customs. The noblemen of the Hussite league ordered the clergy dependent on them to conform to their teaching. This act in the right direction was followed on 10 March, 1416, by another which gave Utraquism the sanction of the only teaching authority then recognized in the country. The rector, Johann von Reinstein (surnamed Cardinalis), declared, with the consent of all the *Magistri*, that Communion under both kinds is an ordination of Christ Himself and a practice of the ancient Church, against which no human ordinances of later date could prevail. The declaration had been given in answer to questions by members of the Hussite league, and it was acted upon, wherever they ruled, with such thoroughness that the Utraquist clergy was insufficient to fill the places of the ejected Catholic priests. The head of the league, Vincenz von Wartenberg, found a way out of the difficulty. He waylaid the Auxiliary Bishop of Prague, confined him in a stronghold, and forced him to ordain as many Utraquist candidates for the priesthood as were needed.

The archbishop henceforth withheld ordination and benefices from all who did not abjure Wycliffism and Utraquism. The Council of Constance meanwhile gave continued attention to Bohemian affairs. Martin V who, in 1411, as Cardinal Colonna, had terminated the trial of John Hus with the sentence of excommunication, now, as pope, confirmed all the council's enactments regarding him and his followers; he wrote to all whom it might concern to return to the Church or to lend their aid in suppressing the new heresies. Before the close of the council he addressed to King Wenceslaus a rule containing twenty-four articles, designed to bring back the religious status of the country to what it was before the Hussite upheaval. The task was heavy, and perhaps uncongenial to King Wenceslaus. Could he force all Wycliffites and Hussites to abjure or to die, reinstate all ejected priests in their benefices, maintain Catholic ascendancy? He made no attempt. In June, 1418, he forbade the exercise of foreign jurisdiction over his subjects, a measure which put a stop to the work of the cardinal legate, Giovanni Domenico. The same year saw the arrival of foreign sectarians, Beghards—called Pickarts—attracted by Bohemia's fame for religious liberty, and of the Oxford Wycliffite, Peter Payne, admitted to the faculty of arts at the university. The university, apprehensive of doctrinal excesses, assembled (September, 1418) the whole party, the *Communitas fratrum*, in order to come to an agreement on doubtful points. The assembly granted Communion to new-born infants, but forbade all deviation from tradition except where it was evidently opposed to Scripture, as in the case of Utraquism.

In 1419 Utraquism received an accession of strength from the repressive measures against it. King Wenceslaus at last giving way to the pope, and the emperor threatening a "crusade" against Bohemia, banished Johann of Jesenic from Prague and commanded that all ejected Catholic beneficiaries should be reinstated in their offices and revenues. The people, accustomed by this time to Utraquist ministrations, resented the change; they fought for their churches and schools; blood was shed, but the king's ordinance was executed wherever his authority was strong enough to enforce it. The success was, however, far from complete. The Utraquist clergy, followed by their numerous adherents, now assembled on the hills, to which they gave Scriptural names, such as Tabor, Horeb, Mount Olivet etc. In July, 1419, "Mount Tabor" was the scene of an epoch-making assembly. Nicolaus of Husinec, banished by Wenceslaus as a dangerous agitator, had brought together 42,000 Utraquists; they listened to Utraquist preachers, received the chalice, and spent the day in organizing resistance to any interference with their religion;

they sent a message to the king that they, one and all, were ready to die for the chalice. In Prague itself matters had gone even further. Ziska of Troznov, like Nicolaus of Husinec, a former favourite of the king, had taken the lead of the malcontents and familiarized them with the thought of armed resistance.

Ziska belonged to the inferior nobility of southern Bohemia; he had distinguished himself both as an undaunted fighter and as an excellent leader of men. Johann, formerly a Premonstratensian monk of Selau, now a zealot for Utraquism, on 30 July, 1419, carried the Blessed Sacrament in procession through the streets of Prague (Neustadt); the processionists, excited by a fiery sermon of their leader, first penetrated into St. Stephen's church which had been closed to them; then they assembled in front of the town hall, where Johann, still holding up the Blessed Sacrament, demanded from the magistrates the release of several Utraquists imprisoned for previous disturbances. The magistrates refused and prepared for resistance. Ziska ordered the storming of the town hall: all persons found therein were thrown out of the windows on to the spears and swords of the processionists, and hacked to pieces, whilst Johann called on God in His Sacrament to inflame their murderous fury. The mob there and then elected four captains, called all men to arms and fortified the Neustadt. King Wenceslaus swore death to all the rebels, but a stroke of apoplexy, caused by excitement, carried him off, 16 August, 1419. The next months were marked by deeds of violence against the faithful clergy, by wanton destruction of church furniture, and by the burning of monastic houses. Many citizens, especially Germans and the higher clergy, sought safety in flight.

Wenceslaus's successor on the Bohemian throne was his brother Sigismund, German Emperor and King of Hungary. He had been the very soul of the Council of Constance; but the Bohemians, holding him responsible for the death of their beloved Hus, disliked and distrusted him. Nor was Sigismund eager to assume the ruling of this troubled kingdom. He tarried in Hungary, leaving Bohemia to be governed by the queen-widow and Vincenz von Wartenberg, the chief of the Utraquist league. The popular masses, led by the lesser nobility and fanatical priests, now began to multiply their meetings on "holy" mountains—Tabor—and to move towards Prague in armed bands. The queen regent, with the assent of the higher nobility, forbade them to meet or even to come near to Prague. In various encounters Ziska and Nicolaus of Husinec successfully resisted the royal troops (4–9 Nov., 1419); an armistice was, however, concluded and Ziska withdrew to Pilsen. Sigismund now gave up his plans of a campaign against the Turks and resolved to restore his new kingdom to Roman unity. On his side were the Catholic nobles, the higher clergy, the Germans settled in the land, and all who had suffered persecution and losses at the hands of the sectarians; against him stood Ziska and Nicolaus of Husinec at the head of the peasantry. Sigismund took up the government in December, then went to Silesia to collect more troops. The Catholics regained courage. They were hard on the Utraquists wherever they were the stronger: in Kuttenberg, for instance, hundreds of captured Utraquists were thrown by the miners into the shafts of disused silver mines. The leaders of the people, meanwhile, built the impregnable stronghold of Tabor, whither the country people betook themselves with all their movable possessions, in order to await in the "community of the brethren" the things that were to come.

Here Utraquism entered upon a new development. The priests of Austi, starting from the principle that the Bible contained the *whole* teaching of Christ,

abolished every traditional rite and liturgy. There were to be no more churches, altars, vestments, sacred vessels, chants, or ceremonies. The Lord's Prayer was the only liturgical prayer; the communion table was a common table with common bread and common appointments; the celebrant wore his everyday clothes and was untoussured. Children were baptized with the first water at hand and without any further ceremony; they received Communion in both kinds immediately after Baptism. Extreme unction and auricular confession were abolished; mortal sins were to be confessed in public. Purgatory and the worship of saints were suppressed, likewise all feasts and fasts. Such a creed accounts for the fury of destruction which possessed the Hussites. Ziska spent his time in drilling his peasants and artisans into an army capable to withstand the dreaded knights in armour of the king's army. Clever tactics, apt choice of the battlefield, confidence in their chief and in their cause, made up for their defective armament: straightened scythes, flails, forks, and iron-shod cudgels were their weapons. Their religious fanaticism was heightened by a young Moravian priest, Martin Hauska, surnamed Loquis, who taught them to read in the Bible that the last days had come, that salvation was only to be found in the mountains—their Tabor—that after the great battle the millennium would reign on earth.

Sigismund's army had been strengthened by contingents from Hungary and other adjoining lands; all was ready for the fray. On 1 March, 1420, Pope Martin V issued a Bull inviting all Christians to unite in a crusade for the extermination of Wycliffites, Hussites, and other heretics: this Bull was read to the imperial diet assembled at Breslau on 17 March. Its effect was terror on the Catholic side, holy enthusiasm and closest union for deadly warfare on the side of the Taborites. Many Catholics took to flight; the Utraquist nobles renounced their allegiance and declared war on Sigismund "who had brought the slander of heresy on the land"; a secret embassy offered the Bohemian crown to King Wladislaw II of Poland. The energetic Ziska at once began operations in southern Bohemia: royal towns, fortresses, and monasteries fell into his hands: these latter were plundered and destroyed. Königgrätz submitted, as did also some nobles disgusted with the excesses of the Taborites. Whilst the king was waiting for the "crusaders" from Germany, he had seventeen Utraquists drowned in the Elbe at Leitmeritz, and two burnt at Echlau. The rebels retaliated by setting fire to several monasteries near Prague and by burning the monks. The "crusading" army arrived in July; with the king's troops they were 100,000 strong. Before engaging in battle, the papal legate, Ferdinand of Lucca, examined the "Four Prague Articles", i. e. four points on the granting of which the rebels would submit.

These articles emanated from the university. In substance they are: (1) The Word of God is to be freely examined by Christian priests throughout the Kingdom of Bohemia and the Margravate of Moravia. (2) The venerable Sacrament of the Body and Blood of Jesus Christ is to be given in two kinds to adults as well as to children, as Jesus Christ has instituted. (3) The priests and monks, of whom many meddle with the affairs of the State, are to be deprived of the worldly goods which they possess in great quantities, and which make them neglect their sacred office; and their goods shall be restored to us, in order that, in accordance with the doctrine of the Gospel, and the practice of the Apostles, the clergy shall be subject to us, and, living in poverty, serve as a pattern of humility to others. (4) All the public sins which are called mortal, and all other trespasses contrary to the law of God, are to be punished according to the laws of the country, by those in charge of them, in order to

wipe from the Kingdom of Bohemia and the Margravate of Moravia the bad reputation of tolerating disorders." The legate concluded his examination by a demand of almost unconditional submission. The "Calixtines", now so called from the chalice which decorated their flags, weapons, and clothes, took up the unequal fight; on 14 July, 1420, they inflicted a signal defeat on the crusaders. Sigismund had recourse to new negotiation on the four articles. But seeing his best supporters wavering, he had himself crowned in the cathedral of Prague (28 July), and two days later he dissolved the crusading army. In order to pay his mercenaries he turned the treasures of several churches into money, and pledged their lands to the nobles, who never parted with them again.

The Utraquist magistrates imposed their whole will on the town and the university; riots and deeds of violence occurred everywhere; the wealthy monasteries were the first and greatest sufferers. Many of the best citizens proclaimed their horror at the destruction of the fairest buildings and their disgust with the Taborite forms of worship. In Prague, however, they were kept down by Johann of Selau, who had assumed a kind of dictatorship; in the country the Taborite leaders themselves thought it better to give another direction to the destructive mania of their followers. Ziska in the southern borderlands and the Prague army added victory to victory; the strong town of Wysehrad surrendered, 1 Nov., 1420, after a crushing defeat of Sigismund's troops. The rebels, now sure of their power, offered the Bohemian throne to King Wladislaw II of Poland. In March, 1421, King Wenceslaus returned to Hungary, leaving his country almost defenceless. By June of the same year the Hussites had established their dominion over the whole kingdom, with the exception of a few northern and western border districts. The inhabitants were asked to accept the Four Prague articles or to emigrate within a stated time; captains and sheriffs were appointed to rule the towns with royal powers. Thus Utraquism and home rule supplanted Catholicism and German rule. The nobility accepted the new order; Archbishop Conrad of Prague adapted the four articles (21 April, 1421), ordained Utraquist clergy, and invited the older clergy likewise to conform. The metropolitan chapter, however, who had fled to Zittau and Olmütz, remained faithful, and appointed the "iron" Johann of Leitomischl, later of Olmütz, administrator of the archdiocese: the Hussites never had a sterner enemy.

Among the Taborites a new sect arose about this time. The priest Martin Loquis taught these rabid levellers of monasteries and murderers of priests that Christ was not really present in the Eucharist, consequently, that worshipping the sacrament was idolatry. Sacrilegious profanations became the order of the day. Proceedings were taken by the Utraquist authorities, advised by the university, against the innovators. Loquis and another were taken prisoners, dragged through the country, cruelly tortured, and finally burnt in a barrel. His four hundred followers were expelled from Tabor. For some time they roamed through the country "as avenging angels", robbing, burning, and killing. Ziska, in disgust, had twenty-four—others say fifty—of the worst put to death by fire. The remainder, reinforced by some fanatical Chiliasts, formed a sect of Adamites, subject to no law and possessing their women in common. Ziska surrounded them on their island in the River Nežárka and exterminated them to the last man (Oct., 1421). The summer of 1421 was employed by the Hussites in consolidating their new power. Successful expeditions penetrated to the north-western border, burned more monasteries, killed more monks, priests, and inoffensive citizens; but here also they suffered their first serious defeat at the hands of Catholic knights and the troops of Meissen

(5 Aug., 1421). As early as April a second army of crusaders, twice as strong as the first, had been forming at Nuremberg, while Sigismund was expected to bring up his Hungarian army. The crusaders laid siege to Saaz.

On 2 Oct. the news spread that Ziska was coming to the rescue of the besieged. This perhaps false information sufficed to disperse the crusaders and their five leaders in all directions in disorderly flight. Not a blow was struck. Sigismund entered Moravia, which he reduced to submission, and met Ziska in battle at Kuttenberg. The stronger battalions were on the emperor's side, but Ziska fought his way through them and shortly afterwards, at Deutsch-Brod, almost annihilated them (8 Jan., 1422). This victory kept the Hussites' foreign foes in wholesome fear for many years; new crusades were indeed preached year after year, but not carried out. The field was left free for internal dissensions to undo what had so far been done. Prague began by shaking off the tyrannical dictatorship of Johann of Selau: with twelve of his partisans he was beheaded, 9 March, 1422. The mob avenged his death by ravaging the university, colleges, and libraries. Next, civil war broke out between, on the one hand the Taborites under Ziska, a few southern towns and Saaz with Laun in the north-west; and on the other, Prague with the whole nobility and the other towns. Its cause was the proposal to unite all parties under the administration of Sigismund Korybut, a nephew of the Grand Duke Witold of Lithuania, who had accepted the Bohemian crown refused by the King of Poland, and appointed Korybut as governor. The first victory again was Ziska's (end of April, 1423). Some futile negotiations followed. From January to September, 1424 the Taborites waged a most successful war, which led their victorious army up to the gates of the capital Korybut and Prague now sent to Ziska the eloquent priest Rokyzana, who succeeded in bringing about a complete understanding between the parties. They then joined in an expedition against Moravia. Close to the Moravian frontier, at Přibislau, Ziska fell ill and died (14 Oct., 1424).

His death was followed by new groupings of the parties. The closer partisans of Ziska, who represented the moderates, now took the name of "Orphans"; their priests still said Mass in liturgical vestments and followed the old rite; the more extreme Taborites chose new chiefs, of whom the most prominent was Andrew Procopius, a married priest surnamed "the Great" or "the Shaven", to distinguish him from Little Procopius (Prokupek) who in time became the spiritual leader of the Orphans. Orphans and Taborites fought together against any common foe; when there was no common foe they fought or quarrelled with one another. Their united forces, under Procopius the Shaven, won the battle of Aussig on the Elbe (16 June, 1426), in which 15,000 Germans and many Saxon and Thuringian nobles lost their lives, but they were beaten in their turn by Albert of Austria, at Zwettel, 12 March, 1427. Whilst these horrible wars were laying waste the country, the *Magistri* of Prague, *pro tem.* the supreme judges in matters of Faith, divided into two parties. Rokyzana, Jacobellus, and Peter Payne favoured a nearer approach to the Taborite innovations; others had gained the conviction that peace and union were only to be found in returning to the Roman allegiance; the chalice for the laity was the only point they wished to retain. Korybut, the governor, favoured the latter view. He engaged in secret negotiations with Pope Martin V, but the secret having leaked out, Rokyzana, at the head of the populace of Prague, seized him and confined him to a fortress (17 April, 1427). The Hussites under Procopius the Shaven now raided Lusatia and Silesia. In July, 1427, a third army of crusaders, some 150,000 strong, entered

Bohemia from the west: Procopius met and defeated them at Mies (4 Aug.). Another army coming from Silesia had a similar fate.

Being complete masters of the situation at home, the Hussites set out for further raids abroad. Their own country was lying waste after so many years of war; the people had become a huge horde of brigands bent on bloodshed and plunder. In the years 1428-1431 the combined Orphans, Taborites, and the townsmen of Prague invaded Hungary, laid waste Silesia as far as Breslau, plundered Lusatia, Meissen, Saxony, and advanced to Nuremberg, leaving in their track the remains of flourishing towns and villages, and devastated lands. Negotiations for an armistice came to naught. When the raiders returned in 1430 they had with them 3000 wagons of booty, each drawn by from six to fourteen horses; a hundred towns and more than a thousand villages had been destroyed. In 1431 a fourth crusade, sent by the unbending Martin V, entered Bohemia. The crusaders numbered 90,000 foot and 40,000 horse; they were accompanied by the papal legate and commanded by the Electoral Prince Frederick of Brandenburg. They met a strong army of Hussites at Taus: the wild war-songs of the enemy filled the soldiers of the Cross with uncontrollable fear: once more they fled in disorder, losing many men and 300 wagons of stores (14 Aug., 1431). After so many reverses the Catholics realized that peace was only to be attained by concessions to the Hussites. Advances were made by Emperor Sigismund and by the Council of Basle, then sitting: a meeting of the contending parties' delegates took place at Eger, where preliminaries for further discussion at Basle were agreed upon. Meanwhile the excommunicated Archbishop Conrad of Prague and the "iron" Bishop Johann of Olmütz died, and the Utraquist Rokyzana had an eye on the See of Prague: it was therefore his interest to make further peace negotiations with Rome. The Taborites, on the contrary, continued the war, heedless of the Eger arrangements; they raided Silesia and Brandenburg, advancing as far as Berlin, and fought Albert of Austria in Moravia and in his own Austrian dominions.

At length, 4 Jan., 1433, a deputation of fifteen members, provided with safe-conducts and accompanied by a numerous train, arrived at Basle. Discussion on the Four Articles of Prague lasted till April without any result. The deputies left Basle on 14 April, but with them went a deputation from the council to continue negotiations with the diet assembled at Prague. Here some progress was made, notwithstanding the opposition of Procopius and the extreme Taborites, who were loth to lay down their arms and return to peaceful pursuits. The conferences dragged on till 26 November, 1433. The council, chiefly bent on safeguarding the dogma, consented to the following disciplinary articles, known as the *Compactata* of Basle: (1) In Bohemia and Moravia, communion under both kinds is to be given to all adults who desire it; (2) All mortal sins, especially public ones, shall be publicly punished by the lawful authorities; (3) The Word of God may be freely preached by approved preachers but without infringing papal authority; (4) Secular power shall not be exercised by the clergy bound by vows to the contrary; other clergy, and the Church itself, may acquire and hold temporal goods, but merely as administrators etc. In substance the *Compactata* reproduced the Four Articles of Prague. They were accepted by the delegates, but further discussion on minor points led to a new rupture and in the beginning of 1434 the delegates left Basle. A new party now arose: the friends of the *Compactata*. It soon gathered strength enough to order the Taborites, who were besieging Pilsen and infesting the country, to dissolve their armed bands. Instead of dispersing they brought all their forces together at Lipau near Prague and offered battle: here they suffered a crush-

ing defeat from which they never recovered. Their two best leaders, Procopius the Shaven and Prokupek, were killed (30 May, 1434).

The tedious negotiations, in which religious, political, and personal interests had to be satisfied, went on with various vicissitudes until 5 July, 1436, when the Bohemian representatives at the Diet of Iglau, solemnly accepted the *Compactata* and promised obedience to the council: the representatives of the council, on their side, removed the ban from the Bohemians and acknowledged them as true sons of the Church. The diet accepted Sigismund as King of Bohemia: on 23 August he entered Prague, and took possession of his kingdom. Henceforth the Utraquists or Calixtines and the Subunists (*sub una specie*) had separate churches and lived together in comparative peace. Priests were ordained for the Utraquist rite. New difficulties were created by Rokyzana's failing to obtain the bishopric for which he had so long agitated, and which he had been promised by Sigismund. His partisans went back to former aberrations, e. g. they re-established the feast of the "Holy Martyr Hus" on 6 July.

In 1448 Cardinal Carvajal came to Prague to settle the ever open question of Rokyzana's claims. Having demanded restitution of confiscated church property as the first step, he was threatened with murder, and fled. In December of the same year Rokyzana returned to Prague as president of the Utraquist consistory. The governor, George Podiebrad, supported him in his disobedience to Rome and nullified all Roman attempts at a final settlement; he opposed St. John Capistran, who was then converting thousands of Utraquists in Moravia. As things were going from bad to worse, Pope Pius II, who had had long experience of the sectarians at Basle and as legate to Prague, refused to acknowledge the Utraquist rite, and declared the *Compactata* null and void, 31 March, 1462. Podiebrad retaliated by persecuting the Catholics; in 1466 he was excommunicated by Paul II; there followed other religious and civil wars. In 1485 King Wladislaw granted equal liberty and rights to both parties. Judging by its results this was a step in the right direction. By degrees the Utraquists conformed to the Roman rites so as to be hardly distinguishable from them, except through the chalice for the laity. In the sixteenth century they resisted Lutheran inroads even better than the Subunists. Their further history is told in the article **BOHEMIAN BRETHREN**.

J. WILHELM.

Husenbeth, FREDERICK CHARLES, b. at Bristol, 30 May, 1796; d. at Cossey, Norfolk, 31 Oct., 1872. The son of a Bristol wine-merchant and of a lady of Cornish family, a convert to Catholicism, he was sent at the age of seven to Sedgley Park School in Staffordshire, and at fourteen entered his father's counting-house. Having formed the resolution, three years later, to study for the priesthood, he returned to Sedgley, going afterwards to Oscott College, where he was ordained by Bishop Milner in 1820. After serving the Stourbridge mission, near Oscott, for a time, he was sent to Cossey Hall, Norfolk, as chaplain to Sir George Stafford Jerningham, who became Baron Stafford in 1824. He took up his residence in a cottage in the village, and continued his ministrations here to the Catholics of the mission until within a few months of his death. During this long period, extending over more than half a century, he is said to have been absent from his mission only on three Sundays. Seven years after his appointment to Cossey he became grand vicar under Bishop Walsh,

successor of Bishop Milner as Vicar-Apostolic of the Midland District. In 1841 he opened St. Wulstan's Chapel, for which he had been assiduous in collecting funds, and in 1850 he received the degree of Doctor of Divinity from Rome. Shortly after the restoration of the English hierarchy by Pope Pius IX, Dr. Husenbeth was nominated provost of the Chapter of Northampton, and Vicar-General of the diocese. In the spring of 1872 he resigned his mission, and he died at St. Wulstan's Presbytery on the last day of October in the same year.

Dr. Husenbeth's personal character was attractive, for he possessed not only piety, learning, and culture, but also a singularly kind heart, agreeable manners, conversational powers of a high order, and a sense of humour which made him a very pleasant companion. He was the survivor of a race of clergy belonging to a past era, and was not devoid of certain old-fashioned prejudices, common to the ecclesiastics of his time. These kept him somewhat out of touch with the development of Catholicism in England which had followed the Oxford movement and the re-establishment of the regular hierarchy. He had no particular liking for religious orders, and was quite opposed to the new forms of devotion which had grown up since his student days at Oscott. He was nevertheless a faithful and assiduous pastor, and full of zeal for the religious welfare of his flock. Among his accomplishments were music and painting, and he executed a number of clever sketches in the course of an Alpine tour which he took in his student days.

During the fifty-two years which Dr. Husenbeth spent in his quiet country presbytery, he found ample leisure time for study and literary labours, and between the years 1823 and 1849 forty-nine works written or edited by him appeared in London, Dublin, and Norwich. Many of these were controversial publications, written in refutation of George Stanley Faber and Blanco White, while others treated of historical, liturgical, or doctrinal matters. Perhaps his most important work is the "Life of Bishop Milner", published in 1862, which, while marred by many defects as a biography, is an important contribution to the history of Catholicism in England. In 1852 he brought out, assisted by Archbishop Polding, O.S.B., a new edition, with abridged notes, of Haydock's illustrated Bible; and he published also at different times admirable editions, for the use of the laity, of the Missal and the vesper-book. The "Emblems of Saints" (1850) was one of his best original works, and the style of his pulpit eloquence is well shown by the various sermons which he printed from time to time.

Dr. Husenbeth contributed a large number of poems and fugitive verses to the periodicals of his time, and was urged in various quarters to collect and publish these, but he never seems to have done so. He also published articles on a great variety of subjects in different Catholic journals, and was a life-long writer in the columns of "Notes and Queries", in which more than thirteen hundred contributions appeared over his initials. He was a voluminous letter-writer, and maintained a correspondence with various literary celebrities, and with many distinguished converts of his time. Dr. Husenbeth's valuable library, collection of crucifixes, reliquaries, and similar objects, and of letters chiefly on religious subjects, were sold at Norwich a few months after his death. Most of the letters passed into the possession of the Bishop of Northampton.

D. O. HUNTER-BLAIR.

Hussey, THOMAS, Bishop of Waterford and Lismore, b. at Ballybogan, Co. Meath, in 1746; d. at

Tramore, Co. Waterford, 11 July, 1803. At an early age he was sent to the Irish College of Salamanca, and after completing his studies joined the Trappists. His ability was such, however, that he was requested by the pope to take orders, was associated for a time with the court of the King of Spain, and soon became prominent in Madrid. In or about 1767 he was appointed chaplain to the Spanish embassy in London, and rector of the chapel attached to it. He made the acquaintance of Dr. Johnson, Edmund Burke, and other famous people, and was regarded by them as one of the ablest and best informed men of his time. In March, 1792, he was made a Fellow of the Royal Society. When the war between England and America broke out, the Spanish ambassador was obliged to leave London, Spain as well as France having taken sides against England, and Dr. Hussey was entrusted with Spanish affairs, and was thus brought into direct contact with George III, as well as with Pitt and other ministers. He was sent to Madrid to endeavour to detach Spain from the American cause, but without success. In Madrid he met Richard Cumberland, the dramatist, who, though jealous of him, speaks highly of his ability, incorruptibility, and courage, and declares that he would have headed a revolution to overthrow the English Church in Ireland. He took up the Catholic cause earnestly, and was deputed by the English Catholics to go to Rome to lay their position before the pope, but the Spanish embassy would not grant him leave of absence. George III, Pitt, and the Duke of Portland entrusted him with a mission to the Irish soldiers and militia in Ireland who were disaffected, but, when he heard their story, he pleaded in their behalf, much to the distaste of the Irish executive. Portland induced him to stay in Ireland to assist in the foundation of Maynooth College, and in 1795 he was appointed its first president. He was shortly after made Bishop of Waterford and Lismore. In 1797 he issued a pastoral to his clergy, strongly resenting Government interference in ecclesiastical discipline. This protest gave great offence to the ministers. He was received by the pope in March, 1798, and is said, but upon slight evidence, to have been a party to the Concordat between Pius VII and Napoleon. Lecky describes him as "the ablest English-speaking bishop of his time".

(The notice in *Dict. Nat. Biog.* is somewhat inaccurate.)

D. J. O'DONOGHUE.

Hutton, PETER, priest, b. at Holbeck, Leeds, Yorkshire, England, 29 June, 1811; d. at Ratcliffe, Leicestershire, England, 2 Sept., 1880. He was baptized at Lady Lane Chapel, then the only Catholic church in Leeds. His grandfather was a convert, and wished Peter's father to be a Benedictine monk, but he found that he had no vocation, so returned to a secular life and married. In his will he requested that his son Peter should be educated in a Benedictine college, and Peter was accordingly sent to Ampleforth in 1824, and began his novitiate in 1829. But owing to certain provisions of the Catholic Emancipation Act of that year, his superiors were, at least theoretically, debarred from professing novices, and, as they were unwilling to offend the authorities in any way, Peter was not professed. So in 1830 he went to Prior Park, where he taught classics. In 1835 the members of the Institute of Charity came to assist in the teaching, and Dr. Gentili shortly afterwards succeeded to the presidency of the college. Hutton was at this time a deacon, having been so for over five years; and he disliked the

advent of these foreign professors very much. The bishop then sent him to Louvain in 1836, where he studied till he was recalled to Prior Park in 1839 by Bishop Baines to replace Father Furlong (who had just joined the Order of Charity) as President of St. Peter's College. Hutton was ordained priest 24 September, 1839, and appointed president, and professor of Latin and Greek.

In 1841 he decided to give up his professorial career in order to enter the Order of Charity. In July, he was admitted to its novitiate at Loughborough, Leicestershire; but Bishop Baines strongly objected to this, deposed him from the presidency of St. Peter's, and ordered him to return to Prior Park as an ordinary professor. For a short period he complied with the bishop's commands, but in 1842 he suddenly left the college, in company with Father Furlong, and went to Italy, where they were hospitably received by Rosmini, the founder of the Institute of Charity. He completed his interrupted novitiate there, and made his vows 31 July, 1843. In 1844 he was appointed rector of the new college of the order at Ratcliffe-on-Wreake, Leicestershire. He next did some parochial work at Newport, Monmouthshire, and Whitwick, near Leicester. He then went to Shepshed, Leicestershire, as rector of the mission and master of the novitiate of Ratcliffe, which had been removed thither. In 1850 it was again transferred to Ratcliffe, and Hutton was then made vice-president of the college, and president in 1851. In addition to this he was appointed rector of the religious community in 1857.

Hutton was a strict disciplinarian, a sound theologian and classical scholar, a good mathematician, and an able preacher. During his administration, the students at Ratcliffe increased in numbers, and the buildings were greatly enlarged. He left in MS. translations of the principal Greek and Latin authors read at Ratcliffe, with copious notes, and many references to German critics. These are preserved at Ratcliffe.

GILLOW, *Bibl. Dict. Eng. Cath.*, s. v.; HIRST, *Brief Memoir of Father Hutton* (Market Weighton, 1886); *The Tablet*, LVI, 304-7, 339; SHEPHERD, *Reminiscences of Prior Park*.
C. F. WEMYSS BROWN.

Huysmans, JORIS KARL, a French novelist; b. in Paris, 5 February, 1848; d. 12 May, 1907. He studied at the Lycée Saint-Louis. At the age of twenty, he obtained a post in the Ministry of the Interior and remained there until 1897, except during the Franco-Prussian war, when he served under the flag. His loyal services won him the esteem of his superiors and the cross of the Legion of Honour. For thirty years he carried on the double duties of his administrative position and his literary profession. He was one of the ten founders of the Goncourt Academy, to the presidency of which he was elected in 1900. His first books, which must be mentioned here, belonged to the most realistic school of literature and professed to show all that is most base and vile in humanity. In 1895 he went to spend a week at the Trappist monastery of Issigny and was there deeply impressed by the monastic life. "En Route" (1895) shows the change that then took place in his life. Not long after he made open profession of Catholicism, and, having resigned his post in the Ministry of the Interior, retired to Ligugé and took up his abode in a house near the Benedictine monastery. After the expulsion of the monks, he returned to Paris, where he died in 1907. During the last twelve years of his life he fought indefatigably for his faith, whose sincerity is proved by his works. He wrote: "L'Oblat" (1903); "De Tout" (1901); "Sainte Lydwine de Schiedam" (1899); "La Bièvre et Saint Séverin" (1898); "La Cathédrale" (1898); "Les Foules de Lourdes" (1905), a reply to Zola's famous novel; "Trois Eglises et Trois Primitifs" (1904). He was deeply interested in the religious art of the Middle Ages and displayed a great

fondness for mysticism. Both before and after his conversion he was a realist. All his art consisted in rendering clearly details that he had seen and noted down. His pictures of poor people, his sketches of old Paris and particularly of Bièvre, as well as his descriptions of big crowds and scenes at Lourdes, are most vivid and picturesque. Of Dutch origin, he shows in his works the temperament of a great colourist and suggests the paintings by Rembrandt and Rubens. Never did a man have clearer power of vision and never did one take more pleasure in looking and in seeing. One may therefore understand the torture that he felt when during the last days of his life he was afflicted with an affection of the eyes and it became necessary to sew his eyelids shut. In his piety he believed that these eyes, with which he had seen so many beautiful things and through which he had received so much pleasure, were taken from him by way of enforcing penitence.

LOUIS N. DELAMARRE.

Hyacinth, SAINT, Dominican, called the Apostle of the North, son of Eustachius Konski of the noble family of Odrowacz; b. 1185 at the castle of Lanka, at Kamin, in Silesia, Poland (now Prussia); d. 15 Aug., 1257, at Cracow. Feast, 16 Aug. A near relative of Saint Ceslaus, he made his studies at Cracow, Prague, and Bologna, and at the latter place merited the title of Doctor of Law and Divinity. On his return to Poland he was given a prebend at Sandomir. He subsequently accompanied his uncle Ivo Konski, the Bishop of Cracow, to Rome, where he met St. Dominic, and was one of the first to receive at his hands (at Santa Sabina, 1220) the habit of the newly established Order of Friars Preachers. After his novitiate he made his religious profession, and was made superior of the little band of missionaries sent to Poland to preach. On the way he was able to establish a convent of his order at Friesach in Carinthia. In Poland the new preachers were favourably received and their sermons were productive of much good. Hyacinth founded communities at Sandomir, Cracow, and at Plocko on the Vistula in Moravia. He extended his missionary work through Prussia, Pomerania, and Lithuania; then crossing the Baltic Sea he preached in Denmark, Sweden, and Norway. He came into Lower or Red Russia, establishing a community at Lemberg and at Haletz on the Mester; proceeded into Muscovy, founded a convent at Dieff, and came as far as the shores of the Black Sea. He then returned to Cracow, which he had made the centre of his operations. On the morning of 15 August he attended Matins and Mass, received the last sacraments, and died a saintly death. God glorified His servant by numberless miracles, the record of which fills many folio pages of the Acta SS., Aug., III, 309. He was canonized by Pope Clement VIII in 1594. A portion of his relics is at the Dominican church in Paris.

FRANCIS MERSHMAN.

Hyacintha Mariscotti, SAINT, a religious of the Third Order of St. Francis and foundress of the Sacconi; b. 1585 of a noble family at Vignanello, near Viterbo in Italy; d. 30 January, 1640, at Viterbo; feast, 30 January; in Rome, 6 February (*Diarium Romanum*). Her parents were Marc' Antonio Mariscotti (Marius Scotus) and Ottavia Orsini. At baptism she received the name Clarice and in early youth was remarkable for piety, but, as she grew older, she became frivolous, and showed a worldly disposition,

which not even the almost miraculous saving of her life at the age of seventeen could change; neither was her frivolity checked by her education at the Convent of St. Bernardine at Viterbo, where an older sister had taken the veil. At the age of twenty she set her heart upon marriage with the Marquess Cassizucchi, but was passed by in favour of a younger sister. She was sadly disappointed, became morose, and at last joined the community at St. Bernardine, receiving the name Hyacintha. But, as she told her father, she did this only to hide her chagrin and not to give up the luxuries of the world; and she asked him to furnish her apartments with every comfort. She kept her own kitchen, wore a habit of the finest material, received and paid visits at pleasure.

For ten years she continued this kind of life, so contrary to the spirit of her vows and such a source of scandal to the community. By the special protection of God, she retained a lively faith, was regular in her devotions, remained pure, always showed a great respect for the mysteries of religion, and had a tender devotion to the Blessed Virgin. At length she was touched by God's grace, and the earnest exhortations of her confessor at the time of serious illness made her see the folly of the past and brought about a complete change in her life. She made a public confession of her faults in the refectory, discarded her costly garments, wore an old habit, went barefoot, frequently fasted on bread and water, chastised her body by vigils and severe scourging, and practised mortifications to such an extent that the decree of canonization considers the preservation of her life a continued miracle. She increased her devotion to the Mother of God, to the Holy Infant Jesus, to the Blessed Eucharist, and to the sufferings of Christ. She worked numerous miracles, had the gifts of prophecy and of discerning the secret thoughts of others. She was also favoured by heavenly ecstasies and raptures. During an epidemic that raged in Viterbo she showed heroic charity in nursing the sick. She established two confraternities, whose members were called Oblates of Mary or Sacconi. One of these, similar to our Society of St. Vincent de Paul, gathered alms for the convalescent, for the poor who were ashamed to beg, and for the care of prisoners; the other procured homes for the aged. Though now leading a life so pure and holy, Hyacintha always conceived the greatest contempt for herself. At her death great sorrow was felt at Viterbo and crowds flocked to her funeral. She was beatified by Pope Benedict XIII in 1726, and canonized 14 May, 1807, by Pius VII.

FRANCIS MERSHMAN.

Hydatius (or **IDATIUS**) of **Lemica** (more correctly **LIMICA**), a chronicler and bishop, b. at the end of the fourth century at Lemica in Galicia (now Ginzo de Limia in Spain); d. shortly after 468. On a journey which he took to Jerusalem while still a child, he became acquainted with St. Jerome. About the year 417 he entered the ecclesiastical state, and in 427 was consecrated bishop probably of Aquæ Flaviæ, now Chaves in Portugal. Subsequently he exercised considerable political influence, as is proved by his mission to Aëtius in Gaul to ask for help against the Suevi (431). His "Chronicle", a continuation of that of St. Jerome, runs from the year 379 to 468. While in its first part (379-427) he derives his information from the testimony of others, he narrates the events from 427 onward as a contemporary witness. It is doubtful whether Hydatius is also the author of the "Fasti consulares" for the years 245-468, appended to the "Chronicle" in the only almost complete manuscript in our possession. The Chronicle is printed in Migne, P. L., LI, 873-890, and LXXIV, 701-750; also in

"Mon. Ger. Hist.: Auct. Antiq.", XI (ed. Mommsen), 13-36. The "Fasti Consulares" are found in P. L., LI, 891-914, and in "Mon. Germ. Hist.: Auct. Antiq.", IX, 205-247.

N. A. WEBER.

Hyderabad-Deccan, **DIOCESE OF**.—Hyderabad, also called Bhagnagar, and Fakhunda Bunyad, capital of the Nizam's dominions, was founded in 1589, by Mohammed Kuli, King of Golconda. The mission of Hyderabad-Deccan was cut off from the Vicariate Apostolic of Madras by Pius IX, 20 May, 1851, and became a diocese in 1886. It is bounded on the east by the Bay of Bengal, on the north by the Godavari, on the west by the frontier dividing the Nizam's dominions from the Presidency of Bombay, and on the south by the Tungabudra and Kistna. The diocese lies partly in the native kingdom of the Nizam, and partly in British territory. Little is known of the early history of this region. Certain documents relate that in the reign of Ibrahim Adil Shah I (1535-1557) there were Christians in Moodgul, a town in the south-west of the district. It is likely that the earliest conversions were made by the Franciscans, who arrived in 1502. Soon after this we read of Christians in Raichur and Chitapur, who were visited by the priests from Goa. Urban VIII in 1637 sent the Theatines to Bijapur, near Moodgul and Raichur. He also established then the Vicariate Apostolic of the Great Mogul. The first vicar was the Oratorian, Father Mateo de Castro, who in 1637 had been named Vicar Apostolic of the Deccan and Bijapur. In 1645 the Kingdom of Golconda and Pegu was added.

Tavernier, who visited Golconda and Hyderabad in 1645 and 1652, tells us that there were Portuguese and Armenian Catholics in those two towns. Father de Castro was succeeded by Don Custodius de Pino, 30 April, 1669; the third vicar was Don Bisconti, 1696, but he died suddenly. After 1696 the vicars were all Discalced Carmelites. In 1720 the island of Bombay was included in the vicariate, which gradually acquired the name Vicariate of Bombay. It is said that some of the Carmelites expelled from Goa in 1707, for not swearing fidelity to the King of Portugal, evangelized Moodgul. In 1784 the Christian community was harassed by the infidels: but the government of Hyderabad ordered the Zemindars and local functionaries to prevent any injury to the Christians. Moodgul was supplied with Jesuit missionaries for the next fifty years. About the end of the eighteenth century, we find one named Velada at Raichur, another named Paradisi in Moodgul, and a third in Chitapur, named Lichetta. In 1784 Delhi and the northern portion of India was given to the prefect Apostolic of Thibet; and the jurisdiction of the Vicar Apostolic of the Great Mogul restricted to Carwar, Golconda, and the Deccan. In 1797 Don Pedro d'Alcantara di San Antonio, fourteenth vicar Apostolic, nominated in 1794, sent Father Joas Louis to Bijapur and Golconda. The Theatine Fathers were at Jamaon and Mesulipatam in 1834; many of them were native priests of the Brahmin caste from Malabar. From 1550 till 1832 the Diocese of Hyderabad had no regularly appointed missions, except those of Moodgul, Masulipatam, and one other. Missionaries visited the country from time to time, but never stayed long.

The first Vicar Apostolic of Madras (the vicariate was established 25 April, 1832) was Rev. Daniel O'Connor, O.S.A., who took possession in August, 1835. Moodgul, Raichur, Chitapur, Hyderabad, etc., belonged to his vicariate. In 1840 he resigned and was succeeded by Bishop Patrick Joseph Carew, afterwards transferred to the Vicariate of Calcutta. On 21 April, 1841, Dr. John Fennelly succeeded him.

Meanwhile Father Daniel Murphy had come to India with Bishop Carew in 1839, and was given the mission of Hyderabad and Secunderabad. In 1840 he began to build a cathedral in the latter place. It was completed in 1850. In 1842 he erected a church at Bolarum. He was chosen as coadjutor to Mgr. Fennelly and consecrated 11 October, 1846, at Kinsale, Ireland. On 20 May, 1851, the mission of Hyderabad-Deccan was made a Vicariate Apostolic with Bishop Murphy as its first vicar. His territory covered all the present Diocese of Hyderabad with the exception of Moodgul and Raichur, which were not added until 1886. Mgr. Murphy had only four missionaries to assist him (Fathers O'Brien, Drake, Hampson, and Queen, all Irish); two of these were at Secunderabad, one at Masulipatam, and one at Hyderabad. The new vicar erected a college near Hyderabad. In 1854 he applied to the Foreign Mission Seminary at Milan for more missionaries, and Fathers Pozzi and Barbero were sent to him. There were some British regiments quartered near Secunderabad, and the Catholic population of the place thus went up to 4000. Besides the college he built an orphanage, and opened a new mission at Chandragoodaim, which had to be abandoned for lack of priests. In 1856, a native named Anthony became a Catholic and brought 120 others with him. He was made catechist, and thus began a small native congregation at Hyderabad. Between 1857 and 1864 six other missionaries came from Milan, and the Christian communities began to increase, but in 1864, owing to failing health, Bishop Murphy was forced to leave India.

The vicariate was then entrusted to the Milan Seminary of Foreign Missions. Father Giovanni Domenico Barbero became vicar Apostolic, and was consecrated Bishop of Doliche, at Rome, 3 April, 1870. He procured some Sisters of St. Anne from Turin, and in 1871 established them at Secunderabad, where they opened an orphanage and a girls' school. Bishop Barbero died 18 October, 1881, and was succeeded by Monsignor Caprotti. In 1886 the Vicariate of Hyderabad became a diocese, and Bishop Caprotti, titular of Abydos, became Bishop of Hyderabad; the districts of Moodgul and Raichur were added to the diocese. The see was removed from Secunderabad to Hyderabad, and the erection of St. Joseph's cathedral was begun. In 1890 a convent was opened there, and a school for Europeans and natives. Bishop Caprotti died in 1897, and was succeeded by Bishop Viganò, who opened new convents, at Raichur, Bezwada, and Kazipet. In 1894 the Little Sisters of the Poor were introduced, and later, the Franciscan Sisters of Mary. At the present time, besides 21 European missionaries, there are in the Diocese of Hyderabad 50 European nuns, 18 native sisters, 75 native catechists; 11 churches, 78 chapels; 38 schools for boys with a total of 1642 pupils; 14 schools for girls with 920 pupils. There are two high schools in Hyderabad, one for boys the other for girls; and one each in Secunderabad, Raichur, and Bezwada, all under the Sisters of St. Anne; 6 orphanages; a home for the infirm, with 60 inmates in the care of the Little Sisters of the Poor, in Secunderabad; a dispensary in Raichur; a catechumenate, and a Magdalen Home under the care of the native sisters in Secunderabad, with branches in Raichur and Bezwada; an industrial school for girls in Bolarum; two libraries; two soldiers' institutes, confraternities, etc. Students are prepared for the priesthood in the Diocese of Mangalore by the Jesuits. Since its erection as a diocese, Hyderabad has held two synods, the first on 28 February, 1889; the second on 9-11 December, 1902. The Catholic population of the diocese amounts to 14,752 souls out of a total of 11 millions composed of pagans, Mussulmans, heretics, etc. The annual number of baptisms of adults is about 400; and of infants about 500. The languages spoken in the diocese are, Telugu, Tamil, Canarese, Coia, Marathi, and Hindustani.

VICARS APOSTOLIC OF HYDERABAD-DECCAN.—1. Monsignor Daniel Murphy, titular Bishop of Philadelphia, was born at Belmont, Crookstown, Co. Cork, Ireland, 18 June, 1815; ordained at Maynooth College, Ireland, 9 June, 1838. When Dr. Carew, one of the Maynooth staff, was named coadjutor to the Vicar Apostolic of Madras, India, Father Murphy offered to accompany him. He arrived at Madras early in January, 1839, and was put in charge of the mission of Hyderabad. When Monsignor Fennelly became Vicar Apostolic of Madras, Father Murphy was made his coadjutor. He was appointed bishop in December, 1845, by Gregory XVI, and consecrated in Kinsale, Ireland, 11 October, 1846, by the Bishop of Cork. He became first Vicar Apostolic of Hyderabad, 20 May, 1855. The residence of the vicariate was in Secunderabad, but, owing to the intolerance of Sir Henry Pottinger, he was obliged to live at Chuderghant on the borders of the Nizam's dominion. During his short administration he showed wonderful zeal. He left India in 1864 owing to ill-health and went to Australia; he was chosen Bishop of Hobart, Tasmania, in 1866, and he died there, Dec., 1907.

2. Monsignor Barbero, second Vicar Apostolic, was born at Foglizzo d'Ivrea, Italy, in 1820; sailed for Hyderabad, 11 February, 1855. He was consecrated Bishop of Doliche by Cardinal Corsi in Rome, 3 April, 1870, and died at Chuderghant, 18 October, 1881.

BISHOPS OF HYDERABAD.—1. Monsignor Caprotti, b. in Carate Brianza (Italy), 1832; d. in Yercaud, 2 June, 1897. He came to Hyderabad in 1857. He was consecrated Bishop of Abydos in 1882, and when the ordinary hierarchy was established in India in 1886, he became Bishop of Hyderabad.

2. Monsignor Viganò, the second bishop, came to Hyderabad in 1880; he was consecrated in 1898, by Monsignor Colgan, Archbishop of Madras; at the request of Pius X he returned to Italy, 15 Nov., 1908, to take charge of the Foreign Missions Society of Milan.

3. Monsignor Vismara, the third Bishop of Hyderabad, came to India in 1890; he was consecrated at Milan, 29 June, 1909, by Cardinal Ferrari.

P. M. PEZZONI.

Hyginus, SAINT, POPE (about 138-142), succeeded Pope Telesphorus, who, according to Eusebius (Hist. eccl., IV, xv), died during the first year of the reign of the Emperor Antoninus Pius—in 138 or 139, therefore. But the chronology of these bishops of Rome cannot be determined with any degree of exactitude by the help of the authorities at our disposal to-day. According to the "Liber Pontificalis", Hyginus was a Greek by birth. The further statement that he was previously a philosopher is probably founded on the similarity of his name with that of two Latin authors. Irenæus says (Adv. hæreses, III, iii) that the Gnostic Valentine came to Rome in Hyginus's time, remaining there until Anicetus became pontiff. Cerdo, another Gnostic and predecessor of Marcion, also lived at Rome in the reign of Hyginus; by confessing his errors and recanting he succeeded in obtaining readmission into the bosom of the Church, but eventually he fell back into his heresies and was expelled from the Church. How many of these events took place during the time of Hyginus is not known. The "Liber Pontificalis" also relates that this pope organized the hierarchy and established the order of ecclesiastical precedence (Hic clerum composuit et distribuit gradus). This general observation recurs also in the biography of Pope Hormisdas; it has no historical value, and, according to Duchesne, the writer probably referred to the lower orders of the clergy. Eusebius (Hist. eccl., IV, xvi) claims that Hyginus's pontificate lasted four years. The ancient

authorities contain no information as to his having died a martyr. At his death he was buried on the Vatican Hill, near the tomb of St. Peter. His feast is celebrated on 11 January.

DUCHESNE (ed.), *Liber Pontificalis*, I, 131; *Acta SS.*, Jan., I, 665; HARNACK, *Geschichte der altchristl. Literatur*, II: *Die Chronologie*, I (Leipzig, 1897), 144 sq.

J. P. KIRSCH.

Hyломorphism. See COSMOLOGY, sub-title *The constituent causes of the world*; FORM; MATTER.

Hylozoism (Gr., ὕλη, matter + ζωή, life), the doctrine according to which all matter possesses life.

There is a certain hylozoism which is only a childish, inexperienced way of looking on nature. We are naturally inclined to interpret other existences after what we know of ourselves, and so it is that children give life and soul to everything. The result of this personification of nature in primitive races has also been called animism. It is a poetical view of the world. We should therefore not be surprised that the first school of philosophers in Greece, the Ionians, conceived of the universe as animated throughout and full of gods: *ἑμψύχων καὶ δαιμόνων πλήρη* (Diog. Laer., I, 27). With the progress of thought a more scientific view of nature prevailed. First obscurely by Anaxagoras, then clearly by Plato and Aristotle, matter and mind were separated and their mutual relations delineated. Hylozoism in its primitive form disappeared. But, with the second successor of Aristotle, Strato of Lampsacus, another kind of hylozoism, clearly materialistic, came into existence. Strato, while repudiating the mechanism of the Atomists, nevertheless, in common with them, held bodies to be the only reality and explained life as a property of matter. In the Stoic doctrine also bodies alone are a reality. Bodies are made up of two principles, a passive principle, matter, and an active principle, form; but form itself is corporeal. It is warm vapour (*πνεῦμα*), or fire, yet fire distinct from the element of this name; it is primitive fashioning fire (*πῦρ τεχμηκόν*), God. In order to form the world a part of it changed itself into the elements, fire, air, water, earth, and constituted the body of the world, while another part retained its original shape, and in that shape confronts the first as form or soul. This was pure materialism.

But a wave of religious mysticism and pantheism was preparing to sweep from the East over the Græco-Roman world and dislodge matter from the throne it had usurped. Under this influence the later Peripatetics, the Neo-Pythagoreans and especially the Neo-Platonic school of Alexandria, while accepting the Stoic concept of the *world-soul*, reversed the relative importance of its terms, considered the soul as a spiritual principle emanating from God, and gave matter the inferior rank, if not as altogether evil, at least as most imperfect. Indeed matter was hardly a reality at all; the activities and perfections of material beings proceeded from a distinct principle, the soul. The universe was an immense organism. Everything was animated; and, though life was in itself distinct from matter, it was in fact imparted to all material beings. This was Pantheistic hylozoism. It survived in the medieval Jewish and Arabian philosophy, and reappeared in Christian countries with the nature philosophers of the Renaissance, Paracelsus, Cardanus, Giordano Bruno, etc. But at the Renaissance it did not come alone. For, under the influence of the enthusiastic return to the study of nature, of the revival of classic literatures with their mythology full of gods and goddesses, and of the sensualism which then invaded morals, the two other forms of hylozoism, the naive and the materialistic, reappeared also, and the three were combined in different proportions by the several writers. In a less degree, even such thinkers as

Richard Cudworth and Henry More, the Cambridge Platonists, yielded to it, when they devised their hypothesis of a "plastic nature", or a sort of inferior soul, which caused the processes of life in organic beings and directed in a purpose-like manner the activity of physical nature.

After Descartes's bold attempt to resolve into motion the operations of physical life, which deprived the word *life* of much of its meaning and put matter in sharp contrast with the higher life of thought, the concept *life* was for a while set aside, and speculation for the most part dealt with matter as opposed to mind. Yet, in a different form, it was the same problem over again, viz. the determination of the limits of matter and of its relation to spirit. To this problem Spinoza offered a solution, which, combining materialistic with pantheistic hylozoism, held the balance even between matter and mind by reducing both to the rank of mere attributes of the one infinite substance. Leibniz, resolving matter into spirit, looked on bodies as aggregates of simple unextended substances or monads, endowed with elementary perception and will. On the contrary, a group of French writers in the eighteenth century, Diderot, Cabanis, Robinet, etc., adhered to a dynamico-materialistic view of the world which recalls that of Strato.

In the nineteenth century the progress of the biological sciences again called attention to physical life. Descartes's mechanism was generally discarded. On the other hand, the craving of reason for unity, which has here characteristically embodied itself in the theory of evolution, tends to consider the world of life—and the world of mind as well—as a mere extension of the world of matter. But then life must be conceived as fundamentally contained in all matter, as one of its essential properties. Thus has hylozoism been revived by some thinkers as a postulate of science. Literally taken, it would be materialism, and in that sense is indefatigably advocated by E. Hæckel, who identifies mind with organization and life, and life with energy, which he makes a property of the atoms. Matter is for him the only reality. He, moreover, imagines ether to be the primitive substance, a part of which, as was the case with the primitive fire of the Stoics, transformed itself through condensation into inert mass, while another part of it subsists as ether and constitutes the active principle, spirit. Very few thinkers, however, would commit themselves to such a doctrine. But many scientists use it as a postulate without ever inquiring into its meta-physical implications. Those who have inquired have commonly agreed that at least mental life can by no means be resolved into matter. Consequently they have modified the concept *matter* itself, and described matter and mind, after the view already set forth by Spinoza, as two manifestations, or two aspects, of one and the same reality. This reality may be declared different in itself from both matter and mind, and unknowable (H. Spencer); or it may be declared identical with both matter and mind, which are respectively its outer and inner sides (Fechner, Lotze, Wundt, etc.). In either case, hylozoism has passed into psycho-physical parallelism with tendencies towards either materialism or idealism.

From what has been said, then, it follows that it would be an error to see in hylozoism a mere doctrine of physical life; for instance, the affirmation of spontaneous generation. Physical life may, in the abstract, be separated from mental life and treated independently of it. But in reality the separation does not hold, and hylozoism has always extended its conclusions to mental life as well. Even naive hylozoism did not stop at granting life to nature, it also endowed nature with soul. Pantheistic hylozoism started with the very concept of mental life. These two forms no longer count in science. On the latter,

since it is of pantheistic origin; see PANTHEISM, GOD, EMANATIONISM.

Scientific hylozoism is a protest against a mechanical view of the world. But, like mechanism, it pretends to apply the same pattern to all beings alike, to make of them all one uniform series. Its outcome is monism, materialistic, idealistic, or parallelistic, according as the series is conceived after the pattern of matter, or of mind, or of some reality combining both. It therefore falls under the criticisms proper to these forms of monism. As a matter of fact, life is not found in all beings; some are destitute of it, and, among those in which it is found, plants possess merely vegetal life, while animals have also the powers of sense, and man the powers of sense and reason. In an age which boasts of trusting experience alone, it is surprising that this fact should be so readily overlooked. True, we crave for unity and continuity in our knowledge and its object; but unity should not be procured at the cost of evident diversity. Or rather, since this craving for unity is nothing else than the voice of reason, it ought indeed to be satisfied; but they err who seek in the world itself this perfect unity which is to be found only in its Cause, God. (See also MATTER, LIFE, SOUL, TELEOLOGY, MONISM, MATERIALISM.)

JOHN M. REDON.

Hymn, a derivative of the Latin *hymnus*, which comes from the Greek ὕμνος, derived from ὑδμεν, to sing. In ancient pagan literature ὕμνος designates a prize song to the gods or heroes set to the accompaniment of the cythara (ὕμνοι μὲν ἐς τοὺς θεοῦ ποιῶνται, ἔπαινοι δ' ἐς ἀνθρώπων, Arrian., IV, xi), at first written in the epic measure like the oldest hymn to the Delphic Apollo, later in distichs or in the refined lyric measures of Alcæus, Anacreon, and Pindar. In Christian literature the noun ὕμνος occurs in only two passages in the New Testament, namely Eph., v, 19, and Col., iii, 16, and then together with the synonyms ψαλμός and ψῆδὴ πνευματικῆ. With these can be compared the verb ὑμνεῖν in Matt., xxvi, 30; Mark, xiv, 26; Acts, xvi, 25; and Heb., ii, 12. Notwithstanding the many attempts at definitions made by exegetes it is difficult to decide to what degree, if at all, a distinction among three kinds of Divine praises is made by the three different terms, psalms, hymns, and spiritual canticles. Psalm is applied only to those songs composed by David, but, if the spiritual contents of these songs be considered, they may justly be called spiritual canticles, while their adaptability to singing makes them hymns. Thus, in the language of the Vulgate, the Psalms of David are termed *hymni*; "hymnos David canentes" (II Par., vii, 6); and that ὕμνος sung by Christ the Lord and His disciples at the Last Supper, as they are described by the Evangelist Matthew (xxvi, 30) as ὑμνοῦντες, or ὑμνήσαντες was the great Hallel prescribed by Jewish custom for the paschal feast. From this it is to be inferred that ὕμνος was originally used in the general acceptation of "song of praise to God". At the same time it can be supposed that the expression ψαλμός was more current among the Jewish Christians, while the Gentile Christians used more commonly the expression ὕμνος or ψῆδὴ, the latter requiring the complementary πνευματικῆ to distinguish it from profane odes.

The Latin word *hymnus* is unknown in the pre-Christian literature. For it the word *carmen* is used

by the classic authors, so that *hymnus* is specifically a Christian derivative from the Greek, like so many other expressions of the liturgy. In the ancient Christian writers *hymnus* is generally paraphrased as "laus Dei cum cantu" (Rufinus, "in Ps. lxxii") or as "hymnus specialiter Deo dictus" (Ambrose, "De Off.", I, xlv). The most celebrated definition is that of Saint Augustine. Commenting on Ps. cxlviii he says: "Know ye what a hymn is? It is a song with praise of God [*cantus est cum laude Dei*]. If thou praisest God and singest not, thou utterest no hymn, if thou singest and praisest not God but another thing, thou utterest no hymn. A hymn then containeth these three things, song [*cantus*] and praise [*cum laude*] and that praise of God [*Dei*]." The expression "praise of God" must not however be taken so literally as to exclude the praise of his saints. Saint Augustine himself says in the explanation of the same psalm, verse 14: "hymnus omnibus sanctis eius"; "What then meaneth this 'A hymn to all His saints'? Let His saints be offered a hymn." God is really praised in His saints and in all His works, and therefore a "praise of the saints" is also a "praise of God"

But Saint Augustine's definition, if it should comprise all and all that alone which has been considered in the course of time as *hymnus*, requires a limitation and an extension. A limitation: a song in praise of God can also be composed in prose, in unmetrical language, as for instance the "Gloria in excelsis" and the "Te Deum". These are still called "Hymnus angelicus" or "Hymnus Ambrosianus", evidently because of their elevated lyrical movement. But we have long understood by *hymnus* a song whose sequence of words is ruled by metre or rhythm, with or without rhyme, or, at least, by a symmetrical arrangement of the stanzas. To the earliest Christian authors and their pagan contemporaries it is most probable that such a limitation of the acceptation was unknown, *hymnus* on the contrary being entirely a general term which included the psalms, the Biblical cantica, the doxologies, and all the other songs of praise to God in prose or in rhythmical language. It is therefore labour lost to seek for the origins of hymnal poetry in Pliny the Younger (Epp., X, xxvii), Tertullian (Apol., ch. ii), Eusebius (Hist. eccl., III), Sozomen (IV, iii), Socrates (V, xxii), and others. On the other hand the expression *cantus* in Saint Augustine's definition must be extended. Although the hymn was originally intended for singing and only for singing, the development of the form soon led to hymns being recited aloud or used as silent prayers. Very early indeed religious poems arose which were conceived and written only for private devotion without ever having been sung, although they were genuine lyrical and emotional productions and are counted under the head of hymnody. Consequently, the term *cantus* is not to be limited to songs which are really sung and set to melodies, but can be applied as well to every religious lyrical poem which can be sung and set to music. With this interpretation Saint Augustine's definition is wholly acceptable, and we may reduce it to a shorter formula, if we say: Hymn in the broader meaning of the word is a "spiritual song" or a "lyrical religious poem", consequently, hymnody is "religious lyric" in distinction from epic and didactic poetry and in contradistinction to profane lyric poetry. Hymn in the closer interpretation of the word, as it will be shortly shown, is a hymn of the Breviary.

BRANCHES AND SUBDIVISIONS.—The religious song or hymn in the broader sense comprises a great number of different poems, the classification of which is not mentioned by Saint Augustine and which is in reality first completely introduced in the "Analecta hymnica mediæ ævi" edited by Blume and Drevés.

This classification does not apply to the hymnody of the Orient (Syrian, Armenian, and Greek), but to the much more important Western or Latin hymnody. First, there are two great groups according to the purpose for which the hymn is intended. Either it is intended for public, common, and official worship (the liturgy), or only for private devotion (although hymns of the latter group may be also used during the liturgical service). Accordingly, the whole Latin hymnody is either liturgical or non-liturgical. Liturgical hymnody is again divided into two groups. Either the hymn belongs to the sacrificial liturgy of the Mass, and as such has its place in the official books of the Mass-liturgy (the Missal or the Gradual), or the hymn belongs to the liturgy of canonical prayer and has its place accordingly in the Breviary or the Antiphonary. In like manner the non-liturgical hymnody is of two kinds; either the hymn is intended for song or only for silent private devotion, meditation, and prayer. Both of these groups have again different subdivisions. In accordance with the above, there arise the following systematic tables:

I. LITURGICAL HYMNODY.—A. *Hymnody of the Breviary or the Antiphonary*.—(1) Hymns in the Closer Sense of the Word (*hymni*).—These are the spiritual songs which are inserted in the *horæ canonice* recited by the priest and are named after the different hours respectively: Hymni “ad Nocturnas” (later “ad Matutinam”), “ad Matutinas Laudes” (later “ad Laudes”), “ad Primam,” “ad Tertiam,” “ad Sextam,” “ad Nonam,” “ad Vesperas,” “ad Completorium.” (2) Tropes of the Breviary (*tropi antiphonales, verbete, prosellæ*).—These are poetical interpolations, or preliminary, complementary, or intercalatory ornamentation of a liturgical text of the Breviary, particularly of the response to the third, the sixth, and the ninth lesson. (3) Rhythmical Offices (*historiæ rhythmicæ or rhythmata*).—These are offices in which not only the hymns, but all that is sung, with the single exception of the psalms and lessons, are composed in measured language (rhythmical, metrical, and later also rhymed verses).

B. *Hymnody of the Missal or the Gradual*.—(1) Sequences (*sequentie, prose*).—These are the artistically constructed songs, consisting of strophe and counterstrophe, inserted in the Mass between the Epistle and the Gospel. (2) Tropes of the Mass (*tropi graduales*).—During the Middle Ages, all those parts of the Mass which were not sung by the priest but by the choir, e. g. the Kyrie, Gloria, Sanctus, Agnus Dei (*tropi ad ordinarium missæ*) also the Introit, Gradual, Offertory, Communion (*tropi ad proprium missarum*) were provided with a rich setting of *interpolatio*, more even than the Breviary. These tropes (q. v.) came to be known as “Tropus ad Kyrie,” “Tropus ad Gloria,” etc. or “Troped Kyrie,” “Troped Gloria,” and so on. (3) Rhythmical or Metrical Masses (*missæ rythmata*).—We include under this heading Masses in which the above mentioned parts (under B, 2) are either entirely or partly composed in metrical form. This form of poetry found very few devotees. (4) Processional Hymns (*hymni ad processionem*) used during the procession before and after Mass, and therefore having their place in the Missal or Gradual. They have nearly all a refrain.

II. NON-LITURGICAL HYMNODY.—A. *Hymnody intended for Singing*.—(1) Canticles (*cantiones*), spiritual songs which do not belong to the liturgy, but still were employed after and during the liturgy, without being incorporated, like the tropes, with it. They gave rise to the folk-songs, from which the canticles are differentiated by being written in ecclesiastical Latin and being sung by the official cantors, but not by the people. (2) Motets (*muteti, motelli*).—These are the artistic forerunners of the canticles

and nearly related to the tropes of the Mass, inasmuch as they grew out of the Gradual responses of the Mass as will be shown more fully in the article HYMNODY AND HYMNOLOGY. In general they may be defined as polyphonic church songs which were to be sung a *cappella* (without musical accompaniment).

B. *Hymnody intended for Silent Private Devotion*.—The general name for these poems is in Latin *rhythmi* or *pia dictamina*. As they were intended for prayer and not for singing, they may be called rhythmical prayers (in German *Reimgebete*). Among the various kinds of these poems are the following:—(1) Rhythmical psalters (*psalteria rhythmica*), that is, poems of 150 strophes, corresponding to the 150 Psalms, mostly treating of Christ or His Blessed Mother. Originally every single strophe treated of the psalm corresponding to it in number. (2) Rhythmical rosaries (*rosaria rhythmica*), similar poems, but which had only fifty strophes corresponding to the fifty “Hail Marys” of the Rosary. (3) Hours-Songs (*officia parva*); these were rhythmical prayers which supplemented (for private meditation) each of the canonical hours with a strophe or a group of strophes. (4) Gloss-Songs, which paraphrased, extended, and explained each separate word of a popular prayer or a church antiphon (e. g. the Lord’s Prayer, the “Hail Mary”, the “Alma Redemptoris”, and so on) by a separate strophe or, at least, a separate verse. These spiritual poems, of which about 30,000 are preserved and again rendered generally accessible by the great collection known as “*Analecta hymnica mediæ ævi*”, fall within the general acceptance of the word hymn. Several of the more important kinds are treated under separate articles, see RHYTHMICAL OFFICES, and SEQUENCES and TROPES. Their development and lofty meaning will be more fully treated under HYMNODY AND HYMNOLOGY.

CLEMENS BLUME.

Hymnody and Hymnology.—Hymnody, taken from the Greek *ὑμνοδία*, means exactly “hymn song”, but as the hymn-singer as well as the hymn-poet are included under *ὑμνοδός*, so we also include under hymnody the hymnal verse or religious lyric. Hymnology is the science of hymnody or the historico-philological investigation and æsthetic estimation of hymns and hymn writers.

I. PRELIMINARY REMARKS.—Hymnology is still recent in its origin. Until lately the vast material of Latin hymnody lay buried for the most part in the manuscripts of the different libraries of Europe, notwithstanding the interest taken in spreading among the people a knowledge and love of hymns, especially of Latin hymns, as early as the twelfth century; and despite the activity with which the subject has been investigated in England, France, and Germany since the middle of the last century. As the “*Realencyclopædie für protestantische Theologie*” asserts: “Research in regard to hymns, as in general concerning the Latin ecclesiastical poetry of the Middle Ages, has made as yet but little progress in spite of the studies so actively pursued during the nineteenth century. Although it may have been thought that the compilations of Neale, Mone, Daniel, and others had provided fairly complete materials for research, we have since learnt how incomplete in quantity and quality the hitherto known material was by the publication of the “*Analecta Hymnica*”, begun by the Jesuit Father Drees in 1886, continued after 1896 with his fellow Jesuit Father Blume [and since 1906 carried on by the latter aided by Rev. H. M. Bannister] Until this magnificent compilation is completed a comprehensive description of the Latin hymnody of the Middle Ages will be impossible; and even then it will first of all require a most minute and thorough examination” (Op. cit., 3rd ed., s. v. “Kirchenlied”, II). The “*Analecta Hymnica*” in the meantime has reached

the fifty-second volume and will be completed in six more volumes and several indexes. This work, however, only lays the foundations for a history of hymnody, which had hitherto been practically non-existent. We have been and are still in an incomparably worse state in regard to the hymnody of the Orient; for the Syrian, Armenian, and Greek hymns, in spite of the meritorious work of Pitra, Zingerle, Bickell, Krumbacher, and others, remain for the most part unpublished and even uninvestigated. For this reason also, only the broadest outlines of the origin and development of hymnody can be given at present, and we must expect many future corrections and many additions to the long list of hymn writers. The latest researches have already changed the whole aspect of the subject.

II. THE EARLIEST BEGINNINGS OF HYMNODY.—To praise God in public worship through songs or hymns in the widest meaning of the word (see HYMN) is a custom which the primitive Christians brought with them from the Synagogue. For that reason the ecclesiastical songs of the Christians and the Jews in the first centuries after Christ are essentially similar. They consisted mainly of the psalms and the canticles of the Old and New Testaments. The congregation (in contradistinction to the cantors) took part in the service, it seems, by intoning the responses or refrains, single acclamations, the Doxologies, the Alleluias, the Hosannas, the Trisagion, and particularly the Kyrie-Eleison, and so originated the Christian folk-song. Genuine hymns even in the broadest sense of the term were not yet to be met with. Even the four songs handed down to us through the "Constitutiones Apostolicæ" which were intended as hymns in the morning, in the evening, before meals, and at candle lighting, cannot be considered hymns. They are rather prayers which, in spite of the lyric tone and rhythmic quality evident in some passages, must be considered as songs in prose, similar to the Prefaces of the Mass, and which are mainly composed of extracts from the Scripture.

The first of these four interesting songs is the Morning Hymn (*ἕμνος ἑωθινός* is its heading in the Codex Alexandrinus of the fifth century in London; and *προσευχὴ ἑωθινή* in the seventh book of the "Constitutiones Apostolicæ"; we call it the "Hymnus Angelicus"): *Δόξα ἐν ὑψίστοις θεῷ* (Gloria in excelsis Deo). The first part of this song of praise was written before 150 A. D., and Saint Athanasius, after translating it into Latin, inserted the whole in the Western Liturgy (see *Stimmen aus Maria-Laach*, LXXIII, iv. 43 sqq.). The Evening Hymn: *Αἰνεῖτε, παῖδες, Κύριον, αἰνεῖτε τὸ ὄνομα Κυρίου* is the same as the "Gloria in excelsis" in a shorter form and with the first verse of Psalm cxii as introduction. The Hymn of Grace at meals begins: *Εὐλογητὸς εἶ, Κύριε, ὁ τρέφων μὲ ἐκ νεότητός μου, ὁ διδοὺς τροφήν πάσῃ σαρκί*. These words show plainly their origin in the Holy Scriptures, and from them can be seen to what extent, if at all, they are ruled by rhythm and metre. The fourth song, the celebrated "Candle-light Hymn" beginning *Φῶς διαφάν* which St. Basil describes as old in his day, is more rhythmical than the others. It is usually divided into twelve verses; these verses vary between five, six, eight, nine, ten and eleven syllables. This at most is the very beginning of what is termed a hymn in metrical language. The fact that in the fifth and later centuries these songs and prayers were called "hymns" is another instance of the error committed in determining the origin of hymnody by deductions from passages in ancient writers where the expression *ἕμνος* or *hymnus* occurs.

The earliest safe historical data we find in endeavouring to trace the origin belong to the fourth century. The writing of Christian hymns intended to be sung in Christian congregations was first undertaken to counteract the activity of the heretics. The Gnostics

Bar-Daisan, or Bardesanes, and his son Harmonius had incorporated their erroneous doctrine in beautiful hymns, and, as St. Ephraem the Syrian says, "clothed the pest of depravation in the garment of musical beauty". As these hymns became very popular an antidote was needed. This induced St. Ephraem (d. 373) to write Syrian hymns. His success inspired St. Gregory of Nazianzus (d. 389) to counteract the heresy of the Arians by Greek hymns. About the same time St. Ambrose (d. 397) composed Latin hymns although the productions of his forerunner in Latin hymnody, St. Hilary of Poitiers (d. 366), had been unsuccessful because they failed to please the popular taste. Thus the earliest known founders of hymnody in the East and West appear at the same period. Even before them Clement of Alexandria (d. about 215) had composed a sublime "song of praise to Christ the Redeemer" which begins with *Στόμιον πῶλων ἀδαῶν*, and at the end of the third century we had the glorious song of the virgins *Ἄνωθεν, παρθένοι, βοῆς ἐγερσινεκρος ἤχος* of St. Methodius (d. about 311). But the latter song from the *Συμπόσιον* of the Bishop of Olympus is to be classed rather under Christian dramatic than lyric verse, while the song added to the *Παιδαγωγός* of Clement is probably not by him, but is of an earlier date. Thus, to conclude from known facts, the writing of hymns proper begins towards the middle of the fourth century in the East and soon afterwards appears in the West. There are many points of contact between the two hymnodies; just as a certain influence was exerted by the Syrians on the Greeks and by both together on the Armenians in respect to the content and form of hymns, in like manner the East, particularly the half-Semitic, half-Greek Syrian Church influenced the development of Western Latin hymnody. But as to the extent of this influence, there is still much uncertainty and opinions consequently differ greatly. Most likely this influence is often over-estimated. At all events the East and West followed separate paths in hymnody from the very beginning, and in spite of their common characteristics the outward form of the hymns was very different.

III. METRE OF CHRISTIAN HYMNODY.—By degrees Christian hymnody became more opposed in outward form to the ancient pagan verse. Nor was this a disadvantage. Christian verse was intended specially for the congregation, for the people, who in those days took a much more active and important part in the Liturgy than is now the case. Christian hymnody is therefore originally and essentially a poetry of the people. The popular and primitive principle of poetic forms is the rhythmical principle; the rise and fall in the verse is governed, not by quantity of syllables—which only the learned recognize—but by the natural accent of the word. To this principle of rhythm or accentual principle the quantitative principle is directly opposed as the latter regards only the length of syllables without heeding the usual intonation of the word. The *Kunst-Dichtung* or artificial verse used the latter principle, but not with lasting success. For the essence of language and the natural tendency of the people favour the accentual principle. The Humanists and many of the learned for a long time regarded the rhythmical verse form with contempt; but this false prejudice has disappeared. The decisive verdict of Krumbacher on Greek hymnody, which is of great importance for the right valuation of Christian hymnody, is as follows: "None could reach the heart of the people with tones that found no echo in their living speech. The danger that lurked here will not be under-estimated by the historian; for had there not been invented and received at the appointed time another artistic form of expression, the Greek nation would have lost forever the treasure of a true religious poetry. Thanks to this new form alone a sort of literature arose which in

poetical feeling, variety, and depth may be placed beside the greatest productions of ancient poetry. This effective artistic form which awoke with a magic cry the poetic genius of the Hellenes and lent to the lethargic tongues measures of ancient power is rhythmical verse¹¹ ("Gesch. der byzant. Lit.", Munich, 1897, p. 655). To a greater degree the above is true in regard to Latin hymnody, especially for the Middle Ages.

The Christian poets did not all immediately abandon the old classic quantitative metre for the accentual. Many even reverted to its use later particularly in the age of the Carolingians. It is interesting, however, to note that such hymns found no real favour with the people and therefore were rarely incorporated in the Liturgy. Occasionally, indeed, their lack of rhythm was redeemed by excellent qualities; for instance, when they employed a very popular metrical form and took care that the natural word accent should correspond as far as possible with the accent required by the quantitative metre, i. e. the accented syllables of the word should occur in the long accented place of the verse scheme. The last case is therefore a compromise between the quantitative and the accentual or rhythmical principles. We have an example of all these excellent qualities in the hymns of St. Ambrose. He observes the rules of quantity, but chooses a popular metre, the iambic dimeter, with its regular succession of accented and unaccented syllables, from which arises the so-called alternating rhythm which marks the human step and pulse and is, therefore, the most natural and popular rhythm. He usually avoids a conflict between the word accent and the verse accent; his quantitative hymns can therefore be read rhythmically. This is one of the reasons of the lasting popularity of the hymns of St. Ambrose. The metre he selected, a strophe consisting of four iambic dimeters, was so popular that a multitude of hymns were composed with the same verse scheme, and are called *hymni Ambrosiani*. Soon, however, many writers began to neglect the quantity of the syllables and their verses became in the fifth century purely rhythmical. The earliest known writer using such rhythmical iambs is Bishop Auspicius of Toul (d. about 470); hence, the purely rhythmical strophe is called the Auspician strophe. Both these iambic dimeters probably sprang from the *versus saturnius*, the favourite metre of the profane popular poetry of the Romans.

Next to this metre in popularity was the *versus popularis* or *πολιτικός*, the name of which explains its character. Christian poetry adopted this metre also on account of its popularity. For instance, let us compare the following child-puzzle verse:

Rex erit, qui récte faciét | qui non faciét, nón erit
with the beginning of a hymn of St. Hilary of Poitiers:

Adi cãmîs glóriôsæ | ét cadúci córporis.

This *versus popularis* and the iambic dimeter are the two metres in which most of the early Christian hymns were written, both in Latin and in Greek. This proves that Christian hymnody strove for popularity even in its outward form. For a similar reason the quantitative principle was gradually abandoned by hymn writers in favour of the rhythmical. "It is certainly no mere chance", as has been very justly said in the "Byzantinische Zeitschrift" (XXII, 244), "that Christians were the first to break away from the learned game of long and short syllables intended for the eye alone; for they wished to reach the ear of the masses. These early Christians strove for and attained by means of the metrical system of their ecclesiastical poetry that which in German religious poetry was first achieved by Luther . . . contact with the people, with their ear, and thus, with their heart." The further development of this rhythmical poetical

form, especially in Latin, is thus briefly described by Meyer: "First, from the fifth century a slow groping struggle with many essays, clumsy but still attractive in their ingenuousness. In the eleventh century begins the contrast of a finished art which in complete regularity creates the most various and beautiful forms, on the surviving examples of which the Romance poets and also, to some extent, the Germanic poets model their work even to-day" (Meyer, "Gesammelte Abhandlungen zur mittellateinischen Rhythmik", Berlin, 1905, 1, 2). The rhythmical principle, especially in its union with rhyme, gained a complete victory over the ancient classic prosody.

IV. HYMNODY OF THE ORIENT.—A. *Syriac Hymnody*.—The first known Christian hymn writer among the Syrians is also the first in point of importance and fecundity, St. Ephraem the Syrian (c. 373). It is impossible to say which of the many songs ascribed to him are authentic as there is no satisfactory edition of his works. His poems may be divided into the two classes so common in Syriac hymnody: "Mémrê" and "Madraschê". The former are poetic speeches or expositions of the Holy Scriptures in uniform metre without division into strophes; they scarcely come within our present scope. The "Madraschê" on the contrary are songs and hymns composed in strophes, the strophes consisting of from four to six verse lines and closing as a rule with a refrain. St. Ephraem was particularly fond of the seven-syllable verse line, hence called the Ephraemic. The quantity of the syllables is scarcely regarded, the syllables for the most part being simply counted. Among the songs which are ascribed to St. Ephraem, no fewer than sixty-five are directed against different heretics; others have as their theme Christmas, Paradise, Faith, and Death. To this last subject he dedicated eighty-five hymns, probably intended for funeral services. Many of his songs, of which several are set to the same tune, were adopted by the Syriac Liturgy and have been preserved in it ever since. The main tenor of these hymns is often very dissimilar to that in the early Greek and especially the Latin hymnody. The sensuousness and the glow of Oriental imagination and the love of symbolism are evident, in some hymns more, in others less. Among the disciples and imitators of Ephraem we may note in particular Cyrillonas (end of the fourth century) whose hymns on the Crucifixion, Easter, and the Grain of Wheat are still extant; Balæus (c. 430) after whom the Syriac pentasyllabic verse is called the "baleasic"; James of Sarugh (d. 521) named by his contemporaries the "flute of the Holy Spirit and the harp of the believing church", though he was a Monophysite. None of these equalled St. Ephraem in poetic gift. Syriac hymnody may be said to have died out after the seventh century as a result of the conquest of Syria by the Arabs, though the following centuries produced several poets whose hymns are chiefly to be found in the Nestorian Psalter.

B. *Greek Hymnody*.—Here also we must be contented with the barest outlines, only a small part of the material has been gathered from the libraries, notwithstanding the publications by Pitru, Christ, Paronikas, Daniel, and Amphilochius and the detailed investigations by Mone, Bouvy, Wilhelm Meyer, and especially Krumbacher. Greek hymnody, if we take hymn in the wider sense of the word, begins with St. Gregory of Nazianzus (d. 389). In their outer form his numerous and often lengthy poems still rest on ancient classical foundation and are exclusively governed by the laws of quantity. Their language unites delicacy and verbal richness to subtlety of expression and precision of theological definition while glowing with the warmth of feeling. The smaller portion of his poetical compositions are lyrical, and even among these only hymns in the wider sense of the

word are found, as the glorious *ἕμνος εἰς Χριστὸν* beginning as follows:

Σέ, τὸν ἀφθίτον μονάρχην,
Δὸς ἀνυμνεῖν, δὸς ἀελεῖν,
Τὸν ἀνακτα, τὸν δεσπότην,
Δι' ὃν ἕμνος, δι' ὃν αἶνος.

These hymns in artistic form did not reach the people nor did they ever form part of the Liturgy. The same is true of the stirring songs of Synesius (d. 430), which were also written in classical form. They are a rosary of twelve hymns of singular sublimity, delicacy, and polish, whose contents at times betray the neo-Platonist; six of them, however, written probably at a later period of the author's life, are distinctly Christian in tone. To all of them the term metrical prayer rather than hymn should be applied. "The easy metres that have something playful in them are unsuited to the dignity of the contents, while the failure to separate the verses into strophes and their prominent subjective tone disqualified them for use in the Liturgy" (Baumgartner, "Gesch. der Weltlit.", IV, 62).

We may look upon the inventive and stirring writer Romanos (d. probably c. 560) as the real founder of Greek hymnody. In his poems the quantitative principle has completely given way to the accentual, rhythmical principle; and with the triumph of this principle the great day of the Greek Christian hymnody begins. About eighty hymns of Romanos have come down to us; nearly all of them show the artistic form of the "kontakia". These kontakia consist of from twenty to thirty or even more strophes of uniform structure to which is prefixed as a rule one, but occasionally two or three strophes of varying structure; every strophe (*τροπάριον* or *οἶκος*), the numerous verses of which are generally different, is followed by a refrain of one or two short lines. The most popular of his hymns was the Christmas hymn which was performed with great festal pomp at the imperial court every year, until the twelfth century, by a double choir from the St. Sophia and the Church of the Apostles. It may well be called a performance, for such a lengthy song, set to music, sung by choirs and counterchoirs, and supplied with proem and refrain, resembles rather a dramatic oratorio than what we are accustomed to call a hymn. It begins thus:

Ἡ παρθένος σήμερον τὸν ὑπερούσιον τίκτει
Καὶ ἡ γῆ τὸ σπήλαιον τῷ ἀπροσίτῳ προσάγει.
Ἄγγελοι μετὰ ποιμένων δοξολογοῦσιν,
Μάγοι δὲ μετὰ ἀστέρος ὁδοιποροῦσιν.

Romanos deserves, as the greatest of the Byzantine poets, the surname *ὁ μελωδός*. Clear and precise in theological language, he possesses in a high degree the depth and fire of a true lyric poet. He was unable, however, to avoid monotony and repetition owing to the uncommon length of the hymns, and a comparison with the father of Latin hymnody, Saint Ambrose, must leave him at a disadvantage.

The Patriarch Sergius of Constantinople, a Monothelite (610-41), followed as a poet very closely in the path of Romanos. It is, however, more than doubtful if the *Ἀκάθιστος ἕμνος* (so called because the clergy and people were obliged to stand while intoning it) should be ascribed to him; it is also impossible to ascertain whether this lengthy song of thanksgiving to the Mother of God, inspired by the rescue of Constantinople and the empire from the Avars, was composed in the year 626 or 677 or 711. At all events it is still greatly revered in the Greek Church and is a shining witness of the poetical creative power of the seventh century. "Whatever enthusiasm for the Blessed Virgin, whatever knowledge of Biblical types and in general of religious objects and ideas was able to accomplish, whatever ornament of speech, versatility of expression, skill of rhythm and rhyme could add, all that is effected here in an unsurpassed degree" ("Zeitschrift für Kirchengeschichte", V, 228 sq.). The Patriarch Sophronius of Jerusalem (629) devoted him-

self more to a learned, and often very arid, artificial form of poetry. To these chief representatives of the florescence of Greek hymnody may be added Andreas-Pyrrhos, eight of whose charming "idiomela" on the chiefs of the Apostles are preserved; and Byzantios and Cyprianos, of whom, however, only the names are known. At the opening of the eighth century St. Andrew, Archbishop of Crete (d. about 726), created the artistic measure of the "canons". A canon is a hymn composed of eight or, in remembrance of the nine Canticles of the Old Testament, of nine different songs, each of which has a peculiar construction and consists of three, four and, originally, more strophes. St. Andrew wrote one hymn of as many as 250 strophes that became proverbial on account of its length and is called *ὁ μέγας κανών*. The influence of the great Romanos is unmistakable in the poems of St. Andrew; besides, the reflections and great verbosity often give a jarring and tiring impression. The canons were particularly cultivated in the eighth century by St. John of Damascus and his half-brother St. Cosmas. Their model in language and metre was St. Gregory of Nazianzus, so they tried to revive the use of the old classical quantitative principle. In this artificial verse their description grew subtilized and often obscure, and genuine poetic feeling suffered from pedantry. These were not songs for the people. But however inferior they were to the natural stirring kontakia, these canons were greatly admired and imitated by contemporary hymn writers.

Disastrous as was its effect on hymnody the iconoclasm of the eighth and ninth centuries called forth a spiritual reaction which was forcibly expressed in religious poetry and inspired many excellent songs. These songs in particular have been the longest retained in the Greek Liturgy. After the Syracusians, Gregory and Theodosius, St. Joseph the Hymnographer (d. about 883) and the imposing succession of Studites are especially to be noted here. The great monastery of the Studium (Studion) at Constantinople became a nursery of hymnography. The hegumen (or abbot) of the monastery, St. Theodore (d. 866), began with the triumphal canon for the great festival that commemorated the victory of the icons, with his canon on the Last Judgment which is described by Neale as "the grandest judgment-hymn of the Church", and with numerous other hymns. After him come his brother Joseph, later Bishop of Thessalonica, who suffered martyrdom, the Studites, Theophanes, Antonios, Arsenios, Basilios, Nicolaos, and lastly George of Nicomedia and Theodorus of Smyrna. In the hymns of all these poets, along with some excellent qualities, there is more or less Byzantine bombast or inflated exaggeration and heaping of epithets. A remarkable personality at this time is the talented poetess Kasia (*Ἰκασσία*) who about 830 was chosen as a bride for the future Emperor Theophilus on account of her beauty, but was rejected because of her too great frankness. She then founded a convent of nuns in which she devoted herself to profane and sacred poetry, as did the celebrated nun Hroswitha von Gandersheim long after her. Her best known poems are the three idiomela on the birth of Christ, on the birth of St. John the Baptist, and on the Wednesday of Holy Week, all of which were incorporated in the Liturgy. A disastrous event for hymnody was the revision of the hymnal undertaken in the ninth century. Many beautiful kontakia were dropped from the Liturgy in favour of the canons, and many of the old hymns were "improved", that is, mutilated. This kind of renovation showed that poetic feeling was declining. Hymnody now gleaned only a scanty aftermath. In the eleventh century even the Greek Liturgy ceased to develop and there remained no soil in which Greek religious poetry could thrive. Only a few isolated hymn writers appeared in the Byzantine Empire after that time; such were Johannes Mauro-

pus, Johannes Zonaras, and Nicephorus Blemmida. On foreign soil, in Italy, there was, however, in the eleventh and twelfth centuries a refflorescence, especially in the Basilian convent at Grottaferrata near Rome, founded by Nilus the Younger in 1005.

V. HYMNODY OF THE WEST.—*Latin Hymnody*.—The West began to cultivate religious poetry at the same time as did the East. From the beginning in spite of some similarity the Western poems were of a very different nature and were hymns in the more restricted sense of the word. They were incorporated into all parts of the Liturgy. As hymnody began to decline in the East, it revived in the West becoming more vigorous and fruitful than ever; this was especially so from the eleventh to the thirteenth century. The works of the religious lyric poetry give us an instructive picture of the culture and spiritual life of the early Christian Age and of the Middle Ages that is wholly unexpected. "In this religious poetry the entire Church co-operated, popes, kings, cardinals, bishops, the brightest lights of science, influential statesmen and ambassadors, humble monks, and simple schoolmasters. . . . The versatility and universality of religious culture, the harmony of mental life with the life of feeling lent to religious poetry that richness and depth, that fullness and fervour, which irresistibly attract even the unbelievers" (Baumgartner, "Geschichte der Weltliteratur", IV, 441).

(1) *First Period up to the Carolingian Age*.—At the cradle of Latin hymnody stands the great opponent of the Arians, St. Hilary of Poitiers (d. 366). While exiled to Asia Minor he was inspired by the example of the Easterns to compose hymns, on which a verdict cannot now be pronounced as we possess only the fragments of three or four. The first celebrates, in asclepiadic alternating with glyconic metre, the birth of the Son co-equal with the Father:

Ante sæcula qui manens

Semperque nate, semper ut est pater.

From this abecedary, that is, a hymn in which every strophe begins with the corresponding letter of the alphabet, there are missing the strophes beginning with the letters from U to Z. The second hymn, also an abecedary, is apparently the song of the new birth of a soul in baptism; the whole song would enable us to ascertain this, but the first five strophes (beginning with A to E) have been lost. The first of the eighteen remaining strophes, which consist each of two iambic senaries, begins:

Pefellit sævam verbum factum et caro.

In the third hymn, each strophe of which consists of three *versus politici*, that is, of trochaic tetrameters, is described the "Hostis fallax sæculorum et diræ mortis artifex" (str. ù, 1); in the tenth strophe the single handwriting in which these three hymns are given us breaks off. The language is profound and obscure, and it is only too clear that St. Hilary could not have become popular with such hymns. All other hymns ascribed to him must be rejected as spurious with the exception of the hymn to Christ, written in twenty-four strophes:

Hymnum dicat turba fratrum, | hymnum cantus persouet,

Christo regi concinnantes | laudem demus debitam.

It was reserved for St. Ambrose (d. 397) to become the real "Father of Latin hymnody". Of his pithy and profound hymns fourteen genuine ones have come down to us in addition to four others which are now used at Tierce, Sext, and None in the Roman Breviary, and the hymn of the virgins "Jesu corona virginum", which are of very doubtful authenticity. Their outer form has been described above. They became at once favourites with the people, drew tears of devotion from the great St. Augustine, and were committed to memory by his mother St. Monica and others. They gave a model and form for all the later Breviary hymns, and from the beginning they re-

mained as component parts of the Liturgy, the revisors of the Breviary having left at least three of them in the prayers of the canonical hours, namely: "Eterna Christi munera", "Æterne rerum conditor" and the inimitably beautiful hymn at Lauds "Splendor paternæ gloriæ". The first strophes of the last-named hymn give an idea of the profound poetry of the Bishop of Milan (note that the two strophes form one sentence):

Splendor paternæ gloriæ, Verusque sol, illabere
De luce lucem proferens, Micans nitore perpeti
Lux lucis et fons luminis, Iubarque sancti spiritus
Dies dierum, illuminans Infunde nostris sensibus.

Richard Chenevix Trench, Protestant Archbishop of Dublin, writes of the hymns of St. Ambrose as follows: "After being accustomed to the softer and richer strains of the later Christian poets . . . it is some little while before one returns with a hearty consent and liking to the almost austere simplicity which characterizes the hymns of St. Ambrose. . . . Only after a while does one learn to feel the grandeur of this unadorned metre, and the profound, though it may have been more instinctive than conscious, wisdom of the poet in choosing it; or to appreciate that noble confidence in the surpassing interest of his theme, which has rendered him indifferent to any but its simplest setting forth. It is as though, building an altar to the living God, he would observe the Levitical precept, and rear it of unhewn stones, upon which no tool has been lifted. The great objects of faith in their simplest expression are felt by him so sufficient to stir all the deepest affections of the heart, that any attempt to dress them up, to array them in moving language, were merely superfluous. The passion is there, but it is latent and repress, a fire burning inwardly, the glow of an austere enthusiasm, which reveals itself indeed, but not to every careless beholder. Nor do we presently fail to observe how truly these poems belonged to their time and to the circumstances under which they were produced, how suitably the faith which was in actual conflict with, and was just triumphing over, the powers of this world, found its utterance in hymns such as these, wherein is no softness, perhaps little tenderness; but a rock-like firmness, the old Roman stoicism transmuted and glorified into that nobler Christian courage, which encountered and at length overcame the world" ("Sacred Latin Poetry", London, 1874, 87 sq.).

Notwithstanding the deep impression made by St. Ambrose's hymns on St. Augustine, the latter did not contribute to hymnody but left us only an interesting rhythmical abecedary composed in the year 393 and intended for singing as the repetition verse proves. This hymn cannot be classed as lyric poetry but is a purely didactic exposition of the history and nature of Donatism. Nor can Pope Damasus I (d. 384), to whom a hymn in honour of St. Agatha and one to St. Andrew are erroneously ascribed, be counted among hymn writers, although the elegance of expression and polished form of his epigraphic poems display poetic talent. In general it seems that for decades at least, and perhaps longer, after St. Ambrose no poet essayed to enrich the Latin Liturgy with genuine hymns. The round of ecclesiastical feasts was still small; for the then customary canonical hours, the great feasts of Easter, Christmas, and Epiphany, the festal anniversaries of the chief Apostles and the Martyrs splendid hymns had been composed by St. Ambrose which were adopted with enthusiasm wherever hymns were used with the Liturgy. The liturgical need was abundantly satisfied therewith and perhaps in the beginning no one had the courage to claim for his poems a place in the Liturgy side by side with those of St. Ambrose.

This explains, perhaps, the singular fact that Aurelius Prudentius (d. after 405), the poet who comes next after St. Ambrose in point of date, composed hymns only for private devotion, and that in construc-

tion and form they stood in complete contrast to the hymns of his great predecessor. The Muse indeed that speaks in the songs of the Spaniard is quite different from the Muse of the hymns of the Milanese; Dreves has termed it the romantic Muse. The highly poetic songs which compose the two books "Kathermerinon" and "Peristephanon" of Prudentius should not be compared with St. Ambrose's hymns; the former as well as the latter are masterpieces of their kind. St. Ambrose's hymns, like the old Roman dome, impress us by their classical dignity and weight, while Prudentius, like the Gothic cathedral, elevates our souls by the richness of his form and the bold flights of his fancy. The exquisite beauty of the hymns of Prudentius induced the Mozarabians to incorporate in their Liturgy some of the martyr hymns from the "Peristephanon" notwithstanding their great length and their private devotional character. In the Roman service as well, several beautiful extracts or centos were used in the Liturgy. Such are those hymns which were used for Lauds on Tuesday, Wednesday, and Thursday and are still retained in the Roman Breviary, namely: "Ales diei nuntius"; "Nox et tenebræ et nubila"; "Lux ecce surgit aurea"; and the charming hymn to the Holy Innocents: "Salvete flores martyrum". It is regrettable that others have been given up, for instance, the Christmas hymn which was widely known in the Middle Ages, the first strophe of which is as follows:

Corde natus ex parentis | ante mundi exordium,
Alpha et O cognominatus, | ipse fons et clausula
Omnium, quæ sunt, fuerunt, | quæque post futura
sunt

Sæculorum sæculis.

Prudentius had apparently no followers, but St. Ambrose, as soon as the desire and courage awoke to introduce other hymns than his into the Liturgy, was the permanent model and pattern. These additions were made in the fifth century and were occasioned by the increased number of festivals. The so-called *hymni Ambrosiani* bear witness to this fact, as they are identical in outer form with the hymns of St. Ambrose; while each strophe consists of four iambic dimeters, as a rule, eight strophes form a hymn. The authors are mostly unknown. It cannot be determined whether the Bishop Paulinus of Nola (d. 431) is the first among them. According to Gennadius he is said to have written among other works a book of hymns; but it cannot be ascertained what they were, as among the extant lyrical poems of Paulinus there is no hymn proper to be found, though there are three poetical paraphrases of the Psalms and a morning prayer written in hexameters:

Omnipotens genitor, rerum cui summa potestas, etc.
Pope Gelasius I (d. 496) wrote genuine Ambrosian hymns as Gennadius tells us; but no single hymn can be ascribed with certainty to this pope. Of the poet Cælius Sedulius (about 450) we have two *hymni* so entitled by him, besides a great "Carmen et opus paschale" (a kind of harmonized Gospel). Of these *hymni*, one, in spite of the refrain, is really a didactic poem; the other is still preserved in the Liturgy. The latter is the abecedary:

A solis ortus cardine
Ad usque terræ limitem,
Christum canamus principem
Natum Maria virgine, etc.

The metre and form of these strophes are those favoured by St. Ambrose while the number of strophes corresponding to the letters of the alphabet is much greater. From the "Carmen paschale" were taken later several hexameter verses which now form the Introit of the votive Mass of the Blessed Virgin: "Salve, sancta parens, enixa puerpera regem", etc. The most faithful, one might almost say slavish, imitator of St. Ambrose was Magnus Felix Ennodius, Bishop of Pavia (d. 521) who, while archdeacon of

Milan, wrote twelve hymns which correspond in outer structure with those of St. Ambrose; but they were not incorporated in the Liturgy.

In the empire of the Frankish dynasty of the Merovingians Venantius Fortunatus, Bishop of Poitiers (d. about 605), is the most prominent poet. He was chiefly a non-liturgical poet; but he left a lasting monument in the Liturgy in the two fine hymns on the Crucifixion:

Pange lingua gloriosi
Proclium certaminis, etc.,

and

Vexilla regis prodeunt,
Fulget crucis mysterium, etc.,

and in the one to Our Lady:

Quem terra, pontus, æthera,
Colunt, adorant, prædicant.

The two last-mentioned hymns are Ambrosian in metre, structure, and number of strophes. The Processional hymn formerly sung at Easter, "Salve festa dies toto venerabilis ævo", is especially to be noted; it was taken from his soaring Easter song:

Tempora florifero rutilant distincta sereno
Et maiore poli lumine porta patet, etc.

Many of Fortunatus's hymns have been lost. The "Hymnus ad Mandatum" on Holy Thursday was a very popular and widely known composition written in the Ambrosian style by the Bishop Flavius of Chalon-sur-Saône (d. 591). It begins:

Tellus ac æthera iubilent
In magni cena principis.

No other hymns by this bishop are known. As curiosities from this age two hymns are to be mentioned in honour of St. Medardus by one of the Merovingians, namely the highly gifted but notorious profligate King Chilperic I (d. 584). They are bad verses but the contents are profound and the imagery is striking. These hymns never found a place in the Liturgy.

As in Italy, the cradle of hymnody, and in the Merovingian Empire, hymnody flourished more and more after the seventh century in Spain, whose great writer Prudentius we have already noticed. The object of the writers to supply the Mozarabian Liturgy with hymns was carried out so well that we can speak of a particular Mozarabian hymnody consisting of over 200 hymns independent of the songs adopted from the hymnal works of St. Ambrose, Prudentius, and Sedulius or borrowed from the Roman Liturgy. The writers of these hymns were without exception bishops, as Isidore of Seville (d. 636), Braulio of Saragossa (d. 651), Eugenius II of Toledo (d. 657), Quiricus of Barcelona (d. 666) and Cyxilla of Toledo (d. about 783). With few exceptions it remains doubtful which Mozarabic hymns should be attributed to each of these poets. Most of these productions are in the metre of St. Ambrose, and as all the hymns of that saint, except the one in honour of the Milanese saints, were used in the Mozarabic service, his influence is unquestionable. The poetic value of the Mozarabic poems is far from being uniform; the greater part have only historico-literary interest.

Of a quite different order are the Latin poems of the ancient Irish Church. They are all intended for private devotion or non-liturgical uses. Not only the quantitative, but also the accentual principle is rejected. The number of syllables forms the verse but in union with rhyme and alliteration. Rhyme is used there as early as the sixth century; it develops steadily and appears in the seventh and especially in the eighth century in its richest and purest form. The progress in rhyme is so constant that it may be taken as a criterion of date. Singular, too, is the taste for alliteration as expressed in verses like "O rex o rector regiminis" or "Patrem precor potentia". The oldest hymn written in Ireland, and at the same time the oldest purely rhythmical Latin hymn, is that of St.

Secundinus or Sechnall (d. about 448) to St. Patrick:

Audite, omnes amantes Deum, sancta merita.

It is written in the rhythm of St. Hilary's "Hymnum dicat turba fratrum"; and the latter hymn may possibly have inspired it. St. Hilary was very popular in Ireland as were his compositions, and many ancient Irish hymns show exactly the scheme of this poem. The next poet in point of time to be mentioned is St. Gildas (d. 569), with his singular song (*Lorica*):

Suffragare trinitatis unitas,
Unitatis miserere trinitas, etc.,

which found widespread popularity through Lathacan Scotigena (Laidcenn). Other hymn writers are St. Columba (Colum Cille, d. 597), five of whose hymns are extant; St. Columbanus (d. 615), St. Ultan of Ardbraccan (d. 656), Colman Mac Murchon, Abbot of Magh Mhile (died about 731), Cengus Mac Típraite (about 741), Cuchuimne (about 746) and Saint Maolruain, Abbot of Tallaght (d. 792). In the beginning of the ninth century the productivity of ancient Irish hymnody seems to have ceased. An Irishman by birth, but not writing in the ancient Irish manner, was the Scholastic of Liège, Sedulius Scotus (d. after 874). Here the Venerable Bede, born in the British Isles, may be mentioned, though he exercised much less influence through his generally dry hymns than through his more important work "De arte metrica"

It is remarkable at first sight that no Irish Latin hymn was adopted into the Liturgy or into the ancient Irish Church. In seeking an explanation of this fact we are led back to one of the most striking personalities of the second half of the sixth century, Pope Gregory the Great (d. 604). According to an old Irish legend, he sent about the year 592 a hymn book to St. Columba with the "hymns of the week", i. e. with the hymns for Matins, Lauds, and Vespers for the different days of the week. This hymn book, to which the hymns of the "Commune Sanctorum" were added before the ninth century, supplanted towards the end of that century the old Benedictine hymns in the Roman Breviary among the "hymni dominicales et feriales", and in the hymns used for the "Commune Sanctorum". Many of these hymns were written by Gregory the Great himself, which shows that he merits an important place in a history of Latin hymnody. Lack of space forbids closer examination of this question, with which is connected the introduction of hymns into the Roman Liturgy during the ninth century.

(2) *Period from the Carolingians to the Crusades.*—The impulse that letters received in the empire of the first Carolingians benefited poetry also but it was not in every way advantageous for hymnody, as there was a return to artificial poetry and the old classical metre, whereby the development of accentual rhythm and folk-song was again somewhat hampered. Only by degrees the accentual folk-poetry rose again in the eleventh century to the surface, with renewed vigour owing largely to the impulse given it by the school of St. Gall. In this last stage of transition there are side by side with fine poems many clumsy efforts in barbaric language, especially in the hymns of unknown authors of the tenth century. The separate groups and schools of poets of this period can be sketched here only briefly. First we find the circle of poets from the palace school of Charlemagne: Paulus Diaconus (d. 798), Paulinus of Aquileia (d. 802), Alcuin, Abbot of St. Martin of Tours (d. 804), Theodulf, Bishop of Orléans (d. 821), and Rabanus (d. 856) who introduces us to the school of Fulda. All these contributed extensive poetical works to hymnody. Thus, Paulus Diaconus is the author of a celebrated hymn on St. John the Baptist: "Ut queant laxis resonare fibris", a masterpiece of spiritual and harmonious lyricism in Sapphic strophes, but somewhat strained and bizarre; and a fervent and polished hymn on the Assumption of Our Lady: "Quis possit ample fame præpotens" Paulinus of Aquileia is

known by his nine hymns, among them the splendid one on the chiefs of the Apostles: "Felix per omnes festum mundi cardines", with the division:

O Roma felix, quae tantorum principum
Es purpurata pretioso sanguine.

Of Theodulf we have among others the once widespread processional hymn for Palm Sunday: "Gloria laus et honor tibi sit, rex Christe, redemptor." Alcuin in the great bulk of his poems has only left two real hymns. With Rabanus, afterwards Archbishop of Mainz, we reach the poetic school of Fulda, the importance and influence of which require closer examination. It is remarkable that Rabanus, who in other writings and poems adhered closely to his predecessors, is much more original in his hymns which show no small poetical power. His Ascension hymn was widely known: "Festum nunc celeberrime magnaue gaudia", and the Liturgy still retains the hymn of the martyrs "Sanctorum meritis inclita gaudia", the two hymns to St. Michael: "Christe, sanctorum decus angelorum" and "Tibi, Christe, splendor patris" (now transposed: "Te splendor et virtus patris") and above all the celebrated hymn: "Veni, creator spiritus". Among the pupils of Rabanus the following excelled as hymn writers: Walafridus Strabo (d. 849), Gottschalk of Orbais (d. 869), and Hermanric of Ellwangen (d. 874).

Of great importance for hymnody was that district in which lay the old Abbeys of St-Amand, Landévenec, St-Omer and Prüm. There arose in this district on the eve of the tenth century an altogether new kind of poetry that subsequently flourished brilliantly, namely that of the metrical and rhythmical Offices. The chief writer of the school of St-Amand (*Schola Elnonensis*) is Huebald (d. 930), the inventor of the "ars organizandi". He was preceded by the productive poet Milo (d. 872). The Landévenec monastery had among its writers the monk Clemens (about 870) and the abbot Gurdestin (d. 884). Prüm was represented by its hagiographer and poet Wandalbert (d. about 870). St. Gall, however, surpassed all the schools of poets and singers of that time in fame and influence. The poetry of the sequences, though not invented here, was cultivated and encouraged. This kind of poetry freed hymnody from the classical restraints and the scanty rhythmical garment of the Carolingian time (see SEQUENCES). In St. Gall were written a considerable number of beautiful processional hymns, and religious songs of welcome to distinguished visitors to the abbey. The notable lyric poet Ratpert (d. after 884), Waldrammus (d. towards the end of the ninth century), Tutilo (d. 898), the prince of sequence poetry Notker Balbulus (d. 912), Abbot Hartmann (d. 925), Ekkehard I (973), Notker Physicus (d. 975), and Hermann Contractus (d. 1054) sang and wrote in St. Gall. This same period witnessed the origin of the tropes of which the motets and cantiones were developments (see TROPES).

In France the Abbey of Cluny contributed to hymnody by the writings of her abbots Odo (d. 943) and Odilo (d. 1048). Other talented French poets of this period are: Fulbert of Chartres (d. 1029), Adémar of Chabannes (d. 1034), Odorannus of Sens (d. 1045), Rainald of St. Maurice at Angers (d. about 1074), Eusebius Bruno of Angers (d. 1081) and Berengarius of Tours (d. 1088). Germany produced the poets Arnold of Vohburg (d. about 1035), Heribert of Eichstädt (d. 1042), Berno of Reichenau (d. 1048), Othlo of St. Emmeram in Ratisbon (d. 1072), Gottschalk of Limburg (d. 1098), and Bruno, Count of Egisheim, later Pope Leo IX (d. 1054). We owe to this pope, of whom Anonymus Mellicensis speaks as "in musica subtilissimum", a Christmas hymn "Egredere, Emanuel, Quem nuntiavit Gabriel", a *rhythmus* "O pater, Deus æterne, de cælis altissime" and a rhythmical Office of St. Gregory, in a somewhat

clumsy form. In England Wulstan (Wolstan) of Winchester (d. 990) and St. Anselm, Archbishop of Canterbury (d. 1109) were prominent though there is still great obscurity regarding the hymnal activity of the latter. Finally Italy is represented not only by Wido of Ivrea (eleventh century) and Alberich of Monte Cassino (d. 1088), but by those brilliant writers Alphanus of Salerno (d. 1085) and St. Peter Damian (d. 1072). The two latter, especially St. Peter Damian, are poets of great fertility. Alphanus wrote only in classical metre and is admirable for the purity of his expression and the skill of his forms. St. Peter Damian chose the rhythms of the Middle Ages and contented himself with a less ornate form; but the plainer cloak hides a depth of intellect, a richness of fancy, and a warmth of feeling which captivate and inspire the reader. Especially beautiful is his *rhythmus*, often ascribed to St. Augustine:

Ad perennis vitæ fontem | mens sitit nunc arida,
Claustra carnis praesto frangi | clausa quaerit anima,
etc.

(3) *Period of Zenith and of Decline (until the rise of Humanism)*.—In the twelfth and thirteenth centuries, the zenith of the culture of the Middle Ages, there appeared such a wealth of poems of the highest order that it is impossible to mention here all the poets and their principal works. Still less is it possible to give an appreciation of them or to note the more important of the far greater number of poems by unknown authors. The newly founded religious orders took an active share in hymnody and enriched the list of hymn writers with glorious names. The poetic forms became even richer, the language more elegant, the rhythm more regular, and the rhyme purer. In the first rank comes France. Marbod, Bishop of Rennes (d. 1123), Balderic, Abbot of Bourgueil (1130), the Archbishop of Tours, Hildebert of Lavardin (d. 1133), and Reginald—by birth and education French—who became a monk of St. Augustine at Canterbury (d. 1136) form a group of poets, with the common trait that they still follow mostly the quantitative principle. Their works, especially those of Hildebert, are brilliant; the writers are book-poets, and votaries of the epic and didactic style, but apart from profane poetry, they contribute relatively little to hymnody proper. Next to them comes as representative of the accentuating principle Godefried, Abbot of Vendôme (d. 1132). Then follows Peter Abelard, Abbot of St. Gildas (d. 1142) who composed a complete hymn-book for his convent, "The Paraclite". Peter the Venerable, Abbot of Cluny (d. 1156) and St. Bernard of Clairvaux (d. 1153) stand, the one as a friend the other as an opponent, in close relation to the remarkable Abelard. The former devoted himself to a considerable extent to the quantitative as well as to the accentual poetry, and not without result. But St. Bernard contributed to hymnody only three rhythmical hymns on St. Victor and St. Malachy. All the other poems ascribed to him are unauthentic, particularly the celebrated "Jesu dulcis memoria". The above-mentioned rhythmical hymns show that Bernard, the great preacher, was but a mediocre poet. The name of the Abbot of Clairvaux has been connected too with that beautiful "Mariale" which is best known by the verses beginning: "Omni die dic Mariæ | Mea laudes anima". But the author of this polished hymn is the contemporary monk of Cluny, Bernard de Morlas (d. about 1140).

The zenith, not only of this period but of all hymnody, was reached by Adam of St. Victor (d. 1142). His numerous sequences, the exact number of which has not yet been determined, are incomparably beautiful. The splendid

Laudes crucis attollamus
Nos, qui crucis exsultamus
Speciali gloria

is also ascribed to him; but it seems more probable that

Adam had an equally gifted forerunner among the monks of St. Victor who wrote this sequence, and to whom therefore must now be ascribed some other sequences which until lately bore the signature of Victor. We must further mention in France Adalbert, Bishop of Mende (d. 1187), Guido of Bazoches (d. 1203), Goswin of Bossut (d. about 1230), and particularly Philippe de Grevia, Chancellor of the churches of Paris (d. 1236). Through the last named poet the poetic art of the "cantio" reached its highest point of perfection in a number of songs which appeal more to the intellect than to the heart. But Philippe also wrote several very fervent hymns. France and Germany must share the honour of claiming Julian von Speier (d. about 1250), choir-master at the court of the Frankish king and later a Minorite in the Franciscan Convent at Paris. He composed wonderful rhythmical Offices of St. Francis and St. Anthony.

In Germany, out of the great number of religious poems written in this period several may be ascribed to each of the following names: Henry of Breitenau (d. about 1150), Udalschalch of Maissach, Abbot of St. Ulrich and St. Afra in Augsburg (d. 1150), St. Hildegard, superior of the Rupertsberg convent near Bingen (d. 1179), Herrat, Abbess of Hohenburg (d. 1195), and Blessed Hermann Josef of Steinfeld (d. 1241). In Flanders we find Alanus of Lille (d. 1203) celebrated for his allegorical poem "Anticlaudianus", also Adam de la Bassée (d. 1258). England has but few great poets during this period: Alexander Neckam, Abbot of Cirencester (d. 1217), John Hoveden, the confessor of Queen Eleanor of England (d. 1275), and John Peckham, Archbishop of Canterbury (d. 1274). Hoveden wrote besides other poems the delightful nightingale song "Philomena" a long lyric-epic on the Life and Passion of Our Lord; and Peckham is immortal through his beautiful rhythmical Office of the Holy Trinity. Italy also witnessed in the thirteenth century the rise among her children of hymn writers no less celebrated and gifted. They were: Thomas of Capua (d. 1243), writer of the hymn on St. Francis "In caelesti collegio" and "Decus morum dux Minorum"; Rainerius Capocci of Viterbo (d. 1252); Thomas of Celano (d. about 1250), to whom we owe, it is said, besides other sequences the immortal "Dies iræ"; St. Thomas Aquinas (d. 1274), the profound singer of the Blessed Sacrament of the Altar in the hymns "Pange lingua gloriosi", "Sacris sollemniis" and "Verbum supernum prodiens", in the sequence "Lauda Sion salvatorem" and in the rhythmical prayer "Adoro te devote", poems that are highly esteemed; Bonaventure (d. 1274), the devout writer of the "Lignum vitæ", of a rhythmical Office of the Passion of Our Lord, and of a beautiful song of the Cross, "Recordare sanctæ crucis". About the end of the thirteenth century the touching classical sequence "Stabat mater" must have been written in Italy too, by a Franciscan monk, but whether by Jacopone da Todi (d. 1306) is more than doubtful. Finally we note Orrigo Scaccabarozzi, archpriest of Milan (d. 1293), who has left numerous liturgical poems of mediocre value.

During the fourteenth and fifteenth centuries hymnody still flourished. But the creative power continued to decrease slowly. Many beautiful poems were written, but their number in comparison to the number of inferior ones dwindled, particularly in the fifteenth century, and above all in France, which had held the premier place in hymnody. The outer form was neglected more and more, the accentual principle with the regular rhythm gradually sank again during the fifteenth century to the bare counting of syllables. Of the poets of this period only the most important are mentioned here: the Cistercian monk Christian von Lilienfeld (d. before 1332); the Carthusian Konrad von Gaming (d. 1360); Archbishop Johann von Jenstein of Prague (d. 1400); and the Venerable

Thomas a Kempis (d. 1471), who besides his immortal "Imitation of Christ" has left us a considerable number of hymns. In France besides the Cistercian Guillaume de Deguileville (d. after 1358), Philippe de Mézières, a nobleman of Picardy (d. 1405), was especially prominent. As hymn writers from Scandinavia the following are to be mentioned: Bishop Brynolf of Scara (d. 1317), confessor of the convent of Vadstena, Petrus Olavson (d. 1378), and Bishop Birger Gregorson of Upsala (d. 1383).

That this once so flourishing art of hymnody should have declined and finally died out cannot be wondered at, if it be considered that in all human undertakings the period of growth is followed by one of decay unless a new spirit pours fresh life into the old forms. This was not the case with hymnody, and external factors hastened its decline. Owing to the exile of the popes at Avignon and divers other religious and political entanglements of the age, and not the least to the Schism, abuses sprang up which lay like a frost on the hymnody of the people, rooted as it was in deep religious sentiment. The freedom to compose their own Liturgies, which each diocese and convent enjoyed at that time, degenerated into total lack of control. Hymns and sequences of more than doubtful worth, composed by men who were anything but poets, were introduced. Hymnody grew exuberantly and ran to weed. This was the favourable moment for Humanism to oppose hymnody successfully. The Humanists abominated the rhythmical poetry of the Middle Ages from an exaggerated enthusiasm for ancient classical forms and metres. Hymnody then received its death blow as, on the revision of the Breviary under Pope Urban VIII, the medieval rhythmical hymns were forced into more classical forms by means of so-called corrections. The hymnody of the Middle Ages with its great wealth is now only an historical monument which bears witness to the artistic skill, the joyful singing, and the deep religious life of our forefathers. For a long time it was neglected, but in the last century it has come to be understood and appreciated more thoroughly.

CLEMENS BLUME.

Hypæpa, titular see of Asia Minor, suffragan of Ephesus, was a small town on the southern slope of the Tmolus, looking towards the plain of Caystrus. Artemis Persica was worshipped there, and its women were noted for their beauty and their skill in dancing. It coined its own money until the time of Emperor Gordianus. It is now a little village in the vilayet of Smyrna, called by the Turks Tapou, though the Greeks retain the ancient name. It has ruins dating from classical and medieval times. The see survived until the thirteenth century; under Isaac Angelus Comnenus it became a metropolitan see. Lequien (Oriens Christ., I, 695) mentions six bishops: Mithres, present at the Council of Nicæa, 325; Euporus, at Ephesus, 431; Julian, at Ephesus, 449, and at Chalcedon, 451; Anthony, who abjured Monothelism at the Council of Constantinople, 680; Theophylactus, at the Council of Nicæa in 787; Gregory, at Constantinople, 879. To these may be added Michael, who in 1230 signed a document issued by the Patriarch Germanus II (Revue des études grecques, 1894, VII).

Hypnotism (Gr. ὕπνος, sleep).—By Hypnotism, or Hypnosis, we understand here the nervous sleep, induced by artificial and external means, which has in our days been made the subject of experiment and methodical study by men of science, physicians or physiologists. It does not differ, however, essentially from the "animal magnetism" which for a hundred years achieved such remarkable success in drawing-rooms without reaching the point of forcing the doors of the scientific academics, nor from the "Mesmerism" or the "Braidism" which will have to be explained in the course of the historical exposition of the subject. The causes of hypnotism have been discussed and are still open to discussion; but what has been ascertained beyond possibility of questioning is the existence of a special kind of sleep, artificially brought on by means of "passes", of acute or prolonged sensations, of a sustained attention, or of an effort of the will. The belief in a subtle, impalpable fluid, analogous to that of mineral magnetism, but peculiar to living beings—the "magnetic" or "vital fluid"—does not date from the eighteenth century, as some have thought, but goes back to a high antiquity. Pliny, Galen, and Aretæus bear witness to its existence. In the fifteenth century, Pomponacius remarks that "certain men have salutary and potent properties which are borne outward by evaporation and produce remarkable effects upon the bodies that receive them". Ficinus, on his part, says that "the soul, being affected with passionate desires, can act not only upon its own body, but even upon a neighbouring body, above all if the latter be the weaker". Lastly, it is Paracelsus who for the first time (in "De Peste") gives body to the doctrine by the hypothesis

of a fluid emanating from the stars and placing living beings in communication, as well as a power of attraction which enables persons in sound health to draw the sick to them; this force he compares to that of the loadstone and calls it *magnale*. And this is the original, fundamental constituent of "magnetism". The doctrine of Paracelsus is later on taken up and developed by a number of writers—Bartholin, Hahnemann, Goclenius, Roberti, and Van Helmont, the champion of "magnetic medicine", Robert Fludd, Father Kircher, author of a famous treatise "De arte magneticâ", Wirdig, Maxwell, Greatrakes, Gassner, and others. They do not all experiment in the same way; some use *munies* (talismans, or magic boxes) to direct the fluid, others operate directly by touch, rubbing, or "passes"

But no complete theory is found until we come to Mesmer (1733-1815). The Viennese physician supposes that there exists a universally diffused fluid, so continuous as to admit of no void, a fluid subtle beyond comparison and of its own nature qualified to receive, to propagate, and to communicate all the sensible effects of movement. He proposes to apply the name of *animal magnetism* to that property of the living body which renders it susceptible to the influence of the heavenly bodies and to the reciprocal action of those that surround it, a property which is manifested by its analogy with the magnet. "It is by means of this fluid", he says, "that we act upon nature and upon other beings like ourselves; the will gives motion to it and serves to communicate it" (*Mémoire sur la découverte du magnétisme animal*). Mesmer came to Paris in 1778, publicly expounded his system, and soon gained name and fame. He next set up as a healer, and obtained some successful results; the sick soon flocked to him in such numbers that he could not treat them individually, but had to group a number of them around a *baquet* and magnetize them all together. The magnetic *baquet* worked admirably. It was an ordinary tub, closed with a lid, from which issued a number of polished iron rods, bent back, and each ending in a dull point. These iron rods, or branches, conducted the magnetic fluid to the patients who stood in the circle. The *baquet* was the most famous and most popular means of producing the magnetic condition, but not the only one. Mesmer used other methods very much like those employed by hypnotizers to-day: movements of the finger or a small iron rod before the face, fixing the patient's eyes on some object, application of the hands to the abdomen, etc. Mesmer, unfortunately, dealt with sick people, and around his *baquet* he had the opportunity of observing more fits and hysterical convulsions than somnambulistic states. But these "convulsionaries" of a new kind, far from injuring the magnetizer or discrediting his method, added to his credit and his renown. The Academy, prejudiced against the innovator, and ill-pleased at the noisy advertisement he was receiving, could not remain heedless of the results he produced; it soon had to yield to the pressure of an excited and enthusiastic public opinion. A commission was named in 1784 to examine Mesmer's theory and practice; among its members were the most illustrious savants of the time—Bailly, Lavoisier, Franklin, de Jussieu. To surrender to the evidence presented, and to recognize the reality of the facts, was inevitable; but all the members of the commission, with the single exception of de Jussieu, refused to attribute the facts to any cause but imagination or imitation.

This direct blow at Mesmerism did not retard its progress. It made many adepts, among whom must be mentioned Deslon, Père Hervier, and above all the Marquis de Puységur, founder of the "Harmonie", one of the most celebrated magnetic societies. It was on his estate of Busancy, under the "magnetized tree", that M. de Puységur achieved his most splendid

successes and renewed the marvels of his master's *baquet*. He did better; he discovered the curious phenomenon of somnambulism. But the hour of this science had not yet come, and, in spite of positive results and incontestable cures, magnetism did not recover its vogue; it was neglected or forgotten during the Revolution and the Empire. It was reserved for an Indo-Portuguese priest, a man of strange bearing, the Abbé Faria, to recall public attention to animal magnetism and to revive the science. The Abbé Faria was the first to effect a breach in the theory of the "magnetic fluid", to place in relief the importance of suggestion, and to demonstrate the existence of "auto-suggestion"; he also established the truth that the nervous sleep belongs only to the natural order. From his earliest magnetizing séances, in 1814, he boldly developed his doctrine. Nothing comes from the magnetizer, everything comes from the subject and takes place in his imagination. Magnetism is only a form of sleep. Although of the moral order, the magnetic action is often aided by physical, or rather by physiological, means—fixedness of look and cerebral fatigue. Here the Abbé Faria showed himself a true pioneer, too little appreciated by his contemporaries, and even by posterity. He was the creator of hypnotism; most of the pretended discoveries of the scientists of to-day are really his. We need only recall here that he practised suggestion in the waking state and post-hypnotic suggestion. General Noizet, who was the immediate disciple of the Abbé Faria, had for his intimate friend a young magnetizer, Dr. Alexandre Bertrand, who believed in the existence of the magnetic fluid. Between the extreme and mutually exclusive doctrines of his master and of his friend, he had the intelligence and the courage to form his own opinion half-way, recognizing equally the share of the imagination and that of the magnetic fluid. We are inclined to think that his view of the matter was a just one, and apt to lead up to the definitive solution.

Thanks to the labours of those just mentioned, the revival of magnetism was assured. A number of writers—Virey, Deleuze, the Baron du Potet, Robouam, Georget, and others—aroused contemporary thought by their published works, their lectures, and their experiments; one of them, Dr. Foissac, in 1826, succeeded in bringing about the appointment by the Academy of Medicine of a commission to examine and register the strange, but positive, facts of magnetism. This second commission of the Academy took its work seriously and for five years conscientiously studied the question. Dr. Husson was charged with the preparation of the report, which appeared in June, 1831. He describes the properties of magnetism at length and with great impartiality, proclaims its virtues, and concludes by asking the Academy to encourage the study of the subject as one of importance for physiology and therapeutics. This victory of magnetism, in a quarter where it had until then met only with disdain and rebuffs, was highly prized, but it had no sequel. The academicians were afraid of the truth, they preserved an obstinate silence, and the report of Husson was thrust away in the archives without being accorded the honours of type. Shortly after this, a violent attack on magnetism by Dubois (of Amiens) met with a cordial reception from the Academy, in spite of Husson's protests. At last, on 1 Oct., 1840, after some unprofitable tests, the learned assembly definitively buried the question, declaring that thenceforward no reply would be given to communications on animal magnetism. Cast out by science, magnetism fell, by inevitable necessity, into commerce on the one hand and spiritism on the other. Clever adventurers exploited it, opening deposits of the fluid in Paris and in the country to heal the ills of humanity. Others had recourse to "table-turning" to know the past

and foretell the future. Superstition and quackery put an end to all honest scientific research. Nevertheless, the ideas of the Abbé Faria were not abandoned, they had been collected and clarified by a number of experts, and they soon found in James Braid (1795-1860), an intelligent and prudent commentator.

Resuming the old experiments, this plain Manchester doctor set himself to destroy completely the Mesmerian edifice; he only succeeded in developing it. No doubt he absolutely rejects the transmission of any magnetic or vital fluid, but he recognizes that the magnetic sleep is mainly of a nervous kind. Most authors have thought—and on all sides repeated—that he attributes this sleep to suggestion alone; this is a grave misapprehension against which Braid protested energetically. He is generally considered the founder of hypnotism, and that splendid title is sufficient for his fame. His contemporaries disregarded him and did not appreciate his doctrine as they should. They refused to see in nervous and sensory concentration the cause of the sleep, and they maintained that, like Faria and Bertrand, the Manchester surgeon acted only on the imagination of his subjects. Braid's decisive answer to his detractors was: "Faria and Bertrand act, or pretend to act, by the aid of a moral impression; their means is of the mental order; *mine is purely physical*, and consists in fatiguing the eyes and, by the fatigue of the eyes, producing that of the brain." In fact, as Dr. Durand de Gros has justly remarked, Braid was an ingenious discoverer who did not know how to make his discovery appreciated at its true worth; he brought to the art of Mesmer and of Faria its necessary complement, its superb capstone, and thus in very truth transformed it. He recognized that the act of gazing fixedly at one point for a certain length of time induces not only sleep, as physiologists before him had observed, but "a profound modification of our whole being which renders it apt to receive the magnetic influence and mental suggestion." From Braid to our own days hypnotism has grown and developed without interruption. The partisans of magnetism, momentarily discomfited, have not laid down their arms, and, while accepting the new theories of nervous fatigue and suggestion, have continued to maintain the existence of a fluid. The theories of Grimes on electro-biology (1848), and of Dr. Philipps (pseudonym of Dr. Durand de Gros) on vital electro-dynamism (1855) deserve to be recalled in this connexion. But theoretical schemes have little attraction for the masses, and the greater number of writers have established themselves on the ground of experiment and clinical practice, multiplying experiments in order to reconnoitre the vast field of hypnosis. We may mention, from amongst these, Dr. Liébeault of Nancy, Dr. Azam of Bordeaux, Professor Charcot of Paris, Dr. Bernheim of Nancy. Theoretical discussions could not, however, remain forever apart on their own ground, since every effect demands a cause; they naturally followed the discovery of facts and soon brought on a notable division of opinions. Two clear-cut schools, as is known, divided the world of science: the school of Nancy, and the Salpêtrière, or Paris, school. The former, represented by Drs. Liébeault, Bernheim, Beaunis, and others, recognizes, under different forms, but one cause of hypnosis, and deliberately pronounces it to be suggestion. The latter, of which Charcot was the renowned chief, believes in a physical cause, and not a moral. It attributes hypnosis to a nervous or cerebral modification of the subject, which modification it attributes to a malady of the nervous system—hysteria.

Both of these doctrines are supported by arguments and facts the force and value of which it would be vain to contest in either case. But, if both views are equally worthy of consideration, they are too absolutely opposed and mutually exclusive to be both

completely true. Suggestion does not explain all the phenomena of hypnosis, any more than does neurosis account for them. The nervous sleep, with the strange and manifold phenomena which accompany it, is beyond comprehension in the light of our actual knowledge. The intimate nature of that cerebral and nervous modification which Charcot regards as a necessary condition is not known, and there is nothing to prevent its reconciliation with the hypothesis of the nervous or magnetic fluid. As to the theory of suggestion, so dear to the Nancy school, it belongs to the psychical order, and is manifestly insufficient to account for the physiological disturbances of the nervous sleep. Professor Beaunis himself does not hesitate to confess its weakness. All this being so, it would seem opportune to inquire if the two hostile—or, rather, rival—schools of Paris and Nancy, either of them singly incapable of explaining hypnosis, might not find additional light and a welcome means of reconciliation in that hypothesis of animal magnetism which science in its earlier days too readily abandoned. The problem is only indicated here; its solution belongs to the future.

Hypnotism, we have said, is an artificial nervous sleep. It is brought on in many ways: by fixity of look, by visual concentration upon a brilliant object, by convergence of the axes of vision, by a sustained and monotonous sensation, by a vivid sensory impression such as that produced by the sound of a gong, by a brilliant light, etc. All these means produce the effect only upon one vitally important psychic condition—the consent of the subject, the surrender of his will to the hypnotist. No one can be hypnotized against his will; but once a person has given himself up to an operator, and gone through the exercises by which the effect is obtained, the operator can put him to sleep at pleasure, and even without the subject's knowledge. More than this, hypnosis can be induced without warning during natural sleep, though the feat is rare and is performed only with predisposed subjects. Not all persons are equally hypnotizable. Most persons who are sound in body and mind resist hypnosis or are affected only very superficially. Idiots and lunatics are absolutely refractory. Neuropaths and hysterical persons, on the other hand, are very susceptible and make ideal subjects. It is through their failure to make this capital distinction that writers come to such widely different conclusions. Dr. Liébeault estimates the proportion of hypnotizable persons at 95 per cent; other scientists are content with a smaller proportion, 50 to 60 per cent; Dr. Bottey admits for women a proportion of only 30 per cent. In short, the Nancy experts have greatly exaggerated the figures by including in their statistics all cases, both the slightly marked and the complete. The sleep induced may last for a long period—for some hours—but ordinarily is of rather short duration. Some hypnotized persons awake spontaneously, others at the departure of the operator, or at some noise. Most often the return to the waking state is brought about by a command or by blowing lightly on the subject's eyes. Once hypnotized, the subject may pass through three distinct phases: catalepsy, lethargy, somnambulism. On this point there have been lively debates between the Paris school and the Nancy school. The latter contends that these three states do not exist, and that suggestion suffices to explain all the phenomena; in this it is gravely mistaken. But the Paris school, too, has been wrong in maintaining, contrary to observed facts, that every hypnotized subject passes successively, and always in the same order, from catalepsy into lethargy, and from lethargy into somnambulism. This order is not always followed; some hypnotized persons fall directly into somnambulism, or into lethargy, without passing through catalepsy. We will consider the three states separately.

Catalepsy reduces the subject to the state of an inflexible corpse; it is characterized by impassibility and muscular rigidity; the subject keeps every position into which the experimenter puts him. He can be caught and thrown this way or that, pinched, pricked, slapped, without showing the least sign of sensibility. He is so rigid that he can remain indefinitely supported on the backs of two chairs, touching them only with the back of his neck and his heels, without betraying the least weakness or the slightest fatigue. The experimenter can climb upon his body without causing it to diverge from the horizontal straight line. Certain movements communicated to the patient are continued automatically and without variation. Even words are sometimes repeated mechanically. But what is still more curious is the reaction of a gesture upon the facial expression, and vice versa. If the subject is placed in a pugilistic attitude, his features, until then impassive, straightway express determination and defiance. If his eyebrows be drawn downward and inward (by the operator) his whole countenance becomes sad and gloomy. Let the hands be taken up and applied to the lips, and the corners of the mouth move apart and communicate a tender and smiling air to the whole physiognomy. Make the subject kneel as for prayer, and immediately the hands clasp, and the face expresses recollection and adoration.

To bring the cataleptic into lethargy it is sufficient to close his eyes or to gently rub his elbow or the top of his head. In the waking state this hypnotic condition is produced by pressing the eyeballs under the closed lids. In lethargy, the head falling back as if wearied, the flaccid limbs and the whole body present the phenomena of profound slumber; there is no longer either consciousness or intelligence, memory or sensation. The contraction of the muscles responds with extreme readiness to the least excitation.

A gentle friction or pressure applied to the top of the head brings on somnambulism. Here the sleep is lighter. The subject's eyes are open; he is insensible to pain, but his muscular strength and the power of his senses are increased to a remarkable degree; he sees, hears, speaks, and walks with uncommon vigour, and avoids the obstacles in his way. He has the appearance of being awake, but is not in possession of himself; he is only an automaton, with the operator pulling the strings at his pleasure. All the activity of the somnambulist is under the operator's control by means of verbal suggestion. If a suggestion be made to the hypnotized subject that it is cold, he straightway shivers. Tell him it is hot, he pants and fans himself, wipes his forehead, and tries to take off his coat. Hand him a glass of cold water and say, "Drink this glass of good Bordeaux", and he sips and smacks his lips. Tell him it is vinegar; he barely tastes it, and puts it away in disgust. Persuade him that he is listening to a beautiful piece of music, and he hears it so well that he beats time to it. The somnambulist sees and hears in imagination all that it is possible to suggest, and nothing is more amusing than his animated conversations with his absent relations and friends. Just as the absent can be made present to him, so a person who is really present can be made to disappear—can be eliminated. "By suggestion", says M. Beaunis, "we can lay an interdiction on an object or a person actually present, so that the person or object shall be, for him, non-existent.

More than this, we can make a person disappear partially; the subject will not see him, but will hear him; or he will be able to see and hear him, but not be aware of him by contact." Charcot often performed this experiment at the Salpêtrière: "When you awake", he would say, "you will not see M. X." He awoke the subject, and, in fact, the interdicted individual was invisible to him. M. X. places himself directly in his path, and he takes no notice of

the obstruction; M. X. stands between him and the window, and he sees only a cloud shutting out the daylight. A hat is put on the head of M. X., and the subject halts in astonishment at seeing a hat suspended in the air without anything to support it. A still more complicated experiment is possible: out of ten cards, all exactly alike, one is pointed out to the somnambulist which he is told will be invisible to him, and another on which he is shown an imaginary portrait. The ten cards are mixed up, and the somnambulist discovers the non-existent portrait on the same card on which it was previously shown to him, while the other of the two indicated cards passes absolutely unperceived.

Cutaneous insensibility is general, but the hypnotist can remove it or localize it at his own pleasure; he can trace a circle, for example, on an arm and make that portion of the limb insensible, while the other part of the arm continues normal. Dr. Barth makes a pretence of touching an hysterical subject on the forearm with a lighted cigar, and immediately a white spot develops on the skin, as large as a bean and surrounded by a circle of red. Itchings and inflammations can be produced. On the other hand, the appearance of water blisters, or *phlyctænae*, vesication, and cutaneous hæmorrhages (experiments of Focachon, Bourru, and Burot) are among the most seriously questioned and most questionable experiments; they have never been verified, even in the case of subjects affected with dermatographism. Suggestion not only works upon the sensibility, but also acts very powerfully on the motive faculty of the subject. It determines either contractions or paralyses, the rigidity of one member, the flaccidity of another. The subject is told: "Your fingers are glued together; separate them if you can." The man makes strenuous efforts to separate his fingers, but cannot. The arm is forbidden to make this or that movement, the hand to write certain letters, the larynx to pronounce a vowel, and the prohibition is effectual; a subject can be made to stutter, to fall dumb, or be afflicted with aphasia at the operator's discretion. The consciousness, the personality, or, more precisely, the memory, may be subjected to strange metamorphoses. "I say to a subject: 'C., you are six years old, you are a little child. Go and play with the other children.' And up he jumps, leaps, goes through the motion of taking marbles out of his pocket, sets them in the proper order, measures the distance with his hand, takes aim carefully, runs and puts them in a row, and thus keeps up his game with an attention and precision of detail most astonishing. In the same way he plays at hide-and-seek and at leap-frog, vaulting over one or two imaginary playmates in succession and increasing the distance each time—all with an ease of which, considering his illness, he would be incapable in the waking state. He transforms himself into a young girl, a general, a *curé*, an advocate, a dog. But when you saddle him with a personality above his ability, he tries in vain to realize it" (Bernheim).

The hypnotist can modify his subject, can make him believe that he is changed into another person, and even set side by side in the same person two existences—one real, the other suggested—which are parallel and mutually inconsistent. M. Gurney calls out a word or a number before a hypnotized subject, or tells some story, then he awakens her and shows plainly that she remembers nothing about it. Then taking her hand he puts a pencil in it and interposes a screen so that she cannot see it. Presently the hand begins to move about and, without the knowledge of the awakened subject, writes the word, or number, or story that was pronounced in the presence of the sleeping subject. It is a trick of the under-self, an automatic act of memory. Suggestion does not always produce its effects immediately; the operator can retard development; he can defer the execution

for many weeks or months after the subject's awakening. "I give an order to L. like this: 'At the third stroke your hands will be raised, at the fifth they will be lowered, at the sixth the thumb of one hand will be applied to the tip of your nose, and the four fingers extended (*un pied de nez*), at the ninth you will walk into the room, at the sixteenth you will fall asleep in an arm-chair.' There is no memory of all this, when the awakening takes place, but all the acts are performed in the order desired" (Janet). The idea of the act suggested remains buried in the memory and revives only at the period assigned and upon the given signal; and when the subject then acts he knows nothing about the origin of the impulse, but thinks he is following his own initiative; he is, without knowing it, the puppet of a brain function. Retroactive suggestions are no less curious. A subject can be made to believe that at such and such a time he has seen a certain event take place, heard a sermon, or performed some action, and the illusory memory becomes so firmly fixed in his mind as to pass for truth and carry conviction with it; he is persuaded when he awakes that he really has seen and heard these things—in one word, that the things have taken place.

Are all suggestions possible and realizable? Can a suggestion once given be resisted? The answer is nowadays no longer in doubt; but for a long time the quacks fostered a belief that they absolutely controlled their subjects, and that there was no such thing as an impossible suggestion. This is an error. Whenever a thing is displeasing or repugnant to him, the hypnotized person yields slowly and with difficulty; if the act proposed is a forbidden or a culpable one in the sight of his conscience, he refuses point blank. An honest woman in the hysterical condition will not permit the least trespass on decency. Of course perverted subjects show no respect for good morals, nor do those who in their normal state are victims of evil habits and yield to the lowest instincts. Nevertheless, there is a certain danger that the clever, powerful hypnotist, who is also unscrupulous, may obtain his ends if he presents reprehensible acts to his subject as innocent and permissible; the will, in hypnosis, is so weak and so unstable that the idea of duty based upon good habits may not always counterbalance the operator's action, and the repetition of alluring suggestions may at last result in drawing the subject into evil. Such cases are not purely hypothetical; we shall come back to their consideration in connexion with the dangers of hypnosis. Fanatical partisans of the suggestion method do not see its dangers, while they vaunt its merits and its practical applications. Has it the therapeutic virtues with which the Nancy school credits it? With the leaders of the Paris school and with Professor Grasset of Montpellier, we decidedly question this. That hypnosis easily conquers hysteria, especially the more localized and circumscribed manifestations of it, no one can deny. The connexion between these two abnormal states has been established, and it is so intimate that Gilles de la Tourette could say: "Hypnotism is only an induced paroxysm of hysteria." It is not wonderful that symptoms of monoplegia and of limited anæsthesia should be made to disappear by suggestion, but the cure cannot be counted on in any given case, nor is it enduring when it does result. As to neurasthenia, Bérillon and Bernheim affirm that just as good results have been obtained in it as in hysteria, but Pitres, Terrien, and other hypnotists strongly question this.

Writers also note the curative action of hypnosis in a certain number of more or less localized nervous states (St. Vitus's dance, tic, incontinence of urine, sea-sickness, vertigo, menstrual troubles, constipation, warts, etc.), but this action is in fact observed

only in hysterical cases, and it is not constant. Is hypnosis applicable to the treatment of psychosis—the of the divers forms of mental alienation—in a word, of madness? Forel, Pitres, Terrien, Lloyd, Tuckey, all agree in confessing its impotence. Auguste Voisin alone believed in its power, and he was obliged to admit that only ten per cent of the mentally deranged were hypnotizable. Even this was too much to say; for mania is characterized by the loss of volition, and we know that hypnosis is produced by a fixing of the attention. Against the widespread vices of alcoholism, morphinism, the ether habit, etc., hypnosis has been successfully employed, but it has not prevented speedy and fatal relapses. Still, when all other means have failed, this method could not be altogether ignored. It may be doubted whether organic maladies are amenable to hypnotic treatment. Bernheim claims to have remedied nervous and spinal affections. Wetterstrand declares that he has cured or relieved patients afflicted with "rheumatism, hæmorrhages, pulmonary phthisis, maladies of the heart, Bright's disease", etc. As to Liébeault, he knows no malady that has resisted its suggestions. It is needless to remark that these marvellous cures have not been demonstrated, and that physicians refuse to believe in them. The beneficiaries of the hypnotic method are nervous and hysterical sufferers, and permanency of cure is not assured in their cases. Besides, it is incontestable that hypnotists have forced the note and outrageously exaggerated their successes.

The applications of hypnosis in surgery, as a means of inducing anæsthesia, have not been frequent, but the cases are remarkable. As early as the year 1829, Cloquet amputated the breast of a hypnotized woman. At Cherbourg, in 1845, Dr. Loysel performed the amputation of a leg; at Poitiers, in 1847, Dr. Ribaud took out a very large tumor of the jaw; Broca, in 1859, opened an abscess on the border of the anus. It was Guérineau who amputated a thigh; and, later, Tillaux worked with hypnosis a serious operation of colporrhaphy. Hypnotism began to be applied in obstetrics less than thirty years ago. Pritzel performed an accouchement in this way in 1855. Dr. Dumontpallier had less success with a first childbirth, but secured complete painlessness for his patient in the earlier stages of labour. Liébeault, Mesnet, Auvard and Secheyron, Fanton, Dobrowsky, Le Menant des Chesnais, Voisin, Bonjour, Joire, and Bourdon have published observations which leave no doubt as to the reality of the anæsthesia produced by hypnosis. But here, as in surgery, it is an exception, a mere object of curiosity. No one dreams of setting up a comparison between hypnosis and chloroform, or of substituting the one for the other. Besides, hypnosis is successful only with nervous and hysterical subjects, and that not uniformly.

Hypnotism has not only been cried up as a therapeutic resource, it has also been applied in pediatry and in pedagogy. Durand (of Gros) is the true initiator of this method, but it is Bérillon who has claimed a place for it in science, failing to distinguish between pediatry, which is related to medicine, and pedagogy, which is the province of the directors of free and conscious education. Suggestion would be in place for serious perversions or inveterate vices—kleptomanic impulses, impulses to lying, debauchery, sloth, indecency, indocility, onanism, etc. Without going so far as Bérillon, Liébeault and Liégeois of Nancy claim to have reformed vicious and depraved children in this way and to have made excellent persons of them. They have cited some cures, but have not stated how long the good effects lasted. Education by hypnosis alone is not to be taken seriously; it does not correspond to the essential demands of education, which is the joint work of two—an intelligent, voluntary, effective collaboration of pupil and teacher.

Hypnosis is not only powerless to effect a moral or physical cure, to heal radically any malady whatever, but it is also, and above everything else, a dangerous method. It is right that this point should be insisted on. In the practice of hypnotism there are physical or physiological, psychic or intellectual, and above all moral, dangers. The wonders of hypnosis as achieved in the laboratories at the Salpêtrière are astounding and incontestable, but one must not fail to consider the price at which they are obtained. Hypnosis is not a casually improvised thing, it is an induced, artificial state, prepared for in advance; an "intensive culture" is necessary, a scientific and patient preparation—at least in so far as the aim is to obtain anything more than the common nervous sleep. Hysteria is the true soil for its growth—it supplies the best subjects, those who respond to the most difficult suggestions and exhibit the most striking effects. Experimentation on those affected in this way, when carried to extremes, is calculated to bring on the most harmful results. Their sensibility, already perverted and exaggerated by neurosis, cannot fail to become completely unbalanced and lead to madness as a sequel of the long and arduous séances. Many of them halt on the road, having ceased to be capable subjects. But, even when it succeeds, hypnotic education finds as its reward a corresponding failure of the psycho-sensitive life, a growing disturbance of the emotional or general sensibility. We may point to the case of a nervous young girl, whose malady was aggravated by hospital séances until restraint in an asylum became necessary. Hypnosis is a two-edged weapon, capable of doing more harm than good. Disturbance and perversion of the higher faculties follow those of the sensitive. The cerebral mechanism is of the most delicate kind, and the intensive practice of hypnosis has the effect of throwing that mechanism out of gear. Hypnotic suggestions set ideas and sentiments, senses and reason, in conflict, and vitiate the functioning of the mind. This effect is all the more fatal as the subjects are, to begin with, enervated and predisposed to lose their mental balance.

Hypnotism, therefore, is a dangerous, if not a morally detestable, practice. In the process of suggestion the individual alienates his liberty and his reason, handing himself over to the domination of another. Now, no one has any right thus to abdicate the rights of his conscience, to renounce the duty towards his personality. It has been objected to this view that there is the same effect in intoxication or in the use of chloroform; but the argument is of no validity. Drunkenness is not justifiable; it is a grave sin against temperance. As for chloroform, it has its precise indications strictly marked. It is only lawfully employed in medicine to make insensible sick people who are about to undergo a surgical operation. Can hypnotism be employed in the same way as chloroform? Has it any social utility, or does it play a humanitarian rôle in any way? Its supporters have vainly endeavored to endow it with practical uses, in order to give it a scientific turn, but in spite of all their efforts, hypnotism remains, not only an idle curiosity, but a dangerous game. Such is the certain conclusion to which we are led by a study of hypnotism in its relation to civil and criminal law. It is a generally recognized fact that criminal or unlawful acts have been, or can be, committed on sleeping subjects. Even without proceeding to actual crime, the hypnotist may make insidious and improper suggestions. Many have boasted of having obtained delicate secrets from young girls, humiliating avowals which they certainly would not have made had they been awake; such procedure is an odious abuse of confidence. We pass on to the consideration of crimes due to hypnosis: women have been made the victims of attempts on

their honour, and even of actual rape. Sometimes, too, by means of suggestion, the subject is made to consent to the crime, as criminal records show. We have no properly ascertained cases of fraud or theft successfully practised by means of hypnosis, but such things are nevertheless possible. The evidence given in all such cases should be regarded with mistrust; the subject may be deliberately trying to deceive, or he may be in good faith mistaken, and so accuse an innocent person. Of this the famous La Roncière case (1834) is a sad illustration.

The hypnotized person is not always a victim; he may be the criminal. But it is necessary to know the circumstances of each case, and not confound hospital patients with normal subjects. The suggestion of intra- and post-hypnotic acts is a usual operation of hypnotists, and the existence of "laboratory crimes"—i. e., crimes suggested in the course of experiment—no longer needs demonstration. But from these jocose crimes we cannot infer the existence of real crimes. Hypnosis, moreover, is complete or partial; only in the former (true somnambulism) is there a total absence of responsibility; in the latter, responsibility is only lessened (auto-suggestion, suggestion, persuasion). Then, too, resistance to suggestion is frequent; there is an inward struggle, a mental debate, proportioned to the standard of education imparted to the subject, the moral strength of the individual. In the administration of justice the testimony of those who have been subjected to hypnotic influence should be accepted only with the most decided reservations. Apart from the hypnosis, the subject can lie and deceive like any other hysterical person. Another cause of unconscious lying is retroactive amnesia: the subject, on awakening from hypnosis, may manifest a complete forgetfulness of what took place, not only in the hypnosis, but also in the period preceding it (Bernheim). Writers are divided on the question of *spontaneous* falsehood in hypnosis, but they are at one in recognizing the frequency of *suggested* lies and false testimony. It is doubtful if any one could succeed in causing a will or a deed of gift to be made by mere suggestion, but it is a sufficiently serious thing that the possibility of such a crime should even be thought of. It has been proposed to use hypnosis as a means of examining prisoners. In this connexion Liégeois has formulated the following conclusions: (1) No one has a right to hypnotize a prisoner in order to obtain from him by that means confessions or evidence against other persons which he refuses in his normal state—that is, when he is in possession of his free will. (2) If, on the other hand, an accused person or the victim of a crime should apply for it, it would be proper to resort to this process in order to elicit indications which the applicant might think likely to be favourable to him. (3) The same conclusion for civil acts, contracts of every kind, bonds, loans, acquired from hypnotic suggestion, and for donations or wills. This system would be fertile of abuses and odious in most cases.—"This kind of inquisition [*question*] would be no more justifiable than the old kind" (Cullerre).

The Church has not waited for the verdict of science to put the faithful on their guard against the dangers of magnetism and hypnotism, and to defend the rights of human conscience; but, ever prudent, she has condemned only abuses, leaving the way free for scientific research. "The use of magnetism, that is to say, the mere act of employing physical means otherwise permissible, is not morally forbidden, provided that it does not tend to an illicit end or one which may be in any manner evil" (Response of the Holy Office, 2 June, 1840). The encyclical letter of the Sacred Penitentiary, Tribunal of August, 1856, only confirms this, and Père Coconnier has referred to it in his famous work "L'Hypnotisme franc", in which he studies the subject

apart from all extraneous considerations. Taking up the latest teachings of Rome, Canon Moureau, of Lille, writes: "Hypnotism is tolerated, in theory and in practice, to the exclusion of phenomena which would certainly be preternatural." This is the opinion of most theologians, and it is the utterance of reason.

After the spiritual, the civil authority was concerned at the accidents resulting from the use of hypnotism, and has sought to regulate the practice and prevent its abuses. The task was not an easy one, and the French Government has found it above its powers to effect. Some efforts have been made in other countries, but without result or harmony of opinion. In Austria, Italy, and Belgium, in consequence of serious complaints, the police have forbidden public séances. In Denmark and Germany they have done better: laws have been passed making the diploma of Doctor of Medicine a necessary condition for the practice of hypnotism. These are excellent measures, but they do not provide for the possible malpractices of a dishonest or avaricious physician. There is no solid basis of duty except in the conscience, and of this the civil law cannot take cognizance. Many of the United States have proscribed hypnotism under the severest penalties, but even there no uniform and efficacious legislation exists. Public opinion demands of the various nations some concerted action to put a stop to the crying abuses of hypnotism, but a respect for human liberty and human conscience will never be secured except by the observance of religious morality. Meanwhile the scientific world contemplates with interest the phenomena of hypnotism, though it is evident that those phenomena move always in the same narrow circle. It cannot be denied that they have lost much of their novelty and their vogue. Philosophers confess that psychology has derived but little illumination from hypnotism, and physicians recognize that, from a therapeutic view-point, suggestion is almost void of results. In the hospitals the practice of hypnotic methods is manifestly on the decline. It is regarded rather as a source of social amusement, a game attended with some risk, than as a clinic process. The masters of the art themselves rarely employ it, and the successors of Charcot at the Salpêtrière tend more and more to have recourse only to "waking suggestion", a surer and less dangerous means of obtaining the same results.

GEORGES SURBLED.

Hypocrisy (Gr. ὑπό, under, and κρίνεσθαι, to contend—hence adequately "to answer" on the stage, "to play a part", "to feign or pretend") is the pretension to qualities which one does not possess, or, more cognately to the scope of this article, the putting forward of a false appearance of virtue or religion. Essentially its malice is identical with that of lying; in both cases there is discordance between what a man has in his mind and the simultaneous manifestation of himself. So far as the morality of the act goes, it is unimportant that this difference between the interior and the exterior be set out in words, as happens in formal lies, or be acted out in one's demeanour, as is true of simulation. It is deserving of notice that the mere concealment of one's own sin, unless one be interrogated by legitimate authority, is not straight-way to be accounted hypocrisy. With the purpose of measuring the degree of sinfulness attributable to this vice, St. Thomas Aquinas teaches that we must carefully differentiate its two elements: the want of goodness, and the pretence of having it. If a person be so minded as definitely to intend both things, it is of course obvious that he is guilty of grievous sin, for that is only another way of saying that a man lacks the indispensable righteousness which makes him pleasing in the sight of God. If, however, the hypocrite be occupied rather with successfully enacting the rôle he has assumed, then, even though he be in mortal sin at the time, it will not always follow that the act of counterfeiting is itself a mortal sin. To determine when it is so, cognizance must be taken of the motive which prompts the sinner to adopt his hypocritical bearing. If the end he has in view be such as to be incompatible with the love of God or one's neighbour, for example, if his purpose were thus to spread abroad false doctrine more unimpededly and more thoroughly, he must clearly be considered to have committed mortal sin. When, on the other hand, his animus does not involve such opposition to the supreme law of charity, the sin is esteemed to be venial, as, for instance, when one finds satisfaction in the completeness with which he carries off his part. The portrait of hypocrisy is drawn with appalling vividness by Christ in His denunciation of the Pharisees in Matt., xxiii: "Woe to you scribes and Pharisees, hypocrites; because you tithe mint, and anise, and cummin, and have left the weightier things of the law; judgment, and mercy, and faith. These things you ought to have done, and not to leave those undone. Blind guides, who strain out a gnat, and swallow a camel" (vv. 23, 24).

JOSEPH F. DELANY.

Hypostasis. See PERSON.

Hypostatic Union, a theological term used with reference to the Incarnation to express the revealed truth that in Christ one person subsists in two natures,

the Divine and the human. Hypostasis (*ὑπόστασις*) means, literally, that which lies beneath as basis or foundation. Hence it came to be used by the Greek philosophers to denote reality as distinguished from appearances (Aristotle, "Mund.", IV, 21). It occurs also in St. Paul's Epistles (II Cor., ix, 4; xi, 17; Heb., i, 3; iii, 14), but not in the sense of person. Previous to the Council of Nicæa (325) *hypostasis* was synonymous with *ousia*, and even St. Augustine (De Trin., V, 8) avers that he sees no difference between them. The distinction in fact was brought about gradually in the course of the controversies to which the Christological heresies gave rise, and was definitively established by the Council of Chalcedon (451), which declared that in Christ the two natures, each retaining its own properties, are united in one subsistence and one person (*εἰς ἓν πρόσωπον καὶ μίαν ὑπόστασιν*) (Denzinger, ed. Bannwart, 148). They are not joined in a moral or accidental union (Nestorius), nor commingled (Eutyches), and nevertheless they are substantially united. For further explanation and bibliography see: INCARNATION; JESUS CHRIST; MONOPHYSITISM; NATURE; PERSON.

Hypothesis. See INDUCTION.

Hypsistarians, or worshippers of the Hypsistos (*ὑψιστος*), i. e. of the "Most High" God; a distinct Jewish-pagan sect which flourished from about 200 B. C. to about A. D. 400, mostly in Asia Minor (Cappadocia, Bithynia, Pontus) and on the South Russian coasts of the Euxine Sea. The names *ὑψιστοί*, *ὑψιστοί* first occur in Gregory of Nazianzus (Orat., xviii, 5) and the name *ὑψιστιανοί* in Gregory of Nyssa (Contra Eunom., II), i. e. about A. D. 374, but a great number of votive tablets, inscriptions, and oracles of Didymos and Klaros establish beyond doubt that the cult of the Hypsistos (*ὑψιστος*, with the addition of *θεός* or *Ζεὺς* or *Ἄττις*, but frequently without addition) as the sole and supreme God was widespread in the countries adjacent to the Bosphorus (cf. Acts, xvi, 17, "these men are servants of the most high God"—oracle of the *pythonissa* at Philippi). It seems probable that the native Cappadocian cult of Zeus Sabazios was deliberately merged in the cult of Jahve Sabaoth practised by the numerous and intellectually predominant Jewish colonies, and that associations (*sodalicia*, *θιάσσοι*) of strict monotheists were formed, who fraternized with the Jews, but considered themselves free from the Mosaic Law. The importance and exalted ideas of these associations can be gathered from the fact that when someone asked Apollo of Klaros whether the Hypsistos alone was without beginning and end, he answered: "He is the Lord of all, self-originated, self-produced, ruling all things in some ineffable way, encompassing the heavens, spreading out the earth, riding on the waves of the sea; mixing fire with water, soil with air, and earth with fire; of winter, summer, autumn, and spring, causing the changes in their season, leading all things towards the light and settling their fate in harmonious order." The existence of these Hypsistarians must have been partially responsible for the astounding swiftness of the spread of Christianity in Asia Minor, yet not all of them accepted the new faith, and small communities of monotheists, neither Christians nor Jews, continued to exist, especially in Cappadocia. The father of Gregory of Nazianzus belonged to such a sect in his youth, and they are described in his panegyric written by his son. They rejected idols and pagan sacrifices, and acknowledged the Creator (*παντοκράτωρ*) and the Most High, to whom however, in opposition to the Christians, they refused the title of "Father"; they had some super-

stitutions in common with the Jews, their worship of fire and light, the keeping of the Sabbath, the distinctions of food, but circumcision they rejected. No doubt Persius had Hypsistarians in view when he ridiculed such hybrid religionists in Satire v, 179-184, and Tertullian seems to refer to them in "Ad nationes", I, xiii. The statement that Hypsistarians continued to exist till the ninth century, is based on a mistaken interpretation of Nicephorus Const., "Antirhet. adv. Const. Copr.", I, in Migne, P. G., col. 209. Hypsistarians are probably referred to under the name *Calicolæ* in a decree of the Emperors Honorius and Theodosius (A. D. 408), in which their places of worship are transferred to the Catholics.

Biog.*, s. v. *Hypsistarii*.

J. P. ARENDZEN.

Hyrtl, JOSEPH, Austrian anatomist, b. at Eisenstadt in Hungary, December 7, 1810; d. 17 July, 1894, on his estate near Vienna. He began his medical studies in Vienna in 1831, having received his preliminary education in his native town. His parents were poor, and he had to find some means to help defray the expenses of his medical education. In 1833, while he was still a medical student, he was named prosector in anatomy, and the preparations which this position required him to make for teaching purposes attracted the attention of professors as well as students. His graduation thesis, "Antiquitates anatomicæ rariores", was a prophecy of the work to which his life was to be devoted. On graduation he became Prof. Czermak's assistant (*famulus*) and later became also the curator of the museum. He added valuable treasures to the museum by the preparations which he made for it. As a student he set up a little laboratory and dissecting room in his lodgings, and his injections of anatomical material were greatly admired. He took advantage of his post in the museum to give special courses in anatomy to students and in practical anatomy to physicians. These courses were numerously attended.

In 1837, when but twenty-six, Hyrtl was offered the professorship of anatomy at the University of Prague, and by his work there laid the foundation of his great reputation as a teacher of anatomy. Here he completed his well known text-book of human anatomy, which went through some twenty editions and has been translated into every modern language. The chair of anatomy at Vienna falling vacant in 1845, he would not have applied for it, so satisfied was he with the opportunities for work at Prague, but that his friends insisted; he was immediately elected. Five years later he published his "Handbook of Topographic Anatomy", the first text-book of applied anatomy of its kind ever issued. Before his death he was to see this department of anatomy become one of the most important portions of the teaching in the medical schools of the world. It was as a teacher that Hyrtl did his great work. Professor Karl von Bardeleben, himself one of the great teachers of the nineteenth century, did not hesitate to say that in this Hyrtl was unequalled. His fame spread throughout Europe, and he came to be looked upon as the special glory of the University of Vienna. In 1865, on the occasion of the celebration of the five-hundredth anniversary of the foundation of the university, he was chosen rector in order that, as the most distinguished member of the university, he should represent her on that day. His inaugural address as rector had for its subject "The Materialistic Conception of the Universe of Our Time". In this he brought out very clearly the lack of logic in the materialistic view of the world and concluded: "When I bring all this together

it is impossible for me to understand on what scientific grounds is founded this resurrection of the old materialistic view of the world that had its first great expression from Epicurus and Lucretius. Nothing that I can see justifies it, and there is no reason to think that it will continue to hold domination over men's minds."

In 1880 there was a magnificent celebration of Hyrtl's seventieth birthday, when messages of congratulation were sent to him from all the universities of the world. After retiring from his professorship he continued to do good work, his last publication being on Arabic and Hebraic elements in anatomy. On the morning of 17 July, 1894, he was found dead in bed, with his arms crossed on his breast. His principal works are "Lehrbuch der Anatomie des Menschen" (Prague, 1846); "Handbuch der topographischen Anatomie", 2 vols., 8vo (Vienna, 1853); "Handbuch der Zergliederungskunst" (Vienna, 1860). His monograph for the reform of anatomical terminology "Onomatologia Anatomica" (Vienna, 1880), attracted widespread attention.

BYDELEBEN, *Biographic Sketch in Deutsche Med. Wochenschrift* (1894), no. xx, 619. A good sketch in English appeared in *The Lancet* (London, 1894), II, 170.

JAMES J. WALSH.

Hyssop (חִסְסוֹן; Sept. ὑσσώπος), a plant which is referred to in a few passages of Holy Writ, and which cannot be identified with certainty at the present day. Its existence in Egypt is proved by Ex., xii, 22, wherein Moses is represented as bidding the elders of Israel to take a bunch of hyssop and to sprinkle with it the blood of the paschal lamb upon the lintel and the side posts of the doors of their dwellings. In the wilderness hyssop was also ready at hand, as can be inferred from Ex., xxiv, 8, completed by Heb., ix, 19, according to which Israel's great lawgiver sprinkled the Hebrews with hyssop dipped in the blood of victims, at the sealing of the old covenant between Yahweh and His people. The references to hyssop contained in the Mosaic ritual show clearly that it was a common plant in the peninsula of Sinai and in the land of Chanaan, and disengage its principal uses among the Hebrews. Thus, it is with hyssop that the blood of a bird offered in sacrifice is to be sprinkled for the cleansing of a man or a house affected with leprosy (Lev., xiv, 4-7, 49-51); it is with it, too, that the sprinkling of the water of purification must be made at the cleansing of a tent, a person, or a vessel polluted by the touch of a dead body (Num., xix, 8). Besides being thus used as an instrument in the act of sprinkling, hyssop was employed as one of the elements to be burned in the preparation of the water of purification itself (Num., xix, 6). It is not therefore surprising to find that this manifold and intimate connexion of hyssop with the various purifications of the Old Law led the Psalmist (Ps. I [Heb. li], 9) to regard the sprinkling with hyssop as symbolical of a thorough purification of the heart, a view which the Catholic Church has made her own in the ceremony of the *Asperges* which usually begins the solemn offering of Holy Mass. Nor is it surprising to find that this same connexion of hyssop with the various cleansings

of the Mosaic Law suggested to many writers the identification of that plant with the *Hyssopus officinalis*, or common hyssop, with which they were particularly acquainted, and the detergent properties of which they not unnaturally thought had induced the Hebrew legislator to select it as especially fit for the purificatory services in Israel. However widely received in the past, such identification is now commonly rejected for this reason, among others, that the *Hyssopus officinalis* appears to have been unknown in ancient Syria and Egypt. The plant, which at the present day is considered as more probably the hyssop of the Mosaic ritual, is the *Origanum maru*. Like the *Hyssopus officinalis* it belongs to the family of the *labiateæ*, has aromatic and detergent properties, and can be easily made into a bunch for purposes of sprinkling. The following are some of its particular claims to be considered as the hyssop spoken of in the Old Testament. In the first place, it is to the *Origanum*—not to the *Hyssopus officinalis*—that all ancient tradition points when referring to the hyssop of the Scriptures. In the next place, its Egyptian name of supho, is clearly allied to the Aramaic *zufo* and the Hebrew *'ezôb*. Lastly, the *Origanum maru* grows on the walls of all the terraces throughout Palestine and Syria. This last claim in favour of the identification of the hyssop of the Old Testament with the *Origanum maru*, is in distinct harmony with III Kings, iv, 33 (Heb. I Kings, iv, 33) where we read that Solomon "treated about trees from the cedar that is in Libanus, unto the hyssop that cometh out of the wall". The chief difficulty in the way of this identification is drawn from John, xix, 29, where it is stated that some of those present at Christ's Passion "putting a sponge full of vinegar about (or rather: upon) hyssop, put it to his mouth". It is oftentimes supposed that the stalk of the *Origanum maru* would be too short and too slender for the purposes described in this passage, and that another plant with a longer and firmer stem, for instance, the caper-plant (*capparis spinosa*) is the one meant by the Fourth Evangelist. This supposition, however, does not appear necessary to many commentators. They think that the cross whereon Jesus lay was not such a lofty object as is assumed by the opponents of the identification, and that in consequence the *Origanum maru*, some 40 or 50 centimetres in length, and undoubtedly near at hand on Calvary, was used either alone, or together with a reed (cf. Matt., xxvii, 29; Mark, xv, 36) to carry the sponge dipped in vinegar to the lips of the Saviour. Numerous other plants, more or less akin to the *Origanum maru* are also regarded, and indeed with some probability, as the hyssop spoken of in Holy Writ.

FRANCIS E. GIGOT.

I

Ibagué, DIOCESE OF (IBAGUENSIS), suffragan of Bogotá, in the Republic of Colombia, South America. Owing to the difficulties of providing adequately for the spiritual needs of the people over the wide area of the Diocese of Tolima, that see was suppressed by decree of 20 June, 1900, and two new bishoprics were formed in its stead: Ibagué and Garzon. Ibagué has jurisdiction over the two provinces that constitute the northern and central portions of the republic. The town of Ibagué (San Bonifacio de Ibagué) is the capital of the Department of Tolima, and is picturesquely situated on a fertile plain, about sixty miles west of Bogotá, at an altitude of more than 4000 feet above sea-level. This city, the seat of the bishopric, is located in the centre of a prosperous district, and dates from 1550. It was for a short time (1854) the capital of the republic. The first and actual bishop of the diocese, Mgr. Ismaël Perdomo, was born at El Gigante, now in the Diocese of Garzon, 22 Feb., 1872. On 29 April, 1903, he was elected to govern the Diocese of Ibagué; he received episcopal consecration at Rome on 19 June, and on 25 June was preconized. The number of Catholics in the diocese is computed, approximately, at 250,000. The cathedral, which is in process of construction, will be dedicated to the Immaculate Conception (see BOGOTÁ; GARZON).

P. J. MACAULEY.

Ibar, SAINT, a pre-Patrician Irish saint, who laboured in the present County Wexford from 425 to 450, recognized the jurisdiction of St. Patrick, and was confirmed in his episcopacy. Thus, though a missionary before the arrival of the great national apostle, St. Ibar was a contemporary of St. Patrick, and is regarded as the patron of Begerin, in Wexford harbour. Although at first not disposed to yield to St. Patrick he afterwards submitted and became his disciple. Much obscurity attaches to his early training, but about the year 480 he settled at Begerin, where he built an oratory and cell. In the "Life of St. Abban" it is stated that St. Ibar's retreat was soon peopled with numerous disciples from all parts of Ireland, and the "Litany of Aengus" invokes the three thousand confessors who placed themselves under St. Ibar's direction. His nephew, St. Abban, as a boy of twelve came to Begerin in St. Ibar's old age and accompanied him to Rome. His name is variously written Ibar, Iberius, and Ivor, and his death is chronicled in the year 500 on 23 April, on which day his feast is observed. Although Begerin was formerly an island in the north of Wexford harbour, it has long since been one of the reclaimed Sloblands.

W. H. GRATTAN-FLOOD.

Ibarra, DIOCESE OF (IBARRENSIS), in Northern Ecuador, suffragan of Quito, created by Pius IX, 29 December, 1862, out of the provinces of Carchi and Imbabura, previously within the Archdiocese of Quito. Francesco Jabani, the Apostolic Delegate,

named as executor of the Bull the Bishop of Antioquia (Colombia), Antonio Riaño, at that time in exile at Quito, under whom the canonical erection of the Diocese of Ibarra took place 6 August, 1865. For two months Bishop Riaño took charge of the diocese as administrator Apostolic, and was succeeded by José María Jerovi, later Archbishop of Quito, and Arsenio Andrade, afterwards Bishop of Riobamba. Finally, in April, 1867, José Ignacio Checa y Barbo was appointed first Bishop of Ibarra, but in June of the following year was transferred to the archiepiscopal see of Quito, being succeeded in June, 1869, in the diocese of Ibarra by Tomás Antonio Iturralde, who resigned in 1875. The next two bishops Pedro Rafael González Calixto (1876-93) and Federico González Suárez (1895-1906) were later appointed Archbishops of Quito. The present (fifth) incumbent is Ulpiano Pérez Quiñonez, born 4 August, 1863, at Quito, ordained in 1887, later professor and rector of the seminary at Atocha, in 1895 made canon, in 1898 vicar-general of Quito, and appointed to the Bishopric of Ibarra, 11 January, 1907, being consecrated on 19 May of the same year at Quito.

Statistics.—According to a communication from the bishop dated 23 May, 1907, the diocese has an area of 3661 sq. miles, with a Catholic population of 104,000, including 36,000 in the province of Carchi (Tulcan, the capital, alone comprising 5000), and 68,000 in the province of Imbabura (Ibarra, the capital and seat of the diocese, numbering 5600). The 28 parishes of the diocese are divided among 8 deaneries (*vicariatos foraneos*): Tulcan, S. Gabriel, and Mira, in the province of Carchi; Otavalo, Cotacachi, Urcuqui, Hatuntaqui, and Ibarra (*foraneo central*), in the province of Imbabura. In addition to the 55 secular priests, 2 Dominicans and 2 Mercedarians devote themselves to the care of souls, each order having a church at Ibarra. The Discalced Carmelite Sisters have a community of 14 sisters at Ibarra; the Bethlehemites, an academy for girls at Ibarra and one at Tulcan; the Sisters of Mercy, schools for girls at Ibarra and Otavalo and a hospital and orphan asylum at Ibarra. In addition to the primary grammar schools there are at Ibarra a preparatory seminary (Seminario Conciliar S. Didaco) and the national college of S. Alfonso, besides a national college at Tulcan. Candidates for the priesthood study in the seminary at Quito. The cathedral chapter, erected 18 June, 1866, consists of 12 canons, including 2 dignitaries (dean and archdean) and 4 officials (*theologalis, doctoralis, magistralis, penitentiarius*). The city of Ibarra, founded 28 September, 1606, which in 1906 celebrated the tercentenary of its foundation, with great splendour, was repeatedly destroyed by earthquakes, and on the night of 15-16 August, 1868, razed to the ground. It has since partially recovered from the catastrophe, and contains, besides the cathedral, the parish church of S. Augustin and the churches connected with the monasteries of the Dominicans (S. Domingo) and the Mercedarians (Nuestra Señora de la Merced), the church formerly in charge of the Capuchins (S. Francisco), and that of S. María del Carmen. There are also 6 public chapels. The confraternities which have been canonically

erected at Ibarra include those of the Perpetual Adoration, of the Immaculate Conception (for young ladies), of St. Joseph, of Bl. Maria Ana of Quito. The Third Orders of St. Francis and St. Dominic have members in almost every parish of the diocese.

GREGOR REINHOLD.

Ibas (Syriac IHĪBĀ or HĪBĀ, i. e. DONATUS), elected Bishop of Edessa in 439 as successor of Rabbulas, one of the most ardent supporters of St. Cyril; d. 457. His policy, however, was just the reverse, as he inclined strongly to the doctrines of Theodore of Mopsuestia. His reign as bishop was most disturbed. The infuriated partisans of Dioscorus protested and had him deposed at the Second Synod of Ephesus (the "Robber Synod"), in 449. He was, however, restored to his see by the Council of Chalcedon (451). Ibas holds a very important place in the history of dogma. Unfortunately the only authentic writing of his that we possess is his celebrated letter to Maris of Beit-Ardashir (i. e. to Dadishō, Catholicos of Seleucia-Ctesiphon and Patriarch of Persia), a famous subject of discussion at six councils. By the Monophysites he was accused of Nestorianism, nor can it be denied that he was in complete sympathy with the theological school of Antioch, whose masters were Diodorus of Tarsus, Theodore of Mopsuestia, and Theodoret of Cyrus. He taught for many years in the "Persian School" at Edessa, where he had among his pupils several future bishops of the Persian Church; he inspired them with admiration for Theodore of Mopsuestia, and translated for them or had them translate the latter's works, so that the Syrian Nestorians call the Bishop of Mopsuestia, by antonomasia, the *Interpreter*. However, Ibas protests that he did not approve Nestorius when that patriarch refused the title of *Mother of God* to Mary: he only blames the methods adopted by Cyril to procure the condemnation of Nestorius; this much he openly declares in his letter to Maris. Moreover, at the Council of Chalcedon, he anathematized Nestorius both orally and in writing, and was rehabilitated almost unanimously by the Fathers. He indignantly repudiated certain assertions attributed to him by his adversaries, for instance: "I do not envy Christ His becoming God, for I can become God no less than He", and there is no reason for doubting the sincerity of his protestations. What is certain is, that to avoid all suspicion of Monophysitism, i. e. the confusion, or rather fusion, of the Divine nature and the human nature in Christ, he did not admit what is called the *communicatio idiomatum*, i. e. the possibility of attributing to the Divine Person the concrete attributes of the human nature, and to the human nature the concrete attributes of the Divine Person. But that is not a sufficient reason for impugning his orthodoxy, as this theory was in his time far from being fully and clearly expounded. At the Council of Chalcedon the Patriarch Maximus of Antioch and the Roman legates declared: "Having read his letter again, we declare that he is orthodox." But the Fathers did not adopt that opinion unanimously.

A hundred years later, the letter of Ibas to Maris was one of the famous "Three Chapters" condemned at the fifth œcumenical council (553), at the instigation of Justinian. Among the theologians of that council, some, like the Westerns, thought that, as the Council of Chalcedon had rehabilitated Ibas, to condemn his writings would be equivalent to condemning that council, in other words to approve its Monophysite adversaries. Others, in the hope of conciliating the Monophysite partisans known as Severians, thought it necessary to condemn once more, not only Nestorius,

but also all writings that inclined towards Nestorianism; they thought the letter of Ibas was impious, because it calumniated St. Cyril, criticized the procedure of the Council of Ephesus, and seemed to justify Nestorius and the Nestorians; others asserted, however, that the letter was apocryphal. In the eighth session (2 June, 553) the council declared: "If anyone defends the aforesaid letter and does not anathematize it, it and him who defends it and who says that it is wholly or at least in part correct let him be anathematized". Pope Virgilius, who had at first expressed a contrary opinion, and for that reason was attacked by Justinian, ended by sanctioning the decisions of the council. It is to be remarked that it was not the person of Ibas, but only his letter to Maris, that was condemned on this occasion.

JÉRÔME LABOURT.

Iberville, PIERRE LE MOYNE, SIEUR D', founder of the colony of Louisiana, b. at Villemarie, Montreal, 16 July, 1661; d. at Havana, 9 July, 1706. He was the third son of Charles Le Moyne, a native of Dieppe, Sieur de Longueuil in Canada, and of Catharine Primot. Several of his brothers distinguished themselves greatly as explorers and sailors, viz., the Sieurs de Longueuil, Sainte-Hélène, Maricourt, Sérigny, Châteauguay, and Bienville. Iberville became a sailor at an early age and served as a volunteer under the Chevalier de Troyes in Hudson Bay. In 1686 he began a brilliant career as soldier and sailor, and took part in many expeditions against the English. In an attack against Fort Rupert, with his brother Maricourt and nine men in two bark canoes, he captured an English ship with fifteen men and the governor of Hudson Bay. In 1694 he took Fort Nelson in Hudson Bay, which he named Bourbon, and in 1696 Fort Pemaquid in Maine. In 1696 also he captured all the English settlements on the coast of Newfoundland, and in 1697 he led an expedition against the English on Hudson Bay. He had a squadron of four ships and a brigantine and commanded the "Pelican" (50 cannon). Separated by ice from his ships Iberville, on 5 Sept., 1697, attacked alone three English ships, sank the "Hampshire" (56 cannon), captured the "Hudson Bay" (32 cannon) and put to flight the "Derring" (36 cannon). He lost his ship and his prize near the mouth of the St. Tereza River, but on the arrival of three ships of his squadron he captured Fort Nelson (Bourbon).

Iberville sailed for France in November, 1697, and was chosen by the Minister of Marine to lead an expedition to rediscover the mouth of the Mississippi River, and to colonize Louisiana, which the English coveted. Iberville's fleet sailed from Brest on 24 October, 1698. It consisted of two small frigates, the "Badine", commanded by Iberville himself, and the "Marin", and two store-ships. At Santo Domingo the warship "François" joined the expedition and accompanied it to its destination. On 25 January, 1699, Iberville reached Santa Rosa Island in front of Pensacola, founded by the Spaniards; he sailed from there to Mobile Bay and explored Massacre Island, later Dauphine. He cast anchor between Cat Island and Ship Island, and on 13 Feb., 1699, he went to the mainland, Biloxi, with his brother Bienville.

On 27 February he set out with two rowboats, two birch canoes and forty-eight men in search of the mouth of the Mississippi, which he discovered on 2 March, 1699. He sailed up as far as the mouth of Red River and returned to his ships through Bayou Ascantia and two lakes, which he named Maurepas and Pontchartrain. On 1 May, 1699, he completed a fort on the north-east side of the Bay of Biloxi, a

little to the rear of what is now Ocean Springs. This fort was called Maurepas or Old Biloxi. On 4 May, 1699, Iberville sailed for France with the "Badine" and the "Marin", leaving Sauvole in command of the infant colony. He returned on 8 Dec., 1699, went up the Mississippi as far as Natchez, and ordered a fort to be built fifty-four miles from the mouth of the river, which was abandoned in 1705. On 28 May, 1700, Iberville returned to France, and came back to Louisiana on 18 Dec., 1701. He remained in the colony until 27 April, 1702, and sent Bienville to found Fort Louis of Mobile on Mobile River, 16 Jan., 1702. In 1706 Iberville captured the island of Nevis from the English, and went to Havana to obtain reinforcements from the Spaniards for an attack on the Carolinas. He died at Havana of yellow fever. He was *capitaine de vaisseau* in the French navy and was said to have been as "military as his sword" He was an able sailor, soldier, explorer, and colonizer.

ALCÉE FORTIER.

Ibora, a titular see in the Province of Helenopont, suffragan of Amasia. The primitive name of the city was Gaziura, formerly a royal city, mentioned by Strabo as deserted (XII, xv; Dion Cassius, xxxv, 12). In fact a Greek inscription, which dates from the time of Mithridates of Pontus, has been discovered on the rock of the fortress; a subterranean gallery, hewn from the rock, descends to the interior of the mountain, and served perhaps as a secret depository for the royal treasures. Evagrius Ponticus, the famous Origenist ascetic of the fourth century, was a native of Ibora (Sozomen, "Hist. Eccl.", VI, xxx); situated not far from it was Annesi, the property of St. Basil, who led a religious life on the banks of the river Iris with his friend St. Gregory and his sister Macrina. There is frequent mention in the correspondence of these two saints of Ibora, which, according to Procopius (*Historia Arcana*, xviii), was destroyed by an earthquake in the sixth century. Le Quien (*Oriens Christ.*, I, 533) mentions seven bishops of Ibora, from the fourth to the ninth century. The bishopric still existed about the year 1170 under Manuel Comnenus (Parthey, "Hieroclis Synecdemus", 108). To-day Ibora is called Turkhal; it is a *caza* in the sanjak of Tokat, in the vilayet of Sivas. The village numbers 3000 inhabitants, all Turks. It is surrounded by beautiful gardens and orchards. Nearby is the Lake of Turkhal, three to three and a half miles in circumference.

S. VAILHÉ.

Iceland.—The island called Iceland, which, though really a part of America, is considered, because of its population and history as forming a part of Europe, is situated in the North Atlantic Ocean, between 63° 23' and 66° 33' N. lat., and is separated from the New World by the comparatively narrow and almost entirely ice-bound Strait of Greenland. It is a compact body of land much indented by fiords on its northern and western shores. A small peninsula, with very sinuous outline, lies at the north-western end, and is connected with the main body by a narrow isthmus. The area of the island is about 39,756 sq. m., only two-fifths of which are inhabitable. From the barren and rocky plateau, the average height of which is 2000 feet above the level of the sea, rise extensive glaciers (*jökull*; pl. *jökular*), broad summits, and high mountains, most of which are of volcanic origin (e. g., Hecla, over 5000 feet; Oeraefa, 6424 feet), and fre-

quently belch forth tremendous masses of lava and mud and work great havoc (e. g. 1783, 1845, 1873). Earthquakes are also frequent. The rivers, though short, are numerous and carry a large volume of water. There are also inland lakes. The climate, which is on the whole of the oceanic type (moderate fluctuations of temperature, with frequent fogs and precipitations), differs, nevertheless, considerably according to locality. It is more severe along the northern coast, which frequently remains ice-bound until the late summer, but it is tempered by the Gulf Stream on the southern and western coasts.

Excellent sulphur is found in abundance, besides some coal and quarry stone. The flora is scanty. Some parts of the island are covered with rich grass, while birch trees, alder trees, and willows grow in protected spots to a height of twenty-seven feet. Small groups of these are to be seen here and there, but the growth of a real forest is prevented by the terrible storms which sweep over the island. The cultivation of grain is out of the question; only berries, and potatoes, and some other vegetables can be raised with profit. The breeding of sheep and horses is the principal occupation in Iceland. While the former supply milk, butter, meat, and wool, the small hardy rough-haired ponies serve as saddle horses and as beasts of burden, and are an important article of exportation. Cattle are less numerous; hogs and domestic fowl rare. Game abounds: reindeer, seals, polar foxes, and polar bears, as well as birds of many varieties, which are sought after for their eggs and feathers. Fishing also is an important occupation, followed not only by the natives, but also by foreigners. Manufactures and handicrafts are still in their infancy. Trade, on the other hand, carried on chiefly by barter, is fast increasing and represents a value of over five million dollars a year. New roads and bridges, and the establishment of the postal service and of telegraphy, are doing much to develop commerce. The revenues, formerly insignificant, have doubled in the last two decades, and are systematically applied to further the culture and material well-being of the people.

The scant population (80,000 souls) dwell chiefly by the shores of the ocean, and in the river valleys which open towards the sea. They belong for the greater part to the North Germanic race (Norsemen). Their language dates back to very early times and has a rich literature. The official creed, since 1550, is the Augsburg Confession; but of late infidelity has been spreading, and new sects have sprung up. Backward industrial conditions and frequent cataclysms of nature (earthquakes, floods, etc.) formerly caused considerable emigration, especially to America.

Since 1874, and especially since 1904, Iceland has become autonomous, is governed by its own laws, and has its own courts and an independent administration. Arms: a white falcon in a field azure. It is not, as formerly, under the immediate jurisdiction of Denmark, though the Danish king is nominally the sovereign of Iceland. The seat of government and meeting-place of the legislative body (the Althing), with its two chambers, is Reykjavik, which is at the same time the capital of the country and the see of the Lutheran bishop; its population approximates 10,000. It has a Lutheran cathedral, a Catholic church, and several hospitals. The three other cities, Akureyri, Isafjörður and Seydisfjörður are also growing rapidly.

POLITICAL HISTORY.—Irish monks, according to legend, were the first discoverers of the island about the year 800. Colonization did not begin until much later, when King Harold I Harfagr of Norway subdued the Norse nobles, who had been independent until then, and made himself absolute lord of Norway in 872. Many liberty-loving men at that time left the land of their fathers (874), and sought new homes on the still uninhabited island which is said to owe its name to

the Norseman, Floke Vilgerdardson. This immigration (*Lundnahme*) continued for sixty years. The colonists (noblemen, with their serfs, among whom were men of Germanic and Celtic origin) divided the soil among themselves, and the chieftains not only continued to exercise judicial prerogatives over the low tenants and serfs, but also performed the functions of high-priests (*goði*). Freeman, however, might claim their rights in the moot or public assembly (*thing*). The people at the beginning of the tenth century numbered about 25,000, divided into some thirty clans, which about 930 formed an independent republic with an aristocratic constitution. The government and the administration of justice were vested in the Althing, which met annually in June and in which freemen and their families could take part. But this body was not always able to exercise its powers, and it happened quite often that internal quarrels were settled by the sword. Thirty years later the country was divided into four quarters, subdivided in turn into thing-districts. To simplify business, there was a special court of law for each district, under the general jurisdiction of the Althing. A committee (*lögráttá*), to which each quarter sent twelve representatives, carried on the administration in the name of the Althing. The republic was on friendly terms with the Kingdom of Norway, the two countries having fixed the respective rights and obligations of their citizens by treaty. But it was not long before King Olaf Haraldsson (1024) and Harold Hardrada (1066) made unsuccessful attempts to bring the island into dependence on Norway.

The inhabitants had in the meantime been converted to Christianity, and for a long while the Catholic bishops exerted over them a powerful and beneficial influence. At their instance the old laws (*Grágás*) were written down in 1117. Unfortunately, soon afterwards bloody feuds broke out among the chief nobles of the State, in the course of which Sturla attempted to make himself king. The people, tired of protracted wars, offered no resistance to King Hakon the Elder when, in 1258, he appointed Gissur Thorwaldsson Governor (*Jarl*). A few years later the whole island swore allegiance to the new master, still insisting, however, on retaining certain privileges (1302). It is certain that this act did not make Iceland, strictly speaking, a province of Norway. Norwegian Iceland is always referred to in public documents of the fifteenth, and in chronicles of the sixteenth, century as a dominion of the Crown (see Styffe, "Skandinavien under Unionstider", Stockholm, 1880), and at first it retained its constitutional organization. In the year 1281, however, a code of laws was introduced by the judge, Jon Einarsson, patterned on the Norwegian laws (*Jonsbok*). Hakon II having died (1380), his son Olaf, who since 1376 had ruled Denmark, ascended the throne, and under this monarch the present union of Denmark and Iceland was consummated. During the reigns of Christian III and his successors the ecclesiastical hierarchy in the island was dissolved, and Luther's teachings were forced upon the people, who were deprived of all their rights. In 1662 its representatives were compelled by force of arms to acknowledge the absolute sovereignty of the King of Denmark, and in 1800 the Althing, whose powers, it must be noted, had previously been reduced to a minimum, was finally suppressed. Forty-three years later it was revived, at first as an advisory body only. There followed long and violent constitutional conflicts with Denmark, which was weakened by foreign wars and internal troubles, and the king at length saw himself obliged to yield to the demands of the Icelanders. Since 1904 the Iceland patriots have in the main succeeded in the achievement of their wishes: national independence and autonomy in the administration of their own affairs. *De jure*, the country is again autonomous; *de facto*,

this is not yet recognized by Denmark. The future is shrouded in darkness.

CHURCH HISTORY.—The Norsemen, who settled in Iceland, from the end of the ninth century, were pagans; and, as we have already observed, it was one of the functions of their chieftains, called *goði*, to conduct religious services. But, as the Icelanders made frequent journeys, and often to distant lands, they were soon brought into contact with Christian populations, from whom they gained a knowledge of a higher civilization. Thus was the soil prepared in advance for the seed of the Gospel. The first native missionary was one Stefnir Thorgilsson (996), commissioned by King Olaf Trygvesson. The somewhat abrupt methods which characterized his religious zeal brought him at first but a small following, but, about the year 1000, Gissur and Hjalti, two highly esteemed Icelanders who had been exiled from the country, on returning from Norway Christians, soon obtained a decree from the Althing whereby pagan practices were suppressed, and the people compelled to accept baptism. The actual conversion of the nation of course was only achieved after long and laborious efforts and the careful instruction of the people. The names of the missionaries and of their bishops are only known in part and there is no information concerning their work. It must at any rate have been fruitful of results, for only fifty years later (1056) the country was given a bishop of its own, suffragan to the Archbishop of Hamburg, with his see at Skalholt, while in 1106 a bishopric was erected at Holar. These two dioceses were first under the Archbishopric of Lund, later (1152) under that of Trondhjem, and until the middle of the sixteenth century were in close communion with Rome. The bishops were selected by the Althing, but the nominees were consecrated by the metropolitan. Many of their prelates were distinguished for their virtue and wisdom. (For details see Baumgartner in "Kirchenlexikon", s. v. "Island".)

The priests of Iceland frequently went to French and English universities to make their studies. Many among the clergy and laity made pilgrimages to the hallowed spots of both East and West. Canon law was in force at an early period (1053). There sprang up a number of monasteries, such as the Benedictine Abbeys of Thingeyrar, Munkathverá, Kirkjubæur, and the Augustinian convents of Thykkviboer, Flatey, Viðey, Möðruvellir, and Skriða. "A strongly intellectual atmosphere pervaded these monasteries. They were centres of learning and literature, and thoroughly national in character. It is beyond question that it is principally to her Catholic clergy that Iceland is indebted for the origin and prosperous growth of her earlier literature, down to the middle of the sixteenth century" (Hermann, vol. II, p. 91).

There were religious as well as historical treatises. The "Lilja" of Eysteinn Asgrímsson, an Augustinian monk of Thykkviboer, was particularly celebrated as "the most soulful and artistic poem of the Middle Ages" (*ibid.*), and was highly appreciated long after the introduction of Protestantism. Works of learning also issued from these cloister cells. Thus we find that an attempt was made in Munkathverá as early as the middle of the thirteenth century to translate the Bible into the vernacular. Abbot Brandr Jónsson was thoroughly versed in Latin literature. Even the "Njalssaga" seems to have originated at Munkathverá. But scholars and artists were to be found not alone in the monasteries, but among the secular clergy, of whom some 300 were distributed among 220 churches (many of which were built of stone). Thus it is related of Torstein Illugason (1335) that he excelled in calligraphy, painting, and wood-carving. The churches were adorned with mural decorations, sculptures, and metal-work, and were provided with priestly vestments, relics of which have been pre-

served to this day at Bessastadr, Gardar, etc. In the museum of Reykjavik are to be found handsome crucifixes, statues, antependia, etc., which recall the Catholic past.

Iceland was most disastrously affected in the beginning of the fifteenth century by internal unrest, factional conflicts, earthquakes, and epidemics which struck men and beasts alike. About this period, also, religious life left much to be desired. Certain bishops, like Arni Olafsson (1413-30) and Jón Gereksson (1430-33), of Skalholt, neglected their flocks or made themselves odious by their acts of tyranny; others, such as the otherwise eminent Arason Jón (1524-50), of Holar, gave scandal by disregarding the law of celibacy. The conflict which lasted for a number of years between Arason Jón and the last Bishop of Skalholt, Oejmundr Pálsson (1520-42) was particularly unfortunate.

The first to preach the new faith were two disciples of Luther, Oddur Gotskálksson and Gissur Einarsson. These soon secured followers, particularly after King Christian III of Denmark and Norway declared himself for the Reformation and, for political and financial reasons, the latter especially, employed force to establish Lutheranism in his kingdom. His object was not to spread the teachings of Luther, but to destroy the last vestiges of liberty in his domains. The imprisonment of the Bishop of Skalholt left only Arason Jón to wage the fight against the spreading heresy. He succeeded for a time, until he was betrayed into the hands of his enemies, who executed him on 7 November, 1550. To this day his countrymen revere his memory for the heroism which marked his life and glorified his death. (Cf. the drama "Jón Arason", by Mathias Jochunsson, Isefiörður, 1900.) It was not difficult to scatter the flock after the shepherds had been slain, especially since here, as in Denmark, the people were deceived by the introduction at first of only slight ceremonial changes, the chief efforts being directed to the confiscation of church property. The former ecclesiastical divisions were allowed to remain; the superintendents at Skalholt and Holar took the title of bishops, while the preachers retained the name of priests (*praestur*). But they were very scantily paid, and from that time the Iceland pastor was obliged to take part in the work of agriculture, if he desired to live as well as a middle-class farmer. Latin remained the official language of the Church until the year 1686. Confirmation and catechetical instruction were introduced as late as the year 1741, at which time the Augsburg Confession, together with several German and Danish hymns, was translated into the Icelandic tongue, and women were permitted to sing in the churches. The ritual and the vestments of the officiating minister remind one, even to-day, of the Catholic past. The *Hamessa* (high Mass), which lasts an hour and a half, opens with the Kyrie and Gloria. The Epistle and Gospel are followed by the Creed and the Pater Noster, after which the sermon is preached. Communion frequently comes next. The priest wears, in the cities at least, over the alb a chasuble on the back of which is a golden cross.

Since 1801 Iceland has had only Protestant bishops, who reside at Reykjavik. There are 20 deaneries and 141 parishes, or scarcely half of the former number. Only seven of the churches are built of stone, most of these dating back to Catholic times; 217 are wooden structures, while for the rest turf or peat is the material used. A distinction is made between principal and secondary churches. The former contain thirty or thirty-two pews generally unpainted, with room for about one hundred persons. The interior is as bare and as plain as the exterior. There is an altar, sometimes a baptismal font, and a primitive pulpit. Frequently a picture hangs above the altar, which is nothing more than a table. Both the principal church, which frequently adjoins the presbytery, and

the subsidiary church, which is generally found near the estate of a wealthy farmer, servc during the week as storehouses for clothing, wool, etc., or as sleeping quarters for guests. Organs are very rare. (Hermann, op. cit.)

Schools, properly so called, are to be found only in the cities. Instruction is a home duty, and is supervised by the preacher as far as circumstances permit. Of course the results thus obtained are not of a high order; but most of the people can read and cipher passably, and write a little. The higher educational institutions of Iceland number a classical high school, a medical school, one seminary for preachers, one nautical and several agricultural schools. The State Library at Reykjavik is comparatively well endowed. Those who wish to pursue higher studies enter the University of Copenhagen.

The standard of morality is not high, and illegitimate births are numerous. No doubt this is partly due to the fact that the two sexes live in close proximity, occupying together undivided rooms, and that the women greatly outnumber men, many of whom succumb to hunting or fishing accidents. It is a very characteristic fact, that of all the works of foreign poets, those of Heine are the most widely read.

Formerly the rigorous laws of Denmark, which were also in force in Iceland, prohibited under severe penalties the celebration of Catholic services. For more than three hundred years no Catholic priest was permitted to set foot on that soil. The first to dare settle in this country (1859) were Frenchmen, the Abbés Bernard and Baudoin. But the intolerance to which they were subjected, on the part of preachers and state officials alike, caused them much suffering, which soon drove Bernard to abandon the country, while Baudoin persevered until 1875. He was the author of the first manual of the Catholic religion in modern Icelandic. After his departure, the mission remained forsaken, although freedom of worship had existed since the preceding year (1874). In 1895 missionary work was resumed with great vigour. It is now conducted by the Marists (2 priests and 2 lay brothers), and boasts of a pretty wooden church, a school (which is also attended by Protestant children), and an excellent hospital, in which the nursing is done by the Sisters of St. Joseph, of Chambéry. The Catholic community is still small, numbering only about 50 souls, and finds temporary increase in the presence of Catholic seamen. But the outlook is more promising than Protestant writers affect to believe. Here and there Protestant clergymen ardently study the Fathers of the Church, and there are presbyteries in which the image of the Madonna hangs alongside that of Luther. Furthermore, in spite of all opposition, these people still cherish hymns in honour of the Blessed Virgin; these have been collected by Dr. Thorkelsson, whose son was reconciled with the Church in 1905.

BURTON, *Ultima Thule, or a Summer in Iceland*, with historical introduction, maps, and illustrations (2 vols., London, 1875); *Allgemeine Welthistorie*, vols. XXXI, XXXII, XXXIII (Halle, 1768, 1770, 1771); DAHLMANN-SCHÄFER, *Dänemark in Geschichte der europäischen Staaten* (5 vols., Gotha, 1840-92); MUNCH, *Det norske Folkes Historie* (Christiania, 1852-63); MAURER, *Insel von seiner ersten Entdeckung bis zum Untergang des Freistaates* (Munich, 1874); IDEM, *Zur politischen Geschichte Islands* (Leipzig, 1880); BAUMGARTNER, *Nordische Fahrten: Island und die Färöer* (3rd ed., Freiburg im Br., 1902); IDEM in *Kirchenlex.*, s. v. *Island*, containing a very explicit treatise on the political and ecclesiastical development of the country, with exhaustive bibliographical references; HERMANN, *Island in Vergangenheit und Gegenwart* (2 vols., Leipzig, 1907); the first part deals with the country and its people, the second has notes of travels and contains numerous translations of songs, bits of folk-lore, etc.; this book, viewed from an historical standpoint, is prejudiced, and not without inconsistencies; but otherwise it is very good. BUCHBERGER, *Kirchl. Handlexikon* (Munich, 1907), s. v. *Island*; *Katholische Missionen (1907-08)*; LOEFFLER, *Dänemarks Natur und Volk* (Copenhagen, 1905); Pt. III, *Island*, 85 sqq. (with extensive bibliographical references); LUNDBORG, *Islands staatsrechtliche Stellung von der Freistaatszeit bis in unsere Tage* (Berlin, 1908); ROSENBERG, *Nordboernes Aandsliv* (Copenhagen, 1877-85); SCHWEITZER, *Geschichte der skandinavischen Literatur* (3 vols., Leipzig, 1895), detailed, but a very

one-sided Protestant account: BAUMGARTNER in *Kirchenlex.*, s. v. *Isländische Literatur*, extensive bibliographical references, a corrective to Schweitzer: IOEM, *Die Lilje*, German tr. of the Icelandic poem (Freiburg, 1884); *Landshagoskyrslur*, Statistics: *fyrir Island* (Reykjavik, 1907), 65, 244.

P. WITTMANN.

ICELANDIC LITERATURE is in its beginning closely connected with that of Norway; in fact it is originally Norse. Iceland was colonized in the ninth and tenth centuries by Norwegians who left their native land when Harold Hárfagri, forced all Norway to submit to his sway (A. D. 872). Iceland, though politically independent until 1262, remained in close contact with the mother country; its language also remained Norse. The introduction of Christianity into the island (A. D. 1000) did not interrupt the literary development, as in other Germanic lands. Literature was zealously cultivated by priests and laymen, and never lost its popular character.

The oldest Norse poems date from about 850; of the poetry preceding this date almost nothing is known. The first transmission of literature was oral; a written literature did not begin until the twelfth century. Most of the manuscripts that we possess, and which are preserved chiefly at Copenhagen, Upsala, and Stockholm, date from the thirteenth and fourteenth centuries. Old Norse poetry, like all ancient Germanic poetry, is alliterative; but, whereas Old English as well as Old High German poetry is written in the epic long line, Old Norse poetry is strophic. The oldest and most important monument of Old Norse poetry is the Edda, which is discussed in a special article. Besides Eddic poetry there was also Skaldic poetry. While the two kinds cannot always be clearly distinguished, still there are important differences. The Eddic poems are anonymous, the Skaldic poems are almost always of known authorship and deal with historic personages or events. Skaldic poetry was essentially a courtly art; it usually sings the praise of some princely patron. While the Eddic poems are simple, the Skaldic poems are extremely artificial in structure and language, employing alliteration and assonance, as well as making elaborate use of such rhetorical devices as *heiti* and *kenningar* (metaphors and figurative paraphrases). The most pretentious kind of Skaldic poem was the *drápa* (literally "fall of men").

The beginnings of Skaldic art are lost in mythic obscurity. The earliest skalds were Norwegians, the first historical name being Bragi, who later figures as the god of poetry in Valhalla. With King Harold Hárfagri (872-930) we get on historic ground. To this circle of poets belong Thorbjörn Hornklofi and Thjóðholf of Hvin, both authors of famous panegyrics. Eyvind Finnsson, surnamed *Skaldaspillir* (spoiler of skalds), composed on King Hakon's death (961) the "Hákonarmál" on the model of the "Eiríksmál", which an unknown skald had composed in honour of the memory of King Eiríkr (d. 950). But the greatest skalds came from Iceland, the most famous being Egill Skallagrímsson (d. 982), whose wild career is the subject of a well-known saga. Of his poems the "Höfudhlaun" (Redemption of the Head) and "Sonartorek" (Loss of the Son) are the most famous. Ulfr Uggason is known for his "Húsdrápa" (985), an important poem for the study of mythology. Most of the Icelandic poets were court poets of Norwegian and other kings. Such were Kormák Ógmundarson (d. 967), Einar Helgason, and Hallfred Ottarsson, a follower of King Olaf Trygvason, whose death in battle he commemorated in the "Olafsdrápa" (1000), as also Gunnlaugr, surnamed *Ormsunga* (serpent's tongue), on account of his biting satire. Among the skalds of St. Olaf (1015-1030) the most prominent were Thormóðr Bersason and Sighvatr Thordarson (d. about 1045), the king's favourite poet, who in his "Bersöglivísur" (Strains of

Candour) addressed a fearless warning to King Magnus, Olaf's son and successor. After the eleventh century Skaldic art declines. Of later Skaldic poems Einar Skulason's "Geisli" (beam), a *drápa* in honour of St. Olaf, is noteworthy, as also the "Háttatal" of Snorri Sturluson (q. v.). With Snorri's nephews, Olaf and Sturla, the list of skalds closes.

Poetry continued in the old forms, but its content was chiefly religious. Poems were written in honour of Christ, the Virgin, and various saints. Of this kind are the "Sólarljóðh" (Song of the Sun), composed about 1200, and the famous "Lilja" (Lily) written about 1340 by Eysteinn Asgrímsson, an Augustinian monk. After the fourteenth century the chief form of Icelandic poetry were the *rimur*, narrative poems in ballad style, the content of which was drawn chiefly from older sagas.

The finest and most characteristic product of Icelandic genius is the saga, the prose narrative of historical events. Unlike Skaldic poetry the saga is of purely Icelandic origin and can be traced back as far as the tenth century. The material is taken from real life; the sagas are frequently the biography of eminent Icelanders (*islandingsögur*) or else of Norwegian kings (*konungasögur*). The sagamen treated their material with poetic freedom and in a perfectly objective manner; dialogue enlivens the narrative, and poetic citations are freely interspersed. In this the saga resembles Old Irish prose narrative, and Irish influence is quite possible. No Germanic literature of medieval times can boast of prose writings as idiomatic and excellent as those of Iceland.

After the Latin language and script had been introduced as a consequence of the adoption of Christianity, the sagas after 1170 were written down. Historiography began. The earliest historians were Sæmund Sigfússon, who wrote in Latin, and Ari Thorgilsson (d. 1148), who first wrote history in the vernacular. Of his history of Iceland only an abstract is preserved. The "Landnámabók", the most complete history of the settlement of Iceland, made liberal use of Ari's work. While Ari's work is exact and scholarly, the writings of the *sögur* are more literary. The sagamen tell their story with poetic freedom. The greatest of the *islandingsögur*, or Icelandic family sagas, are the "Egils saga", the hero of which is the skald Egil, the "Laxdæla", which tells of the inhabitants of the Laxá valley in Western Iceland, the "Eyrbyggja", which has for its main theme the life of the *godhi* (chieftain) Snorri, and the "Njáls saga", the longest and most prominent of all the sagas, the scene of which is laid in Southern Iceland. In this work two originally different sagas, those of Gunnar and Njál, have been fused. No saga gives clearer insight into the state of the island's civilization during the period from 960 to 1016.

Of the numerous other sagas of this kind, mention may be made of those of Gunnlaug Ormsunga, of Kormák, of Grettir the Strong, of Gísli Súrsson, as well as of the "Vatzdæla" and the "Vápnfirðingasaga". The discovery of Greenland and Vinland (America) is related in the "Eirikssaga raudha" (Saga of Eric the Red), which was written about 1200.

The heroic age of Iceland terminates in 1030. Later events are treated in the "Sturlunga-Saga", which arose about 1300 in Western Iceland. It is a collection of sagas grouped around the main portion, the "Islandingsaga" of Sturla Thórhásson. The history of the Icelandic Church is presented in the "Biskupasögur" (bishops' sagas), composed for the most part by clergymen and narrating the lives of the first Icelandic bishops. The story of the conversion of Iceland is told in the "Kristnisaga", which seems a continuation of the "Landnámabók" based on Ari's work.

The history of the Norwegian kings is related in the *konungasögur*. The oldest extant attempt at a complete history is the "Agrip af Nóregs Konungasögum"

(Epitome of Norwegian Kings' Sagas). A collection of similar character is the so-called "Fagrskinna" (Fine Parchment), in which Skaldic poems are extensively used. But the greatest historic work in Icelandic is the famous "Konungabók" of Snorri Sturluson (1178-1241), known also from its opening words as "Heimskringla" (earth's circle). Here the history of Norway is told from its mythic beginnings to 1177. The work was probably completed between 1220 and 1230. Snorri's nephew, Sturla, was also an historian. He is the author of sagas of the Kings Hákon Hákonson and Magnus.

But there were also sagas of purely fictitious content, telling of folk-tales and adventure, generally localized in pre-historic Norway. Of this type are the so-called *fornaldarsögur* (stories of olden times), among which are reckoned the "Volsungasaga", based mainly on Eddic poems (see EDNA), the "Fridthjófssaga", and the "Hervararsaga". All these sagas are known only in late versions of the fourteenth century.

Under foreign influence, notably that of French courtly poetry, arose the *riddarasögur* (knightly stories), which treat of the adventures of the heroes of Arthurian romance, Tristan, Perceval, and others. Many of these sagas are mere translations or adaptations. The "Thidrekssaga", composed about 1250 in Norway, and based on Low German accounts, gives the stories of Dietrich of Bern and is of the greatest importance for the study of the Germanic heroic legends. Lastly we must mention the sagas that tell of sacred legends. Of these that of Barlaam and Josaphat is the most noteworthy.

The most remarkable monument of Icelandic erudition is the "Snorra Edda". Legal literature plays a prominent part in Icelandic letters; the Northern lawbooks are very important for the study of Germanic civilization. The code of laws in force during the days of the republic was first set down by Ulfjótr in 930, on the basis of the Norwegian law. The manuscript in which this code is transmitted was called since the seventeenth century by the strange name of "Grágás" (gray goose).

With the end of the Middle Ages, Icelandic literature declined. Little original writing that commands attention among the world's literature was produced after that. In the seventeenth century, during the great revival of learning in Scandinavia, Iceland furnished her quota of scholars. Thorlak Skulason translated the Bible from Luther's German version; Brynjolf Sveinsson discovered the manuscript of the "Elder Edda" (q. v.); Thormod Torfason and Arne Magnússon figured prominently in the study of Northern antiquities. In the field of history Jan Espolin (d. 1836) won an enviable reputation. The number of poets in modern times is large, but there are few great names. Hallgrim Pjetursson (d. 1674) and Jon Thorakelsson Vidalin (d. 1720) gained fame as writers of psalms, while Bjárna Thórarson (d. 1841) attained a commanding position in the nineteenth century. The attempts at the epic and drama call for no notice.

The Skaldic poems were edited rather uncritically by Vigfússon and Powell in the "Corpus poeticum boreale" (Oxford, 1883), with English versions and notes; a better edition is Wisén's "Carmina norroena" (2 vols., Lund, 1886-89). Ari's "Islendingabók" was edited by Golther (Halle, 1892); the "Heimskringla" by F. Jónsson (4 vols., Copenhagen, 1893-1901), English translation in Morris and Magnússon's "Saga Library" (London, 1891); "Landnámabók", ed. Jónsson (Copenhagen, 1900), tr. Ellwood (London, 1898). Some of the best sagas (including "Egils", "Eyrybyggja", and "Laxdæla") are edited in Cederschiöld, Gering, and Mogk's "Altnordische Sagabibliothek" (Halle, 1892-). The "Njálsaga" was edited by Gíslason in the "Islendinga Sögur", III (Copenhagen, 1843), 1 sq., also separately (Copenhagen, 1875); English translation by G. Webbe Dasent (Edin-

burgh, 1861). The saga material relating to the discovery of America was published in the "Antiquitates Americane" (Copenhagen, 1837); a phototypic edition of the "Eirikssaga raudha" was given by Reeves, "The Finding of Wineland the Good" (London, 1890); critical edition of same saga by G. Storm (Copenhagen, 1891). The "Biskupasögur" were published by the Islenzka Bókmenntafélagi (2 vols., Copenhagen, 1858-78). The Riddarasögur were edited by Cederschiöld under the title of "Fornsögur Sudhrlanda" (Lund, 1884). The literature treating of the Blessed Virgin has been edited by Unger under the title "Maríusaga" (Christiania, 1871).

The best history of Old Norse literature is Jónsson, *Den oldnorske og oldislandske Litteraturs Historie* (3 vols., Copenhagen, 1894-1902). Consult also Mogk, *Geschichte der nordisch-isländischen Literatur* (2nd ed., Strasburg, 1904), also in 2nd ed. of PAUL, *Grundriss der germanischen Philologie*; furthermore GOLThER, *Nordische Literaturgeschichte*, p. I (Leipzig, 1905). The only English history is HORN, *History of the Literature of the Scandinavian North*, tr. ANDERSON (Chicago, 1895). For Skaldic poetry see also THORLAKSSON, *Udsigt over de nordiske islandske Skjalde fra 9. til 14. Aarh.* (Copenhagen, 1882); MEISSNER, *Skaldenpoesie* (1904). For the sagas consult VIGFÚSSON, *Prolegomena zur Ausgabe der Sturlunga saga*, I (Oxford, 1878); MORRIS AND MAGNÚSSON'S *Saga Library*, introd. Modern poetry: POEESTON, *Isländische Dichter der Neuzeit* (Leipzig, 1897).

ARTHUR F. J. REMY.

Iconium, a titular see of Lycaonia. Xenophon (Anab., I, ii, 19) says that it is the easternmost town of Phrygia; other writers, e. g., Cicero (Ad. famil., III, 6; XV, 3), Ammianus Marcellinus (XIV, 2), place it in Lycaonia, and others in Galatia. It is known that the boundaries of these provinces were often changed. It was the possession of M. Antoninus Polemon, dynast of Olbe, to whom Antony gave it, and who reigned from 39 to 26 B. C. (Pliny, "Hist. Natur.", V, 37; Strabo, XII, vi, 1). Iconium later formed part of the Roman Province of Galatia, when the latter was constituted, 25 B. C. Under Claudius the town became a Roman colony, mentioned on many coins and inscriptions. St. Paul preached here during his first mission and converted a goodly number of Jews and pagans; shortly afterwards he returned to organize the church he had founded (Acts, xiv, 20; xvi, 2); he speaks elsewhere of the persecutions he endured there (II Tim., iii, 11). Saint Thecla was one of his converts there. Christianized rather early, the town was the scene in 235 of a council which decreed that the baptism of heretics was invalid. Le Quien (Oriens Christ., I, 1067-74) mentions thirty-six bishops down to the year 1721; the best-known is St. Amphiloehus, the friend of St. Basil and St. Gregory of Nazianzus. The list might well be completed and brought down to the present time, for Iconium is yet the centre of a schismatical Greek diocese.

What constitutes the reputation of the town is that from 1063 to 1309 it was the capital of the sultans of the Seljuk Turks, who on the extinction of their dynasty adopted as their heir Osman, the founder of the present dynasty. A great number of monuments or works of art of the period have been preserved, such as the ruins of the mosque of the Sultan Ala-ed-Din, the blue *medresseh* (school), a vast hall of the palace with a magnificently decorated roof, the golden mosque, the mosque of Selim II, the tomb of Djelal-Eddin, a mystical poet and founder of the whirling dervishes. The superior-general of these Turkish religious, surnamed Tchelebi, always resides at Koniah and has the privilege of girding each new sultan with the sabre of Osman, which for Turkish sovereigns corresponds to the ceremony of coronation. Koniah, the capital of a vilayet which numbers more than a million inhabitants, itself possesses nearly 50,000 inhabitants, three-fourths of whom are Muslims. There are about 300 Catholics. In 1892 the Augustinians of the Assumption established a mission here with a school which is very prosperous to-day. The Oblate Sisters of the Assumption con-

duct a dispensary and a school. The Greek and above all the Armenian schismatics are very numerous. The town is connected with Constantinople by a railroad, and important works of irrigation have been set on foot in order to cultivate the plain which has hitherto been very arid. Koniah is one of the holy cities of Islam. It contains more than 10,000 dervishes (Turkish monks) and theological students.

Greek and Roman Geog.*, II, 12; SARRE, *Reise in Kleinasien* (Berlin, 1896), 28-106; TEXIER, *Asie Mineure* (Paris, 1862), 661-663; CUINET, *La Turquie d'Asie*, I (Paris, 1892), 801-872; HUART, *Konia, la ville des derviches tourneurs* (Paris, 1897).

S. VAILLÉ.

Iconoclasm (Ἐικονοκλασμός, "Image-breaking") is the name of the heresy that in the eighth and ninth centuries disturbed the peace of the Eastern Church, caused the last of the many breaches with Rome that prepared the way for the schism of Photius, and was echoed on a smaller scale in the Frankish kingdom in the West. The story in the East is divided into two separate persecutions of the Catholics, at the end of each of which stands the figure of an image-worshipping Empress (Irene and Theodora).

I. THE FIRST ICONOCLAST PERSECUTION.—The origin of the movement against the worship (for the use of this word see IMAGES, VENERATION OF) of images has been much discussed. It has been represented as an effect of Moslem influence. To Moslems, any kind of picture, statue, or representation of the human form is an abominable idol. It is true that, in a sense, the Khalifa at Damascus began the whole disturbance, and that the Iconoclast emperors were warmly applauded and encouraged in their campaign by their rivals at Damascus. On the other hand it is not likely that the chief cause of the emperor's zeal against pictures was the example of his bitter enemy, the head of the rival religion. A more probable origin will be found in the opposition to pictures that had existed for some time among Christians. There seems to have been a dislike of holy pictures, a suspicion that their use was, or might become, idolatrous, among certain Christians for many centuries before the Iconoclast persecution began (see IMAGES, VENERATION OF). The Paulicians as part of their heresy held that all matter (especially the human body) is bad, that all external religious forms, sacraments, rites, especially material pictures and relics, should be abolished. To honour the Cross was specially reprehensible, since Christ had not really been crucified. Since the seventh century these heretics had been allowed to have occasional great influence at Constantinople, intermittently with suffering very cruel persecution (see PAULICIANS). But some Catholics, too, shared their dislike of pictures and relics. In the beginning of the eighth century several bishops, Constantine of Nacolia in Phrygia, Theodosius of Ephesus, Thomas of Claudiopolis, and others are mentioned as having these views. A Nestorian bishop, Xenicus of Hierapolis, was a conspicuous forerunner of the Iconoclasts (Hardouin, IV, 306). It was when this party got the ear of the Emperor Leo III (the Isaurian, 716-41) that the persecution began.

The first act in the story is a similar persecution in the domain of the Khalifa at Damascus. Yezid I (680-683) and his successors, especially Yezid II (720-24), thinking, like good Moslems, that all pictures are idols, tried to prevent their use among even their Christian subjects. But this Moslem persecution, in itself only one of many such intermittent annoyances to the Christians of Syria, is unimportant except as the forerunner of the troubles in the empire. Leo the Isaurian was a valiant soldier with an autocratic temper. Any movement that excited his sympathy was sure to be enforced sternly and cruelly. He had already cruelly persecuted the Jews and

Paulicians. He was also suspected of leanings towards Islam. The Khalifa Omar II (717-20) tried to convert him, without success, except as far as persuading him that pictures are idols. The Christian enemies of images, notably Constantine of Nacolia, then easily gained his ear. The emperor came to the conclusion that images were the chief hindrance to the conversion of Jews and Moslems, the cause of superstition, weakness, and division in his empire, and opposed to the First Commandment. The campaign against images was part of a general reformation of the Church and State. Leo III's idea was to purify the Church, centralize it as much as possible under the Patriarch of Constantinople, and thereby strengthen and centralize the State of the empire. There was also a strong rationalistic tendency among these Iconoclast emperors, a reaction against the forms of Byzantine piety that became more pronounced each century. This rationalism helps to explain their hatred of monks. (For Leo III's reform of the empire see J. Bury, "History of the Later Roman Empire", London, 1889, bk. VI, ch. ii.) Once persuaded, Leo began to enforce his idea ruthlessly. Constantine of Nacolia came to the capital in the early part of his reign; at the same time John of Synnada wrote to the patriarch Germanus I (715-30), warning him that Constantine had made a disturbance among the other bishops of the province by preaching against the use of holy pictures. Germanus, the first of the heroes of the image-worshippers (his letters in Hardouin, IV, 239-62), then wrote a defence of the practice of the Church addressed to another Iconoclast, Thomas of Claudiopolis (l. c., 245-62). But Constantine and Thomas had the emperor on their side. In 726 Leo III published an edict declaring images to be idols, forbidden by Exodus, xx, 4, 5, and commanding all such images in churches to be destroyed. At once the soldiers began to carry out his orders, whereby disturbances were provoked throughout the empire. There was a famous picture of Christ, called Χριστός ἀντιφωνητής, over the gate of the palace at Constantinople. The destruction of this picture provoked a serious riot among the people. Germanus, the patriarch, protested against the edict and appealed to the pope (729). But the emperor deposed him as a traitor (730) and had Anastasius (730-54), formerly syncellus of the patriarchal Court, and a willing instrument of the Government, appointed in his place. The most steadfast opponents of the Iconoclasts throughout this story were the monks. It is true that there were some who took the side of the emperor, but as a body Eastern monasticism was steadfastly loyal to the old custom of the Church. Leo therefore joined with his Iconoclasm a fierce persecution of monasteries, and eventually tried to suppress monasticism altogether.

The pope at that time was Gregory II (715-31). Even before he had received the appeal of Germanus a letter came from the emperor commanding him to accept the edict, destroy images at Rome, and summon a general council to forbid their use. Gregory answered, in 727, by a long defence of the pictures. He explains the difference between them and idols, with some surprise that Leo does not already understand it. He describes the lawful use of, and reverence paid to, pictures by Christians. He blames the emperor's interference in ecclesiastical matters and his persecution of image-worshippers. A council is not wanted; all Leo has to do is to stop disturbing the peace of the Church. As for Leo's threat that he will come to Rome, break the statue of St. Peter (apparently the famous bronze statue in St. Peter's), and take the pope prisoner, Gregory answers it by pointing out that he can easily escape into the Campagna, and reminding the emperor how futile and now abhorrent to all Christians was Constantine's persecution of Mar-

tin I. He also says that all people in the West detest the emperor's action and will never consent to destroy their images at his command (Greg. II, "Ep. I ad Leonem"; Jaffé, "Reg.", n. 2180). The emperor answered, continuing his argument, by saying that no general council had yet said a word in favour of images, that he himself is emperor and priest (*βασιλεὺς καὶ ἱερεὺς*) in one, and therefore has a right to make decrees about such matters. Gregory writes back regretting that Leo does not yet see the error of his ways. As for the former general Councils, they did not pretend to discuss every point of the faith; it was unnecessary in those days to defend what no one attacked. The title *Emperor and Priest* had been conceded as a compliment to some sovereigns because of their zeal in defending the very faith that Leo now attacked. The pope declares himself determined to withstand the emperor's tyranny at any cost, though he has no defence but to pray that Christ may send a demon to torture the emperor's body that his soul be saved, according to I Cor., v, 5 (Jaffé, l. c., n. 2162).

Meanwhile the persecution raged in the East. Monasteries were destroyed, monks put to death, tortured, or banished. The Iconoclasts began to apply their principle to relics also, to break open shrines and burn the bodies of saints buried in churches. Some of them rejected all intercession of saints. These two other points (destruction of relics and rejection of prayers to saints), though not necessarily involved in the original programme, are from this time generally (not quite always) added to Iconoclasm. Meanwhile, St. John Damascene (d. 754), safe from the emperor's anger under the rule of the Khalifa, was writing, at the monastery of Mar Saba, his famous apologies "against those who destroy the holy icons." In the West, at Rome, Ravenna, and Naples, the people rose against the emperor's law. This anti-imperial movement is one of the factors of the breach between Italy and the old empire, the independence of the papacy, and the beginning of the Papal States. Gregory II already refused to send taxes to Constantinople and himself appointed the imperial *dux* in the *Ducatus Romanus*. From this time the pope becomes practically sovereign of the *Ducatus*. The emperor's anger against image-worshippers was strengthened by a revolt that broke out about this time in Hellas, ostensibly in favour of the icons. A certain Cosmas was set up as emperor by the rebels. The insurrection was soon crushed (727), and Cosmas was beheaded. After this a new and severer edict against images was published (730), and the fury of the persecution was redoubled.

Pope Gregory II died in 731. He was succeeded at once by Gregory III, who carried on the defence of holy images in exactly the spirit of his predecessor. The new pope sent a priest, George, with letters against Iconoclasm to Constantinople. But George, when he arrived, was afraid to present them, and came back without having accomplished his mission. He was sent a second time on the same errand, but was arrested and imprisoned in Sicily by the imperial governor. The emperor now proceeded with his policy of enlarging and strengthening his own patriarchate at Constantinople. He conceived the idea of making it as great as all the empire over which he still actually ruled. Isauria, Leo's birthplace, was taken from Antioch by an imperial edict and added to the Byzantine patriarchate, increasing it by the Metropolis, Seleucia, and about twenty other sees. Leo further pretended to withdraw Illyricum from the Roman patriarchate and to add it to that of Constantinople (Duchesne, "L'Illyricum ecclésiastique", in his "Eglises séparées", Paris, 1905, pp. 229-79), and confiscated all the property of the Roman See on which he could lay his hands, in Sicily and Southern Italy. This naturally increased the enmity between Eastern and Western Christendom. In 731

Gregory III held a synod of ninety-three bishops at St. Peter's, in which all persons who broke, defiled, or took away images of Christ, of His Mother, the Apostles, or other saints, were declared excommunicate. Another legate, Constantine, was sent with a copy of this decree and of its application to the emperor, but was again arrested and imprisoned in Sicily. Leo then sent a fleet to Italy to punish the pope; but it was wrecked and dispersed by a storm. Meanwhile every kind of calamity afflicted the empire; earthquakes, pestilence, and famine devastated the provinces, while the Moslems continued their victorious career and conquered further territory.

Leo III died in June, 741, in the midst of these troubles, without having changed his policy. His work was carried on by his son Constantine V (Copronymus, 741-775), who became an even greater persecutor of image-worshippers than had been his father. As soon as Leo III was dead, Artabasdu (who had married Leo's daughter) seized the opportunity and took advantage of the unpopularity of the Iconoclast Government to raise a rebellion. Declaring himself the protector of the holy icons he took possession of the capital, had himself crowned emperor by the pliant patriarch Anastasius, and immediately restored the images. Anastasius, who had been intruded in the place of Germanus as the Iconoclast candidate, now veered round in the usual Byzantine way, helped the restoration of the images and excommunicated Constantine V as a heretic and denier of Christ. But Constantine marched on the city, took it, blinded Artabasdu and began a furious revenge on all rebels and image-worshippers (743). His treatment of Anastasius is a typical example of the way these later emperors behaved towards the patriarchs through whom they tried to govern the Church. Anastasius was flogged in public, blinded, driven shamefully through the streets, made to return to his Iconoclasm and finally reinstated as patriarch. The wretched man lived on till 754. The pictures restored by Artabasdu were again removed. In 754 Constantine, taking up his father's original idea summoned a great synod at Constantinople that was to count as the Seventh General Council. About 340 bishops attended; as the See of Constantinople was vacant by the death of Anastasius, Theodosius of Ephesus and Pastilias of Perge presided. Rome, Alexandria, Antioch, and Jerusalem refused to send legates, since it was clear that the bishops were summoned merely to carry out the emperor's commands. The event showed that the patriarchs had judged rightly. The bishops at the synod servilely agreed to all Constantine's demands. They decreed that images of Christ are either Monophysite or Nestorian, for—since it is impossible to represent His Divinity—they either confound or divorce His two natures. The only lawful representation of Christ is the Holy Eucharist. Images of saints are equally to be abhorred; it is blasphemous to represent by dead wood or stone those who live with God. All images are an invention of the pagans—are in fact idols, as is shown by Ex. xx, 4, 5; Deut., v, 8; John, iv, 24; Rom., i, 23-25. Certain texts of the Fathers are also quoted in support of Iconoclasm. Image-worshippers are idolaters, adorers of wood and stone; the Emperors Leo and Constantine are lights of the Orthodox Faith, our saviours from idolatry. A special curse is pronounced against three chief defenders of images—Germanus, the former Patriarch of Constantinople, John Damascene, and a monk, George of Cyprus. The synod declares that "the Trinity has destroyed these three" ("Acts of the Iconoclast Synod of 754" in Mansi, XIII, 205 sq.).

The bishops finally elected a successor to the vacant see of Constantinople, Constantine, Bishop of Sylæum (Constantine II, 754-66), who was of course a creature of the Government, prepared to carry on its

campaign. The decrees were published in the Forum on 27 August, 754. After this the destruction of pictures went on with renewed zeal. All the bishops of the empire were required to sign the Acts of the synod and to swear to do away with icons in their dioceses. The Paulicians were now treated well, while image-worshippers and monks were fiercely persecuted. Instead of paintings of saints the churches were decorated with pictures of flowers, fruit, and birds, so that the people said that they looked like grocers' stores and bird shops. A monk Peter was scourged to death on 16 May, 761; the Abbot of Monagria, John, who refused to trample on an icon, was tied up in a sack and thrown into the sea on 7 June, 761; in 767 Andrew, a Cretan monk, was flogged and lacerated till he died (see the Acta SS., 8 Oct.; Roman Martyrology for 17 Oct.; and Nilles, "Kalendarium manuale", 2nd ed., Innsbruck, 1906, p. 303); in November of the same year a great number of monks were tortured to death in various ways (Martyrology, 28 Nov.; Nilles, op. cit., p. 336). The emperor tried to abolish monasticism (always the centre of the defence of images); monasteries were turned into barracks; the monastic habit was forbidden; the patriarch Constantine II was made to swear in the ambo of his church that, although formerly a monk, he had now joined the secular clergy. Relics were dug up and thrown into the sea, the invocation of saints was forbidden. In 766 the emperor fell foul of his patriarch, had him scourged and beheaded and replaced by Nicetas I (766-80), who was, naturally, also an obedient servant of the Iconoclast Government. Meanwhile, the countries which the emperor's power did not reach kept the old custom and broke communion with the Iconoclast Patriarch of Constantinople and his bishops. Cosmas of Alexandria, Theodore of Antioch, and Theodore of Jerusalem were all defenders of the holy icons in communion with Rome. The Emperor Constantine V died in 775. His son Leo IV (775-80), although he did not repeal the Iconoclast laws, was much milder in enforcing them. He allowed the exiled monks to come back, tolerated at least the intercession of saints, and tried to reconcile all parties. When the patriarch Nicetas I died in 780 he was succeeded by Paul IV (780-84), a Cypriote monk, who carried on a half-hearted Iconoclast policy only through fear of the Government. But Leo IV's wife Irene was always a steadfast image-worshipper. Even during her husband's life she concealed holy icons in her rooms. At the end of his reign Leo had a burst of fiercer Iconoclasm. He punished the courtiers who had replaced images in their apartments and was about to banish the empress when he died, 8 September, 780. At once a complete reaction set in.

II. THE SEVENTH GENERAL COUNCIL (Second of Nicea, 787).—The Empress Irene was regent for her son Constantine VI (780-97), who was nine years old when his father died. She immediately set about undoing the work of the Iconoclast emperors. Pictures and relics were restored to the churches; monasteries were re-opened. Fear of the army, now fanatically Iconoclast, kept her for a time from repealing the laws; but she only waited for an opportunity to do so and to restore the broken communion with Rome and the other patriarchates. The Patriarch of Constantinople, Paul IV, resigned, and retired to a monastery, giving openly as his reason repentance for his former concessions to the Iconoclast Government. He was succeeded by a pronounced image-worshipper, Tarasius (784-806, "Vita Tarasii", ed. Heikel, 1889). Tarasius and the empress now opened negotiations with Rome. They sent an embassy to Pope Adrian I (772-95) acknowledging the primacy and begging him to come himself, or at least to send legates, to a council that should undo the work of the Iconoclast synod of 754 (Mansi, XII, pp. 984-86; Hefele, "Conciliengeschichte", 2nd ed., III,

446-47). The pope answered by two letters, one for the empress and one for the patriarch. In these he repeats the arguments for the worship of images, agrees to the proposed council, insists on the authority of the Holy See, and demands the restitution of the property confiscated by Leo III. He blames the sudden elevation of Tarasius (who from being a layman had suddenly become patriarch), and rejects his title of *Œcumenical Patriarch*, but he praises his orthodoxy and zeal for the holy images. Finally, he commits all these matters to the judgment of his legates (Jaffé, "Reg.", 2448 and 2449; Hefele, l. c., 448-452). These legates were an archpriest Peter and the abbot Peter of St. Saba near Rome. The other three patriarchs were unable to answer, they did not even receive Tarasius's letters, because of the disturbance at that time in the Moslem state. But two monks, Thomas, abbot of an Egyptian monastery, and John Syncellus of Antioch, appeared with letters from their communities explaining the state of things and showing that the patriarchs had always remained faithful to the images. These two seem to have acted in some sort as legates for Alexandria, Antioch, and Jerusalem.

Tarasius opened the synod in the church of the Apostles at Constantinople, in August, 786; but it was at once dispersed by the Iconoclast soldiers. The empress disbanded those troops and replaced them by others; it was arranged that the synod should meet at Nicæa in Bithynia, the place of the first general council. The bishops met here in the summer of 787, about 300 in number. The council lasted from 24 September to 23 October. The Roman legates were present; they signed the Acts first and always had the first place in the list of members (Mansi, XII, 993; XIII, 366, 379, etc.), but Tarasius conducted the proceedings, apparently because the legates could not speak Greek. In the first three sessions Tarasius gave an account of the events that had led up to the Council, the papal and other letters were read out, and many repentant Iconoclast bishops were reconciled. The fathers accepted the pope's letters as true formulæ of the Catholic Faith. Tarasius, when he read the letters, left out the passages about the restitution of the confiscated papal property, the reproaches against his own sudden elevation, and use of the title *Œcumenical Patriarch*, and modified (but not essentially) the assertions of the primacy (Mansi, XII, 1077-1084). The fourth session established the reasons for which the use of holy images is lawful, quoting from the Old Testament passages about images in the temple (Ex., xxv, 18-22; Num., vii, 89; Ezech., xli, 18-19; Hebr., ix, 5), and also citing a great number of the Fathers. Euthymius of Sardes at the end of the session read a profession of faith in this sense. In the fifth session Tarasius explained that Iconoclasm came from Jews, Saracens, and heretics; some Iconoclast misquotations were exposed, their books burnt, and an icon set up in the hall in the midst of the fathers. The sixth session was occupied with the Iconoclast synod of 754; its claim to be a general council was denied, because neither the pope nor the three other patriarchs had had a share in it. The decree of that synod (see above) was refuted clause by clause. The seventh session drew up the symbol (*ŏpos*) of the council, in which, after repeating the Nicene Creed and renewing the condemnation of all manner of former heretics, from Arians to Monothelites, the fathers make their definition. Images are to receive veneration (*προσκύνησις*), not adoration (*λατρεία*); the honour paid to them is only relative (*σχετική*), for the sake of their prototype (for the text of this, the essential definition of the council, see IMAGES, VENERATION OF). Anathemas are pronounced against the Iconoclast leaders; Germanus, John Damascene, and George of Cyprus are praised. In opposition to the formula of the Iconoclast synod the fathers declare: "The Trinity has made these three

glorious" (ἡ Τριπλις τοῦς τρεῖς ἐδόξαsen). A deputation was sent to the empress with the Acts of the synod; a letter to the clergy of Constantinople acquainted them with its decision. Twenty-two canons were drawn up, of which these are the chief: canons i and ii confirm the canons of all former general councils; canon iii forbids the appointment of ecclesiastical persons by the State; only bishops may elect other bishops; canons iv and v are against simony; canon vi insists on yearly provincial synods; canon vii forbids bishops, under penalty of deposition, to consecrate churches without relies; canon x forbids priests to change their parishes without their bishop's consent; canon xiii commands all deserted monasteries to be restored; canons xviii-xx regulate abuses in monasteries (see these canons in Mansi, XII, 417-40). An eighth and last session was held on 23 October at Constantinople, in the presence of Irene and her son. After a discourse by Tarasius the Acts were read out and signed by all, including the empress and the emperor. The synod was closed with the usual Polychronia or formal acclamation (see the full text of the Acts in Hardouin, IV, pp. 27-502; Mansi, XII, pp. 992; XIII, p. 440; also Hefele, op. cit., III, pp. 441 sq.), and Epiphanius, a deacon of Catania in Sicily, preached a sermon to the assembled fathers (Mansi, XII, 441-58).

Tarasius sent to Pope Adrian an account of all that had happened ("Ep. ad Adrianum", Mansi, l. e., 458), and Adrian approved the Acts (letter to Charles the Great, Hardouin, IV, 773-820) and had them translated into Latin. But the question of the property of the Holy See in Southern Italy and the friendship of the pope towards the Franks still caused bad feeling between East and West; moreover an Iconoclast party still existed at Constantinople, especially in the army.

III. THE SECOND ICONOCLAST PERSECUTION.—Twenty-seven years after the Synod of Nicæa Iconoclasm broke out again. Again the holy pictures were destroyed, and their defenders fiercely persecuted. For twenty-eight years the former story was repeated with wonderful exactness. The places of Leo III, Constantine V, and Leo IV are taken by a new line of Iconoclast emperors—Leo V, Michael II, Theophilus. Pope Paschal I acts just as did Gregory II, the faithful Patriarch Nicephorus stands for Germanus I, St. John Damascene lives again in St. Theodore the Studite. Again one synod rejects icons, and another, following it, defends them. Again an empress, regent for her young son, puts an end to the storm and restores the old custom—this time finally.

The origin of this second outbreak is not far to seek. There had remained, especially in the army, a considerable Iconoclast party. Constantine V, their hero, had been a valiant and successful general against the Moslems, Michael I (811-13), who kept the Faith of the Second Council of Nicæa, was singularly unfortunate in his attempt to defend the empire. The Iconoclasts looked back regretfully to the glorious campaigns of his predecessor, they evoked the amazing conception of Constantine as a saint, they went in pilgrimage to his grave and cried out to him: "Arise, come back and save the perishing empire!" When Michael I, in June, 813, was utterly defeated by the Bulgars and fled to his capital, the soldiers forced him to resign his crown and set up one of the generals, Leo the Armenian (Leo V, 813-20) in his place. An officer (Theodotus Cassiteras) and a monk (the Abbot John Grammatieus) persuaded the new emperor that all the misfortunes of the empire were a judgment of God on the idolatry of image-worship. Leo, once persuaded, used all his power to put down the icons, and so all the trouble began again.

In 814 the Iconoclasts assembled at the palace and prepared an elaborate attack against images, repeating almost exactly the arguments of the synod of 754. The Patriarch of Constantinople was Nicephorus I

(806-15), who became one of the chief defenders of images in this second persecution. The emperor invited him to a discussion of the question with the Iconoclasts; he refused, since it had been already settled by the Seventh General Council. The work of demolishing images began again. The picture of Christ, restored by Irene over the iron door of the palace, was again removed. In 815 the patriarch was summoned to the emperor's presence. He came surrounded by bishops, abbots, and monks, and held a long discussion with Leo and his Iconoclast followers. In the same year the emperor summoned a synod of bishops, who, obeying his orders, deposed the patriarch and elected Theodotus Cassiteras (Theodotus I, 815-21) to succeed him. Nicephorus was banished across the Bosphorus. Till his death, in 829, he defended the cause of the images by controversial writings (the "Lesser Apology", "Antirrhētikoi", "Greater Apology", etc., in P. G., C, 201-850; Pitra, "Spieleg. Solesm.", I, 302-503; IV, 233, 380), wrote a history of his own time (Ἱστορία σύντομος, P. G., C, 876-994) and a general chronography from Adam (χρονολογιακὸν σύντομον, in P. G., C, 995-1060). See the "Vita Nieephorii patriarchæ auctore Ignatio diacono" (ed. de Door, Leipzig, 1880); and Krumbacher, "Byzantinische Litteratur" (Munich, 1897), 71-73, 349-352. Among the monks who accompanied Nicephorus to the emperor's presence in 815 was Theodore, Abbot of the Studium monastery at Constantinople (d. 826). Throughout this second Iconoclast persecution St. Theodore (*Theodorus Studita*) was the leader of the faithful monks, the chief defender of the icons. He comforted and encouraged Nicephorus in his resistance to the emperor, was three times banished by the Government, wrote a great number of treatises, controversial letters, and apologies in various forms for the images. His chief point is that Iconoclasts are Christological heretics, since they deny an essential element of Christ's human nature, namely, that it can be represented graphically. This amounts to a denial of its reality and material quality, whereby Iconoclasts revive the old Monophysite heresy. Ehrhard judges St. Theodore to be "perhaps the most ingenious [der scharfsinnigste] of the defenders of the cult of images" (in Krumbacher's "Byz. Litt.", p. 150). In any case his position can be rivalled only by that of St. John Damascene. (See his works in P. G., XCIX; for an account of them see Krumbacher, op. cit., 147-151, 712-715; his life by a contemporary monk, P. G., XCIX, 9 sq.; Alice Gardner, "Theodore of Studium", London, 1905. His feast is on 11 Nov. in the Byzantine Rite, 12 Nov. in the Roman Martyrology. See Nilles, "Kal. Man.", I, 321-327.)

The first thing the new patriarch Theodotus did was to hold a synod which condemned the council of 787 (the Second Nicene) and declared its adherence to that of 754. Bishops, abbots, clergy, and even officers of the Government, who would not accept its decree, were deposed, banished, tortured. Theodore of Studium refused communion with the Iconoclast patriarch, and went into exile. A number of persons of all ranks were put to death at this time (Nilles, "Kal. Man.", II, 515-18, and his references); pictures of all kinds were destroyed everywhere. Theodore appealed to the pope (Paschal I, 817-824) in the name of the persecuted Eastern image-worshippers. At the same time Theodotus, the Iconoclast patriarch, sent legates to Rome, who were, however, not admitted by the pope, since Theodotus was a schismatical intruder in the see of which Nicephorus was still lawful bishop. But Paschal received the monks sent by Theodore, and gave up the monastery of St. Praxedes to them and others who had fled from the persecution in the East. In 818 the pope sent legates to the emperor with a letter defending the icons and once more refuting the Iconoclast accusation of idolatry. In this letter he insists chiefly on our need of exterior signs for

invisible things; sacraments, words, the sign of the Cross, and all tangible signs of this kind; how, then, can people who admit these reject images? (The fragment of this letter that has been preserved is published in Pitra, "Spicileg. Solesm.," II, p. xi sq.) The letter did not have any effect on the emperor; but it is from this time especially that the Catholics in the East turn with more loyalty than ever to Rome as their leader, their last refuge in the persecution. The well-known texts of St. Theodore in which he defends the primacy in the strongest possible language—e. g., "Whatever novelty is brought into the Church by those who wander from the truth must certainly be referred to Peter or to his successor. . . . Save us, chief pastor of the Church under heaven" (Ep. i, 33, P. G., XCIX, 1018); "Arrange that a decision be received from old Rome as the custom has been handed down from the beginning by the tradition of our fathers" (Ep. ii, 36; *ibid.*, 1331—were written during this persecution).

The protestations of loyalty to old Rome made by the Orthodox and Catholic Christians of the Byzantine Church at this time are her last witness immediately before the Great Schism. There were then two separate parties in the East having no communion with each other: the Iconoclast persecutors under the emperor, with their anti-patriarch Theodotus, and the Catholics led by Theodore the Studite, acknowledging the lawful patriarch Nicephorus and above him the distant Latin bishop who was to them the "chief pastor of the Church under heaven". On Christmas Day, 820, Leo V ended his tyrannical reign by being murdered in a palace revolution that set up one of his generals, Michael II (the Stammerer, 820–29), as emperor. Michael was also an Iconoclast and continued his predecessor's policy, though at first he was anxious not to persecute but to conciliate every one. But he changed nothing of the Iconoclast laws, and when Theodotus the anti-patriarch died (821) he refused to restore Nicephorus and set up another usurper, Antony, formerly Bishop of Sylæum (Antony I, 821–32). In 822 a certain general of Slav race, Thomas, set up a dangerous revolution with the help of the Arabs. It does not seem that this revolution had anything to do with the question of images. Thomas represented rather the party of the murdered emperor, Leo V. But after it was put down, in 824, Michael became much more severe towards the image-worshippers. A great number of monks fled to the West, and Michael wrote a famous letter full of bitter accusations of their idolatry to his rival Louis the Pious (814–20) to persuade him to hand over these exiles to Byzantine justice (in Mansi, XIV, 417–22). Other Catholics who had not escaped were imprisoned and tortured, among whom were Methodius of Syracuse and Euthymius, Metropolitan of Sardes. The deaths of St. Theodore the Studite (11 Nov., 826) and of the lawful patriarch Nicephorus (2 June, 828) were a great loss to the orthodox at this time. Michael's son and successor, Theophilus (829–42), continued the persecution still more fiercely. A monk, Lazarus, was scourged till he nearly died; another monk, Methodius, was shut up in prison with common ruffians for seven years; Michael, Syncellus of Jerusalem, and Joseph, a famous writer of hymns, were tortured. The two brothers Theophanes and Theodore were scourged with 200 strokes and branded in the face with hot irons as idolaters (Martyrol. Rom., 27 December; Nilles, "Kal. Man.," I, 369). By this time all images had been removed from the churches and public places, the prisons were filled with their defenders, the faithful Catholics were reduced to a sect hiding about the empire and a crowd of exiles in the West. But the emperor's wife Theodora and her mother Theoctista were faithful to the Second Nicene Synod and waited for better times.

Those times came as soon as Theophilus died (20 January, 842). He left a son, three years old, Michael

III (the Drunkard, who lived to cause the Great Schism of Photius, 842–67), and the regent was Michael's mother, Theodora. Like Irene at the end of the first persecution, Theodora at once began to change the situation. She opened the prisons, let out the confessors who were shut up for defending images, and recalled the exiles. For a time she hesitated to revoke the Iconoclast laws, but soon she made up her mind, and everything was brought back to the conditions of the Second Council of Nicæa. The patriarch John VII (832–42), who had succeeded Antony I, was given his choice between restoring the images and retiring. He preferred to retire, and his place was taken by Methodius, the monk who had already suffered years of imprisonment for the cause of the icons (Methodius I, 842–46). In the same year (842) a synod at Constantinople approved of John VII's deposition, renewed the decree of the Second Council of Nicæa, and excommunicated Iconoclasts. This is the last act in the story of this heresy. On the first Sunday of Lent (19 February, 842) the icons were brought back to the churches in solemn procession. That day (the first Sunday of Lent) was made into a perpetual memory of the triumph of Orthodoxy at the end of the long Iconoclast persecution. It is the "Feast of Orthodoxy" of the Byzantine Church, still kept very solemnly by both Uniate and Orthodox. Twenty years later the Great Schism began. So large has this, the last of the old heresies, loomed in the eyes of Eastern Christians that the Byzantine Church looks upon it as a kind of type of heresy in general. The Feast of Orthodoxy, founded to commemorate the defeat of Iconoclasm, has become a feast of the triumph of the Church over all heresies. It is in this sense that it is now kept. The great *Synodikon* read out on that day anathematizes all heretics (in Russia rebels and nihilists also), among whom the Iconoclasts appear only as one fraction of a large and varied class (for the text of the *Synodikon* see Nilles, "Kal. Man.," II, 109–18). After the restoration of the icons in 842, there still remained an Iconoclast party in the East, but it never again got the ear of an emperor, and so gradually dwindled and eventually died out.

IV. ICONOCLASM IN THE WEST.—There was an echo of these troubles in the Frankish kingdom, chiefly through misunderstanding of the meaning of Greek expressions used by the Second Council of Nicæa. As early as 767 Constantine V had tried to secure the sympathy of the Frankish bishops for his campaign against images, this time without success. A synod at Gentilly sent a declaration to Pope Paul I (757–67) which quite satisfied him (Hefele, "Concilien-geschichte," III, 431). The trouble began when Adrian I (772–95) sent a very imperfect translation of the Acts of the Second Council of Nicæa to Charles the Great (Charlemagne, 768–814). The errors of this Latin version are obvious from the quotations made from it by the Frankish bishops. For instance, in the third session of the council, Constantine, Bishop of Constantia, in Cyprus, had said: "I receive the holy and venerable images; and I give worship which is according to real adoration [*κατὰ λατρείαν*] only to the consubstantial and life-giving Trinity" (Mansi, XII, 1148). This phrase had been translated: "I receive the holy and venerable images with the adoration which I give to the consubstantial and life-giving Trinity" ("Libri Carolini," III, 17, P. L., XCVIII, 1148; Hefele, l. c., 705). There were other reasons why these Frankish bishops objected to the decrees of the council. Their people had only just been converted from idolatry, and so they were suspicious of anything that might seem like a return to it. Germans knew nothing of Byzantine elaborate forms of respect; prostrations, kisses, incense, and such signs that Greeks used constantly towards their emperors, even towards the emperor's statues, and therefore applied naturally to holy pictures, seemed to

these Franks servile, degrading, even idolatrous. The Franks saw the word *προσκύνησις* (which meant worship only in the sense of reverence and veneration) translated *adoratio* and understood it as meaning the homage due only to God. Lastly, there was their indignation against the political conduct of the Empress Irene, the state of friction that led to the coronation of Charlemagne at Rome and the establishment of a rival empire. Suspicion of everything done by Greeks, dislike of all their customs, led to the rejection of the council by the Frankish Church. But it should be noted that this rejection of the council did not mean that the Frankish bishops and Charlemagne sided with the Iconoclasts. If they refused to accept the Nicene Council they equally rejected the Iconoclast synod of 754. They had holy images and kept them; but they thought that the Fathers of Nicæa had gone too far, had encouraged what would be real idolatry.

The answer to the decrees of the Second Council of Nicæa sent in this faulty translation by Adrian I was a refutation in eighty-five chapters brought to the pope in 790 by a Frankish abbot, Angilbert. This refutation, later expanded, and fortified with quotations from the Fathers and other arguments, became the famous "Libri Carolini" or "Capitulare de Imaginibus" in which Charlemagne is represented as declaring his convictions (first published at Paris by Jean du Tillet, Bishop of St-Brieux, 1549, in P. L., XCVIII, 990-1248). The authenticity of this work, some time disputed, is now established (Hefele, "Conciliengeschichte", III, 694-717). In it the bishops reject the synods both of 787 and of 754. They admit that pictures of saints should be kept as ornaments in churches and—as well as relics and the saints themselves—should receive a certain proper veneration (*opportuna veneratio*); but they declare that God only can receive adoration (meaning *adoratio, προσκύνησις*); pictures are in themselves indifferent, have no necessary connexion with the Faith, are in any case inferior to relics, the Cross, and the Bible. The pope, in 794, answered these eighty-five chapters by a long exposition and defence of the cult of images ("Hadriani ep. ad Carol. Reg." in Jaffé, "Regesta", n. 2483; Mansi, XIII, 759-810; P. L., XCVIII, 1247-92), in which he mentions, among other points, that twelve Frankish bishops were present at, and had agreed to, the Roman synod of 731. Before the letter arrived the Frankish bishops held the Synod of Frankfort (794) in the presence of two papal legates, Theophylactus and Stephen, who do not seem to have done anything to clear up the misunderstanding. This synod formally condemns the Second Council of Nicæa, showing, at the same time, that it altogether misunderstands the decision of Nicæa. The essence of the decree at Frankfort is its second canon: "A question has been brought forward concerning the new synod of the Greeks which they held at Constantinople [the Franks do not even know where the synod they condemn was held] in connexion with the adoration of images, in which synod it was written that those who do not give service and adoration to pictures of saints just as much as to the Divine Trinity are to be anathematized. But our most holy Fathers, whose names are above, refusing this adoration and service despise and condemn [that synod]" (Mansi, XIII, 909). Charlemagne sent these Acts to Rome and demanded the condemnation of Irene and Constantine VI. The pope of course refused to do so, and matters remained for a time as they were, the Second Council of Nicæa being rejected in the Frankish kingdom.

During the second Iconoclast persecution, in 824, the Emperor Michael II wrote to Louis the Pious the letter which, besides demanding that the Byzantine monks who had escaped to the West should be handed over to him, entered into the whole question of image-worship at length and contained vehement accusations against its defenders. Part of the letter is quoted

in Leclercq-Hefele, "Histoire des conciles", III, 1, p. 612. Louis begged the pope (Eugene II, 824-27) to receive a document to be drawn up by the Frankish bishops in which texts of the Fathers bearing on the subject should be collected. Eugene agreed, and the bishops met in 825 at Paris. This meeting followed the example of the Synod of Frankfort exactly. The bishops try to propose a middle way, but decidedly lean towards the Iconoclasts. They produce some texts against these, many more against image-worship. Pictures may be tolerated only as mere ornaments. Adrian I is blamed for his assent to Nicæa II. Two bishops, Jcremias of Sens and Jonas of Orléans, are sent to Rome with this document; they are especially warned to treat the pope with every possible reverence and humility, and to efface any passages that might offend him. Louis, also, wrote to the pope, protesting that he only proposed to help him with some useful quotations in his discussions with the Byzantine Court; that he had no idea of dictating to the Holy See (Hefele, l. c.). Nothing is known of Eugene's answer, or of the further developments of this incident. The correspondence about images continued for some time between the Holy See and the Frankish Church; gradually the decrees of the Second Council of Nicæa were accepted throughout the Western Empire. Pope John VIII (872-82) sent a better translation of the Acts of the council, which helped very much to remove misunderstanding.

There are a few more isolated cases of Iconoclasm in the West. Claudius, Bishop of Turin (d. 840), in 824 destroyed all pictures and crosses in his diocese, forbade pilgrimages, recourse to intercession of saints, veneration of relics, even lighted candles, except for practical purposes. Many bishops of the empire and a Frankish abbot, Theodomir, wrote against him (P. L., CV); he was condemned by a local synod. (See "Claudii Taurin. De cultu imaginum" in the Cologne "Bibl. Patrum", IX, 2.) Agobard of Lyons at the same time thought that no external signs of reverence should be paid to images; but he had few followers. Walafrid Strabo ("De eccles. rerum exordiis et incrementis" in P. L., CXIV, 916-66) and Hincmar of Reims ("Opusc. c. Hincmarum Laudens.", xx, in P. L., CXXVI) defended the Catholic practice and contributed to put an end to the exceptional principles of Frankish bishops. But as late as the eleventh century Bishop Jocelin of Bordeaux still had Iconoclast ideas, for which he was severely reprimanded by Pope Alexander II.

The Acts of the various synods are in MANSI, *Sacrorum Conciliorum nova et amplissima collectio*, XII, XIII (Florence, 1766); HEFELE, *Conciliengeschichte*, III (2nd ed., Freiburg im Br., 1877), 366-490, 678-717; Fr. tr., edited with valuable notes by LECLERCQ, *Histoire des Conciles*, III (Paris, 1909), 1; ALEXANDER, *De Iconoclastarum hæresi dissertatio* in ZACCARIA, *The-saurus theologiae*, IV (1762), 64-83; MAIMBOURG, *Histoire de l'hérésie des Iconoclastes* (2 vols., Paris, 1683); SPANSEER, *Historia imaginum restituta* (Antwerp, 1686); SCHLOSSEK, *Geschichte der bildertirrenden Kaiser* (Frankfort, 1812); MARX, *Der Bilderstreit der byzantinischen Kaiser* (Trier, 1839); SCHWARZLOSE, *Der Bilderstreit. Ein Kampf der griechischen Kirche um ihre Eigenart u. ihre Freiheit* (Gotha, 1890) (the best short history of Iconoclasm); BEUTLER, *Les vestiges du culte impérial à Byzance et la querelle des Iconoclastes in the Congrès scientifique des Cathol.*, II (1891), 167-180; HARTMANN, *Lehrbuch der Dogmengeschichte*, II (4th ed., Tübingen, 1909), 478-490; BURY, *A History of the Later Roman Empire*, II (London, 1889, 428-438; BRÉHIER, *La querelle des images* (Paris, 1904).

ADRIAN FORTESCUE.

Iconography, CHRISTIAN, is the science of the description, history, and interpretation of the traditional representations of God, the saints, and other sacred subjects in art. Almost from the beginning the Church has employed the arts as potent means of instruction and edification. In the first centuries the walls of the catacombs were decorated with paintings and mosaics (see CATACOMBS), and in all later times churches have lent their walls, ceilings, and windows, as well as their altars, furniture, and liturgical vessels and books, to be adorned with scenes from the Old and the

New Testament, from the lives and legends of the saints, and even from old mythologies, modified, of course, and harmonized with Christian teaching. (For the details of Christian iconography see the articles, DIPTYCHS; IVORIES; METAL-WORK; MOSAICS; PAINTING; RELIQUARIES; SCULPTURE; WINDOWS; WOOD-CARVING.)

The object of iconography is to give the history of these various representations, to note their prevalence or absence at some particular time or in some particular place, to compare those of different lands and different periods, to explain the personal or historical, and to interpret the symbolical. Studied thus, they have an important historical and dogmatic interest, as

pletely shutting off the altar and the sanctuary from the worshipper. It has three doors: the great royal door in the middle (so called because it leads directly to the altar upon which the King of kings is sacrificed), the deacon's door to the right, and the door of the *proskomide* (preparation for Mass) upon the left, when viewing the structure from the standpoint of a worshipper in the body of the church.

Two pictures or icons must appear upon every iconostasis, no matter how humble, in the Greek church; the picture of Our Lord on the right of the Royal door, and that of Our Lady upon the left. But in the finer churches of Russia, Greece, Turkey,

ICONOSTASIS IN THE RUSSIAN CHAPEL AT PANCALDI

they attest the unity of ecclesiastical tradition and the faith of the age in which they were produced.

Special articles dealing with subjects of Christian iconography, besides those already mentioned, are ANCHOR; DOVE; EUCHARIST, EARLY SYMBOLS OF; FISH, SYMBOLISM OF; LAMB; NIMBUS. See also ECCLESIASTICAL ART.

MOLANUS, *De historia imaginum* (1570); DETZEL, *Die christliche Ikonographie* (Freiburg, 1895); BARBIER DE MONTAULT, *Traité d'iconographie chrétienne* (Paris, 1890); DIDRON, *Iconographie chrétienne* (Paris, 1843)—Eng. tr. in BOHN'S LIBRARY; HELMSDORFER, *Christliche Kunstsymbolik und Ikonographie* (Frankfurt, 1839); ALT, *Die Heiligbilder oder die bildene Kunst und die theol. Wissenschaft in ihrem gegenseitigen Verhältnisse* (Berlin, 1845); JAMESON, *Sacred and Legendary Art* (London, 1848); HUSENBETH, *Emblems of Saints* (London, 1860); TWINING, *Symbols and Emblems of Early and Mediaeval Christian Art* (London, 1860).

Iconostasis (Gr. *εικονοστάσιον*, *εικονόστασις*, picture screen, from *εἰκών*, image, picture, and *ἵστασις*, I place), the chief and most distinctive feature in all Greek churches, whether Catholic or Orthodox. It may be said to differentiate the Greek church completely from the Roman in its interior arrangement. It consists of a great screen or partition running from side to side of the apse or across the entire end of the church, which divides the sanctuary from the body of the church, and is built of solid materials such as stone, metal, or wood, and which reaches often (as in Russia) to the very ceiling of the church, thus com-

pletely shutting off the altar and the sanctuary from the worshipper. It has three doors: the great royal door in the middle (so called because it leads directly to the altar upon which the King of kings is sacrificed), the deacon's door to the right, and the door of the *proskomide* (preparation for Mass) upon the left, when viewing the structure from the standpoint of a worshipper in the body of the church. Two pictures or icons must appear upon every iconostasis, no matter how humble, in the Greek church; the picture of Our Lord on the right of the Royal door, and that of Our Lady upon the left. But in the finer churches of Russia, Greece, Turkey, and the East the iconostasis has a wealth of paintings lavished upon it. Besides the two absolutely necessary pictures, the whole screen is covered with them. On the royal door there is always the Annunciation and often the four Evangelists. On each of the other doors there are St. Michael and St. Gabriel. Beyond the deacon's door there is usually the saint to whom the church is dedicated, while at the opposite end there is either St. Nicholas of Myra or St. John the Baptist. Directly above the royal door is a picture of the Last Supper, and above that is often a large picture (*deïsus*) of Our Lord sitting crowned upon a throne, clothed in priestly raiment, as King and High-priest. At the very top of the iconostasis is a large cross (often a crucifix in bas-relief), the source of our salvation, and on either side of it are the pictures of Our Lady and of St. John.

Where the iconostasis is very lofty, as among the Slavonic nationalities, whether Orthodox or Catholic, the pictures upon it are arranged in tiers or rows across its entire length. Those on the lower ground tier have already been described; the first tier above that is a row of pictures commemorating the chief feasts of the Church, such as the Nativity, Annunciation, Transfiguration, etc.; above them is another tier of the twelve Apostles; and above them a tier containing the Prophets of the Old Law; and lastly the very top of the iconostasis. These pictures are

usually painted in the stiff Byzantine manner, although in many Russian churches they have begun to use modern art; the Temple of the Saviour, in Moscow, is a notable example. The iconostasis in the Greek (Hellenic) churches have never been so lofty and as full of paintings as those in Russia and other countries. A curious form of adornment of the icons or pictures has grown up in Russia and is also found in other parts of the East. Since the Orthodox Church would not admit sculptured figures on the inside of churches (although they often have numerous statues upon the outside) they imitated an effect of sculpture in the pictures placed upon the iconostasis which produces an incongruous effect upon the Western mind. The icon, which is generally painted upon wood, is covered except as to the face and hands with a raised relief of silver, gold, or seed pearls showing all the details and curves of the drapery, clothing and halo; thus giving a crude cameo-like effect around the flat painted face and hands of the icon.

The iconostasis is really an Oriental development in adorning the holy place about the Christian altar. Originally the altar stood out plain and severe in both the Oriental and Latin Rites. But in the Western European churches and cathedrals the Gothic church builders put a magnificent wall, the reredos, immediately behind the altar and heaped ornamentation, figures and carvings upon it until it became resplendent with beauty. In the East, however, the Greeks turned their attention to the barrier or partition dividing the altar and sanctuary from the rest of the church and commenced to adorn and beautify that, and thus gradually made it higher and covered it with pictures of the Apostles, Prophets, and saints. Thus the Greek Church put its ornamentation of the holy place in front of the altar instead of behind it as in the Latin churches. In its present form in the churches of the Byzantine (and also the Coptic) Rite the iconostasis is comparatively modern, not older than the sixteenth or seventeenth centuries. It was never used in the Roman churches or any of the Latin churches of the West, and was unknown to the early Church. The modern chancel rail of the Latin Rite correctly represents the primitive barrier separating the altar from the people. In the great Gothic cathedrals the choir screen or rood screen may be said in a manner to be the analogue of the iconostasis, but that is the nearest approach to it in the Western Church. None of the historians or liturgical writers of the early or middle Greek Church ever mention the iconostasis. Indeed the name to-day is chiefly in Russian usage, for the meaning of the Greek word is not restricted merely to the altar screen, but is applied to any object supporting a picture. The word is first mentioned in Russian annals in 1528 when one was built by Macarius, Metropolitan of Novgorod.

In the early Greek churches there was a slight barrier about waist high, or even lower, dividing the altar from the people. This was variously known as *κικλῖς*, grating, *δρῦφακτα*, fence, *διάστουλα*, a barrier made of columns, according to the manner in which it was constructed. Very often pictures of the saints were affixed to the tops of the columns. When Justinian constructed the "great" church, St. Sophia, in Constantinople, he adorned it with twelve high columns (in memory of the twelve Apostles) in order to make the barrier or chancel, and over the tops of these columns he placed an architrave which ran the entire width of the sanctuary. On this architrave or cross-beam large disks or shields were placed containing the pictures of the saints, and this arrangement was called *τέμπλον* (*templum*), either from its fancied resemblance to the front of the old temples or as expressing the Christian idea of the shrine where God was worshipped. Every church of the Byzantine Rite eventually imitated the "great" church and

so this open *τέμπλον* form of iconostasis began to be adopted among the churches of the East, and the name itself was used to designate what is now the iconostasis.

Many centuries elapsed before there was any approach towards making the solid partition which we find in the Greek churches of to-day. But gradually the demand for greater adornment grew, and to satisfy it pictures were placed over the entire iconostasis, and so it began to assume somewhat the present form. After the Council of Florence (1438) when the last conciliar attempt at reunion of the Churches failed, the Greek clergy took great pleasure in building and adorning their churches as little like the Latin ones as possible, and from then on the iconostasis assumed the form of the wall-like barrier which it has at present. As its present form is merely a matter of development of Church architecture suitable and adapted to the Greek Rite, the iconostasis was continuously used by the Catholics as well as by the Orthodox.

Giovanni Crisostomo* (Rome, 1907), p. xii; *Pravoslavnaya Encyclopaedia*, V (St. Petersburg, 1904), 833-8. The complete history in detail of the iconostasis is given (in Russian) in GOLUBINSKI, *Istoria Russkoi Tserkvi*, I (Moscow, 1904), pt. ii, 192-216.

ANDREW J. SHIPMAN.

Idaho (probably an Araphoe Indian word, "Gem of the Mountains"), the name first suggested for the Territory of Colorado, one of the Pacific Slope States, lying like a roughly shaped rudder and stretching 485 miles south from the boundary separating the United States from Canada, with its base extending east from Oregon to Wyoming. It is bounded on the south by Utah and Nevada, on the west by Oregon and Washington, on the east by Wyoming and Montana, on the north by British Columbia. Its area is 83,779 square miles, of

which over one-third is set apart as United States Government forest reserves.

PHYSICAL FEATURES, CLIMATE, ETC.—Central Idaho is a vast mountainous section, containing the Salmon River, Lost River, Saw Tooth, Boise, Seven Devils, and other ranges, which are in general well-timbered. The mean elevation of the state is about 4700 feet, its altitude varying between the extremes of 760 feet and over 12,000 feet. The Bitter Root range, a part of the great Continental Divide, forms the greater portion of the eastern boundary line of the state. In the extreme southern portion of the state are high forestless mountain ranges, the Owyhee, Goose Creek, Bear River, Portneuf, and Bannock ranges. In the great valley between these central and southern mountain ranges flows the Snake River, the largest river of Idaho and the main tributary of the Columbia River, draining over three-fourths of the area of the state. It rises in the Yellowstone National Park, flows westerly in an archlike course through the southern end of Idaho, then turning north it forms the western boundary line of the state for 300 miles. The drainage waters of a vast area of the

SEAL OF IDAHO

country north of the Snake River flow out upon and are absorbed in the lava and sage-brush plains, and thence find their way beneath the lava overflow by subterranean passages into the river, or burst through the lava canyon walls in mighty springs. For 250 miles of its course not a stream flows into the Snake River from the north; the valley of the river, and most of its tributaries, is a lava plain overlaid with a soil of volcanic ash, which when irrigated produces with wonderful fertility; a large area is ir-reclaimable, but has an inestimable value as grazing ground in the winter for sheep, cattle, and horses, the snowfall being light and the temperature rarely reaching zero. The principal tributary valleys of the Snake River are the Boise, Payette, Salmon, and Weiser, drained by rivers of identical names; the northerly course of the river is through deep canyons, between majestic mountain ranges, and far below the great wheat land prairies, the plateaux and rolling hills of Northern Idaho; the river is navigable below Lewiston, but in its course through Idaho the rapid fall of the stream and its extensive use for irrigation prevent navigation. In Idaho's mountains are many fresh-water lakes of great depth and picturesque surroundings; the principal lakes are the Cœur d'Alène, Pend d'Oreille, Payette, and Bear, the latter extending into Utah. Many wonderful waterfalls are found in the state; the four principal ones are formed by the Snake River, and are called the American, Twin, Salmon, and Shoshone Falls—the last-mentioned being 210 feet high and 1200 feet wide and having a world-wide fame.

The climate varies according to location and elevation, the northern part of the state being in the humid, and the southern part in the arid, region. In the latter section the climate is very dry, bracing, and invigorating. In the valleys and agricultural districts zero temperature is almost unknown, and the winters are short with long growing seasons in spring and summer.

POPULATION.—According to the census returns, the population was 13,999 in 1870; 32,610 in 1880; 84,385 in 1890; 161,772 in 1900. In 1908 the population of the state was estimated at 360,000, and that of its capital, Boise, at 25,000. The cities with an estimated population of from five to ten thousand are Pocatello, Twin Falls, Idaho Falls, Cœur d'Alène, Sandpoint, Lewiston, Moscow, and Nampa.

RESOURCES.—No state possesses resources more varied than those of Idaho. Agriculture, mining, lumbering, sheep and cattle raising, and horticulture are successfully carried on, while the lead mines of Northern Idaho produce the purest lead in the country, and supply about one-third of the total output of the United States. The Idaho mines in 1907 produced minerals valued at \$22,165,191.37: lead yielded \$12,470,341.74; silver yielded \$5,546,553.82; copper yielded \$2,241,177.17; gold yielded \$1,373,031.40; zinc yielded \$534,087.24. Valuable deposits of coal and phosphates exist; magnificent building stone, granite and marble, is also found in great quantities. The placer mines of the Boise basin have produced since 1863 over \$250,000,000 in gold, and are still extensively mined by hydraulic plants and dredges. Railway facilities are inadequate and vast mountainous areas of mineral land are yet practically unexplored, so that the mineral resources of Central and Southern Idaho cannot be correctly estimated.

AGRICULTURE.—The six northern counties of the state are in the humid region, with an annual rainfall of over 20 inches, and great crops of grain and grass are raised without irrigation. In the southern part of the state practically no crops are raised without the artificial application of water, and in this section there are over 300 days of sunshine in the year. Idaho has profited greatly by the provisions of the Carey Act, and has been granted 2,000,000 acres of land

under that act by the United States Government, being one of the few states so favoured. Enormous irrigation works have been constructed during the past five years, and still greater ones are in course of construction. In 1908 there were 4,554 miles of main canals and 5,654 miles of lateral canals constructed at a cost of \$28,389,271.00, with 4,040,131 acres under canal, and 1,825,550 acres actually irrigated. Ben Davis and Jonathan apples attain perfection in the horticultural lands of the Boise, Payette, and Weiser valleys, and large quantities of prunes and pears are shipped yearly; several canning factories are in operation in the Boise and Payette valleys. The southern section of the state is noted for its melons, and the eastern section for potatoes. Alfalfa is the principal forage crop, although other grasses are grown; wheat and oats are very successfully raised. Near Lewiston, grapes, cherries, and peaches are produced in large quantities. The enormous development going on in the State of Idaho at the present day, particularly under the irrigation reclamation projects, renders present figures an insecure basis in estimating the state's agricultural resources, yet the statistics for 1907 show the value of farm products as over \$68,000,000: wheat, the principal crop, being valued at \$12,500,000; oats at over \$14,000,000; alfalfa at over \$7,000,000; fruits at \$7,000,000.

OTHER INDUSTRIES.—The principal manufacturing industry is that of lumber; there are in the state over 60,000,000,000 cubic feet of timber, mostly white and yellow pine, with some red fir, cedar, hemlock, tamarack, and white fir; in 1907 there were 224 saw and planing mills, with an output valued at \$7,000,000. Although electric power plants have only begun to utilize the wonderful natural water-fall of the various streams of the state, in 1907 thirty-nine of such power plants were already in existence, representing an outlay of \$4,500,000. In Southern Idaho, in 1908, four great sugar factories produced from sugar beets grown on irrigated lands 52,423,500 pounds of sugar; the total output of manufacturing plants in 1907 was \$22,000,000, and 7,887 workmen were employed.

COMMUNICATION.—There are four telegraph companies in the state, the Western Union, Postal Telegraph, Postal Cable, and Pacific and Idaho Northern, with wires stretching over 6,888 miles. The principal telephone company is the Rocky Mountain Bell, but there are a number of independent companies; the number of miles covered is 16,616. Water transportation in the state is limited, but passenger and freight steamers ply Lakes Cœur d'Alène and Pend d'Oreille. The railroads of the state include the Harriman system, the Northern Pacific, Great Northern, the Idaho Northern, the Pacific & Idaho Northern, and the Spokane & International; there are also electric lines, Cœur d'Alène & Spokane Electric Railway, the Boise & Interurban, and Boise Valley. Great development is taking place, and much construction is being contemplated in the state. The railroad mileage in 1907 was 1,978.58 miles.

EDUCATION.—The constitution provides that the public school funds of the state shall forever remain intact, and only the interest thereon shall be used; this fund for the most part consists of the revenue derived from the sale of thousands of acres of land, sections 16 and 32 of each township in the state, and granted to the public schools of Idaho by the United States Government. These lands are sold at auction to the highest bidder, the minimum price being ten dollars per acre; no religious test or qualification is required for admission as either teacher or student to any public school; neither teachers nor pupils are required to participate in any religious services, and no sectarian or religious doctrines may ever be taught, or any distinction or classification made as to

race or colour. No books or documents of a political or denominational character may be used. Education is compulsory for at least three years between the ages of six and eighteen years.

Besides the public schools there is the state university at Moscow, opened in 1892, which confers the degrees of master and bachelor in arts, science, agriculture, and the degree of bachelor in music, domestic science, law, forestry, and veterinary surgery, civil engineering, mining engineering, electric and mechanical engineering. The faculty numbers fifty, and the student body about 540. There are normal schools at Albion and Lewiston, the academy of Idaho at Pocatello, and a school for deaf, dumb, and blind at Boise, all maintained by the state. In addition to these schools there are one Presbyterian, one Seven Day Adventist, and four Mormon schools and colleges, while there are seven Catholic academies and five Catholic parochial schools. In 1908 there were 2,052 teachers in the public schools, and 70,000 pupils enrolled; the total expenditure for common schools was in that year over \$1,700,000. It is a notable fact that the new immigrants and settlers organize school districts and erect splendid schools, even before the erection of permanent business and residential structures.

HISTORY.—The first white man known to have visited Idaho was Chevalier De La Verandaye, Governor of Quebec; sixty-two years later the great overland expedition of Lewis and Clark, sent out by President Jefferson, traversed the state. During the next fifty years, however, Idaho was known only to the hunters and missionaries, the only settlements being fur-trading posts and missions. In 1860 placer gold was discovered in Oro Fino, and this discovery was followed by a rush to the state of miners from other Western camps; rich placer deposits were discovered on Salmon and Boise Rivers, and in 1863 there were over 25,000 miners in the famous Boise basin alone. Other placer deposits were discovered by adventuresome eager pioneers, but most of the latter left the state after the gold excitement had subsided, leaving a few settlers, who, attracted by the mild climate and wonderful soil, established themselves on ranches. These early settlers were of American stock, hardy, brave, and accustomed to the hardships of pioneer days, and were mostly literate men. The influx of population was not rapid until 1900, when the reports of new mineral discoveries and a wider knowledge of the vast timber and agricultural resources and the wonderful climate spread to the Eastern States. The gigantic irrigation projects under the Government construction and the provisions of the Carey Act attracted a large number of immigrants, particularly from the Dakotas, Iowa, Nebraska, and the Middle Western States; the necessity for possession of some capital in order to obtain irrigated lands secured the immigration to Idaho of a generally well-to-do class of intelligent Americans. There is but a very small percentage of foreign population in the state. Idaho was admitted as the forty-fourth state of the Union on 3 July, 1890, having previously adopted its constitution in November, 1889. The main event in the political history of Idaho was the disfranchisement of the Mormons in 1883, but their disclaimer of polygamy in 1897 led to the restoration of citizenship to a large number of their body. In times past this religious organization had, and even now retains, great political influence in the state.

In 1892 and 1899 great strikes occurred among the lead miners of Northern Idaho; United States troops were called out to quell the riots, and imprisoned over 400 miners in the famous "Bull Pen". In 1907 Frank Steunenberg, the governor during the miners' riots, was assassinated. The officers of the Western Federation of Miners were taken from the State of

Colorado, charged with his murder, but after a lengthy trial were acquitted. In 1896 the constitution of the state was so amended as to permit woman suffrage. The women are not greatly interested in political parties, but the influence of the women voters has been salutary, and has resulted in passing many morally uplifting laws, in the reform and betterment of political conditions, and in securing equitable property right laws for married women. The offices of state and county superintendents of public instruction have almost without exception since their enfranchisement been filled by women, and generally most capably filled; however, few women have occupied seats in the legislature, although other county and state offices have been filled by them.

RELIGIOUS FACTORS.—The membership of the Mormon Church in the state is 40,905. Catholics number 14,450, Presbyterians 3,839, Methodists 3,706, Christian 3,500, Baptist 2,670, Episcopalians 2,000, Congregational 1,373. The first Catholic mission in the state was founded in 1842 among the Cœur d'Aléne Indians by Father Nicholas Point, S.J., and Brother Charles Stuet, S.J., although this tribe had been visited by Father De Smet, S.J., at a still earlier date. These Indians are among the finest specimens of the aboriginal American, and became intelligent and devout Catholics, handing down to the present generation a lively faith and a thrift and industry almost unique in the annals of the American Indian.

On 3 March, 1858, Pope Pius IX constituted the Territory of Idaho as a vicariate Apostolic under the Right Rev. Louis Lootens, titular Bishop of Castabala. In 1885 the Right Rev. Alphonsus Joseph Glorieux succeeded him, having been consecrated titular Bishop of Apollonia at Baltimore; eight years later the State of Idaho was made an episcopal see, with Bishop Glorieux as first Bishop of the Diocese of Boise. To estimate the Catholic population of the state is difficult, because of the wonderful immigration from the Eastern and Middle Western States since 1903. In 1907 there were 11,000 whites and 4,000 Indians, but this is considerably below the present true enumeration. The white Catholics are principally of Irish and German ancestry, Spain, France, Poland, and Canada being also represented. Since 1902 about 3,000 Spaniards from the Basque and Pyrenees provinces have immigrated to the southern part of the state, finding employment in the sheep industry. Catholics prominent in the state's history are Judge John Clark of the Idaho supreme court, Henry Heitfeld, Senator of the United States, Congressman James Gunn, Miss Permeal French, State Superintendent of Public Instruction, Joseph Perrault, Territorial Comptroller, and Joseph Fallon, Commissioner of Immigration.

The first place of worship of any denomination erected in Idaho was a Catholic church, dedicated by Father Mesplie in 1867 in Idaho City, the territorial capital; Catholics also erected the first church in the present capital, Boise.

Idaho is ecclesiastically under the charge of Right Reverend A. J. Glorieux, Bishop of Boise, and about 35 priests, mostly secular, but including the Jesuits, Marists, and Benedictines. Parochial schools, academies, and hospitals to the number of seventeen are in charge of the Sisters of the Holy Cross, of St. Joseph, of the Visitation of Charity, of Providence, of St. Benedict, of the Immaculate Heart of Mary, and the Ursulines.

The order of the Knights of Columbus instituted the pioneer Council at Boise in May, 1904, with twenty-seven members; in May, 1908, the order had increased to eight councils, with a membership of about 600.

LAWS.—The prejudice and feeling against the Mormon Church were largely responsible for the extensive reference to religion and religious worship in the Idaho State Constitution, the preamble of which reads: "We,

the people of the State of Idaho, grateful to Almighty God for our freedom, etc." The constitution guarantees the free exercise of religion, and that no one shall be molested in person or property on account of his mode of worship. Bigamy and polygamy are prohibited in the state; the legislature is advised: "The first concern of good government is the virtue and sobriety of the people and the purity of the home, the legislature should further all wise and well directed efforts for the furtherance of temperance and morality." Sunday is established by law as a day of rest, and practically all business is prohibited on that day; this law is generally well observed even in the mining, irrigation, and railway construction camps.

LEGAL OATHS, ETC.—The oath of office for all officers created under the laws of the state ends with the words "so help me God". Witnesses in all courts are sworn by an oath ending "so help me God". Affirmation is permitted, also swearing according to the peculiar form of the witness's religion. The use of profane language is punishable by fine and imprisonment. A chaplain is appointed by each branch of the legislature, and each day's session is opened with prayer. Legal holidays include all Sundays, Christmas Day, and days appointed by the President of the United States or the governor for a public fast, feast, or holiday. A clergyman is prohibited from testifying as to any confession or statement made in the course of religious ministrations. Religious corporations sole can be formed, the duration of such corporations being unlimited, by a bishop or other clergyman in whom title to church property vests; rights are given to hold, sell, and rent real property, to contract, to borrow money and issue bonds, without limitation as to amount.

EXEMPTION.—Churches, chapels, and other buildings used for religious worship, together with the necessary land, furniture, and equipment, are exempt from taxation, as are also all schools, cemeteries, and hospital property not used for profit. All able-bodied males between eighteen and forty-five are liable to military duties except in time of peace, when those with conscientious scruples against bearing arms are exempt. A priest or minister of any denomination is exempt from jury duty.

MARRIAGE AND DIVORCE.—Marriage is a civil contract which may be solemnized by any justice, judge, governor, mayor, minister or priest; no form is required, but a licence must be procured from the county recorder. The divorce laws are not strict, and many decrees are obtained, for the most part in default of the defendant. The causes for divorce are adultery, wilful desertion, neglect to provide if continued for a year, habitual intemperance, insanity, conviction of felony, and extreme cruelty; for the last cause divorces are frequently granted on account of the infliction of grievous mental suffering. *Bona fide* residence must be shown for only six months before the court takes jurisdiction; large discretion is vested in the trial courts, but they are generally favourably inclined to the granting of divorces.

CHARITABLE ORGANIZATIONS.—Charitable organizations may incorporate under the laws providing for corporations not organized for profit, and may hold such real estate as may be necessary to carry out their purposes. Bequests and devises to such institutions are not valid, except when made by will and executed more than thirty days before the death of the testator, and cannot exceed one-third of the decedent's property when he leaves lineal descendants.

SALE OF LIQUOR.—Liquor is sold under city, county, and state licences; county commissioners and city and town councils may refuse licences, local option being thus practically given to the people. In 1909 a local option bill was passed by the legislature, but as yet no attempt has been made to test

its provisions. The agricultural communities will no doubt exclude saloons and liquor selling, but the mining and lumbering communities will permit the sale of liquor under licence and certain regulations.

PRISONS AND REFORMATORIES.—The state penitentiary with 200 inmates is located at Boise; the Idaho industrial school with 70 inmates is located at St. Anthony; each county has a jail for persons awaiting trial and for punishment of misdemeanours. The industrial school is for the detention of juvenile delinquents and vagrant children between the ages of 8 and 18 years; the inmates are taught useful and honest occupations and trades. In 1909 an appropriation of \$20,000 was made, and a similar amount raised by citizens for the construction of a building for the Children's Home Finding Society, the object of which is to keep abandoned, neglected, and orphan children and those of pauper parentage, until proper homes can be secured for them (see BOISE, DIOCESE OF).

JESS HAWLEY.

Idea (Lat. *idea, forma, species*; Gk. *ἰδέα, εἶδος*, from *ἰδέω*, to see; Fr. *idée*; Ger. *Bild; Begriff*).—Probably to no other philosophical term have there been attached so many different shades of meaning as to the word *idea*. Yet what this word signifies is of much importance. Its sense in the minds of some philosophers is the key to their entire system. But from Descartes onwards usage has become confused and inconstant. Locke, in particular, ruined the term altogether in English philosophical literature, where it has ceased to possess any recognized definite meaning. He tells us himself at the beginning of his "Essay on the Human Understanding" that in this treatise "the word *Idea* stands for whatever is the object of the understanding when a man thinks. I have used it to express whatever is meant by phantasm, notion, species, or whatever it is which the mind can be employed about when thinking." In fact, with him it denotes, indifferently, a sensation, a perception, an image of the imagination, a concept of the intellect, an emotional feeling, and sometimes the external material object which is perceived or imagined.

HISTORY OF THE TERM.—The word was originally Greek, but passed without change into Latin. It seems first to have meant form, shape, or appearance, whence, by an easy transition, it acquired the connotation of nature, or kind. It was equivalent to *εἶδος*, of which it is merely the feminine, but Plato's partiality for this form of the term and its adoption by the Stoics secured its ultimate triumph over the masculine. Indeed it was Plato who won for the term *idea* the prominent position in the history of philosophy that it retained for so many centuries. With him the word *idea*, contrary to the modern acceptance, meant something that was primarily and emphatically objective, something outside of our minds. It is the universal archetypal essence in which all the individuals coming under a universal concept participate. By sensuous perception we obtain, according to Plato, an imperfect knowledge of individual objects; by our general concepts, or notions, we reach a higher knowledge of the idea of these objects. But what is the character of the idea itself? What is its relation to the individual object? And what is its relation to the author or originator of the individual things? The Platonic doctrine of ideas is very involved and obscure. Moreover, the difficulty is further complicated by the facts that the account of the idea given by Plato in different works is not the same, that the

chronological order of his writings is not certain, and, finally, still more because we do not know how far the mythological setting is to be taken literally. Approximately, however, Plato's view seems to come to this:—To the universal notions, or concepts, which constitute science, or general knowledge as it is in our mind, there correspond ideas outside of our mind. These ideas are truly universal. They possess objective reality in themselves. They are not something indwelling in the individual things, as, for instance, form in matter, or the essence which determines the nature of an object. Each universal idea has its own separate and independent existence apart from the individual object related to it. It seems to dwell in some sort of celestial universe (*ἐν οὐρανίῳ τόπῳ*). In contrast with the individual objects of sense experience, which undergo constant change and flux, the ideas are perfect, eternal, and immutable. Still, there must be some sort of community between the individual object and the corresponding idea, between Socrates and the idea "man", between this act of justice and the idea "justice". This community consists in "participation" (*μέθεξις*). The concrete individual participates, or shares, in the universal idea, and this participation constitutes it an individual of a certain kind or nature. But what, then, is this participation, if the idea dwells in another sphere of existence? It seems to consist in imitation (*μίμησις*). The ideas are models and prototypes, the sensible objects are copies, though very imperfect, of these models. The ideas are reflected in a feeble and obscure way in them. The idea is the archetype (*παράδειγμα*), individual objects are merely images (*εἰδῶλα*). Finally, what precisely is the celestial universe in which the ideas have eternally existed, and what is their exact relation to God or to the idea of the good? For Plato allots to this latter a unique position in the transcendental region of ideas. Here we meet a fundamental difference between the answers from two schools of interpreters.

Aristotle, who, his critics notwithstanding, was as competent as they to understand Plato, and was Plato's own pupil, teaches that his master ascribed to the various ideas an independent, autonomous existence. They are a multiplicity of isolated essences existing separated from the individual objects which copy them, and they are united by no common bond. All the relations subsisting in the hierarchies of our universal concepts, however, seem in Plato's view to be represented by analogous relations amongst the autonomous ideas. Aristotle's interpretation was accepted by St. Thomas and the main body of the later Scholastics; and much pain has been devoted to establishing the absurdity of this alleged theory of separation. But the ultra-realism of the Platonic theory of ideas was susceptible of a more benevolent interpretation, which, moreover, was adopted by nearly all the early Fathers of the Church. Indeed they found it easier to Christianize his philosophy than did Albertus Magnus and St. Thomas to do the like for that of Aristotle. They unanimously understood Plato to locate this world of ideas in the Mind of God, and they explained his *κόσμος νοητός* as a system of Divine conceptions—the archetypes according to which God was to form in the future the various species of created beings. With respect to the origin of our knowledge of these universal ideas, Plato cannot consistently derive it from sensuous experience. He therefore teaches that our universal concepts, which correspond to these ideas, are, strictly speaking, innate, inherited by the soul from a previous state of existence. There, in that transcendental Eden, the soul, by direct contemplation of the ideas, acquired these concepts. Sensible experience of the objects around us now merely occasions the reminiscence of these pre-natal cognitions. The acquisition of knowledge is thus, strictly speaking, a process of recollection.

Aristotle vigorously attacked Plato's theory of universal ideas. He himself teaches that sensible experience of the concrete individual is the beginning and foundation of all cognition. Intellectual knowledge, however, is concerned with the universal. But it must have been derived from the experience of the individual, which, therefore, in some way contains the universal. The universal cannot exist, as such, apart from the individual. It is immanent in the individual as the essence, or nature, specifically common to all members of the class. Since this essence, or nature, constitutes the thing specifically what it is, man, horse, triangle, etc., it furnishes the answer to the question: What is the thing? (*Quid est?*). It has therefore been termed the *quiddity* of the thing. In Greek, according to Aristotle, the *τὸ τί ἦν εἶναι*, *εἶδος*, *μορφή*, and *οὐσία δεύτερα* are one and the same thing—the essence, or quiddity, which determines the specific nature of the thing. This is the foundation for the general concept in the mind, which abstracts the universal form (*εἶδος νοητόν*) from the individual. Several of the early Fathers, as we have said, interpreted Plato benevolently, and sought to harmonize as much of his doctrine as possible with Christian theology. For them the ideas are the creative thoughts of God, the archetypes, or patterns, or forms in the mind of the Author of the universe according to which he has made the various species of creatures. "Ideæ principales formæ quædam vel rationes rerum stabiles atque incommutabiles, quæ in divinâ intelligentiâ continentur" (St. August., "De Div.," Q. xlvi). These Divine ideas must not be looked on as distinct entities, for this would be inconsistent with the Divine simplicity. They are identical with the Divine Essence contemplated by the Divine Intellect as susceptible of imitation *ad extra*.

Scholastic Period.—This doctrine of the Fathers received its complete elaboration from the Schoolmen in the great controversy concerning universals (*de universalibus*) which occupied a prominent place in the history of philosophy from the tenth to the thirteenth century. The ultra-realists tended towards the Platonic view in regard to the real existence of universal forms, as such, outside of the human mind, though they differed as to their explanation of the nature of this universality, and its participation by the individuals. Thus William of Champeaux seems to have understood the universal to exist essentially in its completeness in each individual of the species. In essence these individuals are but one, and whatever difference they have is one of accidents, not of substance. This would lead to a pantheistic conception of the universe, akin to that of Scotus Eriugena. On the other hand, the extreme Nominalist view, advocated by Roscelin, denies all real universality, except that of words.—A common name may be applied to the several objects of a species or genus, but neither in the existing individuals nor in the mind is there a genuine basis or correlate for this community of predication. The Aristotelean doctrine of moderate realism, which was already in possession before the eleventh century, held its ground throughout the whole period of Scholasticism, notwithstanding the appearance of distinguished champions of the rival hypothesis, and at last permanently triumphed with the establishment of the authority of St. Thomas. This theory, which in its complete form we may call the Scholastic doctrine of universals, distinguished *universalia ante res, in rebus, et post res*. The universal exists in the Divine Mind only as an idea, model, or prototype of a plurality of creatures *before* the individual is realized. Genus or species cannot in order of time precede the individual. Plato's separate ideas, did they physically exist, would have been individualized by their existence and have thus ceased to be universals. The universal exists in the individual only potentially or fundamentally, not actually or

formally as universal. That is, in each of the individuals of the same species there is a similar nature which the mind, exercising its abstractive activity, can represent by a concept or idea as separate, or apart, from its individualizing notes. The nature, or essence, so conceived is capable of being realized in an indefinite number of individuals, and therefore was justly described as "potentially universal." Finally, by a subsequent reflective generalizing act, the mind considers this concept, or idea, as representative of a plurality of such individuals, and thereby constitutes it a formally universal concept, or idea. In fact, it is only in the concept, or idea, that true universality is possible, for only in the vital mental act is there really reference of the one to the many. Even a common name, or any other general symbol, viewed as an entity, is merely an individual. It is its meaning, or significant reference, that gives it universality. But the fact that in the external world individual beings of the same species, e. g., men, oak trees, gold, iron, etc., have perfectly similar natures, affords an objective foundation for our subjective universal ideas and thereby makes physical science possible.

Diverse Meaning of *Idea* with Medieval and Modern Scholastic Writers.—We have just been using the term *idea* in its modern Scholastic sense as synonymous with "concept." By the Schoolmen the terms *conceptio*, *conceptus mentis*, *species intelligibilis*, and *verbum mentale* were all employed, sometimes as equivalents and sometimes as connoting slight differences, to signify the universal intellectual concepts of the mind. The term *idea*, however, probably in consequence of the Platonic usage, was for a long period employed chiefly, if not solely, to signify the forms or archetypes of things existing in the Divine Mind. Even when referred to the human mind, it commonly bore the significance of *forma exemplaris*, the model pictured by the practical intellect with a view to artistic production, rather than that of a representation effected in the intellect by the object apprehended. The former was described as an exercising of the "practical", the latter of the "speculative", intellect, though the faculty was recognized as really the same. St. Thomas, however, says that *idea* may stand for the act of the speculative intellect also—"Sed tamen si ideam communiter appellamus similitudinem vel rationem, sic *idea* etiam ad speculativam cognitionem pure pertinere potest" (CQ. Disp. de Ideis, a. 3). But I have not been able to find any passage in which he himself employs the word *idea* in the modern Scholastic sense, as equivalent to the intellectual concept of the human mind. The same is true as regards Suarez; so that the recognized general usage of the term in modern Scholastic textbooks does not seem to go much farther back than the time of Descartes.

Modern Philosophy.—Passing from the Schoolmen to modern philosophy, whilst, among those Catholic writers who adhered in general to the medieval philosophy, the term *idea* came to be more and more used to designate the intellectual concept of the human mind, outside of the Scholastic tradition it was no longer confined to intellectual acts. Descartes seems to have been the first influential thinker to introduce the vague and inaccurate use of the word *idea* which characterizes modern speculation generally. Locke, however, as we have mentioned, is largely responsible for the confusion in respect to the term which has prevailed in English philosophical literature. Descartes tells us that he designates generally by the term *idea* "all that is in our minds when we conceive a thing"; and he says, in another place, "*idea est ipsa res cogitata quatenus est objective in intellectu.*" The Cartesian meaning of *idea* seems, then, to be the general psychological determinant of cognition. This wide signification was generally

adopted by Gassendi, Hobbes, and many other writers, and the problem of the origin of ideas became that of the origin of all knowledge. There is, however, throughout, a reversal of the Platonic usage, for in its modern sense *idea* connotes something essentially subjective and intra-mental. With Plato, on the other hand, the ideas were emphatically objective. Spinoza defined *idea* as *mentis conceptus*, and warned his readers to distinguish it from phantasms of the imagination, *imagines rerum quas imaginamus*. We have cited at the beginning of this article Locke's vague definition. The confused and inconsistent usage to which he gave currency contributed much to the success of Berkeley's idealism and Hume's scepticism. From the position frequently adopted by Locke, that ideas are the object of our knowledge, that is, that what the mind knows or perceives are ideas, the conclusions drawn by Berkeley, that we have therefore no justification for asserting the existence of anything else but ideas, and that the hypothesis of a material world, the unperceived external causes of these ideas, is useless and unwarranted, was an obvious inference. Hume starts with the assumption that all cognitive acts of the mind may be divided into "impressions" (acts of perception), and "ideas", faint images of the former, and then lays down the doctrine that "the difference between these consists in the degrees of force and liveliness with which they strike on the mind." He then shows without much difficulty that genuine knowledge of reality of any kind is logically impossible. Kant assigned quite a new meaning to the term. He defines ideas as "concepts of the unconditioned which is thought of as a last condition for every conditioned." The transcendental ideas of metaphysics with him are, God, freedom, and immortality, "a pure concept" (*ein reiner Begriff*) may be either a *Verstandesbegriff* (notion), or a *Verunftbegriff* (idea), the difference being that "the latter transcends the possibility of experience." In the Hegelian philosophy the term again assumed an objective meaning, though not that of Plato. It is a name for the Absolute and the World process viewed as a logical category. It is the absolute truth of which everything that exists is the expression.

Such being the varying signification of the term in the history of philosophy, we may now return to consider more closely its adopted meaning among Catholic philosophers. The term *idea*, and especially *universal idea*, being generally accepted by them as equivalent to *universal concept*, it is the product of the intellect, or understanding, as distinguished from the sensuous faculties. It is an act of the mind which corresponds to a general term in ordinary speech. Thus, in the sentence, "water is composed of oxygen and hydrogen", the three words *water*, *oxygen*, and *hydrogen* stand for any genuine samples of these substances. The names have a definite yet universal meaning. The mental act by which that universal meaning is realized is the universal *idea*. It is a quite distinct thing from the particular sensation or image of the imagination, more or less vivid, which may accompany the intellectual act. The image may be distinct or confused, lively or feeble. It probably varies from moment to moment. It is felt to be of a subjective, contingent, and accidental character, differing considerably from the corresponding image in other persons' minds. It is, however, always an individualistic concrete entity, referring to a single object. Not so, however, with the intellectual *idea*. This possesses stability. It is unchangeable, and it is universal. It refers with equal truth to every possible specimen of the class. Herein lies the difference between thought and sensuous feeling, between spiritual and organic activity (see INTELLECT).

ORIGIN OF IDEAS.—Given the fact that the human

mind in mature life is in possession of such universal ideas, or concepts, the question arises: How have they been attained? Plato, as we have incidentally observed, conceives them to be an inheritance through reminiscence from a previous state of existence. Sundry Christian philosophers of ultra-spiritualist tendencies have described them as innate, planted in the soul at its creation by God. On the other hand, Empiricists and Materialists have endeavoured to explain all our intellectual ideas as refined products of our sensuous faculties. For a fuller account and criticism of the various theories we must refer the reader to any of the Catholic textbooks on psychology. We can give here but the briefest outline of the doctrine usually taught in the Catholic schools of philosophy. Man has a double set of cognitive faculties — sensuous and intellectual. All knowledge starts from sensuous experience. There are no innate ideas. External objects stimulate the senses and effect a modification of the sensuous faculties which results in a sensuous percipient act, a sensation or perception by which the mind becomes cognizant of the concrete individual object, e. g., some sensible quality of the thing acting on the sense. But, because sense and intellect are powers of the same soul, the latter is now awakened, as it were, into activity, and lays hold of its own proper object in the sensuous presentation. The object is the essence, or nature of the thing, omitting its individualizing conditions. The act by which the intellect thus apprehends the abstract essence, when viewed as a modification of the intellect, was called by the Schoolmen *species intelligibilis*; when viewed as the realization or utterance of the thought of the object to itself by the intellect, they termed it the *verbum mentale*. In this first stage it prescindes alike from universality and individuality. But the intellect does not stop there. It recognizes its object as capable of indefinite multiplication. In other words it generalizes the abstract essence and thereby constitutes it a reflex or formally universal concept, or idea. By comparison, reflection, and generalization, the elaboration of the idea is continued until we attain to the distinct and precise concepts, or ideas, which accurate science demands.

IDEA THE INSTRUMENT, NOT THE OBJECT, OF COGNITION.—It is important to note that in the Scholastic theory the immediate object of the intellectual act of perception is not the idea or concept. It is the external reality, the nature or essence of the thing apprehended. The idea, when considered as part of the process of direct perception, is itself the subjective act of cognition, not the thing cognized. It is a vital, immanent operation by which the mind is modified and determined directly to know the object perceived. The psychologist may subsequently reflect upon this intellectual idea and make it the subject of his consideration, or the ordinary man may recall it by memory for purposes of comparison, but in the original act of apprehension it is the means by which the mind knows, not the object which it knows — “*est id quo res cognoscitur non id quod cognoscitur*”. This constitutes a fundamental point of difference between the Scholastic doctrine of perception and that held by Locke, Berkeley, Hume, and a very large proportion of modern philosophers. For Locke and Berkeley the object immediately perceived is the idea. The existence of material objects, if we believe in them, can, in their view, only be justified as an inference from effect to cause. Berkeley and idealists generally deny the validity of that inference; and if the theory of immediate perception be altogether abandoned, it seems difficult to warrant the claim of the human mind to a genuine knowledge of external reality. In the Scholastic view knowledge is essentially of reality, and this reality is not dependent on the (finite) mind which knows it. The knower is something apart from his actualized knowing, and

the known object is something apart from its being actually known. The thing must be before it can be known; the act of knowledge does not set up but presupposes the object. It is of the object that we are directly conscious, not of the idea. In popular language we sometimes call the object “an idea”, but in such cases it is in a totally different sense, and we recognize the term as signifying a purely mental creation.

VALIDITY OF IDEAS.—There remains the problem of the validity, the objective worth, of our ideas, though this question is already in great part answered by what has gone before. As all cognition is by ideas, taken in their widest signification, it is obvious that the question of the validity of our ideas in this broad sense is that of the truth of our knowledge as a whole. To dispute this is to take up the position of complete scepticism, and this, as has often been pointed out, means intellectual suicide. Any chain of reasoning by which it is attempted to demonstrate the falsity of our ideas has to employ ideas, and, in so far as it demands assent to the conclusion, implies belief in the validity of all the ideas employed in the premises. Again, assent to the fundamental mathematical and logical axioms, including that of the principle of contradiction, implies admission of the truth of the ideas expressed in these principles. With respect to the objective worth of ideas, as involved in perception generally, the question raised is that of the existence of an independent material world comprising other human beings. The idealism of Hume and Mill, if consistently followed out, would lead logically to solipsism, or the denial of any other being save self. Finally, the main foundation of all idealism and scepticism is the assumption, explicit or implicit, that the mind can never know what is outside of itself, that an idea as a cognition can never transcend itself, that we can never reach to and mentally lay hold of or apprehend anything save what is actually a present state of our own consciousness, or a subjective modification of our own mind. Now, first, this is an a priori assumption for which no real proof is or can be given; secondly, it is not only not self-evident, but directly contrary to what our mind affirms to be our direct intellectual experience. What it is possible for a human mind to apprehend cannot be laid down a priori. It must be ascertained by careful observation and study of the process of cognition. But that the mind cannot apprehend or cognize any reality existing outside of itself is not only not a self-evident proposition, it is directly contrary to what such observation and the testimony of mankind affirm to be our actual intellectual experience. Further, Mill and most extreme idealists have to admit the validity of memory and expectation; but, in every act of memory or expectation which refers to any experience outside the present instant, our cognition is transcending the present modifications of the mind and judging about reality beyond and distinct from the present states of consciousness. Considering the question as specially concerned with universal concepts, only the theory of moderate realism adopted by Aristotle and St. Thomas can claim to guarantee objective value to our ideas. According to the nominalist and conceptualist theories there is no true correlate *in rerum naturâ* corresponding to the universal term. Were this the case there would be no valid ground for the general statements which constitute science. But mathematics, astronomy, physics, chemistry, and the rest claim that their universal propositions are true and deal with realities. It is involved in the very notion of science that the physical laws formulated by the mind do mirror the working of agents in the external universe. But unless the general terms of these sciences and the ideas which they signify have, corresponding to them, objective correlatives in the common natures and essences of the objects with which these sciences deal,

then those general statements are unreal, and each science is nothing more than a consistently arranged system of barren propositions deduced from empty, arbitrary definitions, and postulates, having no more genuine objective value than any other coherently devised scheme of artificial symbols standing for imaginary beings. But the fruitfulness of science and the constant verifications of its predictions are incompatible with such an hypothesis.

PLATO'S explanation of his doctrine of ideas is scattered through most of his works, especially the *Republic*, *Phædrus*, *Theætetus*, and *Parmenides*. The subsequent literature on the Platonic ideas is enormous. Two recent books may be mentioned in particular: ADAMSON, *The Development of Greek Philosophy* (Edinburgh, 1908); STEWART, *Plato's Doctrine of Ideas* (Oxford, 1909). LONG, *Outlines from Plato* (Oxford, 1905), will also be found helpful. ARISTOTLE discusses the Platonic ideas chiefly in the *Metaphysics* and also in the *Organon*. On the differences between Plato and Aristotle see WATSON, *Aristotle's Criticism of Plato* (Oxford, 1909). For the doctrine of St. THOMAS see his *Summa*, I, Q. xv, and *De Veritate*, Q. iii; see also STÖCKL, *Handbook of the History of Philosophy*, tr. FINLAY (Dublin, 1887 and 1903); TURNER, *History of Philosophy* (New York, 1903); RICKABY, *First Principles* (New York and London, 1896); MAHER, *Psychology*, cc. xii-xiv (New York and London, 1905). See HAMILTON, *Reid* (London, 1872), notes G and M. Among Continental modern Scholastics perhaps the best treatment of many aspects of the subject is that contained in FEILLAUBE, *Théorie des Concepts* (Paris, 1894). See also ROUSSELOT, *L'intellectualisme de St. Thomas* (Paris, 1908), pt. II, c. i.; VAN DER BERG, *De Ideis Divinis juxta doctrinam Doctoris Angelici* (Bois le Duc, 1872); ZIGLIARA, *Della luce intellettuale* (Rome, 1874); DOMET DE VORLES, *La Perception et la Psychologie Thomiste* (Paris, 1892); PRAT, *L'idée* (2nd ed., Paris, 1908). MICHAEL MAHER.

Idealism.—In discussing this term and its meaning, reference must be had to the cognate expressions, *idealist*, *idealized*, *ideal* (adjective), and *the ideal* (noun), all of which are derived from the Greek *idéa*. This signifies "image", "figure", "form"; it can be used in the sense of "likeness" or "copy" as well as in that of "type", "model", or "pattern"; it is this latter sense that finds expression in "ideal" and the derivatives mentioned above. In speaking of "the ideal", what we have in mind is not a copy of any perceptible object, but a type. The artist is said to "idealize" his subject when he represents it as fairer, nobler, more perfect than it is in reality. Idealism in life is the characteristic of those who regard the ideas of truth and right, goodness and beauty, as standards and directive forces. This signification betrays the influence of Plato, who made *idea* a technical term in philosophy. According to him the visible world is simply a copy of a supersensible, intelligible, ideal world, and consequently "things" are but the impress stamped on reality by that which is of a higher, spiritual nature.

Platonism is the oldest form of idealism, and Plato himself the progenitor of idealists. It is usual to place in contrast Plato's idealism and Aristotle's realism; the latter in fact denies that ideas are originals and that things are mere copies; he holds that the essence or form is intelligible, but that it is immanent in the things of nature, whereas it is put into the products of art. It is more correct, therefore, to call his teaching an immanent idealism as contrasted with the transcendental idealism of Plato. Both these thinkers reveal the decisive influence of that moral and æsthetic idealism which permeated Greek life, thought, and action; but for both, what lies deepest down in their philosophy is the conviction that the first and highest principle of all things is the one perfect spiritual Being which they call God, and to which they lead back, by means of intermediate principles—essence and form, purpose and law—the multifarious individual beings of the visible world. In this sense idealism is dualism, i. e. the doctrine of a higher spiritual principle over against that which is lower and material; and this doctrine again is clearly opposed to the monism which would derive the higher and the lower alike out of one and the same All-being.

This older idealism teaches, not that there is One-All but that there is an Alpha and Omega, i. e. a supermundane Cause and End, of the world. By means of its principles, idealism maintains the distinctness of God and the world, of the absolute and the finite yet holds them together in unity; it adjusts the relations between reality and knowledge, by ascribing to things dimension, form, purpose, value, and law at the same time securing for thought the requisite certainty and validity; it establishes objective truth in the things that are known and subjective truth in the mind that knows them. In this sense the Schoolmen teach that *forma dat esse et distingui*, i. e. the principle which formally constitutes the object, likewise, in the act of cognition, informs the mind. Inasmuch as its principles express the cause and purpose of things, their determinate nature and value, idealism unites the speculative and the ethical, the true and the good, moral philosophy and the philosophy of nature.

In this sense St. Augustine developed the Platonic teaching, and his philosophy is idealism in the genuine meaning of the term. From him comes the definition of ideas which Christian philosophy has since retained—"Ideas are certain original forms of things, their archetypes permanent and incommunicable, which are contained in the Divine intelligence. And though they neither begin to be nor cease, yet upon them are patterned the manifold things of the world that come into being and pass away. Upon these ideas only the rational soul can fix its gaze, endowed as it is with the faculty which is its peculiar excellence, i. e. mind and reason [*mente ac ratione*], a power, as it were, of intellectual vision; and for such intuition that soul only is qualified which is pure and holy, i. e., whose eye is normal, clear, and well adjusted to the things which it would fain behold" (De diversis quæst., Q. xlvi, in P. L., XL, 30).

This line of thought the Scholastics adopted, developing it in their treatises as ideology. Their theory indeed is described not as idealism, but as realism; but this does not imply that they are in conflict with the doctrine of Augustine; it means rather that the ideal principles possess real validity, that as ideas they subsist in the Divine mind before the things corresponding to them are called into existence, while, as forms and essences, they really exist in nature and are not merely products of our thinking. In this last-named sense, i. e. as subjective constructions, ideas had long before been regarded by the philosophers of antiquity and especially by the Stoics, who held that ideas are nothing else than mental representations. This erroneous and misleading view appeared during the Middle Ages in the guise of nominalism, a designation given to the system whose adherents claimed that our concepts are mere names (*nomina*), which have as their counterparts in the world of reality individual things, but not forms or essences or purposes. This opinion, which robs both science and moral principles of their universal validity, and which paves the way for Materialism and agnosticism, was combated by the leaders of Scholasticism—Anselm of Canterbury, Albertus Magnus, Thomas Aquinas, Bonaventure, and Duns Scotus—nevertheless, from the fourteenth century onwards, it had its champions and propagators, notably William of Occam. For the untrained mind it was easier to consider individual things as the only realities and to regard forms and essences as purely mental products.

So it came to pass that the word *idea* in the various languages took on more and more the meaning of "representation", "mental image", and the like. Hence too, there was gradually introduced the terminology which we find in the writings of Berkeley, and according to which idealism is the doctrine that ascribes reality to our ideas, i. e. our representations,

but denies the reality of the physical world. This sort of idealism is just the reverse of that which was held by the philosophers of antiquity and their Christian successors; it does away with the reality of ideal principles by confining them exclusively to the thinking subject; it is a spurious idealism which deserves rather the name "phenomenalism" (*phenomenon*, "appearance", as opposed to *noumenon*, "the object of thought").

The doctrine of Descartes has also *per nefas* been called idealism. It is true that Cartesianism is in line with the genuine idealism of the earlier schools, inasmuch as it postulates God, thought, and spatial reality. But, on the other hand, this system too employs *idea* only in a subjective signification and quite overlooks the intermediate position of ideal principles. According to the theory of Leibniz, which has also been regarded as idealistic, our mind constructs from its own resources (*de son propre fond*) its scheme of the world; but, thanks to a pre-established harmony (*harmonie préétablie*), it accords with reality. This view, however, furnishes no solution for the epistemological problem. Kant claims that his critical philosophy is both a "transcendental idealism" and an "empirical realism"; but he declares that ideas are "illusions of reason", and that such ideal principles as cause and purpose are simply devices of thought which can be employed only in reference to phenomena. Fichte took Kant as his starting-point, but finally rose above the level of subjectivism and posited a principle of reality, the absolute Ego. Hegel's doctrine can be termed idealism so far as it seeks the highest principle in the absolute idea, which finds its self-realization in form, concept, etc.—a view which amounts virtually to monism. The various offshoots of the Kantian philosophy are incorrectly regarded as developments of idealism; it is more accurate to describe them as "illusionism" or "solipsism", since they entirely sweep away objective reality. In this connexion a German philosopher declares: "I affirm without hesitation that the assertion, 'the existence of the world consists merely in our thinking', is for me the result of a hypertrophy of the passion for knowledge. To this conclusion I have been led chiefly by the torture I endured in getting over 'idealism'. Whosoever attempts to take this theory in downright earnest, to force his way clean through it and identify himself with it, will certainly feel that something is about to snap in his brain" (Jerusalem, "Die Urtheilsfunktion", Vienna, 1895, p. 261). Similar conclusions are reached by J. Volkelt (*Erfahrung u. Denken*, Hamburg, 1886, p. 519): "Any man who carries his theoretical doubts or denial of the external world so far that even in his everyday experience he is forever reminding himself of the purely subjective character of his perceptions . . . will simply find himself flung out of the natural course and direction of life, stripped of all normal feeling and interest, and sooner or later confronted with the danger of losing his mind completely."

It is certainly a matter of regret that the terms *idea*, *idealist*, and *idealism*, originally so rich in content, should be so far degraded as to signify such aberrations of thought. The present writer, in his "Geschichte des Idealismus" (2nd ed., Brunswick, 1907), has taken the ground that the original meaning of these terms should be restored to them. In the index of this "Geschichte" and in his monograph, "Die wichtigsten philosophischen Fachausdrücke" (Munich, 1909), he traces in detail the changes in meaning which these words have undergone.

OTTO WILLMANN.

Idioms, COMMUNICATION OF. See COMMUNICATIO IDIOMATUM.

Idiota (RAYMUNDUS JORDANUS): the *nom de plume* of an ancient, learned, and pious writer whose identity remained unknown for some centuries. The name need not be understood in the ordinary sense as now used. According to the original Greek, *Idiota* means private, simple, or peculiar, and it is probable that the writer in question employed it in this sense to signify that he was a person of no consequence. The works of this author soon became widely known although he himself remained unknown. They have all been printed several times in the "Bibliotheca Patrum", and his "Contemplationes de amore divino" are often found in small manuals bound up with the meditations of St. Augustine, St. Bernard, and St. Anselm. In the "Magna Bibliotheca Veterum Patrum" published in 1618, his works are given among the writers of the tenth century and, according to Cardinal Bellarmine, *Idiota* flourished about the year 902.

Father Theophilus Raynaud, S. J., was the first to discover that Raymundus Jordanus was the author of the works found in the library of the Fathers under the name *Idiota*. In his preface to one of the works of *Idiota*, the "Oculus Mysticus", which he published in 1641, he accounts for this discovery by the testimony of contemporary writers, and by the fact that some of the original MSS. had been signed by Raymundus. Biographical writers have, in general, accepted Raynaud's theory since the year 1654, when, under his editorship, a complete edition of the works of *Idiota* was published in Paris under the name of Raymundus Jordanus. It is known for certain that this Raymundus was a Frenchman, a Canon Regular of St. Augustine, prior of the house of his order at Uzès, in France, and afterwards Abbot of Selles-sur-Cher, France where he lived and died. Selles, it appears, was not then a Cistercian monastery. Raymundus wrote about the year 1381. In an account of a transaction between the Canons Regular and the Bishop of Uzès which occurred in the year 1377, Raymundus is styled licentiate, and it is stated that he was elected by the chapter of his order to present and conduct its cause before an ecclesiastical tribunal presided over by Cardinal Sabinensi, which he did with ability and success. Whether Raynaud is right in his theory that Raymundus Jordanus is *Idiota*, or whether *Idiota* is to remain unknown like the *Auctor operis imperfecti*, so often quoted by spiritual writers, may still be regarded by many as an open question.

There is however no question as to the works themselves. They were all written in Latin and none of them has been translated into any other language. In the edition of his works published in Paris in the year 1654 we have the following collection:—six books of "Meditations"; a "Treatise on the Blessed Virgin"; a "Treatise on the Religious Life"; and the "Spiritual or Mystical Eye". He wrote also a "Commentary on Psalm xv". His book of "Meditations" contains the following chapters: (1) *De amore divino*; (2) *De Virgine Maria*; (3) *De vera patientia*; (4) *De continuo conflictu carnis et animæ*; (5) *De innocentia perdita*; (6) *De morte*. These meditations were published in Paris in 1519, and the volume is said to have been the work of a pious and holy man who gave no other name than *Idiota*. All his works are written in a simple, clear, and pure style; and they are replete with Christian wisdom. They well deserve to be classed with the works of the early Fathers of the Church, and to be made known in the vernacular for the benefit and edification of pious readers.

ARTHUR DEVINE.

Idolatry (Gr. *εἰδωλατρία*) etymologically denotes Divine worship given to an image, but its signification has been extended to all Divine worship given to anyone or anything but the true God. St. Thomas (Summa Theol., II-II, q. xciv) treats of it as a species of the genus superstition, which is a vice opposed to the virtue of religion and consists in giving Divine honour (*cultus*) to things that are not God, or to God Himself in a wrong way. The specific note of idolatry is its direct opposition to the primary object of Divine worship; it bestows on a creature the reverence due to God alone. It does so in several ways. The creature is often represented by an image, an idol. "Some, by nefarious arts, made certain images which, through the power of the devil, produced certain effects whence they thought that these images contained something divine and, consequently, that divine worship was due to them." Such was the opinion of Hermes Trismegistus. Others gave Divine honours not to the images but to the creatures which they represented. Both are hinted at by the Apostle (Rom., i, 23-25), who says of the first: "They changed the glory of the incorruptible (God into the likeness of the image of a corruptible man, and of birds, and of four-footed beasts and of creeping things"; and of the second: "They worshipped and served the creature rather than the Creator." These worshippers of creatures were of three kinds. Some held that certain men were gods, and these they honoured through their statues, e. g., Jupiter and Mercury. Others opined that the whole world was one God, God being conceived of as the rational soul of the corporeal world. Hence they worshipped the world and all its parts, the air, the water, and all the rest; their idols, according to Varro, as reported by St. Augustine (De Civ. Dei, VIII, xxi, xxii), were the expression of that belief. Others again, followers of Plato, admitted one supreme God, the cause of all things; under Him they placed certain spiritual substances of His creation and participating in His Divinity; these substances they called gods; and below these they put the souls of the heavenly bodies and, below these again the demons who, they thought, were a sort of aerial living beings (*animalia*). Lowest of all they placed the human souls, which, according to merit or demerit, were to share the society either of the gods or of the demons. To all they attributed Divine worship, as St. Augustine says (De Civ. Dei, VIII, 14).

An essential difference exists between idolatry and the veneration of images practised in the Catholic Church, viz., that while the idolater credits the image he reverences with Divinity or Divine powers, the Catholic knows "that in images there is no divinity or virtue on account of which they are to be worshipped, that no petitions can be addressed to them, and that no trust is to be placed in them. . . that the honour which is given to them is referred to the objects (*prototypa*) which they represent, so that through the images which we kiss, and before which we uncover our heads and kneel, we adore Christ and venerate the Saints whose likenesses they are" (Conc. Trid., Sess. XXV, "de invocatione Sanctorum").

MORAL ASPECT.—Considered in itself, idolatry is the greatest of mortal sins. For it is, by definition, an inroad on God's sovereignty over the world, an attempt on His Divine majesty, a rebellious setting up of a creature on the throne that belongs to Him alone. Even the simulation of idolatry, in order to escape death during persecution, is a mortal sin, because of the pernicious falsehood it involves and the scandal it causes. Of Seneca who, against his better knowledge,

took part in idolatrous worship, St. Augustine says: "He was the more to be condemned for doing mendaciously what people believed him to do sincerely". The guilt of idolatry, however, is not to be estimated by its abstract nature alone; the concrete form it assumes in the conscience of the sinner is the all-important element. No sin is mortal—i. e. debars man from attaining the end for which he was created—that is not committed with clear knowledge and free determination. But how many, or how few, of the countless millions of idolaters are, or have been, able to distinguish between the one (Creator of all things and His creatures? and, having made the distinction, how many have been perverse enough to worship the creature in preference to the Creator?—It is reasonable, Christian, and charitable to suppose that the "false gods" of the heathen were, in their conscience, the only true God they knew, and that their worship being right in its intention, went up to the one true God with that of Jews and Christians to whom He had revealed Himself. "In the day when God shall judge the secrets of men by Jesus Christ . . . the gentiles who have not the law, shall be judged by their conscience" (Rom., ii, 14-16). God, who wishes all men to be saved, and Christ, who died for all who sinned in Adam, would be frustrated in their merciful designs if the prince of this world were to carry off all idolaters.

CAUSES.—Idolatry in its grosser forms is so far removed from the Christianized mind that it is no easy matter to account for its origin. Its persistence after gaining a first footing, and its branching out in countless varieties, are sufficiently explained by the moral necessity imposed on the younger generation to walk in the path of their elders with only insignificant deviations to the right or to the left. Thus Christian generations follow upon Christian generations; if sects arise they are Christian sects. The question as to the first origin of idolatry is thus answered by St. Thomas: "The cause of idolatry is twofold: dispositive on the part of man; consummative on the part of the demons. Men were led to idolatry first by disordered affections, inasmuch as they bestowed divine honours upon someone whom they loved or venerated beyond measure. This cause is indicated in Wisdom, xiv, 15: 'For a father being afflicted by bitter grief, made to himself the image of his son who was quickly taken away; and him who then had died as a man, he began now to worship as a god', and xiv, 21: 'Men serving either their affection or their king, gave the incommunicable name to stones and wood'. Second: By their natural love for artistic representations: uncultured men, seeing statues cunningly reproducing the figure of man, worshipped them as gods. Hence we read in Wisdom, xiii, 11 sq., 'An artist, a carpenter has cut down a tree proper for his use in the wood . . . and by the skill of his art fashioneth it and maketh it like the image of a man . . . and then maketh prayers to it, inquiring concerning his substance and his children or his marriage'. Third: By their ignorance of the true God: man, not considering the excellence of God, attributed divine worship to certain creatures excelling in beauty or virtue: Wisdom, xiii, 1-2: ' . . . neither by attending to the works have [men] acknowledged who was the workman, but have imagined either the fire, or the wind, or the swift air, or the circle of the stars, or the great water, or the sun and moon, to be the gods that rule the world'.—The consummative cause of idolatry was the influence of the demons who offered themselves to the worship of erring men, giving answers from idols or doing things which to men seemed marvelous, whence the Psalmist says (Ps. xcvi, 5): 'All the gods of the gentiles are devils'" (II-II, Q. xciv, a. 4).

The causes which the writer of Wisdom, probably an Alexandrian Jew living in the second century B. C.,

assigns to the idolatry prevalent in his time and environment, are sufficient to account for the origin of all idolatry. Man's love for sense images is not a vagary but a necessity of his mind. Nothing is in the intellect that has not previously passed through the senses. All thought that transcends the sphere of direct sense knowledge is clothed in material garments, be they only a word or a mathematical symbol. Likewise, the knowledge of things impervious to our senses, that comes to us by revelation, is communicated and received through the senses external or internal, and is further elaborated by comparison with notions evolved from sense perceptions; all our knowledge of the supernatural proceeds by analogy with the natural. Thus, throughout the Old Testament God reveals Himself in the likeness of man, and in the New, the Son of God, assuming human nature, speaks to us in parables and similitudes. Now, the human mind, when sufficiently ripe to receive the notion of God, is already stocked with natural imagery in which it clothes the new idea. That the limited mind of man cannot adequately represent, picture, or conceive the infinite perfection of God, is self-evident. If left to his own resources, man will slowly and imperfectly develop the obscure notion of a superior or supreme power on which his well-being depends and whom he can conciliate or offend. In this process intervenes the second cause of idolatry: ignorance. The Supreme Power is apprehended in the works and workings of nature; in sun and stars, in fertile fields, in animals, in fancied invisible influences, in powerful men. And there, among the secondary causes, the "groping after God" may end in the worship of sticks and stones. St. Paul told the Athenians that God had "winked at the times of this ignorance" during which they erected altars "To the unknown God", which implies that He had compassion on their ignorance and sent them the light of truth to reward their good intention (Acts, xvii, 22-31). As soon as the benighted heathen has located his unknown god, love and fear, which are but the manifestations of the instinct of self-preservation, shape the cultus of the idol into sacrifices or other congenial religious practices. Ignorance of the First Cause, the need of images for fixing higher conceptions, the instinct of self-preservation—these are the psychological causes of idolatry.

IDOLATRY IN ISRAEL.—The worship of one God is inculcated from the first to the last page of the Bible. How long man, on the strength of the revelation transmitted by Adam and subsequently by Noe, adored God in spirit and truth is an insoluble problem. Monotheism, however, appears to have been the starting-point of all religious systems known to us through trustworthy documents. The Animism, Totemism, Fetishism of the lower races; the nature-worship, ancestor-worship, and hero-worship of civilized nations are hybrid forms of religion, evolved on the psychological lines indicated above; all are incarnations in the uncultured or cultured mind, and manifestations of one fundamental notion, namely, that there is above man a power on whom man is dependent for good and evil. Polytheism is born of the confusion of second causes with the First Cause; it grows in inverse ratio of higher mental faculties; it dies out under the clear light of reason or revelation. The first undoubted mention of idolatry in the Bible is in Genesis, xxxi, 19: "Rachel stole away her father's idols [*teraphim*]", and when Laban overtook Jacob in his flight and made search for "his gods", Rachel "in haste hid the idols under the camel's furniture, and sat upon them" (xxxii, 34). Yet Laban also worshipped the same God as Jacob, whose blessing he acknowledges (xxx, 27), and on whom he calls to judge between him and Jacob (xxxii, 53). A similar practice of blending reverence to the true God with the idolatrous worship of surrounding nations runs through

the whole history of Israel. When Moses delayed to come down from the holy mount, the people, "gathering together against Aaron, said: Arise, make us gods, that may go before us". And Aaron made a molten calf, "and they said: These are thy gods, O Israel, that have brought thee out of the land of Egypt. And . . . they offered holocausts, and peace victims, and the people sat down to eat, and drink, and they rose up to play" (Exodus, xxxii, 1 sqq.). In Settim "the people committed fornication with the daughters of Moab, . . . and adored their gods. And Israel was initiated to Beelphegor" (Numbers, xxv, 1-3). Again, after the death of Josue, "the children of Israel . . . served Baalim . . . and they followed strange gods, and the gods of the people that dwelt round about them" (Judges, ii, 11 sq.). Whenever the children of Israel did evil in the eyes of Jehovah, swift retribution overtook them; they were given into the hands of their enemies. Yet idolatry remained the national sin down to the times of the Machabees. This striking fact has for its causes, first, the natural endeavour of man to come in contact with the object of his worship; he wants gods that go before him, visible, tangible, easily accessible; in the case of the Israelites the strict prohibition of worshipping images added to idolatry the allurements of the forbidden fruit; secondly, the allurements of the pleasures of the flesh offered to the worshippers of the strange divinities; thirdly, mixed marriages, occasionally on a large scale; fourthly, the intercourse in peace and war and exile with powerful neighbours who attributed their prosperity to other gods than Jehovah. The less enlightened Israelites probably conceived of the God of Abraham, Isaac, and Jacob as "their God", Who laid no claim to universal rule. If so, they may frequently have become idolaters for the sake of temporal advantage.

But why did God permit such deviations from the truth? If in His judgment idolatry, as practised by the Jews, is the unmitigated evil which it appears to our judgment, no satisfactory answer can be given to this question, it is the eternal problem of sin and evil. The best that can be said is that the constantly recurring cycle of sin, punishment, repentance, forgiveness, were for God the occasion of a magnificent display of justice, mercy, and longanimity; to the Chosen People a constant reminder of their need of a Redeemer; to the members of the Kingdom of Christ a type of God's dealings with sinners. It may also be pleaded that idolatry in Israel had more the character of ignorant superstition than of contempt of Jehovah. Like the superstitious or quasi-superstitious practices and devotions to which even Christian populations are prone, much of the idolatrous cult in Israel was an excess of piety, rather than an act of impiety, towards the Supreme Power distinctly felt but dimly understood. The well-meant but ill-directed worship never became the religion of Israel; it was never more than a temporary invasion of extraneous religious practices, often deeply overlaying the national religion, but never completely supplanting it. As a last consideration, the punishment of idolatry in Israel was always national and temporal. The prophets held out no eternal bliss or eternal torments as incentives to faithful service of God. And the Prophet of prophets, Christ the Judge, may well repeat from the seat of judgment the words He spoke on the Cross: "Father, forgive them, for they know not what they do".

IDOLATRY AMONG THE HEATHEN.—The causes at work in the genesis of idolatry have produced effects as varied and manifold as the human family itself. The original idea of God has taken in the mind of man all the distorted and fanciful forms which a liquid is liable to assume in a collapsible vessel, or clay in the potter's hands. As, in the course of ages, the power of healing has been attributed to almost every substance

and combination of substances, so has the Divine power been traced in all things, and all things have been worshipped accordingly. As an illustration, the worship of animals may be briefly considered. From the beginning and throughout his history, man is associated with the lower animals. Adam is surrounded by them in Eden, and Eve speaks familiarly to the serpent. Sacrificed animals link man to God, from the sacrifice of Abel to the *taurobolium* of the latest superstition of pagan Rome. The scapegoat carries with it the sins of the people, the paschal lamb redeems them. The Lamb that taketh away the sins of the world, the dove which represents the Holy Ghost, the animal emblems of the Evangelists, the dragon of St. Michael and of St. George of England, not to mention others, are familiar to Christians.

The heathen mind has moved in similar grooves. In oldest Egypt we find the bull associated with the godhead and receiving divine homage—whether as a special representative, a manifestation, a symbol, or a receptacle of the divinity, it is impossible to decide. From the seventh century B. C. onwards every god is figured with the head of some animal sacred to him; Thot has the head of an ibis, Amon a ram's, Horus a hawk's, Anubis a jackal's, etc. Were the Egyptians and other zoologists guided by the same symbolism that leads us to call on "the Lamb of God" for forgiveness of our sins? If so, animal-worship runs through the following stages: Man's close association with animal life fills his mental storehouse with composite notions—e. g., the faithful dog, the sly fox, the cunning serpent, the patient ass—in which the animal embodies a human attribute. Next, the adjective is dropped, and the animal name is used as a predicate of persons, as a personal, family, tribal, or divine name. At this point the process branches off according to the religious temper of the people. Where Monotheism rules, the animal, alive or figured, is but an emblem or a symbol; among untutored savages, like the Red Indians, it is the bearer of the tribe's tutelary spirit and the object of various degrees of worship; in decaying religions—e. g., Egyptian later polytheism—it is identified with the god whose characteristic it represents, and shares with him in divine honours. The light of Revelation has cleared away the aberrations of this natural process wherever it has penetrated, but traces of it remain embedded in many, perhaps in all, languages. Thus Wodan's sacred wolf still enters into 357 personal names borne by Germans. (See also IMAGES; RELIGION; WORSHIP.)

For dogmatic and moral side, see works quoted in text. The history of idolatry is now studied as comparative religion, but as yet there is no standard Catholic work on the subject. For monographs, see BABYLONIA; CHINA; EGYPT; GREECE; also the series of the London Catholic Truth Society, *History of Religion* (32 lectures in 4 vols., London, 1908—); and two similar series, each called *Science et Religion* (Paris).

J. WILHELM.

Idumea, the country inhabited by the descendants of Edom. The word Idumea is the grecized form of the Hebrew name *'Edôm* (Egypt., *Aduma*; Assy., *U-du-um-ma-ai*, *U-du-mu*, *U-du-mi*), which appears to have been applied to the region from the red colour of its sandstone cliffs. Idumea was situated south of Juda and the Dead Sea, but its limits, bordering on the wilderness, are difficult to determine. According to Gen., xxxvi, 8 sqq., on leaving Chanaan, Esau took his abode on Mt. Seir, then the home of the Horites (Gen., xiv, 6; D. V.: Chorreans). Mt. Seir is commonly thought to be the Jebel esh-Shera, a range prolonging the mountains of Moab, to the E. of the 'Arabah; various indications, however, suggest a more westerly location and lead one to believe that Mt. Seir should be sought rather in the highlands between Cades and the southern end of the Dead Sea. The Tel-el-Amarna tablets, indeed, speak of She-erî as a country south of Western Palestine; the same documents mention in that region a city of U-du-mu (Edom), in which Ed-

Dome (Ruma of Jos., xv, 52—D. V.; Heb., *Dûmah*), south-south-west of Hebron, is recognized, the name being sometimes used to designate the country of the Edomites. On the other hand, the route followed by the Israelites, returning from Cades to Asiongaber (A. V.: Eziongeber; Deut., ii, 8) and skirting to the east of the 'Arabah through Salmona (unknown), Phunon (Khirbet Fenân) and Oboth (prob. Wady Weybeh), then going north-eastwards to Jebarim (Kh. 'Ai, east-south-east of Kerak), in order "to compass the land of Edom" (Num., xxi, 4), which they were not allowed to cross (Num., xx, 17), indicates that this land did not extend beyond the 'Arabah. Under the name of Idumea, not only Mt. Seir, but all the surrounding region inhabited by tribes claiming an Edomite descent, is usually understood.

In early times the Edomites were governed by *'allâphim* or "dukes"; but during the sojourn of the Hebrews in the desert Mt. Seir was under the control of a king. Gen., xxxvi, 31—39, gives a list of "the kings that ruled in the land of Edom, before the children of Israel had a king"; from this list we gather that the Edomite monarchy was elective. In spite of the blood-relationship uniting Israel and Edom, the two peoples were frequently in conflict. Saul had turned his army against the Edomites (I K., xiv, 47); David conquered and garrisoned the country (II K., viii, 14) and Solomon occupied its ports on the Red Sea (III K., ix, 26). During Joram's reign, Idumea succeeded in shaking off for a while the yoke of Jerusalem, but Amasias obliged the Edomites once more to own Juda's sway; finally under Achaz they won their independence. With the fall of Juda into the hands of the Babylonians, whom they had joined in the fray, the power of the Edomites waxed stronger, and they took possession of all Southern Palestine, making Hebron their capital. But despite their alliance with the Syrians during the Machabean war, they could not withstand the sturdy onslaught of the Israelite patriots who drove them from the south of Juda. The loss of their possessions east of the 'Arabah, fallen long since into the hands of the Nabathæans, rendered the Edomites an easy prey to their neighbours, and in 109 B.C. they were conquered by John Hyrcanus, who, however, allowed them to remain in the country on the condition that they should adopt Judaism. When, at the death of Alexandra (69), Aristobulus endeavoured to wrest the crown from his brother Hyrcanus II, Antipater, Governor of Idumea, took the latter's side in the conflict, and, upon the arrival of the Romans, attached himself closely to them. The assistance he lent to their army in several expeditions, and the services he rendered to Julius Cæsar were rewarded in 47 by the much-coveted title of Roman citizen and the appointment to the procuratorship of Judea, Samaria, and Galilee. His son was Herod the Great.

CHARLES L. SOUVAY.

Iglesias, DIOCESE OF (ECCLESIIENSIS), suffragan of Cagliari in Sardinia. The city of Iglesias is situated near the ruins of the ancient Sulci. The territory is rich in thermal springs; several mines, especially those of Monte Porri, furnish lead, iron, and manganese. Many of the fortifications, constructed by the Pisans (formerly the masters of Sardinia), still exist. In 1323 the city was taken after a long resistance by James II of Aragon, who thus began the conquest of all Sardinia. Sulci was an episcopal see as early as the seventh cen-

ST. IGNATIUS LOYOLA—TITIAN

COLLECTION OF EARL SPENCER, ALTHORP HOUSE, NORTHAMPTON, ENGLAND

tury. After its decline the bishop took up his residence at the village of Tratalias; in 1503 the see was reunited with that of Cagliari. In 1763 the see was re-established, and Giovanni Ignazio Gautier appointed bishop. The cathedral was erected by the Pisans in 1285, but has been restored in later times. Iglesias has 24 parishes with 73,000 souls, 1 school for boys, and 1 for girls.

U. BENIGNI.

Iglesias de la Casa, José, a Spanish poet of the coterie gathered about Meléndez Valdés, b. at Salamanca, 31 October, 1748; d. prematurely at his native place in 1791. He pursued his studies at the famous University of Salamanca, and in 1783 took Holy orders at Madrid. During his lifetime he published only two rather mediocre poems, "La niñez Laureada" (dealing with an infant prodigy, who at the age of hardly four years underwent a university examination), and "La Teología". Before producing these he had composed his really important poems, which are chiefly satirical and epigrammatical in their nature. In fact, as a satirist he is to be ranked only lower than the great Quevedo. Certain portions of his satirical lyrics proved offensive to the authorities, and the 1798 edition of them was put on the Index by the Inquisition. The necessity of this action was denied by some of his warm friends. Among the better-known editions of his works are those of Barcelona (1820 and 1837), of Paris (1821), and of Madrid (1841). They are most readily accessible in the "Biblioteca de autores Españoles", vol. LXI, which contains about 38 *letrillas*—in the composition of which he excelled—besides a number of satires, epigrams, odes, anacreontics, eclogues, etc. Not long since, some of his unedited poems were published by R. Foulche-Delbosc, in the "Revue Hispanique", vol. II.

J. D. M. FORD.

Ignacio de Azevedo, BLESSED, b. at Oporto, Portugal, 1528; d. near Palma, one of the Canary Islands, 15 July, 1570. He entered the Society of Jesus at Coimbra, 28 December, 1548, and became successively rector of the Jesuit college at Lisbon, provincial of Portugal, and rector at Broja. St. Francis Borgia, soon after his election as superior general of the Society, appointed Ignacio visitor of the missions of Brazil. After three years of arduous labour in that country he returned to Rome, but asked to be sent back as missionary to Brazil. With thirty-nine companions he started on his voyage, but was seized and martyred by Huguenot pirates near the island of Palma. The forty martyrs were beatified on 11 May, 1854.

LEO A. KELLY.

Ignatius Loyola, SAINT, youngest son of Don Beltrán Yañez de Oñez y Loyola and Marina Saenz de Licona y Balda (the name López de Recalde, though accepted by the Bollandist Father Pien, is a copyist's blunder), b. in 1491 at the castle of Loyola above Azpeitia in Guipuscoa; d. at Rome, 31 July, 1556. The family arms are: per pale, or, seven bends gules (? vert) for Oñez; argent, pot and chain sable between two grey wolves rampant, for Loyola. The saint was baptized Iñigo, after St. Eneus (Innicus), Abbot of Oña: the name Ignatius was assumed in later years, while he was residing in Rome. For the saint's genealogy, see Pérez (op. cit. below, 131); Michel (op. cit. below, II, 383); Polanco (Chronicon, I, 516-46). For the date of birth cfr. Astráin, I, 3-8.

I. CONVERSION, 1491-1521.—At an early age he was made a cleric. We do not know when, or why he was released from clerical obligations. He was brought up in the household of Juan Velásquez de

Cuellar, *contador mayor* to Ferdinand and Isabella, and in his suite probably attended the royal court from time to time, though not in the royal service. This was perhaps the time of his greatest dissipation and laxity. He was affected and extravagant about his hair and dress, consumed with the desire of winning glory, and would seem to have been sometimes involved in those darker intrigues, for which handsome young courtiers too often think themselves licensed. How far he went on the downward course is still unproved. The balance of evidence tends to show that his own subsequent humble confessions of having been a great sinner should not be treated as pious exaggerations. But we have no details, not even definite charges. In 1517 a change for the better seems to have taken place; Velásquez died and Ignatius took service in the army. The turning-point of his life came in 1521. While the French were besieging the citadel of Pampeluna, a cannon ball, passing between Ignatius's legs, tore open the left calf, and broke the right shin (Whit-Tuesday, 20 May, 1521). With his fall the garrison lost heart and surrendered, but he was well treated by the French and carried "Ignat[ius] Societ[atis] Jesu Fundat[or]" on a litter to Loyola, where his leg had to be rebroken and reset, and afterwards a protruding end of the bone was sawn off, and the limb, having been shortened by clumsy setting, was stretched out by weights. All these pains were undergone voluntarily, without uttering a cry or submitting to be bound. But the pain and weakness which followed were so great that the patient began to fail and sink. On the eve of Sts. Peter and Paul, however, a turn for the better took place, and he soon threw off his fever.

So far Ignatius had shown none but the ordinary virtues of the Spanish officer. His dangers and sufferings had doubtless done much to purge his soul, but there was no idea yet of remodelling his life on any higher ideals. Then, in order to divert the weary hours of convalescence, he asked for the romances of chivalry, his favourite reading, but there were none in the castle, and instead they brought him the lives of Christ and of the saints, and he read them in the same quasi-competitive spirit with which he read the achievements of knights and warriors. "Suppose I were to rival this saint in fasting, that one in endurance, that other in pilgrimages." He would then wander off into thoughts of chivalry, and service to fair ladies, especially to one of high rank, whose name is unknown. Then all of a sudden, he became conscious that the after-effect of these dreams was to make him dry and dissatisfied, while the ideas of falling into rank among the saints braced and strengthened him, and left him full of joy and peace. Next it dawned on him that the former ideas were of the world, the latter God-sent; finally, worldly thoughts began to lose their hold, while heavenly ones grew clearer and dearer. One night as he lay awake, pondering those new lights, "he saw clearly", so says his autobiography, "the image of Our Lady with the Holy Child Jesus, at whose sight for a notable time he felt a surpassing sweetness, which eventually left him with such a loathing for his past sins, and especially for those of the flesh, that every unclean imagination

ST. IGNATIUS LOYOLA

"Ignat[ius] Societ[atis] Jesu Fundat[or]"
Contemporaneous medal in Royal
Numismatic Cabinet, Berlin

seemed blotted out from his soul, and never again was there the least consent to any carnal thought." His conversion was now complete. Every one noticed that he would speak of nothing but spiritual things, and his elder brother begged him not to take any rash or extreme resolution, which might compromise the honour of their family.

II. SPIRITUAL FORMATION, 1522-24.—When Ignatius left Loyola he had no definite plans for the future, except that he wished to rival all that the saints had done in the way of penance. His first care was to make a general confession at the famous sanctuary of Montserrat, where, after three days of self-examination, and carefully noting his sins, he confessed, gave to the poor the rich clothes in which he had come, and put on a garment of sack-cloth reaching to his feet.

His sword and dagger he suspended at Our Lady's altar, and passed the night watching before them. Next morning, the feast of the Annunciation, 1522, after Communion, he left the sanctuary, not knowing whither he went. But he soon fell in with a kind woman, Inés Pascual, who showed him a cavern near the neighbouring town of Manresa, where he might retire for prayer, austerities, and contemplation, while he lived on alms. But here, instead of obtaining greater peace, he was consumed with the most troublesome scruples. Had he confessed this sin? Had he omitted that circumstance? At one time he was violently tempted to end his miseries by suicide, on which he resolved neither to eat nor to drink (unless his life was in danger), until God granted him the peace which he desired, and so he continued until his confessor stopped him at the end of the week. At last, however, he triumphed over all obstacles, and then abounded in wonderful graces and visions. It was at this time, too, that he began to make notes of his spiritual experiences, notes which grew into the little book of "The Spiritual Exercises". God also afflicted him with severe sicknesses, when he was looked after by friends in the public hospital; for many felt drawn towards him, and he requited their kind offices by teaching them how to pray and instructing them in spiritual matters. Having recovered health, and acquired sufficient experience to guide him in his new life, he commenced in February, 1523, his long-meditated migration to the Holy Land. From the first he had looked forward to it as leading to a life of heroic penance; now he also regarded it as a school in which he might learn how to realize clearly and to conform himself perfectly to Christ's life. The voyage was fully as painful as he had conceived. Poverty, sickness, exposure, fatigue, starvation, dangers of shipwreck and capture, prisons, blows, contradictions, these were his daily lot; and on his arrival the Franciscans, who had charge of the holy places, commanded him to return under pain of sin. Ignatius demanded what right they had thus to interfere with a pilgrim like himself, and the friars explained that, to prevent many troubles which had occurred in finding ransoms for Christian prisoners, the pope had

given them this power, and they offered to show him their Bulls. Ignatius at once submitted, though it meant altering his whole plan of life, refused to look at the proffered Bulls, and was back at Barcelona about March, 1524.

III. STUDIES AND COMPANIONS, 1524-39.—Ignatius left Jerusalem, in the dark as to his future and "asking himself as he went, *quid agendum*" (Autobiography, § 50). Eventually he resolved to study, in order to be of greater help to others. To studies he therefore gave eleven years, more than a third of his remaining life. Latin he studied amongst school-boys at Barcelona, and early in 1526 he knew enough to proceed to his philosophy at the University of Alcalá. But here he met with many troubles to be described later, and at the end of 1527 he entered the University of Salamanca, whence, his trials continuing, he betook himself to Paris (June, 1528), and there with great method repeated his course of arts, taking his M.A. on 14 March, 1535. Meanwhile theology had been begun, and he had taken the licentiate in 1534; the doctorate he never took, as his health compelled him to leave Paris in March, 1535. Though Ignatius, despite his pains, acquired no great erudition, he gained many practical advantages from his course of education. To say nothing of knowledge sufficient to find such information as he needed afterwards to hold his own in the company of the learned, and to control others more erudite than himself, he also became thoroughly versed in the science of education, and learned by experience how the life of prayer and penance might be combined with that of teaching and study, an invaluable acquirement to the future founder of the Society of Jesus. The labours of Ignatius for others involved him in trials without number.

At Barcelona he was beaten senseless, and his companion killed, at the instigation of some worldlings vexed at being refused entrance into a convent which he had reformed. At Alcalá a meddling inquisitor, Figueroa, harassed him constantly, and once autocratically imprisoned him for two months. This drove him to Salamanca, where, worse still, he was thrown into the common prison, fettered by the foot to his companion Calisto, which indignity only drew from Ignatius the characteristic words, "There are not so many handcuffs and chains in Salamanca, but that I desire even more for the love of God."

In Paris his trials were very varied—from poverty, plague, works of charity, and college discipline, on which account he was once sentenced to a public flogging by Dr. Govca, the rector of Collège Ste-Barbe, but on his explaining his conduct, the rector as publicly begged his pardon. There was but one delation to the inquisitors, and, on Ignatius requesting a prompt settlement, the Inquisitor Ori told him proceedings were therewith quashed. We notice a certain progression in Ignatius's dealing with accusations against him. The first time he allowed them to cease without any pronouncement being given in his fa-

vour. The second time he demurred at Figueroa wanting to end in this fashion. The third time, after sentence had been passed, he appealed to the Archbishop of Toledo against some of its clauses. Finally he does not await sentence, but goes at once to the judge to urge an inquiry, and eventually he made it his practice to demand sentence, whenever reflection was cast upon his orthodoxy. (Records of Ignatius's legal proceedings at Azpeitia, in 1515; at Alcalá in 1526, 1527; at Venice, 1537; at Rome in 1538, will be found in "Scripta de S. Ignatio", pp. 580-620.) Ignatius had now for the third time gathered companions round him. His first followers in Spain had persevered for a time, even amid the severe trials of imprisonment, but instead of following Ignatius to Paris, as they had agreed to do, they gave him up. In Paris too the first to follow did not persevere long, but of the third band not one deserted him. They were (St.) Peter Faber (q. v.), a Genevan Savoyard; (St.) Francis Xavier (q. v.), of Navarre; James Laynez, Alonso Salmerón, and Nicolás Bobadilla, Spaniards; Simón Rodríguez, a Portuguese. Three others joined soon after—Claude Le Jay, a Genevan Savoyard; Jean Codure and Paschase Broët, French. Progress is to be noted in the way Ignatius trained his companions. The first were exercised in the same severe exterior mortifications, begging, fasting, going barefoot, etc., which the saint was himself practising. But though this discipline had prospered in a quiet country place like Manresa, it had attracted an objectionable amount of criticism at the University of Alcalá. At Paris dress and habits were adapted to the life in great towns; fasting, etc., was reduced; studies and spiritual exercises were multiplied, and alms funded.

The only bond between Ignatius's followers so far was devotion to himself, and his great ideal of leading in the Holy Land a life as like as possible to Christ's. On 15 August, 1534, they took the vows of poverty and chastity at Montmartre (probably near the modern Chapelle de St-Denys, Rue Antoinette), and a third vow to go to the Holy Land after two years, when their studies were finished. Six months later Ignatius was compelled by bad health to return to his native country, and on recovery made his way slowly to Bologna, where, unable through ill health to study, he devoted himself to active works of charity till his companions came from Paris to Venice (6 January, 1537) on the way to the Holy Land. Finding further progress barred by the war with the Turks, they now agreed to await for a year the opportunity of fulfilling their vow, after which they would put themselves at the pope's disposal. Faber and some others, going to Rome in Lent, got leave for all to be ordained. They were eventually made priests on St. John Baptist's day. But Ignatius took eighteen months to prepare for his first Mass.

IV. FOUNDATION OF THE SOCIETY.—By the winter of 1537, the year of waiting being over, it was time to offer their services to the pope. The others being sent in pairs to neighbouring university towns, Ignatius with Faber and Laynez started for Rome. At La Storta, a few miles before reaching the city, Ignatius had a noteworthy vision. He seemed to see the

Eternal Father associating him with His Son, Who spoke the words: *Ego vobis Romæ propitius ero*. Many have thought this promise simply referred to the subsequent success of the order there. Ignatius's own interpretation was characteristic: "I do not know whether we shall be crucified in Rome; but Jesus will be propitious." Just before or just after this, Ignatius had suggested for the title of their brotherhood "The Company of Jesus". Company was taken in its military sense, and in those days a company was generally known by its captain's name. In the Latin Bull of foundation, however, they were called the "Societas Jesu". We first hear of the term *Jesuit* in 1544, applied as a term of reproach by adversaries. It had been used in the fifteenth century to describe in scorn someone who cantingly interlarded his speech with repetitions of the Holy Name. In 1552 it was still regarded as a mark of scorn, but before very long the friends of the society saw that they

could take it in a good sense, and, though never used by Ignatius, it was readily adopted (Pollen, "The Month", June, 1909). Paul III having received the fathers favourably, all were summoned to Rome to work under the pope's eye. At this critical moment an active campaign of slander was opened by one Fra Matteo Mainardi (who eventually died in open heresy), and a certain Michael who had been refused admission to the order. It was not till 18 November, 1538, that Ignatius obtained from the governor of Rome an honourable sentence, still extant, in his favour. The thoughts of the fathers were naturally occupied with a formula of their intended mode of life to submit to the pope; and in March, 1539, they began to meet in the evenings to settle the matter.

Hitherto without superior, rule, or tradition, they had prospered most remarkably. Why not continue as they had begun? The obvious answer was that without some sort of union, some houses for training postulants, they were practically doomed to die out with the existing members, for the pope already desired to send them about as missionaries from place to place. This point was soon agreed to, but when the question arose whether they should, by adding a vow of obedience to their existing vows, form themselves into a compact religious order, or remain, as they were, a congregation of secular priests, opinions differed much and seriously. Not only had they done so well without strict rules, but (to mention only one obstacle, which was in fact not overcome afterwards without great difficulty), there was the danger, if they decided for an order, that the pope might force them to adopt some ancient rule, which would mean the end of all their new ideas. The debate on this point continued for several weeks, but the conclusion in favour of a life under obedience was eventually reached unanimously. After this, progress was faster, and by 24 June some sixteen resolutions had been decided on, covering the main points of the proposed institute. Thence Ignatius drew up in five sections the first "Formula Instituti", which was submitted to the pope, who gave a viva voce approbation 3 September, 1539, but Cardinal Guidiccioni, the head of the commission appointed to report on the "Formula", was of the view

ST. IGNATIUS LOYOLA—RUBENS

point of poverty in churches. It shows that in making up his mind he was marvellously aided by heavenly lights, intelligence, and visions. If, as we may surely infer, the whole work was equally assisted by grace, its heavenly inspiration will not be doubtful. The same conclusion is probably true of "The Spiritual Exercises".

VII. LATER LIFE AND DEATH.—The later years of Ignatius were spent in partial retirement, the correspondence inevitable in governing the Society leaving no time for those works of the active ministry which in themselves he much preferred. His health too began to fail. In 1551, when he had gathered the elder fathers to revise the constitutions, he laid his resignation of the generalate in their hands, but they refused to accept it then or later, when the saint renewed his prayer. In 1554 Father Nadal was given the powers of vicar-general, but it was often necessary to send him abroad as commissary, and in the end Ignatius continued, with Polanco's aid, to direct everything. With most of his first companions he had to part soon. Rodríguez started on 5 March, 1540, for Lisbon, where he eventually founded the Portuguese province, of which he was made provincial on 10 October, 1546. St. Francis Xavier (q. v.) followed Rodríguez immediately, and became provincial of India in 1549. In September, 1541, Salmeron and Broët started for their perilous mission to Ireland, which they reached (via Scotland) next Lent. But Ireland, the prey to Henry VIII's barbarous violence, could not give the zealous missionaries a free field for the exercise of the ministries proper to their institute. All Lent they passed in Ulster, flying from persecutors, and doing in secret such good as they might. With difficulty they reached Scotland, and regained Rome, Dec., 1542. The beginnings of the Society in Germany are connected with St. Peter Faber (q. v.), Blessed Peter Canisius (q. v.), Le Jay, and Bobadilla in 1542. In 1546 Laynez and Salmeron were nominated papal theologians for the Council of Trent, where Canisius, Le Jay, and Covillon also found places. In 1553 came the picturesque, but not very successful mission of Nuñez Barretto as Patriarch of Abyssinia. For all these missions Ignatius wrote minute instructions, many of which are still extant. He encouraged and exhorted his envoys in their work by his letters, while the reports they wrote back to him form our chief source of information on the missionary triumphs achieved. Though living in Rome, it was he who in effect led, directed, and animated his subjects all the world over.

The two most painful crosses of this period were probably the suits with Isabel Roser and Simón Rodríguez. The former lady had been one of Ignatius's first and most esteemed patronesses during his beginnings in Spain. She came to Rome later on and persuaded Ignatius to receive a vow of obedience to him, and she was afterwards joined by two or three other ladies. But the saint found that the demands they made on his time were more than he could possibly allow them. "They caused me more trouble", he is reported to have said, "than the whole of the Society", and he obtained from the pope a relaxation of the vow he had accepted. A suit with Roser followed, which she lost, and Ignatius forbade his sons hereafter to become *ex officio* directors to convents of nuns (Scripta

de S. Ignatio, pp. 652-5). Painful though this must have been to a man so loyal as Ignatius, the difference with Rodríguez, one of his first companions, must have been more bitter still. Rodríguez had founded the Province of Portugal, and brought it in a short time to a high state of efficiency. But his methods were not precisely those of Ignatius, and, when new men of Ignatius's own training came under him, differences soon made themselves felt. A struggle ensued in which Rodríguez unfortunately took sides against Ignatius's envoys. The results for the newly formed province were disastrous. Well-nigh half of its members had to be expelled before peace was established; but Ignatius did not hesitate. Rodríguez having been recalled to Rome, the new provincial being empowered to dismiss him if he refused, he demanded a formal trial, which Ignatius, foreseeing the results, endeavoured to ward off. But on Simón's insistence a full court of inquiry was granted, whose proceedings are now printed and it unanimously condemned Rodríguez to penance and banishment from the province (Scripta etc., pp. 666-707). Of all his external works, those nearest his heart, to judge by his correspondence, were the building and foundation of the Roman College (1551), and of the German College (1552). For their sake he begged, worked, and borrowed with splendid insistence until his death. The success of the first was ensured by the generosity of St. Francis Borgia, before he entered the Society. The latter was still in a struggling condition when Ignatius died, but his great ideas have proved the true and best foundation of both.

In the summer of 1556 the saint was attacked by Roman fever. His doctors did not foresee any serious consequences, but the saint did. On 30 July, 1556, he asked for the last sacraments and the papal blessing, but he was told that no immediate danger threatened. Next morning at day-break the infirmarian found him lying in peaceful prayer, so peaceful that he did not at once perceive that the saint was actually dying. When his condition was realized, the last blessing was given, but the end came before the holy oils could be fetched. Perhaps he had prayed that his death, like his life, might pass without any demonstration. He was beatified by Paul V on 27 July, 1609, and canonized by Gregory XV on 22 May, 1622. His body lies under the altar designed by Pozzi in the Gesù. Though he died in the sixteenth year from the foundation of the society, that body already numbered about 1000 religious (of whom, however, only 35 were yet professed) with 100 religious houses, arranged in 10 provinces. (Sacchini, op. cit. infra, lib. I, c. i, nn. 1-20.) For his place in history see COUNTER-REFORMATION. It is impossible to sketch in brief Ignatius's grand and complex character: ardent yet restrained, fearless, resolute, simple, prudent, strong, and loving. The Protestant and Jansenistic conception of him as a restless, bustling pragmatist bears no correspondence at all with the peacefulness and perseverance which characterized the real man. That he was a strong disciplinarian is true. In a young and rapidly growing body that was inevitable; and the age loved strong virtues. But if he believed in discipline as an educative force, he despised any other motives for action except the love of God and man. It was by studying Ignatius as a

PORTRAIT OF ST. IGNATIUS
Sánchez-Coello, Madrid

ruler that Xavier learnt the principle, "the company of Jesus ought to be called the company of love and conformity of souls" (Ep., 12 Jan., 1549).

(1) SOURCES.—*Monumenta historica Soc. Jesu*, ed. RODELES (Madrid, 1894—), 36 volumes. Of Ignatius's own letters etc., *Monumenta Ignatiana*, two subsections are in progress: *Epistolæ et Instructiones*, 9 vols., and *Scripta de S. Ignatio*, others will follow on *Spiritual Exercises*, etc. The other volumes contain correspondence of Sts. Francis Xavier, Francis Borgia, of Broët, Salmerón, Nadal, etc., of which the greater part is addressed to Ignatius. The saint's *Autobiography*, communicated to Fr. González de Cámará is in the *Scripta* mentioned above, also in *Acta SS.*, English tr., RIX (London, 1900), with notes by THURSON; another by O'CONNOR (New York, 1900); cfr. *Cartas de S. Ignacio de Loyola* (Naples, 1572); PÉREZ, *La Santa Casa de Loyola* (Bilbao, 1891); SACCHINI, *Historia Societatis Jesu* (Vol. I, Rome, 1615; Vol. II, Antwerp, 1621; Vols. III, IV, V, Rome, 1651-1661).

(2) LIVES.—No life utilizing all the above materials has yet been written; but most have been consulted by ASTRÁIN, *Historia de la Compañía de Jesús en la Asistencia de España* (Madrid, 1902), for the period up to Ignatius's coming to Rome. The subsequent period will be given in the second volume of TA'CHI-VENTURI, *Storia della Compagnia di Gesù in Italia* (Rome, 1909). For what relates to Germany see DUCH, *Geschichte der Jesuiten in den Ländern deutscher Zunge* (Freiburg im Br., 1907). For France see FOUQUERAY. The older lives are very numerous. CARAYON, *Bibliographie Historique de la C. de Jésus* (Paris, 1864), nn. 219-40, gives titles of 121. SOMMERVOGEL, *Bibliothèque de la C. de Jésus* (Brussels, 1890), v. 59-124, and X, 1643, mentions 73 biographers among Jesuits only. Of these the most esteemed are: RIBADENEIRA, *op. cit.*, the most modern edition of which is CLAIR, *La Vie de S. Ignace* (Paris, 1894); ORLANDINI, *Historia Societatis Jesu pars prima, sive Ignatius* (Rome, 1615); BAROLLI, *Della Vita di S. Ignazio* (Rome, 1650), of which the best modern edition is MICHEL, *Histoire de S. Ignace* (Bruges, 1893); BOURGERS, *La Vie de S. Ignace* (Paris, 1679), English tr.—probably by DRYDEN—*The Life of St. Ignatius*—, translated into English by a Person of Quality (London, 1686); PIEN (PINIUS), *Acta S. Ignatii Loyolæ in Acta SS.*, July, VII (Antwerp, 1731); GENELLI, *Leben des h. Ignatius von Loyola* (Innsbruck, 1848), revised ed. by KOLB (Vienna, 1894); STEWART ROSE (pseudonym for Caroline Stewart Erskine, Lady Buchan), *S. Ignatius Loyola and the Early Jesuits* (fully illustrated, London, 1891); THOMPSON, *Life of S. Ignatius* (London, 1910); HELMBÜCHER, *Die Orden und Kongregationen der katholischen Kirche*, III (Paderborn, 1908), 2-257. It is to be regretted that there is as yet no commendable life by a Protestant. Perhaps the best is GOTHEIN, *Ignatius von Loyola und die Gegenreformation* (Halle, 1895). See also ZÖCKLER in HERZOG-HAUCK, *Realencyklopädie für protestantische Theologie und Kirche* (Leipzig, 1900), s. v. *Jesuitenorden*.

(3) SPIRITUAL EXERCISES.—*Ejercicios Espirituales de S. Ignacio de Loyola*, *Reproducción fototípica del original* (Rome, 1908); WATRIGANT, *La genèse des exercices de St-Ignace* (Amiens, 1897); DIERTINS, *Historia Exercitiorum spiritualium* (Rome, 1700). Of the very numerous commentators, the most characteristic of recent times are ROTHHAAN, HUMMELAUER, MESCHLER, and DENIS. For the various editions see SOMMERVOGEL, *Bibliothèque de la Compagnie de Jésus* (2nd ed., Brussels and Paris, 1890—), v. 59-74. For the alleged connexion of *The Exercises* with CISNEROS, *Ejercitatorio de la vida espiritual*, see ASTRÁIN, I, 156-160.

(4) CONSTITUTIONS.—*Constituciones de la Compañía de Jesús*, *Reproducción fototípica del original* (Rome, 1908); *Constituciones Societatis Jesu Latine et Hispanice* (Madrid, 1892); *Institutum Societatis Jesu* (Rome, 1869). For other editions see SOMMERVOGEL, *loc. cit.*, 75-115. See also SUAREZ, *De religione Societatis Jesu* (Lyons, 1632); OSWALD, *Commentarius in Decem Partes Constitutionum Societatis Jesu* (Lille, 1892).

J. H. POLLEN.

Ignatius of Antioch, SAINT, also called Theophrastus (ὁ Θεοφύρατος); b. in Syria, c. the year 50; d. at Rome between 98 and 117. More than one of the earliest ecclesiastical writers have given credence, though apparently without good reason, to the legend that Ignatius was the child whom the Saviour took up in His arms, as described in Mark, ix, 35. It is also believed, and with great probability, that, with his friend Polycarp, he was among the auditors of the Apostle St. John. If we include St. Peter, Ignatius was the third Bishop of Antioch and the immediate successor of Evodius (Eusebius, "Hist. Eccl.", II, iii, 22, Migne, P. G., L). Theodoret ("Dial. Immutab.", I, iv, 33a, Paris, 1642) is the authority for the statement that St. Peter appointed Ignatius to the See of Antioch. St. John Chrysostom lays special emphasis on the honour conferred upon the martyr in receiving his episcopal consecration at the hands of the Apostles themselves ("Hom. in St. Ig.", IV, 587, Migne, P. G.). Natalis Alexander quotes Theodoret to the same effect (III, xii, art. xvi, p. 53).

All the sterling qualities of ideal pastor and a true soldier of Christ were possessed by the Bishop of Antioch in a pre-eminent degree. Accordingly, when the storm of the persecution of Domitian broke in its full fury upon the Christians of Syria, it found their faithful leader prepared and watchful. He was unremitting in his vigilance and tireless in his efforts to inspire hope and to strengthen the weaklings of his flock against the terrors of the persecution. The restoration of peace, though it was short-lived, greatly comforted him. But it was not for himself that he rejoiced, as the one great and ever-present wish of his chivalrous soul was that he might receive the fullness of Christian discipleship through the medium of martyrdom. His desire was not to remain long unsatisfied. Associated with the writings of St. Ignatius is a work called "Martyrium Ignatii", which purports to be an account by eyewitnesses of the martyrdom of St. Ignatius and the acts leading up to it. In this work, which such competent Protestant critics as Pearson and Ussher regard as genuine, the full history of that eventful journey from Syria to Rome is faithfully recorded for the edification of the Church of Antioch. It is certainly very ancient and is reputed to have been written by Philo, deacon of Tarsus, and Rheus Agathopus, a Syrian, who accompanied Ignatius to Rome. It is generally admitted, even by those who regarded it as authentic, that this work has been greatly interpolated. Its most reliable form is that found in the "Martyrium Colbertinum" which closes the mixed recension and is so called because its oldest witness is the tenth-century Codex Colbertinus (Paris).

According to these Acts, in the ninth year of his reign, Trajan, flushed with victory over the Scythians and Dacians, sought to perfect the universality of his dominion by a species of religious conquest. He decreed, therefore, that the Christians should unite with their pagan neighbours in the worship of the gods. A general persecution was threatened, and death was named as the penalty for all who refused to offer the prescribed sacrifice. Instantly alert to the danger that threatened, Ignatius availed himself of all the means within his reach to thwart the purpose of the emperor. The success of his zealous efforts did not long remain hidden from the Church's persecutors. He was soon arrested and led before Trajan, who was then sojourning in Antioch. Accused by the emperor himself of violating the imperial edict, and of inciting others to like transgressions, Ignatius valiantly bore witness to the faith of Christ. If we may believe the account given in the "Martyrium", his bearing before Trajan was characterized by inspired eloquence, sublime courage, and even a spirit of exultation. Incapable of appreciating the motives that animated him, the emperor ordered him to be put in chains and taken to Rome, there to become the food of wild beasts and a spectacle for the people.

That the trials of this journey to Rome were great we gather from his letter to the Romans (par. 5): "From Syria even to Rome I fight with wild beasts, by land and sea, by night and by day, being bound amidst ten leopards, even a company of soldiers, who only wax worse when they are kindly treated." Despite all this, his journey was a kind of triumph. News of his fate, his destination, and his probable itinerary had gone swiftly before. At several places along the road his fellow-Christians greeted him with words of comfort and reverential homage. It is probable that he embarked on his way to Rome at Seleucia, in Syria, the nearest port to Antioch, for either Tarsus in Cilicia, or Attalia in Pamphylia, and thence, as we gather from his letters, he journeyed overland through Asia Minor. At Laodicea, on the River Lycus, where a choice of routes presented itself, his guards selected the more northerly, which brought the prospective martyr through Philadelphia and Sardis, and finally to

ALTAR-TOMB OF ST. IGNATIUS LOYOLA
CHURCH OF THE GESÙ, ROME

Smyrna, where Polycarp, his fellow-disciple in the school of St. John, was bishop. The stay at Smyrna, which was a protracted one, gave the representatives of the various Christian communities in Asia Minor an opportunity of greeting the illustrious prisoner, and offering him the homage of the Churches they represented. From the congregations of Ephesus, Magnesia, and Tralles, deputations came to comfort him. To each of these Christian communities he addressed letters from Smyrna, exhorting them to obedience to their respective bishops, and warning them to avoid the contamination of heresy. These letters are redolent with the spirit of Christian charity, apostolic zeal, and pastoral solicitude. While still there he wrote also to the Christians of Rome, begging them to do nothing to deprive him of the opportunity of martyrdom.

From Smyrna his captors took him to Troas, from which place he dispatched letters to the Christians of Philadelphia and Smyrna, and to Polycarp. Besides these letters, Ignatius had intended to address others to the Christian communities of Asia Minor, inviting them to give public expression to their sympathy with the brethren in Antioch, but the altered plans of his guards, necessitating a hurried departure from Troas, defeated his purpose, and he was obliged to content himself with delegating this office to his friend Polycarp. At Troas they took ship for Neapolis. From this place their journey led them overland through Macedonia and Illyria. The next port of embarkation was probably Dyrrhachium (Durazzo). Whether, having arrived at the shores of the Adriatic, he completed his journey by land or sea, it is impossible to determine. Not long after his arrival in Rome he won his long-coveted crown of martyrdom in the Flavian amphitheatre. The relics of the holy martyr were borne back to Antioch by the deacon Philo of Cilicia, and Rheus Agathopus, a Syrian, and were interred outside the gates not far from the beautiful suburb of Daphne. They were afterwards removed by the Emperor Theodosius II to the Tychæum, or Temple of Fortune, which was then converted into a Christian church under the patronage of the martyr whose relics it sheltered. In 637 they were translated to St. Clement's at Rome, where they now rest. The Church celebrates the feast of St. Ignatius on 1 February.

The character of St. Ignatius, as deduced from his own and the extant writings of his contemporaries, is that of a true athlete of Christ. The triple honour of apostle, bishop, and martyr was well merited by this energetic soldier of the Faith. An enthusiastic devotion to duty, a passionate love of sacrifice, and an utter fearlessness in the defence of Christian truth, were his chief characteristics. Zeal for the spiritual well-being of those under his charge breathes from every line of his writings. Ever vigilant lest they be infected by the rampant heresies of those early days; praying for them, that their faith and courage may not be wanting in the hour of persecution; constantly exhorting them to unflinching obedience to their bishops; teaching them all Catholic truth; eagerly sighing for the crown of martyrdom, that his own blood may fructify in added graces in the souls of his flock, he proves himself in every sense a true pastor of souls, the good shepherd that lays down his life for his sheep.

COLLECTIONS.—The oldest collection of the writings of St. Ignatius known to have existed was that made use of by the historian Eusebius in the first half of the fourth century, but which unfortunately is no longer extant. It was made up of the seven letters written by Ignatius whilst on his way to Rome. These letters were addressed to the Christians (1) of Ephesus (Ἐφεσούς); (2) of Magnesia (Μαγνησιεύσιν); (3) of Tralles (Τραλλιανούς); (4) of Rome (Ῥωμαίους); (5) of Philadelphia (Φιλαδέφεισιν); (6) of Smyrna (Σμυρναίους); (7) and to Polycarp (Ἰπὸς Πολύκαρπον). We find these seven mentioned not only by Eusebius

("Hist. eccl.", III, xxxvi) but also by St. Jerome (De viris illust., c. xvi). Of later collections of Ignatian letters which have been preserved, the oldest is known as the "long recension". This collection, the author of which is unknown, dates from the latter part of the fourth century. It contains the seven genuine and six spurious letters, but even the genuine epistles were greatly interpolated to lend weight to the personal views of its author. For this reason they are incapable of bearing witness to the original form. The spurious letters in this recension are those that purport to be from Ignatius (1) to Mary of Cassobola (Ἰπὸς Μαρτῶν Κασσοβολίτην); (2) to the Tarsians (Ἰπὸς τοὺς ἐν ταρσῶ); (3) to the Philippians (Ἰπὸς Φιλιππησίους); (4) to the Antiochens (Ἰπὸς Ἀντιοχεῖς); (5) to Hero, a deacon of Antioch (Ἰπὸς Ἡρώνα διάκονον Ἀντιοχείας). Associated with the foregoing is (6) a letter from Mary of Cassobola to Ignatius. It is extremely probable that the interpolation of the genuine, the addition of the spurious letters, and the union of both in the long recension was the work of an Apolloniarist of Syria or Egypt, who wrote towards the beginning of the fifth century. Funk identifies him with the compiler of the Apostolic Constitutions, which came out of Syria in the early part of the same century. Subsequently there was added to this collection a panegyric on St. Ignatius entitled, "Laus Heronis". Though in the original it was probably written in Greek, it is now extant only in Latin and Coptic texts. There is also a third recension, designated by Funk as the "mixed collection". The time of its origin can be only vaguely determined as being between that of the collection known to Eusebius and the long recension. Besides the seven genuine letters of Ignatius in their original form, it also contains the six spurious ones, with the exception of that to the Philippians.

In this collection is also to be found the "Martyrium Colbertinum". The Greek original of this recension is contained in a single codex, the famous Mediceo-Laurentianus MS. at Florence. This codex is incomplete, wanting the letter to the Romans, which, however, is to be found associated with the "Martyrium Colbertinum" in the Codex Colbertinus, at Paris. The mixed collection is regarded as the most reliable of all in determining what was the authentic text of the genuine Ignatian letters. There is also an ancient Latin version which is an unusually exact rendering of the Greek. Critics are generally inclined to look upon this version as a translation of some Greek MS. of the same type as that of the Medicean Codex. This version owes its discovery to Archbishop Ussher, of Ireland, who found it in two MSS. in English libraries and published it in 1644. It was the work of Robert Grosseteste, a Franciscan friar and Bishop of Lincoln (c. 1250). The original Syriac version has come down to us in its entirety only in an Armenian translation. It also contains the seven genuine and six spurious letters. This collection in the original Syriac would be invaluable in determining the exact text of Ignatius, were it in existence, for the reason that it could not have been later than the fourth or fifth century. The deficiencies of the Armenian version are in part supplied by the abridged recension in the original Syriac. This abridgment contains the three genuine letters to the Ephesians, the Romans, and to Polycarp. The MS. was discovered by Cureton in a collection of Syriac MSS. obtained in 1843 from the monastery of St. Mary Deipara in the Desert of Nitria. Also there are three letters extant only in Latin. Two of the three purport to be from Ignatius to St. John the Apostle, and one to the Blessed Virgin, with her reply to the same. These are probably of Western origin, dating no further back than the twelfth century.

THE CONTROVERSY.—At intervals during the last several centuries a warm controversy has been carried on by patrologists concerning the authenticity of the

Ignatian letters. Each particular recension has had its apologists and its opponents. Each has been favoured to the exclusion of all the others, and all, in turn, have been collectively rejected, especially by the coreligionists of Calvin. The reformer himself, in language as violent as it is uncritical (Institutes, 1-3), repudiates *in globo* the letters which so completely discredit his own peculiar views on ecclesiastical government. The convincing evidence which the letters bear to the Divine origin of Catholic doctrine is not conducive to predisposing non-Catholic critics in their favour, in fact, it has added not a little to the heat of the controversy. In general, Catholic and Anglican scholars are ranged on the side of the letters written to the Ephesians, Magnesians, Trallians, Romans, Philadelphians, Smyrniots, and to Polycarp; whilst Presbyterians, as a rule, and perhaps a priori, repudiate everything claiming Ignatian authorship.

The two letters to the Apostle St. John and the one to the Blessed Virgin, which exist only in Latin, are unanimously admitted to be spurious. The great body of critics who acknowledge the authenticity of the Ignatian letters restrict their approval to those mentioned by Eusebius and St. Jerome. The six others are not defended by any of the early Fathers. The majority of those who acknowledge the Ignatian authorship of the seven letters do so conditionally, rejecting what they consider the obvious interpolations in these letters. In 1623, whilst the controversy was at its height, Vedelius gave expression to this latter opinion by publishing at Geneva an edition of the Ignatian letters in which the seven genuine letters are set apart from the five spurious. In the genuine letters he indicated what was regarded as interpolations. The reformer Dallæus, at Geneva, in 1666, published a work entitled "De scriptis quæ sub Dionysii Areop. et Ignatii Antioch. nominibus circumferuntur", in which (lib. II) he called into question the authenticity of all seven letters. To this the Anglican Pearson replied spiritedly in a work called "Vindiciæ epistolarum S. Ignatii", published at Cambridge, 1672. So convincing were the arguments adduced in this scholarly work that for two hundred years the controversy remained closed in favour of the genuineness of the seven letters. The discussion was reopened by Cureton's discovery (1843) of the abridged Syriac version, containing the letters of Ignatius to the Ephesians, Romans, and to Polycarp. In a work entitled "Vindiciæ Ignatianæ" (London, 1846), he defended the position that only the letters contained in his abridged Syriac recension, and in the form therein contained, were genuine, and that all others were interpolated or forged outright. This position was vigorously combated by several British and German critics, including the Catholics Denzinger and Hefele, who successfully defended the genuineness of the entire seven epistles. It is now generally admitted that Cureton's Syriac version is only an abbreviation of the original.

Whilst it can hardly be said that there is at present any unanimous agreement on the subject, the best modern criticism favours the authenticity of the seven letters mentioned by Eusebius. Even such eminent non-Catholic critics as Zahn, Lightfoot, and Harnack hold this view. Perhaps the best evidence of their authenticity is to be found in the letter of Polycarp to the Philippian, which mentions each of them by name. As an intimate friend of Ignatius, Polycarp, writing shortly after the martyr's death, bears contemporaneous witness to the authenticity of these letters, unless, indeed, that of Polycarp itself be regarded as interpolated or forged. When, furthermore, we take into consideration the passage of Irenæus (Adv. Hæc., V, xxviii, 4) found in the original Greek in Eusebius (Hist. eccl., III, xxxvi), in which he refers to the letter to the Romans (iv, I) in the following words: "Just as one of our brethren said, con-

demned to the wild beasts in martyrdom for his faith", the evidence of authenticity becomes compelling. The romance of Lucian of Samosata, "De morte peregrini", written in 167, bears incontestable evidence that the writer was not only familiar with the Ignatian letters, but even made use of them. Harnack, who was not always so minded, describes these proofs as "testimony as strong to the genuineness of the epistles as any that can be conceived of" (Expositor, ser. 3, III, p. 11).

CONTENTS OF THE LETTERS.—It is scarcely possible to exaggerate the importance of the testimony which the Ignatian letters offer to the dogmatic character of Apostolic Christianity. The martyred Bishop of Antioch constitutes a most important link between the Apostles and the Fathers of the early Church. Receiving from the Apostles themselves, whose auditor he was, not only the substance of revelation, but also their own inspired interpretation of it; dwelling, as it were, at the very fountain-head of Gospel truth, his testimony must necessarily carry with it the greatest weight and demand the most serious consideration. Cardinal Newman did not exaggerate the matter when he said ("The Theology of the Seven Epistles of St. Ignatius", in "Historical Sketches", I, London, 1890) that "the whole system of Catholic doctrine may be discovered, at least in outline, not to say in parts filled up, in the course of his seven epistles". Among the many Catholic doctrines to be found in the letters are the following: the Church was Divinely established as a visible society, the salvation of souls is its end, and those who separate themselves from it cut themselves off from God (Philad., c. iii); the hierarchy of the Church was instituted by Christ (Introd. to Philad.; Ephes., c. vi); the threefold character of the hierarchy (Magn., c. vi); the order of the episcopacy superior by Divine authority to that of the priesthood (Magn., c. vi, c. xiii; Smyrn., c. viii; Trall., c. iii); the unity of the Church (Trall., c. vi; Philad., c. iii; Magn., c. xiii); the holiness of the Church (Smyrn., Ephes., Magn., Trall., and Rom.); the catholicity of the Church (Smyrn., c. viii); the infallibility of the Church (Philad., c. iii; Ephes., cc. xvi, xvii); the doctrine of the Eucharist (Smyrn., c. viii), which word we find for the first time applied to the Blessed Sacrament, just as in Smyrn., viii, we meet for the first time the phrase "Catholic Church", used to designate all Christians; the Incarnation (Ephes., c. xviii); the supernatural virtue of virginity, already much esteemed and made the subject of a vow (Polyc., c. v); the religious character of matrimony (Polyc., c. v); the value of united prayer (Ephes., c. xiii); the primacy of the See of Rome (Rom., introd.). He, moreover, denounces in principle the Protestant doctrine of private judgment in matters of religion (Philad., c. iii). The heresy against which he chiefly inveighs is Docetism. Neither do the Judaizing heresies escape his vigorous condemnation.

EDITIONS.—The four letters found in Latin only were printed in Paris in 1495. The common Latin version of eleven letters, together with a letter of Polycarp and some reputed works of Dionysius the Areopagite, was printed in Paris, 1498, by Lefèvre d'Étaples. Another edition of the seven genuine and six spurious letters, including the one to Mary of Casobola, was edited by Symphorianus Champerius, of Lyons, Paris, 1516. Valentinus Paccus published a Greek edition of twelve letters (Dillingen, 1557). A similar edition was brought out at Zurich, in 1559, by Andrew Gesner; a Latin version of the work of John Brunner accompanied it. Both of these editions made use of the Greek text of the long recension. In 1644 Archbishop Ussher edited the letters of Ignatius and Polycarp. The common Latin version, with three of the four Latin letters, was subjoined. It also contained the Latin version of eleven letters taken from Ussher's MSS. In 1646 Isaac Voss published at

Amsterdam an edition from the famous Medicean Codex at Florence. Ussher brought out another edition in 1647, entitled "Appendix Ignatiana", which contained the Greek text of the genuine epistles and the Latin version of the "Martyrium Ignatii".

In 1672 J. B. Cotelier's edition appeared at Paris, containing all the letters, genuine and supposititious, of Ignatius, with those of the other Apostolic Fathers. A new edition of this work was printed by Le Clerc at Antwerp, in 1698. It was reprinted at Venice, 1765-1767, and at Paris by Migne in 1857. The letter to the Romans was published from the "Martyrium Colbertinum" at Paris, by Ruinart, in 1689. In 1724 Le Clerc brought out at Amsterdam a second edition of Cotelier's "Patres Apostolici", which contains all the letters, both genuine and spurious, in Greek and Latin versions. It also includes the letters of Mary of Cassobola and those purporting to be from the Blessed Virgin in the "Martyrium Ignatii", the "Vindiciæ Ignatianæ" of Pearson, and several dissertations. The first edition of the Armenian version was published at Constantinople in 1783. In 1839 Hefele edited the Ignatian letters in a work entitled "Opera Patrum Apostolicorum", which appeared at Tübingen. Migne took his text from the third edition of this work (Tübingen, 1847). Bardenhewer designates the following as the best editions: Zahn, "Ignatii et Polycarpi epistulæ martyria, fragmenta" in "Patr. apostol. opp. rec.", ed. by de Gebhardt, Harnack, Zahn, fasc. II, Leipzig, 1876; Funk, "Opp. Patr. apostol.", I, Tübingen, 1878, 1887, 1901; Lightfoot, "The Apostolic Fathers", part II, London, 1885, 1889; an English version of the letters to be found in Lightfoot's "Apostolic Fathers", London, 1907, from which are taken all the quotations of the letters in this article, and to which all citations refer.

JOHN B. O'CONNOR.

Ignatius of Constantinople, SAINT, b. about 799; d. 23 October, 877; son of Emperor Michael I and Procopia. His name, originally Nicetas, was changed at the age of fourteen to Ignatius. Leo the Armenian having deposed the Emperor Michael (813), made Ignatius a eunuch and incarcerated him in a monastery, that he might not become a claimant to his father's throne. While thus immured he voluntarily embraced the religious life, and in time was made an abbot. He was ordained by Basil, Bishop of Paros, on the Hellespont. On the death of Theophilus (841) Theodora became regent, as well as co-sovereign with her son, Michael III, of the Byzantine Empire. In 847, aided by the good will of the empress, Ignatius succeeded to the Patriarchate of Constantinople, vacant by the death of Methodius. The Emperor Michael III was a youthful profligate who found a worthy companion for his debauchery in Bardas, his maternal uncle. At the suggestion of the latter, Michael sought the assistance of Ignatius in an effort to force Theodora to enter a convent, in

the hope of securing for himself an undivided authority and a free rein for his profligacy. The patriarch indignantly refused to be a party to such an outrage. Theodora, however, realizing the determination of her son to possess at any cost an undivided rule, voluntarily abdicated. This refusal to participate in his iniquitous schemes, added to a courageous rebuke, which Ignatius had administered to Bardas for having repudiated his wife and maintained incestuous intercourse with his daughter-in-law, determined the Cæsar to bring about the disgrace of the patriarch.

An insignificant revolt, led by a half-witted adventurer, having broken out, Bardas laid the blame at the door of Ignatius, and having convinced the emperor of the truth of his accusation, brought about the banishment of the patriarch to the island of Terebinthus. In his exile he was visited by the emissaries of Bardas, who sought to induce him to resign his patriarchal office. Their mission failing, they loaded him with every kind of indignity. Meanwhile a pseudo-synod, held under the direction of Gregory of Syracuse, an excommunicated bishop, deposed Ignatius from his see. Bardas had selected his successor in the person of Photius, a layman of brilliant parts, and a patron of learning, but thoroughly unscrupulous. He stood high in the favour of the emperor, for whom he acted as first secretary of state. This choice having been approved by the pseudo-synod, in six days Photius ran the gamut of ecclesiastical orders from the lectorate to the episcopate. To intensify the feeling against Ignatius, and thereby strengthen his own position, Photius charged the exiled bishop with further acts of sedition. In 859 another synod was called to further the interests of Photius, by again proclaiming the deposition of Ignatius. But not all the bishops participated in these disgraceful proceedings. Some few, with the courage of their episcopal office, denounced Photius as a usurper of the patriarchal dignity. Convinced that he could enjoy no sense of security in his office without the sanction of the pope, Photius sent an embassy to Rome for the purpose of pleading his cause. These ambassadors represented that Ignatius, worn out with age and disease, had voluntarily retired to a monastery; and that Photius had been chosen by the unanimous election of the bishops. With an affectation of religious zeal, they requested that legates be sent to Constantinople to suppress a recrudescence of Iconoclasm, and to strengthen religious discipline.

Nicholas I sent the required legates, but with instructions to investigate the retirement of Ignatius and to treat with Photius as with a layman. These instructions were supplemented by a letter to the emperor, condemning the deposition of Ignatius. But the legates proved faithless. Intimidated by threats and quasi-imprisonment, they agreed to decide in favour of Photius. In 861 a synod was convened, and the deposed patriarch cited to appear before it as a simple monk. He was denied the permission to speak with the delegates. Citing the pontifical canons to prove the irregularity of his deposition, he refused to acknowledge the authority of the synod and appealed to the pope. But his pleading was in vain. The prearranged programme was carried through, and the venerable patriarch was condemned and degraded. Even after this, the relentless hatred of Bardas pursued him, in the hope of wringing from him the resignation of his office. Finally an order for his death was issued, but he had fled to safety. The legates returning to Rome, merely announced that Ignatius had been canonically deposed and Photius confirmed. The patriarch, however, succeeded in acquainting the pope, through the archimandrite Theognostus, with the unlawful proceedings taken against him. To the imperial secretary, therefore, whom Photius had sent to him to obtain the approval of his acts, the pope declared that he would

not confirm the synod that had deposed Ignatius. In a letter addressed to Photius, Nicholas I recognized Ignatius as the legitimate Patriarch of Constantinople. At the same time a letter was dispatched to the eastern patriarchs, forbidding them to recognize the usurper. After another unsuccessful effort to obtain papal confirmation, Photius gave vent to his fury in a ludicrous declaration of excommunication against the Roman Pontiff.

In 867 the Emperor Michael was assassinated by Basil the Macedonian, who succeeded him as emperor. Almost his first official act was to depose Photius and recall Ignatius, after nine years of exile and persecution, to the patriarchate of Constantinople, 23 November, 867. Adrian II, who had succeeded Nicholas I, confirmed both the deposition of Photius and the restoration of Ignatius. At the recommendation of Ignatius, Adrian II, on 5 October, 869, convoked the Eighth Œcumenical Council. All the participants of this council were obliged to sign a document approving the papal action in regard to Ignatius and Photius. Ignatius lived ten years after his restoration, in the peaceful exercises of the duties of his office. He was buried at St. Sophia, but afterwards his remains were interred in the church of St. Michael, near the Bosphorus. The Roman Martyrology (23 Oct.) says: "At Constantinople St. Ignatius, Bishop, who, when he had reproved Bardas the Cæsar for having repudiated his wife, was attacked by many injuries and sent into exile; but having been restored by the Roman Pontiff Nicholas, at last he went to his rest in peace."

JOHN B. O'CONNOR.

Ignorance (Lat. *in*, not, and *gnarus*, knowing) is lack of knowledge about a thing in a being capable of knowing. Fundamentally speaking and with regard to a given object ignorance is the outcome of the limitations of our intellect or of the obscurity of the matter itself. In this article it is the ethical aspect and consequences of ignorance that are directly under consideration. From this point of view, since only voluntary and free acts are imputable, ignorance which either destroys or lessens the first-named characteristic is a factor to be reckoned with. It is customary then to narrow somewhat the definition already given of it. It will, therefore, be taken to mean the absence of information which one is required to have. The mere want of knowledge without connoting any requirement on the part of a person to possess it may be called nescience.

So far as fixing human responsibility, the most important division of ignorance is that designated by the terms *invincible* and *vincible*. Ignorance is said to be invincible when a person is unable to rid himself of it notwithstanding the employment of moral diligence, that is, such as under the circumstances is, morally speaking, possible and obligatory. This manifestly includes the states of inadvertence, forgetfulness, etc. Such ignorance is obviously involuntary and therefore not imputable. On the other hand, ignorance is termed *vincible* if it can be dispelled by the use of "moral diligence." This certainly does not

mean all possible effort; otherwise, as Ballerini naively says, we should have to have recourse to the pope in every instance. We may say, however, that the diligence requisite must be commensurate with the importance of the affair in hand, and with the capacity of the agent, in a word such as a really sensible and prudent person would use under the circumstances. Furthermore, it must be remembered that the obligation mentioned above is to be interpreted strictly and exclusively as the duty incumbent on a man to do something, the precise object of which is the acquisition of the needed knowledge. In other words the mere fact that one is bound by some extrinsic title to do something the performance of which would have actually, though not necessarily, given the required information, is negligible. When ignorance is deliberately aimed at and fostered, it is said to be affected, not because it is pretended, but rather because it is sought for by the agent so that he may not have to relinquish his purpose. Ignorance which practically no effort is made to dispel is termed *crass* or *supine*.

The area covered by human ignorance is clearly a vast one. For our purposes, however, three divisions may be noted. (1) Ignorance of law, when one is unaware of the existence of the law itself, or at least that a particular case is comprised under its provisions. (2) Ignorance of the fact, when not the relation of something to the law but the thing itself or some circumstance is unknown. (3) Ignorance of penalty, when a person is not cognizant that a sanction has been attached to a particular crime. This is especially to be considered when there is question of more serious punishment. We must also note that ignorance may precede, accompany, or follow an act of our will. It is therefore said to be antecedent, concomitant, or consequent. Antecedent ignorance is in no sense voluntary, neither is the act resulting from it; it precedes any voluntary failure to inquire. Consequent ignorance, on the other hand, is so called because it is the result of a perverse frame of mind choosing, either directly or indirectly, to be ignorant. Concomitant ignorance is concerned with the will to act in a given contingency; it implies that the real character of what is done is unknown to the agent, but his attitude is such that, were he acquainted with the actual state of things, he would go on just the same. Keeping these distinctions in mind we are in a position to lay down certain statements of doctrine.

Invincible ignorance, whether of the law or of the fact, is always a valid excuse and excludes sin. The evident reason is that neither this state nor the act resulting therefrom is voluntary. It is undeniable that a man cannot be invincibly ignorant of the natural law, so far as its first principles are concerned, and the inferences easily drawn therefrom. This, however, according to the teaching of St. Thomas, is not true of those remoter conclusions, which are deducible only by a process of laborious and sometimes intricate reasoning. Of these a person may be invincibly ignorant. Even when the invincible ignorance is concomitant, it prevents the act which it accompanies from being regarded as sinful. The perverse temper of soul, which in this case is supposed, retains, of course, such malice as it had. Vincible ignorance, being in some way voluntary, does not permit a man to escape responsibility for the moral deformity of his deeds; he is held to be guilty and in general the more guilty in proportion as his ignorance is more voluntary. Hence, the essential thing to remember is that the guilt of an act performed or omitted in vincible ignorance is not to be measured by the intrinsic malice of the thing done or omitted so much as by the degree of negligence discernible in the act.

It must not be forgotten that, although vincible ignorance leaves the culpability of a person intact, still it does make the act less voluntary than if it were

done with full knowledge. This holds good except perhaps with regard to the sort of ignorance termed affected. Here theologians are not agreed as to whether it increases or diminishes a man's moral liability. The solution is possibly to be had from a consideration of the motive which influences one in choosing purposely to be ignorant. For instance, a man who would refuse to learn the doctrines of the Church from a fear that he would thus find himself compelled to embrace them would certainly be in a bad plight. Still he would be less guilty than the man whose neglect to know the teachings of the Church was inspired by sheer scorn of her authority. Invincible ignorance, whether of the law or fact, exempts one from the penalty which may have been provided by positive legislation. Even vincible ignorance, either of the law or fact, which is not crass, excuses one from the punishment. Mere lack of knowledge of the sanction does not free one from the penalty except in cases of censures. It is true then that any sort of ignorance which is not itself grievously sinful excuses, because for the incurring of censures contumacy is required. Vincible and consequent ignorance about the duties of our state of life or the truths of faith necessary for salvation is, of course, sinful. Ignorance of the nature or effects of an act does not make it invalid if everything else requisite for its validity be present. For instance, one who knows nothing of the efficacy of baptism validly baptizes, provided that he employs the matter and form and has the intention of doing what the Church does.

JOSEPH F. DELANY.

IHS, a monogram of the name of Jesus Christ. From the third century the names of our Saviour are sometimes shortened, particularly in Christian inscriptions (IH and XP, for Jesus and Christus). In the next century the "sigla" P occurs not only as an abbreviation but also as a X symbol. From the beginning, however, in Christian inscriptions the *nomina sacra*, or names of Jesus Christ, were shortened by contraction, thus IC and XC or IHS and XPS for IHCOY XPICTOY. These Greek monograms continued to be used in Latin during the Middle Ages. Eventually the right meaning was lost, and erroneous interpretation of IHS led to the faulty orthography "Jhesus". In Latin the learned abbreviation IH̄C rarely occurs after the Carolingian era. The monogram became more popular after the twelfth century when St. Bernard insisted much on devotion to the Holy Name of Jesus, and the fourteenth, when the founder of the Jesuati, Blessed John Colombini (d. 1367), usually wore it on his breast. Towards the close of the Middle Ages IHS became a symbol, quite like X in the Constantinian period. Sometimes above the X appears a cross and underneath three nails, while the whole figure is surrounded by rays. IHS became the accepted iconographical characteristic of St. Vincent Ferrer (d. 1419) and of St. Bernardine of Siena (d. 1444). The latter holy missionary, at the end of his sermons, was wont to exhibit this monogram devoutly to his audience, for which some blamed him; he was even called before Martin V. St. Ignatius of Loyola adopted the monogram in his seal as general of the Society of Jesus (1541), and thus it became the emblem of his institute. IHS was sometimes wrongly understood as "Jesus Hominum (or Hierosolymæ) Salvator", i. e. Jesus, the Saviour of men (or of Jerusalem = Hierosolyma).

R. MAERE.

Ildephonsus, SAINT, Archbishop of Toledo; d. 23 January, 667. He was born of a distinguished family and was a nephew of St. Eugenius, his predecessor in the See of Toledo. At an early age, despite the determined opposition of his father, he embraced the monastic life in the monastery of Agli, near Toledo. While he was still a simple monk, he founded and endowed a monastery of nuns in *Deibiensi villula*. We learn from his writings that he was ordained a deacon (about 630) by Helladius, who had been his abbot and was afterwards elected Archbishop of Toledo. Ildephonsus himself became Abbot of Agli, and in this capacity was one of the signatories, in 653 and 655, at the Eighth and Ninth Councils of Toledo. Called by King Reccesvinth, towards the end of 657, to fill the archiepiscopal throne, he governed the Church of Toledo for a little more than nine years and was buried in the Basilica of Saint Leocadia. To these scanty but authentic details of his life (they are attested by Ildephonsus himself, or by his immediate successor, Archbishop Julianus, in a short biographical notice which he added to the "De viris illustribus" of Ildephonsus) some doubtful or even legendary anecdotes were added later. At the end of the eighth century Cixila, Archbishop of Toledo, embellished the biography of his predecessor. He relates that Ildephonsus was the disciple of Isidore of Seville, and recalls in particular two marvellous stories, of which the second, a favourite theme of hagiographers, poets, and artists, has been for ages entwined with the memory of the saint. Ildephonsus, it is said, was one day praying before the relics of Saint Leocadia, when the martyr arose from her tomb and thanked the saint for the devotion he showed towards the Mother of God. It was related, further, that on another occasion the Blessed Virgin appeared to him in person and presented him with a priestly vestment, to reward him for his zeal in honouring her.

The literary work of Ildephonsus is better known than the details of his life, and merits for him a distinguished place in the roll of Spanish writers. His successor, Julianus of Toledo, in the notice already referred to, informs us that the saint himself divided his works into four parts. The first and principal division contained six treatises, of which two only have been preserved: "De virginitate perpetua sanctæ Mariæ adversus tres infideles" (these three unbelievers are Jovinianus, Helvidius, and "a Jew"), a bombastic work which displays however a spirit of ardent piety, and assures Ildephonsus a place of honour among the devoted servants of the Blessed Virgin; also a treatise in two books: (1) "Annotationes de cognitione baptismi", and (2) "Liber de itinere deserti, quo itur post baptismum". Recent researches have proved that the first book is only a new edition of a very important treatise compiled, at the latest, in the sixth century, Ildephonsus having contributed to it only a few additions (Helfferich, "Der westgothische Arianismus", 1860, 41-49). The second part of his works contained the saint's correspondence; of this portion there are still preserved two letters of Quiricus, Bishop of Barcelona, with the replies of Ildephonsus. The third part comprised masses, hymns, and sermons; and the fourth, *opuscula* in prose and verse, especially epigrams. The editions of the complete works of Ildephonsus contain a certain number of writings, several of which may be placed in either of the last two divisions; but some of them are of doubtful authenticity, while the remainder are certainly the work of another author. Moreover, Julianus states that Ildephonsus began a good number of other works, but his many cares would not permit of his finishing them. On the other hand, he makes no mention of a little work which is certainly authentic, the "De viris illustribus". It may be considered as a supplement to the "De viris illustribus" of Isidore of Seville, and is not so much a literary historical work as a writing intended to glorify

the Church of Toledo and defend the rights of the metropolitan see.

ALBERT PONCELET.

I-li (KULDJA), PREFECTURE APOSTOLIC OF. See CHINA.

Illegitimacy.—As generally defined, and as understood in this article, illegitimacy denotes the condition of children born out of wedlock. It should be noted, however, that, according to the Roman law and the canon law, an illegitimate child becomes legitimate by the subsequent marriage of its parents. This legal provision has been adopted by many European countries, but it does not obtain in England or in most of the United States. Illegitimacy is probably more general, more frequent, and more constant than the majority of persons are aware. Owing to the absence of statistics, no estimate can be given of its extent in the United States and Canada. The following tables show the percentage of illegitimate births (that is, the proportion which they form of the total number of living births) in the principal countries of Europe at different periods during the last thirty years. The figures in the first column are taken from "Der Einfluss der Confession auf die Sittlichkeit", by H. A. Krose, S. J.; those in the second are derived from the "Statesman's Year Book" for 1908:—

Austria	(1887-91)	14.67	(1904)	12.81
Belgium	"	8.75	(1905)	6.41
Denmark	(1887-89)	9.43	(1902-6)	10.01
England and Wales	(1887-91)	4.52	(1905)	4.00
Finland	"	6.42	—	—
France	"	8.41	(1906)	8.85
German Empire	(1886-90)	9.23	(1901-5)	8.50
Bavaria	"	14.01	(1906)	12.36
Prussia	"	7.81	"	7.24
Saxony	"	12.45	(1905)	13.40
Württemberg	"	10.03	(1906)	8.30
Greece	(1876-80)	1.19	—	—
Holland	(1887-91)	3.20	(1900-4)	2.37
Hungary	"	8.61	(1906)	9.80
Ireland	"	2.78	"	2.60
Italy	"	7.30	—	5.33
Norway	"	7.33	(1905)	6.72
Portugal	(1886-90)	12.21	(1904)	11.04
Roumania	"	5.75	—	—
Russia	(1895)	3.00	—	—
Scotland	(1887-91)	7.93	(1906)	6.74
Servia	(1887-89)	1.00	—	—
Spain	(1886-92)	4.70	—	—
Sweden	(1887-91)	10.23	(1904)	12.02
Switzerland	(1887-89)	4.63	(1905)	4.06

These figures are sufficiently disturbing, and yet they do not exhibit the full extent of the evil. Many illegitimate births are registered as legitimate, while many others escape registration entirely. This happens in all countries; probably it is particularly true of Greece and Servia. While the percentages in the first column are about the same as those which obtained for a long period previous to 1891, those in the second column indicate a decline in the rate of illegitimacy in most of the European countries since that date, and in some countries a very notable decline. All authorities agree that the rate has decreased during the last twenty years, but not all admit that the downward movement has been quite as pronounced in some countries as represented by the "Statesman's

Year Book" At any rate, the decline does not necessarily indicate an improvement in sexual morality. Nor does a high rate of illegitimacy in a country prove that the inhabitants are less chaste than those of some other region where the rate is low. The number of illegitimate births implies at least an equal number of sins between the sexes, but it describes neither the full nor the relative extent of such immorality, nor does it represent the relative resistance offered by a people to temptations of this kind. Illegitimacy is subject to many social influences, some of which tend to increase and some to diminish the illicit intercourse from which it results, some of which diminish it without lessening such intercourse, and some of which increase it in the statistical records without increasing it in the eyes of God. In general, illegitimacy is an index of comparative sexual morality only among peoples having the same laws, customs, and social conditions.

It is not difficult to enumerate all the important factors that tend to increase or diminish illegitimacy, but it is practically impossible to measure accurately the relative weight of each. Poverty, heredity, ignorance, town life, religion, have all been set down by one or more authorities as the predominant influence. In this article nothing more will be attempted than a general description of the significant factors and their apparent influence.

Poverty is undoubtedly a factor within certain limits. Owing to the lack of privacy in their homes, the absence of decent facilities for the entertainment of young men in the homes of the young women, and the temptation to which the latter are subjected of exchanging their virtue for material advantages, the poor, at least the very poor, are confronted by moral dangers that do not threaten the rich or the comfortable classes. Moreover, poor girls are generally less familiar with methods of forestalling the consequences of lapses from virtue, and less able to conceal these consequences. On the other hand, poverty that is not so deep as to be degrading is more conducive to the formation of a strong moral character than circumstances which make possible a life of ease and abundant material satisfactions. In some cities, notably in Paris, a considerable number of couples, who have never been united by a marriage ceremony, live together and rear children. Probably the great majority of these are impelled to this course by poverty. In so far as the average age of marriage is later among the poor than among those in better circumstances, it will tend to increase illegitimacy. On these points, however, as well as on the influence of poverty generally, statistics give us little information. They tell us, for example, that there is much less illegitimacy in Ireland than in England and Scotland, but they do not prove that this condition is to be attributed exclusively, or even mainly, to the greater material comfort enjoyed by the English and Scotch. Other factors are operative, such as differences in religion, heredity, and town life.

The particular influence of poverty can be observed only where all the other important factors are the same. As a matter of fact, this situation is scarcely verified in the case of any two countries, and it is not often verified as between different sections of the same country. Thus, the rate of illegitimacy in the County Mayo, which is probably the poorest county in Ireland, is only one-tenth as great as the rate in the prosperous County Down, but the latter includes part of the large city of Belfast, and its people differ largely both in race and religion from the inhabitants of the former county. Again, the proportion of illegitimate births is much greater in the prosperous West End of London than in the poverty-stricken East End, but the marriage age seems to be earlier in the East End, while the proportion of domestic servants is very much greater in the West End. Both these circumstances have a well recognized influence

on the rate of illegitimacy. Furthermore, the better showing made by the East End does not imply better relations between the sexes; according to Charles Booth, illicit intercourse and marriage of the offenders before the birth of their first child are quite common among the lowest classes of that section of London. Instead of considering different geographical sections of a population, it will be more satisfactory to compare classes differing in occupation, but substantially the same in all other important respects. Father Krose adduces statistics from Berlin and Leipzig which show that the great majority of the parents of illegitimate children in those cities are domestic servants and unskilled labourers. It is safe to say that the majority of all illegitimate births occurs among domestic servants, factory employees, and agricultural labourers, speaking especially of the mothers. Even among these it is not so much poverty as certain associations and modes of living connected with the occupation that is immediately responsible. It would seem, therefore, that while poverty is one cause of illegitimacy, it is not the most important cause, nor can its influence be even approximately determined.

Ignorance, in the sense of illiteracy, is sometimes numbered among the factors, but this contention receives no satisfactory support from statistics. The countries with a high standard of elementary education have not a better record than the others. Denmark, Norway, Sweden, Prussia, and Saxony, where the rate of illiteracy is very low, do not show a lower rate of illegitimacy than Ireland, Italy, or Spain. Different sections of the same country, where other conditions are the same, furnish no evidence that education reduces the proportion of illegitimate births. In France, outside of Paris, illegitimacy is least where illiteracy is greatest. In general, it may be said that education, except in the principles and practice of morality, is a negligible factor in relation to the phenomenon of illegitimacy.

Nor can it be shown that climate is a factor. It is sometimes thought that warm regions are more productive of sexual irregularities than those of a lower temperature, but no such conclusion can be derived from the records of illegitimacy. The large cities in the south of Europe are not worse in this respect than those in the north. The net influence of city life does not seem to be very great either in increasing or lessening the number of illegitimate births. In some of the rural districts of England and Wales, the record is worse than in London, Birmingham, or Liverpool. Outside of England illegitimacy is apparently more frequent in the cities than in the country. This is clearly true of most of the capital cities. As a rule, illicit intercourse between the sexes is more frequent in the cities than out of them, but a smaller proportion of it will manifest itself in the records of illegitimacy. Prostitution, immoral preventives of conception, abortion, and concealment of illegitimate births, all tend to reduce the extent of the evil in the cities disproportionately.

Heredity is undoubtedly a factor, but to what extent cannot be determined even approximately. In general the Teutonic and Scandinavian nations exhibit a higher rate of illegitimacy than the Latins and Celts, but, since the former are mainly Protestant and the latter mainly Catholic, the difference might be due to religion. Between the north and south of England there is, however, no such difference, nor any other difference that seems sufficient to explain the greater prevalence of illegitimacy in the former, except that of race. The inhabitants of the north are descendants of the Danes, while the southern population traces its ancestry for the most part to the ancient Saxons. There are more than twice as many illegitimate births in the north-eastern as in the north-western counties of Scotland, and this difference has obtained at least as far back as statistics can be found.

The north-western counties referred to are Ross, Cromarty, and Inverness, which are entirely within the Highlands, and in which there is a greater proportion of Celtic blood than in the north-eastern counties. In the Celtic portion of the population of Ireland, the rate of illegitimacy is much lower than in any other nation of Europe of which we have sufficient knowledge. If we compare Ireland with, for example, Belgium, it would seem that the much higher rate which obtains in the latter country can be explained only by the difference of race. Both are Catholic countries. However, a greater proportion of the people of Belgium live in cities, and are engaged in mining and industrial occupations generally; two of the classes within which illegitimate births are very frequent, namely, domestic servants and factory operatives, are more numerous proportionally; and the influence of bad literature and foreign associations is much more prominent. Does heredity, then, go far toward accounting for the different amounts of illegitimacy in these two countries? Perhaps the safest general statement that can be made concerning the influence of heredity is that if heredity be understood not merely in the sense of certain psychical and physical characteristics, but also as including the heritage of public opinion and social intercourse, it is undoubtedly a factor of some importance.

The influence of legislation is more certain and more easily traceable. Every legal condition and impediment restricting marriage will inevitably tend to increase the number of illegal unions and illegitimate offspring. It has been estimated that there are in Paris 80,000 couples living together who have refused to undergo the trouble or the expenses of a marriage ceremony, civil or ecclesiastical. Many marriages take place in Italy before the ministers of the Church which are not recognized by the State, owing to the omission of the civil ceremony. In the eyes of the State, the offspring of these unions are illegal. Until the year 1868, a man could not get a license to marry in Bavaria unless he possessed an amount of economic advantages that was beyond the reach of a large proportion of the population. Soon after the modification of this legal restriction, the birth rate of illegitimates dropped from twenty per cent to twelve per cent. The rate in Bavaria is still the highest in Europe, with the exception of Austria, but this is undoubtedly due in some measure to the unfavourable legal restrictions which yet remain, and to the surviving influence of the bad customs and the indulgent public opinion which were produced by the older regulations. That the large proportion of illegitimacy in Bavaria is not, as some have assumed, to be attributed to the Catholic religion, clearly appears from the fact that the evil is greater in the Protestant than in the Catholic sections of the country. Unreasonable civil restrictions on marriage are likewise responsible, though in a less degree, for the large number of illegitimate children in Austria. While these restrictions have for the most part been removed within the last quarter of a century, their evil influence is still exerted through custom and public toleration of illicit relations.

It has been suggested that the law of Scotland, which legitimizes children upon the subsequent marriage of their parents, explains to some extent the high rate of illegitimacy in that country. This hypothesis is very doubtful. In the first place, this legal provision exists in other countries of Europe as well as in Scotland; in the second place, its influence in promoting illicit relations would seem of necessity to be very slight. In so far as the expectation of marriage induces a woman to sin, it refers to marriage before the birth of a child. The hope of a marriage later on is usually less solid and less effective as a temptation. The possibility of legitimatization after birth might, however, make public opinion more indulgent toward

illegitimacy. Undoubtedly this would tend to increase the evil.

Certain other social forces of more or less importance may be conveniently grouped together. All of these are, indeed, affected by still other factors, yet each exerts an influence of its own. A lax public opinion is undoubtedly responsible for some of the illegitimacy in Scotland, Wales, Prussia, and the Scandinavian countries. The modes of intercourse and amusement among young men and women; the presence of a large number of soldiers in a community; the power or ascendancy exercised by the upper classes over the women of the lower walks of life; erotic and immoral literature, all have some influence in some regions. The evil results of a large influx of tourists are seen in Tyrol, where the rate of illegitimacy rose during the last decade of the nineteenth century from five to seven per cent. Late marriages, to whatever cause they may be due, have a decisive tendency to increase the proportion of illegitimate births. In Denmark and Sweden, the majority of illegitimate children were born when their mothers were between twenty-five and thirty-five years of age; about one-half of them were born after their mothers had reached the age of thirty. If early marriages had been more frequent some of these women would have been wives before they became mothers. In this connexion it is worth noting that two nations having the same proportion of illegitimacy, as compared with either the total population or the total number of births, may have a very different rate as compared with the total number of unmarried females between the ages of 15 and 45. The last method of computation obviously furnishes the most accurate indication of the comparative morality of different peoples.

Marriage between the conception and the birth of a child reduces to some extent the rate of illegitimacy. In statistics, as well as in law and in popular estimation, those children that are conceived out of wedlock but born after the marriage of their parents are reckoned as legitimate. Such children form a large proportion of the total number in some communities. Father Krose concludes from the investigations and testimony of Protestant pastors and social students that, among the poorer classes in the country districts of Prussia, illicit intercourse before marriage is the rule rather than the exception (op. cit., pp. 24 sq.). Since the great majority of these couples entered matrimony before the arrival of their first child, the number of illegitimate births registered in Prussia was relatively small. The same author attributes to Dr. Neumann, a prominent statistician, the statement that more than thirty-nine per cent of the first-born of Danish marriages saw the light before their parents had been married seven months. As we have already seen, Charles Booth declares that the very poor in some districts of London quite commonly marry between the conception and birth of their first child.

The extent to which illegitimacy is lessened by immoral preventives of conception and birth cannot be estimated even approximately, but it is undoubtedly very large. No one doubts that the lowered birth-rate, which has become so general and so pronounced in both America and Europe, is chiefly due to deliberate restriction of offspring by men and women who are capable of having children, or of having a larger number of children. It is safe to say that in the great majority of cases this result is obtained through means that are immoral. Unfortunately the knowledge and use of these methods are not confined to married persons. Preventives of conception and devices for procuring abortion have been so shamelessly published through the printing press and private agencies of publicity during the last few years that they have come to the attention of the majority of the young people in most of the cities of

Europe and America. In all probability it is to the knowledge and practice of these perverse devices, rather than to improved moral conditions, that we must attribute the slight decline in illegitimacy that has taken place in some countries during the last twenty years. To this factor we must also ascribe in some degree the relatively low rate of illegitimacy in the cities as compared with the country districts. Indeed, a larger proportion of illegitimate births in the cities would, in the present conditions, indicate a smaller degree of immorality, inasmuch as it would imply the absence of many unnatural sins and pre-natal homicides.

The appalling number of prostitutes in the large cities is likewise convincing evidence that the number of illegitimate children would be much larger than it is but for their presence. A few years ago Hausner estimated that the proportion of fallen women to the population was: in Hamburg, one in forty-eight; in Berlin, one in sixty-two; in London, one in ninety-one. While it is true that a large proportion of the sins of unchastity of which prostitution is the occasion would never have been committed if there were no prostitutes, it is none the less true that a large proportion of them represent a choice between fallen women and respectable women who might yield to temptation. Since prostitution is confined to the cities, it lowers the rate of town as compared with rural illegitimacy.

The factor of illegitimacy that has most vital interest for Catholics is, of course, that of religion. We believe that the influence of our religion for morality in general, and the special stress that our teaching lays upon the importance of chastity, renders the proportion of sexual immorality considerably less among our people than it is among those without the Catholic fold. And if long and varied observation by trustworthy students and observers, both Catholic and Protestant, is to receive due credit, we have good and sufficient reasons for this conviction. But we cannot get very satisfactory confirmation from the statistics of illegitimacy. Austria and Bavaria, which are Catholic countries, have a higher rate than any Protestant nation. True, there are, as we have already seen, certain legislative requirements which to some extent explain the bad eminence of these two Catholic lands, but it is impossible to measure the precise importance of this or any other factor. Consequently we are unable to isolate and accurately appraise the effect of religion. The difficulty of estimating the influence of religion is especially great when we compare one entire country with another. For in no two countries do all the other important factors operate in the same way or to the same extent. The only safe method is to study different sections of the same country which resemble each other in all pertinent influences except that of religion.

Taking the Kingdom of Prussia, we find that in 1895 the percentage of illegitimate births was: in Catholic Munster 2.09, in Protestant Koslin 9.24; in Catholic Oppeln 5.65, in Protestant Liegnitz 12.57; in Catholic Aachen 2.42, in Protestant Hanover 9.30. In each of these compared regions the legal, industrial, social, and all other noteworthy conditions were the same, or were conducive to a lower percentage of illegitimacy in the Protestant than in the Catholic section. Comparing all the Catholic portions of Prussia with all the Protestant sections in which other conditions are the same, we find that the rate of illegitimacy in the latter is from two to four times as high as in the former. Moreover, statistics show that both in Prussia and in other parts of the empire the rate among Catholic minorities is higher than among Catholic majorities, but lower among Protestant minorities than among Protestant majorities. During the decade of 1886-1896 the Catholic cantons of Switzerland had a rate of illegitimacy of 3 per cent, while the rate for the entire

country was 4.72 per cent. In 1896 the rate in the Catholic provinces of North Brabant and Limburg in Holland was 2.8 and 2.20, respectively, but 3 for the whole of that country. All of the foregoing figures are taken from the work of Father Kroese (pp. 46-54). It has already been noted that in Ireland Protestant Down had in 1880 ten times as many illegitimate births as equally populous Catholic Mayo, a difference that is certainly not sufficiently explained by the presence of part of a large city in Down. In 1894 the illegitimate births were twice as high in dominantly Protestant Belfast as in dominantly Catholic Dublin. It seems safe to say that none of the differences described in this paragraph can be satisfactorily explained by any other factor than religion.

It may not be amiss to set down some general considerations which account, in part at least, for the comparatively high rate of illegitimacy in some Catholic countries. We have called attention above to the powerful influence of perverse legislation in Bavaria and Austria; in the latter country there has for a long time been in operation an additional factor, namely, those ecclesiastico-political forces, summed up under the name of Josephinism, which have gone far to demoralize the seminaries, the clergy, and the public life of the country, and which have in a hundred ways prevented the Church from exercising her normal influence. France, Italy, and Belgium have a considerably higher rate than England and Wales, but France is no longer a Catholic country in the normal and vital sense, while Italy, as already noted, has an unfavourable civil marriage law. In England the registration laws permit many illegitimate births to be counted as legitimate; moreover, the proportion of marriages between the conception and birth of the first child, the comparative prevalence of prostitution, and the use of immoral preventives of conception and birth, are all undoubtedly greater in that country than in Italy or Belgium. Indeed, competent observation and statistics, in so far as they are available, show that these three important causes of a low rate of illegitimacy are, generally speaking, much more prevalent among Protestant than among Catholic peoples. Finally, the very low rate in Protestant Holland seems to be explained by the astoundingly large percentage of still-births set down in the statistics of that country. They are one hundred per cent more numerous than in Austria-Hungary. If this excess of still-births in Holland, that is, one-half the whole number, be reckoned as illegitimacies who were killed either before or immediately after birth—and this is a reasonable inference—the rate of illegitimacy would be almost twice as high as the existing statistics indicate.

The most important factors which tend to increase illegitimacy are, therefore, bad laws, bad economic conditions, lax public opinion, lax customs of social intercourse, late marriages, and lack of sound moral and religious convictions. The most important influences that tend to lessen and check it are religion, especially, the true religion, immoral practices, and marriage between the conception and birth of the first child. Most of the first set of factors go to prove that illegitimacy is not a correct measure of the moral character of a people or class in the presence of temptations against the virtue of chastity; the last two factors in the second set show that illegitimacy is not a true index of the actual violations of this virtue. Nevertheless every illegitimate child that is born represents at least one grievous sin against the sixth commandment, and forebodes many harmful consequences for itself, its parents, and the community. The child is frequently deserted by its parents, or by the father, and is deprived of many of the social, economic, educational, and religious advantages which he would have obtained if he had been born in wedlock. Infant mortality among illegitimate children is at least twenty-five per cent higher than among those that are

legitimate, while the proportion of criminals among them is also considerably larger. The parents, particularly the mother, suffer a greater or less degree of social ostracism, which, in the case of the woman, often includes inability to find a spouse. In addition she bears by far the greater portion of the burden of rearing the child. On the other hand, where the parents fall but slightly in social esteem the public regard for chastity is deplorably lax. In any case, the presence of illegitimacy in a community always tends to weaken the popular appreciation of chastity, and the popular disapproval of its violation.

JOHN A. RYAN.

Illinois, one of the United States of America, bounded on the north by Wisconsin, on the west by the Mississippi, which separates it from Iowa and Missouri, on the south by the confluent waters of the Mississippi and the Ohio, which separate it from Kentucky, on the east by Indiana and Lake Michigan.

It extends from 36° 56' to 42° 30' N. lat., and 87° 35' to 91° 40' W. long. The extreme length of Illinois is 388 miles and its extreme width is 212 miles. Its area, not including any part of Lake Michigan, is 56,650 square miles. Its total area, including that part of Lake

SEAL OF ILLINOIS

Michigan within its boundaries, is 58,354 square miles. Illinois is the most level state in the Union, except Louisiana and Delaware. It is the lower part of a plain, of which Lake Michigan is the higher. Lake Michigan is 582 feet and the southern part of the state is about 300 feet above sea-level. The slope is from the north to the south, and is gradual, except in the south, where there is a hilly range, which rises to the height of a thousand feet. The surface of the state is slightly rolling, except along the rivers, where it is broken. Beautifully undulating prairies, without forests, characterize the northern and central parts of the state, and these prairies sometimes terminate in well-wooded lateral ridges, especially near the river courses, which give to the landscape a sylvan beauty.

All the large rivers of Illinois flow southward. The Kankakee and Desplaines Rivers meet and form the Illinois, which flows into the Mississippi. The Chicago River, which formerly flowed into Lake Michigan, is made by a unique engineering feat to flow in the opposite direction and is a part of the Chicago drainage canal which joins the Desplaines River near Joliet. The State of Illinois voted in 1908 in favour of a bond issue of \$20,000,000 for the great waterway to connect Lake Michigan with the Mississippi. This, when completed, will be the realization of the missionary's prophecy made two hundred years ago. The soil of Illinois is rich, well-watered and adapted to the production of grain. Illinois has the central position in the great Mississippi Valley—the most fertile valley in the world. The waterways connect it equally with the south and the north; the numerous railroads reach not only the territorial limits of the nation, but tap the richest lands of Canada and Mexico. Coal

fields underlie three-fourths of the state. The fruitful soil, the great waterways, the lake ports, the central location, the rich coal-beds, the great railway systems have made possible the wonderful growth of Illinois as an agricultural, manufacturing, and commercial state. The population of Illinois in 1900 was 4,821,550, 4,734,873 being whites, 85,078 negroes, 1583 Asiatics, and 16 Indians. In population it ranks after New York and Pennsylvania.

RESOURCES.—Agriculture and Coal.—One of the great industries of the state is agriculture. The total acreage of Illinois is 32,794,728 acres. In 1900, 27,699,219 acres were under cultivation. The total value of farm property in Illinois in 1907 was \$2,004,316,897, and the value of the year's produce \$345,649,611. In 1907, the acreage given to the leading crops in Illinois was as follows:—

Wheat	1,321,224	acres
Oats	2,815,233	"
Corn	7,294,873	"
Hay	2,303,616	"
Rye	68,439	"
Barley	4,022,598	"

In the natural products of the state coal is next in importance to agriculture. In the production of coal Illinois ranks next to Pennsylvania. Illinois coal is bituminous. The total output of the state in 1907 was 47,798,621 tons. The number of mines that year was 933. The total value of the coal at the mines in 1907 was \$49,486,396. Fifty-five of the one hundred and two counties of the state are coal producing and the coal-field area is over 8700 square miles.

Banks and Railroads.—The banking business of Illinois since about 1895 has been remarkable. Chicago has become the second greatest money centre of the nation. The total number of national banks in Illinois in 1907 was 407, with a capitalization of over \$50,000,000 and a surplus of \$27,000,000; while there were 421 state banks with a capitalization of \$52,000,000 and a surplus of \$24,000,000. Of the state banks 227 were operating savings departments and 36 were exercising trust powers. The number of private banks in 1907 was 827. Besides thirty-six banks operating trust departments three were organized under the Trust Company Act of 1887, and thirteen foreign corporations qualified as trust companies. In Chicago, there are two banks—the First National, and Illinois Trust and Savings, that usually have more than \$100,000,000 each on deposit. In 1907, Illinois had a main track mileage of 11,967.42 miles; including branches, industrial, yard, and second tracks, it had a total track mileage of 20,066.21 miles. The number of steam railroad employees was 130,984, and the amount of wages paid was \$89,158,407. The total earnings and income of the steam railroads in Illinois amounted to \$190,565,736. In the year ending 30 June, 1907, the total number of passengers carried on the interurban and elevated railroads was 197,781,911.

Manufactures.—The natural resources of the state, its central location, its ports on Lake Michigan, the ideal position Chicago holds as a distributing centre, and the ample supply of labour, have made Illinois the third greatest manufacturing state in the Union. It is only surpassed by New York and Pennsylvania. In 1900 the amount of money invested in manufactures was \$776,828,598; the number of wage-earners dependent on manufactures was 395,111 and to these the sum of \$191,510,962 was paid as wages. The manufactured products had a value of \$1,259,730,168, while in 1905 this value had risen to \$1,410,342,129. There are more than 300 distinct lines of manufacture in the state, carried on in over 38,000 separate establishments, and Illinois ranks first in slaughtering, meat and packing products, agricultural implements, bicycles, steam railroads,

cars, glucose, and distilled liquors. Nearly half the agricultural implements in the United States are manufactured in Illinois. The ten leading industries with the value of their products in 1905 were in the order of their output as follows:—

Slaughtering	\$317,206,082
Foundry and machine shop products	79,961,000
Iron and steel	87,353,000
Clothing	67,439,000
Liquors	77,889,000
Flour and gristmill products	39,892,000
Agricultural implements	38,412,000
Cars and general shop construction steam railroads	25,491,000
Furniture	22,132,000

Of the manufacturing business in Illinois more than seventy-one per cent is to be found in the cities. There are thirty-one cities in the state the seats of manufacturing establishments. The value of manufactured products in Chicago in 1908 was \$1,865,959,000 as against \$1,598,147,500 in 1907. In 1908 the lake traffic in Chicago was 15,307,635 tons in and out, as against a tonnage of 17,000,000 for London, 13,000,000 for Liverpool and 15,000,000 for Hamburg. The largest shipments to the port of Chicago are of iron ore of which 4,419,883 tons were received during the year 1908. Illinois had 9175 oil wells, 1 January, 1908, with a total product in 1907 of 24,500,000 barrels.

EDUCATIONAL SYSTEM.—State University.—The State University had its origin in the Act of Congress passed 1862 making grants of land to Illinois and other loyal states, for the purpose of founding colleges, "the leading object of which" should be "to teach such branches of education as are related to agriculture and the mechanic arts". The endowment fund, which was enlarged by Act of Congress in 1890, amounts to \$600,000. In 1867 the state accepted this grant and chartered the Illinois Industrial University, which in 1885 became the University of Illinois. The state has appropriated millions for its buildings and sustenance. It is the only agricultural and technical state institution in Illinois. It aims now to give a liberal as well as a technical education. Its courses in the liberal arts do not give it rank with the first universities of the country; but as an industrial and technical institution combined it ranks very high. The university has 25 buildings, 400 professors, and a student body of 4700. In 1857 was passed the Act establishing a State Normal University to enable teachers to qualify for the common schools of the state. This is a university only in name, being nothing but a school in fact. In 1874 a normal school was established at Carbondale and others later at Charleston, De Kalb, and Macomb.

Public Schools.—The public school system of Illinois had its origin in the ordinance of the Congress of the old Confederation passed in 1787, establishing for the North-West Territory the system of land surveys by townships six miles square, which provided that section sixteen, or one thirty-sixth part, should always be set apart for maintaining public schools within the township. By the enabling Act of 1818 Congress gave these lands to the new states, and in addition promised three per cent of the net proceeds of all public lands sold in Illinois after 1 January, 1819, to be appropriated by the state for the encouragement of learning. Practically nothing was done in pursuance of this Act until 1830, and the system did not take its present form until 1854, when the first state superintendent was appointed. There were no special provisions in the State Constitution of 1848 relative to education; but in the Constitution of 1870, which is the Constitution still in force, there was

a special article of five sections bearing on education; and on this subject these articles are now the fundamental law of the state.

By the first article a public free school system is to be provided by the general assembly, whereby all children of the state may receive a good common school education; by the second, moneys donated, granted, and received must be applied to the objects for which they were made; by the third, it is provided that neither the general assembly nor any county, city, town, township, school district, or other public corporation shall ever make any appropriation, or pay from any public fund whatever, anything in aid of any church or sectarian purpose, or to help support or sustain any school, academy, seminary, college, university, or other literary or scientific institution controlled by any church or sectarian denomination whatever; nor shall any grant or donation of land, money, or other personal property ever be made by the state, or any such public corporation, to any church or for any sectarian purpose. Section four provides that no teacher or school officer shall be interested in the sale, proceeds, or profits of any school book or school furniture. Section five provides that there may be a superintendent in each county, whose powers, duties, and manner of election are to be prescribed by law.

Under this article of the constitution there has been much legislation, and the first section has been stretched in its meaning to permit the building of high schools. There has also been legislation permitting the mayor of Chicago to name school trustees to manage the schools and select a superintendent. In 1906 there were in Illinois 12,973 public free schools, in which there were 28,128 teachers, of whom 5935 were men and 22,193 were women. The male teachers received on an average \$74.57 per month and the females \$57.54. In the year 1906 the total cost of the public schools was \$25,895,178.90, which is a cost of \$17.58 for every pupil. This amount was derived from the income of the invested township funds, the state tax, and the district tax levies. In 1907 there were 438 high schools enrolling 52,394 pupils, from which 6311 pupils were graduated.

University of Chicago.—The University of Chicago is not only the greatest educational institution in Illinois, but one of the most richly endowed universities in the United States. John D. Rockefeller is its principal benefactor. The assets of the university are now more than \$25,000,000. The present University of Chicago was incorporated in September, 1890. The university has preparatory, under-graduate, graduate, post-graduate, and professional departments. In the schools of law, theology, education, and medicine more than 300 additional courses are given. Unlike any other American university it has no vacation period. The scholastic year is divided into four quarters of twelve weeks each. Students may enter at the first of any quarter and are allowed such credits as they may have from other accredited universities. In the scholastic year 1905-06 the number of enrolled students was 5079. The university has a library of more than 400,000 volumes.

The North-Western University at Evanston is a Methodist institution, which in 1907 had 3662 enrolled students. In 1907 there were in Illinois 55 collegiate institutions, with 1781 instructors and 29,818 students.

CATHOLIC EDUCATIONAL SYSTEM.—Illinois is pre-eminent for its Catholic educational system. In recent years it is conceded that in America the parochial schools are the life of the Church. In Chicago there are 87,040 pupils in the parochial schools. There are five high schools with an attendance of 1250 students. In the colleges and academies for boys there are 3000 students; in the academies for girls there are 5100 pupils. In Chicago the total

number of pupils in the parochial schools, academies, and colleges is 96,390.

Catholic Colleges in Illinois.—Loyola University, Chicago, which is still in course of construction, will be, when completed, the largest Catholic educational institution in Illinois. The five main buildings will stand in a semicircle facing Lake Michigan on the north side, about the same distance from the centre of the city as the Chicago University is from the centre of Chicago on the south side. The law school, which is now established, is in the down-town district, and the other professional schools, when established, will also be there. The preparatory and collegiate departments will be on the university grounds. The university will be, when completed, one of the finest Jesuit institutions in America. St. Ignatius College, Chicago, was erected in 1869 and exists under a charter granted by the State of Illinois. The number of students in 1907 was 600. The college library contains 28,000 volumes. Only a few miles distant from St. Ignatius College is the place on the south branch of the Chicago River where Father Marquette, the great Jesuit explorer of Illinois, built the first white human habitation on the site of the metropolitan city of Chicago. De Paul University (formerly St. Vincent's College), Chicago, is conducted by the Vincentian Fathers. The number of students in 1907-08 was 252.

The importance of the Catholic school system here is shown by the fact that in Illinois there are 20 colleges and academies for boys, with an attendance of 3838; 44 academies for girls with an attendance of 8553; 1042 parochial schools with an attendance of 119,425. Figuring the cost of educating every Catholic pupil at \$17.58, which is the cost under the public school system, there is an annual saving to the state by the Catholic educational system of \$2,097,509.08. In Illinois as in other states the Church receives no state aid and Catholics pay taxes for the support of all schools. The standard of secular education in the Catholic schools ranks higher than that in the public schools. In examinations for teachers in the public schools and in competitive examinations for the civil service, graduates of Catholic schools have taken higher percentages than graduates of public schools. No religious training of any kind is given in the public schools.

FIRST SETTLERS.—In 1790 only 4280 persons were found between the Ohio River and the Lakes, Pennsylvania and the Mississippi. In 1791 there were only 1221 white inhabitants in Illinois. The country had been explored by the Jesuits and other Catholic missionaries and French traders. Some French settlers followed the missionaries. American immigration did not begin until the year 1779-80. The southern part was the first to be populated. The first immigrants came from Pennsylvania, West Virginia, Maryland, South Carolina, and Kentucky. In 1810, the census returns showed the inhabitants of Illinois to number 11,501 whites, 168 slaves, and 613 of all others, an increase of four hundred per cent during the preceding decade. Of the early-comers from the south a large proportion were Irish republicans, who believed in Ireland as an independent nation, and who understood and sympathized thoroughly with American ideals and institutions even before their arrival in the States. Many of these Irish pioneers of Illinois had a good education, among them John Doyle, the first schoolmaster in the state; they made their impress especially on the southern part. A descendant of one of them, Stephen A. Douglas, a convert to Catholicism, was a judge, U. S. senator from Illinois, and presidential candidate against Lincoln. So important was this element in the political life of the state, that eight of the first sixteen governors were Americans of Irish descent.

The northern half of Illinois, because of its location,

was originally peopled by other races. New England had held French power in Canada under control until Wolfe broke it on the plains of Abraham; but the Americans had not driven the red man from the lake region until a considerable time after Clark had entered Illinois from the south. Finally the red man gave way at the narrow gateway, between Lake Erie and the Ohio River, and then there was an inrush of Americans of varied foreign descent as well as more recent immigrants from Europe. The majority were the Puritans of New England, Irish Catholics, and Germans from Pennsylvania. Up to the year 1850 the Irish immigration was the largest and the German second; afterwards the German was the largest and the Irish second, then come the Swedes, the Poles, the English, the Bohemians, the Canadians, the Norwegians, the Danes, the Scotch, the Swiss, the Welsh, and the Belgians in order. Since about 1900 the great tide of immigration has been Slavic and Italian.

ADMISSION TO THE UNION.—Illinois was admitted to the Union 31 December, 1818, during the presidency of James Monroe. The enabling Act of 1818 gave the people the right to form a state constitution within the limits fixed by Congress. There was a constitutional convention, the members of which were selected by the white citizens who were six months in the territory. The delegates were empowered to call a new convention to form a constitution or they might do the work themselves. The only conditions imposed were that the form of government must be republican, and not in conflict with the ordinance of 1787, except in the matter of boundaries. Congress did not promise to recognize the new state unless a census were taken which should show at least 40,000 population. A census was taken, showing a little over the required number. The election for the convention was held in July, 1818, and assembled at Kaskaskia in August, 1818. This convention, consisting of 32 members, adopted the first constitution known as the Constitution of 1818, which was modelled on the constitutions of Kentucky, Ohio, and Indiana. Another constitution was adopted in 1848, and the present one in 1870.

POLITICAL HISTORY.—The history of Illinois up to 1803 is treated in the article **LOUISIANA**. The political history of Illinois had its beginning on the Heights of Abraham, at Quebec. The defeat of Montcalm by Wolfe was the last act of a great drama. By this defeat Illinois became British territory instead of French and such it remained until Colonel George Rogers Clark, an Irish-American, acting under the commission and receiving the assistance of Patrick Henry, Governor of Virginia, put Illinois under the American flag in 1778. The surprise of Kaskaskia and taking of Rocheblave, the English commandant, the fourth of July, 1778, the surrender of Cahokia, the diplomatic handling of hostile Indians, the march on Vincennes and capture of Hamilton, the British commandant, make one of the most thrilling chapters in the history of the American Revolution. Illinois did not become a territory of the United States by the Louisiana Purchase (1803) but by the sword of Clark. On 4 July, 1778, the English flag was hauled down at Kaskaskia and the Illinois Country was taken possession of in the name of Virginia, whose governor, Patrick Henry, had authorized the expedition. In October, 1778, the House of Delegates of Virginia extended jurisdiction over the newly acquired territory. A law was passed in Virginia creating the County of Illinois, and Captain John Todd was appointed commandant in 1779. The treaty of peace with Great Britain in 1783 gave the North-West to the Thirteen States, and in 1784 Virginia ceded her claim to the United States.

The famous ordinance of 1787, one of the last acts of the old confederation, provided first for a temporary form of government and then decreed how states

should be created and their governments established. By this ordinance religious freedom and civil rights, the writ of habeas corpus, and trial by jury were guaranteed. By its provisions the states to be formed out of the North-West territory were to remain forever a part of the United States of America, and it was also provided, that in them "neither slavery nor involuntary servitude should exist in the territory otherwise than for crime, whereof the party should have been duly convicted." By the Act of Congress in May, 1800, the North-West territory was divided, the Indiana territory being created. This new division embraced the present States of Indiana and Illinois; the seat of government was at Vincennes. In 1809 the territory of Illinois was formed with the seat of government at Kaskaskia.

On 18 April, 1818, an enabling Act was passed by Congress to the effect that "the inhabitants of the territory of Illinois be, and are hereby authorized to form for themselves a constitution and state government, and to assume such name as they should deem proper and the said state when formed shall be admitted into the Union upon the same footing with the original states in all respects whatever." By an amendment proposed by Judge Pope, the Illinois delegate to Congress, the northern boundary of the state was extended to the parallel of 42° 30' N. lat. instead of 41° 39' as reported by the committee. The object of this amendment, as stated by Judge Pope, was "to gain for the proposed state a coast on Lake Michigan; but this would afford additional security to the perpetuity of the Union, inasmuch as Illinois would thereby be connected, through the lakes with the states lying to the eastward." The bill, as amended, passed; and if the amendment had not been adopted the territory out of which fourteen counties have been carved, would have been lost to Illinois and become a part of Wisconsin. By adding this territory covered by the amendment, Illinois in 1824 was saved from becoming a slave state, and thereby, afterwards under the guiding hand of Lincoln, made safe for the Union. Although the Missouri compromise of 1820 prohibited slavery north of 36° 30', and Illinois was north of 36° 30', yet the slaveholders made a desperate attempt to make Illinois a slave state; but the friends of freedom, especially those in the northern counties, led by Governor Cole won the fight in 1824, when the state declared against slavery; but slavery was not legally abolished until the adoption of the Constitution of 1848.

Mormonism got a foothold in Illinois between 1840 and 1846, at a place called Nauvoo on the Mississippi, but Joseph Smith, the so-called prophet, precipitated a local civil war and was killed by a mob while in jail; the Mormons were driven out of Illinois and afterwards moved to Utah. Nauvoo now contains a Catholic academy for girls. Extensive internal improvements in the state were projected between 1830 and 1840, and some were made, the most important and successful enterprise being the building of the Illinois and Michigan canal. The state was saved from bankruptcy and its credit established by the foresight and able leadership of Governor Ford.

In the fifties Illinois assumed the most important rôle in the life of the nation. Stephen A. Douglas and Abraham Lincoln became national characters. The Kansas-Nebraska bill, which was fathered by Stephen A. Douglas, declared in one section the Missouri Compromise to be inoperative and void because it was inconsistent with the principle of non-intervention by Congress with slavery in the states and territories as recognized by the compromise measure of 1850. The goal of the ambition of Douglas was the presidency. The Fugitive Slave Law had been passed and the demands of the slaveholders were confirmed by the Supreme Court of the United States in the Dred Scott decision. Douglas wanted to be senator from

Illinois in 1858, and president in 1860. Lincoln was a senatorial candidate at the same time. The election resulted in Douglas's being chosen senator, but certain of his declarations on the slave question enraged the slaveholders of the South, split the Democratic party and made Lincoln a national figure and President of the United States. When Fort Sumter was fired on in April, 1861, most of the Illinois Democrats followed the leadership of Stephen A. Douglas, pledged their support to, and afterwards offered their lives for, the cause of the Union. In the Civil War Illinois furnished the equivalent of 214,133 men for three years' service. It gave to the Union army men like Logan, Grant, Shields, and Mulligan.

ECCLESIASTICAL STATISTICS.—The ecclesiastical province of Chicago, which coincides in its territorial limits with the State of Illinois, comprises the Archdiocese of Chicago, and the Dioceses of Belleville, Alton, Peoria, and Rockford. In it there are 1 archbishop, 6 bishops, 1217 priests, 211 ecclesiastical students, 806 churches, 84 missions, 86 chapels, 2 training schools for boys, 1 industrial school for girls, 12 orphan asylums, 2 infant asylums, 1 industrial and reform school, 100,872 young people under Catholic care, as pupils, orphans, and dependents, 1 working-boys' home, 3 working-girls' homes, 1 school for mutes, 11 homes for the aged, 50 hospitals, 5 committees nursing sick at their homes, and a Catholic population of 1,468,644. No records have been kept or census taken which would show the Catholic population according to race in Illinois, but the Catholics of Irish birth or descent far outnumber all others. Then in their order come the Germans, Poles and other Slavic people, Italians, Bohemians, and French. Chicago was made an episcopal see by Pope Gregory XVI, and Right Rev. William Quarter, a native of Ireland, was appointed as its first bishop. He was consecrated 10 March, 1844, and died 10 April, 1848. He began his labours with several priests in his diocese and no ecclesiastical students. He ordained twenty-nine priests and left forty clergymen and twenty ecclesiastical students. He built thirty churches, ten of which were either brick or stone; at his death all these were free from debt. His successors were Bishops James Van de Velde, Anthony O'Regan, and James Duggan.

In 1880 Chicago became an archdiocese, the Most Reverend Patrick A. Feehan being its first archbishop, during whose administration schools were built to accommodate 60,000 pupils. His successor is the Most Reverend James E. Quigley; having found that the Church had made such growth in his diocese, that it could not be effectively administered by one person, he petitioned Rome to erect the Diocese of Rockford, and include in it twelve counties then forming part of the archdiocese. The petition was granted 23 September, 1908. The Archdiocese of Chicago now comprises the Counties of Cook (including Chicago), Lake, Du Page, Kankakee, Will, and Grundy, and in Catholic population is next to the Archdiocese of New York (see CHICAGO, ARCHDIOCESE OF). The Bishop of Alton is Rt. Rev. James Ryan; of Belleville is Rt. Rev. John Janssen. The Bishop of Peoria was Rt. Rev. John Lancaster Spalding, who has recently resigned on account of failing health; the administrator is Rt. Rev. Peter J. O'Reilly. The Bishop of Rockford is Rt. Rev. Peter J. Muldoon, formerly auxiliary Bishop of Chicago.

Perhaps the most important event in the history of the Catholic Church in America since the Third Plenary Council of Baltimore was the first American Catholic missionary congress held in Chicago, 15-18 November, 1908, under the auspices of the Catholic Church Extension Society of the United States of America. At that missionary congress eighty-nine distinguished members of the American Catholic hierarchy, as well as His Excellency, the Most Reverend

Diomed Falconio, were in attendance. The Catholic Church Extension Society (see MISSIONS) was founded and fostered by Archbishop Quigley, who guided its destinies and gathered around him the men who made the Church Extension a great factor in the Catholic life of America. The first Catholic missions of Illinois were at Kaskaskia, Cahokia, Shawneetown, Cave-in-Rock, Diamond Grove, Galena, Ottawa, LaSalle, Alton, Prairie du Long, Belleville, Shoal Creek, Prairie du Rocher, Edwardsville, Jasper County, Edgar County, McHenry County, Lake County, and Chicago. The first Catholic immigrants to Illinois were the French, and these immigrants were relatively few in their numbers. The first great tide of Catholic immigration was in 1846, 1847, and 1848, when the Irish famine was at its height. These Irish Catholic immigrants settled in great numbers in the northern part of Illinois and especially Chicago. The tide of Irish Catholic immigration flowed to Chicago until recent years. From 1841 until 1850 there was a large German Catholic immigration to Illinois. Since 1890 there has been in Chicago a great influx of Polish, Lithuanian, and Italian Catholics. The Poles became so important in point of numbers in recent years that Archbishop Quigley recommended that an auxiliary bishop of the Polish race be appointed, which was done when Bishop Rhode, the first Polish bishop in America, was consecrated at Chicago, 29 July, 1908.

Catholics Distinguished in Public Life.—The most distinguished Catholic in public life in Illinois was General James Shields. He was born in Pomeroy, Tyrone, Ireland, immigrated to Illinois when a young man, became State Auditor, Justice of the Supreme Court of Illinois, General in the United States Army and United States Senator from Illinois, and afterwards United States Senator from Minnesota and Missouri. He fought in the battle of Chalcutepac and was present at the taking of the city of Mexico. During the Civil War Gen. Shields again became a soldier and on 23 March, 1862, defeated Stonewall Jackson at Winchester, for which he was congratulated by General McClellan, and the words "Winchester, March 23, 1862" were ordered to be inscribed on the Pennsylvania flags. He was distinguished as a lawyer, jurist, statesman, and soldier, and Illinois when invited in 1893 to place the statues of two of her most distinguished men in the Memorial Hall at Washington placed there the bronze statue of General James Shields. A few of the Catholics distinguished in public life are: Judge Gibbons, of the Circuit Court of Chicago, author of "Tenure and Toil; or the Rights and Wrongs of Capital and Labor", and other works; Judge Marcus Kavanaugh, of the Superior Court, Chicago, formerly Colonel of the Seventh Illinois Regiment, author of "Scrapper Halpin" and other stories; Judge Clifford, of the Circuit Court, Chicago; W. J. Hynes, orator and lawyer, and formerly congressman; Dr. J. B. Murphy, a surgeon of world fame, honorary graduate of the Universities of Berlin, Sheffield, Vienna, Prague; ex-Judge Edward F. Dunne, formerly mayor of Chicago; Maurice T. Maloney, ex-Attorney-General of Illinois. John Dougherty, Lieutenant-Governor, was always a Catholic; Governor Bissell, Justice Mulkey of the Supreme Court, and Stephen A. Douglas were converts.

Principal Religious Denominations.—The religious census of 1906 for Illinois gives a total population of 5,418,670, of whom 3,341,473 did not attend any church. Members of all denominations numbered 2,077,197, of whom 932,084 were Roman Catholics (the ecclesiastical authorities, however, computed their number as being 15 per cent greater, i. e. 1,071,896, while in 1909 they are believed to number 1,468,644); of Greek Orthodox there were 17,536; all kinds of Methodists, 263,344; all kinds of Lutherans, 202,-

566; Baptists, 152,870; Presbyterians, 115,602; Disciples of Christ, 105,068; German Evangelists, 59,973; Congregationalists, 54,875; Christian Scientists, 5675; Unitarians, 2339; Quakers, 2343; others, 162,922. The total number of church organizations (parishes, etc.) in Illinois in 1906 was 9374; church edifices, 8626; value, \$66,222,514; debt, \$6,317,979.

LAW AND RELIGION.—Freedom of worship is guaranteed by the Constitution of 1870. It is provided by the criminal code that: "Whoever disturbs the peace and good order of society by labor (works of necessity and charity excepted) or by amusement or diversion on Sunday, or whoever shall be guilty of noise, riot or amusement on Sunday, whereby the peace of any family may be disturbed, shall be fined not to exceed \$25" In the administration of oaths in legal matters the person swearing uplifts his hand and swears by the ever-living God but is not compelled to lay the hand on or kiss the Gospels. Where a person has conscientious scruples against taking an oath he may make his solemn affirmation or declaration. There is no provision in the Criminal Code of Illinois against blasphemy and profanity; but one guilty of blasphemy and profanity may be charged with disorderly conduct and fined not to exceed \$200. Both houses of the Legislature according to custom are opened with prayer. Christmas Day and New Year's Day are legal holidays; but Good Friday is not. The clergy are exempt from jury service, but not from military service. Custom, however, exempts them from military service.

Seal of Confession.—There is no statute in Illinois making confessions to a priest privileged communications. The common law is therefore in force. Greenleaf in his standard work on Evidence I—XIII, p. 248, states what this common-law rule is: "In the common law of evidence there is no distinction between clergymen and laymen; but all confessions, and other matters not confided to legal counsel, must be disclosed when required for the purpose of justice. Neither penitential confessions, made to the minister or to members of the party's own Church, nor secrets confided to a Roman Catholic priest in the course of confession, are regarded as privileged communications". While this is and has been the law in Illinois there is no instance where the courts have forced a priest to divulge the secrets of the confessional. No priest would divulge them and no court in Illinois would hold him for contempt in refusing to answer.

Church Property.—Churches may be incorporated under the General Corporation Act of 1872 and its amendments; but in the Archdiocese of Chicago "the Catholic Bishop of Chicago" is a corporation sole and acts by the archbishop or in his absence by the auxiliary, or in case of death by the administrator. This corporation exists under a special statute. In this corporation sole is vested the title to all diocesan property and this has been most conducive to the growth of the Church. In other dioceses of the state the title to church property is vested in the bishop. Under section 3, article ix, of the constitution property used exclusively for school, religious, cemetery, and charitable purposes may be exempted from taxation; but such taxation must be by general law. By the Revised Act, property used exclusively for church purposes has been exempted; but property used for parochial school purposes has not been exempted. No attempt, however, has been made to collect taxes for such schools.

MARRIAGE AND DIVORCE.—*Marriages.*—Marriages between cousins of the first degree or closer relations are prohibited. Insane persons and idiots are not capable of contracting marriage. Male persons over the age of seventeen years and females over the age of fourteen years may contract and be joined in marriage. Marriages may be celebrated, either by a minister of the Gospel in regular standing in the church or society

to which he belongs, by a judge of any court of record, by a justice of the peace, by any superintendent of any public institution for the education of the deaf and dumb, or if the parties or either of them are Quakers they may be lawfully married in a certain manner as pointed out by the statute. All persons belonging to any religious society, church, or denomination may celebrate their marriage according to the rules and principles of such religious society, church, or denomination. Persons intending to be joined in marriage must before their marriage obtain a licence from the county clerk of the county where such marriage is to take place. For the purpose of ascertaining the age of the parties, and the legality of the contemplated marriage, the county clerk may, and he always does, request the affidavit of either of the parties, or other witnesses. When a minor is an applicant for a marriage licence, or if any applicant is desirous of obtaining a licence to marry a minor, and the parent or guardian of such minor is not present to give his or her consent, then such consent may be in writing, and must be attested by two witnesses. The county clerk would incur a heavy penalty if he issued a licence for the marriage of a male under the age of twenty-one, or of a female under eighteen, without the consent of parent or guardian.

The person authorized to marry any couple must, within thirty days after the solemnization of the marriage, make a certificate thereof, and return the same together with the licence, if any have been issued, to the clerk of the county in which the marriage took place. The county clerk must make a registry thereof in a book kept for that purpose in his office, a registry containing the Christian names and surnames of the parties, the time of their marriage and the name of the person certifying the same; he also endorses on such certificate the time when the same is registered, gives it a number and preserves the same. If the clerk fail to register the marriage certificate within thirty days after the same is returned to him for that purpose (his fees therefor being paid), or if any minister, judge, justice of the peace, or other authorized person shall celebrate a marriage without a licence having been first obtained therefor, as provided by law, or shall fail to make and return to the county clerk such certificate in the time and manner provided by law, he shall forfeit and pay \$100. Common law marriages were recognized in Illinois until recently, when by statute the rule was changed because of the number of fraudulent acts of parties claiming the benefit of these meretricious relations.

Divorce.—The grounds for divorce are impotency, wife or husband living at time of such marriage, adultery, desertion without reasonable cause for the space of two years, habitual drunkenness for the space of two years, attempted poisoning or other means showing malice, extreme and repeated cruelty, conviction of felony or other infamous crime. The party asking the divorce must be a resident of the state one year before the filing of the bill, unless the offence complained of was committed within the state, or whilst one or both of the parties resided in the state. Divorce in no way affects the legitimacy of the children of such marriage, except in cases where the marriage is declared void on the ground of a prior marriage. The proceedings must be had in the county where the complainant resides, but process may be directed to any county in the state. The process, practice, and proceedings are the same as in other cases in chancery, and service may be had by publication. When the defendant appears and denies the charges in the complainant's bill of complaint, either party has the right to have the case tried by a jury; but jury trials are rarely asked for. When the bill is taken as confessed, the court proceeds to hear the cause by examination of witnesses in open court. Where no answer is put in by the defendant a trans-

cript of the evidence must be signed by the judge and preserved as a certificate of evidence in order to sustain the decree. Most default decrees are obtained on the ground of desertion or cruelty. If the charge be cruelty there must be proof of more than one act, and the complainant must be supported by at least one witness. In Illinois, as in other states, divorces have become a menace to society.

The court may on application of either party make such order concerning the custody and care of the minor children of the parties during the pendency of the suit, as may be deemed expedient and for the benefit of the children. The court may award alimony *pendente lite*, solicitor's fees, and suit money, and when a divorce is decreed the court may make such order touching the alimony and maintenance of the wife, the care, custody, and support of the children, as from the circumstances of the parties and the nature of the case, shall be fit, reasonable, and just; and in case the wife be the complainant, to order the defendant to give reasonable security for such alimony and maintenance, or may enforce the payment of such alimony and maintenance in any other manner consistent with the rules and practices of the court. And the court may on application, from time to time, make such alterations in the allowance of alimony and maintenance, and the care, custody, and support of the children, as shall appear reasonable and proper. Anyone advertising for divorces is subject to a fine of from \$100 to \$1000 for each offence, or imprisonment in the county jail not less than three months nor more than one year, or both in the discretion of the court. Neither party to the divorce must marry within one year. There is a "separate maintenance" statute in Illinois, which is in the nature of a divorce *a mensa et thoro*.

PUBLIC INSTITUTIONS.—In Illinois there are schools for the deaf and blind at Jacksonville; industrial home for the blind at Chicago; charitable eye and ear infirmary at Chicago; hospitals for the insane at Jacksonville, Kankakee, Elgin, Anna, Watertown, and Bartonville; asylum for insane criminals at Chester; colony for epileptics in process of organization, location not yet decided upon; asylum for feeble-minded children at Lincoln; soldiers' orphans' home at Normal; soldiers' and sailors' home at Quincy; soldiers' widows' home at Wilmington. There are in addition penitentiaries at Joliet and Chester; a reformatory at Pontiac; a training school for girls and home for juvenile female offenders at Geneva; and a school for boys at St. Charles.

SALE OF LIQUOR.—The sale of liquor is considered a legitimate business in Illinois if the keeper of the dramshop have a licence, but the keeping open of a tipping house on Sunday is forbidden by statute under penalty of \$200; however, in Chicago there is an "open Sunday" under an ordinance in contravention of the statute. The Dramshop Act of Illinois provides heavy penalties for the sale of liquor at retail without a licence, and cities and villages may pass ordinances governing the sale of liquor within their territorial limits. A violation of either the Dramshop Act or a city or village ordinance is *quasi* criminal in its nature, and the punishment may be either a fine or imprisonment or both. It may be said generally with reference to the sale of liquor, that the people of Illinois have adopted the theory of regulation rather than prohibition.

WILLS AND TESTAMENTS.—In Illinois the privilege of disposing by will is not recognized by the civil law as a natural right, but depends on positive law, and is wholly within legislative control. In Illinois one who has testamentary capacity may make a will; and the tests of testamentary capacity are: ability to transact ordinary business, and to understand the business in hand at the time of making the will. To entitle a will to probate

it must be in writing and signed by the testator or testatrix, or in his or her presence by some one under his or her direction; attested by two or more credible witnesses; two witnesses must prove that they saw the testator or the testatrix sign the will in their presence or that he or she acknowledged the same to be his or her act or deed; they must swear that they believed (or believe) the testator or testatrix to be of sound mind or memory at the time of signing or acknowledging the same. A will made according to the laws of a foreign country, which was the testator's domicile, may be proved in Illinois as to personality only; and if made and proved in another state, an exemplified copy may be admitted to probate in Illinois, and affect realty as well as personality. A citizen of Illinois, temporarily absent, may make a will according to the law of the place where he is situated. The courts do not favour defeating a will for mere informality; and if the intention can be ascertained from the instrument, that intention will be carried out if possible. No time is prescribed within which a will must be presented for probate; but there is a penalty for secreting a will. A husband cannot disinherit a wife by his will; she may renounce and take under the statute. Appeal lies from the order of the probate or county court to the circuit court. A bill in chancery under the statute may be filed to set aside a will or the probate thereof. This statute is an enabling act and a statute of repose, and is not a limitation upon any general jurisdiction. Only a party in interest can contest the validity of a will.

CHARITABLE BEQUESTS.—The statute of charitable uses (43 Eliz. 7) is a part of the common law of the State of Illinois, and such statute has not been repealed by statutes for the regulation and maintenance of state charitable institutions. Charitable bequests are viewed favourably in equity; and while equitable jurisdiction over them is not derived from the statute of charitable uses, such statute is regarded as showing the general intent of the term "charitable". The Supreme Court of Illinois in the leading case of "Hoeffer et al. vs. Clogan et al., 171 Ill. 462" has defined "charity" as a gift to be applied consistently with existing laws, for the benefit of an indefinite number of persons, either by bringing their hearts under the influence of education or religion, by relieving their bodies from disease, suffering, or constraint, by assisting them to establish themselves for life, or by erecting or maintaining public buildings, or works, or otherwise lessening the burdens of government. In this case the supreme court of Illinois held that the doctrine of superstitious uses, arising from the statute of I Edward VI, chap. 14, under which devises for procuring the saying of Masses were held void, is not in force in Illinois and has never obtained in the United States; and that a devise of real estate to a religious society in trust, the property to be sold and the proceeds expended for saying Masses for the repose of the testator's soul and the souls of his relatives, is a valid charitable bequest. And the court also held in this case, that a devise in trust to an unincorporated religious society will not be allowed to fail for want of a trustee, as the court will appoint a trustee to take the gift and apply it to the purposes of the trust. In this case the court laid stress on the fact that the Masses said in the church were public. Charitable trusts will be upheld in Illinois though vague and general in terms; and they do not fail because the beneficiaries are subject to change.

CEMETERIES.—Cemetery associations or companies incorporated for cemetery purposes, by any general or special law in Illinois, may acquire by purchase, gift, or devise, and may hold, own, and convey, for burial purposes, only so much land as may be necessary for use as a cemetery or burial-place for the dead.

There may be a conveyance of any lot of land not exceeding five acres to a county for the interment of the dead, for the use of any society, association, or neighbourhood, and such will thereafter be exempted from taxes. There are laws in Illinois governing the sale or lease of land for cemetery purposes; the sale of land not suitable for cemetery purposes; the removal of cemeteries; fixing penalties for destroying, mutilating, or injuring any tomb or other property, or committing a breach of the peace; the enforcement of police protection; the making of gifts in trust for purposes of repairs, improvements, and ornamentation; the investment of trust funds; the exempting of trust funds from taxation; the organization of county cemetery boards and providing for burial of indigent soldiers and sailors. The laws governing cemeteries impose no additional burden on cemeteries owned by Catholic institutions.

HUGH O'NEILL.

Illinois Indians (Illinois, through the French, from Illini-wek, i. e., men: the name used by themselves), an important confederacy of Algonquian tribes formerly occupying the greater part of the present state of Illinois, together with the adjacent portion of Wisconsin, Iowa, and Missouri. Their language, which was perhaps the softest of all the Algonquian tongues, differed only dialectically from that of the Miami, their eastern neighbours and usual allies. They probably numbered originally from 8000 to 10,000 souls, in five principal sub-tribes, the Cahokia, Kaskaskia, Michigamea, Peoria, and Tamaroa. Physically the early Illinois are described as tall, robust and well-featured, but lacking in courage and steadiness of purpose, and greatly given to licentiousness. The priests and conjurers seem to have been even more influential among them than in other tribes. They were rather hunters than farmers and seldom kept their villages long in one place. Their houses were long communal cabins, with four to five fires ranged along the central passage, each fire accommodating two families. The great village of the combined tribes in 1692 was estimated by Father Rasle to contain 300 such cabins, while other explorers of about the same period reported as high as 400. Polygamy was common, a

man sometimes marrying several sisters of the same family, and they appear to have had the clan system. Among their great ceremonies was the noted Calumet dance, the special aversion of the missionaries, which spread from the Illinois to all the tribes of the central region. Their dead were generally disposed of by being wrapped in skins and fastened upright to trees. They carried on a defensive war against most of the surrounding tribes, as well as against the invading Iroquois, but were uniformly friendly toward the French and the English.

So far as known the first white man to make the acquaintance of the Illinois was the Jesuit pioneer, Father Claude Allouez, who met them as visitors at his mission at La Pointe (Bayfield, Wis.) in 1667, and again at the Mascoutens village in southern Wisconsin three years later. In 1673 Marquette, on his voyage of discovery down the Mississippi, was welcomed by them about the mouth of the Des Moines in Iowa, and on his return passed through their villages on the Illinois, preaching as he went. He had already made a study of the language, at La Pointe, in anticipation of establishing a mission, as they now requested. Permission being given, he set up his altar, dedicated to the Immaculate Conception, among the Kaskaskia in April, 1675, but died a month later while on his way to Mackinaw. The work was taken up by Allouez, but again discontinued owing to the Iroquois inroads and the opposition of La Salle, who brought in three Recollect missionaries—Fathers La Ribourde, Membré, and Hennepin. They found little encouragement, however, and Father La Ribourde being slain by a roving war party, the Recollect attempt was abandoned. In 1684 Allouez returned and resumed work among the Peoria gathered at the French fort at the head of Peoria Lake (Rockfort, Ill.). He was followed by Gravier (1687), Rasles (1692), and again by Gravier (1693), to whom we owe the first grammar and dictionary of the language. Father Gravier died in 1706 from a wound received in an encounter with a heathen mob. A second mission was founded about 1700 among the Tamaroa, near the French post of Cahokia, nearly opposite St. Louis, and another about the same time among the Kaskaskia. Twice a year, for a few weeks in summer and for a longer period in winter, all the bands left their villages for the buffalo hunt and were followed by the missionaries. When visited by Charlevoix in 1721 the missions were jointly under the care of Jesuits and priests of the Seminary of Foreign Missions. The Peoria were still almost all pagan, as were portions of the other tribes, but the majority were now Christian, and intermarriage with the French settlers had become common. About this time several of the nation, including the chief, Chicago, visited France and were much impressed by what they saw.

In spite of their receptive temperament the Illinois were fickle, and intemperance introduced by the French garrisons did much to nullify the work of the missionaries and demoralize the tribes. As allies of the French against the hostile Chickasaw and Natchez of the lower Mississippi, they suffered heavily. In 1730 a detachment accompanied the ill-fated expedition of d'Artaguettes against the Chickasaw, and among the prisoners who suffered a horrible death at the stake was the devoted Jesuit missionary, Senat. By this time invasion by the northern tribes and wholesale dissipation at home were rapidly thinning the number of the Illinois, and in 1750 they had been reduced to about 1000 souls with apparently but one mission. The priests of the Foreign Missions were now devoting themselves entirely to the French. On the transfer of Louisiana to Spain in 1763 the Jesuit missions, including those of the Illinois country, were suppressed and confiscated, although the missionaries generally remained as secular priests. The murder of the celebrated chief Pontiac, by a Kaskaskia Indian bribed by an English trader, brought

down upon the Illinois the swift vengeance of the confederated northern tribes, who began a war of extermination that in a few years reduced the nation to a handful of refugees among the French settlements. In 1778 there remained only 380 in two villages in the neighbourhood of Kaskaskia, completely demoralized by drunkenness. In 1833 the survivors, represented by Kaskaskia and Peoria, sold their remaining lands in Illinois and removed to north-east Oklahoma, where they are now confederated with the remnant of the Wea and Piankishaw (part of the Miami), under the official designation of "Peoria and confederated tribes", the entire body numbering in 1908 only 204, all of mixed white blood, but still retaining some share of their language and their Catholic inheritance.

JAMES MOONEY.

Illytd (ILTUTUS), SAINT, flourished in the latter part of the fifth and beginning of the sixth century, and was held in high veneration in Wales, where many churches were dedicated to him, chiefly in Glamorganshire. Born in Armorica, of Bicanys and Rienigulida, sister of Emyr Llydaw, he was a grand-nephew of St. Germanus, Bishop of Auxerre. According to one account he crossed to Britain and joined King Arthur's Court, and later went to Glamorgan, where he was miraculously converted by St. Cadoc. These details, however, rest on a late life of the saint (Cottonian MS., Vesp. A XIV). He is supposed to have been ordained by St. Dubricius, Bishop of Llandaff, and with the assistance of Meirchion, a Glamorgan chieftain, to have built a church and a monastery, which became a centre of learning, one of the three great monastic schools in the Diocese of Llandaff. Among the scholars who flocked thither were Sts. Gildas, Samson, and Maglorius, whose lives, written about 600 ("Acta SS. Ordinis S. Benedicti", Venice, 1733), constitute the earliest source of information on St. Illytd. According to these, his school was situated on a small waste island, which, at his intercession, was miraculously reunited with the mainland, and was known as Llaniltyd Fawr, the Welsh form of Llantwit Major, Glamorganshire. The story of the miracle may have been inspired by the fact that the saint was skilled in agriculture, for he is supposed to have introduced among the Welsh better methods of ploughing, and to have helped them reclaim land from the sea. The legendary place of his burial is close by the chapel dedicated to him in Brecknockshire, and is called Bedd Gwyl Illytd, or the "grave of St. Illytd's eve", the old custom having been to keep vigil there on the eve of his feast, which was celebrated 7 February. There is still to be seen in Llantwit Major a cross, probably of the ninth century, bearing the inscription: SAMSON POSUIT HANC CRUCEM PRO ANIMA EIUS ILTET SAMSON REGIS SAMUEL EBISAR.

F. M. RUDGE.

Illuminati, the name assumed by the members of a secret society founded by Adam Weishaupt in 1776.

HISTORY.—Weishaupt was born of Westphalian parents at Ingolstadt (Bavaria), on 6 February, 1748, and lost his father in 1753. Although educated at a Jesuit school, he fell early under the influence of his free-thinking godfather, the director of the high-school of Ickstatt, to whom he owed his appointment

as professor of civil law at the University of Ingolstadt in 1772. He was the first layman to occupy the chair of canon law at this university (1773), but, in consequence of the growing rationalistic influence which he exerted over the students both in his academic capacity and in his personal intercourse with them, he came into ever sharper collision with the loyal adherents of the Church and with those who were influential in government circles. As, furthermore, his obstinate nature led him to quarrel with almost everyone with whom his intercourse was at all prolonged, he felt the need of a powerful secret organization to support him in the conflict with his adversaries and in the execution of his rationalistic schemes along ecclesiastical and political lines. At first (1774) he aimed at an arrangement with the Freemasons. Closer inquiry, however, destroyed his high estimate of this organization, and he resolved to found a new society which, surrounded with the greatest possible secrecy, would enable him most effectually to realize his aims and could at all times be precisely adapted to the needs of the age and local conditions.

His order was to be based entirely on human nature and observation; hence its degrees, ceremonies, and statutes were to be developed only gradually; then, in the light of experience and wider knowledge, and with the co-operation of all the members, they were to be steadily improved. For his prototype he relied mainly on Freemasonry, in accordance with which he modelled the degrees and ceremonial of his order. After the pattern of the Society of Jesus, though distorting to the point of caricature its essential features, he built up the strictly hierarchical organization of his society. "To utilize for good purposes the very means which that order employed for evil ends", such was, according to Philo (Endl. Erkl., 60 sq.), "his pet design". For the realization of his plans, he regarded as essential the "despotism of superiors" and the "blind, unconditional obedience of subordinates" (ibid.), along with the utmost secrecy and mysteriousness. At the beginning of 1777 he entered a Masonic Lodge and endeavoured, with other members of the order, to render Freemasonry as subservient as possible to his aims. As Weishaupt, however, despite all his activity as an agitator and the theoretic shrewdness he displayed, was at bottom only an unpractical bookworm, without the necessary experience of the world, his order for a long time made no headway. The accession to it, in 1780, of the Masonic agent Freiherr von Knigge (Philo), a man of wide experience and well known everywhere in Masonic circles, gave matters a decisive turn. In company with Weishaupt, who, as a philosopher and jurist, evolved the ideas and main lines of the constitution, Knigge began to elaborate rapidly the necessary degrees and statutes (until 1780 the Minerval degree was the only one in use), and at the same time worked vigorously to extend the order, for which within two years he secured 500 members. When the great international convention of Freemasons was held at Wilhelmsbad (16 July to 29 August, 1782) the "Illuminated Freemasonry", which Knigge and Weishaupt now proclaimed to be the only "pure" Freemasonry, had already gained such a reputation that almost all the members of the convention clamoured for admission into the new institution. Particularly valuable for the order was the accession of Bode (Amelius), who commanded the highest respect in all Masonic circles. Assisted by Bode, Knigge laboured diligently to convert the whole Masonic body into "Illuminated Freemasons". A number of the most prominent representatives of Freemasonry and "enlightenment" became Illuminati, including, in 1783, Duke Ferdinand of Brunswick, the foremost leader of European Freemasonry and the princely representative of the illuminism of his age. Other famous

members were Goethe, Herder, and Nicolai. The order was also propagated in Sweden, Russia, Poland, Denmark, Hungary, Austria, and France. But in 1783 dissensions arose between Knigge and Weishaupt, which resulted in the final withdrawal of the former on 1 July, 1784. Knigge could no longer endure Weishaupt's pedantic domineering, which frequently assumed offensive forms. He accused Weishaupt of "Jesuitism", and suspected him of being "a Jesuit in disguise" (Nachtr., I, 129). "And was I", he adds, "to labour under his banner for mankind, to lead men under the yoke of so stiff-necked a fellow?—Never!"

Moreover, in 1783 the anarchistic tendencies of the order provoked public denunciations which led, in 1784, to interference on the part of the Bavarian Government. As the activity of the Illuminati still continued, four successive enactments were issued against them (22 June, 1784; 2 March, and 16 August, 1785; and 16 August, 1787), in the last of which recruiting for the order was forbidden under penalty of death. These measures put an end to the corporate existence of the order in Bavaria, and, as a result of the publication, in 1786, of its degrees and of other documents concerning it—for the most part of a rather compromising nature—its further extension outside Bavaria became impossible. The spread of the spirit of the Illuminati, which coincided substantially with the general teachings of the "enlightenment", especially that of France, was rather accelerated than retarded by the persecution in Bavaria. In two letters addressed to the Bishop of Freising (18 June and 12 November, 1785) Pius VI had also condemned the order. As early as 16 February, 1785, Weishaupt had fled from Ingolstadt, and in 1787 he settled at Gotha. His numerous apologetic writings failed to exonerate either the order or himself. Being now the head of a numerous family, his views on religious and political matters grew more sober. After 1787 he renounced all active connexion with secret societies, and again drew near to the Church, displaying remarkable zeal in the building of the Catholic church at Gotha. He died on 18 November, 1830, "reconciled with the Catholic Church, which, as a youthful professor, he had doomed to death and destruction"—as the chronicle of the Catholic parish in Gotha relates.

OBJECTS AND ORGANIZATION.—As exhibiting the objects and methods of the order, those documents are authoritative which are given in the first and second sections of works in the bibliography. The subsequent modifications of the system, announced by Weishaupt in his writings after 1785, are irrelevant, since the order had spread far and wide before these modifications were published. The above-named documents reveal as the real object of the Illuminati the elaboration and propagation of a new popular religion and, in the domain of politics, the gradual establishment of a universal democratic republic. In this society of the future everything, according to Weishaupt, was to be regulated by reason. By "enlightenment" men were to be liberated from their silly prejudices, to become "mature" or "moral", and thus to outgrow the religious and political tutelage of Church and State, of "priest and prince". Morals was the science which makes man "mature", and renders him conscious of his dignity, his destiny, and his power. The principal means for effecting the "redemption" of the world was found in unification, and this was to be brought about by "secret schools of wisdom". These "schools", he declares, "were always the archives of nature and of the rights of man; through their agency, man will recover from his fall; princes and nations, without violence to force them, will vanish from the earth; the human race will become one family, and the world the habitation of rational beings. Moral science alone will effect these reforms 'imperceptibly'; every father will become,

like Abraham and the patriarchs, the priest and absolute lord of his household, and reason will be man's only code of law" ("Nachtr.", pp. 80 sq.; repeated verbatim in Knigge, "Die neuesten Arbeiten", p. 38). This redemption of mankind by the restoration of the original "freedom and equality" through "illumination" and universal charity, fraternity, and tolerance, is likewise the true esoteric doctrine of Christ and his Apostles. Those in whom the "illuminating" grace of Christ is operative (cf. Heb., vi, 4) are the "Illuminati". The object of pure (i. e. illuminated) Freemasonry is none other than the propagation of the "enlightenment" whereby the seed of a new world will be so widely scattered that no efforts at extirpation, however violent, will avail to prevent the harvest ("Nachtr.", pp. 44, 118; "Die neuesten Arb.", pp. 11, 70). Weishaupt later declared (Nachtrag zu meiner Rechtfertigung, 77 sqq., 112 sqq.) that Masonry was the school from which "these ideas" emanated.

These objects of the order were to be revealed to members only after their promotion to the "priestly" degree (Nachtr., I, 68). The preliminary degrees were to serve for the selection, preparation, and concealment of the true "Illuminati"; the others were to open the way for the free religion and social organization of the future, in which all distinction of nations, creeds, etc., would disappear. The government of the order was administered by the superiors of the Minerval "churches", "provincials", "nationals", and "areopagites" (who constituted the supreme council), under the direction of Weishaupt as general of the order. Members were acquainted only with their immediate superiors, and only a few trusted members knew that Weishaupt was the founder and supreme head of the order. All the members were obliged to give themselves a training in accordance with the aims of the society, and to make themselves useful, while the order, on its part, pledged itself to further their interests by the most effectual means. They were especially recommended to systematically observe persons and events, to acquire knowledge, and to pursue scientific research in so far as it might serve the purposes of the order. Concerning all persons with whom they had intercourse they were to gather information, and on all matters which could possibly affect either themselves or the order they were to hand in sealed reports; these were opened by superiors unknown to the writers, and were, in substance, referred to the general. The purpose of this and other regulations was to enable the order to attain its object by securing for it a controlling influence in all directions, and especially by pressing culture and enlightenment into its service. All illuministic and official organs, the press, schools, seminaries, cathedral chapters (hence, too, all appointments to sees, pulpits, and chairs) were to be brought as far as possible under the influence of the organization, and princes themselves were to be surrounded by a legion of enlightened men, in order not only to disarm their opposition, but also to compel their energetic co-operation. A complete transformation would thus be effected; public opinion would be controlled; "priests and princes" would find their hands tied; the marplots who ventured to interfere would repent their temerity; and the order would become an object of dread to all its enemies.

Concerning the influence actually exerted by the Illuminati, the statements of ex-Freemasons—L. A. Hossman, J. A. Starck, J. Robinson, the Abbé Baruel, etc.—must be accepted with reserve, when they ascribe to the order a leading rôle in the outbreak and progress of the French Revolution of 1789. Their presentation of facts is often erroneous, their inferences are untenable, and their theses not only lack proof, but, in view of our present knowledge of the French Revolution (cf., e. g., Aulard, "Hist. pol. de la

Rév. Franç.", 3rd ed., 1905; Lavisser-Rambaud, "Hist. générale", VIII, 1896), they are extremely improbable. On the other hand, once it had discarded, after 1786, the peculiarities of Weishaupt, "Illuminationism" was simply the carrying out of the principles of "enlightenment"; in other words, it was Freemasonry and practical Liberalism adapted to the requirements of the age; as such it exerted an important influence on the intellectual and social development of the nineteenth century.

(See MASONRY; SOCIETIES, SECRET.)

The documents, unquestionably genuine, that originated within the order and were published by the Bavarian government: *Einige Originalschr. des Ill. Ordens* (confiscated from Zwack) (Munich, 1787); with *Nachtrag* (seized from Baron Bassus) (in 2 parts, 1787); also documents made public through other agencies and recognized as genuine by Knigge and Weishaupt: *Der echte Illuminat* (Edessa, 1788); *Illuminatus dirigens oder schottischer Ritter* (1794); SPARTACUS AND PHILO (KNIGGE), *Die neuesten Arbeiten* (1794); PHILLO, *Endliche Erklärung* (1788).

Declarations by members who left the order: COSANDEY, RENNER, AND GRÜNBERGER, *Drei merkwürdige Aussagen* (1786); IDEM (with URTSCHNEIDER), *Grosse Absichten des Ill. Ordens*, with three appendices (1786).

In defence of the order: WEISHAUPT, *Apologie der Illuminaten* (Frankfurt and Leipzig, 1787); IDEM, *Vollständige Gesch. d. Verfolgung der Illuminaten in Bayern* (Frankfurt and Leipzig, 1786); IDEM, *Nachtrag zur Rechtfertigung* (1787); IDEM, *Pythagoras, oder Betrachtungen über die geheime Welt- und Regierungskunst* (1790).

Against the order or otherwise concerning it: STÄTLER (Weishaupt's colleague at Ingolstadt), *Das Geheimniss der Boshheit des Stifters des Ill. Ordens* (1787); PRESTON, *Illustrations of Freemasonry* (1856); MOUNIER, *De l'influence attribuée aux Philosophes, aux Franc-maçons et aux Illuminés sur la révolution Française* (1822); JARCKE, *Vermischte Schriften*, II (1839); DESCHAMPS-JANET, *La société et les sociétés*, II (3rd ed., 1880), 93 sqq., 115 sqq.; III (1883), 34 sqq.; WOLFRAM, *Die Illuminaten in Bayern u. ihre Verfolgung* (1899-1900); ENGEL, *Gesch. des Ill. Ordens* (1906) (rich in documents, but favourable to Weishaupt); *Hist.-polit. Blätter* (1889), I, 926-41 (official list of Illuminati).

Illumination. See MANUSCRIPTS.

Illyria, a district of the Balkan Peninsula, which has varied in extent at different periods. To the Greek geographers Illyria (*ἡ Ἰλλυρία* or *τὸ Ἰλλυρικόν*) connoted the eastern shore of the Adriatic Sea and the adjoining mountainous territory stretching into the interior, all of which was the abode of Illyrian tribes. One section of the Illyrian people had migrated to Italy, first to central Italy, where there are traces of them in Picenum and Umbria; later, towards the middle of the eighth century B. C., the Japyges crossed to Apulia and Calabria; and, at the beginning of the seventh century B. C., the Veneti to northern Italy and what is now Carinthia. Even the Illyrians who remained behind never achieved national unity. The kingdom of Bardylis and his son Kleitos, who settled in Macedonia, rose to some importance in the fourth century B. C., until they were subdued by King Philip in 357 B. C. and Alexander the Great in 335 B. C. About 250 B. C. the tribes known as the Ardiaei and Antariates, under the princes Pleuratos and Agron, terrorized the sea with their fleets and preyed on the Greek colonies on the eastern coast of the Adriatic and the neighbouring islands (Pharos, Corfu, etc.). Rome when called on by Issa, one of these Greek cities, took a hand in Illyrian affairs for the first time, and put an end to this peril. When Genthius, the Illyrian king, took sides with Perseus during the last stand of the Macedonians against Rome (171-168 B. C.), he was banished by the Romans, his kingdom left to disintegrate, and later converted into a Roman province (59 B. C.). Part of the remaining Illyrian tribes submitted voluntarily, and the rest were brought under the Roman yoke by Augustus (23 B. C.). From the time of Augustus the name Illyria was applied not only to the present Province of Illyria, since 11 B. C. a province of the empire and called Dalmatia (embracing the Dalmatia of to-day, Montenegro, the western part of Croatia, and the northern part of Albania), but was made to include the districts of Rhætia, Noricum, Pannonia, Mœsia, and Macedonia.

At the time of the division of provinces under Hadrian, it was subdivided into seventeen provinces, comprising also Thrace. When Constantine the Great in A. D. 324 divided the entire Roman Empire into four prefectures, Illyricum, as one prefecture, was assigned to Western Rome, the residence of the prætorian prefect being Sirmium. On the accession of Theodosius I (379), the prefecture was divided into Eastern and Western Illyricum, the former embracing the two civil dioceses of Macedonia, including Epirus, Thessaly, and Greece, and Dacia, under the jurisdiction of a prætorian prefect residing at Thessalonica (Saloniki). Western Illyricum was placed as a civil diocese under the authority of a vicar of the prefect of Italy residing at Sirmium. In 379, or more probably, not until 395, Eastern Illyricum became a part of the Eastern Empire (cf. Rauschen, "Jahrbücher der christlichen Kirche unter dem Kaiser Theodosius dem Grossen", Freiburg, 1897, 469-73).

Ecclesiastically, the whole of Illyricum, which had first received Christianity from St. Paul the Apostle, and Titus, his disciple, was from the first under the Bishop of Rome, as the Patriarch of the West, and, after the division of the empire, formed the eastern part of the territory subject to the pope, as Patriarch of Rome, although politically a part of Byzantium. As the patriarchs of Constantinople endeavoured to extend their patriarchal authority over Eastern Illyricum, the popes sought to preserve intact their jurisdiction over the eastern part of Illyria by appointing the bishops of Thessalonica papal vicars for Illyricum. The first of these vicars is said to have been Bishop Acholius or Ascholius, (d. 383 or 384), the friend of St. Basil. His successor, Anysius, was confirmed by Pope Damasus and his successor, Pope Siricius, as representative of the Roman See. In like manner, the succeeding popes, Anastasius I and Innocent I, extended the powers of the bishops of Thessalonica over Illyria. The authority vested in the bishops of Thessalonica over the metropolitans and other prelates of Illyria was substantially that usually enjoyed by a patriarch, except that patriarchal power is ordinary and attached to a definite see, while the jurisdiction of the vicars of Thessalonica was delegated; they exercised the patriarchal authority belonging to the pope, as his special commissary. The papal Vicariate of Thessalonica persisted for a century with practically no interruption until the connexion was weakened by the first Greek schism, brought about by Acacius, Patriarch of Constantinople (471-89), and Petrus Mongus of Alexandria over the "Henoticon". The bishops of Illyria withdrew from communion with Rome, without attaching themselves to Constantinople, and remained for a time independent. Not until Dorothea, Bishop of Thessalonica, declared for the intruded patriarch, Timotheus, did forty Illyrian bishops renounce allegiance to him (515) and proclaim to Pope Hormisdas their loyalty to Rome.

After the suppression of the Acacian Schism, the vicarship of the bishops of Thessalonica does not seem to have been immediately restored, owing to the policy of the Byzantine emperors, Zeno and Anastasius; still they enjoyed a certain precedence over the other Illyrian bishops. When, in 541, Justinian I, to increase the prestige of his native city Scupi (the present Skoplje or Uskup), raised the bishop of that city to the rank of Archbishop of Justiniana Prima, and placed him over the ecclesiastical provinces of the civil diocese of Dacia, the vicarship was restored without consulting Pope Agapetus, but was divided between the Metropolitan of Thessalonica, for the provinces in which Latin was spoken, and the Metropolitan of Justiniana Prima, for those in which Greek was the native tongue. Pope Vigilius (c. 545) was the first to give his approbation to this arrangement. The title of papal vicar was henceforth almost an

honorary title, as the popes, in the exercise of their patriarchal power, now dealt, for the most part directly with the individual bishops. At first the political situation was in their favour, Italy and Illyricum being both under the Eastern Empire. But even after a large part of both lands had been lost to the Byzantine Empire, Illyricum remained entirely under the jurisdiction of the Western patriarchs, the popes, as for example Gregory the Great and Martin I, who exercised their metropolitan authority, without any objections on the part of the Eastern emperors or the patriarchs of Constantinople. As late as the middle of the eighth century, the ecclesiastical Provinces of Eastern and Western Illyricum were undoubtedly within the Patriarchate of Rome. Soon afterwards, however, they began gradually to withdraw from communion with Rome, and the patriarchs of Constantinople succeeded in bringing Illyria under their jurisdiction. Even Pope Nicholas I attempted in vain to recover the ancient privilege of the Roman See to appoint the Bishop of Thessalonica as his vicar. From the end of the ninth century Eastern Illyria appears in the "Notitiæ episcopatum" as wholly within the Patriarchate of Constantinople, with which it was involved in the Great Schism.

Meanwhile political changes of a far-reaching nature were taking place. Towards the end of the sixth century Western Illyria was overrun by Avars and Slavic tribes, and at the beginning of the seventh century was occupied by Croats and Serbs. These gradually developed into the Slavic kingdoms of Dalmatia and Croatia, whose history was one of varied fortunes until at last they came under the authority of the Hapsburgs. Nothing but the eastern coast and the islands of the Adriatic remained under Byzantine control, and these only until the eleventh century, when the rising Republic of Venice began to establish her authority there. The Byzantine rule was of longer duration in Eastern Illyria, but even there was frequently threatened and weakened by Serbs and Bulgars, until in the fourteenth and fifteenth centuries the Osmons conquered the whole Balkan Peninsula. The name of Illyria then disappeared from history, only to acquire new significance through the modern history of Austria. Under Leopold I (1656-1705) the Serbs or Raizi, who had been established on Hungarian territory since 1690, were designated as the Illyrian nation; to provide for their protection against Magyar incursions a special office was created at the Court of Vienna, known as the Illyrian Court Deputation, which was abolished in 1777, and in 1791 enjoyed a brief revival as the "Illyrian Imperial Chancery." Napoleon united the territories on the Adriatic Sea, ceded by Austria in the Peace of Schonbrunn, in 1809, with Croatia and Ragusa, under the title of the "Seven Illyrian Provinces", made them a part of the French Empire, and placed their administration in the hands of a governor general (Marmont, Funot, and Fouqué). After his fall the territories reverted to Austria, and were constituted, together with the islands, a kingdom of Illyria (1816), with two seats of government. In 1822 the civil district of Croatia and the littoral were separated and united with Hungary; the organization of the year 1849 did away entirely with the Kingdom of Illyria, resolving it into the crownlands of Carinthia, Carniola, and the coast lands (Görz and Gradiska; Istria; and Trieste).

FARLATI, *Illyricum sacrum* (8 vols., Venice, 1751-1819; vols. V to VIII, ed. COLETTI); OCTAVIANI, *De vrbibus finibus romani patriarchatus* (Naples, 1828); DUCHESNE, *L'Illyricum ecclésiastique in Byzantinische Zeitschrift*, I; IDEM, *Eglises séparées* (2nd ed., Paris, 1905); NEHER in *Kirchenlex.* The authenticity of the twenty-six papal Briefs concerning the Church of Thessalonica, and testifying to the papal vicariate of the fourth and fifth centuries, has been attacked by J. FRIEDRICH in *Sitzungsberichte der bayerischen Akademie der Wissenschaften, philol.-philol.-historische Klasse* (Munich, 1891), 771-87, and par-

tially supported by MOMMSEN in *Neues Archiv der Gesellschaft für ältere deutsche Geschichtskunde*, XVIII (1893) and XIX (1894); cf. DUCHESNE, *op. cit. supra* and NOSTITZ-RIENECK, *Die päpstlichen Urkunden für Thessalonike in Zeitschrift für kath. Theol.*, XXI (1897), 1-50. A critical list of the bishops of Thessalonica, which is found in LEQUIEN, *Oriens Christ.*, II, 27-66, has been corrected in many points and published by PETIT in *Echos d'Orient*, IV and V (Paris, 1900-03).

Images, VEILING OF. See HOLY WEEK; PASSION SUNDAY.

Images, VENERATION OF.—I. IMAGES IN THE OLD TESTAMENT.—The First Commandment would seem absolutely to forbid the making of any kind of representation of men, animals, or even plants: "Thou shalt not have strange gods before me. Thou shalt not make to thyself a graven thing, nor the likeness of any thing that is in heaven above, or in the earth beneath, nor of those things that are in the waters under the earth. Thou shalt not adore them, nor serve them" (Ex., xx, 3-5). It is of course obvious that the emphasis of this law is in the first and last clauses—"no strange gods", "thou shalt not adore them". Still any one who reads it might see in the other words too an absolute command. The people are not only told not to adore images nor serve them; they are not even to make any graven thing or the likeness—it would seem—of anything at all. One could understand so far-reaching a command at that time. If they made statues or pictures, they probably would end by adoring them. How likely they were to set up a graven thing as a strange god is shown by the story of the golden calf at the very time that the ten words were promulgated. In distinction to the nations around, Israel was to worship an unseen God; there was to be no danger of the Israelites falling into the kind of religion of Egypt or Babylon. This law obtained certainly as far as images of God are concerned. Any attempt to represent the God of Israel graphically (it seems that the golden calf had this meaning—Ex., xxxii, 5) is always put down as being abominable idolatry.

But, except for one late period, we notice that the commandment was never understood as an absolute and universal prohibition of any kind of image. Throughout the Old Testament there are instances of representations of living things, not in any way worshipped, but used lawfully, even ordered by the law as ornaments of the tabernacle and temple. The many cases of idolatry and various deflexions from the Law which the prophets denounce are not, of course, cases in point. It is the statues made and used with the full approval of the authorities which show that the words, "Thou shalt not make to thyself any graven image", were not understood absolutely and literally. It may be that the word translated "graven image"—פסל—already had a technical sense, meant more than a statue, and included the idea of "idol"; though this does not explain the difficulty of the next phrase וכל חמונה אישׁ כשימים, since חמונה can hardly be made to mean more than "representation" (מין), to "think of", then to "form", "represent"). In any case it is certain that there were "likenesses of that which is in the sky above and on earth below and in the waters" in the orthodox Jewish cult. Whatever one may understand the mysterious ephod and theraphim to have been, there was the brazen serpent (Num., xxi, 9), not destroyed till Ezechias did so (IV Kings, xviii, 4), there were carved and moulded garlands of fruit and flowers and trees (Num., viii, 4; III Kings, vi, 18; vii, 36); the king's throne rested on carved lions (III Kings, x, 19-20); lions and bulls supported the basins in the temple (III Kings, vii, 25, 29). Especially there are the cherubim, great carved figures of beasts (Ezech., i, 5; x, 20, where they are called beasts), that stood over the ark of the covenant

(Ex., xxv, 18-22; III Kings, vi, 23-8; viii, 6-7, etc.). But, except for the human heads of the cherubim (Ezech., xli, 19; Ex., xxv, 20; the references to them when combined seem to point irresistibly to some such figures as the Assyrian winged bulls with human heads), we read nothing of statues of men in the lawful cult of the Old Testament. In this point at least the Jew seems to have understood the commandment to forbid the making of such statues, though even this is not clear in the earlier periods. The ephod was certainly once a statue of human form (Judges, viii, 27; xvii, 5; I Kings, xix, 13, etc.), and what were the theraphim (Judges, xvii, 5)? Both were used in orthodox worship.

During the Machabean period, however, there was a strong feeling against any kind of representation of living things. Josephus tells the story of Herod the Great: "Certain things were done by Herod against the law for which he was accused by Judas and Matthias. For the king made and set up over the great gate of the temple a sacred and very precious great golden eagle. But it is forbidden in the law to those who wish to live according to its precepts to think of setting up images, or to assist any one to consecrate figures of living things. Therefore those wise men ordered the eagle to be destroyed" ("Antiq. Jud.," l. XVII, c. vi, §2). So also in "De bello Jud.," l. I, c. xxxiii (xxi), §2, he says: "It is unlawful to have in the temple images or pictures or any representation of a living thing"; and in his "Life": "that I might persuade them to destroy utterly the house built by Herod the tetrarch, because it had images of living things (ζῳων μορφάς); since our laws forbid us to make such things" (Jos. vita, 12). The Jews at the risk of their lives persuaded Pilate to remove the statues of Cæsar set up among the standards of the army in Jerusalem ["Ant. Jud.," l. XVIII, c. iii (iv), 1; De bell. Jud., ix (xiv), 2-3]; they implored Vitellius not even to carry such statues through their land [ibid., c. v (vii), 3]. It is well known how fiercely they resisted various attempts to set up idols of false gods in the temple (see JERUSALEM, II); though this would be an abomination to them even apart from their general horror of images of any kind. So it became the general conviction that Jews abhor any kind of statue or image. Tacitus says: "The Jews worship one God in their minds only. They hold those to be profane who make images of the gods with corruptible materials in the likeness of man; for he is supreme and eternal, neither changeable nor mortal. Therefore they allow no images (*simulacra*) in their cities or temples" (Hist., V, iv).

It is this uncompromising attitude in the late Jewish history, together with the apparently obvious meaning of the First Commandment, that are responsible for the common idea that Jews had no images. We have seen that this idea must be modified for earlier ages. Nor does it by any means obtain as a universal principle in later times. In spite of the iconoclastic ideas of the Jews of Palestine described by Josephus, in spite of their horror of anything of the nature of an idol in their temple, Jews, especially in the Diaspora, made no difficulty about embellishing their monuments with paintings even of the human form. There are a number of Jewish catacombs and cemeteries decorated with paintings representing birds, beasts, fishes, men, and women. Dom Henri Leclercq has described these catacombs in his "Manuel d'archéologie chrétienne" (I, 495-528). At Gamart, North of Carthage, is one whose tombs are adorned with carved ornaments of garlands and human figures; in one of the caves are pictures of a horseman and of another person holding a whip under a tree, another at Rome in the Vigna Randanini by the Appian Way has a painted ceiling of birds, fishes, and little winged human figures around a centre-piece representing a woman, evidently a Victory, crowning a small figure

(reproduced op. cit., p. 515). At Palmyra is a Jewish funeral chamber painted throughout with winged female figures holding up round portraits; above is a picture, quite in the late Roman style, of Achilles and the daughters of Lycomedes (p. 515). Many other examples (cf. op. cit.) of carved figures on sarcophagi (see especially the cone on p. 522 where purely classical figures support the seven-branched candlestick), wall-paintings, and geometrical ornaments, all in the manner of Pompeian decoration and the Christian catacombs, but from Jewish cemeteries, show that, in spite of their exclusive religion, the Jews in the first Christian centuries had submitted to the artistic influence of their Roman neighbours. So that in this matter when Christians began to decorate their catacombs with holy pictures they did not thereby sever themselves from the custom of their Jewish forefathers.

(2) CHRISTIAN IMAGES BEFORE THE EIGHTH CENTURY.—Two questions that obviously must be kept apart are those of the use of sacred images and of the reverence paid to them. That Christians from the very beginning adorned their catacombs with paintings of Christ, of the saints, of scenes from the Bible and allegorical groups is too obvious and too well-known for it to be necessary to insist upon the fact. The catacombs are the cradle of all Christian art. Since their discovery in the sixteenth century—on 31 May, 1578, an accident revealed part of the catacomb in the Via Salaria—and the investigation of their contents that has gone on steadily ever since, we are able to reconstruct an exact idea of the paintings that adorned them. That the first Christians had any sort of prejudice against images, pictures, or statues is a myth (defended amongst others by Erasmus) that has been abundantly dispelled by all students of Christian archaeology. The idea that they must have feared the danger of idolatry among their new converts is disproved in the simplest way by the pictures, even statues, that remain from the first centuries. Even the Jewish Christians had no reason to be prejudiced against pictures, as we have seen; still less had the Gentile communities any such feeling. They accepted the art of their time and used it, as well as a poor and persecuted community could, to express their religious ideas. Roman pagan cemeteries and Jewish catacombs already showed the way; Christians followed these examples with natural modifications. From the second half of the first century to the time of Constantine they buried their dead and celebrated their rites in these underground chambers (Kraus, "Gesch. der christl. Kunst", I, 38). The old pagan sarcophagi had been carved with figures of gods, garlands of flowers, and symbolic ornament; pagan cemeteries, rooms, and temples had been painted with scenes from mythology. The Christian sarcophagi were ornamented with indifferent or symbolic designs—palms, peacocks, vines, with the chi-rho monogram (long before Constantine), with bas-reliefs of Christ as the Good Shepherd, or seated between figures of saints (Kraus, op. cit., 236-40), and sometimes, as in the famous one of Julius Bassus, with elaborate scenes from the New Testament (ibid., 237). And the catacombs were covered with paintings. There are other decorations such as garlands, ribands, stars, landscapes, vines—no doubt in many cases having a symbolic meaning.

One sees with some surprise motives from mythology now employed in a Christian sense (Psyche, Eros, winged Victories, Orpheus), and evidently used as a type of our Lord. Certain scenes from the Old Testament that have an evident application to His life and Church recur constantly—Daniel in the lions' den, Noe and his ark, Samson carrying away the gates, Jonas, Moses striking the rock. Scenes from the New Testament are very common too, the Nativity and arrival of the Wise Men, our Lord's baptism, the miracle of the loaves and fishes, the marriage feast at Cana,

Lazarus, Christ teaching the Apostles. There are also purely typical figures, the woman praying with uplifted hands representing the Church, harts drinking from a fountain that springs from a chi-rho monogram, sheep. And there are especially pictures of Christ as the Good Shepherd, as law-giver, as a child in His mother's arms, of His head alone in a circle, of our Lady alone, of St. Peter and St. Paul—pictures that are not scenes of historic events, but, like the statues in our modern churches, just memorials of Christ and His saints (for all this see Palmer, "An Introduction to Early Christian Symbolism", ed. Brownlow and Northcote, London, 1900; Kraus, op. cit., I, 58-224; and especially the classified list in Leclercq, op. cit., I, 529-88). In the catacombs there is little that can be described as sculpture; there are few statues for a very simple reason. Statues are much more difficult to make, and cost much more than wall-paintings. But there was no principle against them. Eusebius describes very ancient statues at Cæsarea Philippi representing Christ and the woman He healed there ("Hist. eccl.", VII, xviii; Matt., ix, 20-2). The earliest sarcophagi had bas-reliefs. As soon as the Church came out of the catacombs, became richer, had no fear of persecution, the same people who had painted their caves began to make statues of the same subjects. The famous statue of the Good Shepherd in the Lateran Museum (Kraus, I, 227) was made as early as the beginning of the third century; the statues of Hippolytus and of St. Peter date from the end of the same century (ibid., 230-232). The principle was quite simple. The first Christians were accustomed to see statues of emperors, of pagan gods and heroes, as well as pagan wall-paintings. So they made paintings of their religion, and, as soon as they could afford them, statues of their Lord and of their heroes, without the remotest fear or suspicion of idolatry (Leclercq, op. cit., II, 245-78).

The idea that the Church of the first centuries was in any way prejudiced against pictures and statues is the most impossible fiction. After Constantine (306-37) there was of course an enormous development of every kind. Instead of burrowing catacombs Christians began to build splendid basilicas. They adorned them with costly mosaics, carving, and statues. But there was no new principle. The mosaics represented more artistically and richly the motives that had been painted on the walls of the old caves, the larger statues continue the tradition begun by carved sarcophagi and little lead and glass ornaments. From that time to the Iconoclast persecution holy images are in possession all over the Christian world. St. Ambrose (d. 397) describes in a letter how St. Paul appeared to him one night, and he recognized him by the likeness to his pictures (Ep. ii, in P. L., XVII, 821). St. Augustine (d. 430) refers several times to pictures of our Lord and the saints in churches (e. g. "De cons. Evang.", x, in P. L., XXXIV, 1049; "Contra Faust. Man.", xxii, 73; in P. L., XLII, 446); he says that some people even adore them ("De mor. eccl. cath.", xxxiv, P. L., XXXII, 1342). St. Jerome (d. 420) also writes of pictures of the Apostles as well-known ornaments of churches (In Ionam, iv). St. Paulinus of Nola (d. 431) paid for mosaics representing Biblical scenes and saints in the churches of his city, and then wrote a poem describing them (P. L., LXI, 884). Gregory of Tours (d. 594) says that a Frankish lady, who built a church of St. Stephen, showed the artists who painted its walls how they should represent the saints out of a book (Hist. Franc., II, 17, P. L., LXXI, 215). In the East St. Basil (d. 379), preaching about St. Barlaam, calls upon painters to do the saint more honour by making pictures of him than he himself can do by words ("Or. in S. Barlaam", in P. G., XXXI, 488-489, quoted in Hefele-Leclercq, "Histoire des Conciles", III, p. 611). St. Nilus in the fifth century blames a friend for wishing to decorate a church with profane

ornaments, and exhorts him to replace these by scenes from Scripture (Epist. IV, 56, in Hefele-Leclercq, ibid.). St. Cyril of Alexandria (d. 444) was so great a defender of icons that his opponents accused him of idolatry (for all this see Schwarzlose, "Der Bilderstreit", 3-15). St. Gregory the Great (d. 604) was always a great defender of holy pictures (see below).

We notice, however, in the first centuries a certain reluctance to express the pain and humiliation of the Passion of Christ. Whether to spare the susceptibility of new converts, or as a natural reaction from the condition of a persecuted sect, Christ is generally represented as splendid and triumphant. There are pictures of His Passion even in the catacombs (e. g., the crowning of thorns in the Catacomb of Prætextatus on the Appian way—Leclercq, I, 542), but the favourite representation is either the Good Shepherd (by far the most frequent) or Christ showing His power, raising Lazarus, working some other miracle, standing among His Apostles, seated in glory. There are no pictures of the Crucifixion except the mock-crucifix scratched by some pagan soldier in the Palatine barracks (Kraus, I, 173). In the first basilicas also the type of the triumphant Christ remains the normal one. The curve of the apse (*concha*) over the altar is regularly filled with a mosaic representing the reign of Christ in some symbolic group. Our Lord sits on a throne, dressed in the *tunica talaris* and pallium, holding a book in His left hand, with the right lifted up. This is the type that is found in countless basilicas in East and West from the fourth century to the seventh. The group around him varies. Sometimes it is saints, apostles, or angels (St. Pudentiana, Sts. Cosmas and Damian, St. Paul at Rome, St. Vitalis, St. Michael); often on either side of Christ are purely symbolic figures, lambs, harts, palms, cities, the symbols of the evangelists (S. Apollinare in Classe; the chapel of Galla Placidia at Ravenna). A typical example of this tradition was the *concha*-mosaic of old St. Peter's at Rome (destroyed in the sixteenth century). Here Christ is enthroned in the centre in the usual form, bearded, with a nimbus, in tunic and pallium, holding a book in the left hand, blessing with the right. Under His feet four streams arise (the rivers of Eden, Gen., ii, 10), from which two stags drink (Ps. xli, 2). On either side of Christ are St. Peter and St. Paul, beyond each a palm tree; the background is sprinkled with stars, while above rays of light and a hand issuing from under a small cross suggest God the Father. Below is a frieze in which lambs come out from little cities at either end (marked Hierusalem and Bethlem) towards an Agnus Dei on a hill, from which again flow four streams. Behind the Agnus Dei is a throne with a cross, behind the lambs is a row of trees. Figures of a pope (Innocent III, 1198-1216) and an emperor preceding the processions of lambs were added later; but the essential plan of this mosaic (often restored) dates from the fourth century (see illustration in S. Beissel, S. J., "Altchristliche Kunst", p. 130).

Although representations of the Crucifixion do not occur till later, the cross, as the symbol of Christianity, dates from the very beginning. Justin Martyr (d. 165) describes it in a way that already implies its use as a symbol (Dial. cum Tryph., 91). He says that the cross is providentially represented in every kind of natural object, the sails of a ship, a plough, tools, even the human body (Apol. I, 55). According to Tertullian (d. about 240), Christians were known as "worshippers of the cross" (Apol., xv). Both simple crosses and the chi-rho monogram are common ornaments of catacombs; combined with palm branches, lambs, and other symbols they form an obvious symbol of Christ (see illustrations in Kraus, op. cit., I, 85, 93, 94, 95, 105, 119, 121, etc., especially 130-3; Leclercq, op. cit., 544-8, etc.). After Constantine the cross, made splendid with gold and gems, was set up triumphantly as the standard of the conquering Faith.

A late catacomb painting represents a cross richly jewelled and adorned with flowers (Kraus, I, 133). Constantine's Labarum at the battle of the Milvian Bridge (312), and the story of the finding of the True Cross by St. Helen, gave a fresh impulse to its worship. It appears (without a figure) above the image of Christ in the apsidal mosaic of St. Pudenciana at Rome, in His nimbus constantly (Kraus, I, 182-3, etc.), in some prominent place on an altar or throne (as the symbol of Christ), in nearly all mosaics above the apse or in the chief place of the first basilicas (St. Paul at Rome, *ibid.*, 183; St. Vitalis at Ravenna, Beissel, *op. cit.*, p. 173, etc.). In Galla Placidia's chapel at Ravenna Christ (as the Good Shepherd with His sheep) holds a great cross in His left hand (Beissel, p. 151). The cross had a special place as an object of worship. It was the chief outward sign of the Faith, was treated with more reverence than any picture; "worship of the cross" (*σταυρολατρεία*) was a special thing distinct from image-worship, so that we find the milder Iconoclasts in after years making an exception for the cross, still treating it with reverence, while they destroyed pictures. A common argument of the image-worshippers to their opponents was that since the latter too worshipped the cross they were inconsistent in refusing to worship other images (see *ICONOCLASM*).

The cross further gained an important place in the consciousness of Christians from its use in ritual functions. To make the sign of the cross with the hand soon became the common form of professing the Faith or invoking a blessing. The Canons of Hippolytus tell the Christian: "Sign thy forehead with the sign of the cross in order to defeat Satan and to glory in thy Faith" (c. xxix, 247—Cabrol-Leclercq, "*Monumenta ecclesiæ liturgica*", Paris, 1900-2, I, p. 271; cf. Tertullian, "*Adv. Marc.*", III, 22). People prayed with extended arms to represent a cross (Origen, "*Hom. in Exod.*", iii, 3; Tertullian, "*de Orat.*", 14). So also to make the sign of the cross over a person or thing became the usual gesture of blessing, consecrating, exorcising (Lactantius, "*Divin. Inst.*", IV, 27), actual material crosses adorned the vessels used in the Liturgy, a cross was brought in procession and placed on the altar during Mass. The First Roman Ordo (sixth century) alludes to the cross-bearers (*cruces portantes*) in a procession (21, ed. Atchley, London, 1905, p. 146). As soon as people began to represent scenes from the Passion they naturally included the chief event, and so we have the earliest pictures and carvings of the Crucifixion. The first mentions of crucifixes are in the sixth century. A traveller in the reign of Justinian notices one he saw in a church at Gaza (Kraus, I, 173); in the West, Venantius Fortunatus saw a palla embroidered with a picture of the Crucifixion at Tours, and Gregory of Tours refers to a crucifix at Narbonne (*ibid.*). For a long time Christ on the cross was always represented alive. The oldest crucifixes known are those on the wooden doors of St. Sabina at Rome and an ivory carving in the British Museum (Kraus, "*Ueber Begriff . . . der christl. Archäologie*", Freiburg im Br., 1879). Both are of the fifth century. A Syriac manuscript of the sixth century contains a miniature representing the scene of the crucifixion (Kraus, "*Christl. Kunst*", I, 175). There are other such representations down to the seventh century, after which it becomes the usual custom to add the figure of our Lord to crosses; the crucifix is in possession everywhere. [See Stockbauer, "*Kunstgeschichte des Kreuzes*", Schaffhausen, 1870; Dobbert, "*Zur Entstehungsgeschichte des Crucifixes*" in "*Jahrb. der k. preussischen Kunstsamml.*", I, 1880; L. Bréhier, "*Les origines du crucifix dans l'art chrétien*" in series "*Science et religion*", no. 287 (2nd ed., Paris, 1905).]

The conclusion then is that the principle of adorning chapels and churches with pictures dates from the very earliest Christian times; centuries before the Icono-

clast troubles they were in use throughout Christendom. So also all the old Christian Churches in East and West use holy pictures constantly. The only difference is that even before Iconoclasm there was in the East a certain prejudice against solid statues. This has been accentuated since the time of the Iconoclast heresy (see below, section 5). But there are traces of it before; it is shared by the old schismatical (Nestorian and Monophysite) Churches that broke away long before Iconoclasm. The principle in the East was not universally accepted. The emperors set up their statues at Constantinople without blame; statues of religious purpose existed in the East before the eighth century (see for instance the marble Good Shepherds from Thrace, Athens, and Sparta, the Madonna and Child from Saloniki—Kraus, *op. cit.*, I, 228, 234, etc.), but they are much rarer than in the West. Images in the East were generally flat—paintings, mosaics, bas-reliefs. The most zealous Eastern defenders of the holy icons seem to have felt that, however justifiable such flat representations may be, there is something about a solid statue that makes it suspiciously like an idol.

(3) THE VENERATION OF IMAGES.—Distinct from the admission of images is the question of the way they are treated. What signs of reverence, if any, did the first Christians give to the images in their catacombs and churches? For the first period we have no information. There are so few references to images at all in the earliest Christian literature that we should hardly have suspected their ubiquitous presence were they not actually there in the catacombs as the most convincing argument. But these catacomb paintings tell us nothing about how they were treated. We may take it for granted, on the one hand, that the first Christians understood quite well that paintings may not have any share in the adoration due to God alone. Their monotheism, their insistence on the fact that they serve only one almighty unseen God, their horror of the idolatry of their neighbours, the torture and death that their martyrs suffered rather than lay a grain of incense before the statue of the emperor's *numen* are enough to convince us that they were not setting up rows of idols of their own. On the other hand, the place of honour they give to their symbols and pictures, the care with which they decorate them argue that they treated representations of their most sacred beliefs with at least decent reverence. It is from this reverence that the whole tradition of venerating holy images gradually and naturally developed. After the time of Constantine it is still mainly by conjecture that we are able to deduce the way these images were treated. The etiquette of the Byzantine court gradually evolved elaborate forms of respect, not only for the person of Cæsar but even for his statues and symbols. Philostorgius (who was an Iconoclast long before the eighth century) says that in the fourth century the Christian Roman citizens in the East offered gifts, incense, even prayers (!) to the statues of the emperor (*Hist. eccl.*, II, 17). It would be natural that people who bowed to, kissed, incensed the imperial eagles and images of Cæsar (with no suspicion of anything like idolatry), who paid elaborate reverence to an empty throne as his symbol, should give the same signs to the cross, the images of Christ, and the altar. So in the first Byzantine centuries there grew up traditions of respect that gradually became fixed, as does all ceremonial. Such practices spread in some measure to Rome and the West, but their home was the Court at Constantinople. Long afterwards the Frankish bishops in the eighth century were still unable to understand forms that in the East were natural and obvious, but to Germans seemed degrading and servile (Synod of Frankfurt, 794—see *ICONOCLASM*, IV). It is significant too that, although Rome and Constantinople agree entirely as to the principle of honouring holy images with signs of reverence, the

descendants of the subjects of the Eastern emperor still go far beyond us in the use of such signs.

The development was then a question of general fashion rather than of principle. To the Byzantine Christian of the fifth and sixth centuries prostrations, kisses, incense were the natural ways of showing honour to any one; he was used to such things, even applied to his civil and social superiors; he was accustomed to treat symbols in the same way, giving them relative honour that was obviously meant really for their prototypes. And so he carried his normal habits with him into church. Tradition, the conservative instinct that in ecclesiastical matters always insists on custom, gradually stereotyped such practices till they were written down as rubrics and became part of the ritual. Nor is there any suspicion that the people, who were unconsciously evolving this ritual, confused the image with its prototype or forgot that to God only supreme homage is due. The forms they used were as natural to them as saluting a flag is to us.

At the same time one must admit that just before the Iconoclast outbreak things had gone very far in the direction of image-worship. Even then it is inconceivable that any one, except perhaps the most grossly stupid peasant, could have thought that an image could hear prayers, or do anything for us. And yet the way in which some people treated their holy icons argues more than the merely relative honour that Catholics are taught to observe towards them. In the first place images had multiplied to an enormous extent everywhere; the walls of churches were covered inside from floor to roof with icons, scenes from the Bible, allegorical groups. (Dom Leclercq quotes S. Maria Antiqua built in the seventh century in the Roman Forum, with its systematic arrangement of paintings covering the whole church, as an example of this—Hefele-Leclercq, "Histoire des Conciles", III, 610 sq.). Icons, especially in the East, were taken on journeys as a protection, they marched at the head of armies, and presided at the races in the hippodrome; they hung in a place of honour in every room, over every shop; they covered cups, garments, furniture, rings; wherever a possible space was found, it was filled with a picture of Christ, our Lady, or a saint. It is difficult to understand exactly what those Byzantine Christians of the seventh and eighth centuries thought about them. The icon seems to have been in some sort the channel through which the saint was approached; it has an almost sacramental virtue in arousing sentiments of faith, love and so on, in those who gazed upon it; through and by the icon God worked miracles; the icon even seems to have had a kind of personality of its own, inasmuch as certain pictures were specially efficacious for certain graces (see F. Marin, "Les moines de Constantinople", Paris, 1897, pp. 318-21; Hefele-Leclercq, op. cit., III, pp. 607-8). Icons were crowned with garlands, incensed, kissed. Lamps burned before them, hymns were sung in their honour. They were applied to sick persons by contact, set out in the path of a fire or flood to stop it by a sort of magic. In many prayers of this time the natural inference from the words would be that the actual picture is addressed.

If so much reverence was paid to ordinary images "made with hands", how much more was given to the miraculous ones "not made with hands" (*εἰκόνας ἀχειροποίηται*). Of these there were many that had descended miraculously from heaven, or—like the most famous of all at Edessa—had been produced by our Lord Himself by impressing His face on a cloth (see "Dict. d'arch. chrét.", s. v. "Abgar"). The story of the Edessa picture is the Eastern form of our Veronica legend. The Emperor Michael II (820-9), in his letter to Louis the Pious, describes the excesses of the image-worshippers: "They have removed the holy cross from the churches and replaced it by images before which they burn incense. They sing psalms be-

fore these images, prostrate themselves before them, implore their help. Many dress up images in linen garments and choose them as god-parents for their children. Others who become monks, forsaking the old tradition according to which the hair that is shorn off is received by some distinguished person, let it fall into the hands of some image. Some priests scrape the paint off images, mix it with the consecrated bread and wine and give it to the faithful. Others place the body of the Lord in the hands of images from which it is taken by the communicants. Others again, despising the churches, celebrate Divine Service in private houses, using an image as an altar" (Mansi, XIV, 417-22; Hefele-Leclercq, op. cit., III, 2,612). These are the words of a bitter Iconoclast, and should, no doubt, be received with caution. Nevertheless most of the practices described by the emperor can be established by other and quite unimpeachable evidence. For instance, St. Theodore of the Studion writes to congratulate an official of the court for having chosen a holy icon as godfather for his son (P. G., XCIX, 962-3; Hefele-Leclercq, loc. cit., 613). Such excesses as these explain in part at least the Iconoclast reaction of the eighth century. And the Iconoclast storm produced at least one good result—the Seventh Œcumenical Synod (Nicaea II, 787), which, while defending the holy images, explained the kind of worship that may lawfully and reasonably be given to them and discountenanced all extravagances. A curious story, that illustrates the length to which the worship of images had gone by the eighth century, is told in the "New Garden" (*Νέον Παράδεισον—Pratum Spirituale*) of a monk of Jerusalem, John Moschus (d. 619). This work was long attributed to Sophronius of Jerusalem (Krumbacher, "Byz. Litt.", 188). In it the author tells the story of an old monk at Jerusalem who was much tormented by temptations of the flesh. At last the devil promised him peace on condition that he would cease to honour his picture of our Lady. He promised, kept his word, and then began to suffer temptations against faith. He consulted his abbot, who told him that he had better suffer the former evil (apparently even give way to the temptation) "rather than cease to worship our Lord and God Jesus (Christ with His mother" (quoted by Schwarzlose, "Der Bilderstreit", pp. 19-20).

On the other hand, in Rome especially, we find the position of holy images explained soberly and reasonably. They are the books of the ignorant. This idea is a favourite one of St. Gregory the Great (d. 604). He writes to an Iconoclast bishop, Sorenus of Marseilles, who had destroyed the images in his diocese: "Not without reason has antiquity allowed the stories of saints to be painted in holy places. And we indeed entirely praise thee for not allowing them to be adored, but we blame thee for breaking them. For it is one thing to adore an image, it is quite another thing to learn from the appearance of a picture what we must adore. What books are to those who can read, that is a picture to the ignorant who look at it; in a picture even the unlearned may see what example they should follow; in a picture they who know no letters may yet read. Hence, for barbarians especially, a picture takes the place of a book" (Ep. ix, 105, in P. L., LXXVII, 1027). But in the East, too, there were people who shared this more sober Western view. Anastasius, Bishop of Theopolis (d. 609), who was a friend of St. Gregory and translated his "Regula pastoralis" into Greek, expresses himself in almost the same way and makes the distinction between *προσκύνησις* and *λατρεία* that became so famous in Iconoclast times: "We worship (*προσκυνοῦμεν*) men and the holy angels; we do not adore (*λατρεύομεν*) them. Moses says: Thou shalt worship thy God and Him only shalt thou adore. Behold, before the word 'adore' he puts 'only', but not before the word 'worship'; because it is lawful to worship [creatures], since worship is only giving

special honour (*τιμῆς ἔμφασις*), but it is not lawful to adore them nor by any means to give them prayers of adoration (*προσεύξασθαι*)" (Schwarzlose, op. cit., 24).

(4) ENEMIES OF IMAGE-WORSHIP BEFORE ICONOCLASM.—Long before the outbreak in the eighth century there were isolated cases of persons who feared the ever-growing cult of images and saw in it danger of a return to the old idolatry. We need hardly quote in this connection the invectives of the Apostolic Fathers against idols (Athenagoras, "Legatio pro Christ.," xv-xvii; Theophilus, "Ad Autolyceum," II; Minucius Felix, "Octavius," xxvii; Arnobius, "Disp. adv. Gentes"; Tertullian, "De Idololatria," I; Cyprian, "De idolorum vanitate"), in which they denounce not only the worship but even the manufacture and possession of such images. These texts all regard idols, that is, images made to be adored. But canon xxxvi of the Synod of Elvira is important. This was a general synod of the Church of Spain held, apparently about the year 300, in a city near Granada (Hefele-Leclercq, "Hist. des Conc.," I, 212-64). It made many severe laws against Christians who relapsed into idolatry, heresy, or sins against the Sixth Commandment. The canon reads: "It is ordained (Placuit) that pictures are not to be in churches, so that that which is worshipped and adored shall not be painted on walls" (ibid., p. 240). The meaning of the canon has been much discussed. De Rossi and Hefele thought it was only a precaution against possible profanation by pagans who might go into a church (ibid.). Dom Leclercq ("Manuel d'archéologie," II, 140) and J. Turmel ("Rev. du clergé franç.," 1906, XLV, 508) see in it a law against pictures on principle. In any case the canon can have produced but a slight effect even in Spain, where there were holy pictures in the fourth century as in other countries. But it is interesting to see that just at the end of the first period there were some bishops who disapproved of the growing cult of images. Eusebius of Caesarea (d. 340), the Father of Church History, must be counted among the enemies of icons. In several places in his history he shows his dislike of them. They are a "heathen custom" (*ἑθνικὴ συνήθεια*, Hist. eccl., VII, 18); he wrote many arguments to persuade Constantine's sister Constantia not to keep a statue of our Lord (see Mansi, XIII, 169). A contemporary bishop, Asterius of Amasia, also tried to oppose the spreading tendency. In a sermon on the parable of the rich man and Lazarus he says: "Do not paint pictures of Christ; he humbled himself enough by becoming man" (quoted by Schwarzlose, op. cit., 7, from Combefis, "Auctar. nov.," I, "Hom. iv in Div. et Laz.>"). Epiphanius of Salamis (d. 403) tore down a curtain in a church in Palestine because it had a picture of Christ or a saint (Schwarzlose, ibid., 7-8). The Arian Philostorgius (fifth century) too was a forerunner of the Iconoclasts (Hist. Eccl., II, 12; VII, 3), as also the Bishop of Marseilles (Serenus), to whom St. Gregory the Great wrote his defence of pictures (see above). Lastly we may mention that in at least one province of the Church (Central Syria) Christian art developed to great perfection while it systematically rejected all representation of the human figure (L. Bréhier, "La querelle des images," p. 8-9; Hefele-Leclercq, III, 613-4). These exceptions are few compared with the steadily increasing influence of images and their worship all over Christendom, but they serve to show that the holy icons did not win their place entirely without opposition, and they represent a thin stream of opposition as the antecedent of the virulent Iconoclasm of the eighth century.

(5) IMAGES AFTER ICONOCLASM.—*Coronation of Images*.—After the storm of the eighth and ninth centuries (see ICONOCLASM), the Church throughout the world settled down again in secure possession of her images. Since their triumphant return on the Feast of Orthodoxy in 842, their position has not again been

questioned by any of the old Churches. Only now the situation has become more clearly defined. The Seventh General Council (Nicaea II, 787) had laid down the principles, established the theological basis, restrained the abuses of image-worship. That council was accepted by the great Church of the five patriarchates as equal to the other six. Without accepting its decrees no one could be a member of that church, no one can to-day be Catholic or Orthodox. Images and their cult had become an integral part of the Faith; Iconoclasm was now definitely a heresy condemned by the Church as much as Arianism or Nestorianism. The situation was not changed by the Great Schism of the ninth and eleventh centuries. Both sides still maintain the same principles in this matter; both equally revere as an œcumenical synod the last council in which they met in unison before the final calamity. The Orthodox agree to all that Catholics say (see next paragraph) as to the principle of venerating images. So do the old Eastern schismatical Churches. Although they broke away long before Iconoclasm and Nicaea II they took with them then the principles we maintain—sufficient evidence that those principles were not new in 787. Nestorians, Armenians, Jacobites, Copts, and Abyssinians fill their churches with holy icons, bow to them, incense them, kiss them, just as do the Orthodox.

But there is a difference not of principle but of practice between East and West, to which we have already alluded. Especially since Iconoclasm, the East dislikes solid statues. Perhaps they are too reminiscent of the old Greek gods. At all events, the Eastern icon (whether Orthodox, Nestorian or Monophysite) is always flat—a painting, mosaic, bas-relief. Some of the less intelligent Easterns even seem to see a question of principle in this and explain the difference between a holy icon, such as a Christian man should venerate, and a detestable idol, in the simplest and crudest way: icons are flat, idols are solid. However, that is a view that has never been suggested by their Church officially; she has never made this a ground of complaint against Latins, but admits it to be (as of course it is) simply a difference of fashion or habit, and she recognizes that we are justified by the Second Council of Nicaea in the honour we pay to our statues, just as she is in the far more elaborate reverence she pays to her flat icons.

In the West the exuberant use of statues and pictures during the Middle Ages is well known and may be seen in any cathedral in which Protestant zeal has not destroyed the carving. A discussion of early medieval use in England will be found in Daniel Rock, "Church of our Fathers", chapters viii and ix (ed. G. W. Hart and W. H. Frere, London, 1905, vol. III). In the East it is enough to go into any Orthodox Church to see the crowd of holy icons that cover the walls, that gleam right across the church from the iconostasis. And the churches of the Eastern sects that have no iconostasis show as many pictures in other places. As specimens of exceedingly beautiful and curious icons painted after the Iconoclast troubles at Constantinople, we may mention the mosaics of the *Kahrie-Jami* (the old "Monastery in the Country", *Μονὴ τῆς χώρας*) near the Adrianople gate. The Turks by some accident have spared these mosaics in turning the church into a mosque. They were put up by order of Andronicus II (1282-1328); they cover the whole church within, representing complete cycles of the events of our Lord's life, images of Him, His mother, and various saints; and still show in the desecrated building an example of the splendid pomp with which the later Byzantine Church carried out the principles of the Second Nicæan Council (see Ch. Diehl, "Les Mosaïques de Kahrie-Djami" in his "Etudes byzantines", Paris, 1905, pp. 392-431).

In both East and West the reverence we pay to images has crystallized into formal ritual. In the

Latin Rite the priest is commanded to bow to the cross in the sacristy before he leaves it to say Mass ("Ritus servandus" in the Missal, II, 1); he bows again profoundly "to the altar or the image of the crucifix placed upon it" when he begins Mass (ibid., II, 2); he begins incensing the altar by incensing the crucifix on it (IV, 4), and bows to it every time he passes it (ibid.); he also incenses any relics or images of saints that may be on the altar (ibid.). In the same way many such commands throughout our rubrics show that always a reverence is to be paid to the cross or images of saints whenever we approach them. The Byzantine Rite shows if possible even more reverence for the holy icons. They must be arranged according to a systematic scheme across the screen between the choir and the altar that from this fact is called iconostasis (*εικονόστασις*, picture-stand; see Fortescue, "Orth. Eastern Church", pp. 403-4); before these pictures lamps are kept always burning. Among them, on either side of the royal door, are those of our Lord and His Mother. As part of the ritual the celebrant and the deacon before they go in to vest bow profoundly before these and say certain fixed prayers: "We worship (*προσκυνοῦμεν*) Thine immaculate image, O Christ", etc. ("Euchologion", Venice, 1898, p. 35); and they too throughout their services are constantly told to pay reverence to the holy icons. Images then were in possession and received worship all over Christendom without question till the Protestant Reformers, true to their principle of falling back on the Bible only, and finding nothing about them in the New Testament, sought in the Old Law rules that were never meant for the New Church and discovered in the First Commandment (which they called the second) a command not even to make any graven image. Their successors have gradually tempered the severity of this, as of many other of the original principles of their founders. Calvinists keep the rule of admitting no statues, not even a cross, fairly exactly still. Lutherans have statues and crucifixes. In Anglican churches one may find any principle at work, from that of a bare cross to a perfect plethora of statues and pictures.

The coronation of images is an example of an old and obvious symbolic sign of honour that has become a fixed rite. The Greek pagans offered golden crowns to their idols as specially worthy gifts. St. Irenæus (d. 202) already notices that certain Christian heretics (the Carpocratian Gnostics) crown their images; he disapproves of the practice, though it seems that part of his dislike at any rate is because they crown statues of Christ alongside of those of Pythagoras, Plato, and Aristotle ("Adv. omn. hæc.", I, xxv, sixth edition, Leipzig, 1853, p. 253). The offering of crowns to adorn images became a common practice in the Eastern Churches. In itself it would mean no more than adding such additional splendour to the icon as might also be given by a handsome gold frame. Then the affixing of the crown naturally attracted to itself a certain amount of ritual, and the crown itself, like all things dedicated to the use of the Church, was blessed before it was affixed.

At Rome, too, a ceremony evolved out of this pious practice. A famous case is the coronation of the picture of our Lady in St. Mary Major. Clement VIII (1592-1605) presented crowns (one for our Lord and one for His Mother, both of whom are represented in the picture) to adorn it; so also did succeeding popes. These crowns were lost and Gregory XVI (1831-46) determined to replace them. On 15 August, 1837, surrounded by cardinals and prelates, he brought crowns, blessed them with a prayer composed for the occasion, sprinkled them with holy water, and incensed them. The "Regina Cœli" having been sung, he affixed the crowns to the picture, saying the form—"Sicuti per manus nostras coronaris in terris, ita a te gloria et honore coronari mereamur in cœlis"—for

our Lord, and a similar form (per te a Jesu Christo Filio tuo . . .) for our Lady. There was another collect, the *Te Deum*, a last collect, and then High Mass *coram Pontifice*. The same day the pope issued a Brief (*Cœlestis Regina*) about the rite. The crowns are to be kept by the canons of St. Mary Major. The ceremonial used on that occasion became a standard for similar functions (see Moroni, "Dizionario di Erudizione storico-ecclesiastica", Venice, 1842, XVII, pp. 239-41, where the prayers and ceremonies are given).

The Chapter of St. Peter have a right to crown statues and pictures of our Lady since the seventeenth century. A certain Count Alexander Sforza-Pallavicini of Piacenza set aside a sum of money to pay for crowns to be used for this purpose. The first case was in 1631, when the chapter, on 27 August, crowned a famous picture, "Santa Maria della febbre", in one of the sacristies of St. Peter. The count paid the expenses. Soon after, at his death, by his will (dated 3 July, 1636) he left considerable property to the chapter with the condition that they should spend the revenue on crowning famous pictures and statues of our Lady. They have done so since. The procedure is that a bishop may apply to the chapter to crown an image in his diocese. The canons consider his petition; if they approve it they have a crown made and send one of their number to carry out the ceremony. Sometimes the pope himself has crowned images for the chapter. In 1815 Pius VII did so at Savona, and again in 1816 at Galloro near Castel Gandolfo. A list of images so crowned down to 1792 was published in that year at Rome (Raccolta delle immagini della bñia Vergine ornate della corona d'oro). The chapter has an "Ordo servandus in tradendis coronis aureis quæ donantur a Rmo Capitulo S. Petri de Urbe sacris imaginibus B. M. V."—apparently in manuscript only. The rite is almost exactly that used by Gregory XVI in 1837 (see Moroni, loc. cit., pp. 238-45).

(6) THE PRINCIPLES OF IMAGE-WORSHIP.—Lastly something must be said about Catholic principles concerning the worship of sacred images. The Latin *Cultus sacrarum imaginum* may quite well be translated (as it always was in the past) "worship of holy images", and "image-worshipper" is a convenient term for *cultor imaginum*—*εικονοδόλος*, as opposed to *εικονοκλάστης* (image-breaker). Worship by no means implies only the supreme adoration that may be given only to God. It is a general word denoting some more or less high degree of reverence and honour, an acknowledgment of worth, like the German *Verehrung* ("with my body I thee worship" in the marriage service; English city companies are "worshipful"; a magistrate is "Your worship", and so on. See the excellent note on the use of this word in D. Rock, "The Church of our Fathers", III, p. 285). We need not then hesitate to speak of our worship of images; though no doubt we shall often be called upon to explain the term.

We note in the first place that the First Commandment (except inasmuch as it forbids adoration and service of images) does not affect us at all. The Old Law—including the ten commandments—as far as it only promulgates *natural* law is of course eternal. No possible circumstances can ever abrogate, for instance, the Fifth, Sixth, and Seventh Commandments. On the other hand, as far as it is positive law, it was once for all abrogated by the promulgation of the Gospel (Rom., viii, 1-2; Gal., iii, 23-5, etc.; Acts, xv, 28-9). Christians are not bound to circumcise, to abstain from leuitically unclean food and so on. The Third Commandment that ordered the Jews to keep Saturday holy is a typical case of a positive law abrogated and replaced by another by the Christian Church. So in the First Commandment we must distinguish the clauses—"Thou shalt not have strange gods before

me", "Thou shalt not adore them nor serve them"—which are eternal natural law (*prohibitum quia malum*), from the clause: "Thou shalt not make to thyself any graven image", etc. In whatever sense the archæologist may understand this, it is clearly not natural law, nor can anyone prove the inherent wickedness of making a graven thing; therefore it is Divine positive law (*malum quia prohibitum*) of the Old Dispensation that no more applies to Christians than the law of marrying one's brother's widow.

Since there is no Divine positive law in the New Testament on the subject, Christians are bound firstly by the natural law that forbids us to give to any creature the honour due to God alone, and forbids the obvious absurdity of addressing prayers or any sort of absolute worship to a manufactured image; secondly, by whatever ecclesiastical laws may have been made on this subject by the authority of the Church. The situation was defined quite clearly by the Second Council of Nicæa in 787. In its seventh session the Fathers drew up the essential decision (*θρος*) of the synod. In this, after repeating the Nicene Creed and the condemnation of former heretics, they come to the burning question of the treatment of holy images. They speak of real adoration, supreme worship paid to a being for its own sake only, acknowledgment of absolute dependence on some one who can grant favours without reference to any one else. This is what they mean by *λατρεία*, and they declare emphatically that this kind of worship must be given to God only; it is sheer idolatry to pay *λατρεία* to any creature at all. In Latin, *adoratio* is generally (though not always; see e. g. in the Vulgate, II Kings, i, 2, etc.) used in this sense. Since the council especially there is a tendency to restrict it to this sense only, so that *adorare sanctos* certainly now sounds scandalous. So in English by *adoration* we now always understand the *λατρεία* of the Fathers of the Second Nicæan Council. From this adoration the council distinguishes respect and honourable reverence (*ἀσπασμός καὶ τιμητικὴ προσκύνησις*) such as may be paid to any venerable or great person—the emperor, patriarch, and so on. A fortiori may and should such reverence be paid to the saints who reign with God. The words *προσκύνησις* (as distinct from *λατρεία*) and *δουλεία* became the technical ones for this inferior honour. *Προσκύνησις* (which oddly enough means etymologically the same thing as *adoratio*—*ad + os, κυεῖν*, to kiss) corresponds in Christian use to the Latin *veneratio*; *δουλεία* would generally be translated *cultus*. In English we use *veneration, reverence, cult, worship* for these ideas. This reverence will be expressed in signs determined by custom and etiquette. It must be noted that all outward marks of respect are only arbitrary signs, like words; and that signs have no inherent necessary connotation. They mean what it is agreed and understood that they shall mean. It is always impossible to maintain that any sign or word must necessarily signify some one idea. Like flags these things have come to mean what the people who use them intend them to mean. Kneeling in itself means no more than sitting. In regard then to genuflections, kisses, incense and such signs paid to any object or person the only reasonable standard is the understood intention of the people who use them. Their greater or less abundance is a matter of etiquette that may well differ in different countries. Kneeling especially by no means always connotes supreme adoration. People for a long time knelt to kings. The Fathers of Nicæa II further distinguish between *absolute* and *relative* worship. Absolute worship is paid to any person for his own sake. Relative worship is paid to a sign, not at all for its own sake, but for the sake of the thing signified. The sign in itself is nothing, but it shares the honour of its prototype. An insult to the sign (a flag or statue) is an insult to the thing of which it is a sign; so also we honour the prototype by honouring the

sign. In this case all the outward marks of reverence, visibly directed towards the sign, turn in intention towards the real object of our reverence—the thing signified. The sign is only put up as a visible direction for our reverence, because the real thing is not physically present. Every one knows the use of such signs in ordinary life. People salute flags, bow to empty thrones, uncover to statues and so on; nor does any one think that this reverence is directed to coloured bunting or wood and stone.

It is this relative worship that is to be paid to the cross, images of Christ and the saints, while the intention directs it all really to the persons these things represent. The text then of the decision of the seventh session of Nicæa II is: "We define (*ὀρίζομεν*) with all certainty and care that both the figure of the sacred and life-giving Cross, as also the venerable and holy images, whether made in colours or mosaic or other materials, are to be placed suitably in the holy churches of God, on sacred vessels and vestments, on walls and pictures, in houses and by roads; that is to say, the images of our Lord God and Saviour Jesus Christ, of our immaculate Lady the holy Mother of God, of the honourable angels and all saints and holy men. For as often as they are seen in their pictorial representations, people who look at them are ardently lifted up to the memory and love of the originals and induced to give them respect and worshipful honour (*ἀσπασμόν καὶ τιμητικὴν προσκύνησιν*) but not real adoration (*ἀληθινὴν λατρείαν*), which according to our faith is due only to the Divine Nature. So that offerings of incense and lights are to be given to these as to the figure of the sacred and life-giving Cross, to the holy Gospel-books and other sacred objects in order to do them honour, as was the pious custom of ancient times. For honour paid to an image passes on to its prototype; he who worships (*ὁ προσκυνῶν*) an image worships the reality of him who is painted in it" (Mansi, XIII, pp. 378-9; Harduin, IV, pp. 453-6; Denzinger, "Enchiridion", 10th ed., no. 302; Hefele-Leclercq, op. cit., III, pp. 772-3).

That is still the stand-point of the Catholic Church. The question was settled for us by the Seventh Ecumenical Council; nothing has since been added to that definition. The customs by which we show our "respect and worshipful honour" for holy images naturally vary in different countries and at different times. Only the authority of the Church has occasionally stepped in, sometimes to prevent a spasmodic return to Iconoclasm, more often to forbid excesses of such signs of reverence as would be misunderstood and give scandal.

The Schoolmen discussed the whole question at length. St. Thomas declares what idolatry is in the "Summa Theologica", II-II, Q. xciv, and explains the use of images in the Catholic Church (ib., a. 2, ad 1^{um}). He distinguishes between *latria* and *dulia* (ib., II-II, Q. ciii). The twenty-fifth session of the Council of Trent (Dec., 1543) repeats faithfully the principles of Nicæa II: "[The holy Synod commands] that images of Christ, the Virgin Mother of God, and other saints are to be held and kept especially in churches, that due honour and reverence (*debitum honorem et venerationem*) are to be paid to them, not that any divinity or power is thought to be in them for the sake of which they may be worshipped, or that anything can be asked of them, or that any trust may be put in images, as was done by the heathen who put their trust in their idols [Ps. cxxxiv, 15 sqq.]; but because the honour shown to them is referred to the prototypes which they represent, so that by kissing, uncovering to, kneeling before images we adore Christ and honour the saints whose likeness they bear" (Denzinger, no. 986). As an example of contemporary Catholic teaching on this subject one could hardly quote anything better expressed than the "Catechism of Christian Doctrine" used in England by command of the Cath-

olic bishops. The four answers, nos. 184-187, sum up the whole position exactly: (184) "It is forbidden to give divine honour or worship to the angels and saints, for this belongs to God alone." (185) "We should pay to the angels and saints an inferior honour or worship, for this is due to them as the servants and special friends of God." (186) "We should give to relics, crucifixes and holy pictures a relative honour, as they relate to Christ and his saints and are memorials of them." (187) "We do not pray to relics or images, for they can neither see nor hear nor help us."

ADRIAN FORTESCUE.

Imagination.—ITS NATURE.—Imagination is the faculty of representing to oneself sensible objects independently of an actual impression of those objects on our senses. It is, according to scholastic psychology, one of the four internal senses, distinct, on the one hand, from the *sensus intimus*, the *sensus aestimativus*, and the memory, and, on the other hand, distinct from the spiritual intellect. The last distinction is to be specially noted on account of the similarity between the operations of the imagination and certain acts of the intellect. We acquire knowledge of our different faculties only from a study of their operations, and the nature of image is the object of endless controversy. Is it psychologically identical with perception, being differentiated only by lesser intensity? Or, on the contrary, has it a specific nature of its own? It would be hard to say. The problem is very complex and perhaps insoluble. The analogy and the points of contact between the image and the perceptive representation are evident; but they hardly seem to justify an identification of the image with the complete perception, and the opinion which regards them as distinct still seems to us the more probable. The imagination is a psycho-physical faculty. To think it can be reduced to the physiological functioning of the brain is an unwarranted and misleading assumption, though it is quite clear that its operations postulate a material basis. Cerebral fatigue, mental disease, and the necessarily quantitative character of its objects leave no room for doubt on this point.

OBJECT.—Although the imagination is independent of actual impression by sensible objects, yet it can represent only what has in some way passed through the senses. There is in this regard, however, a very marked difference between the different external senses. In the case of normal subjects visual images are the most numerous and the most perfect. Those derived from the sense of hearing are also very common; but the images arising from the senses of taste, smell, and touch are much rarer, and many persons, normally constituted, declare that they never have them unless perhaps in almost imperceptible degree. There has been much discussion of late in regard to "affective" images. Ribot believes we can unhesitatingly assert their existence; they are constituted, he claims, by the revival of an affective state, independent of the mental representation of the object which first occasioned it. But the question is not settled; many persons emphatically deny the existence of such images, and the question may be raised whether the so-called "affective image" is not the mere imaginative representation of a past affection,

or the actual affective re-echo of an unusually impressive image.

DIVISIONS.—Imagination is two-fold, retentive (re-productive) and creative (productive). The object of the first is a sensible reality, which we have previously perceived as such. The creative forms its object by combining elements which were separately perceived. The analysis of the creative imagination is of considerable importance for the psychology of invention, and of artistic and intellectual initiative. It brings us in contact with that as yet mysterious region, which is designated by the very indefinite and certainly collective name of "subconsciousness." Judged by their relative perfection, images are complete or incomplete, generic or schematic. The complete image approaches, in richness and precision, objective perception. It occurs most frequently among the passive images which will be discussed farther on. The incomplete image, as its name indicates, is less rich, less precise. Certain details of the object escape consciousness, but what is represented is still sufficient to characterize an individual object. Of course, its complete or incomplete character is relative and, consequently, susceptible of innumerable gradations. The generic image results from the fusion of several more or less analogous images, with the incompatible differences eliminated. It corresponds to the *ensemble* of all the individual objects of one kind that the subject has ever perceived. This is why materialists and even persons incapable of psychological observation confound it with an abstract idea, from which, however, it is absolutely distinct. The generic image is evidently very incomplete. The schematic image is still more summary. It is hardly ever sought for its own sake; it gives only the schema of the object, that is to say certain characteristic outlines sufficient to support the intellect in its proper functions. As a rule the schematic image alone would be insufficient for this purpose; it is, for instance, impossible to imagine a multitude of 40,000 objects, in a manner sufficiently precise to supply the intellect with the sensible factors, indispensable for the mathematical operations to which this number lends itself. Hence the irresistible tendency to complete the schematic image by the verbal image, and the part which the word thus comes to play in the process of thought has given rise to serious errors. Not a few psychologists have mistaken the verbal image, which adds precision to the schematic image, for the idea itself, and it is evident that such a psychological error leads directly to nominalism.

As regards genesis, images are either voluntary or spontaneous. Voluntary images are produced freely. We will to imagine our home, our parents, or some familiar place we have left. These images are usually incomplete, vague, and dull; we render them somewhat more definite by fixing the attention on each part in turn, the grouping of all the parts into a unit being the work of memory. Spontaneous, or passive images are entirely different. Without the slightest impulse or direction of our will, they spring up suddenly in consciousness, representing at times an object which has no apparent connexion with the trend of our thoughts. Images occurring in a dream are a good example, but sleep is by no means necessary for their production; any one who is accustomed to introspection will readily acknowledge that there are constantly arising from the depths of the soul passive images which often become the starting-point of new associations. However, they are best observed in the state of reverie. When this is brought on by fatigue, the most surprising images appear, and they are so well defined and so perfect that they might well pass for pseudo-hallucinations.

THE EXTERNALIZING OF IMAGES.—The relation existing between the image and the "consciousness of presence" is highly complex. The main point is to

determine whether the image tends naturally to externalize itself, i. e. whether the image if left to itself would picture its object as existing outside the mind. This has been denied at times, on account of the probable distinction between the perception and the image, and also because a complete image is a rare occurrence. Are we to admit that a generic or schematic image could externalize itself? To admit this would not settle the question; it is, rather, probable that every image would project itself were it not inhibited by some other influence. It is, indeed, difficult to recognize in a dream anything else than the play of images. For the animal as well as for man, a dream manifestly runs its course in exterior space, and provokes acts, which, if the externalizing of images be denied, are quite incomprehensible. This theory is supported by the characteristics of hallucination, which also throw some light on the mechanism of inhibition. In the case of hallucination the image, even though corrected by reason, represents its object as existing in exterior space. We must remark, further, that hallucination takes place in cases of extreme fatigue or when certain cerebral centres appear to be paralyzed by poison. It is possible, of course, to refer the phenomenon not to paralysis but to toxic stimulation. But such a solution seems to be excluded by the manner in which we seize on the subconscious elements and by the circumstances in which these elements come to the surface. Pseudo-hallucination offers a form intermediate between the totally inhibited image and hallucination. At times the objects appear with wonderful clearness making us almost feel their presence; but the space they occupy does not correspond with external space, nor have they any spatial relation with the objects which we perceive by our senses. They occur most naturally when one is dreaming or in a half-awakened state; and it is well-known that they are due to fatigue or to the suspension of critical reason and voluntary intellectual activity. It is consequently when the image is most intense and when another function, especially critical reason, is in abeyance, that images display a tendency to externalize themselves, and, sometimes, are actually externalized. It seems therefore that, normally, the image would be projected, if no other factor intervened. An analysis of normal perception leads to the same conclusion. This, we know, is the outcome both of sensory impressions and of the images that we externalize. What the latter contribute is, it seems to us, just as objective as what is contributed by the sensory impressions. There may be another way of interpreting the phenomenon; but when we consider it in conjunction with the facts just mentioned, it seems necessary to admit that, normally, the image externalizes itself.

Psychologists often raise the question why certain states of consciousness, such as perception, give us the impression of the external presence of an object. Probably this impression is a primordial characteristic and, from a psychological point of view, it would be more natural to enquire why images, in certain cases, are devoid of that characteristic. Of course, that is no solution of the philosophical problem concerning the objective value of our faculties; but the fact is of considerable importance in the domain of experimental psychology. The only possible answer to the question seems to be as follows: the image is inhibited and appears as subjective whenever its externalization would produce incoherence in the things perceived. It is quite certain that children, possessing less of the critical sense and fewer acquired associations, readily believe "whatever comes into their heads"; and again great fatigue, drunkenness, and other states of the sort which are evidently obstacles to the action of reason are precisely the conditions in which images have the greatest tendency to externalize themselves.

In normal circumstances there is always some special note in the image or in the thing perceived which

prevents them from corresponding exactly. Disagreements therefore appear which force us to place images in a category distinct from that of perceptions, and our acquired associations convince us that they belong to the unreal, or at least less real, world of the conscious subject. This view is corroborated by the phenomenon of normal perception. The data of sense stir up through association images that complete them; the latter, then, must be in perfect accord with the former, and, as a matter of fact, we know that we externalize them spontaneously. In dreams we project into outer space incoherent images, but frequent observation shows that we co-ordinate and complete them, arranging them in a logical whole. It would seem then most likely that along with this coherence we produce their illusory externalization. It is well known how suddenly fantastic images disappear as soon as we recognize their absurdity. There seems to be no doubt then that images of their own nature tend to externalize themselves, and they do so as long as no conflict results therefrom. It will be urged, perhaps, that we are not conscious of this rational criticism demonstrating the logical impossibility of externalizing the images; to this we rejoin that analytic reason intervenes in exceptional cases only, and that it is nearly always a question of simple acquired associations. Dogs and cats, without an inkling of the principle of causality, seek the cause of sensible phenomena. In like spontaneous fashion we inhibit or suppress our subjective images when they differ too widely from reality.

THE MOTIVE FORCE OF IMAGES.—It is well known that an image inclines to action, and Ribot has formulated the general law that "every image tends to its own realization". If external action does not always reveal all the images that arise in consciousness, the reason is that many of them are neutralized by antagonistic images, which, owing to the character of their object, tend to issue in actions of an opposite sort. This motive force of images makes itself felt at every moment of our lives; but it should be observed that ordinarily it acts only through an emotional state and perhaps, as scholastic philosophers maintain, by means of a special "locomotive" faculty. Be that as it may, it seems to be proved that, in order to influence action and movements, images need not necessarily be in consciousness, much less at its focus. "Marginal" images, or even totally subconscious images, can act on our members and produce at times very complex movements. It would be an error to think that this occurs only exceptionally and in abnormal conditions; nevertheless it is through the practices of spiritism, table turning, automatic writing, etc., that special attention has been drawn to it and the most striking examples of it offered to the psychologist. The "motive force" of images is only a particular instance of a law so general that it dominates the whole psychic life. Each psychic state, wherever it may occur in the human person, tends to spread over adjacent areas and thereby produce equilibrium, i. e. the harmonious condition of the whole personality. An image causing a muscular contraction illustrates this diffusion in a very striking way, and that is why it has been observed sooner and formulated in a more precise manner than any other.

ELABORATION OF IMAGES BY THE INTELLECT.—The image is the starting point and in some measure the immediate matter of all our intellectual operations. It is certain that any cessation of imaginative activity puts an end at once to intellectual function; and since these two faculties, imagination and intelligence, are subjectively distinct, this dependence must be of an objective sort, i. e. the intellect borrows from the imagination. An analysis of our higher knowledge, even the most abstract, gives this explanation all the corroboration that immediate experience can furnish. The ideas of the most spiritual things, such as God or

virtue, yield through analysis just those elements which are taken from the purely sensible order, and are presented by the imagination. Consequently, there can be no doubt as to the objective co-operation of the imaginative faculty in the phenomenon of ideation. But certain dangerous errors in this matter must be guarded against. Hitherto we have insisted on the distinction to be observed between the schematic image and the idea. It would be a serious mistake to admit that any combination of images, however summary and refined, can furnish the object of the idea. Abstraction is often explained as though its initial process, the leaving aside of the individualizing notes, applied to the image itself, and as though the residue of that operation were the intellectual determinant, the *species impressa*, which starts the intellect itself into action. This is clearly an illusion. The image in its own essence is, and remains, individual; no separation of parts can bring to view the universal, the non-quantitative, in it. We must consider the rôle of the image in ideation as something quite different. It determines, not the *intellectus agens*, which would be inconceivable, but the conscious subject, to produce the intellectual object. There is no proportion, so far as the nature of the processes goes, between the image and the object of the intellect. Only a spiritual faculty (the *intellectus agens*) is proportioned to such an object; but the image is, as it were, a bait, which, in accordance with the nature of its own object, draws out the superior powers of the conscious subject. Hence, although everything in our intellectual knowledge is derived from the images, everything in it transcends them. These two aspects of the question, the essential dependence of the intellect on the images, and its transcendence in respect to them, must always be considered if we are to understand accurately the part played by the image in the process of ideation. There result therefrom important consequences the study of which pertains to the psychology of intelligence.

To conclude: we conceive the higher realities only by analogy with sensible things, but it in no way follows that we conceive nothing but what is material. Images play a very important part in all the activities of the intellectual order; but they do not constitute that order itself. The very spirituality of the human soul depends on this latter truth.

All general works on Psychology treat of the Imagination, and in most cases in a satisfactory manner. The following in particular may be cited: JAMES, *Principles of Psychology* (New York, 1892); MAHER, *Psychology* (London, 1905); RIBOT, *Essai sur l'imagination créatrice* (Paris, 1904); J. M., *A propos du sentiment de présence chez les profanes et les mystiques in Revue des questions scientifiques* (Brussels, 1908-9); VAN BIENVLIET, *Images sensibles et images matricielles in Rev. Philos.*, XLIV (1897), pp. 113-128; BINET, *La pensée sans images, Ibid.*, LV (1903), pp. 138-152; DE CRAENE, *Nos représentations sensibles intérieures in Rev. Néo-Scol.*, III (1896), pp. 45-69; DUGAS, *L'imagination* (Paris, 1903); GREENWOOD, *Imagination in Dreams* (New York, 1894); JOLY, *De l'imagination* (Paris, 1877); PEILLAUBE, *L'imagination etc. in Rev. de Philos.*, II (1902), pp. 701-718; IDEM, *Théorie des concepts* (Paris, 1895); SURBLED, *L'imagination in Science Cath.* (1896).

M. P. DE MUNYINCK.

Imbonati, CARLO GIUSEPPE, Cistercian of the Reform of St. Bernard, orientalist, biographer, theologian; b. at Milan; flourished in the latter half of the seventeenth century. The date of his death is disputed; yet it certainly did not occur before the year 1696. He occupied the chairs of theology and Hebrew in Rome and was raised to the dignity of abbot. A former pupil of Giulio Bartolucci, who was a member of the same order and projector of the "Bibliotheca magna rabbinica", Imbonati eventually became his master's collaborator. Upon the demise of the latter he completed and edited the fourth volume (Rome, 1693) of this monumental work, which, notwithstanding its shortcomings, bears witness to the untiring industry and vast erudition of its authors, and laid the foundation for Wolf's "Bibliotheca hebraica" and

other works of the kind. Imbonati brought out a supplementary fifth volume under the title "Bibliotheca latino-hebraica, sive de Scriptoribus latinis, qui ex diversis nationibus contra Judæos vel de re hebraicâ utcumque scripserunt" (Rome, 1694). This volume also contains a "Chronology of Sacred Scripture", and two dissertations of an apologetico-polemical character (viz., on the Messias, and on the Divinity and Humanity of Christ) based upon miscellaneous Hebrew, Greek, and Latin writings. Imbonati's "Chronicon Tragicum, sive de eventibus tragicis Principum" (Rome, 1696) has a didactic as well as a scientific aim, and was written chiefly for the guidance of "Principes veritatis amatores". The dedicatory letter, prefixed to this work and addressed to Card. Cœlestinus Sfondratus, O.S.B., is dated from the Monastery of St. Bernard in the Baths of Diocletian, 1 April, 1696. This is the latest date ascertainable concerning Imbonati's career. (See BARTOLOCCI, GIULIO.)

Bartolucci.

THOMAS PLASSMANN.

Imhof, MAXIMUS VON, German physicist; b. 26 July, 1758, at Rissbach, in Bavaria; d. 11 April, 1817, at Munich. He was the son of a shoemaker. After preliminary studies at Landshut he entered the Augustinian Order in 1780 and taught, in the monastery at Munich, physics, mathematics, and philosophy from 1786 to 1791. In 1790 he became a member of the class in physics of the Munich Academy of Sciences, of which he was made director in 1800. In 1790 he received the appointment of Professor of Physics and Mathematics at the Electoral Lyceum, and in 1792 he was called by the academy to lecture in public on experimental physics and chemistry. He was elected prior of his monastery in 1798. In 1802 he left the order and was made canon of the Frauenkirche in Munich. During twenty-one years he superintended the installation of lightning-rods in Bavaria. His important published works are: "Theoria electricitatis", Munich, 1790; "Institutiones physices", Munich, 1796; "Experimental-Naturlehre", Munich, 1795; "Anfangsgruende der Chemie", Munich, 1802; "Anweis ueber Blitzableiter", Munich, 1816.

LOMMELE, *Allgemeine Deutsche Biographie*, XIV (Leipzig, 1881), 56-57.

WILLIAM FOX.

Imitation of Christ, a work of spiritual devotion, also sometimes called the "Following of Christ". Its purpose is to instruct the soul in Christian perfection with Christ as the Divine Model. It consists of a series of counsels of perfection written in Latin in a familiar and even colloquial style, and is divided into four parts or books: (1) Useful admonitions for a spiritual life; (2) Admonitions concerning spiritual things; (3) Of interior consolation; (4) Of the Blessed Sacrament. With the exception of the Bible, it is perhaps the most widely read spiritual book in the world. It was first published anonymously in A. D. 1418. Its authorship was until recently in dispute, being attributed to various spiritual writers, St. Bernard, St. Bonaventure, Innocent III, Henry of Kalkar, John a Kempis, Walter Hilton, Jean Charlier de Gerson, and Giovanni Gersen. The claim of Thomas a Kempis has been completely vindicated in recent years. For details as regards the authorship and the nature of the work itself see THOMAS A KEMPIS.

Immaculate Conception.—THE DOCTRINE.—In the Constitution "Ineffabilis Deus" of 8 December, 1854, Pius IX. pronounced and defined that the Blessed Virgin Mary "in the first instant of her concep-

tion, by a singular privilege and grace granted by God, in view of the merits of Jesus Christ, the Saviour of the human race, was preserved exempt from all stain of original sin" (Denzinger, "Enchiridion", 10th ed., n. 1641). The subject of this immunity from original sin is the person of Mary at the moment of the creation of her soul and its infusion into her body. The term *conception* does not mean the *active* or *generative* conception by her parents. Her body was formed in the womb of the mother, and the father had the usual share in its formation. The question does not concern the immaculateness of the generative activity of her parents. Neither does it concern the *passive* conception absolutely and simply (*conceptio seminis, carnis, inchoata*), which, according to the order of nature, precedes the infusion of the rational soul. The person is truly conceived when the soul is created and infused into the body. Mary was preserved exempt from all stain of original sin at the first moment of her animation, and sanctifying grace was given to her before sin could have taken effect in her soul. The formal active essence of original sin was not removed from her soul, as it is removed from others by baptism; it was *excluded*, it never was in her soul. Simultaneously with the exclusion of sin, the state of original sanctity, innocence, and justice, as opposed to original sin, was conferred upon her, by which gift every stain and fault, all depraved emotions, passions, and debilities, essentially pertaining to original sin, were excluded. But she was not made exempt from the temporal penalties of Adam—from sorrow, bodily infirmities, and death. The immunity from original sin was given to Mary by a singular exemption from a universal law through the same merits of Christ, by which other men are cleansed from sin by baptism. Mary needed the redeeming Saviour to obtain this exemption, and to be delivered from the universal necessity and debt (*debitum*) of being subject to original sin. The person of Mary, in consequence of her origin from Adam, should have been subject to sin, but, being the new Eve who was to be the mother of the new Adam, she was, by the eternal counsel of God and by the merits of Christ, withdrawn from the general law of original sin. Her redemption was the very masterpiece of Christ's redeeming wisdom. He is a greater redeemer who pays the debt that it may not be incurred, than he who pays after it has fallen on the debtor (Ullathorne, "Immac. Conception", p. 89). Such is the meaning of the term "Immaculate Conception."

THE HOLY SCRIPTURE.—No direct or categorical and stringent proof of the dogma can be brought forward from Scripture. But the first scriptural passage which contains the promise of the redemption, mentions also the Mother of the Redeemer. The sentence against the first parents was accompanied by the Earliest Gospel (*Proto-evangelium*), which put enmity between the serpent and the woman: "and I will put enmity between thee and the woman and her seed; she (he) shall crush thy head and thou shalt lie in wait for her (his) heel" (Gen., iii, 15). The translation "she" of the Vulgate is interpretative; it originated after the fourth century ("Katholik", 1893, 425), and cannot be defended critically. The conqueror from the seed of the woman, who should crush the serpent's head, is Christ; the woman at enmity with the serpent is Mary (Hoberg, "Genes.", p. 50; cf. Leimbach, "Messianische Weissagungen", 1909, pp. 5 sq.). God puts enmity between her and Satan in the same manner and measure, as there is enmity between Christ and the seed of the serpent. Mary was ever to be in that exalted state of soul which the serpent had destroyed in man, i. e. in sanctifying grace. Only the continuous union of Mary with God by grace explains sufficiently the enmity between her and Satan. The *Proto-evangelium*, therefore, in the original text contains a direct promise

of the Redeemer, and in conjunction therewith the manifestation of the masterpiece of His Redemption, the perfect preservation of His virginal Mother from original sin. The salutation of the angel Gabriel—*χαίρε κεχαριτωμένη*, Hail, full of grace (Luke, i, 28; cf. Bardenhewer, "Mariä Verkündigung", 95 sq.)—indicates a unique abundance of grace, a supernatural, godlike state of soul, which finds its explanation only in the Immaculate Conception of Mary. But the term *κεχαριτωμένη* (full of grace) serves only as an illustration, not as a proof of the dogma. From the texts Prov., viii, and Eccles., xxiv, which exalt the Wisdom of God and which in the liturgy are applied to Mary, the most beautiful work of God's Wisdom, or from the Canticle of Canticles (iv, 7, "Thou art all fair, O my love, and there is not a spot in thee"), no theological conclusion can be drawn. These passages, applied to the Mother of God, may be readily understood by those who know the privilege of Mary, but do not avail to prove the doctrine dogmatically, and are therefore omitted from the Constitution "Ineffabilis Deus." For the theologian it is a matter of conscience not to take an extreme position by applying to a creature texts which might imply the prerogatives of God.

TRADITION.—In regard to the sinlessness of Mary the older Fathers are very cautious: some of them even seem to have been in error on this matter. Origen, although he ascribed to Mary high spiritual prerogatives, thought that, at the time of Christ's passion, the sword of disbelief pierced Mary's soul; that she was struck by the poniard of doubt; and that for her sins also Christ died (Origen, "In Luc. hom. xvii"; Lehner, "Marienverehrung in den ersten Jahrh.", Stuttgart, 1886, p. 150). Exactly in the same manner St. Basil writes in the fourth century: he sees in the sword, of which Simeon speaks, the doubt which pierced Mary's soul (Basil, Ep. celix; Lehner, op. cit., p. 152). St. Chrysostom accuses her of ambition, and of putting herself forward unduly, when she sought to speak to Jesus at Capharnaum (Matt., xii, 46; Chrysostom, Hom. xlv; cf. also "In Matt.", hom. iv; Lehner, pp. 152 sq.; E. Lucius, "Anfänge des Heiligenkultus", Tübingen, 1904, p. 439; Hunter, "Dogmatic Theol.", II, p. 565). But these stray private opinions merely serve to show that theology is a progressive science. If we were to attempt to set forth the full doctrine of the Fathers on the sanctity of the Blessed Virgin, which includes particularly the implicit belief in the immaculateness of her conception, we should be forced to transcribe a multitude of passages. In the testimony of the Fathers two points are insisted upon: her absolute purity and her position as the second Eve (cf. I Cor., xv, 22). This celebrated comparison between Eve, while yet immaculate and incorrupt—that is to say, not subject to original sin—and the Blessed Virgin is developed by Justin (Dialog. cum Tryphone, 100), Irenæus (Contra Hæreses, III, xxii, 4), Tertullian (De carne Christi, xvii), Julius Firmicus Maternus (De errore profan. relig., xxvi), Cyril of Jerusalem (Catecheses, xii, 29), Epiphanius (Hæres., lxxviii, 18), Theodotus of Ancyra (Or. in S. Deip., n. 11), Sedulius (Carmen paschale, II, 28). The Fathers call Mary the tabernacle exempt from defilement and corruption (Hippolytus, "Orat. in illud, Dominus pascit me", in Gallandi, "Bibl. patrum", II, 496); worthy of God, immaculate of the immaculate, most complete sanctity, perfect justice, neither deceived by the persuasion of the serpent, nor infected with his poisonous breathings (Origen, "Hom. i in diversa"); incorrupt, a virgin immune through grace from every stain of sin (Ambrose, "Sermo xxii in Ps. cxviii"); a dwelling fit for Christ, not because of her habit of body, but because of original grace (Maximus of Turin, "Hom. viii de Natali Domini"); a virgin innocent, without spot, void of culpability, holy in body and in soul, a

lily springing among thorns, untaught the ills of Eve . . . nor was there any communion in her of light with darkness, and, when not yet born, she was consecrated to God (Theodatus of Ancyra, "Orat. in S. Dei Genitr.," in Gallandi, IX, 475). In refuting Pelagius St. Augustine declares that all the just have truly known of sin "except the Holy Virgin Mary, of whom, for the honour of the Lord, I will have no question whatever where sin is concerned" (De naturâ et gratiâ, c. xxxvi). Mary was pledged to Christ in the womb when she was made (Peter Chrysologus, "Sermo cxi de Annunt. B. M. V."): it is evident and notorious that she was pure from eternity, exempt from every defect (Typicon S. Sabæ); she was formed without any stain (St. Proclus, "Laudatio in S. Dei Gen. ort.," I, 3); she was created in a condition more sublime and glorious than all other natures (Theodorus of Jerusalem in Mansi, XII, 1140); when the Virgin Mother of God was to be born of Anne, nature did not dare to anticipate the germ of grace, but remained devoid of fruit (John Damascene, "Hom. i in B. V. Nativ.," ii; cf. Ullathorne, op. cit., 112 sq.).

The Syrian Fathers never tire of extolling the sinlessness of Mary. St. Ephraem considers no terms of eulogy too high to describe the excellence of Mary's grace and sanctity: "Most holy Lady, Mother of God, alone most pure in soul and body, alone exceeding all perfection of purity . . . , alone made in thy entirety the home of all the graces of the Most Holy Spirit, and hence exceeding beyond all compare even the angelic virtues in purity and sanctity of soul and body . . . my Lady most holy, all-pure, all-immaculate, all-stainless, all-undefiled, all-incorrupt, all-inviolable . . . spotless robe of Him Who clothes Himself with light as with a garment . . . flower unfading, purple woven by God, alone most immaculate" ("Precationes ad Deiparam," in Opp. Græc. Lat., III, 524-37). To St. Ephraem she was as innocent as Ève before her fall, a virgin most estranged from every stain of sin, more holy than the Seraphim, the sealed fountain of the Holy Ghost, the pure seed of God, ever in body and in mind intact and immaculate ("Carmina Nisibena," ed. Bickell, p. 122). Jacob of Sarug says that "the very fact that God has elected her proves that none was ever holier than Mary; if any stain had disfigured her soul, if any other virgin had been purer and holier, God would have selected her and rejected Mary" (ed. Bickell, "Ausgewählte Gedichte," pp. 228 sqq.). It seems, however, that Jacob of Sarug, if he had any clear idea of the doctrine of sin, held that Mary was perfectly pure from original sin ("the sentence against Adam and Eve") at the Annunciation (op. cit., p. 242).

St. John Damascene (Or. i Nativ. Deip., n. 2) esteems the supernatural influence of God at the generation of Mary to be so comprehensive that he extends it also to her parents. He says of them that, during the generation, they were filled and purified by the Holy Ghost, and freed from sexual concupiscence. Consequently, according to the Damascene, even the human element of her origin, the material of which she was formed, was pure and holy. This opinion of an immaculate active generation and the sanctity of the "conceptio carnis" was taken up by some Western authors; it was put forward by Petrus Comestor in his treatise against St. Bernard (ed. Louvain, 1536) and by others. Some writers even taught that Mary was born of a virgin and that she was conceived in a miraculous manner when Joachim and Anne met at the golden gate of the temple (Trombelli, "Mariæ SS. Vita", sect. V, ii, 8; Summa aurea, II, 948. Cf. also the "Revelations" of Catherine Emmerich which contain the entire apocryphal legend of the miraculous conception of Mary—see Schmöger, "Leben Jesu nach den Gesichtern A. K. Emmerich", p. 77 sqq.; Livius, "The Blessed Virgin in the Fathers of the first six centuries", 208 sqq.). From this sum-

mary it appears that the belief in Mary's immunity from sin in her conception was prevalent amongst the Fathers, especially those of the Greek Church. The rhetorical character, however, of many of these and similar passages prevents us from laying too much stress on them, and interpreting them in a strictly literal sense. The Greek Fathers never formally or explicitly discussed the question of the Immaculate Conception.

CONCEPTION OF ST. JOHN.—A comparison with the conception of Christ and that of St. John may serve to throw light both on the dogma and on the reasons which led the Greeks to celebrate at an early date the Feast of the Conception of Mary. The conception of the Mother of God was beyond all comparison more noble than that of St. John the Baptist, whilst it was immeasurably beneath that of her Divine Son. The soul of the precursor was not preserved immaculate at its union with the body, but was sanctified either shortly after conception from a previous state of sin, or through the presence of Jesus at the Visitation. Our Lord, being conceived by the Holy Ghost, was, by virtue of his miraculous conception, *ipso facto* free from the taint of original sin (Livius, op. cit., 249). Of these three conceptions the Church celebrates feasts. The Orientals have a Feast of the Conception of St. John the Baptist (23 Sept.), which dates back to the fifth century, is thus older than the Feast of the Conception of Mary, and, during the Middle Ages, was kept also by many Western dioceses on 24 September. The Conception of Mary is celebrated by the Latins on 8 December; by the Orientals on 9 December (cf. De Meester, op. cit. infra, p. 9); the Conception of Christ has its feast in the universal calendar on 25 March. In celebrating the feast of Mary's Conception the Greeks of old did not consider the theological distinction of the active and the passive conceptions, which was indeed unknown to them. They did not think it absurd to celebrate a conception which was not immaculate, as we see from the Feast of the Conception of St. John. They solemnized the Conception of Mary, perhaps because, according to the "Proto-evangelium" of St. James, it was preceded by miraculous events (the apparition of an angel to Joachim, etc.), similar to those which preceded the conception of St. John, and that of our Lord Himself. Their object was less the purity of the conception than the holiness and heavenly mission of the person conceived. In the Office of 9 December, however, Mary, from the time of her conception, is called beautiful, pure, holy, just, etc., terms never used in the Office of 23 September (sc. of St. John the Baptist). The analogy of St. John's sanctification may have given rise to the Feast of the Conception of Mary. If it was necessary that the precursor of the Lord should be so pure and "filled with the Holy Ghost" even from his mother's womb, such a purity was assuredly not less befitting His Mother. The moment of St. John's sanctification is by later writers thought to be the Visitation ("the infant leaped in her womb"), but the angel's words (Luke, i, 15) seem to indicate a sanctification at the conception. This would render the origin of Mary more similar to that of John. And if the Conception of John had its feast, why not that of Mary?

THE DOCTRINE PROBABLE.—There is an incongruity in the supposition that the flesh, from which the Flesh of the Son of God was to be formed, should ever have belonged to one who was the slave of that arch-enemy, whose power He came on earth to destroy. Hence the axiom of Pseudo-Anselmus (Eadmer) developed by Duns Scotus, *Decuit, potuit, ergo fecit*, it was becoming that the Mother of the Redeemer should have been free from the power of sin and Satan from the first moment of her existence; God could give her this privilege, therefore He gave it to her. Again it is remarked that a peculiar privilege was

granted to the prophet Jeremias and to St. John the Baptist. They were sanctified in their mother's womb, because by their preaching they had a special share in the work of preparing the way for Christ. Consequently some much higher prerogative is due to Mary. (A treatise of P. Marchant, claiming for St. Joseph also the privilege of St. John, was placed on the Index in 1633.) Scotus says that "the perfect Mediator must, in some one case, have done the work of mediation most perfectly, which would not be unless there was some one person at least, in whose regard the wrath of God was anticipated and not merely appeased" (Hunter, "Dogm. Theol.", 1895, II, 552).

THE FEAST.—The older feast of the Conception of Mary (Conc. of St. Anne), which originated in the monasteries of Palestine at least as early as the seventh century, and the modern feast of the Immaculate Conception are not identical in their object. Originally the Church only celebrated the Feast of the Conception of Mary, as she kept the Feast of St. John's conception, not discussing the sinlessness. This feast in the course of centuries became the Feast of the Immaculate Conception, as dogmatical argumentation brought about precise and correct ideas, and as the thesis of the theological schools regarding the preservation of Mary from all stain of original sin gained strength. Even after the dogma had been universally accepted in the Latin Church, and had gained authoritative support through diocesan decrees and papal decisions, the old term remained, and before 1854 the term "Immaculata Conceptio" is nowhere found in the liturgical books, except in the invitorium of the Votive Office of the Conception. The Greeks, Syrians, etc. call it the Conception of St. Anne (Σύλληψις τῆς ἁγίας καὶ θεοπρομήτορος Ἀννης, "the Conception of St. Anne, the ancestress of God"). Pasaglia in his "De Immaculato Deiparæ Conceptu", basing his opinion upon the "Typicon" of St. Sabas, which was substantially composed in the fifth century, believes that the reference to the feast forms part of the authentic original, and that consequently it was celebrated in the Patriarchate of Jerusalem in the fifth century (III, n. 1604). But the Typicon was interpolated by the Damascene, Sophronius, and others, and, from the ninth to the twelfth centuries, many new feasts and offices were added (Toscani and Cozza, op. cit. infra, XIV, 20). To determine the origin of this feast we must take into account the genuine documents we possess, the oldest of which is the canon of the feast, composed by St. Andrew of Crete, who wrote his liturgical hymns in the second half of the seventh century, when a monk at the monastery of St. Sabas near Jerusalem (d. Archbishop of Crete about 720). But the solemnity cannot then have been generally accepted throughout the Orient, for John, first monk and later bishop in the Isle of Eubœa, about 750 in a sermon, speaking in favour of the propagation of this feast, says that it was not yet known to all the faithful (*ἐὶ καὶ μὴ παρὰ τοῖς πᾶσι γνωρίζεται*; De Meester, p. 7; Migne, P. G., XCVI, 1499). But a century later George of Nicomedia, made metropolitan by Photius in 860, could say that the solemnity was not of recent origin (P. G., C, 1335). It is therefore, safe to affirm that the feast of the Conception of St. Anne appears in the Orient not earlier than the end of the seventh or the beginning of the eighth century. Allatus (Dissert. de lib. eccl. Græc., p. 44), Assemani (Kal. utr. eccl., V, 435), Kellner (Heortology, 242), Nilles (Kal. man., I, 349) hold this opinion.

As in other cases of the same kind the feast originated in the monastic communities. The monks, who arranged the psalmody and composed the various poetical pieces for the office, also selected the date, 9 December, which was always retained in the Oriental calendars. Gradually the solemnity emerged from the cloister, entered into the cathedrals, was glorified by preachers and poets, and eventually

became a fixed feast of the calendar, approved by Church and State. It is registered in the Calendar of Basil II (976-1025), and by the Constitution of Emperor Manuel I Comnenus on the days of the year which are half or entire holidays, promulgated in 1166, it is numbered among the days which have full sabbath rest. Up to the time of Basil II, Lower Italy, Sicily, and Sardinia still belonged to the Byzantine Empire; the city of Naples was not lost to the Greeks until 1127, when Roger II conquered the city. The influence of Constantinople was consequently strong in the Neapolitan Church, and, as early as the ninth century, the Feast of the Conception was doubtless kept there, as elsewhere in Lower Italy on 9 December, as indeed appears from the marble calendar found in 1742 in the Church of S. Giorgio Maggiore at Naples (Martinow, "Annus græco-slavicus", 9 Dec.). To-day the Conception of St. Anne is in the Greek Church one of the minor feasts of the year (De Meester, 5). The lesson in Matins contains allusions to the apocryphal "Proto-evangelium" of St. James, which dates from the second half of the second century (see ANNE, SAINT). To the Orthodox Greeks of our days, however, the feast means very little; they continue to call it "Conception of St. Anne", indicating unintentionally, perhaps, the active conception which was certainly not immaculate. In the Menæa of 9 December this feast holds only the second place, the first canon being sung in commemoration of the dedication of the Church of the Resurrection at Constantinople. The Russian hagiographer Muraviev and several other orthodox authors even loudly declaimed against the dogma after its promulgation, although their own preachers formerly taught the Immaculate Conception in their writings long before the definition of 1854 (cf. Martinow, loc. cit.).

In the Western Church the feast appeared (8 Dec.), when in the Orient its development had come to a standstill. The timid beginnings of the new feast in some Anglo-Saxon monasteries in the eleventh century, partly smothered by the Norman conquest, were followed by its reception in some chapters and dioceses by the Anglo-Norman clergy. But the attempts to introduce it officially provoked contradiction and theoretical discussion, bearing upon its legitimacy and its meaning, which were continued for centuries and were not definitively settled before 1854. The "Martyrology of Tallaght" compiled about 790 and the "Feilire" of St. Aengus (800) register the Conception of Mary on 3 May (O'Hanlon, "Lives of the Irish Saints", V, 102; Thurston, "The Irish Origin of Our Lady's Feast of the Conception" in "Month", 1904, p. 61). It is doubtful, however, if an actual feast corresponded to this rubric of the learned monk St. Aengus. This Irish feast certainly stands alone and outside the line of liturgical development. It is a mere isolated appearance, not a living germ (E. Bishop, "Origin etc.", p. 6). The Scholiast adds, in the lower margin of the "Feilire", that the conception (Inceptio) took place in February, since Mary was born after seven months—a singular notion found also in some Greek authors. The first definite and reliable knowledge of the feast in the West comes from England; it is found in a calendar of Old Minster, Winchester (Conceptio S'ce Dei Genetricis Mariæ), dating from about 1030, and in another calendar of New Minster, Winchester, written between 1035 and 1050 (Hampson, "Cal. medii Ævi", I, 433, 446); a pontifical of Exeter of the eleventh century (assigned to 1046-1072) contains a "benedictio in Conceptione S. Mariæ"; a similar benediction is found in a Canterbury pontifical written probably in the first half of the eleventh century, certainly before the Conquest. These episcopal benedictions show that the feast not only commended itself to the devotion of individuals, but that it was recognized by authority and was observed by the Saxon monks

with considerable solemnity. The existing evidence goes to show that the establishment of the feast in England was due to the monks of Winchester before the Conquest (1066).

The Normans on their arrival in England were disposed to treat in a contemptuous fashion English liturgical observances; to them this feast must have appeared specifically English, a product of insular simplicity and ignorance. Doubtless its public celebration was abolished at Winchester and Canterbury, but it did not die out of the hearts of individuals, and on the first favourable opportunity the feast was restored in the monasteries (Bishop, p. 30). At Canterbury, however, it was not re-established before 1328. Several documents (Ullathorne, 161 sq.) state that in Norman times it began at Ramsey, pursuant to a vision vouchsafed to Helsing or Æthelsige, Abbot of Ramsey, on his journey back from Denmark, whither he had been sent by William I about 1070. An angel appeared to him during a severe gale and saved the ship after the abbot had promised to establish the Feast of the Conception in his monastery. However we may consider the supernatural feature of the legend, it must be admitted that the sending of Helsing to Denmark is an historical fact (Thurston in "Month", July 1904; Ullathorne, p. 164). The account of the vision has found its way into many breviaries, even into the Roman Breviary of 1473. The Council of Canterbury (1328) attributes the re-establishment of the feast in England to St. Anselm, Archbishop of Canterbury (d. 1109). But although this great doctor wrote a special treatise, "De Conceptu virginali et originali peccato", by which he laid down the principles of the Immaculate Conception, it is certain that he did not introduce the feast anywhere. The letter ascribed to him, which contains the Helsing narrative, is spurious (Bishop, p. 8). The principal propagator of the feast after the Conquest was Anselm, the nephew of St. Anselm. He was educated at Canterbury where he may have known some Saxon monks who remembered the solemnity in former days; after 1109 he was for a time Abbot of St. Sabas at Rome, where the Divine Offices were celebrated according to the Greek calendar. When in 1121 he was appointed Abbot of Bury St. Edmund's he established the feast there; partly at least through his efforts other monasteries also adopted it, like Reading, St. Albans, Worcester, Gloucester, and Winchester (Bishop, 32).

But a number of others decried its observance as hitherto unheard of and absurd, the old Oriental feast being unknown to them. Two bishops, Roger of Salisbury and Bernard of St. Davids, declared that the festival was forbidden by a council, and that the observance must be stopped. And when, during the vacancy of the See of London, Osbert de Clare, Prior of Westminster, undertook to introduce the feast at Westminster (8 December, 1127), a number of monks arose against him in the choir and said that the feast must not be kept, for its establishment had not the authority of Rome (cf. Osbert's letter to Anselm in Bishop, p. 24). Whereupon the matter was brought before the Council of London in 1129. The synod decided in favour of the feast, and Bishop Gilbert of London adopted it for his diocese. Thereafter the feast spread in England, but for a time retained its private character, the Synod of Oxford (1222) having refused to raise it to the rank of a holiday of obligation. In Normandy at the time of Bishop Rotric (1165-83) the Conception of Mary, in the Archdiocese of Rouen and its six suffragan dioceses, was a feast of precept equal in dignity to the Annunciation. At the same time the Norman students at the University of Paris chose it as their patronal feast. Owing to the close connexion of Normandy with England, it may have been imported from the latter country into Normandy, or the Norman barons and clergy may have

brought it home from their wars in Lower Italy, where it was universally solemnized by the Greek inhabitants. During the Middle Ages the Feast of the Conception of Mary was commonly called the "Feast of the Norman nation", which shows that it was celebrated in Normandy with great splendour and that it spread from there over Western Europe. Passaglia contends (III, 1755) that the feast was celebrated in Spain in the seventh century; Bishop Ullathorne also (p. 161) finds this opinion acceptable. If this be true, it is difficult to understand why it should have entirely disappeared from Spain later on, for neither does the genuine Mozarabic Liturgy contain it, nor the tenth century calendar of Toledo edited by Morin (Kellner, op. cit., p. 254). The two proofs given by Passaglia are futile: the life of St. Isidore, falsely attributed to St. Ildephonsus, which mentions the feast, is interpolated, while, in the Visigoth lawbook, the expression "Conceptio S. Mariæ" is to be understood of the Annunciation.

THE CONTROVERSY.—No controversy arose over the Immaculate Conception on the European continent before the twelfth century. The Norman clergy abolished the feast in some monasteries of England where it had been established by the Anglo-Saxon monks. But towards the end of the eleventh century, through the efforts of Anselm the Younger, it was taken up again in several Anglo-Norman establishments. That St. Anselm the Elder re-established the feast in England is highly improbable, although it was not new to him. He had been made familiar with it as well by the Saxon monks of Canterbury, as by the Greeks with whom he came in contact during his exile in Campania and Apulia (1098-9). The treatise "De Conceptu virginali", usually ascribed to him, was composed by his friend and disciple, the Saxon monk Eadmer of Canterbury (Kellner, op. cit., 446). When the canons of the cathedral of Lyons, who no doubt knew Anselm the Younger, Abbot of Bury St. Edmund's, personally introduced the feast into their choir, after the death of their bishop in 1240, St. Bernard deemed it his duty to publish a protest against this new way of honouring Mary. He addressed to the canons a vehement letter (Epist. clxxiv), in which he reproved them for taking the step upon their own authority and before they had consulted the Holy See. Not knowing that the feast had been celebrated with the rich tradition of the Greek and Syrian Churches regarding the sinlessness of Mary, he asserted that the feast was foreign to the old tradition of the Church. Yet it is evident from the tenor of his language that he had in mind only the active conception or the formation of the flesh, and that the distinction between the active conception, the formation of the body, and its animation by the soul had not yet been drawn. No doubt, when the feast was introduced in England and Normandy, the axiom "deicit, potuit, ergo fecit", the childlike piety and enthusiasm of the *simplices* building upon revelations and apocryphal legends, had the upper hand. The object of the feast was not clearly determined, no positive theological reasons had been placed in evidence.

St. Bernard was perfectly justified when he demanded a careful inquiry into the reasons for observing the feast. Not adverting to the possibility of sanctification at the time of the infusion of the soul, he writes that there can be question only of a sanctification *after* conception, which would render holy the nativity not the conception itself (Scheeben, "Dogmatik", III, p. 550). Hence Albert the Great observes: "We say that the Blessed Virgin was not sanctified before animation, and the affirmative contrary to this is the heresy condemned by St. Bernard in his epistle to the canons of Lyons" (III Sent., dist. iii, p. I, ad 1, Q. i). St. Bernard was at once answered in a treatise written by either Richard of St. Victor or Peter Comestor. In this treatise appeal is

THE IMMACULATE CONCEPTION

MURILLO, THE LOUVRE

made to a feast which had been established to commemorate an insupportable tradition. It maintained that the flesh of Mary needed no purification; that it was sanctified before the conception. Some writers of those times entertained the fantastic idea that before Adam fell, a portion of his flesh had been reserved by God and transmitted from generation to generation, and that out of this flesh the body of Mary was formed (Scheeben, op. cit., III, 551), and this formation they commemorated by a feast. The letter of St. Bernard did not prevent the extension of the feast, for in 1154 it was observed all over France, until in 1275, through the efforts of the Paris University it was abolished in Paris and other dioceses. After the saint's death the controversy arose anew between Nicholas of St. Albans, an English monk who defended the festival as established in England, and Peter Cellensis, the celebrated Bishop of Chartres. Nicholas remarks that the soul of Mary was pierced twice by the sword, i. e. at the foot of the cross and when St. Bernard wrote his letter against her feast (Scheeben, III, 551). The point continued to be debated throughout the thirteenth and fourteenth centuries, and illustrious names appeared on each side. St. Peter Damian, Peter the Lombard, Alexander of Hales, St. Bonaventure, and Albert the Great are quoted as opposing it. St. Thomas at first pronounced in favour of the doctrine in his treatise on the "Sentences" (in I. Sent. c. 44, q. I ad 3), yet in his "Summa Theologica" he concluded against it. Much discussion has arisen as to whether St. Thomas did or did not deny that the Blessed Virgin was immaculate at the instant of her animation, and learned books have been written to vindicate him from having actually drawn the negative conclusion. For this controversy see: Cornoldi, "Sententia S. Thomæ etc.", (2nd ed., Naples, 1870); Ronard de Card, "L'ordre des Frères-prêcheurs et l'immaculée Conception" (Brussels, 1864); Pesch, "Præl. dogm." III (Freiburg, 1895), 170; Heinrich-Gutberlet, "Dogmat. Theol.", VII (Mainz, 1896), 436; Többe, "Die Stellung des hl. Thomas zu der unbefl. Empfängnis" (Münster, 1892); C. M. Schneider, "Die unbefl. Empfängnis und die Erbsünde" (Ratisbon, 1892); Pohle, "Lehrbuch d. Dogmatik", II (Paderborn, 1903), 251. Yet it is hard to say that St. Thomas did not require an instant at least, after the animation of Mary, before her sanctification. His great difficulty appears to have arisen from the doubt as to how she could have been redeemed if she had not sinned. This difficulty he raised in no fewer than ten passages in his writings (see, e. g., "Summa Theol.", III, Q. xxvii, a. 2, ad 2um). But while St. Thomas thus held back from the essential point of the doctrine, he himself laid down the principles which, after they had been drawn together and worked out, enabled other minds to furnish the true solution of this difficulty from his own premises.

In the thirteenth century the opposition was largely due to a want of clear insight into the subject in dispute. The word "conception" was used in different senses, which had not been separated by careful definition. If St. Thomas, St. Bonaventure, and other theologians had known the doctrine in the sense of the definition of 1854, they would have been its strongest defenders instead of being its opponents. We may formulate the question discussed by them in two propositions, both of which are against the sense of the dogma of 1854: (1) the sanctification of Mary took place before the infusion of the soul into the flesh, so that the immunity of the soul was a consequence of the sanctification of the flesh and there was no liability on the part of the soul to contract original sin. This would approach the opinion of the Damascene concerning the holiness of the active conception. (2) The sanctification took place after the infusion of the soul by redemption from the servi-

tude of sin, into which the soul had been drawn by its union with the unsanctified flesh. This form of the thesis excluded an immaculate conception. The theologians forgot that between sanctification before infusion and sanctification after infusion there was a medium, i. e., sanctification of the soul at the moment of its infusion. To them the idea seemed strange that what was subsequent in the order of nature could be simultaneous in point of time. Speculatively taken, the soul must be created before it can be infused and sanctified, but, in reality, the soul is created and sanctified at the very moment of its infusion into the body. Their principal difficulty was the declaration of St. Paul (Rom., v. 12), that all men have sinned in Adam. The purpose of this Pauline declaration, however, is to insist on the need which all men have of redemption by Christ. Our Lady was no exception to this rule. A second difficulty was the silence of the earlier Fathers. But the divines of those times were distinguished not so much for their knowledge of the Fathers or of history, as for their exercise of the power of reasoning. They read the Western Fathers more than those of the Eastern Church, who exhibit in far greater completeness the tradition of the Immaculate Conception. And many works of the Fathers which had then been lost sight of have since been brought to light. The famous Duns Scotus (d. 1308) at last (in III Sent., dist. iii, in both commentaries) laid the foundations of the true doctrine so solidly and dispelled the objections in a manner so satisfactory, that from that time onward the doctrine prevailed. He showed that the sanctification after animation—*sanctificatio post animationem*—demanded that it should follow in the order of nature (*naturæ*) not of time (*temporis*); he removed the great difficulty of St. Thomas showing that, so far from being excluded from redemption, the Blessed Virgin obtained of her Divine Son the greatest of redemptions through the mystery of her preservation from all sin. He also brought forward, by way of illustration, the somewhat dangerous and doubtful argument of Eadmer (S. Anselm) "*decutit, potuit, ergo fecit*" (cf. Scheeben, III, 555, ss.).

From the time of Scotus not only did the doctrine become the common opinion at the universities, but the feast spread widely to those countries where it had not been previously adopted. With the exception of the Dominicans, all or nearly all, of the religious orders took it up. The Franciscans at the general chapter at Pisa in 1263 adopted the Feast of the Conception of Mary for the entire order; this, however, does not mean that they professed at that time the doctrine of the Immaculate Conception. Following in the footsteps of their own Duns Scotus, the learned Petrus Aureolus and Franciscus de Mayronis became the most fervent champions of the doctrine, although their older teachers (St. Bonaventure included) had been opposed to it. The controversy continued, but the defenders of the opposing opinion were almost entirely confined to the members of the Dominican Order. In 1439 the dispute was brought before the Council of Basle where the University of Paris, formerly opposed to the doctrine, proved to be its most ardent advocate, asking for a dogmatical definition. The two referees at the council were John of Segovia and John Turrecremata (Torquemada). After it had been discussed for the space of two years before that assemblage, the bishops declared the Immaculate Conception to be a doctrine which was pious, consonant with Catholic worship, Catholic faith, right reason, and Holy Scripture; nor, said they, was it henceforth allowable to preach or declare to the contrary (Mansi, XXXIX, 182). The Fathers of the Council say that the Church of Rome was celebrating the feast. This is true only in a certain sense. It was kept in a number of the churches of Rome, especially in those of the religious orders,

but it was not received in the official calendar. As the council at the time was not oecumenical, it could not pronounce with authority. The memorandum of the Dominican Torquemada formed the armoury for all attacks upon the doctrine made by S. Antoninus of Florence (d. 1459), and by the Dominicans Bandelli and Spina (Ronard de Card, "L'Ordre des Frères-Prêcheurs et l'Immac. Conc.", Brussels, 1864).

By a Decree of 28 Feb., 1476, Sixtus IV at last adopted the feast for the entire Latin Church and granted an indulgence to all who would assist at the Divine Offices of the solemnity (Denzinger, 734). The Office adopted by Sixtus IV was composed by Leonard de Nogarolis, whilst the Franciscans, since 1480, used a very beautiful Office from the pen of Bernardine dei Busti (*Sicut Lilium*), which was granted also to others (e. g. to Spain, 1761), and was chanted by the Franciscans up to the second half of the nineteenth century. As the public acknowledgment of the feast of Sixtus IV did not prove sufficient to appease the conflict, he published in 1483 a constitution in which he punished with excommunication all those of either opinion who charged the opposite opinion with heresy (*Grave nimis*, 4 Sept., 1483; Denzinger, 735). In 1546 the Council of Trent, when the question was touched upon, declared that "it was not the intention of this Holy Synod to include in the decree which concerns original sin the Blessed and Immaculate Virgin Mary, Mother of God" (*Sess. V, De peccato originali*, v, in Denzinger, 792). Since, however, this decree did not define the doctrine, the theological opponents of the mystery, though more and more reduced in numbers, did not yield. St. Pius V not only condemned proposition lxxiii of Baius that "no one but Christ was without original sin, and that therefore the Blessed Virgin had died because of the sin contracted in Adam, and had endured afflictions in this life, like the rest of the just, as punishment of actual and original sin" (Denzinger, 1073), but he also issued a constitution in which he forbade all public discussion of the subject. Finally, he inserted a new and simplified Office of the Conception in the liturgical books ("*Super speculam*", Dec., 1570; "*Superni omnipotentis*", March, 1571; "*Bullarium Marianum*", pp. 72, 75).

Whilst these disputes went on, the great universities and almost all the great orders had become so many bulwarks for the defense of the dogma. In 1497 the University of Paris decreed that henceforward no one should be admitted a member of the university, who did not swear that he would do the utmost to defend and assert the Immaculate Conception of Mary. Toulouse followed the example; in Italy, Bologna and Naples; in the German Empire, Cologne, Mainz, and Vienna; in Belgium, Louvain; in England, before the Reformation, Oxford and Cambridge; in Spain, Salamanca, Toledo, Seville, and Valencia; in Portugal, Coimbra and Evora; in America, Mexico and Lima. The Friars Minor confirmed in 1621 the election of the Immaculate Mother as patron of the order, and bound themselves by oath to teach the mystery in public and in private. The Dominicans, however, were under special obligation to follow the doctrines of St. Thomas, and the common conclusion was that St. Thomas was opposed to the Immaculate Conception. Therefore the Dominicans asserted that the doctrine was an error against faith (John of Montesono, 1373); although they adopted the feast, they termed it persistently "Sanctificatio B. M. V." not "Conceptio" (*Grotfend, "Zeitrechnung"*, II, 237), until in 1622 Gregory V abolished the term "sanctificatio". Paul V (1617) decreed that no one should dare to teach publicly that Mary was conceived in original sin, and Gregory V (1622) imposed absolute silence (*in scriptis et sermonibus etiam privatis*) upon the adversaries of the doctrine until the Holy See should define the question. To put an end

to all further cavilling, Alexander VII promulgated on 8 December, 1661, the famous constitution "*Sollicitudo omnium Ecclesiarum*", defining the true sense of the word "*conceptio*", and forbidding all further discussion against the common and pious sentiment of the Church. He declared that the immunity of Mary from original sin in the first moment of the creation of her soul and its infusion into the body was the object of the feast (Denzinger, 1100).

EXPLICIT UNIVERSAL ACCEPTANCE.—Since the time of Alexander VII, long before the final definition, there was no doubt on the part of theologians that the privilege was amongst the truths revealed by God. Wherefore Pius IX, surrounded by a splendid throng of cardinals and bishops, 8 December 1854, promulgated the dogma. A new Office was prescribed for the entire Latin Church by Pius IX (25 December, 1863), by which decree all the other Offices in use were abolished, including the old Office *Sicut lilium* of the Franciscans, and the Office composed by Passaglia (approved 2 Feb., 1849). In 1904 the golden jubilee of the definition of the dogma was celebrated with great splendour (Pius X, Enc., 2 Feb., 1904). Clement IX added to the feast an octave for the dioceses within the temporal possessions of the pope (1667). Innocent XII (1693) raised it to a double of the second class with an octave for the universal Church, which rank had been already given to it in 1664 for Spain, in 1665 for Tuscany and Savoy, in 1667 for the Society of Jesus, the Hermits of St. Augustine, etc. Clement XI decreed on 6 Dec., 1708, that the feast should be a holiday of obligation throughout the entire Church. At last Leo XIII, 30 Nov., 1879, raised the feast to a double of the first class with a vigil, a dignity which had long before been granted to Sicily (1739), to Spain (1760), and to the United States (1847). A Votive Office of the Conception of Mary, which is now recited in almost the entire Latin Church on free Saturdays, was granted first to the Benedictine nuns of St. Anne at Rome in 1603, to the Franciscans in 1609, to the Conventuals in 1612, etc. The Syrian and Chaldean Churches celebrate this feast with the Greeks on 9 December; in Armenia it is one of the few immovable feasts of the year (9 December); the schismatic Abyssinians and Copts keep it on 7 August whilst they celebrate the Nativity of Mary on 1 May; the Catholic Copts, however, have transferred the feast to the 10 December (Nativity, 10 September). The Catholic Orientals have since 1854 changed the name of the feast in accordance with the dogma to the "Immaculate Conception of the Virgin Mary" (cf. the various calendars in Nilles, "*Cal. man. utr. eccl.*")

The Archdiocese of Palermo solemnizes a Commemoration of the Immaculate Conception on 1 September to give thanks for the preservation of the city on occasion of the earthquake, 1 September, 1726. A similar commemoration is held on 14 January at Catania (earthquake, 11 Jan., 1693); and by the Oblate Fathers on 17 Feb., because their rule was approved 17 Feb., 1826. Between 20 September, 1839, and 7 May, 1847, the privilege of adding to the Litany of Loretto the invocation, "Queen conceived without original sin", had been granted to 300 dioceses and religious communities. The Immaculate Conception was declared on 8 November, 1760, principal patron of all the possessions of the crown of Spain, including those in America. The decree of the first Council of Baltimore (1846), electing Mary in her Immaculate Conception principal Patron of the United States, was confirmed on 7 February, 1847.

Immaculate Conception, CONGREGATION OF THE.

—I. CONGREGATION OF THE IMMACULATE CONCEPTION OF OUR LADY, founded in 1484 at Toledo, Spain, by Beatrix de Silva, sister of Blessed Amadeus. On the marriage of Princess Elizabeth of Portugal with John II, King of Castile, Beatrix had accompanied the queen to the court of her husband, but her great beauty having roused the jealousy of the queen, she escaped with difficulty and took refuge in the Dominican convent at Toledo. Here for forty years she led a life of great holiness, without, however, becoming a member of the order. Inspired by her devotion to the Blessed Virgin to found a new congregation in her honour, Beatrix, with some companions, took possession of a castle set apart for them by Queen Isabella. In 1489, by permission of Innocent VIII, the sisters adopted the Cistercian rule, bound themselves to the daily recitation of the Office of the Immaculate Conception, and were placed under obedience to the ordinary of the archdiocese. In 1501 Alexander VI united this congregation with the Benedictine community of San Pedro de las Dueñas, under the Rule of St. Clare, but in 1511 Julius II gave it a rule of its own, and in 1616 special constitutions were drawn up for the congregation by Cardinal Quignonez. The second convent was founded in 1507 at Torrigio, from which, in turn, were established seven others. The congregation soon spread through Spain, Italy, and France. The foundress determined on the habit, which was white, with a white scapular and blue mantle.

HÉLYOT, *Dict. des ordres relig.* (Paris, 1859); FEHR in *Kirchenlex.*, s. v. *Empfängnis Mariæ*, *Orden von der*. F. M. RUDGE.

II. MISSION PRIESTS OF THE IMMACULATE CONCEPTION (usually called MISSIONARIES OF RENNES), founded at St-Méen in the Diocese of Rennes, by Jean-Marie-Robert de Lamennais, for the care of the diocesan seminary and the holding of missions. The disciples of the founder's younger brother, Félicité, in 1829 withdrew with him into the solitude of La Chênaie, forming the famous Society of St. Peter, with which the elder community at its own request was united, under the superiority of Félicité. The new congregation was placed under simple vows, the aims proposed being the defence of the Faith, the education of youth, and the giving of missions. A house of studies was erected at Malestroit, near Ploërmel, and placed under the direction of Fathers Blanc and Rohrbacher, while Lamennais remained at La Chênaie, with the younger members, writing for them his "Guide de la jeunesse", and for the more advanced the "Journée du chrétien." Lamennais's long-cherished project of forming a body of priests thoroughly equipped for pressing needs in the Church of France, a scheme which he outlined in 1825 in a letter to M. de Salinis, seemed well on the way towards fulfilment. A vivid picture of the rule of life and the spirit of La Chênaie is to be found in the letters of Maurice de Guérin, whose companions were such men as Gerbet,

Guéranger, Gaume, Scorbiac, and Ch. de Sainte-Foi. The condemnation of "L'Avenir" disturbed only temporarily the activity of La Chênaie. On the final defection of Félicité, however, the Bishop of Rennes transferred to Jean-Marie the superiority of the congregation, the members of which left La Chênaie for Malestroit, laymen being now excluded. The congregation, reorganized, gained a new lease of life in 1837 and by 1861 had 200 members in 9 houses, under the mother-house at Rennes.

III. SERVITES OF THE IMMACULATE CONCEPTION, founded in 1864 by Peter Carisciaran, a Georgian priest, at Constantinople, to minister to the spiritual wants of Georgian Christians. The congregation was confirmed by Pius IX, 29 May, 1875. Approval was given for the three rites, Latin, Armenian, and Georgian, the first two for use among the Georgians in their native country, the last to keep up the Greek-Georgian Rite in the monastery at Constantinople, which is the mother-house of the congregation. The priests of the Immaculate Conception have charge of three congregations at Constantinople, one at Feri-kuei, for Georgians and Armenians, another for the Latins at Scutari, and a third for Georgians at Pera. Candidates for the priesthood are ordained by the Bishop of Saratov, who is the ecclesiastical superior of Georgia; for a time they fill parish duties as secular priests, after which they are appointed by the congregation to some post where they may minister to their countrymen.

THE SISTER SERVITES OF THE IMMACULATE CONCEPTION conduct two primary schools, to which children are admitted, without distinction of creed.

IV. SISTERS OF PROVIDENCE OF THE IMMACULATE CONCEPTION, founded at Jodoigne, in 1833, definitively established at Champion near Namur in 1836, by Canon Jean-Baptiste-Victor Kinet, for the instruction of children, the care of orphan asylums, and the service of the sick and prisoners. In 1858 the congregation received the approbation of the Apostolic See, and shortly afterwards the confirmation of its statutes. By 1876 there were a hundred and fifty convents in Belgium, England, Italy, and the United States. The mother-house is at Champion.

V. SISTERS OF THE IMMACULATE CONCEPTION, a branch of the Institute of the Holy Family, founded in 1820 by the Abbé Pierre Noaventure Noailles, Canon of Bordeaux. Abbé Noailles when studying at the Seminary of St. Sulpice, Paris, conceived the idea of founding a congregation, in which Christians of every class of life might lead a life of perfection. In 1820 he placed the first three members of the Holy Family in a house at Bordeaux, under the name of the Ladies of Loreto. As the numbers increased the sisters were divided by their founder into two categories: (1) Those engaged directly in the various works undertaken by the Institute (2) Lay sisters who perform household duties, and are called the Sisters of St. Martha. The first are sub-divided into three branches (a) The Sisters of St. Joseph who undertake the charge of orphans (b) The Sisters of the Immaculate Conception, who devote themselves to educational work (c) The Sisters of Hope, who nurse the sick. The Institute encountered much opposition at first, but the constitutions have now been canonically approved by the Holy See. The works of the Sisters of the Immaculate Conception are very numerous; they devote themselves to educational work and visiting the poor. They have fifteen con-

vents in Great Britain and Ireland, to all of which and to five boarding-schools elementary schools are attached. About 230 sisters teach in these convents. The English Novitiate is at Rock Ferry, Cheshire. The other English houses are at Great Prescott Street, London, E.; Leeds; Sicklinghall, Yorkshire; Stockport; Macclesfield; Stalybridge; Woodford, Essex; Ramsgate; Liscard, Cheshire; Birkenhead; Wrexham, Wales; Leith, Scotland. Attached to the Leeds convent is a juniorate for testing vocations. The habit in England only is blue with a white girdle and a black veil. In Ireland they have one house in the Archdiocese of Armagh at Magherafelt, and another in Kildare, to both of which schools are attached. The institute has novitiate houses at Bordeaux, France; Bas-Oha, Liège, Belgium; Hortaleza, Madrid, Spain; Bellair, Natal, South Africa; Montreal, Canada; and two in Asia. Besides the novitiates there are juniorates attached to some of the convents. There is one at Lozère, Mende, France, one at Liège, Belgium, and one at Fromista, Spain.

STEELE, *Convents of Great Britain; The Holy Family*, a pamphlet; article in *The Irish Catholic on The Holy Family*.

FRANCESCA M. STEELE.

Immanence (Lat. *in manere*, to remain in) is the quality of any action which begins and ends within the agent. Thus, vital action, as well in the physiological as in the intellectual and moral order, is called immanent, because it proceeds from that spontaneity which is essential to the living subject and has for its term the unfolding of the subject's constituent energies. It is initiated and is consummated in the interior of the same being, which may be considered as a closed system. But is this system so shut in as to be self-sufficient and incapable of receiving anything from without?—or can it enrich itself by taking up elements which its environment offers and which are at times even necessary, as nourishment is to the immanent activity of the body? This is the problem which the philosophies of immanence propose and attempt to solve, not only in respect to man considered as a particular being, but also in respect to the universe considered as a whole. It is, indeed, with reference to this latter aspect that the controversy arose in ancient times.

HISTORICAL SKETCH.—The doctrine of immanence came into existence simultaneously with philosophical speculation. This was inevitable, since man first conceived all things after his own likeness. He regarded the universe, then, as a living thing, endowed with immanent activity, and working for the full unfolding of its being. Under the veil of poetic fictions, we find this view among the Hindus, and again among the sages of Greece. The latter hold a somewhat confused Hylozoism: as they see it, the cosmos results from the evolution of a single principle (water, air, fire, unity), which develops like an animal organism. But Socrates, coming back to the study "of things human", refuses to look upon himself as merely part and parcel of the Great All. He asserts his independence and declares himself distinct from the universe; and thus he shifts the pivotal problem of philosophy. What he professes is, indeed, the immanence of the subject, but that immanence he does not conceive as absolute, for he recognizes the fact that man is subject to external influences. Thenceforward, these two conceptions of immanence are to alternate in ascendancy and decline. After Socrates, Plato, and Aristotle, absolute immanence regains its sway through Zeno of Cittium, who gives it its clearest expression. In turn it falls back before the preaching of Christianity, which sets forth clearly the personality of man and the distinction between God and the world. The Alexandrians, in the wake of Philo, impart a new lustre to the doctrine of absolute immanence; but St. Augustine, borrowing from Plotinus

the Stoic notion of "seminal principles", contends for relative immanence which in the Middle Ages triumphs with St. Thomas. With the Renaissance comes a renewal of life for the theory of absolute immanence. In the seventeenth and eighteenth centuries, on the contrary, Descartes and Kant maintain the transcendency of God, though recognizing the relative immanence of man. But their disciples exaggerate this latter fact and thus fall into subjective monism: the ego is shut up in its absolute immanence; it posits the non-ego. After Fichte, Schelling, and Hegel, the same path is taken by Cousin, Vacherot, Bergson, and many others. The principle of absolute immanence becomes a dogma which they seek to impose upon contemporary philosophy. It confronts revealed religion, and appears as one of the sources of modernism, which it thus brings into close proximity with liberal Protestantism. The notion of immanence is at the present day one of the centres around which the battle is being fought between the Catholic religion and monism.

Before passing on to larger developments, we note that (1) under its various aspects, the conception of immanence is the interpretation and extension of a fact observed in the living subject; (2) in every age it takes on two parallel and opposite forms, which the Encyclical "Pascendi gregis" defines in an eminently philosophical way, as follows: "Etenim hoc quærimus; an ejusmodi 'immanentia' Deum ab homine distinguat necne? Si distinguit, quid tum a catholica doctrina differt aut doctrinam de revelatione cur rejicit? Si non distinguit, pantheismum habemus. Atqui immanentia hæc modernistarum vult atque admittit omne conscientiaæ phenomenon ab homine, ut homo est, proficisci" (For, we ask, does this "immanence" make God and man distinct or not? If it does, then in what does it differ from the Catholic doctrine? or why does it reject what is taught in regard to revelation? If it does not make God and man distinct, it is Pantheism. But this immanence of the Modernists would claim that every phenomenon of consciousness proceeds from man as man).

DIVISION.—From this general consideration of the subject the following division arises. A. The doctrine of immanence, (1) absolute, (2) relative. And, as this doctrine has of late years given birth to a new method in apologetics, we shall next consider: B. The employment of the method of immanence, (1) absolute, (2) relative.

A. *The Doctrine of Immanence.* (1) Absolute Immanence. (a) Its Historical Evolution.—At its outset the doctrine of immanence, properly so called, was concerned with solving the problem of the world's origin and organization: the universe was the resultant of an absolutely necessary, immanent evolution of one only principle. The Stoics, who gave it its first exact formula, virtually revived the pre-Socratic cosmogonies. But they shut up in matter first the "Demiurgic Word", in which Plato saw the efficient cause of the cosmos; and, then, the transcendently lovable and desirable "Supreme Intelligence", postulated by Aristotle as the final cause of universal activity. There existed, then, but one principle under a seeming duality; it was corporeal, though it expressed itself sometimes in terms of passivity, when it was called *matter*, and sometimes in terms of activity, when it was called *force*, or *cause*. It was the technic fire presiding over the genesis of the world; it was the Divine seminal principle from which all things were born (*πῦρ τεχνικόν, λόγος σπερματικός*). This principle, which is the first to move, is also the first to be moved, since nothing is outside of it; all beings find in it their origin and their end, they are but successive moments in its evolution, they are born and they die through its perpetual becoming. The fiery spirit seems to move the chaotic mass as the soul moves the body, and this is why it is called the "soul of the

world". Human souls are but sparks from it, or rather its phenomena, which vanish at death and are re-absorbed into the bosom of nature. This is Hylozoism carried to its ultimate expression.

The Greek and Roman Stoics changed nothing in this conception. Philo alone, before Christianity, attempted to transform it. Pursuing the syncretic method which he brought into repute in the School of Alexandria, he undertook to harmonize Moses, Plato, and Zeno. Thus he was led into a sort of inverted Stoicism, setting up at the origin of all things no longer a corporeal seminal principle, but a spiritual God, perfect, anterior to matter, from whom everything is derived by a process of outflow and downflow continued without limit. Proclus, Porphyry, Jamblicus, and Plotinus adopted this emanationist Pantheism, which formed the basis of their neo-Platonism. From Egypt the Alexandrian ideas spread over the West through two channels. First, in the fourth century, they entered Spain with a certain Mark, who had lived at Memphis; in Spain they developed by amalgamating with Manichæism under the influence of Priscillian, and after the German conquest of Spain they passed into Gaul. In the latter country, moreover, they were propagated by the Latin translations of Boethius. Later on, we find traces of them in Scotus Eriugena (ninth century), then in Abelard (twelfth century), Amaury of Bène, and David of Dinant (twelfth and thirteenth centuries), and especially in the celebrated Meister Eckhart (fourteenth century). Soon after this the Renaissance restores the ancient doctrines to honourable consideration, and the philosophy of immanence reappears in the commentaries of Pomponatius on Aristotle and those of Marsilio Ficino on Plotinus. Giordano Bruno saw in God the monad of monads, who by an inward necessity produces a material creation which is inseparable from Himself. Vanini made God immanent in the forces of nature, while, according to Jacob Böhme, God acquires reality only through the evolution of the world. By an unbroken tradition, then, the doctrine of immanence comes down to modern times. The Cartesian revolution seems even to favour its development. Exaggerating the distinction between soul and body, the former of which moves the latter by means of the pineal gland, the mechanical theories prepared the way for Malebranche's occasionalism: God alone acts; "there is but one true cause, because there is but one true God." Spinoza, too, admits only one cause. A disciple of Descartes in the geometrical rigour of his deductive processes, but still more a disciple of the rabbis and of Giordano Bruno in the spirit of his system, he sets up his *natura naturans* unfolding its attributes by an immanent progression. This is all but the revival of Alexandrian thought.

True Cartesianism, however, was not favourable to theories of this sort, for it is based on personal evidence, and it distinguishes sharply between the world and its transcendent cause. With its vivid realization of the importance and independence of the individual, it follows, rather, the Socratic tradition. That insight, defined and purified by Christianity, had all along served as a barrier against the encroachment of the doctrine of absolute immanence. It could not but derive fresh strength from the philosophy of *Cogito, ergo sum*, and it was indeed strengthened even to excess. Jealous of its own immanence, which it had learned to know better than ever, the human mind overshot its first intention and turned the doctrine of absolute immanence to its own profit. At first it sought only to solve the problem of knowledge, while keeping entirely clear of empiricism. In the Kantian epoch it still claimed for itself only a relative immanence, for it believed in the existence of a transcendent Creator and admitted the existence of noumena, unknowable, to be sure, but with which we maintain relations. Soon the temptation becomes stronger;

having hitherto pretended to impose its own laws on knowable reality, thought now credits itself with the power of creating that reality. For Fichte, in fact, the ego not only posits knowledge, it also posits the non-ego. It is the pre-eminent form of the Absolute (Schelling). No longer is it the Substance that, as *natura naturans*, produces the world by a process of derivation and degradation without limit; it is an obscure germ, which in its ceaseless becoming, rises to the point of becoming man, and at that point becomes conscious of itself. The absolute becomes Hegel's "idea", Schopenhauer's "will", Hartmann's "unconscious", Renan's "time joined to the onward tendency" (*le Temps joint à la tendance au progrès*), Taine's "eternal axiom", Nietzsche's "superman", Bergson's "conscience". Under all the forms of evolutionistic monism, lies the doctrine of absolute immanence.

Considering the religious tendencies of our age, it was inevitable that this doctrine should have its corresponding effect in theology. The monism which it preaches, setting aside the idea of separateness between God and the world, also removes entirely the distinction between the natural order and the supernatural. It denies anything transcendent in the supernatural, which, according to this theory, is only a conception springing from an irresistible need of the soul, or "the ceaseless palpitation of the soul panting for the infinite" (Buisson). The supernatural is but the product of our interior evolution; it is of immanent origin, for "it is in the heart of mankind that the Divine resides". "I am a man, and nothing Divine is foreign to me" (Buisson). Such is the origin of religion in this view. And herein we recognize the thesis of liberal Protestantism as well as that of the Modernists.

(b) The actual content of the doctrine of Absolute Immanence.—As it is nowadays presented, the doctrine of absolute immanence is the resultant of the two great currents of contemporary thought. Kant, reducing everything to the individual consciousness, and declaring all metaphysical investigation to be illusory, locks the human soul in its own immanence and condemns it thenceforth to agnosticism in regard to transcendent realities. The Positivist movement reaches the same terminus. Through mistrust of that reason which Kant had exalted to such a degree, Comte rejects as worthless every conclusion that goes beyond the range of experience. Thus the two systems, setting out from opposite exaggerations, arrive at one and the same theory of the unknowable: nothing is left us now but to fall back upon ourselves and contemplate the phenomena which emerge from the depths of our own ego. We have no other means of information, and it is from this inner source that all knowledge, all faith, and all rules of conduct flow out by the immanent evolution of our life, or rather of the Divine, which thus manifests itself through us. This initial position determines the solutions which the doctrine of immanence furnishes for the problems concerning God and Man.

(i) God.—The problems of the Divine life and action are among the foremost to interest the partisans of absolute immanence. They talk incessantly of Trinity, Incarnation, and Redemption, but only, as they claim, to do away with the mysteries and to see in these theological terms merely the symbols that express the evolution of the first principle. Philo's Trinity, like that of neo-Platonism, was an attempt to describe this evolution, and the moderns have only resuscitated the Alexandrian allegory. The great being, the great fetish, and the great medium (Comte), the evolving idea, the evolved idea, and their relation (Hegel), unity, variety and their relation (Cousin)—all these, in the thought of their originators, are but so many revivals of the Oriental myths. But conscience now demands the abolition of all such

symbols. "The religious soul is in fact forever interpreting and transforming the traditional dogmas" (Sabatier), because the progress of the absolute reveals to us new meanings as it makes us more fully conscious of the Divinity that is immanent in us. Through this progress the incarnation of God in humanity goes on without ceasing, and the Christian mystery (they make the blasphemous assertion) has no other meaning. There can be no further question of a redemption; nor could there have been an original fall, since in this view, disobedient Adam would have been God Himself. At most the pessimists admit that the Supreme will, or the unconscious, which blundered into the production of the world, will recognize its blunder as it rises to consciousness in individuals, and will repair that blunder by annihilating the universe. In that hour of cosmic suicide, according to Hartmann, the Great Crucified will have come down from his cross. Thus is Christian terminology incessantly subjected to new interpretations. "We still speak of the Trinity . . . , of the Divinity of Christ, but with a meaning more or less different from that of our forefathers". Buisson, in his "La Religion, la Morale et la Science", thus explains the influence of the doctrine of immanence upon the interpretation of dogmas in liberal Protestantism.

(ii) The World, Life, and the Soul.—To explain the origin of the world, the evolution of the Divine principle is put forward. This hypothesis would also account for the organization of the cosmos. Hence the universal order is considered as the outcome of the action of blind energies, and no longer as the realization of a plan conceived and executed by a providence. From the physico-chemical forces life issues; the absolute slumbers in the plant, begins to dream in the animal, and at last awakens to full consciousness in man. Between the stages of this progress there is no breach of continuity; it is one and the same principle which clothes itself in more and more perfect forms, yet never withdraws from any of them. Evolutionism and transformism, therefore, are but parts of that vast system of absolute immanence in which all beings enfold one another, and none is distinct from the universal substance. Consequently, there is no longer any abyss between matter and the human soul; the alleged spirituality of the soul is a fable, its personality an illusion, its individual immortality an error.

(iii) Dogma and Moral.—When the Absolute reaches its highest form in the human soul, it acquires self-consciousness. This means that the soul discovers the action of the Divine principle, which is immanent in it as constituting its essential nature. But the perception of this relation with the Divine—or, rather, of this "withness" of the Divine—is what we are to call Revelation itself (Loisy). At first confused, perceptible only as a vague religious feeling, it develops by means of religious experience (James), it becomes clearer through reflexion, and asserts itself in the conceptions of the religious consciousness. These conceptions formulate dogmas—"admirable creations of human thought" (Buisson)—or rather of the Divine principle immanent in human thought. But the expression of dogmas is always inadequate, for it marks but one moment in the religious development; it is a vesture which the progress of Christian faith and especially of Christian life will soon cast off. In a word all religion wells up from the depths of the sub-conscious (Myers, Prince) by vital immanence; hence the "religious immanence" and the more or less agnostic "symbolism" with which the Encyclical "Pascendi gregis" reproaches the Modernists.

The human soul, creator of dogmas, is also the creator of moral precepts, and that by an absolutely autonomous act. Its will is the living and sovereign law, for in it is definitively expressed the will of the God immanent in us. The Divine flame, which warms

the atmosphere of our life, will inevitably cause those hidden germs of morality to develop which the absolute has implanted. Hence, there can be no longer any question of effort, of virtue, or of responsibility; these words have lost their meaning, since there is neither original sin nor actual and freely willed transgression. There is no longer any blameworthy concupiscence; all our instincts are impregnated with Divinity, all our desires are just, good, and holy. To follow the impulse of passion, to rehabilitate the flesh (Saint-Simon, Leroux, Fourier), which is one form under which the Divinity manifests itself (Heine), this is duty. In this way, indeed, we cooperate in the redemption which is being accomplished day by day, and which will be consummated when the absolute shall have completed its incarnation in humanity. The part which moral science has to play consists in discovering the laws which govern this evolution, so that man in his conduct may conform to them (Berthelot) and thus ensure the collective happiness of humanity; social utility is to be henceforward the principle of all morality; solidarity (Bourgeois), which procures it, is the most scientific form of immanent morality, and of this man is, in the universe, the beginning and the end.

(2) Relative Immanence. (a) Its Historical Evolution.—Since the day when Socrates, abandoning the useless cosmogonic hypotheses of his predecessors, brought philosophy back to the study of the human soul, whose limits and whose independence he defined—since that time the doctrine of relative immanence has held its ground in conflict with the doctrine of absolute immanence. Relative immanence recognizes the existence of a transcendent God, but it also recognizes, and with remarkable precision, the immanence of psychical life. It is upon the evidence of this fact, indeed, that the admirable pedagogical method, known as *maieutic*, is founded. Socrates thoroughly understood that knowledge does not enter our minds ready made from without; that it is a vital function, and therefore immanent. He understood that a cognition is not really ours until we have accepted it, lived it, and in some sort made it over for ourselves. This certainly attributes to the life of thought a *real* immanence, not, however, an *absolute* immanence; for the soul of the disciple remains open to the master's influence.

Again we find this conception of relative immanence in Plato. He transports it, in a rather confused manner, into the cosmological order. He thinks, in fact, that, if there are things great and good and beautiful, they are such through a certain participation in the ideas of greatness, goodness, and beauty. But this participation does not result from an emanation, an outflowing from the Divinity into finite beings; it is only a reflection of the ideas, a resemblance, which the reasonable being is in duty bound to perfect, as far as possible, by his own energy. With Aristotle this notion of an immanent energy in individuals acquires a new definiteness. The very exaggeration with which he refuses to admit in God any efficient causality, as something unworthy of His beatitude, leads him to place at the heart of finite being the principle of the action which it puts forth with a view to that which is supremely lovable and desirable. Now, according to him, these principles are individualized; their development is limited; their orientation determined to a definite aim; and they act upon one another. It is, therefore, a doctrine of relative immanence which he maintains. After him the Stoics, reviving the physics of Heraclitus, came back to a system of absolute immanence with their theory of germinal capacities. The Alexandrian Fathers borrowed this term from them, taking out of it, however, its pantheistic sense, when they set themselves to search in the writings of the pagans for "the sparks of the light of the Word" (St. Justin), and, in human souls,

for the innate capacities which render the knowledge of God so easy and so natural. St. Augustine, in his turn defines these capacities as "the active and passive potentialities from which flow all the natural effects of beings", and this theory he employs to demonstrate the real, but relative, immanence of our intellectual and moral life. Our natural desire to know and our spontaneous sympathies do not germinate in us unless their seeds are in our soul. These are the first principles of reason, the universal precepts of the moral consciousness. St. Thomas calls them "habitus principiorum", "seminalia virtutum" "dispositiones naturales", "inchoationes naturales". He sees in them the beginnings of all our physiological, intellectual, and moral progress, and, following the course of their development, he carries to the highest degree of precision the concept of relative immanence. The Thomist tradition—continuing after him the struggle against empiricism and positivism on the one side and, on the other, against rationalism carried to the extreme of monism—has always defended the same position. It recognizes the fact of immanence, but rejects every exaggeration on either side.

(b) Actual Content of the Doctrine of Relative Immanence.—This doctrine rests upon that innermost experience which reveals to man his individuality, that is to say his inward unity, his distinctness from his environment, and which makes him conscious of his personality, that is to say, of his essential independence with respect to the beings with which he is in relation. It, moreover, avoids all imputation of monism, and the manner in which it conceives of immanence harmonizes excellently with Catholic teaching. "An ejusmodi immanentia Deum ab homine distinguit, necne? Si distinguit, quid tum a catholica doctrina differt?" (Encycl. "Pascendi").

(i) God.—God, then, transcends the world which He has created, and in which He manifests His power. We know His works; through them we can demonstrate His existence and find out many of His attributes. But the mysteries of His inner life escape us; Trinity, Incarnation, Redemption are known to us only by revelation, to which revelation the immanence of our rational and moral life presents no obstacle whatever.

(ii) The World, Life, and the Soul.—The organization of the world is governed by Divine Providence, whose ordering action can be conceived in diverse ways, whether we suppose successive interventions for the formation of various beings, or whether, following St. Augustine, we prefer to maintain that God created all things at the same time—"Deus simul omnia creavit" (De Genesi ad lit.). In the latter case we should invoke the hypothesis of germinal capacities, according to which hypothesis God must have deposited in nature energies of a determinate sort—"Mundus gravidus est causis nascentium" (ibid.)—the evolution of which at favourable junctures of time would organize the universe. This organization would be due to an immanent development, indeed, but one proceeding under external influences. Thus did plants, animals, and men appear in succession, though there could be no question of attributing to them a common nature; on the contrary, the doctrine of relative immanence draws a sharp line of demarcation between the various substances, and particularly between matter and soul; it is extremely careful to maintain the independence of the human person. Not only does this doctrine, joining issue with sensualism, demonstrate that the mind is a living energy, which, far from letting itself be absorbed by influences from without, forms its necessary and universal principles by its own action under the pressure of experience—not only this, but it also safeguards the autonomy of human reason against that encroachment of the Divine which the ontologists maintained.

(iii) Dogma and Moral.—The human soul, then, enjoys an immanence and an autonomy which are relative indeed but real, and which Divine Revelation itself respects. Supernatural truth is, in fact, offered to an intelligence in full possession of its resources, and the reasonable assent which we give to revealed dogmas is by no means "a bondage" or "a limitation of the rights of thought". To oppose Revelation with "a preliminary and comprehensive demurrer" ("une fin de non-recevoir préliminaire et globale"—Le Roy) in the name of the principle of immanence, is to misinterpret that principle, which, rightly understood, involves no such exigencies (see below, "The Method of Immanence"). Nor does the fact of relative immanence stand in the way of progress in the understanding of dogmas "in eodem sensu eademque sententia" (Conc. Vatic., sess. III). The human soul, then, receives the Divine verities as the disciple receives his master's teaching; it does not create those verities. Neither does it create principles of moral conduct. The natural law is certainly not foreign to it, being graven upon the very foundation of man's constitution. It lives in the heart of man. This law is immanent to the human person, which consequently enjoys a certain autonomy. No doubt it recognizes its relation to a transcendent legislator, but none the less true is it that no prescription coming from another authority would be accepted by the conscience if it was in opposition to the primordial law, the requirements of which are only extended and clearly defined by positive laws. In this sense the human will preserves its autonomy when, in obeying a Divine law, it acts with a fundamentally inviolable liberty. This liberty, however, may be aided by natural and supernatural helps. Conscious of its weakness, it seeks and obtains the assistance of grace, but grace does not absorb nature; it only adds to nature, and in no way infringes upon our essential immanence.

B. *Employment of the Method of Immanence.*—The notion of immanence occupies so large a place in contemporary philosophy that many make an axiom of it. It is held to be a directing principle of thought and Le Roy makes bold to write that "to have acquired a clear consciousness of the principle of immanence is the essential result of modern philosophy" (Dogme et Critique, 9). Now it is in the name of this principle that "a preliminary and comprehensive demurrer" (ibid.) is presented in bar of all Revelation, for in the light of it "a dogma has the appearance of a subjection to bondage, a limitation of the rights of thought, a menace of intellectual tyranny" (ibid.). And this creates a religious situation with which apologetics is deeply concerned, and with good reason. All the efforts of this science will be vain, all its arguments inconclusive, if it cannot, first of all, compel minds imbued with the prejudice of absolute immanence to take under consideration the problem of the transcendent. Without this precaution, anti-nomy is inevitable: on the one hand, it is claimed, the mind cannot receive a heterogeneous truth; on the other, revealed religion proposes to us truths which go beyond the range of any finite intelligence. To solve this difficulty we have recourse to the method of immanence. But this method has been understood in two different ways which lead to diametrically opposite results.

(1) Method Based on the Idea of Absolute Immanence.—This is the positivist and subjectivist method. It consists in accepting off-hand the postulate of an absolute immanence of the rational and moral life. It is therefore obliged to lower revealed truth to the level of scientific truths which the mind attains solely by its own energy. Thus, some, like Lechartier, have proposed to modify dogmatic formulæ and "dissolve the symbols" of them in order to harmonize both with the aspirations of the soul which thinks them. By

this means "the higher realities, which religious myths have for so many centuries striven to express, will be found identical with those which positive science has just established" Revealed truth will then appear as coming from us; it will present itself as the reflexion of our soul, which changes its formulæ according as it can or cannot find itself in them. In this way there will no longer be any antinomy, since human reason will be the principle of dogmas. Others following Loisy, hope to find in themselves, through a psychological analysis, the expression of revelation. This would be the outcome of an immanent progress, "the consciousness which man has acquired of his relations with God" Revelation is realized in man, but it is "the work of God in him, with him, and by him". Thus the difficulty arising out of the opposition between the natural order and the supernatural would disappear—but at the price of a return to the doctrine of absolute immanence. It seems, too, that Laberthonnière, though in spite of his principles, ends by accepting this very same doctrine which he had undertaken to combat, when he writes that "since our action is at once ours and God's, we must find in it the supernatural element which enters into its constitution". According to this view, psychological analysis will discover the Divine element immanent in our action, the inward God "more present to us than we ourselves" Now this "living God of conscience" can be discerned only through an intuition which we get by a sort of moral and dynamic ontologism. But how will this presence of the Divine manifest itself in us? By the true and imperative demand of our nature which calls for the supernatural.—Such is the abuse of the method of immanence which the Encyclical "Pascendi gregis" points out and deplors: "And here again we have reason for grievous complaint, because among Catholics there are to be found men who, while repudiating the doctrine of immanence as a doctrine, make use of it nevertheless for apologetic purposes, and do this so recklessly that they seem to admit in human nature a genuine exigency properly so called in regard to the supernatural order." With still less reserve, those whom the Encyclical calls *integralistæ* boast of showing the unbeliever the supernatural germ which has been transmitted to humanity from the consciousness of Christ, and hidden in the heart of every man. This is the thought of Sabatier and of Buisson, theologians of the liberal Protestant school—"I am a man, and nothing Divine is foreign to me" (Buisson).

(2) Method Based on the Idea of Relative Immanence.—There is another application of the method of immanence much more reserved than the one just described since it keeps within the natural order and confines itself to stating a philosophic problem, viz.: Is man sufficient for himself? or is he aware of his insufficiency in such a way as to realize his need of some help from without? Here we are not at all concerned—as the Encyclical "Pascendi gregis" reproaches the Modernists—"with inducing the unbeliever to make trial of the Catholic religion"; we are concerned only with (1) compelling a man who analyzes his own being to break through the circle within which, supposedly, the doctrine of immanence confines him, and which makes him reject a priori, as out of the question, the whole argument of objective apologetics; and then (2) with bringing him to recognize in his soul "a capacity and fitness for the supernatural order which Catholic apologists, using the proper reservations, have demonstrated" (Encycl. "Pascendi gregis"). In other words, this method has in itself nothing that calls for condemnation. It consists, says Maurice Blondel, its inventor, "in equating within our own consciousness, what we seem to think, to wish, and to do with what we really do, wish and think, in such a way that in the fictitious negations, or the ends artificially desired, those profound affirmations and irrepressible needs

which they imply shall still be found" (Lettre sur les exigences). This method endeavours to prove that man cannot shut himself up in himself, as in a little world which suffices unto itself. To prove this, it takes an inventory of our immanent resources; it brings to light, on the one hand, our irresistible aspirations towards the infinitely True, Good, and Beautiful, and, on the other hand, the insufficiency of our means to attain these ends. This comparison shows that our nature, left to itself, is not in a state of equilibrium; that, to achieve its destiny, it needs a help which is essentially beyond it—a transcendent help. Thus, "a method of immanence developed in its integrity becomes exclusive of a doctrine of immanence". In fact, the internal analysis which it prescribes brings the human soul to recognize itself as relative to a transcendent being, thereby setting before us the problem of God. Nothing more is needed to make it evident that the "preliminary and comprehensive demurrer", which it sought to set up against Revelation in the name of the principle of immanence, is an unwarranted and arrogant exaggeration. The psychologic examination of conscience which is just now being made, far from ruling out the traditional apologetic, rather appeals to it, opens the way for it, and demonstrates its necessity.

To this preliminary clearing of the ground the method adds a subjective preparation which shall dispose the individual for the act of faith by exciting in him the desire to enter into relations with the transcendent God. And the result of this preparation will be not only intellectual and theoretical, but also moral and practical. Arousing in him a more vivid consciousness of his weakness and his need of help, the method will impel a man to acts of humility which inspire prayer and attract grace.

Such is the twofold service which the method based on the idea of relative immanence can render. Within these limits, it is rigorous. But could it not go farther, and open to us a view of the nature of this transcendent being whose existence it compels us to recognize? Might it not, for example, bring the unbeliever to hear and heed "the appeal of preventive or sanctifying grace" which would then express itself in psychologic facts discernible by observation and philosophical analysis (Cardinal Dechamps)? Would it not enable us to experience God, or at least "to find in our action the supernatural element which is said to enter into His Constitution" (Père Laberthonnière)? Would it not, finally, justify us in affirming with certainty that the object of our "irrepressible aspirations" is a "supernatural Unnamed" (Blondel), an object which is "beyond and above the natural order" (Ligeard)?

At this point the method of immanence stirs the delicate problem of the relation between nature and the supernatural; but it is doubtful whether the method can solve this problem by its immanent analysis. All the attempts referred to above when they lead to anything, seem to do so only at the price of confounding the notion of the transcendent with that of the preternatural, or even of the supernatural—or, again, at the price of confounding the Divine co-operation and Divine grace. In a word, if the psychologic analysis of the tendencies of human nature ends in "showing, without recourse to what Revelation gives us, that man desires infinitely more than the natural order can give him" (Ligeard), it does not follow that we can say with any certainty that this "desired increase" is a supernatural Unnamed. As a matter of fact, (1) the natural order far exceeds in vastness the object of my analysis; (2) between my nature and the supernatural there is the preternatural; (3) the aids to which my nature aspires, and which God gives me, are not necessarily of the supernatural order. Besides, even if a supernatural action does in fact manifest itself under these religious aspirations, immanent

analysis, apprehending only psychological phenomena, cannot detect it. But the question is still under consideration; it is not for us to solve the mystery of the transcendent in a definitive manner and from the point of view of the method of immanence.

Immigration. See MIGRATION.

Immortality (Lat., *in, mortalis*; Germ., *Unsterblichkeit*).—By immortality is ordinarily understood the doctrine that the human soul will survive death, continuing in the possession of an endless conscious existence. Together with the question of the existence of God, it forms the most momentous issue with which philosophy has to deal. It belongs primarily to rational or metaphysical psychology and the philosophy of religion, though it comes also into contact with other branches of philosophy and some of the natural sciences.

Belief in a future life of some sort seems to have been practically universal at all times. Here and there individuals have rejected this belief, and particular forms of religion or systems of philosophy logically incompatible with it have had adherents; still, however vague and inconsistent may have been the views among different peoples as to the character of the life beyond the grave, it remains true that the persuasion of the reality of a future existence seems to have been hitherto ineradicable throughout the human race as a whole. The doctrine of immortality, strictly or properly understood, means personal immortality, the endless conscious existence of the individual soul. It implies that the being which survives shall preserve its personal identity and be connected by conscious memory with the previous life. Unless the individual's identity be preserved, a future existence has relatively little interest. From the doctrine of immortality thus explained there have been sundry variations. Some have held that after a future life of greater or less duration the soul will ultimately perish. Throughout the East there has been a widespread tendency to believe in metempsychosis or transmigratio—that individual souls successively animate different human beings, and even the bodies of lower animals. A special form of this view is the theory of metamorphosis, that in such a series of reincarnations the soul undergoes or can undergo evolution and improvement of its condition. Pantheism, if logical, can offer only an impersonal immortality, a future condition in which the individual is absorbed into the absolute—the one infinite being, whether conscious or unconscious. Practically, this differs little from annihilation. For the materialist, the soul, or the conscious life, is but a function of the organism, and necessarily perishes at death. Positivists, however, while adopting this conclusion, would still cheer mankind with the hope of a place in the "choir invisible", that is, a future existence in the minds and on the lips of future generations—a not very substantial form of immortality, and one

of a very aristocratic character, the franchise being narrowly limited.

History.—*Egypt* affords at a very early date the most abundant evidence of an extremely vivid and intense belief in a future life. Offerings of provisions of all sorts to the spirits of the departed, elaborate funeral ceremonies, and the wonderfully skilful mummification of the bodies of the deceased, all bear witness to the strength of the Egyptians' convictions of the reality of the next life. (See EGYPT, especially sections on *The Future Life* and *The Book of the Dead*.)

India.—The doctrine of personal survival with a future retribution for good and ill conduct is found in the earliest forms of Brahminism. At a later period a school of Brahmin philosophers evolved a system of vague Pantheism in which absorption into the Infinite Being is the final goal. Still, the popular belief has in practice always tended towards Polytheism, whilst the doctrine of successive reincarnations of the soul in different human beings or animals remained a constant expression of belief in survival. A special form of this belief is the doctrine of *Karma*—the persisting existence and transmission through re-incarnations of the sum of the past deeds and merits of the individual (see BRAHMINISM). Akin to the pantheistic absorption of philosophic Pantheism is the theory of *Nirvana*, which forms a central feature in strict Buddhism. Whatever Nirvana may mean for the philosophers and saints of Buddhism, for the multitude the ideal liberation from labour and pain is restful quiet, not death or extinction (see BRAHMINISM and BUDDHISM).

China.—In China worship of ancestors is evidence of belief in some form of personal survival which carries us back to the earliest ages of that most ancient and conservative nation. The departed spirits are both helped and propitiated to aid their descendants by sacrifices and sundry services of filial piety (see CONFUCIANISM).

Japan.—Similarly in Japan, whatever may be the genuine logical theory of the soul in the religion of Shintoism, the popular mind finds in the great institution of ancestor worship instinctive satisfaction and expression for the belief in a future life, which seems so deeply and universally rooted in human nature.

Judaism.—That early Jewish history shows that the Hebrew nation did not believe in a future life, is sometimes stated. It is true that temporal rewards and punishments from God are much insisted upon throughout the Old Testament, and that the doctrine of a future life occupies a less prominent position there than we should perhaps have anticipated. Still, careful study of the Old Testament reveals incidental and indirect evidence quite sufficient to establish the existence of this belief among the Israelites at an early date (see Gen. ii, 7; Wis., ii, 22, 23; Eccl., xii, 7; Prov., xv, 24; Is., xxxv, 10; li, 6; Dan., xii, 2, etc.). It would, however, on a priori grounds, have been incredible that the Hebrew people should not have held this belief, considering their intimate contact with the Egyptians on one side and the Chaldeans on the other (see Atzberger, "Die christliche Eschatologie", Freiburg, 1890).

Greece.—The Greeks seem to have been among the first to attempt systematic philosophical treatment of the question of immortality. Belief in a future life is clear in Homer, though the character of that existence is vague. Pindar's conception of immortality and of its retributive character is more distinct and also more spiritual. The Pythagoreans are vague and tintured by Oriental Pantheism, though they certainly taught the doctrine of a future life and of metempsychosis. We have not definite texts defining Socrates' view, but it seems clear that he must have been a believer in immortality. It is, however, in the hands of his great pupil Plato that the doctrine attained its most elaborate philosophical exposition and defence. Plato's teaching on the subject is given in several of his

writings, the "Meno", "Phædrus", "Gorgias", "Timæus", and "Republic", but especially in the "Phædo". There are many variations and seeming inconsistencies, with liberal use of myth and allegory, in the unfolding of his ideas in these different works. For Plato, the soul is a being quite distinct from the body, related to it as the pilot to the ship, the charioteer to the chariot. The rational soul is the proper soul of man. It is a Divine element, and it is this which is immortal. Among his arguments in favour of immortality are the following: (1) Throughout the universe opposites alternately generate and succeed each other. Death follows life, and out of death life is again generated. Man must be no exception to this general law. (2) The soul is a simple substance, akin in nature to the simple and immutable idea, and therefore, like the latter, incorruptible. (3) The essence of the soul is life and self-movement. Being a soul only in so far as it participates in the idea of life, it is incapable of death. (4) The process of learning is really only reminiscence, the recall of knowledge of a past life. Man is, therefore, to survive the present life. (5) Truth dwells in us; the soul is made for truth, but truth is eternal. (6) The soul is made for virtue, but advance in virtue consists in progressive liberation of oneself from bodily passions. (7) The soul is not a harmony, but the lyre itself. (8) Destruction can be effected only by a principle antagonistic to the very nature of a being. Vice is for the soul the only principle of this kind, but vice cannot destroy the being of the soul, therefore the soul is indestructible. Otherwise the wicked would have no future punishment to expect. Finally, he urges, in many forms, the argument from retributive justice and the necessity of future existence for adequate reward of the good and punishment of the wicked. In Aristotle's philosophical system, on the other hand, the question of immortality holds so small a place that it is doubtful whether he believed in a future personal life at all. He teaches clearly that the *νοῦς ποιητικός*, the active intellect, is indestructible and eternal; but then it is not certain that he did not understand this *νοῦς* in a pantheistic sense. It is, however, in his Ethics that Aristotle is most disappointing on this subject. For obviously, the question of the reality of a future life is of the first importance in any complete philosophical treatment of morality, whilst Aristotle in this treatise practically ignores the problem. His attitude here proves how much all modern ethical philosophy owes to the Christian Revelation.

The Epicurean School offers us the most complete and reasoned negation of immortality among ancient philosophers. Indeed the most recent Materialism has little of force to add to Lucretius' elaborate exposition of the Epicurean arguments (*De Natura Rerum*, III). He is quite candid in stating that his object is to relieve men from fear of that life. The position of the Stoics is more uncertain. Their Pantheism presents difficulties to the doctrine of survival, yet at times they seem to favour the belief. But in Greece and Rome, as elsewhere, whatever may have been the teaching of the philosophical schools, the mass of even pagan mankind clung to a faith and hope in a future existence, however degraded and incoherent their conception of its character.

Christianity.—With the birth of the Christian religion the doctrine of immortality took up quite a new position in the world. It formed the foundation of the whole scheme of the Christian Faith. No longer a dubious philosophical tenet, or a hazy popular opinion, it is now revealed in clear and distinct terms. The dogma of the Fall, the Christian conception of sin, the Incarnation of the Son of God, all the means of grace and redemption, and the priceless value of each human soul are connected in significance with this article of the Creed. As part of the Christian Faith this doctrine was one of the chief factors in establish-

ing the equality of man and the liberation of the slave. The doctrine received its complete philosophical elaboration from St. Thomas. Accepting the Aristotelian theory that the soul is the form of the body, Aquinas still insists that, possessing spiritual faculties of intellect and will, it belongs to an altogether higher plane of existence than other animal forms. Though form of the body, it is not to be conceived as immersed according to its whole being in the body. That is, it is not completely and intrinsically dependent on the body which it animates, like *formæ eductæ ex materiâ*. For the human soul is created and infused into the body, and there is thus no intrinsic impossibility in its existing separate from the body. Still, as the human soul possesses vegetative and animal faculties, its natural condition is that of union with a body, and during this life the activities of the spiritual powers of intellect and will presuppose the co-operation of the organic faculties of imagination and sensation. Even the most spiritual operations of the soul are therefore extrinsically dependent on the bodily organism. The sensory and vegetative activities of the soul should necessarily be suspended when the soul is separated from the body, whilst its conscious spiritual life must then be carried on in some manner other than the present. What that manner is, our present experience does not enable us adequately to conceive. Yet St. Thomas holds that we can prove the fact of the soul's conscious life when separated from the body.

Modern thought has not added much to the philosophy of immortality. Descartes' conception of the soul would lend itself to some of the Platonic arguments. In Leibnitz's theory the soul is the chief monad in the human nature. It is a simple, spiritual substance of a self-active nature. From this he infers its indestructibility and immortality, but he also believes that its pre-existence is similarly deducible. Spinoza's Pantheism is incompatible with the theory of personal immortality. In Kant's critical philosophy, substantiality is a mere subjective category or form moulding our way of thinking. The conception of the soul as a substance is illusory, and every attempt to establish immortality by rational argument is a mere sophism. Yet, like the existence of God, he reinstates it as a postulate of the practical reason. For Hume and Sensationists generally, to whom the mind is merely a series of mental states attached to certain cerebral changes, there can obviously be no metaphysical basis for the doctrine of immortality, though J. Stuart Mill argues that his school need have no special difficulty in adhering to the belief in an endless series of such conscious states.

JUSTIFICATION OF THE DOCTRINE OF IMMORTALITY.—As we have already observed, the immortality of the human soul is one of the most fundamental tenets of the Christian Religion. Consequently, every evidence for the Divine character of Christianity goes to prove and confirm the foundation upon which the whole edifice rests. Catholic philosophers, however, with the exception of Scotus and his followers, have generally claimed to establish the validity of the belief apart from revelation. Still its adequate treatment presupposes, as already demonstrated, some of the main theses of natural theology, ethics, and psychology. It is itself the crowning conclusion of this last branch of philosophy. Only the briefest outline of the argument can be attempted here. For fuller discussion the reader may consult any Catholic text-book of psychology. The following are the chief propositions involved in the building up of the doctrine: The human soul is a substance or substantial principle. It is a simple, or indivisible, and also a spiritual being, that is, intrinsically independent of matter. It is naturally incorruptible. It cannot be annihilated by any creature. God is bound to preserve the soul in possession of its conscious life, at least for some time, after death. Finally, the evidence all leads to the conclusion that

the future life is to continue for ever. By the human mind, or soul, is meant the ultimate principle within me by which I feel, think, and will, and by which my body is animated. A substance, in contrast with an accident, is a being which subsists in itself, and does not merely inhere in another being as in a subject of inhesion. Now the ultimate subject to which my mental states belong must be a substance—even if that substance be the bodily organism. Further, reflexion, memory, and my whole conscious experience of my own personal identity assure me of the present abiding character of this substantial principle which is the centre of my mental life. Again, the simplicity and spiritual character of many of my mental acts or states prove the principle to which they belong to be of a simple and spiritual nature. The character of an activity exhibits the nature of the agent. The effect cannot transcend its cause. But careful psychological observation and analysis of many of my mental operations prove them to be both spiritual and simple in nature. Our universal ideas, intellectual judgments and reasonings, and especially the reflective activity of self-consciousness manifest their simple or indivisible and spiritual character. They cannot be the activities of a corporeal agent or the actions of a faculty exerted by or essentially dependent on a material being.

Again, psychology shows that our volitions are free, and that the activity of free volition cannot be exerted by a material agent, or be intrinsically dependent on matter. If volition were thus intrinsically dependent on matter, all our acts of choice would be inexorably bound up with and predetermined by the physical changes in the organism. The soul is thus a simple or indivisible, substantial principle, intrinsically independent of matter. Not being composite, it is not liable to perish by corruption or internal dissolution nor by the destruction of the material principle with which it is united, since it is not intrinsically dependent on this latter being. If it perish at all, this must be by simple annihilation. But annihilation, like creation, pertains to God alone, for, as shown in natural theology, it can be effected only by the withdrawal of the Divine activity, through which all creatures are immediately conserved in existence. God could of course, by an exercise of His absolute power, reduce the soul to nothingness; but the nature of the soul is such that it cannot be destroyed by a finite being. For positive evidence, however, that the soul will continue after death in the possession of a conscious life, we must appeal to teleology and the consideration of the character of the universe as a whole. All science proceeds on the assumption that the universe is rational, that it is governed by reason, law, and uniformity throughout. Theistic philosophy explains, justifies, and confirms this postulate in establishing the government of the universe by the providence of an infinitely wise and just Creator. But the consideration of certain characteristics of the human mind reveals a purpose which can be realized only by the soul's continuing in the possession of a conscious life after death. Firstly, there is in the mind of man, as distinguished from all the lower animals, the capacity to look back to the indefinite past and forward to the distant future, the impulse to project itself in imagination beyond the limits of space and time, to rise to the conception of endless duration. There is an ever-increasing yearning for knowledge, a craving for an ever fuller possession of truth, which expands and grows with every advance of science. There is the character of unfinishedness in our mental life and development—the contrast between the capabilities of the human intellect and its present destiny, "between the immensity of man's outlook and the limitations of his actual horizon, between the splendour of his ideals and the insignificance of his attainments" (Marshall), which all demand a future existence unless the human mind is to be a wasteful failure.

Again, there is the craving of the human will, the insatiate desire of happiness, universal throughout the race. This cannot be appeased by any temporal joy. Finally, there is the ethical argument. Human reason affirms that the performance of duty is both right and reasonable in the fullest sense, that it cannot be better in the end for the man who violates the moral law than for him who observes it. But were this the only life this would often be the case. It would assuredly not be a rational universe, and it would be in irreconcilable conflict with the notion of the moral government of the world by a Just and Infinite God, if vice were to be rewarded and virtue punished—that the swindler, the murderer, the adulterer, and the persecutor should enjoy the pleasures of this world to the end, whilst the honest man, the innocent victim, the chaste, and the martyr may undergo life-long injustice, privation, and suffering.

Argument from Universal Belief.—We have already traced at such length the history of belief in a future life that it is only necessary here to point out that a universal conviction of this kind, in opposition to all sensible appearances, must have its roots in man's rational nature, and therefore claims to be accepted as valid, unless we are prepared to hold that man's rational nature inevitably leads him into profound error in a matter of fundamental importance to his moral life.

Evidence from Spiritualism.—During the last quarter of a century considerable labour has been devoted to investigating what is called "experimental evidence" of another life. This, it is supposed, is specially suited to the *Zeitgeist* of our day. The Society for Psychical Research, founded in 1882, has published a score of volumes of "Proceedings", and a dozen volumes of a "Journal", in which is accumulated a mass of evidence in regard to extraordinary phenomena connected with thought-reading, clairvoyance, telepathy, mesmeric trance, automatic writing, apparitions, ghosts, spiritualism, and the like. In the last few years, also, several works by individual investigators, who have selected material from the Society's "Proceedings" or elsewhere, have appeared, urging these phenomena as scientific proof, or rather as evidence guaranteed by scientific method, in favour of the hypothesis of another life.

The main evidence insisted on in most of the recent works is the alleged communications of certain mediums with the souls of particular deceased persons. These mediums are, it is supposed, gifted with some supernatural faculty by which they get into relations with departed spirits. They receive at times, it is alleged, information from these discarnate souls which they reveal to the investigator. This knowledge, it is asserted, is frequently of a kind which the medium cannot have attained by any recognized means, and therefore establishes the personal identity of the communicating spirit. In some cases the spirit furnishes much information about its present condition—which is, however, invariably of a very homely character. Amongst the grounds of objection against this line of argument it may be urged: The total number of mediums who give evidence of remarkable experiences is relatively small. Many are shown to be impostors. Those whose testimonies have been tested and authenticated are extremely few. The prominence of one or two well-known mediums in all the recent literature evinces this. The communications from the "departed" obtained even by the most successful mediums in their most fortunate experiments are very imperfect and disconnected in character, while the quality of the information received is ludicrously trivial, suggestive of the grade of intelligence we are wont to shut up in asylums for idiots (Royce). Further, the alleged mediumistic communications from the discarnate spirit, of however singular or private a nature, can never prove the personal identity of the

spirit with any particular deceased human being. It can only prove that the "control" of the medium is exercised by an intelligence other than human; and there is no sort of evidence to prove the veracity of such an intelligence. The reality of occasional obsession by evil spirits has, since the time of Christ, been always believed in the Church. Finally, the mediumistic faculty, if it be the exercise of genuine power of communication with souls passed out of this life, must, according to Catholic theology, be effected not by use of a merely supernatural personal aptitude, but by a preternatural agency. It is the teaching of the Church that no good, but serious moral evil will be the ultimate result of invoking the intervention of such an agency in human affairs. The view that faith in life everlasting, revealed by Christ and guaranteed by the miraculous history of the Christian Religion, when once lost may be restored by the instrumentality of experiences like those of Moses Stainton or Mrs. Piper, does not seem very solidly founded (see OBSESSION and SPIRITUALISM).

ST. THOMAS, *Con. Gent.*, II, lxxix, lxxxi; *Summa Theol.*, I, QQ. lxxvi, xc; PLATO, *Phædo*; FELL, *Immortality of the Human Soul*, tr. (St. Louis and London, 1906); MAHER, *Psychology* (6th ed., New York and London, 1905); MARTINEAU, *A Study of Religion* (2 vols., 2nd ed., Oxford, 1889); ALGER, *The Destiny of the Soul. A Critical History of the Doctrine of a Future Life* (14th ed., New York, 1885), contains a valuable bibliography of the subject, but the writer's presentation of Catholic doctrines is often grotesque; ELBÉ, *Future Life in the Light of Ancient Wisdom and Modern Science*, tr. (New York and London, 1907); *The Ingersoll Lectures by William James, Royce, Fiske, Osler* (New York and Boston, 1896-1904) are useful on some particular points; ROHNE, *Psyche, Seelenkult u. Unsterblichkeitsglauben der Griechen* (2 vols., 3rd ed., Freiburg, 1903); KNEIB, *Der Beweis für die Unsterblichkeit der Seele* (Freiburg, 1903); KNABENBAUER, *Das Zeugnis für die Unsterblichkeit* (Freiburg, 1878); PIAT, *Destinée de l'homme* (Paris, 1898); JANET and SÉAILLES, *History of the Problems of Philosophy*, tr. (London, 1902).

The literature of what claims to be the evidence of spiritualism has rapidly increased in recent years. See HYSLOP, *Science and a Future Life* (New York and London, 1906); DELANNE, *Evidence for a Future Life*, tr. (London, 1909); LONGE, *Survival of Man* (London, 1909); MYERS, *Human Personality and its Survival of the Bodily State* (London, 1902-3); INGM, *Science and a Future Life* (New York and London, 1898); TWEEDALE, *Man's Survival after Death* (London, 1909).

MICHAEL MAHER.

Immovable Feast. See FEASTS, ECCLESIASTICAL.

Immunity (Lat. *immunitas*) means an exemption from a legal obligation (*munus*), imposed on a person or his property by law, custom, or the order of a superior (lex 214, sqq. De verb. signif., l. 50, tit. 16). This exemption is therefore a kind of privilege and follows the same rules. In ecclesiastical terminology, immunities are exemptions established by law in favour of sacred places and sacred things, church property and persons. If we consider, not only actual exemptions, which vary at divers times and in divers countries, but their principle, immunity may be defined as the exemption of ecclesiastical persons and property from secular jurisdiction. This principle varies necessarily in its application according to circumstances.

In strongly hierarchical societies, for instance in a feudal society, immunities play an important part; on the other hand, in our modern society, where men are much more on a basis of equality, immunities are less useful; they are looked on with disfavour by the highly centralized secular power, and suffer, as is evident, much more restriction.

DIVISION.—An immunity according to its object, is local, real, or personal. Local immunity refers to places consecrated to Divine worship, to churches; real immunity, to Church property; personal immunity, to clerics, their lawsuits and trials and, in a measure, to their property. We shall briefly consider each of these three kinds as viewed by canon law, after which we shall see to what extent they are in vogue in our modern societies.

A. Local immunity withdraws places dedicated to Divine worship from secular jurisdiction and pre-

serves them from acts that would profane the respect due to holy places. It implies likewise the right of a person to remain in a place consecrated to God, so that the public authorities may not remove delinquents therefrom. This is the right of asylum (q. v.); it was greatly restricted by canon law, and is now abandoned everywhere without any formal protest from the Church. As local immunity arises from a place or building being dedicated to Divine worship, it must be considered as attaching not only to churches that have been solemnly consecrated, but also to those that have merely been blessed, and to chapels and oratories legitimately erected by ecclesiastical authority; it extends likewise to the accessory buildings, sacristy, porch, yard, belfry, and to the neighbouring consecrated ground and the burial ground (ch. ii, §, De immunit. eccles. lib. III, tit. 49). Among the profane acts forbidden in churches by canon law, not to mention those that are prohibited by their very nature, we may cite: criminal secular trials (c. v, *h. t.*) even under penalty of excommunication; civil secular trials (c. ii, *h. t.* in VI); but acts of ecclesiastical jurisdiction (even judicial) are not forbidden. Commerce and trading are prohibited, likewise fairs, markets, and in general all purely civil meetings, as secular deliberative assemblies (*parlamenta*), unless permission has been granted by the ecclesiastical authorities, whose rights are thus safeguarded. The employment of force to enter sacred places, breaking down doors, interrupting or preventing Divine service, are violations of local immunity. This crime was formerly punished with excommunication *ipso facto* incurred, but this is no longer enforced by the Constitution "Apostolica Sedis". This kind of immunity exists in our day almost unimpaired; the law recognizes the right of the clergy to the internal administration of their churches and thus guarantees, either directly or indirectly, their exclusive application to Divine service.

B. Real immunity withdraws Church property from secular jurisdiction, so that it is free from public charges, in particular from taxation. We are not speaking here of the sacred buildings or of the objects required in ecclesiastical ceremonies and the administration of the sacraments, which by their nature must not be used for profane purposes, but of things that have been set aside to furnish revenues for the churches, the clergy, and the different works organized and controlled by the Church; we refer to Church property, in its widest sense, movable and immovable: lands, buildings, episcopal residences, presbyteries, monasteries, schools, ecclesiastical hospitals, etc., also titles to property, real rights, incomes, etc. All these properties, sources of revenue to the Church and her ministers, were exempt from the charges and taxes imposed on the corresponding properties of the laity. And, as this exemption was general and public, clerics could not offer or consent to any taxes on the property of their benefices. As a matter of fact, this immunity, recognized in principle by the laws of the Christian States, did not result in an actual freedom from taxation; not only was Church property subject to ecclesiastical taxes, annates, tithes, and others, but it contributed largely to the public expenditure of the State; however, the principle of immunity was protected by having the subsidies voted by the clergy themselves as gratuitous gifts, after papal authorization. The amount of the subsidy was to be settled by the bishops and clergy, in accordance with canon xix of the Lateran Council of 1179 (c. iv, *h. t.*); and canon xli of the Lateran Council, of 1215, protects the clergy against excessive demands of princes, by requiring, under pain of nullity, the previous consent of the pope (c. vii, *h. t.*). The voting of the contributions from ecclesiastical property, as is well known, was the principal object of the celebrated Assemblies of the French clergy (Bourlon, "Les assemblées du clergé", Paris, 1907). At present, the property of the Church

has greatly decreased, and no longer enjoys real immunity; except as a matter of principle, it hardly differs from secular property. However, with regard to buildings used for Divine service, and the movable property appertaining thereto, most Governments consider them as property of public utility, dedicated to the service of the community, and therefore exempt from taxation. That is also the reason why in several of the United States, charitable and educational institutions pay no taxes; in this, however, it is impossible to recognize an ecclesiastical immunity properly so called, based on the religious character of these establishments.

C. Personal immunity is that which withdraws clerics from secular jurisdiction, on account of their perpetual dedication to the service of God. It is not concerned with the withdrawal from secular jurisdiction of acts of the clergy as clerics, and in their official capacity; it is clear that, from such a point of view, they are solely under ecclesiastical jurisdiction, without there being any necessity to having recourse to any immunity. Personal immunity withdraws them from secular jurisdiction in matters where other citizens would be subject to it. If clerics are obliged to keep the ordinary laws, they take their orders and commands solely from ecclesiastical authority; the penal sanctions which they would incur for violating the ordinary laws, may not be imposed on them by secular judges, in virtue of the privilege of the tribunal. This privilege withdraws the clergy entirely from secular judicial jurisdiction, so that not only spiritual lawsuits of clerics, but also temporal lawsuits, whether the suits be criminal or civil, fall within the jurisdiction of the ecclesiastical judges (see PRIVILEGES, CLERICAL). The privilege of the tribunal has disappeared almost completely to-day, with the consent, whether tacit or explicit, of the Church in the various concordats (see Nussi, "Quinquaginta Conventiones", Rome, 1869, § xx). Further, personal immunity exempts the clergy from public duties imposed by law on citizens in general or on certain classes, and also from taxation and imposts. Some of these public duties were considered *servile*, for instance, statute labour, the duty of contributing personally to the upkeep of roads and bridges; others were considered *honourable*, as guardianship, the municipal magistracy (*curia*), military service. The clergy, like the nobility, by reason of their rank, the highest of all, were exempt from servile duties; they were excused from the others, by reason of their withdrawal from secular business. The first class of duties has disappeared in our days; as to the second, the immunity has been maintained to a large extent under modern laws, such is the manifest incompatibility of the sacerdotal ministry and certain of these offices. Thus clerics are not called on to act as jurymen in criminal affairs. In some countries, clerics filling positions recognized by the State are exempt from guardianship (for instance, parish priests in Italy), and are excluded from public or municipal offices in the localities where they exercise their ecclesiastical functions. As to military service, in countries where it is compulsory the condition of the clergy varies. They may be entirely exempt, as in Austria and Belgium, or they may be under restricted obligations, as in Italy or Germany; finally, they may be placed on an exact equality with the other citizens, as now happens in France. Such a violation of their immunity is not one that the Church tolerates and accepts in silence; the opposition between military service and the vocation of the clergy, ministers of peace, is only too violent and apparent; the bishops and the popes have, therefore, protested against the laws which in divers countries compel the clergy to serve in the army (cf. the letter of Leo XIII to Cardinal Nina, dated 27 August, 1878). Finally, clerics were exempt from taxes and imposts, whether purely personal, as the poll-tax; or real, as property tax. It

must be recognized however that the latter exemption was practically disregarded by all nations except the Papal States. It has now completely disappeared.

JURIDICAL ORIGIN.—The *raison d'être* of all this immunity is the respect due to God, which is shared by those things and persons dedicated to His worship. Viewed in this light it springs from both natural and Divine law. Moreover, it is certain that if we consider the sacred ministry and worship formally, the property, the persons, and their acts are subject, by Divine right, only to religious authority, but that is not properly speaking an immunity. It is only one aspect of the greater question of the independence of ecclesiastical society of the civil society. The precise point in question is the juridical origin of the immunities we have just spoken of, which do not directly concern their acts as ministers of religion; are these immunities of right Divine, or of positive canon law, or even of secular law, that is, only generous concessions of princes, which might be withdrawn at will? No one disputes that immunities are part of the positive ecclesiastical law; every one admits that they have been inserted in civil laws, else they could not have been applied. But were canon law and civil law already bound by Divine law? If they were, the Church would be unable to make concessions in the matter of immunities, and the civil laws in suppressing them would be essentially unjust and without force. In answering this question we meet with two extreme opinions, but the truth will be found between them. A number of theologians and canonists (cf. Ferraris, "Prompta Biblioth.", s. v. "Immunitas", a. I, n. 7, 14) hold that the immunities are established by Divine law, with the exception of the right of asylum. They point out that in all nations, the consecration to the Deity of temples, property, and persons, placed them outside ordinary conditions, and made them specially exempt; in the Old Testament this was the case in regard to a worship that only prefigured the Christian worship; the custom of exemptions dates back to the very origin of the Church; finally, certain canonical texts speak of the immunities as being of Divine right. Opposed to this we have the "regalist" jurists declaring that "the immunities of the clergy are favours which the ecclesiastics received from sovereigns, not from popes and councils" (Héricourt, "Les Lois ecclésiastiques de France", H, v, viii); and Governments have acted in accordance with this view.

These "regalists" say that the clergy, allowance made for their spiritual functions, are on a level with ordinary citizens in all other matters; that Church property, although legally applied to the clergy and the expenses of Divine worship, nevertheless, does not cease to be essentially a temporal thing, and consequently subject to the secular power; that all immunities originate in concessions of emperors and Christian princes. Recent canonists hold a middle opinion (cf. Cavagnis, "Instit. juris publ. eccles.", II, 323 sq., 4th ed., Rome, 1906). They remark that the Church has never given an official answer to the question, but that it seems possible to ascertain exactly what she thinks from two facts: on the one hand she protests against the civil laws that suppress the immunities, and claims them as belonging to her of right (cf. prop. 30, 31 and 32 of the "Syllabus"); she therefore does not consider them to be concessions granted freely by the civil authorities. On the other hand, yielding to the conditions and circumstances of modern society, she makes no effort to revive the immunities that have disappeared, at least the right of asylum and exemption from property taxes, which is conclusive that she does not consider them unchangeable prescriptions of the Divine law. These authors conclude that the immunities are founded in Divine right, but emanate from positive canonical legislation; they repeat with the Council of Trent

(Sess. XXV, c. 20, "De Ref."), that immunities arise by Divine direction and ecclesiastical sanctions, "divina ordinatione et ecclesiasticis sanctionibus". To the partisans of the first view they answer that the custom of ancient races, the prescriptions of the Mosaic law, and the practice of the early ages of the Church prove indeed that immunities are in conformity with Divine law, but they do not demonstrate the existence of a law properly so called. What the Divine law pointed out required to be defined and completed by positive legislation. To the "regalists" they reply that all the immunities did not originate from imperial or princely concessions, several of them having been established positively by the Church, in agreement, it is true, with the secular powers; moreover, that the others have been "canonized" and inserted in ecclesiastical law and constitute for the Church an acquired right; besides they are sufficiently based on Divine law not to be considered as purely gratuitous favours conferred by the State on the Church. This middle theory adopts therefore all that is reasonable in the two extreme opinions.

BRIEF HISTORY OF THE IMMUNITIES.—The history of ecclesiastical immunities is a chapter of the more extensive history of the relations of Church and State. Moreover, some of them, as the right of asylum and the privilege of the tribunal, have had specially chequered careers. In general, we may say that the immunities developed with the growth of the Church, then they have been continuously restricted in proportion as the separation of the two powers became accentuated and the State became laicized. As long as the civil power, as such, was religious and Catholic, the laws on mixed questions settled by agreement, the clergy the first order in the State, and the public authorities helped to enforce the legislation and to carry out the decisions of the officially-recognized ecclesiastical authority, immunities were, in a certain sense, a social necessity; and that was especially true of a state of society wherein privileges and private laws played an important part, as in the feudal days. The feudal system adopted the immunities of the Roman law. When the Christian religion was recognized by the Roman empire, nothing seemed more natural than to grant it immunities and privileges equal to those that had been enjoyed by the religion that had hitherto been the official one. Constantine granted immunity to the churches, and to the clergy an exemption from all public and municipal charges and even certain taxes, as the poll-tax (Cod. Theod., lib. XVI, tit. ii, "De episcopis", especially lex 2). If the law placed difficulties in the way of the *curiales* who wished to join the clergy, it opposed the bringing of the clergy into the *curia* (ibid., leg. 7, 9, 11). As to property, not only could it be freely acquired and held by the churches, but being devoted to a public service, it was exempted by Constantine from common taxes and extraordinary charges (lib. XI, tit. i and xvi). This legislation maintained by Justinian, was received and confirmed by the imperial German law (Auth. "Item nulla", of Frederick II, according to lex 2 of the Cod. lib. I, tit. iii, "De episcopis"). In the kingdoms of the Franks, the property of the Church did not at first enjoy a general immunity, but it was often granted by a special concession of the king; later, the exemption was common, but repaid, doubtless more than equitably, by the contributions of which we have spoken, and which were gratuitous in nothing but the name (*dona gratuita*). The legislation of the Decretals, which corresponds, as is well known, with the period of the greatest authority of the Church, represents the greatest extension of the personal and real immunities; it is the legislation explained above theoretically in vigour; it has remained as a kind of ideal, never realized in practice. As early as the fifteenth century, ecclesiastical immunities had been curtailed more than once by

temporal princes; the Council of Trent (Sess. XXV, c. 20, "De Ref."), after confirming the canon law concerning immunities, addressed a solemn warning to the secular powers, the emperor, kings, and princes; it recalled to them their obligation of defending the churches, clergy, and ecclesiastical property against all who attacked their "liberty, immunity, and jurisdiction". But the movement was too strong to be thus easily overcome; on the contrary, it increased, and the end of the eighteenth century saw in France the suppression not only of immunities but even of Church property. The example was followed sooner or later by other countries, and there resulted an almost complete extinction of immunities, as we have explained above.

Immunities were maintained longer in Italy, and especially in the Papal States, owing to the care of the popes and especially of the Congregation of Immunity. In the movement for a thorough ecclesiastical reform following the Council of Trent, the popes could not neglect immunities; Sixtus V had confided this matter to the cardinals forming the "Congregation of Bishops"; but shortly afterwards, Urban VIII, by the Bull "Inscrutabile" (22 June, 1626), established a special congregation, which he called "Congregatio Immunitatis". This congregation, composed like the others of a certain number of cardinals, one of whom was its Prefect, assisted by a secretary, a fiscal lawyer, two bishops charged with drawing up reports, and a staff of lower officials, was appointed to look after the defence and enforcement of immunities. It was kept busily occupied and gave many decisions; no official collection of these has been made, but the Abbot General of Cîteaux, Pierre André Ricci, published in 1708 a repertory of them, arranged alphabetically, "Synopsis, decreta et resolutiones Sac. Cong. Immunitatis super controversiis jurisdictionalibus completens"; the work was re-edited with numerous additions by Mgr. Barbier de Montault, Paris, 1868. Although diminished, the work of this congregation continued till the invasion of Rome by the Italian troops in 1870; it was then joined to the Sacred Congregation of the Council and was suppressed in the recent reorganization of the Roman Curia by Pius X in 1908.

A. BOUDINHON.

Imola, DIOCESE OF (IMOLENSIS), suffragan of Bologna. The city is located on the Santerno, and was anciently called Forum Cornelii, from the dictator L. Cornelius Sulla, who founded it about 82 B. C. The name Imola was first used in the seventh century by the Lombards, who applied it to the fortress (the present Castellaccio, the construction of which is attributed to the Lombard Clefi), whence the name passed to the city itself. According to Paul the Deacon, Imola was in 412 the scene of the marriage of Atawulf, King of the Visigoths, and Placidia, daughter of Theodosius the Great. In the Gothic war, and after the Lombard invasion, it was held alternately by the Byzantines and barbarians. With the exarchate it passed under papal authority. In the ninth century it was bravely defended against the Saracens and Hungarians by Fausto Alidosi. In the tenth century Troilo Nordiglio acquired great power. This and the following centuries witnessed incessant wars against the Ravennatese, the Faentines, and Bolognese, as well as the intestine struggles of the *Castrimolesi* (Castro Imolese) and the *Sancassianesi* (San Cassiano). Amid these conflicts was formed the republican constitution of the city. In the contest between pope and emperor Imola was generally Ghibelline, though it often returned to the popes (e. g. in

1248). Several times, powerful lords attempted to obtain the mastery of the city (Alidosi, 1292; Maghi-nardo Pagano, 1295). Benedict XII turned the city and its territory over to Lippo Alidosi with the title of pontifical vicar, the power remaining in the same family (Alidosi) until 1424, when Angelo della Pergola, "capitano" for Filippo Maria Visconti, gained the supremacy. But in 1426 the city was restored to the Holy See, and the legate (later Cardinal) Capranica inaugurated a new regime in public affairs.

In 1434, 1438, and 1470 Imola was conferred on the Sforza, who had become lords of Milan. It was again brought under papal authority when it was bestowed as dowry on Catherine Sforza, the bride of Girolamo Riario, nephew of Sixtus IV. Riario was invested with the Principality of Forlì and Imola. This proved advantageous to Imola, which was embellished with beautiful palaces and works of art (e. g. in the cathedral, the tomb of Girolamo, murdered in 1488 by conspirators of Forlì). The rule of the Riarii, however, was brief, as Alexander VI deprived Ottaviano, son of Girolamo, of power, and on 25 November, 1499, the city surrendered to Cæsar Borgia. On his death, two factions, that of Galeazzo Riario and that of the Church, contested the rule of the city. The ecclesiastical party was victorious, and in 1504 Imola submitted to Julius II. The last trace of these contests was a bitter enmity between the Vaini and Dassatelli families. In 1797 the French established a provisional government at Imola; in 1799 it was occupied by the Austrians; in 1800 it was united to the Cisalpine Republic. After that it shared the fortunes of the Romagna.

Noteworthy among the secular edifices of Imola are the Farsetti and the municipal palaces. In the latter is a fresco representing Clement VII and Charles V (1535) passing through the city. The public library was established in 1747 by the Conventual Padre Setti. In the sixteenth century the Accademia degli Industriosi flourished. Among the celebrated men of Imola were: Pope Honorius II; Benvenuto da Imola (Rambaldi), a lecturer on Dante at the University of Bologna in the fourteenth century; Taddeo della Volpe, a captain in the service of the popes and Venice (in 1510 Venice presented him with a staff bearing the image of a fox and his device: SIMUL ASTU ET DENTIBUS UTAR); Giovanni Sassitelli, surnamed *il Cagnaccio*, who was also a captain; Ottaviano Vestri and his son Marcello, famous jurists of the sixteenth and seventeenth centuries; Innocenzo da Imola (Francucci), a pupil of Francia and Gaspare Sacchi, distinguished painters; Andrea and Giuseppe Bagnari, noted for their skill in inlaid work; Cosimo Morelli, the famous architect who designed the sacristy of St. Peter's, Rome.

The Christian origins of Imola are obscure. The episcopal see certainly antedates St. Ambrose, who *sede vacante* ordered the Bishop of Vigorenza to visit the church of Imola and provide for the election of a pastor. The martyrdom of Saint Cassian is likewise certain, being described by Prudentius (Peristeph., IX) from pictures seen by him in the cathedral of Imola. Saint Cassian was a schoolmaster, put to death for his faith by his pupils, under Diocletian. Some have identified him with Saint Cassian, Bishop of Sabiona (Säben in the Tyrol), said to have been transferred to Imola, but this would place the martyrdom in the time of Julian. In 435 Valentinian III built the church of S. Maria in Arenula. The bishop then was St. Cornelius, whose deacon was made Bishop of Ravenna by Sixtus III and is known as St. Peter Chrysologus. His successor was Projectus, at whose ordination Chrysologus pronounced a magnificent eulogy of St. Cornelius. Chrysologus himself was buried at Imola. His tombstone, discovered in 1698, was a rude block on which was written PERRUS. Of the gifts of St. Peter Chrysologus to the church of

Imola there is still preserved a paten, with the figure of a lamb on an altar, surrounded by the metrical legend

Quem plebs tunc cara crucis agnum fixit in ara.

Hostia fit gentis primi pro labe parentis.

These leonine verses, however, indicate a much more recent date. At the same period flourished the deacon St. Donatus. Other bishops worthy of mention are: John (946), who restored the cathedral and embellished the tomb of St. Peter Chrysologus; Blessed Basil (1063); Ridolfo (1146), and Enrico (1174), who suffered for their adherence to Alexander III, Enrico laid the foundations of the present cathedral, finished in 1271 under Bishop Sinibaldo; Pietro Ondedei (1416), a distinguished canonist and theologian; the Dominican Gaspare Sighigelli (1450), learned and saintly; Girolamo Dandini (1546), formerly nuncio at Paris, founder of an orphan asylum; Francesco Guarini (1566), the founder of the seminary; Cardinal Fabio Chigi (1652), afterwards Pope Alexander VII; Cardinal Filippo Gualtieri (1702), founder of a *monasterio frumentario* to supply the poor peasants with seed; Cardinal Giancarlo Bandi (1752), who rebuilt the cathedral and the basilica of Valentinian; Cardinal Barnaba Chiaramonti (1785), afterwards Pope Pius VII; Cardinal Giovanni Maria Mastai Ferretti (1832), afterwards Pius IX.

Imola has 121 parishes with 120,000 souls; 7 religious houses of men and 12 of women; 4 educational institutions for boys, and 12 for girls.

ALBERGHETTI, *Compendio della storia civile . . . D'Imola* (Imola, 1810); ANGELI, *Memorie biografiche di uomini illustri Imolesi* (Imola, 1828); CAPPELLETTI, *Le Chiese d'Italia* (Venice, 1857), II.

U. BENIGNI.

Imola, INNOCENZO DI PIETRO FRANCUCCI DA, Italian painter; b. at Imola, c. 1494; d. at Bologna, c. 1550. When but twelve years of age he arrived at the latter city to study painting as a bursar of his native town, which, by an ordinance dated 17 March, 1506, had voted him an annual subsidy of ten baskets of grain. He entered Francia's atelier, as is proved by this extract from the master's register, given by Malvasia: "1508. On the 7 May I took into my school Nocentio Francuccio of Imola, on the recommendation of Felesini and Gombruti." It is probable that Innocenzo went to Florence and that he studied for some time under the direction of Mariotto Albertinelli. Soon he was invited by Count Giovanni Battista Bentivoglio to take up his residence at Bologna. Here Innocenzo passed the remainder of his life, and here are still to be found the greater number of his works.

But a sovereign influence, that of Raphael, had already taken possession of the artist and effaced in him all the influences which had preceded it; or rather, he found in the work of Raphael the finished expression of that quality which had charmed him in Francia and Mariotto, as in Andrea del Sarto and Fra Bartolommeo. It is doubtful, however, whether he ever knew Raphael, who had left Florence in 1508 and returned only for a few months in 1517, when Innocenzo was busy at Bologna in the famous convent of S. Michele in Bosco. It is almost certain that he never was at Rome, and, consequently that he was not acquainted—unless by engravings—with the great decorations of the Stanze and the Farnesina; for him Raphael is still the painter of the Madonnas. On the other hand, we know that Francia had friendly relations with the Urbinese master. We know, too, that one of the first pieces of work executed by Innocenzo for Bentivoglio was a copy of the "Virgin with the Fish", now at Madrid, a picture then already famous and in the possession of a nobleman. Such copies, no doubt, were scattered throughout Italy, popularizing the genius of Rafael. Thus did the master's influence radiate quite beyond the limits of his school, and artists like Garofalo and Bagnacavallo were to be seen

establishing at a distance from that school—at Ferrara and at Bologna—veritable foci of Raphaellesque imitation.

Innocenzo is one of the striking examples of this influence. With him it was not, as it was with Bagnacavallo, a form of servility impelling him to travesty now the "Transfiguration", now the "Healing of the Paralytic"; but through a kind of natural sympathy the ideas of the master were caught up and re-echoed in the kindred soul of the disciple. The force of Innocenzo's love was such as to give those ideas a new life in himself. His art is only a reflected art, and yet it keeps a certain spontaneity. With forms which are nearly all borrowed, the feeling remains ingenuous, and at times charming. For the most part, however, Innocenzo's works are only anthologies of Rafael, like the "Holy Family with his patrons" or the "St. Michael with the saints" in the Bologna museum, formed by the fusion of the "Virgin of Foligno" with the "St. Michael" of the Louvre. Other works, on the other hand, are freely created in the spirit of Raphael, such as the "Marriage of St. Catherine" in S. Giacomo Maggiore, one of this master's largest pictures, and perhaps his best, with a solidity of execution very remarkable in a work of that date (1536). The predellas with which he loved to embellish his work are almost invariably charming works in themselves, the predella often better than the picture. In general, Innocenzo painted little besides altar pieces. Still, he did his part in the decoration of the Palazzino della Viola, where Cardinal d'Ivrea entrusted him with the painting of a loggia. Lastly, his frescoes in S. Michele in Bosco are not to be despised, demonstrating his love of large and simple subjects.

His work is interesting precisely because it maintained in some measure the suavity of the old religious art, avoiding the pompous and violent subjects which were beginning to seduce the minds of his contemporaries. His was a delicate poetic talent, with little originality, and the old themes offered it sufficient scope; and, in an age that was already abandoning those themes, this very spirit of tradition constituted a sort of originality. His life was that of a simple, hard-working artist, wholly given to the art which he respected and for which he won respect. Affable and modest, shunning the licentious society of his fellow-artists, he possessed the charm of a gentle and kindly disposition. Carried off, at the age of fifty-six, by a malignant fever, he left at Bologna the memory of an upright artist and an exemplary man.

LOUIS GILLET.

Impanation, an heretical doctrine according to which Christ is in the Eucharist through His human body substantially united with the substances of bread and wine, and thus is really present as God, made bread: *Deus panis factus*. As, in consequence of the Incarnation, the properties of the Divine Word can be ascribed to the man Christ, and the properties of the man Christ can be predicated of the Word (*communicatio idiomatum*), in the very same way, in consequence of the impanation—a word coined in imitation of incarnation—an interchange of predicates takes place between the Son of God and the substance of bread, though only through the mediation of the body of Christ. The doctrine of impanation agrees with the doctrine of consubstantiation, as it was taught by Luther, in these two essential points: it denies on the one hand the Transubstantiation of bread and wine into the Body and Blood of Christ, and on the other professes nevertheless the Real Presence of Christ in the Eucharist. Yet the doctrines differ essentially in so far as Luther asserted that the Body of Christ penetrated the unchanged substance of the

bread but denied a hypostatic union. Orthodox Lutheranism expressed this so-called sacramental union between the Body of Christ and the substance of bread in the well-known formula: The Body of Christ is "in, with and under the bread"—*in, cum et sub pane*; really present, though only at the moment of its reception by the faithful—*in usu, non extra usum*. The theologians of the Reformed Churches, calling this doctrine, in their attack against the Lutherans, *impanation*, use the term not in the strict sense explained above, but in a wider meaning.

If we search for the historic origin of the term, we must go back to the controversies against the disciples of Berengarius of Tours at the end of the eleventh century. Guitmund of Aversa (d. before 1195), in his work "De corporis et sanguinis Christi veritate in Eucharistiâ" (P. L., CXLIX, 1427 sqq.), distinguishes two classes of disciples of Berengarius; those who absolutely deny the Real Presence of Christ in the Eucharist, and those who, though they admit that the Body and Blood of Christ are really (*revera*) present in the Eucharist, reject the doctrine of Transubstantiation and explain Christ's Real Presence by a kind of impanation (*Christum quodammodo impanari*). Guitmund thinks this to be the essence of Berengarius's doctrine (*hanc esse subtiliorem Berengarii sententiam*). This teaching, however rightly or wrongly attributed to Berengarius, evidently does not profess impanation in the strict sense of the term; it rather coincides with the above-mentioned doctrine of consubstantiation as taught by Luther. Alger of Liège (1131), in his work, "De sacramento corporis et sanguinis Christi", I, 6 (P. L., CLXXX, 439-845), without mentioning any definite names, points out and opposes the errors of some (*errantes quidam*) who say that "Christ's Person is impanated in the bread, just as God is incarnated in the human flesh" (*dicunt ita personaliter in pane impanatum Christum sicut in carne humanâ personaliter incarnatum Deum*). He calls this a heresy, which ought to be utterly rooted out, because it is an absurd novelty (*quia nova et absurda*). Who was it that introduced this new heresy? For a long time the well-known Abbot Rupert of Deutz (1135) was suspected. Cardinal Bellarmine (*De Euch.*, III, xi, xv), Baronius (*Ann. Eccl.*: ad annum 1111, n. 49), Suarez, and Vasquez thought they could trace back the doctrine of impanation to him (cf. his work "De div. officiis", II, 2 and 9), and recently P. Rocholl ("Rupert v. Deutz", Gütersloh, 1886, 247 sqq.) repeated the same charge. Others, however, acquit him of this error, as Alexander Natalis, Tournely, and especially Gerberon in his "Apologia Ruperti Tuitensis" (Paris, 1669); and, amongst modern writers of the history of dogmatic theology, J. Bach ("Dogmengeschichte des Mittelalters", I, Vienna, 1875, 412 sqq.) and Schwane ("Dogmengeschichte", III, Freiburg, 1882, 641). They seem to be right, for a critical examination of all the passages bearing on the subject shows that Rupert, though at times he used ambiguous expressions, nevertheless believed in the Transubstantiation of the substance of bread into the Body of Christ. However this be, it cannot now be decided whether Alger of Liège cited Rupert as an advocate of impanation, since it remains unknown whether Rupert had already published his ambiguous expression at the time when Alger wrote his attack.

With much better reason, John of Paris (d. 1306) is considered the champion of the strict doctrine of impanation. In his work, "Determinatio de modo extendi corpus [*sic*] Christi in sacramento altaris alio quam sit ille quem tenet Ecclesia" (ed. Peter Alix, London, 1686), he tries, in conscious opposition to the Church, to establish, as plausible at least, the hypothesis that "the bread does not remain in its own *suppositum*, but is assumed through the Flesh or through the Body of Christ as a part of the *esse* and hypostasis of the Logos" (*Ego dico panem ibi manere*

non in proprio supposito, sed tractum ad esse et suppositum Verbi, mediante carne aut corpore parte). Consequently, he maintains that it is correct to say: "The Body of Christ is 'impanated', i. e. has become bread" (Corpus Christi impanatum, i. e. panis factum); still it cannot be said that "the Man or Christ has become bread" (sed hominem aut Christum non possumus dicere impanatum), an explanation which is certainly not too conspicuous for clearness and precision. Amongst the reformers, Andreas Osiander (d. 1552), a fervent disciple of Luther, seems to have held the doctrine of impanation, though later Lutheran theologians have tried to acquit him of this error. It is, however, difficult to discern the real meaning of this fiery writer from his confused expressions. For this reason Melancthon, in a letter of 22 March, 1538, to the pastor Vitus Theodorus in Nuremberg, merely expresses his suspicion that Osiander held the doctrine of impanation. Both Melancthon and Luther were thoroughly opposed to this absurd opinion. And this for many reasons, but especially because they would have been obliged to adore in the strictest sense of the word (*cultu latriæ*) the bread hypostatically united with the Body of Christ, and this would have been in diametrical opposition to the Lutheran principles and practices of the Lord's Supper. Recently, Bayma, a Catholic theologian, in a series of theses proposed a theory on Transubstantiation, which, upon critical examination, comes very close to the above mentioned teaching of William of Paris; in fact, it seems to explain the Real Presence of Christ in the Eucharist by impanation. He bases his theory on the proposition that the substance of bread, in consequence of the conversion, ceases to be substance, and that it receives a new subject, without undergoing interior change, having its support no longer in itself but in another suppositum (*substantia panis desinit esse substantia eo solum, et absque aliâ sui mutatione, quod in alio supernaturaliter sustentatur, ita ut jam non in se sit, sed in alio ut in primo subjecto*). Consequently it is the Body of Christ that supports the nature of the bread (*Corpus Christi sustentat naturam panis*). Of this hypothesis, which denies a real Transubstantiation entirely, or admits it only nominally, the Holy Office justly declared: *tolerari non posse* (7 July, 1875—cf. Denzinger, "Enchiridion", 1843-46, 10th ed., Freiburg, 1908). The doctrine of impanation as far as it denies the Transubstantiation of bread and wine is certainly a heresy; besides, it is also against reason, since a hypostatic union between the Word of God Incarnate, or the God-man Christ, and the dead substances of bread and wine is inconceivable. Much less conceivable is such a union if we presuppose Transubstantiation, for since the substance of bread no longer exists it cannot enter into a hypostatic union with Christ.

J. POHLE.

Impediments, CANONICAL.—I. GENERAL NOTION OF AN IMPEDIMENT.—The Latin word *impedimentum* signifies directly whatever embarrasses or hinders a person, whatever is an obstacle to his movements, and in this sense the baggage of an army was called *impedimenta*. Juridical language applies the term to whatever hinders the free action of an agent, or to whatever prevents him from performing, or at least from performing regularly, any act that the law takes cognizance of. The impediment therefore affects directly the juridical capacity of the agent, restrains it, or even entirely suppresses it; indirectly it affects the action itself, which it renders more or less defective or even null. An impediment consequently produces its effect

by reason of a defect; it ceases when the agent has legally recovered his capacity, whether that be by a dispensation or by his fulfilling the conditions requisite for the act he wishes to perform. The impediment, in other words, the restriction or suppression of the juridical capacity of the agent, may arise from natural laws, from Divine law, or from human law, ecclesiastical or civil; we may, however, point out that certain cases of nullity, certain defects of acts that the law takes cognizance of, are caused by the absence of an essential constitutive element; for example in the case of a contract imposed by force on one of the parties, there would be no impediment unless in a wide improper sense of the term. This general idea of impediments is applicable to all those acts in regard to which the law regulates the juridical capacity of the agents; for instance, acquisition of jurisdiction, contracts in religious matters, the sacraments. Canon law affords a multitude of examples. A layman, a heretic, an excommunicated person is incapable of acquiring spiritual jurisdiction; better known are the restrictions placed on minors, religious, children not yet emancipated, etc., in the matter of making contracts; finally, there are many legal obstacles affecting the capacity of the faithful to receive licitly or even validly, baptism, confirmation, penance, and particularly Holy orders and matrimony.

Canon law uses the word impediment in its restricted and technical sense, only in reference to marriage, while impediments to Holy orders are spoken of as irregularities (q. v.). We may remark, however, that several real impediments or obstacles to the reception of Holy orders are not called irregularities: thus, women and unbaptized persons, who are by Divine law incapable of being ordained, are not termed irregular. But speaking of matrimony, the word impediment refers to all obstacles, whether arising from natural or Divine law. Another interesting fact is that whereas the word impediment has thus acquired a precise technical meaning in canon law, the cognate words *impedire*, *impediens*, *impeditus*, have preserved their wide grammatical signification and may be applied to other matters; so writers speak of those unable to go personally to Rome to be absolved from censures as *impediti adire Romam*, and the Constitution "Apost. Sedis" speaks of those who hinder (*impedientes*) the exercise of ecclesiastical jurisdiction.

II. IMPEDIMENTS TO MARRIAGE, IN GENERAL.—The fundamental idea of an impediment to matrimony is contained implicitly in the well known prohibitions of Leviticus and some ancient canonical texts; in the latter may be discovered the basis of the celebrated distinction between diriment impediments which render a marriage null and void, and prohibitory impediments which only render it illicit; sometimes the canons of councils insist on the separation of the parties who have violated the law, which implies that the marriage was void; sometimes, on the contrary, they exact only an expiation or reparation, without dissolving the conjugal union, which implies that the marriage was valid though more or less in opposition to the law. But these ancient canonical texts do not give a complete list of impediments, much less a general theory concerning them. It is only at the end of the twelfth century that we find, for the first time, the use of the word "impediment" in its technical sense, together with a catalogue of matrimonial impediments. In his "Decree", Gratian neither speaks definitely, nor does he give a satisfactory list; nor does Peter Lombard in his "Sentences" About 1190 Bernard of Pavia uses freely the expression, which became classical, "impedit contrahendum et dirimit contractus", and further he enumerated the impediments: "sunt autem quæ matrimonium impediunt xiv", but his list is not definitive; the technical names of each impediment remain for some time longer unsettled. However the doctrine of the School soon becomes fixed

and with it the terminology. The distinction between diriment and prohibitory impediments is sharply marked, and a more or less successful attempt is made to classify the diriment impediments. Their number is not yet determined, not because the doctrine is uncertain, but because several of them may be included under the same title. Certain canonists try to limit them to the quasi sacred number fourteen (twice seven); others reckon twelve, sixteen, or even more. The gloss of the "Decree" (*Causa xxvii*, q. 1, vº "Quidam", before can. i) says there are sixteen matrimonial impediments, fourteen of which are diriment; it enumerates them without order in the following distichs:

Votum, conditio, violentia spiritualis,
Proximitas, error, dissimilisque fides,
Culpa, dies vetitus, honor, ordo, ligatio, sanguis,
Quæ sit et affinis, quique coire nequibit,
Additur his ætas, habitum conjunge furoris;
His interdictum subditur Ecclesiæ.
Hæc, si canonico vis consentire rigori
Te de jure vetant jura subire tori.

In spite of its insertion in the gloss, this enumeration was not adopted permanently, doubtless because it did not separate the prohibitory from the diriment impediments, and because the former class was incomplete. The list that was received almost universally, and which, with a few changes, still figures in most canonical treatises on marriage, and is followed step by step, by many authors including St. Liguori (*Theol. Mor.*, I, VI, n. 1008), was composed by Tancred (1210-1214). It contains four prohibitory impediments separated from thirteen diriment:

Ecclesiæ vetitum, tempus, sponsalia, votum,
Impediunt fieri, permittunt facta teneri.
Error, conditio, votum, cognatio, crimen,
Cultus disparitas, vis, ordo, ligamen, honestas,
Dissensus, et affinis, si forte coire nequibis,
Hæc faciendâ vetant connubia, facta retractant.

But after the Council of Trent, which created the impediments of abduction and clandestinity, these thirteen were increased to fifteen; the last hemistich, "si forte coire nequibis", was replaced by "si clandestinus, et impos"; and for abduction was added the hexameter "Raptive sit mulier, loco nec reddita tuto". Though this method of enumerating them is so common, it is not satisfactory, being somewhat confused. No official list of impediments has ever been promulgated, and indeed it would be very difficult to compile such a list, as there are many ways of reckoning the impediments improperly so called, all of which may be included under a defect of consent, such, for instance, as error, insanity, constraint, dissimulation and others. It is possible likewise to count in different ways the prohibitory impediments among which that of "mixed religion" must be included. Of the many definitions of matrimonial impediments formulated by canonists, we prefer that of D'Annibale (*Summula*, III, n. 428): "Any circumstance of which the law takes cognizance that is opposed to a licit or valid marriage."

Impediments have been classified and divided in many ways, of which the following are the more important. (1) The chief division is that which distinguishes between prohibitory and diriment impediments, the former rendering the marriage illicit, the latter making it void; we have already said enough about this. (2) They have been divided according to their juridical cause: some arise from natural law, as the different forms of defective consent, impotency, relationship in direct ascending or descending line; others arise from Divine law, which demands unity and perpetuity of marriage, thus forbidding polygamy and marriage after divorce; others, finally, while suggested by natural and Divine law have been created by ecclesiastical law. (3) A distinction must be made between absolute and relative impediments. The for-

mer forbid any marriage of the person on whom the impediment falls, for instance, impotency, Holy orders, etc., the latter forbid the marriage with certain definite persons only; such for example are relationship, crime, etc. (4) Impediments may be also public or hidden according as the fact giving rise to them is known or secret, or in other words, may be proved easily or with difficulty. Examples of public impediments are relationship, lawful affinity, Holy orders, etc.; hidden impediments are those arising from purely private and especially concealed facts, for instance, affinity arising from illicit intercourse, certain forms of "crime", etc. (5) A very practical division is based on the nature of the dispensation that is granted or refused by the church. Most of the impediments arising from ecclesiastical law are dispensed from with more or less facility (cf. Lehmkühl, "*Theol. Mor.*", II, n. 792). (6) Finally, it is important to distinguish impediments properly so called from those that are only improperly so termed. The former are those that arise from an absence of capacity to contract on the part of one of the individuals, who cannot enter into a valid marriage even if he performs all the customary external acts and has a firm intention of marrying. Such would be the case of a married man, who had obtained a divorce, he being thereby absolutely incapable of validly marrying another woman. Such also is the impediment of form, or clandestinity, which renders the contract null and void, if the requisite conditions of publicity have not been complied with, namely the presence of the parish priest of the locality or his delegate, and of two witnesses; it is an impediment properly so-called, though it does not act directly by affecting the personal capacity of the contracting party. On the other hand, impediments improperly so called do not imply the juridical incapacity of the agent, but the absence of a due consent on his part, whether from want of knowledge, liberty, or will. In that case it is the contract that is non-existent, because it lacks an essential element; wherefore, such impediments are not, properly speaking, created or established by the law, and are not matter for dispensation. They spring from the natural law in the sense that they are the application to Matrimony of the laws that regulate all contracts and arise from the very nature of things. Ecclesiastical law cannot intervene directly; it is limited to pointing them out and applying opportune measures to prevent as far as possible marriages affected by these different forms of defective consent.

Marriage is juridically a contract, and a Christian marriage does not cease to be a contract because it is a sacrament. Being a sacrament it is a sacred thing, and as such is subject to the authority of the church; and, being a contract, the church can establish impediments to matrimony, either personal or formal. Having the power to establish them, she can abrogate them, modify them, and, consequently, dispense from them in individual cases (see MARRIAGE; DISPENSATION).

III. IMPEDIMENTS TO MARRIAGE, IN PARTICULAR.—The following is the list of the impediments of marriage arranged in what seems the most logical order, with the essential notions on each, except where reference is made to special articles.

A. Prohibitory impediments, that is to say, those which render a marriage illicit, but do not impair its validity. (1) *Betrothal*.—A valid engagement to marry, entered into by two individuals, constitutes an absolute, prohibitory impediment, that is, an obstacle to any other marriage; by plighting his troth, the man creates a correlative right on the part of the woman, and any other marriage would be a violation of that right (see BETROTHAL). (2) *Vow*.—Such also is the case of a vow, not any vow whatsoever, but a vow of chastity, and moreover a simple vow, for a solemn vow of chastity constitutes a diriment impediment. The

obligation by vow towards God is an obstacle to any marriage; consequently it too is an absolute prohibitory impediment (see CHASTITY, and Vow). (3) *Mixed Marriage*.—Whereas the marriage of a baptized person with an infidel is null and void, the marriage of a Catholic with a baptized non-Catholic is the object of a prohibitory impediment, mixed religion (*mixta religio*); it is therefore a relative impediment. For the dispensation in case of mixed marriages and the conditions attached to it see MIXED MARRIAGES. (4) *Vetium Ecclesiae*, a prohibition, in the form of a precept, imposed by ecclesiastical authority on a particular individual, would also be a personal impediment if it had a general character; it affects only the capacity of an individual. This precept is imposed to delay a marriage until a given condition has been fulfilled, for instance, till the removal of the obstacle to a marriage arising from a preceding betrothal to another person.

(5) *Forbidden times* (*tempus clausum, tempus feriatum*) is only an impediment improperly so-called, because it does not affect the personal capacity of the contracting parties, and, because it prohibits, not the marriage itself, but only the solemn celebration of the marriage; although, in truth, it is used commonly as if it forbade the marriage. These forbidden periods, though formerly much longer, were reduced by the Council of Trent (Sess. XXIV, cap. x, "De Reform. Matrim.") to the two following times: from Advent to the Epiphany, and from Ash Wednesday to Low Sunday.

B. Diriment impediments, that is to say those that render the marriage null and void, form three groups: (1) Impediments properly so called, which are personal incapacities, some absolute, some relative. Two arise from the physical incapacity of the subject: impuberty and impotency. *Puberty* is the state of physical development requisite for generation. The age of puberty varies with the individual and the climate; the legal presumption of the Roman law fixed it at twelve years for girls and fourteen for boys. The church has followed this rule or presumption, but it has not made want of a fixed age an impediment properly so-called which would render the marriage void under every hypothesis. It is presumed that young people reach the age of puberty at twelve and fourteen; it is presumed that they do not reach it before this time; but if as a matter of fact they have reached it, and a marriage be necessitated by the circumstances of the case (*quando malitia supplet etatem*), the marriage is valid without dispensation. Formerly real dispensations from this impediment were granted, but on the condition that the common life should begin only later. *Impotency* is the state of one who is incapable of normal sexual relations. It is clear that an impotent person cannot validly contract marriage since he is physically incapable of realizing its object. For this particular impediment we must refer to the technical treatises on the subject and limit ourselves to some conclusions. The impotency which is a cause of nullity is the incapacity of having conjugal relations (*impotentia coeundi*), not incapacity of engendering (*impotentia generandi*), in other words, sterility. No one is presumed impotent once he has reached the legal or real age of puberty; consequently, no one, except eunuchs, can be prevented by authority from marrying (Sixtus V, 27 June, 1587). The different classifications of impotency, absolute or relative, antecedent or subsequent, perpetual or temporal, to be met with in various treatises, are of no practical importance now. Only perpetual antecedent impotency is a cause of nullity; nowadays it is seldom necessary to examine too closely into this matter, as all cases arising from it are treated as far as possible under the form of dispensations of non-consummated marriages.

Next we have an impediment based on the presumption of want of consent, *abduction* (*raptus*). In as far as it is an impediment, it is the incapacity of the abduc-

tor of contracting valid marriage with the woman whom he has abducted, until she has first been allowed to go free. Two impediments arise from religious obligations which exclude marriage with any person whosoever they are: A solemn vow (*votum*), that is to say, a vow taken in an order that has a solemn profession of its members, whether men or women; and Holy orders (*ordo*), that is to say, the sub-diaconate and major orders. Another impediment of a religious nature is that called disparity of worship (*cultus disparitas*); it renders void the marriage of a Christian with an infidel, that is, of a baptized person with one who is unbaptized (see DISPARITY OF WORSHIP). Next in order we have a previous matrimonial engagement (*ligamen*), an impediment rendered void any marriage of a married person, during the lifetime of the person to whom he or she has been validly married. The respect due to marriage has caused to be prohibited the union of persons who have attacked the sanctity of the marriage of one or other of the parties by killing his or her partner, or by committing adultery with a promise of marriage or an attempted marriage; that is the impediment of crime (*crimen*). (See CRIME.)

Finally, respect due to family and kin forms the basis of the impediment of relationship (*cognatio*), which occurs in five forms: (a) natural relationship or community of blood (*consanguinitas*), which prohibits all marriages in the direct ascending or descending line *in infinitum*, and in the collateral line to the fourth degree or fourth generation; (b) alliance or affinity (*affinitas*), which establishes a bond of relationship between each of the married parties and the blood relations of the other, and forbids marriage between them to the fourth degree. Such is the case when the affinity springs from conjugal relations; but as canon law considers affinity to spring also from illicit intercourse, there is an illicit affinity which annuls marriage to the second degree only; (c) public decorum (*honestas publica*), a legal anticipation of affinity; those who will be related by the consummation of marriage are already looked upon as related when they are betrothed or have only ratified the marriage contract. This impediment is as extensive as affinity, if it springs from a reception of the Sacrament of Matrimony; if it arises solely from betrothal it extends only to the first degree; (d) spiritual relationship (*cognatio spiritualis*). Spiritual birth has been considered as producing a kind of relationship between those who took an active part in the rites of Christian initiation, baptism, and confirmation, and marriage between them is forbidden. The impediment arising from these sacraments has been restricted by the Council of Trent (Sess. XXIV, cap. ii, "De Ref. Matri."); it prevents the marriage of the sponsor with the child or with the child's parents, also the marriage of the minister of the sacrament with the person baptized or confirmed and with his parents. But we must remark that as far as the Sacrament of Confirmation is concerned there can be no question of the marriage of the minister; also as confirmation requires only one sponsor, who must be the same sex as the person confirmed, this impediment cannot arise between them; the only case therefore where it would occur is in a marriage of the sponsor in confirmation with the parent of the child, which would be null and void; (e) Lastly there is the purely legal relationship of *adoption*, with the prohibitions of marriage attached to it in Roman law; the church has merely accepted and ratified them.

(2) The second kind comprises the only diriment impediment that is based on a question of form, to wit, clandestinity.

(3) Next we have the impediments, improperly so called, which do not affect the capacity of the agent, the nullity of the marriage being caused by a defect of consent. This defect may arise from the intellect or the will; hence we have two classes. Arising from the intellect, we have: insanity; and total ignorance, even

in confuso, of what marriage is (this ignorance however is not presumed to exist after the age of puberty has been reached); and lastly, error, where the consent is not given to what was not intended. All cases of error do not annul a marriage but only those that arise from an error regarding a person (*error personæ*) or a quality affecting a person (*redundans in personam*). There is an error affecting a person that forms a separate class, namely, a mistake relating to his liberty (*conditio servilis*): a marriage with a slave who is believed to be free is null and void. Arising from the will, a defect of consent may be caused through deceit or dissimulation when one expresses exteriorly a consent that does not really exist; or from constraint imposed by an unjust external force, which causes the consent not to be free (*vis et metus*). Finally a consent, even real, is destroyed if to the contract be added clauses or conditions contrary to the essential elements of marriages, as divorce or adultery; but it must be noted that a mere concomitant intention is not a cause of nullity; not being expressed formally as a condition, it is presumed non-existent. It is clear that the impediments improperly so-called are as varied as the ways in which the validity of the matrimonial consent, psychologically considered, can be affected.

In addition to the treatises of canonists and moralists on marriage, consult, for the historical aspect, FREISEN, *Geschichte des kanonischen Eherechts* (Tübingen, 1888); for the classification of the impediments, GASPARRI, *Tractatus de matrimonio* (Paris, 1904).

A. BOUDINHON.

Imposition of Hands, is a symbolical ceremony by which one intends to communicate to another some favour, quality or excellence (principally of a spiritual kind), or to depute another to some office. The rite has had a profane or secular as well as a sacred usage. It is extremely ancient, having come down from patriarchal times. Jacob bequeathed a blessing and inheritance to his two sons Ephraim and Manasses by placing his hands upon them (Gen., xlviii, 14) and Moses conferred on Josue the hegemony of the Hebrew people in the same manner (Num., xxvii, 18, 23). In the New Testament Our Lord employed this rite to restore life to the daughter of Jairus (Matt., ix, 18) and to give health to the sick (Luke, vi, 19). The religious aspect of this ceremony first appeared in the consecration of Aaron and his sons to the office of priesthood. Before immolating animals in sacrifice the priests, according to the Mosaic ritual, laid hands upon the heads of the victims (Ex., xxix: Lev., viii, ix); and in the expressive dismissal of the scapegoat the officiant laid his hands on the animal's head and prayed that the sins of the people might descend thereon and be expiated in the wilderness (Lev., xvi, 21). The Apostles imposed hands on the newly baptized, that they might receive the gifts of the Holy Ghost in confirmation (Acts, viii, 17, 19; xix, 6); on those to be promoted to Holy orders (Acts, vi, 6: xiii, 3; I Tim., iv, 14: II Tim., i, 6; Matt., xiii); and on others to bestow some supernatural gift or corporal benefit (Acts, *passim*). In fact this rite was so constantly employed that the "imposition of hands" came to designate an essential Catholic doctrine (Heb., vi, 2).

To understand clearly the extent to which the imposition of hands is employed in the Church at present it will be necessary to view it in its sacramental or theological as well as in its ceremonial or liturgical aspect. In confirmation, the imposition of hands constitutes the essential matter of the sacrament, not however that which precedes the anointing, but that which takes place at the actual application of the chrism (S. C. de Prop. Fide, 6 Aug., 1840). In the sacrament of Holy orders it enters either wholly or in part, into the substance of the rite by which most of the higher grades are conferred. Thus in the ordination of deacons according to the Latin rite it is at least partial matter of the sacrament; in conferring the priesthood

there is a threefold imposition, viz.: (a) when the ordaining prelate followed by the priests, lays hands on the head of the candidate *nil dicens*; (b) when he and the priests extend hands during the prayer, "Oremus, fratres carissimi", and (c) when he imposes hands at giving power to forgive sins, saying "Accipe Spiritum Sanctum". The first and second of these impositions combined constitute in the Latin Church partial matter of the sacrament, the *traditio instrumentorum* being required for the adequate or complete matter. The Greeks, however, rely on the imposition alone as the substance of the sacramental rite. In the consecration of bishops the imposition of hands alone pertains to the essence (see CONFIRMATION; ORDERS).

The ceremonial usage is much more extensive. (1) In baptism the priest signs the forehead and breast with the sign of the cross, lays hands on the head during the prayer, "Preces nostras", and again after the exorcism, beseeching God to send down the light of truth into the purified soul (cf. Rom. Rit.). Tertullian mentions imposition as being used in conferring baptism in his own day (de Bap., VI, VII, &c.). (2) In penance the minister merely raises his hand at the giving of absolution. The ancient *ordines* (cf. Martene, "De antiqua ecclesiæ disciplina", *passim*), record this custom. (3) In extreme unction there is no imposition of hands enjoined by the rubrics, although in the prayer immediately before the anointing the words "per impositionem manuum nostrarum" occur. Possibly the imposition is contained in the unctions as it is in the administration of confirmation. (4) Apart from the sacraments the rite is also employed in almost all the various blessings of persons and things. Abbots and virgins are thus blessed (cf. Roman Pontifical and Ritual). (5) In the reconciliation of public penitents and the reception of schismatics, heretics, and apostates into the Church, hands were formerly, and still are, imposed (cf. Duchesne, "Christian Worship", pp. 328, 435, St. Cyprian, "De Lapsis", 16). (6) Those obsessed by evil spirits are similarly exorcized (cf. Roman Ritual, Titus, x, cl). (7) The rubrics of the missal direct the celebrant to hold his hands extended during most of the prayers. At the pre-consecration prayer, "Hanc igitur oblationem", he also holds his hands over the *oblata*. This action seems borrowed from the old Levitical practice, already noticed, of laying hands on the victims to be sacrificed, but curiously it has not been proved to be very old. Le Brun (Explication de la Messe, iv, 6) says he did not find the rubric in any missal older than the fifteenth century. Pius V made it *de præcepto* (cf. Gühr, "La Messe", II, 345). The significance of the act is expressive, symbolizing as it does the laying of sin upon the elements of bread and wine which, being changed into the Body and Blood of Christ, become thus our emissary or scapegoat, and finally the "victim of our peace" with God. Nothing can better show the relationship that has always existed between prayer and the ceremony that is being considered, than this expressive sentence from St. Augustine, "Quid aliud est manuum impositio, quam oratio super hominem?" (De Bap., III, xvi, 21).

Antiq.*, s. v.; LESÈTRE in *Fig., Dict. de la Bible*, s. v. *Imposition des mains*; THALHOFER in *Kirchenlex.*, s. v. *Handauflegung*.

PATRICK MORRISROE.

Impostors.—Under this heading we may notice a certain number of objectionable characters who, while not of sufficient importance to claim separate treatment, have at various epochs so far achieved notoriety or caused disturbance in the Church by their mendacity or their moral turpitude, that they cannot be entirely passed over in such a work as the present. That there would be hypocrites who would take advantage of a profession of piety to mask their own evil designs

had been clearly foretold by Christ in the Gospels. "Beware of false prophets," He had said, "who come to you in the clothing of sheep, but inwardly they are ravaging wolves" (Matt., vii, 15), and again "there will rise up false Christs and false prophets and they shall shew signs and wonders, to seduce (if it were possible) even the elect" (Mark, xiii, 22). The same note is heard in the other books of the New Testament; for example: "Many false prophets are gone out into the world" (I John, iv, 1); "But there were also false prophets among the people, even as there shall be among you lying teachers" (II Pet., ii, 1), and the early fulfilment of these predictions is attested by the language of the "Didache" (cc. xi and xvi), and by Justin Martyr (about A. D. 150) who observes: "Our Lord said that many false prophets and false Christs would appear in His name and would deceive many; and so it has come about. For many have taught goddess, blasphemous and unholy doctrines forging them in His name" (Dial., c. lxxxii). Putting aside, as lying beyond our province, the succession of pseudo-Messiahs among the Jews, men like John of Gischala and Simon Bar-Giora, who played so terrible a part in the story of the siege of Jerusalem, we may recognize in the Simon Magus of whom we read in Acts viii, 5-24, the first notorious impostor of Christian church history. He offered St. Peter money that he might have power to impart to others the gifts of the Holy Ghost, and the Acts do not tell us very much more about him than that he had previously practised sorcery and bewitched the people of Samaria. But Justin Martyr and other early writers inform us that he afterwards went to Rome, worked miracles there by the power of demons, and received Divine honours both in Rome and in his own country. Though much extravagant legend afterwards gathered round the name of this Simon, and in particular the story of a supposed contest in Rome between him and St. Peter, when Simon attempting to fly was brought to earth by the Apostle's word, breaking his leg in his fall, it seems nevertheless probable that there must be some foundation in fact for the account given by Justin and accepted by Eusebius. The historical Simon Magus no doubt founded some sort of religion as a counterfeit of Christianity in which he claimed to play a part analogous to that of Christ.

With the heresies of the second and third centuries, as with those of later ages, a large number of impostors were unquestionably associated. The Gnostic Marcus is declared to have combined the most extravagant teaching of formulæ, by which the initiated would after death leave their bodies in this world, their souls with the Demiurge, and "ascend in their spirits at the pleroma", with the lowest kind of juggling tricks, pretending, for example, to show the contents of a glass chalice miraculously changed in colour after consecration (Irenæus, "Contra Hæreses", I, xiii-xxi). Similarly it is at least very doubtful whether the frenzied prophesyings of the two women, Priscilla and Maximilla, who left their husbands to scour the country of Phrygia with the heretic Montanus, are not to be regarded as conscious impostures. Their orthodox opponents strenuously maintained that all the leaders of the sect were possessed by the devil and ought to be compelled to submit to exorcism. Neither were such extravagances confined to the East, although they most abounded there. St. Gregory of Tours tells us of a half crazy fanatic at the end of the sixth century who declared himself to be Christ and who travelled in the neighbourhood of Arles in company with a woman whom he called Mary. He was declared to work miracles of healing and crowds of people believed in him and paid him Divine honour. In the end he moved about with a following of more than three thousand persons until he was killed in offering violence to an envoy of Bishop Aurelius. The woman named Mary under torture made a dis-

closure of all his frauds, but many of the populace still believed in them, and a number of other adventurers accompanied by hysterical prophetesses seem to have flourished in Gaul at the same epoch (Greg. Turon., "Hist.", X, 25). Still more famous were the impostors Adelbert and Clement, who opposed the authority of St. Boniface in Germany about the year 744. Adelbert, who was a Gaul, claimed to have been honoured with supernatural favours from his birth. He drew the people away from the churches, gave them pieces of his nails and hair as relics, and told them that it was unnecessary for them to confess their sins to him because he already read their hearts. Clement, a Scotsman, rejected the canons of the Church about marriage and other disciplinary questions and maintained that Jesus Christ, in his descent into Hell, had set free all the souls confined there, even the lost and the unbaptized. The question of these heretical bishops was referred to Rome and discussed by Pope Zachary in a council held there in 745, at which there was read aloud a miraculous letter from Jesus Christ which Adelbert pretended had fallen from heaven and had been picked up by the Archangel Michael. In the end the council pronounced sentence of deposition and excommunication against the two accused (cf. Hefele, "Conciliengeschichte", §§363-367; Hauck, "Kirchengeschichte Deutschlands", I, 554 seq.).

Throughout the Middle Ages we meet with many examples of such half crazy fanatics, and our imperfect information does not usually allow us to pronounce in what measure insanity or conscious fraud was responsible for their pretensions. Such cases are wont more particularly to be multiplied at times of national calamity or religious excitement. The epoch of the year 1000, owing to some vague expectation (an expectation, however, which has been much exaggerated), of the coming of the day of judgment (cf. Apoc. xx, 7) marked such a crisis, and Raoul Glaber (Migne, P. L., CXLII, 643-644) tells us in particular of two ecclesiastical agitators, one named Leotardus, at Châlons, and the other Wilgardus, at Ravenna, who at that time caused great disturbance. Leotardus pretended to have had extraordinary revelations and preached some sort of socialistic doctrine preventing the people from paying tithes. When his followers eventually deserted him he drowned himself in a well. Wilgardus appears to have been a literary fanatic who believed that he had been commanded by Virgil, Horace, and Juvenal in a vision to correct the dogmatic teaching of the Church. He had many followers and formed for a while a sort of schism until he was condemned by papal authority. Of all the deluded persons, however, whose sanity must always remain in doubt, the Anabaptist John of Leyden (John Bokelzoon), who became tyrant of Münster at a much later period (1533), is the most remarkable. He believed himself endowed with supernatural powers and gifts, but preferred to act as the public executioner of his own sentences, hacking his victims to pieces with his own hands. The period of the great Schism of the West was also an epoch when many fanatical or designing persons reaped a rich harvest out of the credulity of the populace. A Greek, known as Paulus Tigrinus, pretending to be Patriarch of Constantinople, after a successful career of fraud in Cyprus and elsewhere, came to Rome, where he was detected and imprisoned by Urban VI. At the election of Boniface IX he was released and took refuge with the Duke of Savoy, whom he imposed upon with the same pretence of being the true Patriarch of Constantinople. By this prince he was sent with a dozen horses to Avignon and received as patriarch by the antipope, Clement VII. Thence he eventually made his escape, carrying with him many rich presents which he had received from the deluded Clement. Another famous impostor of this period was a Franciscan friar, one James of Jülich, who performed all the functions of a bishop

without ever having received episcopal consecration. He was at first admitted as a bishop auxiliary by Florentius, Bishop of Utrecht. Great scandal and disturbance were caused when the truth was discovered, on account of the large numbers of persons whom he had (of course invalidly) ordained priests. He was solemnly degraded, in 1392, by a commission of seven bishops and on being handed over to the secular arm was sentenced to be boiled alive, but this sentence was mitigated in execution. Nothing, however, could more clearly illustrate the extent to which a period of civil war encourages visionaries and religious impostors than the history of France's sainted heroine, Joan of Arc. In fact the principal obstacle to the recognition of her own inspiration has been found in the circumstance that several other visionaries, of whom Catherine of La Rochelle was the most noted, claimed similar Divine missions at about the same period. The facts have been exaggerated for their own purposes by such writers as Vallet de Viriville (Charles VII, II, 129) and Anatole France (Jeanne d'Arc, II, 96); but there certainly were a number of such impostors, both male and female; and in particular five years after the Maid was burnt at the stake another woman impersonated her, was received at Orléans as the true Joan of Arc, and found influential supporters in that character for more than three years.

Other cases of imposture in the fifteenth century were undoubtedly fostered by the Wycliffite and Hussite heresies. If Sir John Oldcastle, the Wycliffite martyr, really believed, as is asserted on good contemporary authority, that he would rise again three days after his death, he was clearly the victim of delusions, but the details associated with the veneration of the ashes of Richard Wyche, burned in 1440 (Gairdner, "Lollardy", I, 171), imply some admixture of deliberate fraud. In Germany the social revolt so largely encouraged by Hussite doctrines was turned to account by more than one adventurer. Johann Böhm, who in 1476 gathered round him a crowd of peasants, numbering sometimes as many as 30,000, at Niklashausen in Franconia, seems to have been the tool of Hussites more astute than himself. He professed to have had revelations from the Blessed Virgin, and declared war upon all recognition of priestly authority, upon the payment of tithes, and in fact upon all property. He was eventually captured by the Bishop of Würzburg and burnt (Janssen, "Gesch. d. deutschen Volkes", II, 401). Somewhat similar in its partially social aims was the rebellion on English soil of Jack Cade, who professed to be a descendant of the Earls of Mortimer. How far these pretensions and a certain mountebank element in his character gained him his influence over his followers it is difficult to decide. After London had for a day or two been in the hands of the rebels, the revolt was put down, and Cade eventually slain (1450). Two other impostures of somewhat later date—those of Lambert Simnel (1487), who pretended to be the son of the murdered Duke of Clarence, and Perkin Warbeck (1497), who announced himself as Richard Duke of York, the younger of the two princes believed to have been smothered in the Tower—are famous in English history, but neither of them had any religious character. For the same reason we need not touch here upon sundry other noted impersonations of characters of royal dignity, e. g. the Alexis Comnenus who appeared in the twelfth century as the rival of Isaac Comnenus II; the Baldwin who appeared in Flanders in 1225 after the death of the true Baldwin in the East; the adventurer who impersonated Frederic II and who when seized and tortured by the Emperor Rudolph in 1284 confessed the fraud, not to speak of several others. Two similar pretenders to royalty, however, are of more consequence, and the impersonation, if impersonation it was, is buried in deeper mystery. When King Sebastian of Portugal

in 1578 fought his last desperate battle against the Moors upon African soil, there was some conflict of evidence regarding the manner of his death, and though what purported to be his dead body was brought back and interred in Portugal, rumours persistently circulated that he had escaped and was still alive. Influenced by the fact that Philip II of Spain now claimed and occupied the throne of the sister kingdom, a whole series of pretenders appeared, each averring that he was in truth the Sebastian whom men believed to have perished. The first three of these claimants were vulgar rogues, but the fourth played his part with extraordinary firmness and consummate ability. He obtained recognition from a number of people who had known Sebastian well, and though the Spanish Viceroy of Naples seized him and sent him to the galleys, he seems to have been treated by the Spanish authorities with a curious degree of consideration. Even now it cannot be affirmed with absolute certainty that his story was a false one, though nearly all historians pronounce against him.

Still more doubtful is the case of "the false Demetrius". The true Demetrius, the son of Tsar Ivan, the Terrible, was murdered in 1592. Muscovy after Ivan's death fell into terrible anarchy, and not long afterwards there appeared in Poland a young man who declared that he was Demetrius who had escaped the massacre, and that he now meant to press his claim to the throne of the Tsars. Sigismund, King of Poland, lent him his support. He made himself master of Moscow and was generally received with enthusiasm, although he made no secret of the fact that during his residence in Poland he had adopted the Roman Faith. Probably the merits of the historical controversy as to his identity have never been quite fairly judged, because all have agreed in describing him as a tool of the Jesuits, and have, consequently, taken it for granted that the whole claim was a political coup devised by them to draw Russia over to the Roman obedience. It has, however, been clearly shown how doubtful is the assumption that Demetrius was really an impostor. (See Pierling, "Rome et Démétrius", Paris, 1878; and "La Russie et le Saint-Siège" of the same author.) Of the other royal pretenders, and notably of the six various adventurers who came forward in the character of the Dauphin Louis, the son of Louis XVI, there is no need to say anything. Neither need we linger over such fantastic personages as Paracelsus (Philip Bombast von Hohenheim, 1493-1541), who, despite his parade of cabalistic formulæ and his pretence of Divine inspiration, was really for his age a scientific genius, or Nostradamus (1503-1566), the Parisian astrologer and prophet, who also practised as a physician, or Cagliostro (Giuseppe Balsamo, 1743-1795), who died in the dungeons of the Castle of Sant' Angelo after an almost unprecedented career of fraud, in which a sort of freemasonry, called "Egyptian Masonry", invented by him in England, played a notable part. Such English astrologers on the other hand as John Dee (1527-1608), whose life has recently been written by C. F. Smith (1909), William Lilly (1602-1681), and John Gadbury (1627-1704), seem to have been sincere believers in their own strange science, and that curious character, Valentine Greatrakes (1629-1683), was not a mere charlatan but undoubtedly possessed some natural gift of healing. More to our purpose are a number of feigned or deluded ecstasies who often traded upon the popular credulity in countries like Spain that were ready to welcome the miraculous. Amongst the most famous of these was Magdalena de la Cruz (1487-1560), a Franciscan nun of Cordova, who for many years was honoured as a saint. She was believed to have the stigmata and to take no other food than the Holy Eucharist. The Blessed Sacrament was said to fly to her tongue from the hand of the priest who was giving Holy Communion, and it seemed at such moments that

she was raised from the ground. The same miraculous levitation took place during her ecstasies at which time also she was radiant with supernatural light. So universal was the popular veneration, that ladies of the highest rank, when about to be confined, sent to her the cradles or garments prepared for the expected child, that she might bless them. This was done by the Empress Isabel, in 1527, before the birth of Philip II. On the other hand St. Ignatius Loyola had always regarded her with suspicion. Falling dangerously ill in 1543, Magdalena confessed to a long career of hypocrisy, ascribing most of the marvels to the action of demons by which she was possessed, but maintaining their reality. She was sentenced by the Inquisition, in an *auto-da-fé* at Cordova, in 1546, to perpetual imprisonment in a convent of her order, and there she is believed to have ended her days most piously amid marks of the sincerest repentance (see Görres, "Mystik", V, 168-174; Lea, "Chapters from Relig. Hist. of Spain", 330-335). A large number of similar cases have been discussed in considerable detail by Lea both in his "Chapters" just cited, and also in the fourth volume of his "History of the Inquisition of Spain", but Lea, though indefatigable as a compiler, is not to be relied on in the conclusions and inferences he draws.

One Italian impostor at this period, who achieved a European reputation, was Joseph Francis Borro or Borri (1627-1695). In consequence of some crime committed in his dissolute youth, he had taken sanctuary in a church at Rome. There he pretended to be converted, and to have received from God a mission as a reformer. He had revelations about the Trinity, and declared that God had appointed him to be *Generalissimo* of an army, which in the name of the pope was to exterminate all heretics. He also maintained that the Blessed Virgin was divinely and miraculously conceived, that she was, consequently, of the same nature as her Son and present with Him in the Blessed Eucharist. Borro was arrested by the Inquisition and sentenced in 1661, but he managed to escape and travelled in many parts of Europe. He seems to have lent himself entirely to a career of vulgar fraud, and amongst his other victims he obtained considerable sums of money from Queen Christina of Sweden (this was before her reception into the Catholic Church), upon the pretext of making researches to discover the philosopher's stone. Eventually he gravitated back to Rome, was there arrested, and died in prison in 1695 (see Cantù, "Eretici d'Italia", III, 330). It is also hardly to be doubted that in consequence of the witch-finding mania which prevailed in both the Protestant and Catholic countries of Europe, during the last half of the sixteenth and the greater part of the seventeenth century, as well as the exaggerated belief in demoniacal possession current during the same period, the minds of many weak, vicious, or designing persons were fascinated by the supposed possibilities of intercourse with the devil in a more or less visible shape. How much credit is to be attached to the confessions undoubtedly made by many of those accused of sorcery, it seems impossible to decide. Neither is it easy to arrive at the real facts in such criminal indictments as that of the priest Louis Gauffridi, burnt for his satanical practices and his immoral relations with the "convulsionnaires" in the Ursuline convent of the Sainte-Baume, near Aachen, in 1611, that of the pretended ecstasica, Madeleine Bavent, who upon similar charges was put to death with her confessor at Louviers, in 1647, or that of Urbain Grandier, the necromancer priest, supposed to have cast a spell over the possessed nuns of Loudun in the time of Cardinal Richelieu. These and similar stories, which have been exploited again and again in such prurient and anti-religious works as Michelet's "La Sorcière", from an historical point of view still remain shrouded in an almost impenetrable obscurity.

On the other hand few will now venture to identify themselves with that unquestioning acceptance of all kinds of satanic and demoniacal phenomena which is to be found in the fourth and fifth volumes of Görres's "Mystik". The dangers of excessive credulity of this kind have been too lamentably brought home to our own generation by the outrageous impostures of "Léo Taxil" to be readily forgotten. At present the tendency of historians is to detect deliberate fraud, not so much perhaps in the sorcerers themselves, as in the pretended intuitions of such "witch-finders" as Matthew Hopkins, who in the years 1645-1646 tortured hundreds of miserable victims in East Anglia, under the pretext of finding witch-marks, a procedure which generally ended in their condemnation and death. It is pitiable that the most devout Nonconformist leaders, men like Baxter and Calamy, regarded Hopkins as the inspired agent of Heaven in this work.

Towards the close of the seventeenth century, the discovery of the supposed Popish Plot occasioned an epidemic of malicious impostures in England. The persecution of Catholics for more than a hundred years previously had let loose a tribe of spies who, passing from side to side, as fear or interest suggested, scrupled at no form of trickery. In a man like the priest-hunter, Richard Topcliffe (1532-1604), who cruelly tortured Father Southwell, the martyr, in his own house, the note of brutality prevailed, but that of treachery and fraud was not absent. With Gilbert Gifford (d. 1590), the government agent who betrayed Mary Queen of Scots to her doom, the case was reversed. Not only he, but Robert Bruce (d. 1602), the Scottish spy and swindler, John Cecil (d. 1626), the agent of Burleigh and afterwards the associate of the "Appellant" priests, and several others were pitiable rogues prepared at all times to sell themselves to the highest bidder. A little later we have another example of the same type in James Wadsworth (1604-1656), the son of a fervent convert of the same name, who had become in his later years a priest and Jesuit. James Wadsworth the younger lived upon the money which he earned by his treacherously acquired knowledge of English Catholics and their secrets. Whatever may be said of James La Cloche, a supposed natural son of Charles II and for a while a Jesuit scholastic, whose story has recently attracted attention (see Barnes, "The Man of the Mask" and the review, by Andrew Lang, in "The Athenæum", 26 Dec., 1908), it seems clear that La Cloche and his double were both swindlers, though not of the treacherous order. However, the comparative respite accorded to Catholics by the accession of Charles II was also accompanied by a great recrudescence of anti-papal feeling. Two unprincipled scoundrels, Israel Tongue (who, though less clearly culpable than his confederate, cannot have acted in good faith) and Titus Oates, a young man whose record was already infamous, concocted a scheme to exploit the anti-papery ferment. Oates, to worm himself into the secrets of the Catholics, pretended conversion and offered himself to the Jesuits. He was sent to Valladolid on trial but was soon expelled. Professing repentance he was allowed another trial at St-Omer, but expelled a second time. Coming to Tongue in London, the two, in August, 1678, evolved the details of a wildly extravagant plot which the pope and the Jesuits were supposed to have brought to the verge of execution. All the preposterous details were greedily swallowed by the English populace, and in the panic which ensued some thirty-five victims, Catholics of position, Jesuits, and others, had their lives sworn away by the grossest perjury. Oates, whom his modern biographer (Secombe, "Twelve Bad Men", 154) describes as "the bloodiest villain since the world began", found a host of abettors and imitators, amongst whom Thomas Dangerfield, an adventurer who also personated the Duke of Mon-

mouth and claimed miraculous gifts of healing, with Stephen Dugdale, William Bedloe, Edward Turberville, and Robert Bolron, were the most conspicuous. Oates soon after became discredited, and in 1685, under James II, he was convicted of perjury and punished by floggings of unexampled severity, but under William and Mary his sentence was reversed, and in spite of fresh malpractices he received a large pension from the Government, which he drew until his death in 1705. With Oates in his later years was associated William Fuller (1670-1717), seemingly the inventor of the "warming-pan story" (concerning the birth of James, the Old Pretender) and concocter of fictitious Jacobite plots. He published letters of Mary of Modena but was convicted and pilloried.

Another swindler who tried to make money out of the fabrication of pretended Jacobite plots was Robert Young. He succeeded for a while, during that age of intrigue and mistrust, in imposing upon the popular credulity, but he was in the end detected. He was afterwards convicted of coining and executed (1700). Robert Ware the forger, the author of "Foxes and Firebrands", who has of late years been so thoroughly exposed by Father Bridgett, traded upon the same prejudices. His more public career began contemporaneously with that of Oates in 1678, and by sheltering himself behind the high reputation of his dead father, Sir James Ware, amongst whose manuscripts he pretended to discover all kinds of compromising papers, he obtained currency for his forgeries, remaining almost undetected until modern times. Many foul aspersions upon the character of individual popes, Jesuits, and other Catholics, and also upon some Puritans, which have found their way into the pages of respectable historians, are due to the fabrications of "this literary skunk", as Fr. Bridgett not unjustifiably calls him (see Bridgett, "Blunders and Forgeries", pp. 209-216). Some other vindictive and unprincipled scoundrels whose impostures for the most part took a literary form may also be mentioned here, though without any hope of exhausting the list. Foremost among them comes the Abbé Zahorowski, a Jesuit expelled from his order in which as a young scholastic he had been guilty of certain mean and discreditable tricks. In revenge for his expulsion he contrived to write and publish the notorious "Monita Secreta", which, as a code of secret instructions issued by authority, pretended to lay bare the shameless and Machiavellian policy followed by the Society of Jesus. That the "Monita Secreta" are a forgery is now universally admitted even by opponents, and since the publication of the memoirs of Father Wielewicki (*Scriptores Rerum Polonicarum*, vols. VII, X, XIV) no doubt remains that Zahorowski was the author (see Duhr, "Jesuitenfabeln" No. 5; Brou, "Les Jésuites de la Légende", I, 281). Hardly less dear to the no-popey champion than the "Monita Secreta" is the fictitious "Hungarian Confession" or "Fluchformular". It is a profession of faith supposed to have been exacted of converts to the Church in Hungary (c. 1676), by which among other things they were required to declare that the pope ought to receive Divine honours, and that the Blessed Virgin ought to be held higher than Christ himself. The forgery seems to have been traced to the door of George Lani, an Evangelical minister, sent to the galleys for political intrigues against the Government in Hungary, who first published it in a work called "Captivitas Papistica". Whether it was his own fabrication is not, however, certain. He may possibly have adopted, seriously and in good faith, some satirical composition in circulation at the time (see Duhr, "Jesuitenfabeln", No. 7, and S. F. Smith in "The Month", July-August, 1896).

Such satirical compositions have often been taken seriously. An example is the "Letter of the Three Bishops", which, though written by an apostate of infamous character, Peter Paul Vergerius (1554), and

professing to be a letter of advice given by three bishops to the pope to help to strengthen the power of the papacy, is obviously a skit rather than a forgery. But his letter has been quoted as authentic by hundreds of Protestant controversialists from Crashaw downwards (see Lewis "The Letter of the Three Bishops"). Of the same type is an indulgence supposed to have been granted by Tetzel to remit sin unrepented of, a document really derived from a burlesque Latin drama (see "The Month", July, 1905, p. 96); but forgery of the most flagrant type was often used, as, for example, by the ex-Capuchin Father Norbert Parisot, later called Platel, who in the time of Benedict XIV wrote a book of memoirs on the Jesuit missions, professing to incorporate authentic documents, for the most part fabricated by himself. He afterwards left his order, went to Holland and to Portugal, and is suspected to have fabricated the religious effusions which were made the pretext for burning Father Walafrida as a heretic in 1761 (see Brou, "Les Jésuites de la Légende", II, 82).

In the encouragement of the crowd of impostors who flourished at the beginning of the eighteenth century many leading members of the Anglican episcopate, notably Archbishop Tenison, Bishops Compton of London and White Kennett of Peterborough, were conspicuous. A whole tribe of Huguenots and French "proselytes" (i. e. seceders from Catholicism) were welcomed in England with open arms; but the frauds and immoralities of these men, many of which were brought to light in the recriminations of the famous "Bangor Controversy" (a name derived from Hoadly, Bishop of Bangor, the patron of de la Pilonière, an ex-Jesuit who played a principal part in the fray), would suffice to fill a volume. It seems plain that such converts to Protestantism as Malard, Rouire, and Fournier, despite the eminence of their ecclesiastical patrons, were thorough-going scoundrels (see Thurston, "Weeds from the Pope's Garden", in "The Month", Feb., 1897). For example, the last named, obtaining Bishop Hoadly's signature on a scrap of paper, wrote over it a promissory note for £8000 and sued the bishop for the money. When the claim was resisted, Fournier, an ex-priest, impudently declared that the bishop when in his cups had signed the note and given it to him in payment of a debt. But even at this stage, Fournier, strong in his denunciations of popery, found supporters against the bishop. The same was conspicuously the case with the ex-Jesuit, Archibald Bower, who published in 1743 a most scurrilous "History of the Popes" and mendaciously calumniated his former co-religionists. He was ardently taken up by eminent Protestant ecclesiastics and statesmen, but his insincerity in the end became so patent that he was exposed and denounced by the Anglican, John Douglas, afterwards Bishop of Salisbury (see Pollen in "The Month", Sept., 1908). More nearly corresponding to the ordinary type of impostor was the famous Psalmanazar (1679-1763), a Frenchman, educated in childhood by the Dominicans, who coming to England pretended to be a pagan from Formosa, and professed himself a convert to Anglicanism, winning favour by abusing the Jesuits. He was warmly encouraged by Bishop Compton, to whom he presented a Catechism in "Formosan", a purely fictitious language. Afterwards he fell into poverty and disrepute, confessed the fraud, and is said to have been sincerely repentant, being visited by Dr. Johnson in his last days. His accomplice and mentor Innes, an Anglican clergyman, before the cheat was detected was rewarded by being made chaplain-general of the English forces in Portugal.

Passing over a certain number of religious enthusiasts who may in various degrees have been self-convinced and who range from the crazy hallucinations of Joanna Southcott (d. 1814), who believed she was to bring forth the Messiah, or of Richard Brothers,

the Divinely-crowned descendant of King David and ruler of the world (c. 1792), to the miracle-working claims of Anna Lee (d. 1784), the foundress of the American Shakers, we will pause only to say a word of Joseph Smith (1805-1844), the first apostle of Mormonism. It cannot be doubted that this man, who after a dissolute youth professed to have visions of a golden book, consisting of metal plates inscribed with strange characters, which he dug for and found, was a deliberate impostor. Smith pretended to decipher and translate these mystic writings, after which the "Book of Mormon" was taken back to heaven by an angel. The translation was printed, but a flood of revelations was still vouchsafed to the seer. Followers, who adopted the name of "The Latter Day Saints", gathered round him, and after some rather brutal treatment in Missouri provoked by their polygamy and other doctrines, the sect finally settled in Nauvoo, Illinois. In this State Joseph Smith and Hyrum his brother were lynched on 27 June, 1844, amid circumstances of great barbarity. A revulsion of feeling followed, and Brigham Young, Smith's successor, achieved a corresponding success when he transferred the head-quarters of the sect to Utah (see Lynn, "Story of the Mormons"; and Nelson, "Scientific aspects of Mormonism"). An English analogue of Mormonism was afforded by the Agapemonists from 1848 onward, who under their founder, H. S. Prince, combined a fantastic belief in a reincarnation of the Deity in Prince and his successors with the grossest laxity of morals. But leaving out of account the class of criminal impersonations for motives of gain (like that of Arthur Orton in the celebrated Tichborne case, where the pretender, we may note, seriously damaged his case by his ignorance of the life and Catholic practice of the Jesuit College of Stonyhurst in which Roger Tichborne was brought up), anti-Catholic prejudice is still responsible for a large proportion of modern impostures. Famous among these are the supposed revelations of Maria Monk, who professed to have been a nun for some years in the convent of the Hôtel-Dieu, at Montreal, and who published in 1835 a wild and often self-contradictory story of the murders and immoralities supposed to be committed there by priests and nuns. Though this narrative was fully refuted from the very first by unimpeachable Protestant testimony, which proved that during the period of Maria Monk's alleged residence in the convent she was leading the life of a prostitute in the city, and though this disproof has been in a hundred ways confirmed by later evidence, the "Awful Disclosures of Maria Monk" is a book still sold and circulated by various Protestant societies. Maria Monk died (1849) in prison, where she had been confined as a common pickpocket (see "The True History of Maria Monk", Catholic Truth Soc. pamphlet, Lond., 1895).

Not less famous is the case of Dr. Achilli, an ex-Dominican and anti-popey lecturer, whose long career of debauchery, first as a Catholic and then as a pretended convert to Protestantism, Dr. (afterwards Cardinal) Newman exposed in 1852. In the libel action which Achilli was forced to bring, a verdict was given against Newman on certain counts, but almost the whole Protestant press of the country described the trial as a gross miscarriage of justice. Achilli's credit was in consequence completely destroyed. In the case of many of these purveyors of "awful revelations" on both sides of the Atlantic, the previous record of the lecturer is of the most scandalous kind. The men calling themselves "ex-monk Widdows" and "James Ruthven", as well as the "escaped nun", Edith O'Gorman, may also be specially mentioned in this connexion. Hardly more creditable is the history of Pastor Chiniquy (1809-1899), who for many years denounced in highly prurient books and pamphlets, notably that called "The Priest, the Woman and the Confessional", the alleged abuses of the Catholic

Church. It is admitted that he had been twice suspended by two different bishops before he seceded from the Church, and there is no room to doubt that these suspensions were motived by grave moral lapses of which the bishops in question had full and convincing information, though, as often happens in such cases, the girls he had seduced could not be persuaded to face the exposure involved by substantiating the charge publicly upon oath. Certain it is that, while in his early books after leaving the Church he makes no charge against the moral character of the Catholic clergy but rather on the contrary attributes his change of faith to doctrinal considerations, in his later works, notably his "Fifty years in the Church of Rome" (1885), he represents himself as forced to relinquish Catholicism by the appalling scandals he had witnessed (see S. F. Smith's "Pastor Chiniquy", Catholic Truth Soc. pamphlet, Lond., 1908). But by that time he knew what the Protestant public demanded, while all who could effectively confute his statements were dead.

Of a different type is the most notorious imposture of modern times, that of "Léo Taxil" and "Diana Vaughan". Léo Taxil, whose true name was G. Jogand-Pagès, had long been known as one of the most blasphemous and obscene of the anti-clerical writers in France. He had been repeatedly sentenced to fines and imprisonment for the filthy and libellous works he published. For example, on account of his atrocious book "Les Amours de Pie IX" he was sentenced to pay 60,000 francs at the suit of the pope's nephew. He had also founded the "Anti-Clerical", a journal which fanatically attacked all revelation and religion. In 1885 it was announced that Léo Taxil had been converted, and he soon proceeded to publish a series of pretended exposures of the practices of Freemasonry, and particularly of the "Satanisme" or Devil-worship with which he declared it was intimately bound up. Amongst other attractions he introduced a certain "Diana Vaughan", the heroine of "Palladism", who was destined to be the spouse of the demon Asmodeus, but clung to virtue, and was constantly visited by angels and devils. Various other writers, Bataille, Margiotta, Hacks, etc., exploited the same ideas and became in a measure Taxil's confederates. In 1896-1897 the imposture was finally shown up and Taxil cynically admitted that Diana Vaughan was only the name of his typist. [See Portalé, "La Fin d'une mystification", Paris, 1897, and H. Gruber (H. Gerber), "Leo Taxils Palladismus Roman", and other works, 1897-8.] Of Dr. Dowie, who professed to represent a second coming on earth of the prophet Elias, and of his followers the "Zionists", of the Christian Scientists, of the late Madame Blavatsky and A. P. Sinnett, the prophets of Esoteric Buddhism, of Mrs. Annie Besant and the believers in reincarnation, there is no need to say more here than that the existence of such cults proves conclusively that the age of credulity is not yet over.

No book or article of note seems to have been specially devoted to the general subject here treated. A number of references have been given in the course of the article, and it will be sufficient to add here that most of the statements made can be verified in any good biographical dictionary, notably in the *Dictionary of National Biography*, so far as concerns the English impostors mentioned.

HERBERT THURSTON.

Impotence. See DIVORCE; IMPEDIMENTS, CANONICAL; MARRIAGE.

Improperia are the reproaches which in the liturgy of the Office of Good Friday the Saviour is made to utter against the Jews, who, in requital for all the Divine favours and particularly for the delivery from the bondage of Egypt and safe conduct into the Promised Land, inflicted on Him the ignominies of the Passion and a cruel death. It is during the Aloration of the Cross that these touching remonstrances are rendered by the choir. In all they consist of three

distinct parts. Of these the third—composed of the antiphon "Crucem tuam adoramus", the first verse of Psalm lxvi, the versicle "Crux fidelis", and the hymn "Pange lingua gloriosi lauream"—does not belong to the Improperia strictly so called. The first part consists of three reproaches, namely, the "Popule meus" (Mich., vi, 3), "Ego eduxi" (Jer., ii, 21) and "Quid ultra" (Is., v, 2, 4), the Trisagion (*Sanctus Deus, Sanctus fortis, Sanctus immortalis*) being repeated after each in the Latin and Greek languages. The second part contains nine reproaches pervaded by the same strain of remonstrance. Each of these is a verse taken from some portion of the Scriptures and followed in every instance by the "Popule meus" as a sort of refrain. Originally these striking sentences were rendered to a plain-song melody. In the year 1560 Palestrina gave them such an appropriate and beautiful musical setting that Pius IV ordered it to be used in the Sistine Chapel, where one may still hear on Good Friday each year these exquisite compositions, which are unsurpassed in simple beauty, dramatic feeling, and depth of impressiveness. The best edition of Palestrina's "Improperia" is probably that published by Dr. Proske in the fourth volume of "Musica Divina" in 1863. This version is founded on the Altaempes-Othoboni MS. preserved in the Vatican Library (cf. Grove, "Dictionary of Music", s. v.). The precise date of the appearance of the Improperia in the liturgy is not ascertained. Definite references to it are found in documents of the ninth and tenth centuries, and even traces exist in manuscripts of a much earlier date. In his work "De antiqua ecclesiæ disciplinâ", Martène (c. xxiii) gives a number of fragmentary *Ordines*, some of which go back as far as 600. Many others mention the Improperia. In the beginning the order was not quite what it is now, and in many places the officiant himself at the Good Friday Office sang the verses of the *reproaches*, while the people joined in the responses or refrain. Thus the representative character of these moving words seems to have been more effectively observed.

Impropiation. See TITHES.

Incantation. See MAGIC.

Incardination and Excardination (Lat. *cardo*, a pivot, socket, or hinge—hence, *incardinare*, to hang on a hinge, or fix; *excardinare*, to unhinge, or set free).—In the ecclesiastical sense the words are used to denote that a given person is freed from the jurisdiction of one bishop and is transferred to that of another. The term *cardinare* is used by St. Gregory I (590-604), and *incardinare*, in the sense of inscribing a name on the list or *matricula* of a church, is found in the ancient "Liber Diurnus" of the Roman chancery. Excardination is the full and perpetual transference of a given person from the jurisdiction of one bishop to that of another. Incardination is canonical and perpetual enlistment in the new diocese to which a given person has been transferred by letters of excardination. It must be remembered that in canon law a person belongs to a bishop in any one or more of the four following ways: by birth, by benefice, by domicile, or by service. In accordance with this the Church has always maintained the principle that excardination cannot be forced upon a person unwilling to accept it, nor at the same time can it be withheld unless there exist a just reason. The Council of Trent is most clear in its legislation on these matters, as will be seen from the following: "Whereas no one ought to be ordained, who, in the judgment of his own bishop, is not useful or necessary for his churches, the Holy Synod, in the spirit of what was enjoined by the sixth canon of the Council of Chalcedon, ordains that no one

shall for the future be ordained without being attached to that church, or pious place, for the need or utility of which he is promoted, where he shall discharge his duties, and may not wander about without any certain abode. And if he shall quit that place without having consulted the bishop, he shall be interdicted from the exercise of his Sacred orders. Furthermore, no cleric, who is a stranger, shall, without letters commendatory from his own ordinary, be admitted by any bishop to celebrate the Divine mysteries and to administer the sacraments" (Sess. XXIII, "De Ref.", cap. xvi). "The Holy Synod ordains that henceforth no secular cleric . . . shall be promoted to Sacred orders unless it be first legitimately certain that he is in the peaceful possession of an ecclesiastical benefice sufficient for his honest livelihood; and he shall not be able to resign that benefice, without mentioning that he was promoted under the title thereof; nor shall that resignation be received, unless it be certain that he can live suitably from other resources at his disposal; and any resignation made otherwise shall be null" (Sess. XXI, "De Ref.", cap. ii).

From these decrees of the Council of Trent canonists deduce that for excardination to be lawful there must exist a just cause. Moreover, letters of excardination are absolutely valueless unless at the same time there is a corresponding incardination into another diocese, lest the cleric wander about "ovis quasi perditâ et errans" (Decret. Grat., can. i, dist. 72). Many decrees of the Congregation of the Council assert this (S. C. C., 5 Sept., 1818; 14 Dec., 1822; 26 Jan., 1833; 20 July, 1898; Bouix, "De Episcopo", pt. V, c. xxiv, 4). Accordingly, clerics, without the consent of the bishop, may not leave the diocese to which they belong. Moreover, if they have not been appointed to any specific work in the diocese, the bishop may order them to remain in the diocese even though they be unwilling to do so (S. C. C., as above). He must, however, have a just cause for his action, and make provision for the decent support of clerics thus retained (Bargilliat, 1907, no. 607). If a cleric wishes to enter a religious order, the bishop has no power to refuse letters of excardination; they are not granted, however, until the novitiate has been completed. If before that date such a cleric is to receive orders, the bishop will grant him the necessary dismissorial letters (q. v.). A bishop cannot incardinate a cleric verbally. The canonical effect is obtained only when the incardination is granted in writing, absolutely and perpetually. There must not be any limitations either expressed or tacit; so that a cleric is absolutely enlisted in his new diocese and takes the oath similar to that prescribed by Innocent XII in the Constitution "Speculatores" (1694) for acquiring a new domicile (S. C. C., 20 July, 1898). Further, the incardination is not accomplished unless the cleric presents a legally executed document which sets forth that the cleric has been released perpetually from his former diocese, the bishop of which gives testimony (secretly if necessary) as to the subject's birth, life, morals, and studies. When the above conditions have been complied with, clerics after they have been transferred may be ordained, although it is recommended that the bishop should give a further trial before imposing hands upon his new subject. In general the Council of Trent declares, he should ordain no one, except for the need or convenience of his diocese (Sess. XXIII, "De Ref.", c. xvi). A greater amount of supervision is required when it is question of incardinating a cleric or a layman from a foreign country or speaking a foreign tongue. There is a grave obligation on bishops to inquire most strictly as to their life from their former ordinaries (S. C. C., 20 July, 1898). Clerics and laymen who do not wish to use the benefits of excardination are bound by the aforesaid Constitution "Speculatores". In connexion with excardination and incardination, it is generally accepted now that

the vicar capitular (q. v.) has no power to grant perpetual letters of excommunication, nor can he receive a cleric into the diocese in perpetuity, but for a time he may do either in any cases which present themselves during his period of office ("Clement.", I: "De hæret.", Reiffenstuel ad tit. "Ne sede vacante", n. 77).

In course of time special legislation on this subject has become necessary in various countries. The following is a brief résumé of the same. Where clerics are ordained *ad titulum missionis* they are bound thereby not only to the diocese, but to the province also, "so that priests thus ordained may, with the consent of both ordinaries, be transferred from one diocese into another merely by conferring a fresh title without the necessity of taking a fresh oath". In Scotland a three years' trial is recommended before such transfer be made. The Third Plenary Council of Baltimore made obligatory on the bishops of the United States a three years' trial (or even five, but no more) for a strange priest, unless the bishops of both dioceses should agree to the immediate reception of the applicant. This is called by the council *formal* incardination. If, after the lapse of this period, the bishop does not formally reject the applicant, he is legally presumed to have accepted him (nos. 63, 66). This council also reminds all ordinaries of the special rules to be observed in the case of clerics who have taken the "mission oath", and of members of religious orders desirous of joining a diocese (nos. 64, 65; cf. Cong. Prop., 30 Nov., 1885, and 17 April, 1871). To obtain uniformity of action, the council recommends that bishops use an identical printed formula for excommunication and incardination. A decree of the Congregation of the Council (14 Nov., 1903) concerns secular clerics who wish to go to North America or the Philippine Islands. It again calls attention to a circular sent to the American and Italian bishops in 1890, which instructed the latter not to allow their clergy to emigrate to America unless they have an excellent record concerning their previous ministry, are of mature age, are likely to edify by their zeal, piety, and prudence, and also are able to assign a valid and serious reason for leaving home. This circular now applies to all priests who propose to emigrate to America or the Philippines, or even to make prolonged visits to those countries without the consent of the congregation. In case of real and urgent necessity the bishops can only grant permission for absence during six months, and in each case they are bound to inform the congregation of the permission given. The bishops of Brazil have lately adopted the same precautions. In the Third Plenary Council of Baltimore (no. 69) the Fathers approve of the custom of bishops having an abundant supply of priests, lending to more needy bishops some of such priests, but such transfers to be of a temporary nature. The Holy See approved the custom of the American bishops. The councils of Westminster contain a command received from Propaganda and imposed upon all bishops in missionary countries and also prefects and vicars Apostolic, that without any hesitation they require strange clerics and priests to present commendatory letters from their bishops. Those who have them not are in no way to be received. A priest who wishes to leave the diocese to which he is attached must be furnished with a letter of excommunication, i. e. excommunication (commonly called an *exeat*) from his ordinary, and no bishop can aggregate to his diocese any strange priest who is not possessed of such letter (First Synod of Westminster, no. 19, e. vii). Further, no bishop shall ordain a cleric born in the diocese of another bishop without a testimonial or dismissorial letter from that bishop. This rule should be observed also in the case of converts who wish to enter the sacred ministry. For the special rules which govern the sojourn at Rome of ecclesiastics belonging to other dioceses, see the

decree of the S. Cong. of the Council, 22 Dec., 1894, and the instruction of Pius X, 6 Aug., 1905.

Besides the aforesaid decrees of the Councils of Westminster and Baltimore, and of the Congregations of the Council and Propaganda, see BOUVIS, *De Episcopo*; FERRARIUS, *De regimine dioceseos sede vacante* (reprint, Paris, 1676); GASPARRI, *De sacræ ordinatione* (Rome, 1893); BARGILLIAT, *Prælect. juris canonici* (Paris, 1907); TAUNTON, *Law of the Church* (St. Louis, 1906), s. v. *Excommunication*.

DAVID DUNFORD.

Incarnate Word, SISTERS OF CHARITY OF THE.—This congregation, with simple vows, was founded by Rt. Rev. C. M. Dubuis, Bishop of Galveston. In 1866, this prelate travelled as far as France in search of religious, who would devote themselves to works of mercy in his large diocese. He addressed himself to Mother Angélique, Superioress of the Convent of the Incarnate Word, at Lyons, and requested her to train some worthy subjects for the missions of Texas. Mother Angélique complied with his demand, received into her community two or three postulants, and prepared them in a special manner for their future work; thus was formed the nucleus of the new congregation, which was to be known as the Sisters of Charity of the Incarnate Word. The three sisters embarked for Texas soon after, and landed at Galveston in December, 1866. Arrived at their mission, they devoted themselves to the care of the sick. In 1867 and 1868 other bands of zealous sisters, educated and professed in the same convent at Lyons, came to their assistance; their arrival opened for the congregation a new era: the existing works were perfected, and others established. On 31 March, 1869, Bishop C. M. Dubuis sent from Galveston a colony of these sisters to found a convent at San Antonio; in 1870, he erected this new community into an independent centre, on the occasion of vesting the first postulants admitted into the San Antonio novitiate. Previous to 1874, the sisters had been solely occupied in caring for the sick, the aged, and orphans, but following the counsel of Rt. Rev. A. D. Pellicer, first Bishop of San Antonio, they then engaged in educational work. The community of San Antonio, with its dependent houses, was organized into a generalate in August, 1897, with the sanction of Bishop John A. Forest.

At present, the congregation is governed by a superioress general and her council composed of six members. The mother-house, novitiate, and normal department are situated in San Antonio, Texas. The probation as postulant and novice lasts two years. Perpetual profession is preceded by five years of annual vows. The constitutions, based upon the Rule of St. Augustine, were approved by the Holy See in 1905. The congregation, as its name indicates, is especially consecrated to the Incarnate Word. The sisters foster the pious and constant ambition to learn and to teach how to know, love, and serve more and more God made Man; they endeavour to reproduce in their daily conduct His two favourite virtues, charity and obedience. The sisters also cultivate a particular devotion to the Blessed Sacrament and to Mary Immaculate. The congregation has developed considerably during the past forty years. From a small colony of three sisters in 1869, it has grown to a flourishing community of five hundred and forty-two members, and has under its direction five colleges, thirteen academies, twenty-eight schools, four orphanages, nine hospitals, and two homes for the aged. These establishments are distributed throughout the States of Texas, Missouri, and Oklahoma, and the Republic of Mexico.

JAS. P. CANNING.

Incarnate Word and Blessed Sacrament, ORDER OF THE, founded in the early part of the seventeenth century by Jeanne Chézard de Matel. The illustrious foundress was born in 1596, at Roanne, France, and died in 1670 at Lyons. The rules and constitutions of the order were approved in 1633 by Urban VIII, and confirmed in 1644 by Innocent X. The principal object of the order is the education of youth. The first house was founded at Lyons, France, foundations being subsequently established at Avignon, Paris, and various other places in France. At the time of the French Revolution the religious were driven out of their monasteries, and destruction threatened the order, but the Word Incarnate watched over its preservation, and, after the restoration of peace, the order was re-established. Azerables, France, claims the privilege of being the cradle of the resuscitated order. It thence again spread its branches over many parts of France. In 1852, Bishop Odin, first Bishop of Texas, visited France to obtain religious for his far-off mission. A little band, headed by the noble and self-sacrificing Mother St. Claire, left Lyons to transplant to the New World the Order of the Incarnate Word. At Brownsville, Texas, then a mere fort, was founded the first house in America. Many hardships had to be encountered, and many difficulties faced, but the wise and prudent management of the superioress, and the devotion and self-sacrifice of the pioneer band, overcame every obstacle. In 1866 an establishment was founded at Victoria by religious from Brownsville, Texas, Mother St. Claire being again chosen superioress. The same wise administration caused this house to prosper, and in a few years it had sent out subjects to begin foundations at Corpus Christi, Houston, and Hallettsville. These, in turn, made foundations in many places in Mexico. The community of Victoria consists at present of forty-four members. Mother M. Antoinette, who was then a novice of the house of Lyons, and was the first to join the community after its commencement here, is the present superioress. The institute is in a very flourishing condition. A new, excellently-equipped academy has been built at Victoria, where a high standard of education is maintained by an efficient staff.

MOTHER ANTOINETTE.

Incarnation, the mystery and the dogma of the Word made Flesh. In this technical sense the word *incarnation* was adopted, during the twelfth century, from the Norman-French, which in turn had taken the word over from the Latin *incarnatio* (see Oxford Dictionary, s. v.). The Latin Fathers, from the fourth century, make common use of the word; so Saints Jerome, Ambrose, Hilary, etc. The Latin *incarnatio* (*in: caro*, flesh) corresponds to the Greek *σάρκωσις*, or *ἐνσάρκωσις*, which words depend on John (i, 14) *καὶ ὁ Λόγος σὰρξ ἐγένετο*, "And the Word was made flesh". These two terms were in use by the Greek Fathers from the time of St. Irenæus—i. e. according to Harnack, A. D. 181-189 (cf. Iren., "Adv. Hæc." III, 19, n. i.; Migne, VII, 939). The verb *σαρκοῦσθαι*, to be made flesh, occurs in the creed of the Council of Nicæa (cf. Denzinger, "Enchiridion", n. 86). In the language of Holy Writ, flesh means, by synecdoche, human nature or man (cf. Luke, iii, 6; Rom., iii, 20). Suarez deems the choice of the word *incarnation* to have been very apt. Man is called flesh to emphasize the weaker part of his nature. When the Word is said to have been incarnate, to have been made Flesh, the Divine goodness is better expressed whereby God "emptied Himself" and was found in outward bearing (*σχήματι*) like a man" (Phil. ii, 7): He took upon Himself not only the nature of man, a nature capable of suffering and sickness and death, He became like a man in all save only sin (cf. Suarez, "De Incarnatione", Præf. n. 5).

The Fathers now and then use the word *ἐνανθρώπησις*, the act of becoming man, to which correspond the terms *inhumanatio*, used by some Latin Fathers, and "Menschwerdung", current in German. The mystery of the Incarnation is expressed in Scripture by other terms: *ἐπιδήψις*, the act of taking on a nature (Heb., ii, 16): *ἐπιφάνεια*, appearance (II Tim., i, 10); *φανέρωσις ἐν σαρκί*, manifestation in the flesh (I Tim., iii, 16); *σώματος κατάρτισμος*, the fitting of a body, what some Latin Fathers call *incorporatio* (Heb., x, 5); *κένωσις*, the act of emptying one's self (Phil., ii, 7). In this article, we shall treat of the fact, nature and effects of the Incarnation.

I. THE FACT OF THE INCARNATION implies three facts: (1) The Divine Person of Jesus Christ; (2) The Human Nature of Jesus Christ; (3) The Hypostatic Union of the Human with the Divine Nature in the Divine Person of Jesus Christ.

(1) *The Divine Person of Jesus Christ.*—We presuppose the historicity of Jesus Christ,—i. e. that He was a real person of history (cf. JESUS CHRIST); the Messiahship of Jesus; the historical worth and authenticity of the Gospels and Acts; the Divine ambassadorship of Jesus Christ established thereby; the establishment of an infallible and never failing teaching body to have and to keep the deposit of revealed truth entrusted to it by the Divine ambassador, Jesus Christ; the handing down of all this deposit by tradition and of part thereof by Holy Writ; the canon and inspiration of the Sacred Scriptures—all these questions will be found treated in their proper places. Moreover, we assume that the Divine nature and Divine personality are one and inseparable (see TRINITY). The aim of this article is to prove that the historical person, Jesus Christ, is really and truly God,—i. e. has the nature of God, and is a Divine person. The Divinity of Jesus Christ is established by the Old Testament, by the New Testament and by tradition.

A. The Old Testament proofs of the Divinity of Jesus presuppose its testimony to Him as the Christ, the Messiah (see MESSIAS). Assuming then, that Jesus is the Christ, the Messiah promised in the Old Testament, from the terms of the promise it is certain that the One promised is God, is a Divine Person in the strictest sense of the word, the second Person of the Holy Trinity, the Son of the Father, One in nature with the Father and the Holy Spirit. Our argument is cumulative. The texts from the Old Testament have weight by themselves; taken together with their fulfilment in the New Testament, and with the testimony of Jesus and His apostles and His Church, they make up a cumulative argument in favour of the Divinity of Jesus Christ that is overwhelming in its force. The Old Testament proofs we draw from the Psalms, the Sapiential Books and the Prophets.

(a) Testimony of the Psalms.—Ps. ii, 7. "The Lord hath said to me: Thou art my son, this day have I begotten thee." Here Jahweh, i. e., God of Israel, speaks to the promised Messiah. So St. Paul interprets the text (Heb., i, 5) while proving the Divinity of Jesus from the Psalms. The objection is raised that St. Paul is here not interpreting but only accommodating Scripture. He applies the very same words of Ps. ii, 7 to the priesthood (Heb., v, 5) and to the resurrection (Acts, xiii, 33) of Jesus; but only in a figurative sense did the Father beget the Messiah in the priesthood and resurrection of Jesus; hence only in a figurative sense did He beget Jesus as His Son. We answer that St. Paul speaks figuratively and accommodates Scripture in the matter of the priesthood and resurrection but not in the matter of the eternal generation of Jesus. The entire context of this chapter shows there is a question of real sonship and real Divinity of Jesus. In the same verse, St. Paul applies to the Christ the words of Jahweh to David, the type of Christ: "I will be to him a father, and he shall

be to me a son". (II Kings, vii, 14.) In the following verse, Christ is spoken of as the first-born of the Father, and as the object of the adoration of the angels; but only God is adored: "Thy throne, O God, is forever and ever. . . Thy God, O God, hath anointed thee" (Ps. xlv, 7, 8). St. Paul refers these words to Christ as to the Son of God (Heb., i, 9). We follow the Massoretic reading, "Thy God, O God" The Septuagint and New Testament reading, *ὁ θεός, ὁ θεός σου*, "O God, Thy God", is capable of the same interpretation. Hence, the Christ is here called God twice; and his throne, or reign, is said to have been from eternity. Ps. cix, 1: "The Lord said to my Lord (Heb., Jahweh said to my Adonai): Sit thou at my right hand" Christ cites this text to prove that He is Adonai (a Hebrew term used only for Deity), seated at the right hand of Jahweh, who is invariably the great God of Israel (Matt., xxii, 44). In the same psalm, Jahweh says to Christ: "Before the day-star, I begot thee". Hence Christ is the begotten of God; was begotten before the world was, and sits at the right hand of the heavenly Father. Other Messianic psalms might be cited to show the clear testimony of these inspired poems to the Divinity of the promised Messias.

(b) Testimony of the Sapiaential Books.—So clearly do these Sapiaential Books describe uncreated Wisdom as a Divine Person distinct from the First Person, that rationalists have resort to a subterfuge and claim that the doctrine of uncreated Wisdom was taken over by the authors of these books from the Neo-Platonic philosophy of the Alexandrian school. It is to be noted that in the pre-sapiaential books of the Old Testament, the uncreated Logos, or *λόγος*, is the active and creative principle of Jahweh (see Ps. xxxii, 4; xxxii, 6; cxviii, 89; cii, 20; Is., xl, 8; lv, 11). Later the *λόγος* became *σοφία*, the uncreated Word became uncreated Wisdom. To Wisdom were attributed all the works of creation and Divine Providence (see Job, xxviii, 12; Prov., viii and ix; Ecclus., i, 1; xxiv, 5 to 12; Wis., vi, 21; ix, 9). In Wis., ix, 1, 2, we have a remarkable instance of the attribution of God's activity to both the Logos and Wisdom. This identification of the pre-Mosaic Logos with the Sapiaential Wisdom and the Johannine Logos (see Logos) is proof that the rationalistic subterfuge is not effective. The Sapiaential Wisdom and the Johannine Logos are not an Alexandrian development of the Platonic idea, but are a Hebraistic development of the pre-Mosaic uncreated and creating Logos or Word (*דבר*).

Now for the Sapiaential proofs: In Ecclus., xxiv, 7, Wisdom is described as uncreated, the "first born of the Most High before all creatures", "from the beginning and before the World was I made" (ibid., 14). So universal was the identification of Wisdom with the Christ, that even the Arians concurred with the Fathers therein; and strove to prove by the word *ἐκτίσσε*, *made or created*, of verse 14, that incarnate Wisdom was created. The Fathers did not make answer that the word *Wisdom* was not to be understood of the Christ, but explained that the word *ἐκτίσσε* had here to be interpreted in keeping with other passages of Holy Writ and not according to its usual meaning,—that of the Septuagint version of Gen., i, 1. We do not know the original Hebrew or Aramaic word; it may have been קניני. This word occurs in Prov. viii, 22: "The Lord possessed me (Heb., gat me by generation; see Gen., iv, 1) in the beginning of His ways, before He made anything from the beginning, I was set up from eternity." Wisdom speaking of itself in the Book of Ecclesiasticus cannot contradict what Wisdom says of itself in Proverbs and elsewhere. Hence the Fathers were quite right in explaining *ἐκτίσσε* not to mean *made or created* in any strict sense of the terms (see St. Athanasius, "Sermo ii contra Arianos", n. 44; Migne, P.

G., XXVI, 239). The Book of Wisdom, also, speaks clearly of Wisdom as "the worker of all things . . . a certain pure emanation of the glory of the almighty God . . . the brightness of eternal light, and the unspotted mirror of God's majesty, and the image of his goodness." (Wis., vii, 21-26.) St. Paul paraphrases this beautiful passage and refers it to Jesus Christ (Heb., i, 3). It is clear, then, from the text-study of the books themselves, from the interpretation of these books by St. Paul, and especially, from the admitted interpretation of the Fathers and the liturgical uses of the Church, that the personified wisdom of the Sapiaential Books is the uncreated Wisdom, the incarnate Logos of St. John, the Word hypostatically united with human nature, Jesus Christ, the Son of the Eternal Father. The Sapiaential Books prove that Jesus was really and truly God.

(c) Testimony of the Prophetic Books.—The prophets clearly state that the Messias is God. Isaias says: "God Himself will come and will save you" (xxxv, 4); "Make ready the way of Jahweh" (xl, 3); "Lo Adonai Jahweh will come with strength" (xl, 10). That Jahweh here is Jesus Christ is clear from the use of the passage by St. Mark (i, 3). The great prophet of Israel gives the Christ a special and a new Divine name "His name will be called Emmanuel" (Is., vii, 14). This new Divine name St. Matthew refers to as fulfilled in Jesus, and interprets to mean the Divinity of Jesus. "They shall call his name Emmanuel, which, being interpreted, is God with us." (Matt., i, 23.) Also in ix, 6, Isaias calls the Messias God: "A child is born to us . . . his name shall be called Wonderful, Counsellor, God the Strong One, the Father of the world to come, the Prince of Peace." Catholics explain אל נבר with עמנואל; the very same child is called God the Strong One (ix, 6) and Emmanuel (vii, 14); the conception of the child is prophesied in the latter verse, the birth of the very same child is prophesied in the former verse. The name Emmanuel (God with us) explains the name that we translate "God the Strong One." It is uncritical and prejudiced on the part of the rationalists to go outside of Isaias and to seek in Ezechiel (xxxii, 21) the meaning "mightiest among heroes" for a word that everywhere else in Isaias is the name of "God the Strong One" (see Is., x, 21). Theodotion translates literally *θεός ἰσχυρός*; the Septuagint has "messenger". Our interpretation is that commonly received by Catholics and by Protestants of the stamp of Delitzsch ("Messianic Prophecies", p. 145). Isaias also calls the Messias the "sprout of Jahweh" (iv, 2), i. e. that which has sprung from Jahweh as the same in nature with Him. The Messias is "God our King" (Is., lii, 7), "the Saviour sent by our God" (Is., lii, 10, where the word for Saviour is the abstract form of the word for Jesus); "Jahweh the God of Israel" (Is., lii, 12): "He that hath made thee, Jahweh of the hosts His name" (Is., liv, 5)".

The other prophets are as clear as Isaias, though not so detailed, in their foretelling of the Godship of the Messias. To Jeremias, He is "Jahweh our Just One" (xxiii, 6; also xxxiii, 16). Micheas speaks of the twofold coming of the Child, His birth in time at Bethlehem and His procession in eternity from the Father (v, 2). The Messianic value of this text is proved by its interpretation in Matthew (ii, 6). Zacharias makes Jahweh to speak of the Messias as "my Companion"; but a companion is on an equal footing with Jahweh (xiii, 7). Malachias says: "Behold I send my angel, and he shall prepare the way before my face, and presently the Lord, whom you seek, and the angel of the testament, whom you desire, shall come to his temple" (iii, 1). The messenger spoken of here is certainly St. John the Baptist. The words of Malachias are interpreted of the Precursor by Our Lord Himself (Matt., xi, 10). But the Baptist prepared the way before the face of Jesus Christ. Hence

the Christ was the spokesman of the words of Malachias. But the words of Malachias are uttered by Jahweh the great God of Israel. Hence the Christ or Messias and Jahweh are one and the same Divine Person. The argument is rendered even more forcible by the fact that not only is the speaker, Jahweh the God of hosts, here one and the same with the Messias before Whose face the Baptist went: but the prophecy of the Lord's coming to the Temple applies to the Messias a name that is ever reserved for Jahweh alone. That name is מָשִׁיחַ. It occurs seven times (Ex., xxiii, 17; xxxiv, 23; Is., i, 24; iii, 1; x, 16 and 33; xix, 4) outside of Malachias, and is clear in its reference to the God of Israel. The last of the prophets of Israel gives clear testimony that the Messias is the very God of Israel Himself. This argument from the prophets in favour of the Divinity of the Messias is most convincing if received in the light of Christian revelation, in which light we present it. The cumulative force of the argument is well worked out in "Christ in Type and Prophecy", by Maas.

B. New Testament Proofs.—We shall give the witness of the Four Evangelists and of St. Paul. The argument from the New Testament has a cumulative weight that is overwhelming in its effectiveness, once the inspiration of the New Testament and the Divine ambassadorship of Jesus are proved (see *INSPIRATION; CHRISTIANITY*). The process of the Catholic apologetic and dogmatic upbuilding is logical and never-failing. The Catholic theologian first establishes the teaching body to which Christ gave His deposit of revealed truth, to have and to keep and to hand down that deposit without error or failure. This teaching body gives us the Bible; and gives us the dogma of the Divinity of Christ in the unwritten and the written Word of God, i. e. in tradition and Scripture. When contrasted with the Protestant position upon "the Bible, the whole Bible and nothing but the Bible"—no, not even anything to tell us what is the Bible and what is not the Bible—the Catholic position upon the Christ-established, never-failing, never-erring teaching body is impregnable. The weakness of the Protestant position is evidenced in the matter of this very question of the Divinity of Jesus Christ. The Bible is the one and only rule of faith of Unitarians, who deny the Divinity of Jesus; of Modernistic Protestants, who make out His Divinity to be an evolution of His inner consciousness; of all other Protestants, be their thoughts of Christ whatsoever they may. The strength of the Catholic position will be clear to any one who has followed the trend of Modernism outside the Church and the suppression thereof within the pale.

(a) Witness of the Evangelists.—We here assume the Gospels to be authentic, historical documents given to us by the Church as the inspired Word of God. We waive the question of the dependence of Matthew upon the Logia, the origin of Mark from "Q", the literary or other dependence of Luke upon Mark; all these questions are treated in their proper places and do not belong here in the process of Catholic apologetic and dogmatic theology. We here argue from the Four Gospels as from the inspired Word of God. The witness of the Gospels to the Divinity of Christ is varied in kind.

(α) Jesus is the Divine Messias.—The Evangelists, as we have seen, refer to the prophecies of the Divinity of the Messias as fulfilled in Jesus (see Matt., i, 23; ii, 6; Mark, i, 2; Luke, vii, 27).

(β) Jesus is the Son of God.—According to the testimony of the Evangelists, Jesus Himself bore witness to His Divine Sonship. As Divine Ambassador He can not have borne false witness.

Firstly, He asked the disciples, at Cæsarea Philippi, "Whom do men say that the Son of man is?" (Matt., xvi, 13). This name Son of man was commonly used by the Saviour in regard to Himself; it bore testimony

to His human nature and oneness with us. The disciples made answer that others said He was one of the prophets. Christ pressed them. "But whom do you say that I am?" (*ibid.*, 15). Peter, as spokesman, replied: "Thou art Christ, the Son of the living God" (*ibid.*, 16). Jesus was satisfied with this answer; it set Him above all the prophets who were the *adopted* sons of God; it made Him the *natural* Son of God. The adopted Divine sonship of all the prophets Peter had no need of special revelation to know. This natural Divine Sonship was made known to the leader of the Apostles only by a special revelation. "Flesh and blood hath not revealed it to thee, but my Father who is in heaven" (*ibid.*, 17). Jesus clearly assumes this important title in the specially revealed and altogether new sense. He admits that He is the Son of God in the real sense of the word.

Secondly, we find that He allowed others to give Him this title and to show by the act of real adoration that they meant real Sonship. The possessed fell down and *adored* Him, and the unclean spirits cried out: "Thou art the Son of God" (Mark, iii, 12). After the stilling of the storm at sea, His disciples *adored* Him and said: "Indeed thou art the Son of God" (Matt., xiv, 33). Nor did He suggest that they erred in that they gave Him the homage due to God alone. The centurion on Calvary (Matt., xxvii, 54; Mark, xv, 39), the Evangelist St. Mark (i, 1), the hypothetical testimony of Satan (Matt., iv, 3) and of the enemies of Christ (Matt., xxvii, 40) all go to show that Jesus was called and esteemed the Son of God. Jesus Himself clearly assumed the title. He constantly spoke of God as "My Father" (Matt., vii, 21; x, 32; xi, 27; xv, 13; xvi, 17, etc.).

Thirdly, the witness of Jesus to His Divine Sonship is clear enough in the Synoptics, as we see from the foregoing argument and shall see by the exegesis of other texts; but is perhaps even more evident in John. Jesus indirectly but clearly assumes the title when He says: "Do you say of him whom the Father hath sanctified and sent into the world: Thou blasphemest, because I said, I am the Son of God? . . . the Father is in me and I in the Father." (John, x, 36, 38.) An even clearer witness is given in the narrative of the cure of the blind man in Jerusalem. Jesus said: "Dost thou believe in the Son of God?" He answered, and said: "Who is he, Lord, that I may believe in him? And Jesus said to him: Thou hast both seen him; and it is he that talketh with thee. And he said: I believe, Lord. And falling down, he adored him." (John, ix, 35-38.) Here as elsewhere, the act of adoration is allowed, and the implicit assent is in this wise given to the assertion of the Divine Sonship of Jesus.

Fourthly, likewise to His enemies, Jesus made undoubted profession of His Divine Sonship in the real and not the figurative sense of the word; and the Jews understood Him to say that He was really God. His way of speaking had been somewhat esoteric. He spoke often in parables. He willed then, as He willed now, that faith be "the evidenee of things that appear not" (Heb., xi, 1). The Jews tried to catch Him, to make Him speak openly. They met Him in the portico of Solomon and said: "How long dost thou hold our souls in suspense? If thou be the Christ, tell us plainly" (John, x, 24). The answer of Jesus is typical. He puts them off for a while; and in the end tells them the tremendous truth: "I and the Father are one" (John, x, 30). They take up stones to kill Him. He asks why. He makes them admit that they have understood Him aright. They answer: "For a good work we stone thee not, but for blasphemy; and because that thou, being a man, makest thyself God" (*ibid.*, 33). These same enemies had clear statement of the claim of Jesus on the last night that He spent on earth. Twice He appeared before the Sanhedrim, the highest authority

of the enslaved Jewish nation. The first time, the high priest, Caiphas, stood up and demanded: "I adjure thee by the living God, that thou tell us if thou be the Christ the Son of God" (Matt., xxvi, 63). Jesus had before held His peace. Now His mission calls for a reply. "Thou hast said it" (ibid., 64). The answer was likely—in Semitic fashion—a repetition of the question with a tone of affirmation rather than of interrogation. St. Matthew reports that answer in a way that might leave some doubt in our minds, had we not St. Mark's report of the very same answer. According to St. Mark, Jesus replies simply and clearly: "I am" (Mark, xiv, 62). The context of St. Matthew clears up the difficulty as to the meaning of the reply of Jesus. The Jews understood Him to make Himself the equal of God. They probably laughed and jeered at His claim. He went on: "Nevertheless I say to you, hereafter you shall see the Son of man sitting on the right hand of the power of God, and coming in the clouds of heaven" (Matt., xxvi, 64). Caiphas rent his garments and accused Jesus of blasphemy. All joined in condemning Him to death for the blasphemy whereof they accused Him. They clearly understood Him to make claim to be the real Son of God; and He allowed them so to understand Him, and to put Him to death for this understanding and rejection of His claim. It were to blind one's self to evident truth to deny the force of this testimony in favour of the thesis that Jesus made claim to be the real Son of God. The second appearance of Jesus before the Sanhedrim was like to the first; a second time He was asked to say clearly: "Art thou then the Son of God?" He made reply: "You say that I am." They understood Him to lay claim to Divinity. "What need we any further testimony? for we ourselves have heard it from his own mouth" (Luke, xxii, 70, 71). This twofold witness is especially important, in that it is made before the great Sanhedrim, and in that it is the cause of the sentence of death. Before Pilate, the Jews put forward a mere pretext at first. "We have found this man perverting our nation, and forbidding to give tribute to Cæsar, and saying that he is Christ the king" (Luke, xxiii, 2). What was the result? Pilate found no cause of death in Him! The Jews seek another pretext. "He stirreth up the people from Galilee to this place" (ibid., 5). This pretext fails. Pilate refers the case of sedition to Herod. Herod finds the charge of sedition not worth his serious consideration. Over and again the Jews come to the front with a new subterfuge. Over and again Pilate finds no cause in Him. At last the Jews give their real cause against Jesus. In that they said He made Himself a king and stirred up sedition and refused tribute to Cæsar, they strove to make it out that he violated Roman law. Their real cause of complaint was not that Jesus violated Roman law; but that they branded Him as a violator of the Jewish law. How? "We have a law; and according to that law he ought to die, because he made himself the Son of God" (John, xix, 7). The charge was most serious; it caused even the Roman governor "to fear the more." What law is here referred to? There can be no doubt. It is the dread law of Leviticus: "He that blasphemeth the name of the Lord, dying let him die: all the multitude shall stone him, whether he be a native or a stranger. He that blasphemeth the name of the Lord, dying let him die" (Lev., xxiv, 17). By virtue of this law, the Jews were often on the very point of stoning Jesus; by virtue of this law, they often took Him to task for blasphemy whenever He made Himself the Son of God; by virtue of this same law, they now call for His death. It is simply out of the question that these Jews had any intention of accusing Jesus of the assumption of that adopted sonship of God which every Jew had by blood and every prophet had had by special free gift of God's grace.

Fifthly, we may only give a summary of the other uses of the title Son of God in regard to Jesus. The angel Gabriel proclaims to Mary that her son will "be called the Son of the most High" (Luke, i, 32); "the Son of God" (Luke, i, 35); St. John speaks of Him as "the only begotten of the Father" (John, i, 14); at the Baptism of Jesus and at His Transfiguration, a voice from heaven cries: "This is my beloved Son" (Matt., iii, 17; Mark, i, 11; Luke, iii, 22; Matt., xvii, 3); St. John gives it as his very set purpose, in his Gospel, "that you may believe that Jesus is the Christ, the Son of God" (John, xx, 31).

Sixthly, in the testimony of John, Jesus identifies Himself absolutely with the Divine Father. According to John, Jesus says: "he that seeth me seeth the Father" (ibid., xiv, 9). St. Athanasius links this clear testimony to the other witness of John "I and the Father are one" (ibid., x, 30); and thereby establishes the consubstantiality of the Father and the Son. St. John Chrysostom interprets the text in the same sense. A last proof from John is in the words that bring his first Epistle to a close: "We know that the Son of God is come: and He hath given us understanding that we may know the true God, and may be in his true Son. This is the true God and life eternal" (I John, v, 20). No one denies that "the Son of God" who is come is Jesus Christ. This Son of God is the "true Son" of "the true God"; in fact, this true son of the True God, i. e. Jesus, is the true God and is life eternal. Such is the exegesis of this text given by all the Fathers that have interpreted it (see Corluy, "Spicilegium Dogmatico-Biblicum", ed. Gandavi, 1884, II, 48). All the Fathers that have either interpreted or cited this text, refer *ὁστος* to Jesus, and interpret "Jesus is the true God and life eternal." The objection is raised that the phrase "true God" (*ὁ ἀληθινὸς θεός*) always refers, in John, to the Father. Yes, the phrase is consecrated to the Father, and is here used precisely on that account, to show that the Father who is, in this very verse, first called "the true God", is one with the Son Who is second called "the true God" in the very same verse. This interpretation is carried out by the grammatical analysis of the phrase; the pronoun *ἡστος* (*ὁστος*) refers of necessity to the noun near by, i. e. His true Son Jesus Christ. Moreover, the Father is never called "life eternal" by John; whereas the term is often given by him to the Son (John, xi, 25; xiv, 6: I John, i, 2; v, 11–12). These citations prove beyond a doubt that the Evangelists bear witness to the real and natural Divine Sonship of Jesus Christ.

Outside the Catholic Church, it is to-day the mode to try to explain away all these uses of the phrase Son of God, as if, forsooth, they meant not the Divine Sonship of Jesus, but presumably His sonship by adoption—a sonship due either to His belonging to the Jewish race or derived from His Messiahship. Against both explanations stand our arguments; against the latter explanation stands the fact that nowhere in the Old Testament is the term Son of God given as a name peculiar to the Messias. The advanced Protestants of this twentieth century are not satisfied with this latter and wornout attempt to explain away the assumed title Son of God. To them it means only that Jesus was a Jew (a fact that is now denied by Paul Haupt). We now have to face the strange anomaly of ministers of Christianity who deny that Jesus was Christ. Formerly it was considered bold in the Unitarian to call himself a Christian and to deny the Divinity of Jesus; now "ministers of the Gospel" are found to deny that Jesus is the Christ, the Messias (see articles in the Hibbert Journal for 1909, by Reverend Mr. Roberts, also the articles collected under the title "Jesus or Christ?" Boston, 1909). Within the pale of the Church, too, there were not wanting some who followed the trend of Modernism to such an extent as to admit that in

certain passages, the term "Son of God" in its application to Jesus, presumably meant only adopted sonship of God. Against these writers was issued the condemnation of the proposition: "In all the texts of the Gospels, the name Son of God is merely the equivalent of the name Messias, and does not in any wise mean that Christ is the true and natural Son of God" (see decree "Lamentabili", S. Off., 3-4 July, 1907, proposition xxxii). This decree does not affirm even implicitly that every use of the name "Son of God" in the Gospels means true and natural Sonship of God. Catholic theologians generally defend the proposition whenever, in the Gospels, the name "Son of God" is used in the singular number, absolutely and without any additional explanation, as a proper name of Jesus, it invariably means true and natural Divine Sonship of Jesus Christ (see Billot, "De Verbo Incarnato," 1904, p. 529). Corluy, a very careful student of the original texts and of the versions of the Bible, declared that, whenever the title Son of God is given to Jesus in the New Testament, this title has the inspired meaning of natural Divine Sonship; Jesus is by this title said to have the same nature and substance as the Heavenly Father (see "Spicilegium", II, p. 42).

(7) Jesus is God.—St. John affirms in plain words that Jesus is God. The set purpose of the aged disciple was to teach the Divinity of Jesus in the Gospel, Epistles, and Apocalypse that he has left us; he was aroused to action against the first heretics that bruised the Church. "They went out from us, but they were not of us. For if they had been of us, they would not doubt have remained with us" (I John, ii, 19). They did not confess Jesus Christ with that confession which they had obligation to make (I John, iv, 3). John's Gospel gives us the clearest confession of the Divinity of Jesus. We may translate from the original text: "In the beginning was the Word, and the Word was in relation to God and the Word was God" (John i, 1). The words *ὁ θεός* (with the article) mean, in Johannine Greek, the Father. The expression *πρὸς τὸν θεόν* reminds one forcibly of Aristotle's *τὸ πρὸς τι εἶναι*. This Aristotelian way of expressing relation found its like in the Platonic, Neo-Platonic, and Alexandrian philosophy; and it was the influence of this Alexandrian philosophy in Ephesus and elsewhere that John set himself to combat. It was, then, quite natural that John adopted some of the phraseology of his enemies, and by the expression *ὁ λόγος ἦν πρὸς τὸν θεόν* gave forth the mystery of the relation of Father with Son: "the Word stood in relation to the Father", i. e., even in the beginning. At any rate the clause *θεός ἦν ὁ λόγος* means "the Word was God". This meaning is driven home, in the irresistible logic of St. John, by the following verse: "All things were made by him." The Word, then, is the Creator of all things and is true God. Who is the Word? It was made flesh and dwelt with us in the flesh (verse 14); and of this Word John the Baptist bore witness (verse 15). But certainly it was Jesus, according to John the Evangelist, who dwelt with us in the flesh and to Whom the Baptist bore witness. Of Jesus the Baptist says: "This is he, of whom I said: After me there cometh a man, who is preferred before me: because he was before me" (verse 30). This testimony and other passages of St. John's Gospel are so clear that the modern rationalist takes refuge from their forcefulness in the assertion that the entire Gospel is a mystic contemplation and no fact-narrative at all (see JOHN, GOSPEL OF SAINT). Catholics may not hold this opinion denying the historicity of John. The Holy Office, in the Decree "Lamentabili", condemned the following proposition: "The narrations of John are not properly speaking history but a mystic contemplation of the Gospel; the discourses contained in his Gospel are theological meditations on the mystery of salvation and are destitute of historical truth." (See prop. xvi.)

(b) Witness of St. Paul.—It is not the set purpose of St. Paul, outside of the Epistle to the Hebrews, to prove the Divinity of Jesus Christ. The great Apostle takes this fundamental principle of Christianity for granted. Yet so clear is the witness of Paul to this fact of Christ's Divinity, that the Rationalists and rationalistic Lutherans of Germany to-day strive to get away from the forcefulness of the witness of the Apostle by rejecting his form of Christianity as not conformable to the Christianity of Jesus. Hence they cry: "Los von Paulus, zurück zu Christus"; that is, "Away from Paul, back to Christ" (see Jülicher, "Paulus und Christus", ed. Mohr, 1909). We assume the historicity of the Epistles of Paul; to a Catholic, the Christianity of St. Paul is one and the same with the Christianity of Christ. (See PAUL, SAINT). To the Romans, Paul writes: "God sending his own Son, in the likeness of sinful flesh and of sin" (viii, 3). His Own Son (*τὸν ἑαυτοῦ υἱόν*) the Father sends, not a Son by adoption. The angels are by adoption the children of God; they participate in the Father's nature by the free gifts He has bestowed upon them. Not so the Own Son of the Father. As we have seen, He is more the offspring of the Father than are the angels. How more? In this that He is adored as the Father is adored; the angels are not adored. Such is Paul's argument in the first chapter of the Epistle to the Hebrews. Therefore, in St. Paul's theology, the Father's Own Son, Whom the angels adore, Who was begotten in the to-day of eternity, Who was sent by the Father, clearly existed before His appearance in the Flesh, and is, in point of fact, the great "I am who am",—the Jahweh Who spoke to Moses on Horeb. This identification of the Christ with Jahweh would seem to be indicated, when St. Paul speaks of Christ as *ὁ ὢν ἐπὶ πάντων θεός*, "who is over all things, God blessed for ever" (Rom., ix, 5). This interpretation and punctuation are sanctioned by all the Fathers that have used the text; all refer to Christ the words "He who is God over all" Petavius (De Trin., II, 9, n. 2) cites fifteen, among whom are Irenæus, Tertullian, Cyprian, Athanasius, Gregory of Nyssa, Ambrose, Augustine, and Hilary. The Peshitta has the same translation as we have given. Alford, Trench, Westcott and Hort, and most Protestants are at one with us in this interpretation.

This identification of the Christ with Jahweh is clearer in the First Epistle to the Corinthians. Christ is said to have been Jahweh of the Exodus. "And all drank the same spiritual drink; (and they drank of the spiritual rock that followed them, and the rock was Christ)" (x, 4). It was Christ Whom some of the Israelites "tempted, and (they) perished by the serpents" (x, 10); it was Christ against Whom "some of them murmured, and were destroyed by the destroyer" (x, 11). St. Paul takes over the Septuagint translation of Jahweh *ὁ κύριος*, and makes this title distinctive of Jesus. The Colossians are threatened with the deception of philosophy (ii, 8). St. Paul reminds them that they should think according to Christ; "for in him dwelleth the fulness of the Godhead (*πλήρωμα τῆς θεότητος*) corporeally" (ii, 9); nor should they go so low as give to angels, that they see not, the adoration that is due only to Christ (ii, 18, 19). "For in Him were all things created in heaven and on earth, visible and invisible, whether thrones or dominations or principalities or powers; all things were created by Him and for Him" (*εἰς αὐτόν*). He is the cause and the end of all things, even of the angels whom the Colossians are so misguided as to prefer to Him (i, 16). The cultured Macedonians of Philippi are taught that in "the name of Jesus every knee should bow, of those that are in heaven, on earth, and under the earth; and that every tongue should confess that the Lord Jesus Christ is in the glory of God the Father" (ii, 10, 11). This is the very same genuflexion and confession that the Romans are bidden to make to the Lord and

the Jews to Jahweh (see Rom., xiv, 6; Is., xlv, 24). The testimony of St. Paul could be given at much greater length. These texts are only the chief among many others that bear Paul's witness to the Divinity of Jesus Christ.

C. Witness of Tradition.—The two main sources wherefrom we draw our information as to tradition, or the unwritten Word of God, are the Fathers of the Church and the general councils.

(a) The Fathers are practically unanimous in explicitly teaching the Divinity of Jesus Christ. The testimony of many has been given in our exegesis of the dogmatic texts that prove the Christ to be God. It would take over-much space to cite the Fathers adequately. We shall confine ourselves to those of the Apostolic and apologetic ages. By joining these testimonies to those of the Evangelists and St. Paul, we can see clearly that the Holy Office was right in condemning these propositions of Modernism: "The Divinity of Christ is not proven by the Gospels but is a dogma that the Christian conscience has evolved from the notion of a Messiah. It may be taken for granted that the Christ Whom history shows us is much inferior to the Christ Who is the object of Faith" (see prop. xxvii and xxix of Decree "Lamentabili"). (α) St. Clement of Rome (A. D. 93-95, according to Harnack), in his first epistle to the Corinthians, xvi, 2, speaks of "The Lord Jesus Christ, the Sceptre of the Might of God" (Funk, "Patres Apostolici", Tübingen ed., 1901, p. 118), and describes, by quoting Is., lii, 1-12, the humiliation that was foretold and came to pass in the self-immolation of Jesus. As the writings of the Apostolic Fathers are very scant, and not at all apologetic but rather devotional and exhortive, we should not look in them for that clear and plain defence of the Divinity of Christ which is evidenced in the writings of the apologists and later Fathers. (β) The witness of St. Ignatius of Antioch (A. D. 110-117, according to Harnack) is almost that of the apologetic age, in whose spirit he seems to have written to the Ephesians. It may well be that at Ephesus the very same heresies were now doing havoc which about ten years before or, according to Harnack's chronology, at the very same time, St. John had written his Gospel to undo. If this be so, we understand the bold confession of the Divinity of Jesus Christ which this grand confessor of the Faith brings into his greetings, at the beginning of his letter to the Ephesians. "Ignatius . . . to the Church . . . which is at Ephesus . . . in the will of the Father and of Jesus Christ *Our God (τοῦ θεοῦ ἡμῶν)*." He says: "The Physician in One, of the Flesh and of the Spirit, begotten and not begotten, who was *God in Flesh (ἐν σαρκὶ γενόμενος θεός)* . . . Jesus Christ Our Lord" (c. vii; Funk, I, 218). "For *Our God* Jesus Christ was borne in the womb by Mary" (c. xviii, 2; Funk, I, 226). To the Romans he writes: "For *Our God* Jesus Christ, abiding in the Father, is manifest even the more" (c. iii, 3; Funk, I, 256). (γ) The witness of the Letter of Barnabas (Sanday, A. D. 70-79; Harnack, A. D. 130): "Lo, again, Jesus is not the Son of man but the Son of God, made manifest in form in the Flesh. And since men were going to say that the Christ was the Son of David, David himself, fearing and understanding the malice of the wicked, made prophecy: The Lord said to my Lord . . . Lo, how David calls Him the Lord and not son" (c. xiii; Funk, I, 77). (δ) In the apologetic age, Saint Justin Martyr (Harnack, A. D. 150) wrote: "Since the Word is the first-born of God, He is also God" (Apol. I, n. 63; P. G., VI, 423). It is evident from the context that Justin means Jesus Christ by the Word; he had just said that Jesus was the Word before He became Man, and used to appear in the form of fire or of some other incorporeal image. St. Irenæus (Harnack, A. D. 181) proves that Jesus Christ is rightly called the one and only God and Lord, in that all

things are said to have been made by Him (see "Adv. Hær.", III, viii, n. 3; P. G., VII, 868; bk. IV, 10, 14, 36). Deutero-Clement (Harnack, A. D. 166; Sanday, A. D. 150) insists: "Brethren, we should think of Jesus Christ as of God Himself, as of the Judge of the living and the dead" (see Funk, I, 184). St. Clement of Alexandria (Sanday, A. D. 190) speaks of Christ as "true God without any controversy, the equal of the Lord of the whole universe, since He is the Son and the Word is in God" (Cohortatio ad Gentes, c. x; P. G., VIII, 227).

To the witness of these Fathers of the Apostolic and apologetic age, we add a few witnesses from the contemporary pagan writers. Pliny (A. D. 107) wrote to Trajan that the Christians were wont before the light of day to meet and to sing praises "to Christ as to God" (Epist., x, 97). The Emperor Hadrian (A. D. 117) wrote to Servianus that many Egyptians had become Christians, and that converts to Christianity were "forced to adore Christ", since He was their God (see Saturninus, e. vii). Lucian scoffs at the Christians because they had been persuaded by Christ "to throw over the gods of the Greeks and to adore Him fastened to a cross" (De Morte Peregrini, 13). Here also may be mentioned the well-known *graffito* that caricatures the worship of the Crucified as God. This important contribution to archaeology was found, in 1857, on a wall of the Pædagogium, an inner part of the Domus Gelotiana of the Palatine, and is now in the Kircher Museum, Rome. After the murder of Caligula (A. D. 41) this inner part of the Domus Gelotiana became a training-school for court pages, called the Pædagogium (see Lanciani, "Ruins and Excavations of Ancient Rome", ed. Boston, 1897, p. 186). This fact and the language of the *graffito* lead one to surmise that the page who mocked at the religion of one of his fellows has so become an important witness to the Christian adoration of Jesus as God in the first or, at the very latest, the second century. The *graffito* represents the Christ on a cross and mockingly gives Him an ass's head; a page is rudely scratched kneeling and with hands outstretched in the attitude of prayer; the inscription is "Alexamenos worships his God" (Ἀλεξάμενος σέβεται τὸν θεόν). In the second century, too, Celsus arraigns the Christians precisely on this account that they think God was made man (see Origen, "Contra Celsum", IV, 14; P. G., XI, 1043). Aristides wrote to the Emperor Antonius Pius (A. D. 138-161) what seems to have been an apology for the Faith of Christ: "He Himself is called the Son of God; and they teach of Him that He as God came down from heaven and took and put on Flesh of a Hebrew virgin" (see "Theol. Quartalschrift", Tübingen, 1892, p. 535).

(b) Witness of the Councils.—The first general council of the Church was called to define the Divinity of Jesus Christ and to condemn Arius and his error (see ARIUS). Previous to this time, heretics had denied this great and fundamental dogma of the Faith; but the Fathers had been equal to the task of refuting the error and of stemming the tide of heresy. Now the tide of heresy was so strong as to have need of the authority of the universal Church to withstand it. In his "Thalia", Arius taught that the Word was not eternal (*ἦν πότε ὅτε οὐκ ἦν*) nor generated of the Father, but made out of nothing (*ἐξ οὐκ ὄντων γέγονεν ὁ λόγος*); and though it was before the world was, yet it was a thing made, a created thing (*ποίημα* or *κτίσις*). Against this bold heresy, the Council of Nicæa (325) defined the dogma of the Divinity of Christ in the clearest terms: "We believe . . . in one Lord Jesus Christ, the Son of God, the Only-begotten, generated of the Father (*γεννηθέντα ἐκ τοῦ πατρὸς μονογενῆ*), that is, of the substance of the Father, God of God, Light of Light, True God of True God, begotten not made, the same in nature with the Father (*ὁμοούσιον τῷ πατρὶ*) by Whom all things were made" (see Denzinger, 54).

(2) *The Human Nature of Jesus Christ.*—The Gnostics taught that matter was of its very nature evil, somewhat as the present-day Christian Scientists teach that it is an "error of mortal mind"; hence Christ as God could not have had a material body, and His body was only apparent. These heretics, called *docteta*, included Basilides, Marcion, the Manichæans, and others. Valentinus and others admitted that Jesus had a body, but a something heavenly and ethereal; hence Jesus was not born of Mary, but His airy body passed through her virgin body. The Apollinarists admitted that Jesus had an ordinary body, but denied Him a human soul; the Divine nature took the place of the rational mind. Against all these various forms of the heresy that denies Christ is true Man stand countless and clearest testimonies of the written and unwritten Word of God. The title that is characteristic of Jesus in the New Testament is Son of Man; it occurs some eighty times in the Gospels; it was His Own accustomed title for Himself. The phrase is Aramaic, and would seem to be an idiomatic way of saying "man". The life and death and resurrection of Christ would all be a lie were He not a man, and our Faith would be vain (I Cor., xv, 14). "For there is one God, and one mediator of God and men, the man Christ Jesus" (I Tim., ii, 5). Why, Christ even enumerates the parts of His Body. "See my hands and feet, that it is I myself; handle and see: for a spirit hath not flesh and bones, as you see me to have" (Luke, xxiv, 39). St. Augustine says, in this matter: "If the Body of Christ was a fancy, then Christ erred; and if Christ erred, then He is not the Truth. But Christ is the Truth; hence His Body was not a fancy" (QQ. lxxxiii, q. 14; P. L., XL, 14). In regard to the human soul of Christ, the Scripture is equally clear. Only a human soul could have been sad and troubled. Christ says: "My soul is sorrowful even unto death" (Matt., xxvii, 38). "Now is my soul troubled" (John, xii, 27). His obedience to the heavenly Father and to Mary and Joseph supposes a human soul (John, iv, 34; v, 30; vi, 38; Luke, xxii, 42). Finally Jesus was really born of Mary (Matt., i, 16), made of a woman (Gal., iv, 4), after the angel had promised that He should be conceived of Mary (Luke, i, 31); this woman is called the mother of Jesus (Matt., i, 18; ii, 11; Luke, i, 43; John, ii, 3); Christ is said to be really the seed of Abraham (Gal., iii, 16), the son of David (Matt., i, 1), made of the seed of David according to the flesh (Rom., i, 3), and the fruit of the loins of David (Acts, ii, 30). So clear is the testimony of Scripture to the perfect human nature of Jesus Christ, that the Fathers held it as a general principle that whatsoever the Word had not assumed was not healed, i. e., did not receive the effects of the Incarnation.

(3) *The Hypostatic Union of the Divine Nature and the Human Nature of Jesus in the Divine Person of Jesus Christ.*—Here we consider this union as a fact; the nature of the union will be later taken up. Now it is our purpose to prove that the Divine nature was really and truly united with the human nature of Jesus, i. e., that one and the same Person, Jesus Christ, was God and Man. We speak here of no moral union, no union in a figurative sense of the word; but a union that is physical, a union of two substances or natures so as to make One Person, a union which means that God is Man and Man is God in the Person of Jesus Christ.

A. The Witness of Holy Writ.—St. John says: "The Word was made flesh" (i, 14), that is, He Who was God in the Beginning (i, 2), and by Whom all things were created (i, 3), became Man. According to the testimony of St. Paul, the very same Person, Jesus Christ, "being in the form of God [*ἐν μορφῇ Θεοῦ ὑπάρχων*], . . . emptied himself, taking the form of a servant [*μορφὴν δούλου λαβών*]" (Phil., ii, 6, 7). It is always one and the same Person, Jesus Christ, Who

is said to be God and Man, or is given predicates that denote Divine and human nature. The author of life (God) is said to have been killed by the Jews (Acts, iii, 15); but He could not have been killed were He not Man.

B. Witness of Tradition.—The early forms of the creed all make profession of faith, not in one Jesus Who is the Son of God and in another Jesus Who is Man and was crucified, but "in one Lord Jesus Christ, the Only-begotten Son of God, Who became Man for us and was crucified". The forms vary, but the substance of each creed invariably attributes to one and the same Jesus Christ the predicates of the Godhead and of man (see Denzinger, "Enchiridion"). Franzelin (thesis xvii) calls special attention to the fact that, long before the heresy of Nestorius, according to Epiphanius (Ancorat., II, 123, in P. G., XLII, 234), it was the custom of the Oriental Church to propose to catechumens a creed that was very much more detailed than that proposed to the faithful; and in this creed the catechumens said: "We believe . . . in one Lord Jesus Christ, the Son of God, begotten of God the Father . . . that is, of the substance of the Father . . . in Him Who for us men and for our salvation came down and was made Flesh, that is, was perfectly begotten of Mary ever Virgin by the Holy Spirit; Who became Man, that is, took perfect human nature, soul and body and mind and all whatsoever is human save only sin, without the seed of man; not in another man, but unto Himself did He form Flesh into one holy unity [*εἰς μίαν ἁγίαν ἐνότητά*]; not as He breathed and spoke and wrought in the prophets, but He became Man perfectly; for the Word was made Flesh, not in that It underwent a change nor in that It exchanged Its Divinity for humanity, but in that It united Its Flesh unto Its one holy totality and Divinity [*εἰς μίαν . . . ἑαυτοῦ ἁγίαν τελειότητά τε καὶ θεότητα*]." "The one holy totality", Franzelin considers, means personality, a person being an individual and complete subject of rational acts. This creed of the catechumens gives even the Divinity of the totality, i. e. the fact that the individual Person of Jesus is a Divine and not a human Person. Of this intricate question we shall speak later on.

The witness of tradition to the fact of the union of the two natures in the one Person of Jesus is clear not only from the symbols or creeds in use before the condemnation of Nestorius, but also from the words of the ante-Nicæan Fathers. We have already given the classic quotations from St. Ignatius the Martyr, St. Clement of Rome, St. Justin the Martyr, in all of which are attributed to the one Person, Jesus Christ, the actions or attributes of God and of Man. Melito, Bishop of Sardis (about 176), says: "Since the same (Christ) was at the same time God and perfect Man, He made His two natures evident to us; His Divine nature by the miracles which He wrought during the three years after His baptism; His human nature by those thirty years that He first lived, during which the lowliness of the Flesh covered over and hid away all signs of the Divinity, though He was at one and the same time true and everlasting God" (Frag. vii in P. G., V, 1221). St. Irenæus, toward the close of the second century, argues: "If one person suffered and another Person remained incapable of suffering; if one person was born and another Person came down upon him that was born and thereafter left him, not one person but two are proven . . . whereas the Apostle knew one only Who was born and Who suffered" ("Adv. Hær.", III, xvi, n, 9, in P. G., VII, 928). Tertullian bears firm witness: "Was not God really crucified? Did He not really die as He really was crucified?" ("De Carne Christi", c. v, in P. L., II, 760).

II. THE NATURE OF THE INCARNATION.—We have treated the fact of the Incarnation, that is, the fact of the Divine nature of Jesus, the fact of the human

nature of Jesus, the fact of the union of these two natures in Jesus. We now take up the crucial question of the nature of this fact, the manner of this tremendous miracle, the way of uniting the Divine with the human nature in one and the same Person. Arius had denied the fact of this union. No other heresy rent and tore the body of the Church to any very great extent in the matter of this fact after the condemnation of Arius in the Council of Nicæa (325). Soon a new heresy arose in the explanation of the fact of the union of the two natures in Christ. Nicæa had, indeed, defined the fact of the union; it had not explicitly defined the nature of that fact; it had not said whether that union was moral or physical. The council had implicitly defined the union of the two natures in one hypostasis, a union called physical in opposition to the mere juxtaposition or joining of the two natures called a moral union. Nicæa had professed a belief in "One Lord Jesus Christ . . . true God of true God . . . Who took Flesh, became Man and suffered." This belief was in one Person Who was at the same time God and Man, that is, had at the same time Divine and human nature. Such teaching was an implicit definition of all that was later on denied by Nestorius. We shall find the great Athanasius, for fifty years the determined foe of the heresiarch, interpreting Nicæa's decree in just this sense; and Athanasius must have known the sense meant by Nicæa, in which he was the antagonist of the heretic Arius.

(1) In spite of the efforts of Athanasius, Nestorius, who had been elected Patriarch of Constantinople (428), found a loophole to avoid the definition of Nicæa. Nestorius (q. v.) called the union of the two natures a mysterious and an inseparable joining (*συνάφειαν*), but would admit no unity (*ἕνωσιν*) in the strict sense of the word to be the result of this joining (see "Serm.", ii, n. 4; xii, n. 2, in P. L., XLVIII). The union of the two natures is not physical (*φυσική*) but moral, a mere juxtaposition in state of being (*σχετική*); the Word indwells in Jesus like as God indwells in the just (loc. cit.); the indwelling of the Word in Jesus is, however, more excellent than the indwelling of God in the just man by grace, for that the indwelling of the Word purposes the Redemption of all mankind and the most perfect manifestation of the Divine activity (Serm. vii, n. 24); as a consequence, Mary is the Mother of Christ (*Χριστοτόκος*), not the Mother of God (*Θεοτόκος*). As is usual in these Oriental heresies, the metaphysical refinement of Nestorius was faulty, and led him into a practical denial of the mystery that he had set himself to explain. During the discussion that Nestorius aroused, he strove to explain that his indwelling (*ἐνοίκησης*) theory was quite enough to keep him within the demands of Nicæa; he insisted that "the Man Jesus should be co-adored with the Divine union and almighty God [*τὸν τῆ θεῶ συνάφειαν τῷ παντοκράτορι θεῷ συμπροσκυνούμενον ἄνθρωπον*]" (Serm., vii, n. 35); he forcibly denied that Christ was two persons, but proclaimed Him as one person (*πρόσωπον*) made up of two substances. The oneness of the Person was however only moral, and not at all physical. Despite whatsoever Nestorius said as a pretext to save himself from the brand of heresy, he continually and explicitly denied the hypostatic union (*ἕνωσιν καθ' ὑπόστασιν, κατὰ φύσιν, κατ' οὐσίαν*), that union of physical entities and of substances which the Church defends in Jesus; he affirmed a juxtaposition in authority, dignity, energy, relation, and state of being (*συνάφεια κατ' ἀδελφίαν, ἀξίαν, ἐνέργειαν, ἀνάφοραν, σχέσιν*); and he maintained that the Fathers of Nicæa had nowhere said that God was born of the Virgin Mary (Sermo, v, nn. 5 and 6).

A. Nestorius in this distortion of the sense of Nicæa clearly went against the tradition of the Church. Before he had denied the hypostatic union of the two natures in Jesus, that union had been taught by the

greatest Fathers of their time. St. Hippolytus (about 230) taught: "the Flesh [*σάρξ*] apart from the Logos had no hypostasis [*οὐδὲ ὑποστάσις ἐδίνατο*], was unable to act as principle of rational activity], for that its hypostasis was in the Word" ("Contra Noet.", n. 15, in P. G., X, S23). St. Epiphanius (about 365): "The Logos united body, mind, and soul into one totality and spiritual hypostasis" ("Hær.", xx, n. 4, in P. G., XLI, 277). "The Logos made the Flesh to subsist in the hypostasis of the Logos [*εἰς ἑαυτὸν ὑποστήσαντα τὴν σάρκα*]" ("Hær.", cxxvii, n. 29, in P. G., XLII, 684). St. Athanasius (about 350): "They err who say that it is one person who is the Son that suffered, and another person who did not suffer . . . ; the Flesh became God's own by nature [*κατὰ φύσιν*], not that it became consubstantial with the Divinity of the Logos as if coeternal therewith, but that it became God's own Flesh by its very nature [*κατὰ φύσιν*]." In this entire discourse ("Contra Apollinarianum", I, 12, in P. G., XXVI, 1113), St. Athanasius directly attacks the specious pretexts of the Arians and the arguments that Nestorius later took up, and defends the union of two physical natures in Christ [*κατὰ φύσιν*], as apposed to the mere juxtaposition or joining of the same natures [*κατὰ σχέσιν*]. St. Cyril of Alexandria (about 415) makes use of this formula oftener even than the other Fathers; he calls Christ "the Word of the Father united in nature with the Flesh [*τὸν ἐκ θεοῦ Πατρὸς Λόγον κατὰ φύσιν ἐνωθέντα σάρκι*]" ("De Recta Fide", n. 8, in P. G., LXXVI, 1210). For other and very numerous citations, see Petavius (III, 4). The Fathers always explain that this physical union of the two natures does not mean the intermingling of the natures, nor any such union as would imply a change in God, but only such union as was necessary to explain the fact that one Divine Person had human nature as His own true nature together with His Divine nature.

B. The Council of Ephesus (431) condemned the heresy of Nestorius, and defined that Mary was mother in the flesh of God's Word made Flesh (can. i). It anathematized all who deny that the Word of God the Father was united with the Flesh in one hypostasis (*καθ' ὑπόστασιν*); all who deny that there is only one Christ with Flesh that is His own; all who deny that the same Christ is God at the same time and man (can. ii). In the remaining ten canons drawn up by St. Cyril of Alexandria, the anathema is aimed directly at Nestorius. "If in the one Christ anyone divides the substances, after they have been once united, and joins them together merely by a juxtaposition [*μὴν συνάπτων αὐτὰς συναφείας*] of honour or of authority or of power and not rather by a union into a physical unity [*συνῶδω τῇ καθ' ἕνωσιν φυσικῆν*], let him be accursed" (can. iii). These twelve canons condemn piecemeal the various subtleties of Nestorius. St. Cyril saw heresy lurking in phrases that seemed innocent enough to the unsuspecting. Even the co-adoration theory is condemned as an attempt to separate the Divine from the human nature in Jesus by giving to each a separate hypostasis (see Denzinger, "Enchiridion", ed. 1908, nn. 113-26).

(2) The condemnation of the heresy of Nestorius saved for the Church the dogma of the Incarnation, "the great mystery of godliness" (I Tim., iii, 16), but lost to her a portion of her children, who, though dwindled down to insignificant numbers, still remain apart from her care. The union of the two natures in one Person was saved. The battle for the dogma was not yet won. Nestorius had postulated two persons in Jesus Christ. A new heresy soon began. It postulated only one Person in Jesus, and that the Divine Person. It went farther. It went too far. The new heresy defended only one nature, as well as one Person in Jesus. The leader of this heresy was Eutyches. His followers were called Monophysites. They varied in their ways of explanation. Some

thought the two natures were intermingled into one. Others are said to have worked out some sort of a conversion of the human into the Divine. All were condemned by the Council of Chalcedon (451). This Fourth General Council of the Church defined that Jesus Christ remained, after the Incarnation, "perfect in Divinity and perfect in humanity . . . consubstantial with the Father according to His Divinity, consubstantial with us according to His humanity . . . one and the same Christ, the Son, the Lord, the Only begotten, to be acknowledged in two natures not intermingled, not changed, not divisible, not separable" (see Denzinger, n. 148). By this condemnation of error and definition of truth, the dogma of the Incarnation was once again saved to the Church. Once again a large portion of the faithful of the Oriental Church were lost to their mother. Monophysitism resulted in the national Churches of Syria, Egypt, and Armenia. These national Churches are still heretic, although there have in later times been formed Catholic rites called the Catholic Syriac, Coptic, and Armenian rites. The Catholic rites, as the Catholic Chaldaic rite, are less numerous than the heretic rites.

(3) One would suppose that there was no room for heresy in the explanation of the mystery of the nature of the Incarnation. There is always room for heresy in the matter of explanation of a mystery, if one does not hear the infallible teaching body to whom and to whom alone Christ entrusted His mysteries to have and to keep and to teach them till the end of time. Three patriarchs of the Oriental Church gave rise, so far as we know, to the new heresy. These three heresiarchs were Sergius, the Patriarch of Constantinople, Cyrus, the Patriarch of Alexandria, and Athanasius, the Patriarch of Antioch. St. Sophronius, the Patriarch of Jerusalem, remained true and delated his fellow patriarchs to Pope Honorius. His successor in the see of Peter, St. Martin, bravely condemned the error of the three Oriental patriarchs, who admitted the decrees of Nicæa, Ephesus, and Chalcedon; defended the union of two natures in one Divine Person; but denied that this Divine Person had two wills. Their principle was expressed by the words, *ἓν θέλημα καὶ μίᾳ ἐνέργεια*, by which they would seem to have meant one will and one activity, i. e. only one principle of action and of suffering in Jesus Christ and that one principle Divine. These heretics were called Monothelites. Their error was condemned by the Sixth General Council (the Third Council of Constantinople, 680). It defined that in Christ there were two natural wills and two natural activities, the Divine and the human; and that the human will was not at all contrary to the Divine, but rather perfectly subject thereto (Denzinger, n. 291). The Emperor Constant sent St. Martin into exile in Chersonesus. We have trace of only one body of Monothelites. The Maronites, founded about the monastery of John Maron, were converted from Monothelism in the time of the Crusades and have been true to the Faith ever since. The other Monothelites seem to have been absorbed in Monophysitism, or in the schism of the Byzantine Church later on.

The error of Monothelism is clear from the Scripture as well as from tradition. Christ did acts of adoration (John, iv, 22), humility (Matt., xi, 29), reverence (Heb., v, 7). These acts are those of a human will. The Monothelites denied that there was a human will in Christ. Jesus prayed: "Father, if Thou wilt, remove this chalice from me; but yet not my will, but thine be done" (Luke, xxii, 42). Here there is question of two wills, the Father's and Christ's. The will of Christ was subject to the will of the Father. "As the Father hath given me commandment, so do I" (John, xiv, 31). He became obedient even unto death (Phil., ii, 8). The Divine will in Jesus could not have been subject to the will of the Father, with which will it was really identified.

(4) Thus far we have that which is of Faith in this matter of the nature of the Incarnation. The human and Divine natures are united in one Divine Person so as to remain that exactly which they are, namely, Divine and human natures with distinct and perfect activities of their own. Theologians go farther in their attempts to give some account of the mystery of the Incarnation, so as, at least, to show that there is therein no contradiction, nothing that right reason may not safely adhere to. This union of the two natures in one Person has been for centuries called a hypostatic union, that is, a union in the Divine Hypostasis. What is an hypostasis? The definition of Boethius is classic: *rationalis naturæ individua substantia* (P. L., LXIV, 1343), a complete whole whose nature is rational. This book is a complete whole; its nature is not rational; it is not an hypostasis. An hypostasis is a complete rational individual. St. Thomas defines hypostasis as *substantia cum ultimo complemento* (III, Q. ii, a. 3, ad 2^{um}), a substance in its entirety. Hypostasis superadds to the notion of rational substance this idea of entirety; nor does the idea of rational nature include this notion of entirety. Human nature is the principle of human activities; but only an hypostasis, a person, can exercise these activities. The Schoolmen discuss the question whether the hypostasis has anything more of reality than human nature. To understand the discussion, one must needs be versed in scholastic philosophy. Be the case as it may in the matter of human nature that is not united with the Divine, the human nature that is hypostatically united with the Divine, that is, the human nature that the Divine Hypostasis or Person assumes to Itself, has certainly more of reality united to it than the human nature of Christ would have were it not hypostatically united in the Word. The Divine Logos identified with Divine nature (Hypostatic Union) means then that the Divine Hypostasis (or Person, or Word, or Logos) appropriates to Itself human nature, and takes in every respect the place of a human person. In this way, the human nature of Christ, though not a human person, loses nothing of the perfection of the perfect man; for the Divine Person supplies the place of the human.

It is to be remembered that, when the Word took Flesh, there was no change in the Word; all the change was in the Flesh. At the moment of conception, in the womb of the Blessed Mother, through the forcefulness of God's activity, not only was the human soul of Christ created but the Word assumed the man that was conceived. When God created the world, the world was changed, that is, it passed from the state of nonentity to the state of existence; and there was no change in the Logos or Creative Word of God the Father. Nor was there change in that Logos when it began to terminate the human nature. A new relation ensued, to be sure; but this new relation implied in the Logos no new reality, no real change; all new reality, all real change, was in the human nature. Anyone who wishes to go into this very intricate question of the manner of the Hypostatic Union of the two natures in the one Divine Personality may with great profit read St. Thomas (III, q. iv, a. 2); Scotus (in III, Dist. i); (De Incarnatione, Disp. II, sec. 3); Gregory of Valentia (in III, D. i, q. 4). Any modern text book on theology will give various opinions in regard to the way of the union of the Person assuming with the nature assumed.

III. EFFECTS OF THE INCARNATION.—(1) *On Christ Himself*.—A. On the Body of Christ.—Did union with the Divine nature do away with all bodily imperfections? The Monophysites were split up into two parties by this question. Catholics hold that, before the Resurrection, the Body of Christ was subject to all the bodily weaknesses to which human nature unassumed is universally subject; such are hunger,

thirst, pain, death. Christ hungered (Matt., iv, 2), thirsted (John, xix, 28), was fatigued (John, iv, 6), suffered pain and death. "We have not a high priest, who cannot have compassion on our infirmities: but one tempted in all things like as we are, without sin" (Heb., iv, 15). "For in that, wherein he himself hath suffered and been tempted, he is able to succour them also that are tempted" (Heb., ii, 18). All these bodily weaknesses were not miraculously brought about by Jesus; they were the natural results of the human nature He assumed. To be sure, they might have been impeded and were freely willed by Christ. They were part of the free oblation that began with the moment of the Incarnation. "Wherefore when he cometh into the world, he saith: Sacrifice and oblation thou wouldest not; but a body thou hast fitted to me" (Heb., x, 5). The Fathers deny that Christ assumed sickness. There is no mention in Scripture of any sickness of Jesus. Sickness is not a weakness that is a necessary belonging of human nature. It is true that pretty much all mankind suffers sickness. It is not true that any specific sickness is suffered by all mankind. Not all men must needs have measles. No one definite sickness universally belongs to human nature; hence no one definite sickness was assumed by Christ. St. Athanasius gives the reason that it were unbecoming that He should heal others who was Himself not healed (P. G., XX, 133). Weaknesses due to old age are common to mankind. Had Christ lived to an old age, He would have suffered such weaknesses just as He suffered the weaknesses that are common to infancy. Death from old age would have come to Jesus, had He not been violently put to death (see St. Augustine, "De Peccat.", II, 29; P. L., XLIV, 180). The reasonableness of these bodily imperfections in Christ is clear from the fact that He assumed human nature so as to satisfy for that nature's sin. Now, to satisfy for the sin of another is to accept the penalty of that sin. Hence it was fitting that Christ should take upon himself all those penalties of the sin of Adam that are common to man and becoming, or at least not unbecoming, to the Hypostatic Union. (See St. Thomas, III, Q. xiv, for other reasons.) As Christ did not take sickness upon Himself, so other imperfections, such as deformities, which are not common to mankind, were not His. St. Clement of Alexandria (III Pædagogus, c. 1), Tertullian (De Carne Christi, c. ix), and a few others taught that Christ was deformed. They misinterpreted the words of Isaias: "There is no beauty in him, nor comeliness; and we have seen him, and there was no sightliness", etc. (liii, 2). The words refer only to the suffering Christ. Theologians now are unanimous in the view that Christ was noble in bearing and beautiful in form, such as a perfect man should be; for Christ was, by virtue of His incarnation, a perfect man (see Stentrup, "Christologia", theses lx, lxi).

B. On the Human Soul of Christ. (a) In the Will. —(α) Sinlessness.—The effect of the Incarnation on the human will of Christ was to leave it free in all things save only sin. It was absolutely impossible that any stain of sin should soil the soul of Christ. Neither sinful act of the will nor sinful habit of the soul were in keeping with the Hypostatic Union. The fact that Christ never sinned is an article of faith (see Council, Ephes., can. x, in Denzinger, 122, wherein the sinlessness of Christ is implicit in the definition that He did not offer Himself for Himself, but for us). This fact of Christ's sinlessness is evident from the Scripture. "There is no sin in Him" (I John, iii, 5). "Him, who knew no sin, he hath made sin for us" i. e. a victim for sin (II Cor., v, 21). The impossibility of a sinful act by Christ is taught by all theologians, but variously explained. Günther defended an impossibility consequent solely upon the Divine provision that He would not sin (Vorschule, II, 441). This is no impossibility at all. Christ is God. It is

absolutely impossible, antecedent to the Divine provision, that God should allow His flesh to sin. If God allowed His flesh to sin, He might sin, that is, He might turn away from Himself; and it is absolutely impossible that God should turn from Himself, be untrue to His Divine attributes. The Scotists teach that this impossibility to sin, antecedent to God's prevision, is not due to the Hypostatic Union, but is like to the impossibility of the beatified to sin, and is due to a special Divine Providence (see Scotus, in III, d. xiii, Q. i). St. Thomas (III, Q. xv, a. 1) and all Thomists, Suarez (d. xxxiii, §2), Vasquez (d. lxi, c. iii), de Lugo (d. xxvi, §1, n. 4), and all theologians of the Society of Jesus teach the now almost universally admitted explanation that the absolute impossibility of a sinful act on the part of Christ was due to the hypostatic union of His human nature with the Divine. (β) Liberty.—The will of Christ remained free after the Incarnation. This is an article of faith. The Scripture is most clear on this point. "When he had tasted, he would not drink" (Matt., xxvii, 34). "I will; be thou made clean" (Matt., viii, 3). The liberty of Christ was such that He merited. "He humbled himself, becoming obedient unto death, even to the death of the cross. For which cause God also hath exalted him" (Phil., ii, 8). "Who having joy set before him, endured the cross" (Heb., xii, 2). That Christ was free in the matter of death, is the teaching of all Catholics; else He did not merit nor satisfy for us by His death. Just how to reconcile this liberty of Christ with the impossibility of His committing sin has ever been a crux for the theologians. Some seventeen explanations are given (see St. Thomas, III, Q. xlvii, a. 3, ad 3um; Molina, "Concordia", d. liii, membr. 4).

(b) In the Intellect.—The effects of the Hypostatic Union upon the knowledge of Christ will be treated in a special article (see KNOWLEDGE OF CHRIST).

(c) Sanctity of Christ.—The Humanity of Christ was holy by a twofold sanctity: the grace of union and sanctifying grace. The grace of union, i. e. the Substantial and Hypostatic Union of the two natures in the Divine Word, is called the substantial sanctity of Christ. St. Augustine says: "Tunc ergo sanctificavit se in se, hoc est hominem se in Verbo se, quia unus est Christus, Verbum et homo, sanctificans hominem in Verbo" (When the Word was made Flesh then, indeed, He sanctified Himself in Himself, that is, Himself as Man in Himself as Word; for that Christ is One Person, both Word and Man, and renders His human nature holy in the holiness of the Divine nature) (In Johan. tract. 108, n. 5, in P. L., XXXV, 1916). Besides this substantial sanctity of the grace of Hypostatic Union, there was in the soul of Christ, the accidental sanctity called sanctifying grace. This is the teaching of St. Augustine, St. Athanasius, St. John Chrysostom, St. Cyril of Alexandria, and of the Fathers generally. The Word was "full of grace" (John, i, 14), and "of his fullness we all have received, and grace for grace" (John, i, 16). The Word were not full of grace, if any grace were wanting in Him which would be a perfection fitting to His human nature. All theologians teach that sanctifying grace is a perfection fitting the humanity of Christ. The mystical body of Christ is the Church, whereof Christ is the Head (Rom., xii, 4; I Cor., xii, 11; Eph., i, 20; iv, 4; Col. i, 18; ii, 10). It is especially in this sense that we say the grace of the Head flows through the channels of the sacraments of the Church—through the veins of the body of Christ. Theologians commonly teach that from the very beginning of His existence, He received the fullness of sanctifying grace and other supernatural gifts (except faith, hope, and the moral virtue of penance); nor did He ever increase in these gifts or this sanctifying grace. For so to increase would be to become more pleasing to the Divine Majesty; and this were impossible in Christ. Hence St. Luke meant (ii, 52)

that Christ showed more and more day after day the effects of grace in His outward bearing.

(d) Likes and Dis-likes.—The Hypostatic Union did not deprive the Human Soul of Christ of its human likes and dislikes. The affections of a man, the emotions of a man were His in so far as they were becoming to the grace of union, in so far as they were not out of order. St. Augustine well argues: "Human affections were not out of place in Him in Whom there was really and truly a human body and a human soul" (De Civ. Dei, XIV, ix, 3). We find that he was subject to anger against the blindness of heart of sinners (Mark, iii, 5); to fear (Mark, xiv, 33); to sadness (Matt., xxvi, 37); to the sensible affections of hope, of desire, and of joy. These likes and dislikes were under the complete will-control of Christ. The *fomes peccati*, the kindling-wood of sin—that is, those likes and dislikes that are not under full and absolute control of right reason and strong will-power—could not, as a matter of course, have been in Christ. He could not have been tempted by such likes and dislikes to sin. To have taken upon Himself this penalty of sin would not have been in keeping with the absolute and substantial holiness which is implied by the grace of union in the Logos.

C. On the God-Man (Deus-Homo, θεάνθρωπος).—One of the most important effects of the union of the Divine nature and human nature in One Person is a mutual interchange of attributes, Divine and human, between God and man, the *Communicatio Idiomatum*. The God-Man is one Person, and to Him in the concrete may be applied the predicates that refer to the Divinity as well as those that refer to the Humanity of Christ. We may say God is man, was born, died, was buried. These predicates refer to the Person Whose nature is human, as well as Divine; to the Person Who is man, as well as God. We do not mean to say that God, as God, was born; but God, Who is man, was born. We may not predicate the abstract Divinity of the abstract humanity, nor the abstract Divinity of the concrete man, nor vice versa; nor the concrete God of the abstract humanity, nor vice versa. We predicate the concrete of the concrete: Jesus is God; Jesus is man; the God-Man was sad; the Man-God was killed. Some ways of speaking should not be used, not that they may not be rightly explained, but that they may easily be misunderstood in an heretical sense (see COMMUNICATIO IDIOMATUM).

(2) *The Adoration of the Humanity of Christ*.—The human nature of Christ, united hypostatically with the Divine nature, is adored with the same worship as the Divine nature (see ADORATION). We adore the Word when we adore Christ the Man; but the Word is God. The human nature of Christ is not at all the reason of our adoration of Him; that reason is only the Divine nature. The entire term of our adoration is the Incarnate Word; the motive of the adoration is the Divinity of the Incarnate Word. The partial term of our adoration may be the human nature of Christ; the motive of the adoration is the same as the motive of the adoration that reaches the entire term. Hence, the act of adoration of the Word Incarnate is the same absolute act of adoration that reaches the human nature. The Person of Christ is adored with the cult called *latria*. But the cult that is due to a person is due in like manner to the whole nature of that Person and to all its parts. Hence, since the human nature is the real and true nature of Christ, that human nature and all its parts are the object of the cult called *latria*, i. e., adoration. We shall not here enter into the question of the adoration of the Sacred Heart of Jesus (see HEART OF JESUS, DEVOTION TO THE). (For the Adoration of the Cross, CROSS AND CRUCIFIX, THE, subtitle II.)

(3) *Other Effects of the Incarnation*, such as affected the Blessed Mother and us, will be found treated under the respective special subjects. (See GRACE; JUSTIFI-

CATION; SATISFACTION; IMMACULATE CONCEPTION; MARY, THE BLESSED VIRGIN.)

Incas. See PERU.

Incense (Lat. *thus*, Gr. *θυμιαμα*), an aromatic substance which is obtained from certain resinous trees and largely employed for purposes of religious worship. The word is also used to signify the smoke or perfume arising from incense when burned.

NATURE.—In ancient times incense was furnished by two trees, viz. the *Boswellia sacra* of Arabia Felix, and the *Boswellia papyrifera* of India, both of which belong to the Terebinthian family. Mention is made of it in Num., vii, 14; Deut., xxxiii, 10, etc. It was procured from the bark much as gum is obtained at present. To enhance the fragrance and produce a thicker smoke various foreign elements were added (cf. Josephus, "Bella Jud.", V, 5). These ingredients generally numbered four, but sometimes as many as thirteen, and the task of blending them in due proportion was assigned under the Old-Law ordinances to particular families (Cant., iii, 6).

USE.—The use of incense was very common. It was employed for profane purposes as an antidote to the lassitude caused by very great heat (cf. Lane, "Manners and Customs of Modern Egyptians", III, 8) as perfumes are now used. Mention of its introduction into pagan worship is made by classical writers (cf. Ovid, "Metamorph.", VI, 14, Virgil, "Æneid", I, 146). Herodotus testifies to its use among the Assyrians and Babylonians, while on Egyptian monumental tablets kings are represented swinging censers. Into the Jewish ritual it entered very extensively, being used especially in connexion with the eucharistic offerings of oil, fruits, and wine, or the unbloody sacrifices (Leviticus, vi, 15). By the command of God Moses built an altar of incense (cf. Ex., xxx), on which the sweetest spices and gums were burned, and to a special branch of the Levitical tribe was entrusted the office of daily renewal (I Par., ix, 29).

When, exactly, incense was introduced into the religious services of the Church it is not easy to say. During the first four centuries there is no evidence for its use. Still, its common employment in the Temple and the references to it in the New Testament (cf. Luke, i, 10; Apoc., viii, 3-5) would suggest an early familiarity with it in Christian worship. The earliest authentic reference to its use in the service of the Church is found in Pseudo-Dionysius ("De Hier. Ecc.", III, 2). The Liturgies of Sts. James and Mark—which in their present form are not older than the fifth century—refer to its use at the Sacred Mysteries (cf. Brightman, "Eastern Liturgies"). A Roman Ordo of the seventh century mentions that it was used in the procession of the bishop to the altar and on Good Friday (cf. "Ordo Romanus VIII" of St. Amand; for the Ordo in Einsiedeln MS., cf. Duchesne, "Christian Worship", 481). The pilgrim Etheria saw

it employed at the vigil Offices of the Sunday in Jerusalem (cf. *Peregrinatio*, II). Almost all Eastern liturgies bear witness to its use in the celebration of the Mass, particularly at the Offertory (cf. Goar, "*Eucho-logium Græcorum*", 73; Renaudot, "*Coll. liturgiarum orient.*", I, 200). In the Roman Church incensation at the Gospel of the Mass appears very early—at the Offertory in the eleventh, and at the Introit in the twelfth century, at the Benedictus and Magnificat of the canonical Hours about the thirteenth century, and, in connexion with the Elevation and Benediction of the Blessed Sacrament, about the fourteenth century. "*Ordo Romanus VI*" describes the incensation of the celebrant, and in the time of Durandus (*Rat. off. Div.*) the assisting clergy were incensed. In the present discipline of the Western Church incense is used at solemn Mass, solemn blessings, functions, and processions, choral offices, and absolutions for the dead. On these occasions persons, places, and things such as relics of Christ and the saints, crucifix, altar, book of Gospels, coffin, remains, sepulchre, etc. are incensed. When used the incense is generally burned. There are two cases, however, when it is not consumed: (a) the grains put into the Pascal candle and (b) the grains put into the sepulchre of consecrated altars. At Mass incense is generally blessed before use.

SYMBOLISM AND MANNER OF INCENSING.—Incense, with its sweet-smelling perfume and high-ascending smoke, is typical of the good Christian's prayer, which, enkindled in the heart by the fire of God's love and exhaling the odour of Christ, rises up a pleasing offering in His sight (cf. Amalarius, "*De eccles. officiis*" in P. L., CV). Incensing is the act of imparting the odour of incense. The censer (q. v.) is held in the right hand at the height of the breast, and grasped by the chain near the cover; the left hand, holding the top of the chain, is placed on the breast. The censer is then raised upwards to the height of the eyes, given an outward motion and slightly ascending towards the object to be incensed, and at once brought back to the starting point. This constitutes a *single* swing. For a *double* swing the outward motion should be repeated, the second movement being more pronounced than the first. The dignity of the person or thing will determine whether the swing is to be *single* or *double*, and also whether one swing or more are to be given. The incense-boat is the vessel containing the incense for immediate use. It is so called from its shape. It is generally carried by the thurifer in the disengaged hand.

Incense Altar. See ALTAR (IN SCRIPTURE).

Incest (Lat. *in*, not, and *castus*, chaste) is sexual intercourse between those who are related by blood or marriage. Its specific malice is contracted by such unlawful commerce between those related within the fourth degree of consanguinity or affinity, as computed by canonists. The guilt is incurred not only by those sinful acts which are, as theologians say, fully consummated, but also by incomplete acts. The particular deformity of incest comes not merely from the violation of the virtue of chastity, but also from the offence against the mingled affection and reverence with which parents and, proportionately, other relatives should be regarded. It is certain that this crime has its distinctive enormity from the prohibition of the natural law, where there is question of the first degree in the direct line, for instance, between parents and children. For the other degrees it is probable that recourse must be had to the ecclesiastical law which invalidates marriage within those limits. It is commonly held, with regard to

those related by consanguinity or affinity, that with the exception of the first degree in the direct line all forms of incest are, morally speaking, of the same species, and therefore for the integrity of confession there is no necessity to distinguish between them. It must be noted, however, that carnal sins between those who are spiritually or legally related within the degrees that would render their marriage invalid, are separate species of incest. A decree of the Holy Office, 25 June, 1885, declares that in applications for matrimonial dispensations it is no longer necessary to make mention of the circumstance of incestuous relations between the petitioners.

JOSEPH F. DELANY.

Inchbald, ELIZABETH, novelist, dramatist, and actress; b. at Staningfield, near Bury St. Edmunds, 15 Oct., 1753; d. at Kensington, London, 1 Aug., 1821; daughter of John Simpson (d. 1761), a Catholic farmer of some social position. From an early age she wished to be an actress, but an impediment in her speech raised a difficulty. She visited London several times and then suddenly left her home in 1772 and went to town to seek her fortune as an actress. In the same year she married Joseph Inchbald, actor, artist and Catholic, whom she had met some months earlier. From that time her career was marked out. She began by playing Cordelia to her husband's Lear and continued to act in a large number of characters until she retired from the stage in 1789. She is said to have won warm praise from her audiences though she was not a great actress. Her husband died in 1779, and in 1782 she had her first play accepted. As a dramatist she produced more than a dozen plays (chiefly to be found in old dramatic collections), of which some, however, were translations or adaptations. None of her dramatic work takes a high rank, though the characters are fairly well drawn, and the dialogue is vivid and witty. Her life during the time following her husband's death, and, indeed, before, was by no means an easy one, but she made good friends, amongst them Mrs. Siddons and John Kemble, and her wit, warmth of heart, and talent won for her a place in society which she greatly enjoyed. In 1791 she produced her first novel, "*A Simple Story*", which was successful at once. The story is one of much interest and pathos, and is simply and vivaciously told; it is one of the earliest specimens of the English novel of passion and has been very often reprinted (latest edition, London, 1908). Her second story, "*Nature and Art*", is not so good, but it won popularity and is still interesting to the student of the eighteenth-century novel. It contains in a mild form some of the revolutionary opinions concerning society which nearly all the young literary people of that time discussed in their work (a handy modern edition of it is that of Cassell, London, 1886). Though at times she grew lax in the practice of her faith, Mrs. Inchbald all her life was a sincere Catholic and at the close of her life turned fervently to the ways of piety. On the advice of Dr. Poynter, vicar Apostolic of the London district, she burnt her memoirs which she had prepared for publication. All her biographers agree as to her beauty and charm, her stainless life, and her generous charities.

In Cœna Domini, a papal Bull, so called from the feast on which it was annually published in Rome, viz. the feast of the Lord's Supper, or Maundy Thursday. The ceremony took place in the loggia of St. Peter's in the presence of the pope, the College of Cardinals, and the Roman Court. The Bull was read first in Latin by an auditor of the Sacred Roman Rota,

and then in Italian by a cardinal-deacon. When the reading was over the pope flung a lighted waxen torch into the piazza beneath. The Bull contained a collection of censures of excommunication against the perpetrators of various offences, absolution from which was reserved to the pope. The custom of periodical publication of censures is an old one. The tenth canon of the Council of York (1195) orders all priests to publish censures of excommunication against perjurers with bell and lighted candle thrice in the year. The Council of London (1200) commands the yearly publication of excommunication against sorcerers, perjurers, incendiaries, thieves, and those guilty of rape. The first list of censures of the "Bulla Cœnæ" appeared in the fourteenth century, and was added to and modified as time went on, until its final revision under Urban VIII in the year 1627, after which it remained practically unchanged till its formal abrogation in the last century. Under Urban V (1363) the list contained seven cases; under Gregory XI (1372) nine; under Martin V (1420) ten; under Julius II (1511) twelve; under Paul III (1536) seventeen; under Gregory XIII (1577) twenty, and under the same pontiff in the year 1583 twenty-one; under Paul V (1606 and 1619) twenty; and the same number in the final shape given to it by Urban VIII.

The main heads of the offences struck with excommunication in the Bull are as follows: (1) Apostasy, heresy, and schism. (2) Appeals from the pope to a general council. (3) Piracy in the papal seas. (4) Plundering shipwrecked vessels, and seizure of flotsam and jetsam. (5) The imposition of new tolls and taxes, or the increase of old ones in cases where such was not allowed by law or by permission of the Holy See. (6) The falsification of Apostolic Briefs and Bulls. (7) The supply of arms, ammunition, or war-material to Saracens, Turks, or other enemies of Christendom. (8) The hindering of the exportation of food and other commodities to the seat of the Roman court. (9) Violence done to travellers on their way to and from the Roman court. (10) Violence done to cardinals, legates, nuncios, etc. (11) Violence done to those who were treating matters with the Roman court. (12) Appeals from ecclesiastical to secular courts. (13) The avocation of spiritual causes from ecclesiastical to lay courts. (14) The subjection of ecclesiastics to lay courts. (15) The molestation of ecclesiastical judges. (16) The usurpation of church goods, or the sequestration of the same without leave of the proper ecclesiastical authorities. (17) The imposition of tithes and taxes on ecclesiastics without special leave of the pope. (18) The interference of lay judges in capital or criminal causes of ecclesiastics. (19) The invasion, occupation, or usurpation of any part of the Pontifical States. There was a clause in the older editions of the Bull, ordering all patriarchs, archbishops, and bishops to see to its regular publication in their spheres of jurisdiction, but this was not carried out, as we learn from a letter of Pius V to the King of Naples. The efforts of this pope to bring about its solemn publication in every part of the Church were foiled by the opposition of the reigning powers. Philip II, in the year 1582, expelled the papal nuncio from his kingdom for attempting to publish the Bull. Its publication was forbidden in France and Portugal. Rudolf II (1576-1612) likewise opposed it. In spite of the opposition of princes it was known to the faithful through diocesan rituals, provincial chapters of monks, and the promulgation of jubilees. Confessors were often ordered to have a copy of it in their possession; St. Charles Borromeo had a copy of it posted up in every confessional in his diocese. In Rome its solemn publication took place year after year, on Holy Thursday, until 1770, when it was omitted by Clement XIV and never again resumed.

A widespread and growing opposition to papal pre-

rogatives in the eighteenth century, the works of Febronius and Pereira, favouring the omnipotence of the State, eventually resulted in a general attack on the Bull. A very few of its provisions were rooted in the old medieval relations between Church and State, when the pope could effectually champion the cause of the oppressed, and by his spiritual power remedy evils, with which temporal rulers were powerless or unwilling to deal. They had outlived their time. The excommunication of Ferdinand, Duke of Parma, by Clement XIII on 30 January, 1768, proved the signal for a storm of opposition against the Holy Thursday Bull in almost all the European states. Joseph I of Portugal issued an edict on 2 April, 1768, declaring it treason to print, or sell, or distribute, or make any judicial reference to the Bull. Similar edicts followed in the same year from Ferdinand IV of Naples, the Duke of Parma, the Prince of Monaco, the free states of Genoa and Venice, and Maria Teresa, Empress of Austria, to her subjects in Lombardy. Joseph II followed the lead of his mother, and on 14 April, 1781, he, pope-like, informed his subjects that "the power of absolving from the cases reserved in the 'Bulla Cœnæ', which the pope had hitherto given in the so-called quinquennial faculties, was now and henceforth entirely withdrawn." On 4 May of the same year he ordered the Bull to be struck out of the rituals, and no more use to be made of it. In 1769 appeared Le Bret's well-known attack on the Bull in four volumes, under the title "Pragmatische Geschichte der so berufenen Bulle in Cœna Domini, und ihrer fürchterlichen Folgen für Staat und Kirche" (Frankfurt, 1769). Towards the end of the work he appeals to the humanity, wisdom, and magnanimity of the newly-elected pontiff, Clement XIV, to suppress it. Clement, who already as cardinal had expressed his view as to the necessity of living in peace and harmony with the heads of Christian states, omitted its publication, but did not formally abrogate it. St. Pius V had inserted a clause in it, which stated that it would continue to have the force of law until the Holy See should substitute another in its place. In the quinquennial faculties delivered to bishops the pope continued to grant power to absolve from its cases. This was done so late as 1855 by Pius IX. For these reasons theologians and canonists commonly held that the main provisions of the Bull were still in force. Nevertheless, there was good ground for supposing that the few obnoxious clauses that had outlived their purpose, and in the changed times were no longer applicable to the Christian community, had ceased to have any binding force. The Bull was formally abrogated by Pius IX through the issue of the new Constitution "Apostolica Sedes" (q. v.), in which the censures against piracy, against appropriating shipwrecked goods, against supplying infidels with war-material, and against the levying of new tolls and taxes find no place. In the preamble to the Constitution the pope remarks that, with altered times and customs, certain ecclesiastical censures no longer fulfilled their original purpose, and had ceased to be useful or opportune.

In the controversies that arose at the time of the Vatican Council about papal infallibility, the Bull "In Cœna Domini" was dragged to the front, and Janus said of it that if any Bull bears the stamp of an ex cathedra decision it must surely be this one, which was confirmed again and again by so many popes. Hergenröther, afterwards made cardinal at the same time as Newman, had no difficulty in showing in his "Catholic Church and Christian State" the absurdity of this assertion.

JOHN PRIOR.

In Commendam.—A phrase used in canon law to designate a certain manner of collating an ecclesiastical benefice. The word *commendam* is the accusative of the Low Latin noun *commenda*, "trust", or "custody", which is derived from the verb *commendare* (to give in trust). The phrase *in commendam* was originally applied to the provisional collation and occupation of an ecclesiastical benefice which was temporarily without an actual occupant. It was thus opposed to the phrase *in titulum* which was applied to the regular and unconditioned collation of benefices. The custom of giving benefices *in commendam* dates back to the fourth century. Thus St. Ambrose makes mention of a church which he gave *in commendam*, while he was Bishop of Milan: "Commendo tibi, fili, Ecclesiam quæ est ad Forum Cornelli . . . donec ei ordinetur episcopus." (Ep. ii, P. L., XVI, 886-87). The Third Council of Orleans, held in 538, in its eighteenth canon puts commendams under episcopal supervision (Mansi, "Coll. Amplissima Conc.", IX, 17). Gregory the Great on various occasions gave churches and monasteries *in commendam* to such bishops as had been driven from their sees by the invading barbarians, or whose own churches were too poor to furnish them a decent livelihood (Epp. i, 40; ii, 38; iii, 13; vi, 21; in P. L., LXXVII, 493, 577, 614, 812). In course of time the custom arose of allowing ecclesiastics, and even laymen, to draw the revenues of ecclesiastical benefices, without having any jurisdiction over spiritual affairs. In many cases, also, the one who held a benefice *in commendam* in this manner had the right and the obligation to engage and pay an ecclesiastic for fulfilling the spiritual obligations of the benefice. In the Middle Ages such commendams were often given to students, professors, church diplomats, cardinals, and others. (Concerning the abuses of this practice and the efforts of popes and councils to put an end to them, see COMMENDATORY ABBOT.) The pope has now reserved to himself the right of giving benefices *in commendam*, but makes use of this right only in cases of cardinals who reside in Rome. At present Cardinal Oreglia holds *in commendam* the Church of Santi Vincenzo ed Anastasio alle tre Fontane; Cardinal Agliardi, the Church of San Lorenzo in Damaso; Cardinal Vincenzo Vannutelli, the Church of San Silvestro in Capite; Cardinal Cassetta, the Church of Santi Vito, Modesto e Crescenzia, and Cardinal Rampolla is Grand Commendatory Prior of the Knights of Malta.

Besides the bibliography mentioned under COMMENDATORY ABBOT, see PERMANEDER in *Kirchenlex.*, s. v. *Commende*; PHILLIPS, *Kirchenrecht*, VII (Ratisbon, 1845-89), 282 sq.; HINSCHEUS, *Das Kirchenrecht der Katholiken und Protestanten in Deutschland*, III (Berlin, 1869-97), 109; DE CANGE, *Glossarium Medicæ et Infimæ Latinitatis*, II (Niort, 1883-7), 441.

MICHAEL OTT.

Incorporation of Church Property, CIVIL.—Christianity at its very beginning, found the concept of the corporation well developed under Roman law and widely and variously organized in Roman society. It was a concept that the early Christians soon adapted to their organization and, as a means of protection in the periods of persecution. Whether we attach to the burial corporations (*collegia tenuiorum* or *funeraticia*) of the early Christians the importance that De Rossi and other archæologists do, there can be no doubt that in the second and third centuries of the Christian era the corporation was generally resorted to as a means of holding, and transmitting church property. In later times this concept fitted in naturally with the genius of the religious orders, and the great monastic establishments of the Middle Ages were organized on that plan. "In the Middle Ages, all life", says Dr. Shahan (Middle Ages, p. 346), "was corporate. As religion was largely carried on by the corporations of monks and friars, so the civic life and its duties were everywhere in the hands of corpora-

tions." The mortmain legislation of the Middle Ages indicates that the corporation, as adapted for the holding of ecclesiastical property, was not only a secure, but a prosperous method of tenure in times of feudal warfare. In one instance, the Middle Ages improved upon the Roman concept of the corporation. The corporation sole was a refinement of the canon lawyers. Its most familiar instance in English law is the bishop, the vicar, or the pastor, who succeeds to the rights of an office and by consequence to the sole custody of its temporalities. Blackstone's division of corporation into lay and ecclesiastical (Commentaries, Book II, ch. 18) has no application in the United States where all incorporated religious societies are treated as private civic corporations.

IN THE UNITED STATES.—While in England corporations exist or are created by prescription, royal charter, or Act of Parliament, in the United States they are created by the state legislature, either by special Act or under the provisions of general statutes. Congress may create corporations only as incident to its powers of government, as set forth in the federal constitution, and not in any case, religious corporations. General provisions for the incorporation of religious societies are found, at an early date, in the laws of most of the states (as New York, in 1784). And provisions for the incorporation of the churches of special denominations soon followed (in New York, for the Protestant Episcopal Church in 1813; for the Society of Friends in 1839; for the Catholic Church in 1863). Prior to the Revolution, when the Catholic Church was without civil rights in the colonies, title to its property was held in the name of individuals. The Jesuit estates in Maryland were so held for one hundred and fifty years. With the establishment of the United States, Catholic bodies proceeded after the fashion of their fellow citizens of other denominations, to incorporate. The religious orders were among the first: the Augustinian Fathers at Philadelphia, in 1796; the Sulpicians at Baltimore, in 1805; the Jesuits at Georgetown, in 1815; some years later the Dominicans, by Act of legislature in Ohio, etc. With the acquiescence of Archbishop Carroll many parishes also incorporated; St. Mary's and Holy Trinity, two Philadelphia congregations, as early as 1788. There was no uniform plan followed in these articles of incorporation, and no sufficient safeguarding of ecclesiastical discipline. In the ensuing years a number of disedifying controversies arose between lay trustees on the one hand and the bishop or his representative, the pastor, on the other, chiefly relating to the right of the bishop to designate for the congregation a pastor not of their preference, or (as in the case of the famous Hogan schism in Philadelphia, 1821-2) to exclude a pastor deemed unfit or disqualified. Troubles of this kind led to a Brief dated August 22, 1822, from Pius VII to Archbishop Maréchal, in which "the immoderate and unlimited right which trustees or the administrators of the temporal properties of the Church assume independently of the diocesan bishops", is condemned. As a further consequence, the fifth decree of the First Provincial Council of Baltimore (1829), orders: "Since lay trustees have too often abused the power given them by the civil law, to the great detriment of religion, we greatly desire that in the future no church shall be built or consecrated unless it shall have been assigned, by written instrument to the bishop in whose diocese it is to be built, wherever this can be done." This policy, in a general way, governed the tenure of Catholic church property in the United States for the ensuing generation, and by 1855 Catholic churches in the United States (except those held by religious orders) were almost wholly in the name of the bishops.

But in the meanwhile, it appears to have been recognized that the holding of church property in the name of the bishop, under the rules of canon law, was fraught with some dangers and inconveniences. In

1855 the New York legislature had passed a law providing that "no interest in property, real or personal, should be conveyable or descendible to any ecclesiastic or his successor in any ecclesiastical office." There was similar legislation in Pennsylvania and Ohio. Such legislation, with the waning of the anti-Catholic spirit which had fostered it, was soon repealed; but in 1863, a measure for the incorporation of Catholic church property, drawn by the eminent lawyer, Charles O'Connor, at the request of Archbishop Hughes, was enacted by the New York legislature. This measure may be regarded as another deviation in the policy of the hierarchy, away from the plan of vesting in fee simple the large temporalities of great dioceses in one man, even though subject to the trusteeship prescribed in the canon law, and a return to some of the features of lay trusteeship, limited and safeguarded however by the rules of ecclesiastical discipline.

Meanwhile such instances as the attempt of European relatives in 1868 to contest the will of Bishop Baraga, devising the church property of the Marquette Diocese to his successor, and the Purell failure in 1879 (involving two hundred pieces of church property and a long period of litigation), were so persuasive that "the Third Plenary Council of Baltimore (1884), in its decrees on the subject of church property, urges the bishops to place all church property under the protection of legal incorporation, where it can be done safely, as in the State of New York; where such incorporation cannot be made it requests the bishop to have himself made a corporation sole and thus hold the property as any other corporation would; and where this cannot be done it permits him to hold the property in fee simple" (Rev. J. M. Farley, now Archbishop Farley, in "The Forum", June, 1894). Justice Strong, formerly of the United States Supreme Court, says: "Almost all, if not all, the questions mooted in the civil courts of this country, relating to church polity, discipline, officers or members, have arisen incidentally in controversies respecting church property" (Relation of Civil Law to Church Polity, p. 40). It is recognized in numerous decisions of American courts (Am. and Eng. Ency. of Law, XXIV, 330), that the terms "church" and "incorporated religious society" are not identical. The former is the larger term—its objects and purposes are moral and religious, the church incorporation is subsidiary, having to do chiefly with the care and control of the temporalities. While for various, and no doubt sufficient reasons, the title to church property continues in the bishop in fee simple as heretofore, in a number of states, e. g. Ohio, Pennsylvania, the tendency is towards incorporation, either by special acts making the bishop a "corporation sole" or under the terms of general provisions drawn especially to suit the needs and circumstances of the Catholic Church, e. g. the New York law of 1863, or agreeable thereto, as the Michigan law of 1897. In Maryland the Archbishop of Baltimore holds all church property as a corporation sole. This title was obtained from the legislature of Maryland by Archbishop Whitfield; its powers and scope were enlarged in the time of Archbishop Spalding, and again in the time of Archbishop Bayley and also under Cardinal Gibbons. By an act of the Massachusetts legislature (ch. 560; 1897) "the present Roman Catholic Archbishop of the Archdiocese of Boston, and his successors in office, shall be and are made a body politic and corporation sole" to receive, take and hold, by sale, gift, lease, devise or otherwise real and personal property of every description for religious, charitable and burial purposes. There are similar Acts for the other dioceses in Massachusetts. In the Chicago Archdiocese all diocesan property is held by "the Catholic Bishop of Chicago" as a corporation sole; he is responsible for all matters pertaining to its administration. This is in accordance with the statutes of the

State of Illinois. Under the provisions of the California code, the church property in the several Catholic dioceses within the state is held by the bishop or archbishop as a corporation sole. Section 602 of the California code provides: "Whenever the rules, regulations or discipline of any religious denomination, society or church so require, for the temporalities thereof, and the management of the estate and property thereof, it shall be lawful for the bishop, chief priest, or presiding elder of such religious denomination, society or church to become a sole corporation, in the manner prescribed in this title, as nearly as may be, and with all the powers and duties, and for the uses and purposes in this title provided for religious incorporation and subject to all the provisions, conditions and limitations in said title prescribed." By the terms of the New York Act of 1863 (ch. 45), the Roman Catholic archbishop or bishop, the vicar-general, the pastor of the congregation and two laymen, the two last being selected by the three first mentioned or by a majority of them, form the board of trustees. The two laymen hold office for one year and their successors are appointed in the same manner as provided for the original selection. The New York law has furnished the model for like statutes in Minnesota, North and South Dakota, and other states. In Wisconsin (Sec. 2001-10, m. S., ch. 37; Laws of 1883) "the bishop of each diocese being the only trustee of each Roman Catholic church in his diocese, may cause any or all congregations therein to be incorporated by adding four more members as trustees as hereinafter provided. The bishop and vicar-general of each diocese, the pastor of the congregation to be incorporated together with two laymen, practical communicants of such congregation (the latter to be chosen from and by the congregation) shall be trustees." It is provided that the bishop and vicar-general may be represented by proxy at any meeting of the board of trustees. The trustees or directors, may, by unanimous vote, adopt by-laws not contrary to the statutes of the diocese and the discipline of the Roman Catholic Church.

In Michigan an Act to revise, amend, and consolidate the laws for the incorporation of ecclesiastical bodies, passed in 1897, was regarded by the late Rev. P. A. Baart, an eminent canonist, as "the most liberal of any law in the country" on the subject. He says that "being a general law which fits all denominations, it will not be easily changed in the future." Some of the provisions of this enactment are as follows: "Section 1. The people of the state of Michigan enact, That it shall be lawful for any five or more persons of full age to become incorporated as a church, religious society, Sunday school or other society for the purpose of diffusing moral or religious knowledge by complying with the following conditions. . . ." (These relate to the statements to be contained in the articles of association and the filing of such articles with the registrar of deeds and the secretary of State.) "Section 4. The persons forming such corporations shall adopt by-laws, and execute and acknowledge them in the same manner as the articles of association above provided for, and such by-laws shall be recorded in the office of the registrar of deeds of the county where such corporation is to hold its regular meetings. Such by-laws shall prescribe the qualifications of members; the manner in which they shall be admitted, suspended or expelled; the officers of such corporations, their official title, their term of office; the manner of their election and removal from office; their official duties; the time and manner of calling and holding meetings, etc." The constitution of one state, West Virginia, prohibits the granting of charters of incorporation to religious societies. It may be said that as a rule, all Catholic educational and charitable institutions throughout the United States which have attained any importance or permanence are incorporated, usually under the provisions of general statutes for the

incorporation of civil corporations. In states, such as Indiana, California, Michigan, Wisconsin and New York (especially prior to 1893), where the principle of the statute of charitable uses is not recognized, bequests to unincorporated institutions have frequently been declared invalid because of the uncertainty of the beneficiary (*Ruth and others vs. Oberbrunner and another*: 40 Wis. 238). In many states, such as New York and Pennsylvania, legacies to religious corporations are exempt from the inheritance tax; whereas a bequest to an unincorporated body, even though religious in its purposes, would be charged with the inheritance tax. Thus, in New York, a bequest to a missionary society, known as "The Paulist Fathers" was held liable to the tax [*In re Kavanaugh estate (Surr.)*, 6 N. Y., Supp. 619]. The inheritance tax legislation, which is now coming to be practically general, may, in states where the title to Catholic church property is still held by the bishops in fee simple, raise issues of some financial importance when it comes to transferring the estate of a deceased bishop to his successor. The policy of the law evidently favours the incorporation of religious societies. This is also shown in the extra safeguards which the statutes of many states throw about the incorporated cemetery.

IN GREAT BRITAIN.—The state does not consider the Catholic Church as a corporation. Neither is a Catholic bishop made a corporation sole. Catholic Church property is usually held by trustees under a trust deed, or by joint ownership, where no trust has been declared. The mere purpose of holding or administering Catholic church property would not be admitted by the Registrar-General as a purpose which would warrant the registering of a corporation under the Companies Act. Up to 1832, when the Roman Catholic Charity Act was enacted, the only way the English Catholics had of securing bequests and foundations was to place the property or money in the names of private persons who could be depended upon to apply it as desired by the donor. If these private parties appropriated the property or money or in any manner disregarded the trust, there was no remedy, as in the eyes of English law it was held to be their private property. A great deal of Catholic church property at the present day is simply invested in names, generally three, without mentioning any trust. When the Roman Catholic Charities Act of 1860 was before Parliament the question of declaring trusts was referred by the English bishops to the Holy See. Cardinal Wiseman was of opinion that owing to bequests for Masses, etc., and conditions which the courts would hold as superstitious there was great danger of losing the property altogether. The Holy See took the opinion of the majority of the bishops, and in 1862 decided that trusts might be declared in accordance with the Act except in cases where there would be danger to the property. As a rule, however, the implied trust is generally recognized even to the extent of excusing such property from inheritance or succession duty. There is a charity Trust Act (1853, with later amendments) authorizing the registration of mission, school and conventual property as a means of securing it for the purpose intended; but owing to the powers of the government department over such registered property and the publicity involved, many bishops and superiors have not availed themselves of the advantages of the Act.

HUMPHREY J. DESMOND.

IN CANADA.—Corporate bodies may be created in Canada either by authority of the Dominion Parliament.

ment or of the Legislature of any of the provinces. The respective powers as to incorporation are derived from the "British North America Act," 1867, under which the Dominion was constituted. Section 91 of that Act sets out the powers of the Parliament of Canada, and Section 92 the exclusive powers of the provincial Legislatures. To the latter was given the right to make laws in relation to "municipal institutions in the province", "local works and undertakings" (with certain specified exceptions), "the incorporation of companies with provincial objects", "property and civil rights in the province", and "generally all matters of a merely local or private nature in the province" Bodies corporate falling within any of the above classes can be created by provincial charter. In all other cases the charter must be procured from the federal authorities. The sections of the "British North America Act" dealing with the distribution of the legislative powers, and very particularly in their application to commercial corporations, have been subjected to judicial interpretation in many cases decided in the Canadian Courts and in the judicial committee of the Privy Council. A provincial legislature may pass Acts enabling corporations to carry on certain operations within that particular province, and the Dominion Parliament may pass Acts empowering corporations to carry on the same operations throughout the whole Dominion. If a Dominion corporation should decide to confine its operations to one province only, its status as a corporation is not thereby affected. On the other hand, it has been decided that a fire insurance company created under authority of a provincial Act is not inherently incapable of entering, outside its province of origin, into a valid contract of insurance relating to property also outside of those limits (*Can. Pac. Ry. Co. vs. Ottawa Fire Ins. Co.*, 39 Sup. Ct. Rep. 405). Corporations, whether federal or provincial, may be created in two ways,—by special Act or by letters patent. When the former mode is adopted, the Bill to create the corporation is introduced and passed through Parliament or the Legislature, as the case may be, in the same manner as other Bills, and subject to the rules of procedure of the legislative body. Religious corporations are created by special Act. Commercial companies are generally created by letters patent; and application therefor is made by petition, setting forth the proposed name of the company, the objects for which it is sought to be incorporated, the amount of the capital, number of shares, and information of a like nature. After examination of the petition and payment of a prescribed fee, the Governor-General of Canada or the Governor of the province, as the case may be, issues letters patent to the applicant. All corporations must comply with the provincial regulations, as to payment of license to do business within any particular province, and with municipal regulations as to payment of taxes, etc. Foreign corporations are permitted to exercise their functions within any of the provinces of Canada under the comity of nations, but they must also comply with all local regulations.

Index, CONGREGATION OF THE. See ROMAN CONGREGATIONS.

Index of Prohibited Books, or simply INDEX, is used in a restricted sense to signify the exact list or catalogue of books, the reading of which is forbidden

to Catholics by the highest ecclesiastical authority. This list forms the second and larger part of the codex entitled "Index librorum prohibitorum", which contains the entire ecclesiastical legislation relating to books. The "Index librorum prohibitorum", as an integral part of the prohibition of books, has already been dealt with in the article CENSORSHIP OF BOOKS.

A book is prohibited or put on the Index by decree of the Sacred Congregation of the Roman Inquisition, of the Sacred Office, or of the Index, which decree, though approved by the pope (*in forma communi*), always remains a purely congregational decree. It need scarcely be mentioned that the pope alone, without having recourse to any of the congregations, may put a book on the Index, either by issuing a Bull or a Brief, or in any other way he chooses. Formerly it was the rule that a book was examined by one of the Roman Congregations only after complaint had been made to Rome. With regard to the Congregation of the Index, however, Pius X, when reorganizing the Roman Curia by the Constitution "Sapienti consilio" (29 June, 1908), decreed as follows: "Henceforth it will be the task of this Sacred Congregation not only to examine carefully the books denounced to it, to prohibit them if necessary, and to grant permission for reading forbidden books, but also to supervise, *ex officio*, books that are being published, and to pass sentence on such as deserve to be prohibited. Its further task is to remind the bishops of their sacred duty to combat the publication of pernicious writings and give information about them to the Apostolic See, in accordance with the Constitution "Officiorum ac munerum" of 25 January, 1897 (Acta S. Sedis, XI, 432).

In the reorganization of the Roman Congregations, Pius X did not change the constitution or methods of the Congregation of the Index, but rather confirmed anew Leo XIII's Bull "Officiorum", together with Benedict XIV's "Sollicita ac provida" sanctioned therein. This Bull of Benedict XIV, published on 8 July, 1753, regulates in detail the procedure of the Roman Congregations in the examination of pernicious books. It strictly commands that the examination of a book be entrusted only to revisors well versed in the particular language and branch of learning. They must be free from all partisanship and prejudice, and must pass judgment not according to their private predilections or the tenets of any school, but simply and solely according to the general Catholic teaching and the dogmas of Holy Church. Especially when examining books of Catholic authors of merit, they ought, in a spirit of fairness and leniency, to allow them free circulation, if at all possible. In no case ought the book of a Catholic author to be condemned on the strength of the verdict of *one* revisor, not even when all the consultors agree with him. Together with the report of the first revisor—whose name, however, must not be mentioned—the book must be given to another for a second revision, and only when the second revisor's verdict is in agreement with that of the first are both reports referred to the cardinals for final decision. If, however, the second revisor be of opinion that the book ought not to be prohibited, a third shall examine both verdicts as well as the book itself, but without knowing the names of the other revisors. If the opinion of the third coincides with that of the first, and with the general vote of the consultors, the case may be passed on to the cardinals. Otherwise the consultors are again to give their votes, whereupon the matter is put before the cardinals for final decision.

In the case of writings which, according to the decision of the congregation, may be published in a revised edition, the congregation should, if possible, hear the author's own defence or else appoint a consultant *ex officio* for the defence. If the book have

been forbidden with the clause "donec corrigatur" (i. e. until corrected), and the author be willing to publish an edition in keeping with the wishes and orders of the congregation, the decree of prohibition is to be withheld, unless the prohibited edition be already widely circulated and known. In the latter case, when promulgating the decree, the new revised edition is to be expressly mentioned as authorized. The secretary to the Congregation of the Index is empowered to communicate the strictures passed on censored books to the respective authors or their representatives—but to these only at the author's request. Otherwise the official secret is to be strictly observed by all who have taken part in the process. Books, which at first sight are recognized as very dangerously heretical or immoral, may be forthwith prohibited.

The first printed catalogues of forbidden books did not appear at Rome, and, even after the institution of civil censorship, lists of books and writings prohibited by the State continued to appear, and are even yet published (see Hilgers, "Der Index der verbotenen Bücher"). The first Roman "Index of Prohibited Books" (Index librorum prohibitorum), published in 1559 under Paul IV, was very severe, and was therefore mitigated under that pontiff by decree of the Holy Office of 14 June of the same year. It was only in 1909 that this "Moderatio Indicis librorum prohibitorum" (Mitigation of the Index of Prohibited Books) was re-discovered in "Codex Vaticanus lat. 3958, fol. 74", and was published for the first time in the "Zentralblatt für Bibliothekswesen" (Leipzig, 1909–10). Concerning the curious indexes of 1590 and 1593, which were printed but never promulgated, see Hilgers, "Der Index der verbotenen Bücher", 12 sq., 524 sqq., 529 sqq. The last and best edition of the Index, published by Leo XIII (Rome, 1900) and now in force, was reprinted in 1901, and again under Pius X in 1904 and 1907.

PETZOLDT, *Catalogus Indicis librorum prohibitorum et expurgandorum* (Dresden, 1859); REUSCH, *Die Indices librorum prohibitorum des sechzehnten Jahrhunderts* (Tübingen, 1886).

JOSEPH HILGERS.

India.—In popular language the name "India", in its widest extension, is taken to include British India proper, Native States, Portuguese and French India, Burma, and Ceylon, and is even sometimes stretched to include Indo-China. In its strictest sense, however, it means the Indian Empire properly so-called. The Indian Empire, as at present constituted, comprises (besides the peninsula) Burma, Aden, the Laccadive, Maldiva, Andaman, and Nicobar Islands, but does not include Ceylon, which is a Crown colony politically distinct. Its total area exceeds 1,800,000 square miles—fifteen times that of the United Kingdom, nearly one-sixth of the area of the whole British Empire, and three-quarters of the area of Europe. About 1,000,000 square miles are directly under British rule, the rest consisting of Native States and Agencies and the small possessions of France and Portugal. The greatest length, from Kashmir to Cape Comorin, is 2022 miles, and the greatest breadth, from Eastern Burma to Karachi, 2520 miles. The land frontier measures about 6000, and the coast line about 9000, miles. It will be useful at the outset to point out the impossibility of forming one united conception of anything connected with India. It is not a country but rather a continent, comprising such a variety of physical features, climates, seasons, products, races, religions, customs, and languages as to require an encyclopedia by itself. Nor can any amount of knowledge gathered in one part of this immense territory be taken as applicable without qualification to another.

PHYSICAL FEATURES.—The peninsula is separated on the north from Tibet and Central Asia by the Himalaya, Hindu Kush, and Karakoram mountains,

EASTERN CAVE, CAVES OF ELLORA

INDIA

and some lower ranges divide it from Afghanistan and Baluchistan. Attached to the Bombay Presidency is a certain portion of Baluchistan bordering on the Afghan frontier. Within its general boundaries there are several small portions of territory belonging to Portugal and France, having their centres of government at Goa and Pondicherry respectively. In point of contour, Bengal, Sind, Rajputana, and the Punjab are flat, being formed by the alluvium of the Ganges and Indus respectively. The rest of the peninsula is roughly speaking a plateau rising abruptly at the western edge and gradually sloping down to the east coast. As a consequence the watershed line is generally at the summit of the western Ghats, 30 to 100 miles from the west coast. From this point a few

The climate is on the whole dry and rainless for two-thirds of the year, during which time crops are possible only by means of irrigation. The rainy season (called the monsoon) occupies the remaining four months but differs on the two sides of the country. On the western coast it lasts from June to September, while on the east coast it occurs from October to December—in each case the rain being borne on to the land by the sea breeze. The rainfall on the western coast strip is about 70 inches, while on the Ghat line it sometimes rises to 300, but falls in the interior to 30, 20 and even less than 10 inches. In the northern parts and on the east coast the rainfall is less, while in the desert districts of Sind, Rajputana, etc. it is very scanty. About the Himalayas the conditions approach more

BENARES FROM THE RIVER GANGES
[Holy City of the Hindus]

small rivers run their short course to the Arabian Sea, but the greater ones rise in the heart of the Ghats and run across the whole peninsula, increasing in volume as they progress, and empty their waters into the Gulf of Bengal (Mahanadi, Godaveri, Kistna, Kaveri, etc.). In the more northerly parts, however, the plateau recedes inland, and here two rivers of considerable size (Tapti and Nerbudda) run into the Arabian Sea. The average level of the Deccan plateau is under 2000 feet; but it contains many ranges and isolated mountains rising over 4000 feet, chiefly along the western edge, and there are still higher parts in the Mysore and neighbouring districts, where the highest point is 8840 feet above sea level. The coast is for the most part flat and straight, with a considerable number of small indentations suitable for small craft; but there are very few large harbours: Karachi (mostly artificial), Bombay, and Marmagoa are the only ones which are practicable on the west side, while on the east there is not a single one, Madras harbour being purely artificial, and Calcutta over 100 miles up the River Hooghly.

nearly to those of Europe. One-half of the latitude of India falls within the tropics. Ice and snow are entirely unknown except in the high altitudes, and hail is rare and phenomenal. The temperature, which varies much locally, falls in the aggregate rarely lower than 50° and rises in parts as high as 120° in the shade. In the tropical portions there are two hot seasons, the one before and the other after the rains (May and October). With due precautions against exposure to the sun, avoidance of chills, a carefully adjusted diet and judiciously regulated exercise, Europeans find the country on the whole healthy though enervating; but any weakness in the constitution is more likely to reveal itself there than at home, especially among men who go out after the prime of life. The people as a whole are of a mild and inoffensive character, and obsequious to the European; and except for a chance of robbery among the remote hill tribes, the traveller is everywhere as safe as he would be in any part of Europe.

India is covered over with a network of railways,

along which the chief business centres and the chief objects of interest for the traveller are situated—the rest being accessible by journeys of a few miles by *tonga* along decent roads. Except in the cities much frequented by Europeans hotels are scarce; but refreshment rooms and even sleeping rooms are found in the more important railway stations, otherwise resort must be had to "travellers' bungalows", in some of which food can be obtained by previous notice. In Native States respectable Europeans are accepted as guests of the State, and guest-houses are provided for them. In other remote districts resident European officials can be relied upon for incidental hospitality in case of emergency. In a few large cities such as Calcutta, Bombay, and Karachi, European commodities of

Kolarian aborigines of the Central Provinces, from four to five millions; (4) the Tibeto-Burmese, above eleven millions; (5) Europeans, a fluctuating figure something over 170,000; (6) Parsees about 94,000; (7) Jews, 18,000—smaller classifications being omitted. The prevailing languages are correspondingly the Aryan (Hindi, Bengali, Marathi, Punjabi, Gujerathi, Uriya, Sindi, etc.); the Dravidian (Telugu, Tamil, Malayalam, and Canarese); the Kolarian (Santali) and the Tibetan and Burmese. There are also very many minor languages confined to small districts or single tribes. The lingua franca of the country is Hindustani, or Urdu, a mixture of Hindi with Persian and Arabic words, and written in the Arabic or in the Devanagiri character—its prevalence being due to the Mogul domination.

POLITICAL HISTORY.—The historical vicissitudes of India have been likened to the waves of the ocean flowing into a shallow bay, one following after another, and each obliterating wholly or partially the effects of the preceding. It may also be likened to a kaleidoscope of ever-changing colour and form, as kingdom after kingdom has risen and fallen, coagulated and disintegrated, and as the supremacy has passed from hand to hand. The ancient portion of this history is almost without dates, and even the events themselves are mostly gathered from precarious references. Consequently, as regards origins, even what is certain must from the nature of the case be vague. Down to some unascertainable date (possibly about 1500 B. C.) India was inhabited partly by the various aboriginal peoples (Kolarians, etc.) whose remnants are still found surviving in the country, and partly by Dravidian immigrants who had superseded these aborigines at some very early period. About that time the great Aryan family divided into two sections, one passing southwards into India. This Aryan race in great part held aloof from the people they subjugated, whom they regarded with contempt. But in some degree mixture was inevitable; and thus a large number of local tribes, some pure Aryan, others aboriginal, others mixed, came into existence. When Alexander the Great made his expedition to India in 326 B. C., his sphere of activity did not extend beyond the Sutlej. After his death and the breaking up of his empire, the people of India, under the leadership of a prince of Patna (305 B. C.) forced the Greek invader to relinquish all share in the country. Many of the Indian tribes were then gradually consolidated into an empire which reached its highest organization under Asoka (272–232 B. C.). The empire of Asoka comprised practically the whole of the peninsula except the portion south of Madras, which was held independently by the more ancient Chola, Pandya, Chera, and Satuja dynasties. Soon after Asoka's death, his kingdom broke up into several smaller ones bearing the names of Kalinga, Andhra, Malwa, and Magadha, besides numbers of minor states. Early in the Christian era fresh Scythian hordes poured into India and founded the Kushan Empire, which comprised the whole north-west down to the Vindhya Mountains. This empire reached the summit of power under King Kanishka, the great patron of Buddhism who ruled about A. D. 120. By the fourth century A. D. the Guptas and the Western satraps rose in importance, and divided the supremacy between them till the latter were swallowed up by the former. The Gupta Empire lasted till the end of the fifth century A. D. when it was destroyed by a Mongol tribe, called the White Huns. In the sixth century the White Huns were overcome by the Persians and by Turkish tribes, and their hold on India fell before a confederacy of Indian princes under the King of Magadha. In the beginning of the seventh century there existed two supremacies—that of the north under a king of Thaneshwar, and that of the south in the hands of the Chalukyas, with the River Nerbudda as the boundary between them. These organizations soon fell to

SERINGHAM PAGODA, TRICHINOPOLY

every kind are obtainable, and the social and domestic life differs in no way from that at home. The same is true to a more limited extent in towns occupied as military stations. Elsewhere it is generally impossible even to obtain anything so European as a loaf of bread, except at the refreshment room of the station, if there is one.

One of the peculiarities of Indian life is the hill stations, "suburban towns" they might be called, to which those who have the opportunity flock from the plains in the hot seasons, and occasionally at other times, to recover from the enervating influence of the plains. For instance Darjeeling, Simla, Mussourie, Murree, Nainital, etc., on the slopes of the Himalayas; Mount Abu in Rajputana; Khandalla, Poona, Mathuran, and Mahableshwar, in the western Ghats; Bangalore, Wellington, and Coonor, in the Mysore hills; Kandy and Nuwara Eliya, in Ceylon.

POPULATION AND LANGUAGE.—According to the census of 1901 the total population of the Indian Empire amounted to 294,361,036, of which 62,461,549 belong to the Native States, and 231,899,507 to strictly British territory. The whole of this population is divided racially as follows: (1) The Aryans, mostly in Northern India and the Deccan, about 221 millions or nearly three-fourths of the total; (2) The Dravidian races of Southern India, about sixty millions; (3) the

pieces, and for several centuries India became once more a congress of petty chieftaincies.

The next foreign invaders were the Mohammedans of Afghanistan, who gradually took possession of the northern half of the peninsula, while in the south the supremacy of the Chalukyas was succeeded by that of the Cholas. In the fourteenth century the Afghan Empire had expanded over almost the whole of the country, the chieftaincies of Kashmir, Orissa, Kutch, Junagarh, and the Comorin Coast alone retaining independence. But there was a constant tendency among the various provinces of this empire to throw off the yoke, in which for the most part they succeeded. In the fourteenth century the country south of the Kistna was held by the Indian princes with their capital at Vijayanagar, while north of this the Bahmani kingdom, and those of Malwa, Gondwana, Telingana, Behar, Bengal, Jaunpur, etc., were in various degrees independent of the Afghan dominion of Delhi. Two hundred years later the Afghan empire had shrunk up towards the Himalayas and was fringed round with

more or less independent kingdoms which now included Rajputana, Sind, Multan, Gujerat, Malwa, Gondwana, Khandesh, Berar, Bidar, Golconda, Ahmednagar, Bijapur, etc. The year 1526 marks the entrance into India of the Moguls, who under the famous Akbar (1556-1605) finally broke the Afghan power and set up the Mogul supremacy in its place. The empire of Akbar comprised the provinces of Kabul, Lahore, Multan, Delhi, Agra, Oudh, Allahabad, Ajmere, Gujerat,

Malwa, Behar, Bengal, Khandesh, Berar, Ahmednagar, Orissa, Sind, and Kashmir, the southern boundary being roughly speaking marked by the River Godaverri and the latitude of Bombay. South of this extended the Moslem sultanates of Ahmednagar, Bidar, Golconda, and Bijapur, south of which lay their enemy, the Indian confederacy of Vijayanagar. The latter power was irrecoverably defeated by the former in the battle of Talikot (1565). The barrier which had withstood the Moslem power for three centuries was thus removed; and this prepared the way to an extension southwards as far as Mysore—the sway of the southern princes having now declined so as to become almost negligible. But these victorious Moslem sultans were in turn attacked from the rear by the Mogul power which under Aurung-Zeb (1658-1707) swallowed up the Kingdoms of Ahmednagar, Bijapur, and Golconda. But the Mogul supremacy, like all former ones, was incapable of permanency. Besides successful efforts after independence made by the tribes of the north, a new enemy now appeared in the rising power of the Mahrattas (Aryans of the Deccan) who under Sivaji (1627-1680) played havoc wherever they went. By 1750 the Mahratta confederacy had extended over the greater part of Central India and the western coast, while the Mogul Empire had been resolved into several kingdoms of which Rajputana, Ahmedabad, Oudh, Behar, Bengal, the Nizam's dominions (Hyderabad-Deccan) were the chief—the Dravidian princes still reigning on the Cana-

rese and Travancore coasts. By the end of the eighteenth century the Mahratta confederacy had still further extended its range northwards so as to include Rajputana.

Meanwhile various European powers were gradually securing a footing in the country. First came the Portuguese in 1498, and secured certain strips of the western coast (Goa, Chaul, Bombay, Bassein, Damão, Diu). More than a century later the Dutch, sworn enemies of the Portuguese, established themselves in Nagapatam, Madras, Pulicat, etc., besides wresting Cochin and other portions of territory from the Portuguese. The English East India Company (founded in 1600) soon acquired stations at Sarat, Calicut, Masulipatam, Madras, and (by cession) Bombay (1661-5). Before 1700 the French had secured Masulipatam, Pondicherry, and Chandernagore, while at the same time the Danes held Tranquebar and Serampur. In the conflict which followed the Portuguese, Dutch, and Danes counted for little, and the two last named powers ultimately lost all footing in the country. The

struggle was chiefly between the English and the French, both of whom tried to win the various native princes over by persuasion, treaty, subsidy, or force, and played them off against the opposing power. The growth of the English supremacy was steady but gradual. By the battle of Plassey in 1757 they became virtually masters of Bengal. By 1784 they had secured sway along the east coast (Circars and Carnatic). In 1795 they were dominant in Bengal and Behar, the Circars, Madras,

ANCIENT BRAHMINICAL TEMPLE, GWALIOR

Carnatic, Malabar, etc. In 1805 they had reached up the Ganges valley as far as Delhi, and in the south from Madras as far as Bellary and along the Kanara coasts. In 1823 British territory reached almost all round the coast from Assam to Gujerat, and extended inwards in such a way that the Native States resembled islands in a sea (Travancore, Mysore, Nizam's dominions, Kolhapur, Mahratta States, Rajputana, Oudh, etc.). In 1843 Sind was added to the British dominions; in 1849, the Punjab; in 1854, Nagpur; in 1856, Oudh; and in 1885, Burma. Where conquest or cession by treaty did not take place, the Native States were taken under military protection, the British troops stationed in them being an effectual preventative of revolt or foreign alliance. The conquest of India would present an interesting study in ethics, as would most other conquests in the world, but one thing is clear: the history of India before the English supremacy was a history of war, devastation, arbitrary rule, fall of empire upon empire, chaos, and insecurity, while under British rule it has become precisely the opposite. The foregoing sketch, inadequate and incomplete, will suffice to convey a general impression of the whole field; and it will be rendered more intelligible if read with Joppen's "Historical Atlas of India", from which it has chiefly been taken.

PRESENT POLITICAL ORGANIZATION. *British India.*—India is at present divided into British territory, independent Native States, and protected Native

States—which latter are in varying degrees under the sway of the supreme executive authority of the Governor-General of India, more commonly known as the viceroy. For purposes of administration the Indian Empire is divided into the nine great provinces of Madras, Bombay, Bengal, Eastern Bengal and Assam, United Provinces of Agra and Oudh, the Punjab, Burma, Central Provinces, and the North-West Frontier Province, under officials variously designated governor, lieutenant-governor and chief commissioner—the minor charges being Coorg, Ajmere-Marwara, British Baluchistan, and the Andaman Islands, each under a chief commissioner.

Of independent States there are only two, Bhutan and Nepal, both in the Himalayas. Of the protected States, Hyderabad (Deccan), Baroda, and Mysore are the most important, while the smaller ones are to a

KUTUB MINAR, DELHI

great extent grouped together into Agencies, e.g., Rajputana, Kathiawar, Central India, etc. The chiefs of these protected states retain their own internal administration, but under British supervision, which is exercised sometimes through political agents, in other cases by political residents. The princes have no right to make war or peace, or to send ambassadors to other states, or to maintain a military force beyond a certain specified limit; and the supreme government can exercise any degree of control in case of misgovernment; moreover, some of them are required to pay a fixed annual tribute.

Portuguese India.—The actual Portuguese possessions at the present time within the peninsula are Goa, Damão and Diu. Goa is a tract of picturesque and fertile country on the West Coast about 250 miles south of Bombay, measuring 63 miles in length by 40 miles in breadth. It comprises a nucleus of "old conquests", Goa, Bardez, and Salcete (to be distinguished from the Island of Salsette near Bombay); an outer belt of "new conquests"; and the Island of Anjediva. The population borders on half a million; the majority are native Catholics whose ancestors were converted centuries ago. Freedom of religion is tolerated, but no public form of worship other than the

Catholic is admitted within the "old conquests". Goa is regarded as an integral part of the Portuguese Empire, and (with its two dependencies, Damão and Diu) forms a province subject to a Governor-General. Damão, 100 miles north of Bombay, a fortified Portuguese town with a small outlying district in the interior, has an area of 82 square miles with a total population of over 50,000. Diu is a small fortified island at the southern point of the Kathiawar coast, measuring about 7 miles by 2, with a population of something over 12,000. (For ecclesiastical particulars see under GOA and DAMÃO).

French India.—The French possessions consist of five settlements. Of these Pondicherry is the chief, having an area of 115 square miles and a population of about 150,000. Next comes Karikal with 53 square miles and 26,000 inhabitants. The rest are much smaller, namely, Chandernagore, near Calcutta, Mahe, on the Malabar coast, and Yanam, north of Madras, the total area of French India being 203 square miles, with a total population of about 300,000. In British territory round about Pondicherry, etc., there are also a number of small plots, the sites of former French factories, over which the French possess certain rights. Administration is in the hands of a governor residing at Pondicherry. (For ecclesiastical particulars see PONDICHERRY, ARCHDIOCESE OF.)

THE GOVERNMENT AND THE PEOPLE.—There has arisen in India of recent years a wave of national aspiration, which is by some viewed with alarm, and by others with indifference. It originated or first manifested itself by the formation of the Indian National Congress in 1886, which began to hold annual meetings wherein "to give voice to our aspirations and to formulate our wants" (Gokhale in 1905). In 1904 a party-protest against the partition of Bengal was followed by an attempt to force the hand of Government by the boycott of imported goods in favour of Indian manufactures (Swadeshi movement), which in turn developed into an effort after "national revival". This movement issued in a certain amount of seditious writing, systematic spread of disaffection among the masses, and even resort to anarchistic methods such as the use of bombs, etc. Given that the clement of sedition and violence is suppressed with a firm hand, the movement does not (in the present writer's opinion) forebode anything like a mutiny, or jeopardize British dominion. But in its constitutional elements, which are based on democratic ideas derived from European education, it will have to be reckoned with. Viewed in this light, it means that an ever-increasing number of Hindus, who have been educated on English lines and many of them in English universities, realize keenly their position as British subjects, claim equality with Europeans in talent, education, and citizenship, seek to be admitted more extensively to Government offices, aim at a representative instead of an autocratic form of government, demand financial autonomy for the country, etc., etc., and are endeavouring to develop public opinion in favour of all these points, first among their own class, and then among the community in general. No one can quarrel with this aspiration so long as it is worked on constitutional lines, and in a measure calculated to promote the real welfare of the country. The practical difficulty arises from the fact that while in the eyes of most Europeans the country is not yet ripe for such measures, the promoters of the movement either believe that it is ripe, or else that by pushing the matter the country can be made ripe far sooner than if matters are left alone. This seems a fair and moderate view of the movement, putting aside the more extreme tendencies connected with it. With regard to the policy of Government in dealing with the situation, account must be taken of the tendency of the Oriental mind to respect power and to take advantage of good nature. Anything like leniency or long-

suffering in dealing with disturbance is in India sure to be taken as a sign of weakness, and hasty endeavours to pacify the people by partially acceding to their demands will only be interpreted as indications of fear, and an encouragement to further agitation. A firm determination, on the part of Government, not even to entertain any idea of concession till all signs of disorder have permanently disappeared, would probably be more effectual than any other measure.

It does not come within the scope of this article to discuss the political situation. Our only concern here is to dispel certain false or exaggerated notions as to the relations between Government and people. There does not, it is true, exist in India much positive patriotism in favour of British rule; but at the same time neither does there exist anything like a deep or widespread *spontaneous* indignation. The mass of the people usually confine their interest to the narrow horizon of their own personal wants. They find that contact with Europeans brings a great increase to their revenues; and in fact there is a danger of whole classes being spoiled by the lavishness with which, compared with former times, they are remunerated for their services. It is quite certain that the people prefer to deal with European rather than with native officials. On the whole, Government is considerate in remitting or reducing taxation as soon as scarcity is felt. A considerable grievance has been removed or greatly diminished by the reduction of the salt tax, but a minor grievance remains regarding the toddy tax (native palm-tree liquor). It is true that preferential treatment in favour of British trade has done much to destroy the older native industries; but this has been amply compensated for by the increased facilities of obtaining articles of comfort and convenience, as also in the employment given to natives in government posts, office work, public works, industries, outlets for produce, etc. No one will deny that detailed improvements in administration are possible and desirable; but the grievances which exist, while affording matter for constitutional representation, are not sufficient to justify any real disaffection, still less resort to violent measures.

The really serious evils of India as felt by the masses are three in number. The first is the artificial creation of famines. The constant recurrence of famine in India is not due to local scarcity of food; for it is notorious that there is always in the country at large plenty of grain for the people, and abundance to spare—a fact proved by the undiminished exportation which goes on all the time. The cause of famine is due simply to the combination of the native grain-dealers, who buy up the supplies and establish famine-prices as soon as the first sign of scarcity is observed. All other explanations of famine in India are either false, or inadequate and negligible. Government expedients of famine relief-works and free distribution of food are neither adequate nor radical. The proper and effectual remedy would be for Government to make laws keeping the prices down and forcing the merchants to sell at those prices. This, however, Government will not do, on the plea of not interfering with freedom of trade—thus losing sight of the duty of the State to protect particular classes of the population from what is equivalently gross oppression. The second evil is the extraordinary usury practised by the native Marwaris or money lenders, who have the people at their mercy in times of stress, and who carry on their business in such a way that getting into their hands usually means total ruin. The necessity of borrowing small sums of money being recognized, the only remedy would be for Government either to provide some means of meeting this need on moderate terms, or else to legislate in some effectual manner for the restraint of the professional money lenders—a matter easy to theorize about but difficult to achieve. The third evil in India is petty

tyranny, extortion, and corruption on the part of subordinate native officials. Such a charge can only be proved in detailed cases, but its widespread existence seems to be universally admitted and complained of. And as such acts are done under cover of authority, the blame of them is popularly attributed to the British Government, which in truth is utterly incapable of coping with the evil. With the removal or diminution of these three evils, and a few adjustments of taxation in view of local circumstances, India would be a most prosperous and happy country as far as good government can make it one.

These remarks, based on six years' careful observation in the country itself, ought to put writers outside India on their guard against the monstrous misrepresentations which are so frequently circulated in the press.

EDUCATION.—In India there are five universities,

VISWAKAMA, OR VISHVAKARMA, CAVE, ELLORA, INDIA
Specimen of Buddhist Cave Temple—probably end of VII century of the Christian Era

namely, those of Calcutta, Madras, Bombay, Allahabad, and the Punjab. They are all organized on the examining-body system, having affiliated to them a large number of teaching colleges, some of which are worked by Government, some by missionary bodies, etc. Below these come numerous high-schools, middle schools, primary-schools, and technical schools of various kinds, to a total of over 160,000. Of those institutions 27,220 are public, 73,192 aided, and 60,057 private and unaided. According to the census of 1901 the statistics of literacy run as follows:—

	ABLE TO READ AND WRITE	UNABLE TO READ AND WRITE	TOTAL
Males	14,690,080	134,752,026	149,442,106
Females	996,341	142,976,459	143,972,800
	15,686,421	277,728,485	293,414,906*

* Add unspecified 946,159.

It should be noted that immense progress has taken place since then; but even now it is estimated that only 25.3 per cent of the boys and 3.4 per cent of the girls of school-going age attend school.

RELIGIOUS HISTORY.—Mention has already been made of the Aryan tribes which immigrated into India many centuries before Christ. It was during their sojourn in the Punjab that the first sacred hymns were composed (the Rig Veda). While pushing eastwards and southwards, the first beginnings of the caste system were formed and the rest of the sacred books written (see VEDAS). Their religion, which had in the

first instance been a simple kind of nature and hero-worship, was developed by the Brahmin priests and sages into a highly ceremonial cult with a theoretical background of emanative pantheism as formulated later on in the Vedanta. While the speculative and liturgical portions of the Hindu religion were being developed by the educated classes, the popular religion was being transformed by contact with the older local tribes. The polytheism induced by the co-existence of various local deities received a monotheistic explanation from the Brahmins, each god being regarded as a particular manifestation of the supreme one. Buddhism came into existence in the sixth century B. C. (Gautama Buddha fl. circa 527 B. C.). It adopted many of the fundamental ideas of the prevailing Brahministic creed and developed its asectical consequences, but made no account of the system of caste, and afterwards degenerated into saint and hero worship. During the following centuries Buddhism gradually spread throughout the country, and constituted a formidable rival to Brahminism. A reaction, however, supervened, during which Buddhism gradually disappeared from the land, though it continued to prevail in Burma and Ceylon. From the thirteenth century A. D., Brahminism has retained a permanent hold over at least three-quarters of the population. Out of a miscellaneous collection of elements—Vedic pantheism, Puranic mythology, aboriginal animism, polytheism, demon worship, and sorcery, there developed a promiscuous system of religious belief and practice which became hereditary, and which may be called "exoteric or popular Hinduism" as distinguished from the esoteric or philosophical religion of the select few. The study of Hinduism therefore naturally falls into two corresponding parts of which a totally separate treatment is necessary (see BRAHMINISM). Besides Hinduism in these two senses of the term, there exist certain other religions, the chief of which may be enumerated as follows:—

(1) Animism and a promiscuous collection of archaic low cults and superstitions, still maintained by the more remote aboriginal tribes—a survival of the time prior to the Aryan immigration; and also rife to a great extent among the masses of Hindus. (2) Jainism, a form of religion allied equally with Hinduism and Buddhism and found chiefly in Gujerat and Kathiawar. Its alleged founder Mahavira is said to have died just when Buddha was entering into his missionary labours (circa 527 B. C.). (See JAINISM.) (3) Sikhism, an off-shoot (originating in the Punjab in the fifteenth century A. D.) claiming to be a purification of Hinduism, in which, however, the worship of a sacred book has largely taken the place of the worship of images (see SIKHISM). (4) Zoroastrianism, brought into India by a body of Parsees who fled before the Mohammedan conquerors of Persia, and reached India about A. D. 700. This religion has neither influenced nor been largely influenced by Hinduism, and is still kept up among the Parsee community exclusively (see AVESTA; PARSEES). (5) Mohammedanism, introduced into India by the Moslem conquerors, who, beginning about A. D. 1000, gradually spread their domination over the land till in the seventeenth century it reached almost to Cape Comorin. Large numbers were brought over from Hinduism to this creed. But they retained much of their old caste and ceremonial ideas, and thus brought into existence a modified form of popular Mohammedanism, outwardly resembling Hinduism in many points—among which hero-worship directed to tombs of saints corresponds largely to the Hindu worship of images (see MOHAMMED AND MOHAMMEDANISM). (6) Christianity, said to have existed among the White Huns, through whom it may have contributed to the Krishna legend; prevalent from very early times on the Malabar coast and to some extent in several other parts (see THOMAS CHRISTIANS); extensively spread by the Portuguese

from the year 1500, and afterwards by missionaries of other European nations. In recent times Christian ideas have exercised much indirect influence on the educated classes of Hindus, resulting partly in efforts to purify popular Hinduism of its grosser elements, partly in adopting a more rationalized interpretation of Hindu ideas and practices. But the popular religion among the masses remains untouched.

PRESENT RELIGIOUS STATISTICS.—According to the census of 1901 the religious statistics of the Indian Empire stand as follows:—The votaries of Hinduism number 207,147,026, or about three-quarters of the total. The Mohammedans come next with 62,458,077. The Buddhists number 9,476,759, almost exclusively in Burma and Assam. Animism prevails among the aboriginal tribes to the number of 8,584,148. Christians come next with a total of 2,923,241. The Sikhs (chiefly in the Punjab) number 2,195,339; the Jains (chiefly on the western coasts), 1,334,148; the Parsees (chiefly in Bombay), 94,190; the Jews, 18,228—the rest being insignificant or unclassified. The Christian statistics are detailed as follows:

	EUROPEANS	EURASIANS	NATIVES	TOTAL
Church of England	111,764	35,781	305,917	453,462
Presbyterians	9693	1439	42,799	53,931
Baptists	2108	2017	216,915	221,040
Methodists	5998	2420	68,489	76,907
Congregationalists	421	140	37,313	37,874
Lutherans, etc.	1400	287	153,768	155,455
Latin Catholics	33,964	45,697	1,122,508	1,202,169
Syrians	6	1	571,320	571,328
Others	4323	1469	145,284	151,076

ECCLIASTICAL HISTORY.—The history of the Catholic Church in India can be divided into the following sections:—(1) From the earliest times down to the advent of the Portuguese, and especially the traditions regarding St. Thomas and the community believed to have been founded by him (see THOMAS CHRISTIANS). (2) Portuguese missionary enterprise dating from the year 1498, a brief outline of which appears under GOA. (3) The dispute regarding concessions to Hindu usage, commencing with Robert de Nobili in 1606 and ending with the final decisions of the Holy See in 1742 (see MALABAR RITES; MADURA MISSION). (4) Propaganda missionary enterprise, commencing about the year 1637. (5) The conflict of jurisdiction between the vicars Apostolic of propaganda and the Portuguese *padroado*, commencing in the eighteenth century, reaching its climax in 1838, and its final settlement in 1886 (see GOA, ARCHDIOCESE OF; PADROADO). (6) The establishment of the hierarchy in 1886 and subsequent organization down to the present time. Besides the special articles referred to, local details will be found under the different dioceses. Here it will be sufficient to take a brief survey of the whole. From very early times there existed on the Malabar and Coromandel Coast a considerable community of native Christians claiming to have received the Faith from the Apostle St. Thomas, whose martyrdom is held to have taken place near Mylapur, three miles south of Madras. His reputed tomb seems to have been in the hands of Nestorians, and the community generally appears for several centuries to have been ruled by bishops from Persia or Babylonia who were also Nestorians. When the Portuguese came into India, they set themselves to the task of removing this Nestorian taint and bringing the community into union with the Catholic Church, and this was accomplished by the Synod of Diamper in 1599. In 1653, in consequence of domestic quarrels, a revolt took place, followed by a conciliation of the great majority, while a certain minority fell away, and became later on a prey to Jacobite influences. The Syrian Catholics—as they

are called on account of their liturgy—still flourish and are governed by three vicars Apostolic at Ernakulam, Trichur, and Changanacherry respectively.

Portuguese missionary enterprise, which began shortly after 1500, partly followed the progress of conquest, but also extended beyond it, so that large communities were formed in the south of the peninsula and as far as Madras on the east coast, and Damão on the west, while sporadic efforts were made from time to time further northwards, as far as Bengal, Agra, and even Tibet. The chief successes were, first, within the strictly Portuguese territory of Goa, where the fullest influence of the State lay at the back of the missionaries; secondly, on the Fishery Coast about Cape Comorin; thirdly, in the inland districts of Madura; fourthly, in the districts of Bassein, Salsette, Bombay, Karanja, and Chaul on the western coast, north of Goa. The Franciscans and Dominicans were the first orders in the field, soon to be followed by the Jesuits and Augustinians, and later on by the Carmelites, Theatines, Hospitallers of St. John, and Oratorians. The tide of enterprise reached its highest soon after A. D. 1600, by which time vast numbers had been enrolled in the membership of the Church. The work of attending to the wants of such large communities naturally placed a limit on further missionary extension. Moreover, as the power of Portugal itself began to decline, there was a falling off in the supply of missionaries, and after the suppression of the Jesuits in 1773 it may be said that missionary progress under Portuguese patronage came practically to a standstill. Mean-

time the Holy See, recognizing the inadequacy of the Portuguese resources to deal with so vast a country, began to provide independently for the spread of the Gospel by appointing vicars Apostolic, under Propaganda, the first being that of the Deccan, afterwards called the Vicar Apostolic of the Great Mogul, and finally the Vicar Apostolic of Bombay. This appointment, made about 1637, was followed by others down to recent times, till the whole of the country outside the actual sphere of Portuguese ministrations was in some way provided for. It soon happened that where the vicars Apostolic came into contact with the Portuguese clergy there arose a conflict of jurisdiction—the vicars Apostolic resting their claims on the direct delegation of the Holy See, while the Portuguese party took their stand on the ancient prerogatives of the patronage as well as the prescriptive right of possession. The policy of Rome throughout this conflict was to support unequivocally the position of the vicars Apostolic, at the same time recommending them to use caution and thereby avoid dissension where possible. The strained relations between the two parties reached a climax when in 1838 the Holy See cancelled the jurisdiction of the three suffragan Sees of Cranganore, Cochin, and Mylapur and transferred it to the nearest vicars Apostolic, and did the same with regard to certain portions of territory which had formerly been under the authority of Goa itself. The struggle,

which was most fierce in the districts of Bombay, Madras, and Madura, continued till 1857, when a concordat was drawn up which gave comparative peace to the churches, but left the two conflicting jurisdictions almost in *statu quo*. Finally in 1886 another concordat was established, and at the same time the whole country was divided into ecclesiastical provinces, and certain portions of territory, withdrawn in 1838, were restored to the jurisdiction of the Portuguese sees. The delineations made in 1886 were afterwards supplemented by adjustments and subdivisions down to 1899, since when the ecclesiastical distribution has been stable. The following lists will summarize the main facts thus described: (1) The old foundations of the Portuguese Padroado:—Goa, 1534; Cochin, 1557; Cranganore, 1600; San Thomé (Mylapur), 1606. (2) Vicariates founded before 1800:—Great Mogul, 1637; Malabar, 1659; Bombay and Tibet, 1720, Ava and Pegu (Burma), 1722. (3) Vicariates founded from 1800 to 1886:—Tibet, 1826; Bengal, Madras, and Ceylon, 1834; Madura and Coromandel, 1836; Agra and

Patna, 1845; Jaffna, 1847; East and West Bengal, Vizagapatnam, Pondicherry, Coimbatore, and Mysore, 1850; Hyderabad (Deccan), 1851; Mangalore, Quilon, and Verapoly, 1853; Poona, 1854; Central Bengal, North and South Burma, 1870; Punjab and Kashmir, 1880; Kandy, 1883; East Burma, 1886. (4) The hierarchy as established in 1886 consisted of eight archbishops bearing the titles of Agra, Calcutta, Madras, Bombay, Goa, Pondicherry, Verapoly, and Ceylon, each having his subject dioceses, vicariates, and prefectures Apostolic. (5)

The following new subdivisions were made after 1886:—Kashmir, Nagpur, Trichur, and Kottayam, 1887; Assam, 1889; Ernakulam, and Changanacherry, 1890; Rajputana, 1891; Bettiah, 1892; Galle and Trincomalee, 1893; Kumbakonam, 1899. To these must be added the three vicariates Apostolic of Burma.

CATHOLIC STATISTICS.—The ecclesiastical organization connected with India does not by any means coincide with the political divisions of the country. India consists of eight ecclesiastical provinces, seven of which are in the peninsula and the eighth in Ceylon. The Provinces of Agra, Calcutta, Bombay, Madras, Verapoly are entirely in the Indian Empire. The Province of Goa comprises Portuguese India and some portion of British India, besides the suffragan sees in Africa and the Far East. The Province of Pondicherry comprises French India and some portion of British India, as well as the Diocese of Malacca in the Straits Settlements. The Province of Colombo is entirely in Ceylon and so outside the Indian Empire. On the other hand, the three vicariates of Burma, which at present belong to the Indian Empire, are not part of ecclesiastical India proper, and lie outside the Apostolic Delegation of the East Indies. The same is true of Aden, which belongs politically to the Bombay Presidency. Our best course, therefore, in giving ecclesiastical statistics, will be to take the general group just described, indicating certain subtractions

AL-UD-DEEN'S GATEWAY, DELHI

which must be made in order to bring the figures into relation with the Government census of India. The following estimate of the Catholic population has been compiled from the "Madras Catholic Directory" for 1909, eked out in a few instances from other sources.

PROVINCE, DIOCESE, ETC.	PREDOMINANT CLERGY	CATHOLIC POPULATION
<i>Province of Agra:—</i>		
Archdiocese of Agra	Italian Capuchins	9422
Diocese of Allahabad	Italian Capuchins	7600
Diocese of Lahore	Belgian Capuchins	5700
Prefecture A. of Rajputana	French Capuchins	3849

The following notes will elucidate the table:—

(1) *Province of Goa.*—In the Archdiocese of Goa 299,628 belong to Portuguese territory and 35,403 to British territory. In the Diocese of Damão 2,213 belong to Portuguese territory and 69,789 to British territory. Out of these latter, 26,419 are Goanese living in Bombay island, under the personal and not territorial jurisdiction of Damão. The suffragan sees of Cochin and Mylapur are entirely in British territory. The more remote suffragan sees in Africa and the Far East are omitted from the list. (2) *Province of Pondicherry.*—In the Archdiocese of Pondicherry 25,859 belong to French territory and 117,266 to British territory. The suffragan sees are all in British India except Malacca, which is altogether outside India. (3) *Province of Verapoly.*—The three Vicariates of Ernakulam, Changanacherry, and Trichur consist of Catholics of the Syrian Rite, with a total of

325,281 (Thomas Christians). By subtracting the figures for French India, Portuguese India, Malacca, and Ceylon, and separating off the Syrian vicariates, the total results for the Indian Empire (including Burma) for the year 1908 are as follows:—Latin Catholics 1,439,066; Syrian Catholics 325,281. A comparison with the census of 1901 reveals an increase of 190,325 Latin Catholics, and 2695 Syrian Catholics—which is probably a fair estimate of progress during the last eight years. As far as older statistics can be obtained for purposes of comparison, the total number of Catholics in British India (not including Burma or Ceylon) in 1857 was 801,858. In 1885 they had risen to 1,030,100, and in 1905 to 1,582,186.

DOUBLE JURISDICTION.—One of the peculiarities of ecclesiastical India, though not unknown in other parts of the Church, is the existence in certain places of what is popularly known as a "double jurisdiction." The historical explanation lies in the fact that when the jurisdiction conflict was brought to a close in 1886, the Padroado sphere of influence was not restricted to Portuguese territory, but allowed to remain in many parts of British India where the Padroado clergy were in actual possession. In the first place the See of Goa was allowed to retain a considerable part of the coast country north and south of Goa; while the two ancient Sees of Cochin and Mylapur and the newly erected See of Damão were all three totally in British territory. But it happened that in the case of Mylapur there existed certain widely scattered and isolated parishes which were actually under Portuguese clerical administration, and these were retained as exempted churches in the midst of Propaganda territory. Thus to the Bishop of Mylapur belong no fewer than fifteen separate churches scattered over the Diocese of Trichinopoly, with others in Madras, Calcutta, and Dacca giving a total number of twenty-eight. In the Island of Salsette, near Bombay, which was made over to the Diocese of Damão, six churches remained attached to the Propaganda jurisdiction of Bombay. In some of these places both jurisdictions exist side by side, the one holding territorial sway, the other possessing exemption. In Bombay a more special arrangement was made—the archbishop under Propaganda enjoying territorial jurisdiction, while the Bishop of Damão holds personal jurisdiction over those who are Goanese by birth or otherwise connected with Padroado rule; and a certain complicated code exists for determining the jurisdiction to which individuals belong (see under GOA; BOMBAY; DAMÃO; ST. THOMAS OF MYLAPUR). In the Archdiocese of Verapoly (Malabar Coast) another form of double jurisdiction exists, this time based on a difference of rite. There the Latins are under the Archbishop of Verapoly, while the Syrian Christians (Syrians not by race but by liturgy only) in the same territorial limits are assigned to three vicars Apostolic of the same rite.

THE CATHOLIC CLERGY.—Under the Portuguese regime, the first missionary work was done by the religious orders. In course of time a large body of native secular clergy came into existence, some of whom strongly developed the apostolic spirit; but in general their work was to take charge of the parishes and mission-stations which had already been founded by the missionary orders. On the expulsion of the religious orders from Portuguese territory in 1834, the whole care of the faithful devolved on the secular clergy, who at present work in the Dioceses of Goa, Cochin, Mylapur, and Damão—a few being European Portuguese, and the rest natives of India. Of recent years a few Jesuits have been introduced in the parts which lie outside Portuguese territory.

Similarly the vicariates Apostolic were initiated and continued to be worked by European missionaries of different orders and nationalities, assisted by such secular native or other priests as they were able

to train up. When the hierarchy was established in 1886 the same regime was retained, the bishops being generally of the same order or congregation. The foregoing list shows the orders and nationalities in the various dioceses. The fewness of missionaries of British extraction in India is sometimes made a matter of criticism by Englishmen not conversant with history. They forget that at the time when India was assigned to vicars Apostolic, England was not in a condition to send out foreign missionaries. Secondly, it is much less than a century ago since England began to acquire anything like a general footing in the country. Even at the present time the clergy of England have their hands full in attending to the needs of their own country, and have few men to spare for outside enterprise. Then again, as regards the far greater part of India, the nationality of the missionaries is a matter of indifference, since the work is almost entirely with native communities, who have to be dealt with in the vernacular. In the larger towns, where English is a current language, the clergy manage to equip themselves with a sufficient knowledge of English, and the same is true of military chaplains, though in individual cases a deficiency may sometimes be found. Those who travel will never come across a European missionary in British territory who cannot make himself understood in English, and in the majority of cases the proficiency attained is remarkable.

The actual statistics of the clergy for the whole ecclesiastical group already described may be estimated approximately at 2800 priests, of whom about 1050 are Europeans, and about 1750 of native extraction. By a cross division about 2000 may be classed as secular clergy (including the Mill Hill Fathers and the Foreign Mission Fathers), and about 800 as members of religious orders or congregations. There are also more than 500 brothers of various orders and congregations, and about 3000 nuns; and the number of churches and chapels served rises above 5000.

CATHOLIC MISSIONARY WORK.—The figures of Catholic population given above include only those who are ascertainably members of the Church—all converts being subjected to careful tests and instruction before baptism. The numbers are mostly made up of native Christians, partly of the higher but chiefly of the lower castes, together with a certain percentage of Europeans belonging to the army, government and civil service, railways, etc., and a number of Eurasians. The Catholic population is densest among the Thomas Christians of Travancore, where the ecclesiastical divisions are of the smallest. The coast districts east and west (the scene of the ancient Portuguese and French missions), and especially the south of the peninsula, come next in order of numbers; and here the dioceses are larger. The farther north we go the more scanty the Catholic population becomes. Thus the Province of Agra, which in dimensions covers almost as much space as the other seven provinces taken together, contains the smallest number of Catholics—this being a field which has only begun to be worked in recent times. At present the largest mission centres for natives are in Chota Nagpur, (Diocese of Calcutta) the Godaveri districts (Hyderabad), the Telugu districts (Madras), the districts of Trichinopoly, Madura, Pondicherry, Kumbakonam, Mysore, etc., in the south. Smaller but growing missions are in the Ahmednagar District (Poona) and the Anand District (Bombay). It has been estimated that the number of converts baptized in the year 1903 amounted to about 16,000; while the number of catechumens preparing for baptism counted about 45,000. At the present time the rate of progress, though not definitely ascertainable in detail, has certainly advanced.

MISSIONARY SUCCESS.—One of the moot questions

in connexion with India is the real or supposed difference between missionary progress in the past and in the present. The prevailing surface impression is that the Catholic body of India was built up suddenly within the space of say a century and a half by the Portuguese missionaries, the fruits of whose enterprise we inherit and to some extent keep up without adding much thereto in modern times. Special investigation would be required in order to give a documented answer; but the following considerations will help towards a sound view of the case. In the first case, the reason usually regarded by non-Catholics as an adequate explanation of past success, viz., that the Portuguese spread the Gospel by force; or, as it is sometimes said, "at the point of the sword", is certainly an exaggerated one, and in many respects false. There are on record a few isolated cases in which, equivalently at least, physical force was used—for instance, where a ship-load of captured pirates were given the option of embracing Christianity or being thrown into the sea. But such acts were entirely unsupported by authority, ecclesiastical or civil, besides being so rare as not to count. As to the

PUBLIC MOSQUE, DELHI, INDIA
Specimen of Moslem architecture in red sandstone and white marble—A. D. 1658

policy of the state, the local tendency was rather to be tolerant of paganism and to let religious propagandism go; and when, under pressure from the King of Portugal, an organized policy of support for the Faith was framed, physical coercion was not one of its elements. It may safely be said that there existed in the legislature no law forcing a born pagan to become a Christian; nor was compulsion exercised in practice. The methods adopted by the State consisted, first, in a ruthless destruction of pagan temples, and fouling of sacred tanks in districts where the civil power was fully dominant and the Gospel had been preached; and also in forbidding the public exercise of any alien religion within the Portuguese confines. Political and social advantages of various kinds were attached to conversion, and corresponding disabilities to non-conversion; and in certain parts, all adults over the age of fifteen were compelled to listen to Christian instructions on Sundays under pain of fine and, if obdurate, of expulsion from the district. This policy had partly the effect of bringing converts, often of dubious quality, into the Church, and partly of driving away from Portuguese confines those who were tenacious of their ancestral creed. But it is to be noted that these measures were by no means carried into effect uniformly at all times and in all places, and their sphere was in any case confined to the narrow limits of actual Portuguese territory, or even to a small radius round the chief centres such as Goa and Bassein. More defensible and even praiseworthy methods were also in vogue, such as making great account of public baptisms of converts, in which the

Portuguese nobility stood sponsors to the neophytes and bestowed on them their illustrious family names—hence the prevalence of De Souzas, De Mellos, Almeidas, Pereiras, and even Albuquerque, etc. among the people to this day. Another usage was to rescue slaves from the slave-dealers, either by capture or purchase, and turn them into Christians; or again, to take charge of all orphans and bring them up in the Faith. In some cases outside Portuguese territory, conversion was promoted by affording protection to the helpless classes against the tyranny of the Mohammedans, as occurred on the Fishery Coast. Hence it seems clear that practices savouring of coercion were in some cases a partial, but never the sole or adequate, cause of conversions. This is shown by the fact that missionary work proceeded with equal or even greater success in districts altogether remote from state influence, e. g. Madura, where the missionaries worked on lines of persuasion alone, unaided even by the mere prestige of Portugal at their back.

If then, as must be admitted, the progress of missionary success in modern times is not so notable as in the past, a complexity of causes must be assigned, of which the following are the chief:—The early missionaries had the advantage of being pioneers working an open field. They were at first unhampered by the existence of large communities of Christians needing constant parochial care. They had, moreover, the stimulus of novelty, and their message had also the advantage of novelty. It came to the people as a surprise, and large bodies of converts could be brought in before the enemies of the Faith had time to formulate objections to Christianity and to imbue the minds of the people with them. Besides this there were no Protestant missions in those days (the first beginning of Protestant enterprise was at Tranquebar in 1704), so that Christianity was able to present an undivided front to the country, as there were no rival sects and creeds to be played off one against another. Then again, the terms on which Christians were admitted to baptism were much more lenient than nowadays. A willing disposition, accompanied by a brief instruction, was in many cases taken as sufficient grounds for admitting thousands together to baptism; whereas at present a careful course of instruction and probation lasting at least a whole year is the usual requirement—less reliance being placed on subsequent instruction and training than was formerly the case. The result is probably a better quality of convert nowadays than in many instances was then secured. If it is allowed that the prestige of the Portuguese State went then for a great deal in favour of conversion, it must be added that at present the professed neutrality of the British Government is nothing short of a public encouragement of indifferentism. The ideas of Western civilization are also undoubtedly an important obstacle to the progress of Christianity in modern times, for they materialize the people's minds and interests, induce agnosticism or indifferentism, sophisticate the simple, and encourage the worldly—disintegrating the old creeds, but building up nothing in their place. Of obstacles inherent to the people themselves, rigid conservatism of mind and the trammels of the caste system are certainly of the first magnitude. Hence it is found to-day, as it was found in Portuguese times, that in places where the pressure of the State was unfelt, the Brahmins were the most difficult to convert, and the low-caste and no-caste people the easiest. In modern times the greatest missionary success is invariably found (1) among the aborigines or depressed classes; (2) among those who are without caste and outside the influence of the Brahmins; (3) in districts most remote from railways and centres of civilization; and (4) in places where one missionary body alone holds the field. Among the educated classes, especially those who have been trained in the European manner, conversions are

extremely rare—sometimes on account of indifferentism and unbelief imported from the west; sometimes for want of practical seriousness of purpose in religious discussion, of which many are extremely fond; and sometimes on account of a certain slackness of mind and a tendency to vague viewiness, or symbolism and poetic fancy instead of a love of facing and gripping facts—a peculiarity temperamental to the eastern mind.

CATHOLIC EDUCATION.—Besides strictly ecclesiastical ministrations to the faithful, and efforts for the spread of the Faith, the clergy of India take a prominent part in the educational work of the country. The latest complete collection of statistics in this branch was compiled in 1904. It includes the whole ecclesiastical group already mentioned with the exception of Burma (according to Krose some of the figures for Burma can be supplied as follows:—schools, 151, with 8983 pupils; orphans, 968). The following particulars are taken from this list:—

Male Education:—23 ecclesiastical seminaries with 697 native students; 8 scholasticates of religious orders with 101 scholastics; 15 novitiates with 79 novices; 12 university colleges (most of them small ones) with 1343 students; 67 high schools for boys with 9771 students; 251 middle schools with 23,889 pupils; 2465 primary schools with 98,687 pupils; 4 normal schools with 77 pupils; 26 industrial schools with 977 pupils; 17 schools for catechists with 277 students; 114 male orphanages with 5141 inmates; 76 boarding schools with 6037 inmates.

Female Education:—67 novitiates for conventual orders with 450 novices; 61 high schools with 3202 pupils; 248 middle schools with 15,229 pupils; 683 primary schools with 41,263 pupils; 11 normal schools with 186 pupils; 59 industrial schools with 2335 pupils; 138 female orphanages with 7489 inmates; 108 boarding schools with 5220 inmates. The total number of children under education in Catholic schools is 204,481 (137,326 boys and 67,155 girls). This figure includes 12,650 orphans of both sexes.

It is to be noted that the numbers of pupils in schools includes a large proportion of non-Catholics. The policy of opening our schools to outsiders is due to the fact that in many places the Catholics are either too few or too poor to maintain efficient schools and colleges for themselves alone, and the admission of others is in most cases the only means by which a good education under Catholic auspices can be secured. Under such arrangements religious instruction is given apart to the Catholic pupils; but the slightest show of propagandism has to be avoided with regard to the others. The part played by the Catholic clergy in the general educational work of the country, as well as the results, second to none, which are obtained, brings great prestige to the Catholic body. It also establishes excellent relations with large numbers of better-class Hindus, Mohammedans, Parsees, etc., who openly express their indebtedness to the "Fathers" who have educated them, and are commonly ready to befriend them. It is mainly to this prominence in educational work that the Catholic clergy owe the high esteem which they enjoy in the country.

CATHOLIC LITERARY ENTERPRISE.—On the whole the Catholic clergy of India do not make much use of the press as a means of exercising influence on those outside the Fold. Their publications consist mostly of the Scriptures, Bible histories, catechisms, prayer-books, and works of instruction, some in English, but most in the vernacular, executed at mission presses in Calcutta, Bombay, Trichinopoly, Mangalore, Agra, Bettiah, etc. Of Catholic weekly newspapers there are several such as "The Catholic Herald of India" (Calcutta); "The Examiner" (Bombay); "The Catholic Watchman" (Madras); "The Catholic Register" (San Thomé)—all in English; "O Crente", official organ of the Archdiocese of Goa; "O Anglo-Lusitano",

representing the Goan community in Bombay; beside several others in English and sundry local idioms. On the whole the Catholic press confines its attention to Catholic interests without entering into the social or political affairs of the country. For the use of the clergy a "Promptuarium Canonico-Liturgicum" is published at Ernakulam. Mention should also be made of the "Madras Catholic Directory", giving the status of the dioceses for the whole of India, and published annually since the year 1851.

PROTESTANT MISSIONARY WORK.—The first Protestant missionaries to set foot in India were two Lutherans from Denmark, who began work in 1705 in the Danish settlement of Tranquebar. Their first step was to translate the Bible into Tamil, and afterwards into Hindustani. They made little progress at first, but gradually spread to Madras, Cuddalore, and Tanjore. In 1750 Schwartz carried on the work thus begun and extended it to Tinnevely near Cape Comorin. After the Lutherans came the Baptists, who began work at Serampur near Calcutta. In 1758 a Danish missionary first devoted attention to Calcutta. In 1799 there was a great outburst of energy at Serampur, whose missionaries are said in the space of ten years to have translated the Bible into thirty-one languages or dialects, and by 1816 had formed a community of 700 converts. The London Missionary Society entered the field in 1798. By the "New Charter" of 1813 the East India Company provided for the establishment of the Anglican Archbishopric of Calcutta, with three archdeaconries, one for each presidency. This led the way to further enterprise on the part of the Church Missionary Society, which started in 1814, and the Society for the Propagation of the Gospel, which followed in 1826. Their greatest successes were scored in Southern India, in the fields already opened by the Lutherans. In 1835 the See of Madras was established, and in 1837 that of Bombay. In 1877 two missionary bishops assistant to the Bishop of Madras were appointed for the Tinnevely missions, and new sees were erected at Lahore and Rangoon, in Burma. The missionary Bishopric of Travancore and Cochin was established in 1879. The first missionary sent by the Church of Scotland arrived in 1830. Since then the Presbyterian Church of Ireland, the Wesleyan Methodists, the Salvation Army, and various other bodies, European and American, have been added to the list. Summing up the figures of progress, we find that in 1830 there were only nine Protestant missionary societies at work, with about 27,000 native Protestants in India, Burma, and Ceylon. In 1870 there were no fewer than thirty-five such societies, with an estimate of 318,363 Protestant Christians. In 1852 there were 459 Protestant missionaries and in 1872 there were 606. Features of the Protestant methods of work are: the spread of the Scriptures in the local vernacular; education of children specially in vernacular schools; special efforts in the way of female education; and a very extensive use of native missionaries, not only ordained ministers, but also lay preachers both male and female (Hunter's "Indian Empire").

Great stress is sometimes laid on the rapid growth of Protestant numbers, and the relatively smaller increase of Catholic numbers. Thus Mr. J. N. Farquhar, writing in the "Contemporary Review" for May, 1908, offers the following comparisons (Catholics including Latins and Syrians, and comprising British and French but not Portuguese India; while Protestants include all native Christians in India excluding Burma):—

	CATHOLICS.	PROTESTANTS.
1851	732,887	91,092
1871	934,400	224,258
1891	1,313,653	559,661
1901	1,550,614	871,991

From these and other figures he calculates that, whereas the Catholic increase for fifty years is only 111.5 per cent, that of the Protestants during the same period is 857.2 per cent. The question is a complicated one, because we do not know the methods by which the Protestant figures are obtained, i. e. whether they include only really initiated Christians; what proportion of the conversions are permanent, or how far pecuniary assistance has to do with many of them. Putting this aside, it is to be noted that whereas most of our Catholic energy is taken up by permanent ministrations to numerous stable bodies of hereditary Catholics, Protestant missionary enterprise is to a great extent of recent origin, and has had before it an open field. The different missionary societies on

ENTRANCE, SUMAREE TEMPLE, BENARES

their first arrival find themselves free from pre-existing ties, and can give their whole energy to breaking new ground in remote districts, where there is always the best chance of securing rapid results. Only after the pioneer work is finished, and the Protestant converts are settled down as hereditary Christians, will the comparison of percentages provide a fair test. Moreover if percentages are left aside, and attention paid to the actual growth of numbers, it will be found from the above figures that whereas Catholics have increased by 817,727, Protestants during the same period have only increased by 780,899. This fact puts quite a different aspect on the case.

ARCHITECTURE AND ARCHÆOLOGY.—India is rich in archæological monuments of various kinds, and presents a remarkable variety of architectural works of highest excellence, embodying the history of the past. First come the stupas or topes connected with early Buddhism, and dating centuries before Christ. The chief of these are found at Sarnath near Benares, Gaya, Sanchi, and other parts of Northern India, the scene of the original Buddhist movement, and at Anuradhapura etc., in Ceylon. The country is also dotted over with Buddhist rock-cut temples and monasteries dating from a century before Christ to about the seventh century A. D., the most important being those at Ellora and Ajunta, Nasick, Badami,

Kennery in Salsette, and Karli near Poona, etc.; besides these there are numerous Brahminical rock-temples dating from about the seventh century, apparently in imitation of Buddhist precedent. Of these the best known is that of Elephanta near Bombay. From the seventh century A. D. there was a great development of Hindu temple-building, chiefly in the South of India—of which noble specimens are to be seen in the Mysore and Dharwar districts, e. g. Lakundi, Aivally, Paddatgul, Badami, etc., near Gadag, and also in the parts round about Madras. Hindu architecture reached its climax in the fourteenth and fifteenth centuries, as at Vijayanagar, Madura, Tanjore, Trichinopoly, and other places near the Coromandel Coast. Nor should Benares or the Orissa Coast be omitted. In the thirteenth century the Jains of Rajputana had attained wonderful perfection in the marble carvings of the interiors of their temples, of which the finest specimens are seen on Mount Abu and at Girnar. In the sixteenth and seventeenth centuries Moslem art also grew to the highest perfection in Agra, Delhi, and other northern centres, and also in the Deccan sultanates at Gulberga, Golconda, and Bijapur. At Ahmedabad a special kind of Moslem architecture was developed through the employment of Hindu workmen under Mohammedan direction; while in Sind the mausoleums are remarkable for the splendour of their interior decoration with encaustic tile-work. Among secular buildings the palaces of rajahs and sultans, and the hill forts of various chiefs, are objects of interest. Add to this the eminence attained by Indian artisans of the past in all kinds of jewellery work, brass work, enamel work, wood carving, weaving, and embroidery, and it will be seen that there is probably no country which might more profitably be visited by the art student than India.

CATHOLIC ARCHÆOLOGY.—Except for the reputed tomb of St. Thomas near Mylapur, the two shrines at the Great and Little Mounts close by, a few early stone monuments, and a few inscriptions on copper in Travancore, ecclesiastical antiquities are wanting before Portuguese times. The Portuguese churches of the sixteenth and seventeenth centuries, though without pretension to high artistic style, were in many cases majestic and imposing. The finest group was naturally at Goa, but the ruins at Bassein and Chaul near Bombay are also of remarkable interest both for number and size. Elsewhere the churches are mostly of secondary importance. The presence of Portuguese Christianity is marked by numerous stone crosses of a peculiar shape scattered about the country, especially along the seashores and on the tops of hills near Bombay. Among modern buildings of note may be mentioned the cathedrals of Allahabad and Lahore, the college churches of Mangalore and Trichinopoly, and the parish churches of Karachi and the Holy Name, Bombay. The college buildings of Trichinopoly, Calcutta, Darjeeling, and Bombay are also worthy of mention.

RELIGIOUS POLICY OF GOVERNMENT.—With regard to religion, the Indian Government maintains an attitude of strict neutrality. The Church of England is not in any sense "by law established", and whatever official countenance is given to it rests purely on the principle of providing for the religious requirements of subjects belonging to its communion, e. g. by appointments and salaries for bishops, military chaplains, and subsidies for the building or maintenance of military churches. A similar patronage, etc., is extended to the Scotch Presbyterian Church, and in a less degree to the Catholic Church. No better statement of the details of the law can be found than that contributed by Mr. J. A. Saldanha to the "Examiner" of 23 February, 1907, and 24 July, 1909, which runs as follows:—

In British India.—One of the fundamental principles

of the British Government in India is the toleration and equal protection of all religions. Every religious denomination enjoys the utmost freedom of action, and the religious privileges and susceptibilities of every community, caste, and class are respected with the most delicate care. This policy drew encomiums as early as 1818 from Abbé Dubois, a French missionary of Southern India, who in the preface to his treatise on "Hindu Manners, Customs and Ceremonies" attributes the strength of the British power in India among other causes to "the inviolable respect which they constantly show for the customs and religious belief of the country; and the protection they afford to the weak as well as to the strong, to the Brahmin as to the Pariah, to the Christian, to the Mahomedan, and to the Pagan". This attitude of toleration, protection, and equal treatment of all religions was affirmed in the most emphatic language in the royal proclamation of 1858:—"We declare it to be Our royal will and pleasure that none be in any wise favoured, none molested or disquieted by reason of their religious faith or observances, but all shall alike enjoy the equal and impartial protection of the Law; and We do strictly charge and enjoin all those who may be in authority under Us, that they abstain from all interference with the religious belief or worship of any of Our subjects, on pain of Our highest displeasure". Assemblies within religious edifices or outside are never to be interfered with in British India except in cases of disorder. The police authorities have only the right of licensing and regulating public assemblies on public roads under Act V of 1861. On the other hand, under the same enactment they are bound to keep order "in the neighbourhood of places of worship, during the time of public worship". The utmost liberty is allowed to preach on religious subjects even in public streets, provided no cause is given to offend the religious feelings of the hearers or others, and no disturbance of public peace or obstruction to traffic is caused. No restriction is imposed on other means of propagating a religion, except such as would bring the measures within any of the offences against religion or the offence of defamation as defined in the penal code.

Even practices regarded by the educated classes as grossly superstitious are tolerated. It is only in places to which the Prevention of Cruelty to Animals Act, 1890, has been specifically extended that measures can be legally taken to prevent the infliction of unnecessary pain on animals in connexion with sacrifices, etc. But the superstitious and religious but inhuman practices of *Satti* and of *Thaggi* have been abolished by the strong hand of law.

No native of British India, nor any natural-born subject of His Majesty the King resident therein, is by reason only of his religion, place of birth, descent, colour, disabled from holding any office under the British Government (3 and 4 Will. IV, c. 85). The scrupulous regard to the policy of non-interference with religious practices of the people in British India is carried so far that the courts have always refused to interfere with the internal *autonomy of castes*. The principle is that where the caste exercises jurisdiction on a subject which interests its members, it is enough if it proceeds according to caste usage and exercises its powers with due care and in accordance with custom (see I. L. R. 24 Bom. 30; 26 Bom. 174). Where a community is a *private and voluntary religious society* resting upon a consensual basis, the law observed is that the members make rules for themselves and may constitute a tribunal to enforce the rules, and the decision of that tribunal is binding when it has acted within the scope of its authority and in a manner consonant with the general principles of justice. When the decision of a domestic tribunal has been arrived at *bona fide*, the court has no jurisdiction to interfere (I. L. R. XI Bom. 174). Act I of 1880 is the only enactment in the

British Indian Statute Book relating to religious societies. It confers on bodies associated for the purpose of maintaining religious worship certain powers in respect of (1) appointment of new trustees in cases not otherwise provided for, (2) vesting their properties in these new trustees without a formal instrument, and (3) dissolution of the societies by three-fifths of their number at a meeting convened for such purpose. Questions regarding the validity of the appointments of any trustee, as to whether any person is a member of a society, etc., can be submitted for adjudication to the High Court. This Act confers only certain enabling powers on religious associations, and allows High Courts to interfere only when there are certain disputes within an association.

One of the striking features of the British Administration in India—the result of its respect for the customs of the people—is that by far the great mass of them are allowed to regulate their laws of succession, inheritance, property, etc., according to their immemorial usages. The enactments regarding succession, wills, etc., are intended for communities who are supposed not to have any set usages to fall back upon. The State scrupulously avoids interference even with the usages of converts to Christianity. In *Abraham v. Abraham* (9 M. I. A., 195) the Privy Council held, "The profession of Christianity releases the convert from the trammels of Hindu Law, but it does not of necessity involve any change in the rights or relations of the convert in matters with which Christianity has no concern, such as his rights and interests in, and powers over, property. The convert, though not bound as to such matters, either by the Hindu Law or by any other positive law, may by his course of conduct after his conversion have shown by what law he intended to be governed as to these matters." A recent decision of the Bombay High Court has gone so far as to recognize the legal existence of the peculiar system of Hindu co-parcenership among the native Christians of Kanara (8 Bom. L. R. 770). It is interesting to note how, where the State has thought fit to pass special enactments as to marriages and dissolution of marriages among Christians or converts, the usages of the Roman Catholics have been duly respected, as in the Christian Marriage Act of 1872 (Sections 9, 10, 30, 32, 65), and the Dissolution of Native Converts' Marriages Act, 1866, Section 34, which provides that "nothing contained in this Act shall be taken to render invalid any marriage of a native convert to Roman Catholicism, if celebrated in accordance with the rules, rites, ceremonies, and customs of the Roman Catholic Church." Such laws or usages as inflict on any person forfeiture of rights or property, and may be held in any way to impair or affect any right of inheritance, by reason of his renouncing or having been excluded from the communion of any religion or being deprived of caste, have been declared illegal by Act XXI of 1851.

The only apparent exception to the policy of equal favour to all religious communities is the modest en-

dowment of the established religion by the maintenance of Protestant Anglican Bishops and civil chaplains, and churches under their control and their establishment. This arose from the fact that the officers of the East India Company, who established British dominion in India, consisted mainly of Anglican Protestants; and while the East India Company took good care to maintain old Hindu and Mohammedan religious edifices and the establishments of their ministers of worship which had been endowed and maintained by previous rulers, it was but natural that it should have provided for an ecclesiastical establishment needed for the majority of its officers. The Government of India Act, 1833 (3 and 4 Will. IV, c. 85), while authorizing the Anglican ecclesiastical institution provides for the appointment of two chaplains of the Church of Scotland on the establishment of each presidency. "Provided always that nothing herein contained shall be so construed as to prevent the Governor-General in Council from granting from time to time to any sect, persuasion, or community of

Christians, not being of the United Church of England and Ireland, or of the Church of Scotland, such sums of money as may be expedient for the purpose of instruction or for the maintenance of places of worship."

In the last respect the Government of India cannot be said to be partial to Christians as compared with non-Christians; since it spends large sums of State money over a number of non-Christian religious edifices and institutions in continuance and perpetuation of the practice of their predecessors

in the government of the country. This is done either directly by periodical payments, or indirectly by means of *inams* or grant lands free from assessment. The Anglican ecclesiastical establishments had their origin in the ancient chaplaincies attached to the East India Company's factories in India.

The Roman Catholic religion comes in for rather an insignificant share of the State's bounty. Catholic troops are allowed the ministrations of Catholic priests, but the State does not maintain them on anything like the scale extended to Anglican chaplains—the expenditure on Catholic military chaplains and their establishments, etc., for the whole of the Indian Army amounting to Rs. 284,000 per annum. (The rupee varies in value from 30 to 32 cents.) An instructive commentary on this part of the subject is furnished by the figures of expenditure in the Bombay Presidency. The Church of England costs Rs. 289,708 per annum; the Church of Scotland Rs. 34,435; while the Catholic Church receives only Rs. 10,374, or about equal to the salary of one Anglican senior chaplain. (The monthly allowance of Rs. 500 given to the archbishop is for statistical returns.) Compare this with the annual cash allowances given to non-Christian temples and mosques, amounting to not less than Rs. 255,000; in addition to the enormous revenues derived from lands presented to them by the State, on which the mere assessment (which of course is not recovered) comes to close on Rs. 900,000. In other words, the British Government spends on non-Christian temples and

BENARES

mosques over eleven lacs of rupees every year in the Bombay Presidency alone. Whether this obligation is inherited from its predecessors, and if so to what extent, is more than one can venture to say. In any case it throws out into bold relief the extreme sensitiveness of the British Government to the religious susceptibilities of its non-Christian subjects.

In regard to educational institutions, the British Government in India generously patronizes and aids with grants schools and colleges established by individuals or associations, whether religious or secular. It is important to note that the Government educational authorities never think of interfering with the arrangements made in these aided schools for imparting religious instruction. What the Universities Act (VIII of 1904) and the educational codes require is that the schools and colleges should be efficiently maintained for imparting secular instruction up to the standard required. The question of the religious instruction of the pupils, even in institutions maintained by purely religious bodies, is one with which Government does not concern itself. Teachers of religion are not paid by Government as such, but they are allowed perfect freedom in selecting the subjects of religious instruction, the time of the day chosen, and the method of treatment. One cannot help wondering why this policy of the Government in India, viz., of non-interference with religious teaching in aided schools, cannot be adopted in England as a solution of its educational difficulty.

The British Indian law recognizes not only corporate bodies with rights of property vested in the corporation apart from its individual members, but also the juridical persons or subjects called foundations. A Hindu or a Mohammedan can establish a religious or charitable institution by simply expressing his purpose and endowing it; and the State will give effect to the bounty or at least protect it. A formal trust is not required for this purpose (I. L. R., 12 Bombay, 247; 7 Allahabad, 178). Under the native system of government it was looked upon as a heinous offence to appropriate to secular purposes the estate that had once been dedicated to pious uses (W. and B.; H. L. 202, 817). The State, however, in its secular executive and judicial capacity habitually intervened to prevent fraud and waste in dealing with religious endowments. It was quite in accordance with the legal consciousness of the people that the Bombay Regulation XVII of 1827 gave to the collector a visitatorial power enabling him to enforce an honest and proper administration of religious endowments. The connexion of the Government in its executive capacity with Hindu and Mohammedan foundations was brought to an end for Bombay by Bombay Act VII of 1863, and for Bengal and Madras by Act XX of 1863. But the existence of sacred property and of the rights and obligations connected with it as objects of the jurisdiction of the civil courts is recognized by the laws just referred to. The law which protects the foundation against external violence guards it also internally against maladministration, and regulates, conformably to the central principle of the institution, the use of its augmented funds. It is only as subject to this control in the general interest of the community that the State through the law-courts recognizes merely artificial persons. It guards property and rights as devoted, and thus belonging, so to speak, to a particular allowed purpose, only on a condition of varying the application when either the purpose has become impracticable, useless, or pernicious, or the funds have augmented in an extraordinary measure. This principle is recognized in the law of England as it was in the Roman law, whence indeed it was derived by the modern codes of Europe, and is applied to religious institutions in India. The courts can draw up schemes for the management of a religious endowment and its funds, when internal disputes arise among its administrators or those interested in

it, giving, however, due consideration to the established practice of the institution and position of the priests or ministers of worship and of other persons connected with it (see Justice West's remarks in I. L. R., 12 Bom. 247). Religious endowments have been held not to be vested in the public at large, but in that part of the public for whose religious benefit they were originally established (I. L. R., 7 All. 178).

The Courts in India have always refused to recognize the authority of the parishioners or the congregations of a church founded by the people themselves or their ancestors, and devoted to religious worship according to the Roman Catholic ritual, to manage or divert its temporalities independently of their ecclesiastical superiors subject to the See of Rome, much less to interfere in its public worship or change the character thereof. Whatever be the rights of what are called "juntas" in certain parishes, the congregations are not deemed to have any legal existence independent of the vicar under the vicar Apostolic or bishop deriving his authority from the pope (see the decision of the Madras High Court of Feb., 1895, and the sub-judge's decision conformed to it, printed in the "History of the Diocese of Mangalore", pp. 213-218).

In Native States.—In the Interpretation Act, 1889 (52 and 53 Vict. ch. 63), the expression "India" is defined as meaning British India together with any territories of any native prince or chief under the suzerainty of Her Majesty, exercised through the Governor General of India or through any governor or other officer subordinate to the Governor General of India. The territory of the Native States is not British territory; nor are their subjects British subjects. But the sovereignty over them, as Sir Courtenay Ilbert in his "Government of India" aptly observes, "is divided between the British Government and their rulers in proportions which differ greatly according to the history and importance of the several States, and which are regulated partly by treaties or less formal engagements, partly by *sanads* or charters, and partly by usage". The British Government has undertaken to protect these states from external aggression. But Government "as the paramount power (a) exercises exclusive control over the foreign relations of the State; (b) assumes a general but a limited responsibility for the internal peace of the State; (c) assumes a special responsibility for the safety and welfare of the British subjects resident in the State." The last is enjoyed by *delegation* from Indian principalities expressed by treaty or based on tacit and long usage. Such delegated jurisdiction is exercised also on British railways running through protected states, in civil stations, cantonments, and residences within them. In these areas a large number of British-Indian enactments have been introduced by the Governor General of India under the operation of Act XXI of 1879, the preamble of which runs as follows:—"Whereas by treaty, capitulation, agreement, grant, usage, sufferance and other lawful means, the Governor General of India in Council has power and jurisdiction within divers places beyond the limits of British India." It is by virtue of this legislative provision, that the Divorce Act (IV of 1869, as amended by Acts XI of 1889 and II of 1900), the Christian Marriage Act (XV of 1872, as amended by Acts II of 1891 and II of 1892), the Administrator General Act (II of 1874, as amended by Acts IX of 1890 and VI of 1900), Married Woman's Property Act (III of 1874), Births, Deaths and Marriages Registration Act (as amended by Act XVI of 1890) and Pilgrim Ships Act (XIV of 1895) have been made applicable to subjects of His Majesty within the dominions of Princes or States in India under the suzerainty of His Majesty.

The British Government also exercises jurisdiction in some Native States over the subjects or a class of the subjects, of such states, which is called *residuary*;

that is, what remains outside the actual sovereign powers exercised by the native princes. When any Indian chief dies without an heir, or leaving a minor heir, or proves himself incapable of ruling, the British Government steps in and administers the affairs of the State through their agent, and exercises what has been named by Sir William Lee-Warner ("Protected Princes of India", p. 330), *substituted jurisdiction*. In such case it is the Governor-General of India or the local governors that conduct the administration, while the British Indian Legislatures are unable to extend their authority over the native subjects of Indian Princes or their territory. It is the prerogative of the Crown and not of the British-Indian Legislatures, whose enactments may be introduced only by the British executive authority by means of special orders. In the exercise of the *substituted jurisdiction*, as in Mysore during a long minority administration, a large number of Indian legislative enactments have been introduced in several Native States. The Native States administrations

have also built up their legislative code on the model of the British-Indian legislation. Thus we shall find that there is no State in which the Indian Penal Code or some code like it has not been introduced with all the provisions relating to offences against religion (Sections 296-298 Indian Penal Code). But there is not a single Native State which can boast among its legislative achievements any enactments similar to the Caste and Religious Disabilities Act (XXI of 1851), which declares as illegal "such laws or usages

as inflict on any person forfeiture of rights or property or may be held in any way to impair or affect any right of inheritance, by reason of his renouncing or having been excluded from the communion of any religion or being deprived of caste". It is a masterpiece of British statesmanship and policy of toleration and equal protection of all religions. That it should not find a place in the statute book of a State like Mysore governed on the highest liberal principles, in which a native Catholic of the State rose to the eminent position of a judge of the Mysore High Court and then that of a member of the Council of Administration, and in which Christianity thrives splendidly side by side with Hinduism and every other religion, is an enigma which outsiders are at a loss to understand. The agitation for the introduction of legislation on the lines of the British-Indian enactment in the large Native States of Mysore and Travancore has failed woefully.

But for this flaw in the administration of the Native States, it must be said to their credit that the principle of religious toleration has been generally respected by Indian princes and rulers. There have been some rare instances in which the British Government has found it necessary to interfere on the score of religious intolerance of a chief. One of the notable cases was the refusal of Lord Ripon to allow the Maharajah of Indore to restrict the freedom of religious worship of the Canadian mis-

sionaries within their own houses and in their own premises, a privilege which has extended to their converts and dependents, the native subjects of His Highness. Though there are native rulers, who have not surrendered a jot of their internal sovereignty over their native subjects, yet their very existence is tolerated and guaranteed on the condition of their maintaining a just and peaceful administration combined with toleration of all religions—if not equal protection of all religious bodies and sects. The latter condition of equal protection could not be exacted from Indian chiefs by a European Government which boasts of an established Church supported by the State at home—though it has practically kept itself free from such an entanglement in India. So every Indian State has its established church—generally that of the religion of the chief—maintained out of public funds. Many a ruler has at the same time extended his patronage to religious communities other than that to which he belongs by grants of land to their places of worship and *nemnuks* or allowances to their religious ministers.

There are numerous Christian educational and charitable institutions in native States, which have received large grants-in-aid from Indian chiefs and darbars. Christian bishops and missionaries are generally treated with marked respect and receive every courtesy from darbars and their officers. Christian religious propaganda is, it is true, looked upon with disfavour by the people especially those of higher castes of Hindus, and with the almost impassable barriers of caste or fanaticism the progress of

DUNKAR, SPITI, INDIA

Christianity is necessarily slow in India, and slower still in most Native States which support an established church. Foreign missionaries in some States suffer from the prohibition against their acquiring lands, but this prohibition does not apply to native Christians, in whose names any number of lands can be purchased for the use of missions. On the whole, Christian missionaries have to be thankful for the liberal principles on which native administrations are conducted under the guiding hand of the British Government.

ECCLESIASTICAL LITERATURE.—From the Catholic point of view nothing in the way of a complete general history of the Church in India has yet been written, though the materials for such a work are abundant and might easily be collected. They consist chiefly of the records and histories of the different religious orders, collections of official documents, monographs on particular missions and biographies of eminent missionaries—as well as occasional literature of various kinds. Some rather scanty general histories have been written by Protestants; but most of them are vitiated by a marked animus against Roman Catholicism, and have to be read with caution. The following is a somewhat promiscuous list of works, most of which are easily accessible: On the Thomas Christians.—MACKENZIE, *Christianity in Travancore* (1901); MEDLYCOTT, *India and the Apostle St. Thomas* (1905); RAULIN, *Historia Ecclesie Malabarice* (Rome, 1745); GEDDES, *The Church of Malabar and the Synod of Diamper* (1694); PHILIPPOS, *The Syrian Church in Malabar* (1869); KENNET, *St. Thomas, Apostle of India* (1882); MILNE RAE, *Syrian Church in India* (1892); HOWARD, *Christians of St. Thomas* (1864). Concerning the Portuguese.—LAFITAU, *Découvertes et conquêtes des Portugais* (1533); *O Chronista de Tisuaru*; SOUZA, *Asia Portuguesa* (1666); DU BARROS, *Decadens* (1777); DELLON, *Relation de l'Inquisition de Goa*; FONSECA, *Sketch of the City of Goa* (Bombay, 1878); *Bullarium*

Patronatus Portugallia Regum (Lisbon, 1868); COTTINEAU, *Historical Sketch of Goa* (Madras, 1831); TORRIE, *Estalística de India Portuguesa* (Bombay, 1879); DE SOUZA, *Oriente Conquistada* (1881); D'ORSEY, *Portuguese Discoveries, Dependencies and Missions* (1893); DANVERS, *The Portuguese in India* (1894), *O Oriente Portuguez*; GOUVEA, *Jornada de Arcebispo de Goa* (1609). On the Jurisdiction Struggle.—*Life of Hartmann* (1868); STRICKLAND, *The Goa Schism* (1853); BUSSIERES, *Historia do Scisma Portuguez* (Lisbon, 1854); a copious pamphlet literature dating from 1858 to 1893, all out of print.

Monographs and Biographies.—*Lettres édifiantes et curieuses* by M. (1750); BERTRAND, *Mémoires historiques sur les Missions* (1847); IDEM, *La Mission de Madure* (1854); IDEM, *Lettres édifiantes et curieuses* (Madura, 1865); SAINT CYR, *La Mission du Madure* (Paris, 1859); GUCHEN, *Cinquante ans de Madure* (1887); MOORE, *History of the Mangalore Mission*; SUAN, *L'Inde Tamoule* (1901); *Litteræ Annua Soc. Jesu* (1573 etc.); *Rerum a Soc. Jesu in Oriente gestarum volumen* (1574); CAHREZ, *Atlas Geographicus S. J.* (1900); GOLDIE, *First Christian Mission to the Great Mogul* (1897); *La Mission de Vizagapatam* (1890); TENANT, *Christianity in Ceylon*; FORTUNAT, *Au pays des Rajas [Rajputana]* (1906); COLERIDGE, *Life and letters of St. Francis Xavier* (London, 1886); *Monumenta Xaveriana* (Madrid, 1900); CROS, *Vie de St. François Xavier* (Toulouse, 1898); ANTHONY MARZ, *Life of Dr. A. Hartmann* (1868); SGAU, *Mgr. Alexis Canoz* (1891); ZALESKI, *Les Martyrs de l'Inde* (1900). GENERAL AND SUNDRY.—MAFFÆI, *Historiarum Indicarum Libri* (Cologne, 1593); DE HOUDT, *Histoire Générale des Voyages* (1753); CROZE, *Christianisme de l'Inde* (1758); TIEFFENTALLER-BENOUILLE, *Description de l'Inde* (1786); PAULINUS A S. BARTHOLOMÆO, *India orientalis christiana* (Rome, 1794); MURRAY, *Discoveries and travels in Asia* (1820); HOUGH, *Christianity in India* (1839); MULLBAUER, *Geschichte der Kath. Missionen in Ostindien* (Freiburg, 1852); MARSHALL, *Christian Missions* (London, 1862); WERNER, *Atlas des Missions Catholiques* (1886); IDEM, *Orbis Terrarum Catholicus* (Freiburg, 1890); SMITH, *The Conversions of India* (London, 1893); STRICKLAND, *The Jesuits in India* (1852); IDEM, *Catholic Missions in S. India* (1865); FANTHOM, *Reminiscences of Agra*. A series of travellers' accounts since the days of MARCO POLO; *The Bombay Gazetteer*, the Madras and other manuals *passim*; HUNTER, *Indian Empire*, and *passim* in *Imperial Gazetteer*; *Madras Catholic Directory* each year from 1851 to 1909; BUCHANAN, *Christian Researches in Asia* (1811); DA CUNHA, *Chaul and Bassein* (1876); *The Origin of Bombay* (1900); STEWARD, *History of Bengal* (1813); *Calcutta Review*, V, p. 242; *Portuguese in North India*; *Ibid.* (April, 1881); *The Inquisition; Vindication of de Nobili in East and West* (Dec., 1905); EDWARDS, *The Rise of Bombay* (1902); *The Bombay Examiner* files 1907 and onwards for *History of Bombay Vicariate*; a large ecclesiastical bibliography will be found in D'ORSEY, *Portuguese Discoveries*, p. 379 sq.

SECULAR LITERATURE.—ALLEN, *Narrative of Indian History* (1909); *Cyclopedia of India* (London, 1908); SMITH, *Early history of India*; SMITH, *Asoka in Rulers of India* series; HOERNE AND STARK, *History of India*; DUTT, *Ancient and Modern India* (Calcutta, 1889-1890); POOLE, *Medieval India in Story of the Nations* series; REES, *The Muhammadans in Epochs of India* series; BERNIER, *Travels*, ed. by CONSTABLE; *Rulers of India* series (Clive, Warren Hastings, etc.); MALLESON, *History of the French in India* (London, 1868); MALISSON, *Decisive battles of India*; HUNTER, *Brief history of the Indian peoples*; JOPPEN, *Historical Atlas of India*; HUNTER, *The Indian Empire* (London, 1893); HUNTER, *Imperial Gazetteer of India* (1910); HUGO, *Essays on the Persis*, ed. WEST; WEBER, *History of Indian Literature* (London, 1892); CUST, *Modern Languages of the East Indies* (London, 1898); DOWSON, *Dictionary of Hindu mythology, religion, geography, history and literature* (1879); MONIER-WILLIAMS, *Modern India and the Indians*; HODGSON, *Essays relating to Indian subjects*; BIGANDET, *Life or Legend of Gaudama [Buddha]* (London, 1880); BARTH, *Religions of India* (London, 1882); DAVIES, *Hindu Philosophy*; JACOB, *Manual of Hindu Pantheism*; DAVIES, *The Bhagavad-gita*; GOUGH, *The Philosophy of the Upanishads and ancient Indian metaphysics* (London, 1882); PHAYRE, *History of Burma* (London, 1883); BURNELL, *The laws of Manu*; HILL, *Aboriginal tribes of Central Provinces* (1866); WATSON AND KAYE, *People of India, races and tribes* (1868); GLEIG, *Life of Munro*; TENENT, *Ceylon* (London, 1860); THORNTON, *British India*; CROOKE, *Popular religion and folklore of N. India* (Allahabad, 1894); WILKINS, *Hindu Theology*; GEARY, *Burma after the conquest*; MALCOLM, *Political history of India*; WILLIAMS, *Hinduism*; ERSKINE, *India under Baber and Humayun*; DUBOIS, *Hindu manners and customs* (Oxford, 1899); RHYSDAVIDS, *Buddhism* (New York, 1896); WILKINS, *Daily life and work in India*; PADFIELD, *The Hindu at home*; MANNING, *Ancient and medieval India* (London, 1869); WILLIAMS, *Thought and life in India*; ELPHINSTONE, *The History of India* (1866); WHEELER, *The History of India* (4 vols., London, 1874-76); TOD, *Annals and Antiquities of Rajasthan*; RISLEY, *The people of India*; MONIER-WILLIAMS, *Indian Wisdom* (London, 1876); MACDONNELL, *Sanskrit Literature* (London, 1900).

ERNEST R. HULL.

Indiana, one of the United States of America, the nineteenth in point of admission, lies between 37° 47' and 41° 50' N. lat., and between 84° 49' and 88° 2' W. long. Its length is 267 miles, north and south, and its average width, east and west, 140 miles. Its area is 35,885 square miles, or 22,966,400 acres. On the north it is

bounded by the State of Michigan and Lake Michigan, on the east by the State of Ohio, on the South by the Ohio River, and on the West by the Wabash River and the State of Illinois. It is subdivided into ninety-two counties. Indianapolis is now the capital, situated in the geographical centre of the State. The State has only three lake ports, Michigan City, Indiana Harbor, and Gary.

PHYSICAL CHARACTERISTICS.—There are no mountains in the State; the area is generally level or undulating, but with continuous drainage slopes of considerable extent. The most rugged or broken portion of the State borders the Ohio and extends north from twenty to fifty miles, interspersed by fertile valleys and table lands. There is more or less broken land adjacent to the larger streams, but back of these the country undulates and becomes level with easy drainage. More than eighty per cent. of the State was originally dense forest, interspersed with open stretches. In the north-west portion of the State the great prairie begins that stretches across Illinois. Approximately ninety per cent. of the original forest has been cleared and the land brought to a high state of cultivation. The Wabash and Ohio are the only navigable rivers, the former having once been navigable for light-draught steamboats as far north as Lafayette. But navigation to any extent has receded to a point below Terre Haute. All streams originally abounded in fish, but the supply has greatly diminished in recent years; strict fishery laws are now in force to encourage an increase.

POPULATION.—This, like the other central States north of the Ohio, is composed of a population of mixed origin (2,775,000 in 1908). Its first white settlers were the French from Canada, of whom some traces still exist, mainly near Vincennes, at Terre Haute, and around South Bend. The next in order of time were pioneers from Kentucky and southern Ohio, who first settled the southern counties. With later material progress in the nineteenth century, New York and New England blood contributed to the population of the northern part of the State, with generous infusions from the mixed races of Pennsylvania and Maryland. The digging of the Wabash and Erie Canal attracted large numbers of Irish and German immigrants, who worked upon the project. With the railroad and agricultural development in the middle of the century came further infusions of Irish, German, New England, and Eastern blood—the two latter classes being the descendants of ancestors who had crossed the Atlantic from Great Britain in the century or more preceding the Revolution, but thoroughly Americanized under the conditions of their new habitat. Foreign immigration in the past thirty years has not added largely to the population, but has proceeded farther west, leaving, however, as it crossed the State, some English, Swedes, Germans, and Swiss.

RESOURCES.—Although Indiana stands thirty-fifth in area among the states, in agricultural resources the State stands fifth in the production of wheat, and sixth in that of corn and oats. In 1908 the State produced 32,746,145 bushels of wheat from 2,059,339 acres; 31,368,570 bushels of oats from 1,528,502 acres; 120,447,582 bushels of corn from 3,884,980 acres; 4,143,084 bushels of potatoes from 66,884 acres; 1,835,244 tons of hay from 1,317,455 acres; besides important items of tomatoes, clover, tobacco, peas, onions, clover seed, butter, cheese, poultry, eggs, and apples. The State is also a liberal producer of horses, cattle, hogs, and sheep. The assessed valuation of its farms is \$660,172,175. In 1908 the population was 2,775,000; its total taxables in 1907 being \$1,767,815,487. Of gravel and macadamized roads there were in the same year 18,252 miles; of steam railroads, 7,142, and 1,763 miles of electric inter-urban roads. Ohio and Switzerland are the only counties

without railroads. The manufacturing interests of the State are considerable; in 1905 there were 7,912 factories representing an investment of \$311,526,000, with 154,174 wage-earners. The value of their product was \$394,165,838, and the wages paid were \$72,178,259. The bituminous coal output in 1907 was 13,250,715 tons; from its oil wells were produced 5,103,297 barrels of oil valued at \$4,489,213; of oolitic limestone the product value was \$3,673,965.

EDUCATION.—According to latest estimates the total value of school property (public and religious) is \$33,792,339; number of teachers, 16,571; of pupils enrolled, 531,731. The public school fund of the State (including university fund) is \$11,818,433. The State university is located at Bloomington, established according to the declaration of the first State constitution, and was opened in 1824. President Hall, a Princeton graduate, constituted at that time the whole faculty. It has many large buildings, a faculty numbering seventy-two, and about 1800 students, of whom over one-third are young ladies. Purdue University at Lafayette owes its name to John Purdue, a wealthy bachelor of that city, who endowed it as an agricultural college. It was founded by State legislative enactment in 1874 as Indiana's land-grant college, under the congressional act of 1862, when 13,000,000 acres of government land were set aside for establishing industrial colleges to advance agriculture and the mechanical arts. It is one of sixty-five similar institutions founded in the United States. It has over 2100 students, 237 professors, some twenty-five substantial buildings, and a large U. S. experimental station. The campus and experimental farm cover 180 acres. Although supported by legislative appropriations it is overtaxed for room and facilities. Coeducation prevails at Purdue and the State university, and in other State educational institutions. It is estimated that in 1907 Purdue gave instruction to more than 100,000 people by its regular course, its short course in agriculture, its farmers' institutes, and by its corn and fruit excursion trains with its professors and instructors accompanying the trains.

The public free school system of the State is now developed to a degree commensurate with the needs of the population. This development had its impetus from the spirit which dictated the constitution of 1852. Previous to that period, free public education was scattered and meagre. A system of consolidating poorly-attended schools into one central school of greater efficiency and the free transportation of pupils (made possible by the law of 1907) are doing much in rural districts to lift education to a higher plane. Local township taxation has been liberal in advancing this system. No small factor in raising the level of rural intelligence, moreover, has been the extensive spread of the system of rural free mail delivery, providing a daily mail, with daily newspapers and periodicals. The State is also well supplied with rural telephone systems and good roads.

Institutions worthy of mention are Wabash College at Crawfordsville, a Presbyterian school with 231 students; Earlham College, near Richmond, with 413 students, founded by the Society of Friends; Franklin College at Franklin, a Baptist institution; De Pauw University at Greencastle, under Methodist influence, with 924 students; Taylor University at Upland; Butler University (near Indianapolis), founded by the Church of the Disciples, 256 students; Rose Polytechnic at Terre Haute, where also is the State normal school; Hanover College, founded in 1827 by Presbyterians, near Madison, with 138 students; Chautauqua classes at Winona Lake, and its technical institution at Indianapolis; Culver Military School at Lake Maxinkuckee (the largest of its kind in the U. S.); the normal school at Valparaiso, with 4000 students, the Indiana Kindergarten Training

School at Indianapolis; manual training and domestic instruction have been instituted by about seventy-five towns; there are also State schools for blind, deaf and dumb, feeble-minded, and soldiers' orphans, where industrial training is also carried on.

History records that the first known regular school in the State was that of the Catholic priest Rivet at Vincennes (1793). Three years later there is an account of a little school in Dearborn County. As settlers came into the south-eastern counties children were taught in their homes. Owing to dangers from Indians and wild beasts, the teacher went to the homes, spending one-third of the day there. Thus with six families a teacher gave three lessons each week to all the children. Later, as danger of going through the forest decreased, the children congregated at the home of a centrally-located family, where a lean-to was built for their use against the pioneer's cabin. When possible a log house near some living spring would be built and a teacher hired for three or more months, and "boarded around" with the patrons. It is a matter of history that some of the early log school houses in Washington County were constructed with loop-holes for shooting at Indians. Barns and mills were often utilized. At Vevay (a Swiss settlement) the first school taught in English was in a horse mill.

In many southern counties after the Indian wars, block-houses were turned into schools. The interiors were of the crudest character. Adventurers from England, Scotland and Ireland, or the East, were generally the teachers in these primitive days. Many of them, to increase their earnings, chopped wood after school and on Saturdays. In these days there were no regular school books. Any accessible book—the Bible, Gulliver's Travels, or Pilgrim's Progress—was used to teach pupils to read. Ink and paper were almost as scarce. But as time went on, with the advance of civilization, these primitive conditions, so common to all the States west of the Alleghenies at some time in their history, were replaced by larger facilities, with better teachers and a fuller supply of books. But this may be taken as a true picture of pioneer days previous to (if not for a decade after) the adoption of the constitution in 1816. Struggles against the forces of nature, the sparseness and poverty of the population, made education in a general way a secondary matter. It was out of this condition that was evolved the theory and the system of free schooling in the rudiments at public expense.

HISTORY.—Indiana was originally part of the French possessions extending to the Gulf of Mexico. It was first visited in the latter part of the seventeenth century by hunters and Indian traders from Canada, and government posts were extended in the early years of the eighteenth century down the Wabash as far as Vincennes. Indian and French interests never clashed, but their settlements were of little historical moment. The Miami confederacy of Indians, whose villages were scattered through the central and northern parts of the State, included the Weas, Foxes, Piankishaws, Pottawottomies, Shawanos, Ouatatenons, and Kiekapoops. In 1763 the territory embraced by the State was ceded to England. At the time of the cession to Great Britain of the north-west territory

SEAL OF INDIANA

it is estimated that north of the Ohio it contained about 1200 adults, 800 children and 900 negro slaves. Many retired to French posts like St. Louis. That portion of this domain, now known as Indiana, remained British territory less than twenty years. By the treaty of 1783 it was ceded to the United States, after the English had been surprised and driven from Fort Vincennes by the heroic exploits of General George Rogers Clark. The post of Kaskaskia on the Mississippi was the first object of acquisition in Clark's assault upon the north-west territory.

It was at this old town that Clark first met Father Pierre Gibault, to whom (as Judge Law states in his history of Vincennes), next to Vigo and Clark himself, the United States is more indebted for the accession of this great domain than to any other man. He was a native of Montreal, where he was born in 1737. He had been ten years pastor at Kaskaskia, much beloved and of great influence. Having been formerly at Vincennes, he was well known there. He had little sympathy with his new masters, the English. Clark's humane and liberal treatment soon won the hearts of the Canadians and the influence of Father Gibault, their recognized leader. It resulted in an offer from the good priest to win over the allegiance of his compatriots at Vincennes. This he undertook at once in face of the difficulties of wilderness travel and Indian dangers, and readily accomplished it after a two days' sojourn there. The American flag was hoisted over the fort, after all who remained had taken the oath of allegiance. Vincennes, so easily captured and at once garrisoned and officered by Clark, was soon afterwards (Dec., 1778) retaken by a large force of English under Colonel Hamilton, dubbed by Clark as the "hair buyer" general, because of his being accused of offering rewards to the Indians for American scalps, and of his efforts to harry the frontier by Indian raids. It was in the second and final capture of Vincennes from Hamilton that Clark and his pioneers proved their prowess and earned the gratitude of their country against almost superhuman difficulties.

It was again at this juncture that the influence and services of Father Gibault, supplemented by those of the Sardinian merchant Francis Vigo, were so essential to Clark's heroic enterprise. Patrick Henry (then Governor of Virginia) refers to him as "the priest to whom this country owes many thanks for his zeal and services"; but probably the highest compliment paid to Father Gibault's loyalty and services is contained in Colonel Hamilton's wrathful denunciation of his influence. Indian attacks continued to make the State an unsafe place of residence, but the campaign of General Wilkinson in 1791 and later of General Wayne discomfited and disorganized the savages, and many tribes submitted. In 1800 Ohio was carved off from the north-west territory as a separate State, and the territory west and north-west was designated Indiana Territory. On 4 July, William Henry Harrison became its first territorial governor, resident at Vincennes. In 1805 Michigan, and in 1809 Illinois were carved off, thus confining the State to its present boundaries. But settlements continued to increase against Indian and natural obstacles and by 1810 the population, confined mainly to the southern end of the territory, amounted to 24,250. From the day that the British flag was hauled down at Vincennes until a decade after the Indians were scattered by the pioneers of Kentucky and Indiana, fighting back to back at Tippecanoe, the history of the State was one of long and bloody effort upon the part of the settler to win the fertile soil for homestead and plough. Year by year the front line of civilization was pushed farther and farther up the State, its advance marked by block houses and log cabins punctured with port-holes.

The record of this period is one of fierce reprisal of white man against red man, and of red man against white man, in which the savage played a steadily

losing game. That deep-rooted hatred against the Indian for his aid to the English in the war of the Revolution, nothing could quench in the breast of the pioneer. He was the peer of the Indian in woodcraft and stealth and his master with the rifle. Daily this weapon went with his plough afield as, furrow by furrow, the soil yielded to its new claimant, forever. The threatening attitude for Tecumseh, who was an Indian of unusual ability of organization, determined the governor to proceed against him. On 6 Nov., 1811, Harrison's army reached Prophetstown on the Wabash, about five miles below the mouth of the Tippecanoe. The next morning, before daylight, in violation of previous agreement, the Indians (Tecumseh being absent), led on by his brother, "The Prophet", attacked the Americans and a massacre was narrowly averted: but the frontiersmen fought bravely and stubbornly and turned the attack into a victory. Aside from minor skirmishes up to 1815, which marked the close of the war of 1812, the troubles from Indians were spasmodic (caused by wandering bands) for another decade. Yet the battle of Tippecanoe must stand as a decisive one in western history. In answer to a petition for admission to the Union, a bill admitting the State was passed in April, 1816, and on 29 June following the State adopted a constitution. On 11 December the State was formally admitted. It was not without considerable effort on the part of the free-soilers of that day that a clause excluding slavery was adopted.

From this time forward emigration, mostly from the south-east, was so rapid that by 1820 the population was 147,176, and by 1830 the sales of public lands for the previous decade reached 3,588,221 acres and the population was 343,031. It had more than doubled since 1820. Down the Mississippi and its tributaries (the Ohio and Wabash) was to be found the sole outlet for the increasing produce of the Middle West, whose waters drained into the great valley. Districts which were not upon streams navigable by even the lightest draught steamboat were sorely retarded. The small, flat boat was their main reliance. Roads suitable for heavy carriage were few up to the middle of the century. To meet this condition the building of canals (espoused by the constitution of 1816) was long advocated, in emulation of Ohio which took example after New York State. In 1826 Congress granted a strip two and a half miles wide on each side of the proposed canal. A very extensive and ambitious scale of main and lateral canals and turnpikes was advocated in consequence. The expense and time attending shipment of merchandise from the east at this time were almost prohibitive. Yet 100,000 bushels of salt came to the State each year from central New York, because it was a necessity, regardless of price. Work began on the Wabash and Erie Canal in 1832, on the White Water in 1836, on the Central in 1837. But bad financing and "bad times" nearly wrecked the whole scheme; yet the Wabash and Erie Canal was completed from Toledo to Evansville. It was a great factor in the development of the State, although it brought heavy loss upon the bondholders on the advent of the railroad, which competition the canal at that time could not stand.

Before the canal was in operation wheat sold at 37 to 45 cents, and corn at 16 to 20 cents per bushel. Salt brought \$10 per barrel, and sugar from 25 to 35 cents per pound. But the canal increased prices of farm products three or four fold and reduced prices of household needs 60%, a tremendous stimulus to agricultural development. By 1840 the population of the upper Wabash Valley had increased from 12,000 to 270,000. The canal boat that hauled loads of grain east came back loaded with immigrants. In 1846 it is estimated that over thirty families settled every day in the State. Manufacturing also developed

rapidly. In the ten years between 1840 and 1850 the counties bordering the canal increased in population 397 per cent; those more fertile, but more remote, 190 per cent. The tide of trade, which had been heretofore to New Orleans, was reversed and went east. The canal also facilitated and brought emigration from Ohio, New York, and New England, in the newly established counties in the northern two-thirds area of the State. The foreign immigration was mostly from Ireland and Germany. Later, this great canal fell into disuse, and finally very unwisely was abandoned, as railway mileage increased. In the next ten years, by 1840, of the public domain 9,122,688 acres had been sold. But the State was still heavily in debt, although growing rapidly. In 1851 a new constitution (now in force) was adopted. The first constitution was adopted at a convention assembled at Corydon, which had been the seat of government since December, 1813. The original state house, built of blue limestone, still stands; but in 1821 the site of the present capital (Indianapolis) was selected by the legislature; it was in the wilds, sixty miles from civilization; to-day it is a city of 225,000 inhabitants and the largest inland steam and electric railroad centre without navigation in the United States. Yet no railroad reached it before 1847.

The State sent three regiments to the Mexican war. Lew Wallace (afterwards general in the rebellion and the author of "Ben Hur") was a second lieutenant. All her regiments were officered by volunteer officers. During the war between the States, Oliver P. Morton (later U. S. senator) was the war governor and lent the full force of his strong character to the demand made upon this State, which furnished to the Civil War 208,000 soldiers. In addition to the sums expended by the State, the counties and townships gave, in bounties, \$15,492,876; for the relief of soldiers and their families, \$4,566,898; and for other expenses, \$198,866. Her total loss from battle and the incidents of war was 24,416. Her troops saw service in every Southern State. There is a National Soldiers' Home at Marion, established by Congress in 1890, and a State Soldiers' Home near Lafayette, created by the legislature in 1895. Benjamin Harrison, twenty-third President of the United States, had been a resident of the State since his twenty-first year and was the grandson of her first territorial governor, who was later elected ninth President of the United States. Thomas A. Hendricks, Vice-President of the United States, was elected with Grover Cleveland in 1884; both Harrison and Hendricks were lawyers of national reputation.

RELIGION.—History.—The first religion of Indiana, after its emergence into the daylight of history, was that of the Roman Catholic Church, brought thither by those missionaries of New France who followed the lakes and watercourses leading to the valley of the Wabash. The earliest of these priests was the Jesuit Allouez, whose rude mission-house stood on the St. Joseph River, within the present limits of Indiana, in close neighbourhood to the present site of Notre Dame University. The ground on which this mission stood is the earliest recorded land grant in the territory comprising the State's present limits. It was made in 1686 to the Jesuit Missions on condition of their erecting a house and chapel there within three years. Here the founder of the church in Indiana died in 1689. His place was taken by Father Claude Aveneau, who for many years ministered to the Christian Indians and the fitting *coureurs des bois*, who passed back and forth over this portage, which transferred their canoes from the waters of the Great Lake basin to those of the Great Valley. The mission was suspended by trouble with the Miamis for a few years, but in 1706 was restored under Father James Gravier. In 1711 he was succeeded

by Father Peter F. X. Chardon, but Charlevoix found it deserted in 1721.

Until 1734 Father St. Pé was in charge and his successor was Father Du Jaunay. In 1719 at Fort Ouiatenon on the Wabash below the present Lafayette, then at Fort Miami where Fort Wayne now stands, and finally in 1733 at Poste au Ouabache (later and still known as Vincennes), Jesuit missionaries were established almost continuously down to 1763. On 22 July, 1741, at Fort Ouiatenon was born a child, Anthony Foucher, who was destined to be the first native of the State to receive Holy orders. Ouiatenon was the head of navigation for the largest pirogues. Here all peltries destined for Canada were transferred to canoes. This made it an important rendezvous. As many as 20,000 skins a year are said to have been shipped from Ouiatenon in 1720 and the decade following. Yet not a vestige of this post remains—not even a stone upon a stone. From that point of time, until the battle of Tippecanoe (1811) marked the close of serious Indian warfare, there were only visiting priests at Vincennes and Fort Wayne. Confirmation was first administered at Vincennes about 1814 by the Bishop of Bardstown. Communicants were mostly of French origin, remnants of the early days of French sovereignty.

Dioceses.—(a) Diocese of Vincennes. This included the whole State, was established in 1834, and its first bishop was Simon Gabriel Bruté. At the time he was named for this diocese he was president of Mount St. Mary's College, Emmitsburg, to which he had donated his library of 5000 volumes. He died after incredible hardships in 1839, a veritable martyr to his zeal for the faith. There were only two priests besides in the State at the time of his consecration. Celestine de la Hailandière succeeded him. He attracted the Eudists to establish a theological seminary at Vincennes, drew Father Sorin and the Fathers of the Holy Cross to begin the work now flourishing at Notre Dame, and the Sisters of Providence whose house adjoins Terre Haute. He resigned (1847) and was followed by Bishop Bazin, who died in six months and was followed by Maurice de St. Palais, who had laboured many years on the frontier. To him the State owes the first orphan asylum and the Benedictine monks, whose house is at St. Meinrad. Bishop St. Palais died in June, 1877, rich in labours accomplished and much beloved. He had been offered the Archbishopric of Toulouse, but refused. His successor is the present Bishop Francis Silas Chatard, formerly at the head of the American College in Rome, now resident at Indianapolis. His jurisdiction is now known and designated as the Diocese of Indianapolis.

(b) Diocese of Fort Wayne. Erected in 1857, it comprises the northern half of the State. Its first bishop, John Henry Luers, a tireless labourer, was the founder of an association to care for infirm priests, and did much to extend the church under his care. There were only three schools and one college when he came. When he died there were forty schools and a university. His successor (1872) was Joseph Dwenger, founder of the St. Joseph's Orphan Home at Lafayette, and one for girls at Fort Wayne, who did much to extend the work of his predecessor in establishing parochial schools. He was also instrumental in the establishment of St. Joseph's College, near Rensselaer, by the Community of the Precious Blood. He was followed (1893) by Joseph Rademacher, who was transferred from Nashville, Tennessee, where he was consecrated (1883). This zealous administrator died in 1900, and was succeeded by the present incumbent, Herman Joseph Alerding.

Principal Religious Denominations.—Few states (if any) of the Federal Union present such a variety of religious denominations as the State of Indiana. This is due to the varied racial elements of its pop-

ulation. The accompanying table shows the various forms of religion represented, according to the latest state statistics (1907).

Two notable religio-sociological experiments on a considerable scale were tried in the early history of the State, which attracted widespread interest. In 1815 George Rapp transplanted his Rappist brethren, numbering 800, to a tract of 30,000 acres bordering the Wabash, where they built a substantial town which they called Harmonie; there they formed a socialistic celibate community of people belonging to the German peasant class, originally from Würtemberg. Their church structure, the most massive and notable one west of the Alleghanies, was in the form of a Greek cross, about 120 feet in length; the roof was supported by eighteen pillars of native walnut, cherry, and sassafras, some of them six feet in circumference. Although eminently successful in

and parsonage, and the land whereon said buildings are situate, not exceeding ten acres, when owned by a church, also every cemetery, are exempt from taxation."

Sunday is a *dies non*; and all contracts or acts, otherwise legal, are void if executed thereon; and all persons are under statutory prohibition from pursuing their usual business avocation, or rioting, hunting, fishing, or quarrelling upon that day. The penalty is a fine of not more than ten dollars. Exceptions are made for those conscientiously observing the Seventh Day, and travellers, tollgate-keepers, and ferrymen. Profanity and blasphemy at any time are also subject to fine. All witnesses must take an oath most consistent with and binding upon the conscience. Those conscientiously opposed to an oath may affirm, under the pains and penalties of perjury. The legislature is by custom opened by prayer. Sunday, New Year's

* Meeting places

material advancement, they sold their domain in 1824 to Robert Owen, a Scotch philanthropist, who was ambitious of exploiting there some of his social theories. He rechristened the town New Harmony, and brought with him or attracted there many men of eminent culture, and it became a veritable Mecca for scholars and travellers during the years of Owen's proprietorship, and was an enduring influence for many years upon the intellectual development of the State. The experiment came to an end in 1828, with failure marked across its record.

Legislation Directly Affecting Religion.—By statute (enacted in 1881 and now in force) "Clergymen, as to confessions or admissions made to them in the course of the discipline enjoined by their respective churches, shall not be competent witnesses." By statute (enacted in 1891 and in force) "Every building used and set apart for educational, literary, scientific or charitable purposes, and the tract of land on which such building is situated, not exceeding forty acres; also the personal property, endowment funds and interest thereon, set apart for the purpose"; likewise "Every building used for religious worship, pews and furniture,

Day, Christmas, and days recommended by the President of the United States, or the governor, as a day of public fasting or thanksgiving, Lincoln's birthday, Washington's birthday, Memorial Day (30 May), Labour Day, and days of any general, state, or national election, shall be legal holidays. If any such day falls on a Sunday, the Monday following shall be the legal holiday. All traffic in intoxicating liquors is prohibited on Sunday, the Fourth of July, New Year's Day, Christmas, Thanksgiving Day, and upon the day of any election in the township, town, or city where holden; such sale is also prohibited on all days between eleven p. m. and five a. m. There are strict statutes against obscene pictures or literature.

In the constitution of 1851, now in force, the provisions relating to religious freedom in the constitution of 1816 have been substantially re-enacted and are worthy of note: "All men shall be secured in their natural right to worship Almighty God according to the dictates of their own conscience. No law shall in any case whatever control the free exercise and enjoyment of religious opinions or interfere with the right of conscience: no preference shall be given by

law to any creed, religious society, or mode of worship; and no man shall be compelled to attend, erect, or support any place of worship, or to maintain any ministry, against his consent. No religious test shall be required as a qualification for any office of trust or profit. No money shall be drawn from the treasury for the benefit of any religious or theological institution" (Art. I, §47-51).

Marriage and Divorce.—The statutory grounds of divorce are: adultery, impotency (pre-existing), abandonment for two years, cruel treatment, habitual drunkenness, failure to make provision for two years, or conviction of infamous crime. There has been generally considerable liberality upon the part of the courts in granting divorces. In 1907 there were 29,804 marriages and 3980 divorces. It is estimated that the divorces of residents of the cities are fifty per cent above those from rural communities. The marriage of negroes and whites is prohibited; all parties contracting marriage must procure a licence; solemnizing without a licence is punished by a heavy fine. Recent enactment has yielded to the public sentiment against easy divorce, and greater restrictions have been thrown about the procurement of the marriage licence. But legislation is far short of checking the evil.

Sale of Liquor.—Temperance sentiment has grown stronger in Indiana each year for the past twenty years and has voiced itself in increasingly restrictive legislation. The majority of voters in any township may by petition prevent the sale for two years thereafter of intoxicants. And by the most recent enactment it is provided that, upon petition signed by twenty per cent of the aggregate vote last cast in the county for secretary of state, an election must be ordered to determine whether intoxicants may be sold within the county. A majority of the votes cast at such election shall determine the issue. Since this law was passed (Sept., 1908) about ninety per cent of the counties of the State have been made "dry" territory. The general sentiment of the community therefore is overwhelmingly opposed to the evils of intemperance, and the influence of the saloon in politics. Even where tolerated there are many statutory penalties, such as for selling to minors, to intoxicated persons, for maintaining "wine rooms" and the other evils incidental to the traffic. The disposition is growing stronger in favour of a drastic enforcement of these statutes.

Matters Affecting Religious Work.—The title to the property of the Roman Catholic Church in this State has of recent years been vested in the bishop of the diocese and his successors in office, in trust. This has been done to avoid the inconvenience of lay trusteeship of church and cemetery property authorized by statute. The statutes relating to wills have not hampered the devising of property for charitable or religious purposes. Married women may (when of age) devise by will their real or personal estate since the statute of 1852. Foreign wills proved according to the law of the country where made are admissible to probate in this State in the manner specially prescribed. Under the constitution (Art. XII) no person conscientiously opposed to bearing arms shall be compelled to do militia duty, but shall pay an equivalent for exemption. By recent statute clergymen are exempt from grand jury service. But, although there is no special statute exempting them from petit jury service, it has been the invariable custom not to draw clergymen for such service. By common law (no statute contravening) they are exempt from jury or military service.

Catholic Schools and Religious Houses.—Notre Dame University, in St. Joseph County, in charge of the Fathers and Brothers of the Holy Cross, is one of the largest Catholic institutions of learning in the United States. It was started in 1844 by Father Sorin, assisted by several brothers. The students

in 1907 numbered 833, and the faculty, 69 professors. It has some 600 acres of land; upon this estate, over a mile distant from the university, is situated a large school for young ladies, called St. Mary's of the Lakes, started in 1855 and directed by the Sisters of the Order of the Holy Cross; the number of students in 1908 was 297. A similar school, called St. Mary's of the Woods, west of the limits of Terre Haute, dates from 1845, when six Sisters of Providence, from Ruille-sur-Loire, came with Mother Theodore at their head; their mother-house is located here; there were 208 scholars in 1908, and they have several other schools in the State. The Congregation of the Most Precious Blood took charge of the Indian School at Rensselaer, erected by Mother Katharine Drexel, and continued it until the withdrawal of government support in 1896 forced a discontinuance of the work. The college (St. Joseph's) started in 1891 is in a flourishing condition, having been enlarged in 1897; the number of students in 1908 was 200. The Poor Handmaids of Jesus Christ have a mother-house at Fort Wayne; they have charge of St. Vincent's Orphan Asylum and a hospital at Fort Wayne. Since 1887 they have had a sanatorium for consumptives at South Bend, a hospital at Laporte, and numerous schools.

The Sisters of St. Francis of the Perpetual Adoration have a hospital (St. Elizabeth's) at Lafayette; the mother-house adjoins the hospital; they are also in charge of St. Joseph's Orphan Asylum (for boys) and St. Anthony's Home for the Aged, in the same city. They have also founded hospitals at Hammond, Logansport, New Albany, Terre Haute, and Michigan City; and elsewhere are in charge of schools. The Sisters of St. Joseph (founded by the Jesuit Medaille in 1650) have a convent school near Tipton, an academy in Tipton, and schools at Delphi, Elwood, Kokomo, and Logansport. The Sisters of the Most Precious Blood began their labours in Jay County in 1853; they are in charge of the Kneip Sanatorium near Rome City, and several schools. The School Sisters of Notre Dame conduct several schools in the State. The Sisters of St. Agnes have been engaged in similar work since 1872. The St. Francis Sisters of the Sacred Heart have a Home for the Aged Poor at Avilla, and nine schools and two orphan asylums. The Felician Sisters teach the parochial school at Otis. The Sisters of the Holy Family of Nazareth teach two schools at South Bend. The Sisters of St. Dominic have charge of schools at Earlpark and Mishawaka; the Sisters of St. Francis conduct the Wabash Railroad hospital at Peru.

St. Meinrad's Benedictine Abbey and College in Spencer County has a stately Gothic church of stone, connecting with large community and college buildings. To the abbey belong 40 priests, 12 clerics, 6 choir novices, 42 lay brothers, and 1 novice. There are 80 ecclesiastical students, and in the college 271 students. St. Joseph's Orphan Asylum for boys at Lafayette was founded in 1875, with an endowment of 580 acres bequeathed by Rev. George A. Hamilton and a gift of 51 acres from Owen Ball and James B. Falley. It has ample brick buildings and cares for 133 children. The Poor Handmaids of Jesus Christ are in charge of St. Vincent's Asylum for girls at Fort Wayne, with 106 children. The Franciscan Fathers have at Oldenburg a monastery and their theological study house with 24 clerics and 7 lay brothers. They are also engaged in pastoral work at Indianapolis and Lafayette. The Little Sisters of the Poor have a house at Indianapolis with 136 inmates, and at Evansville with 101 inmates. The Sisters of the Good Shepherd have a house at Indianapolis. The Sisters of Charity have hospitals at Evansville and Indianapolis. The Poor Clares have a monastery at Evansville. The Nuns of the Order of St. Benedict have a convent and academy in the same city. The mother-house of the Sisters of St. Francis is located at Olden-

burg, with an academy of 100 pupils. The Sisters of Mercy have a hospital at Lawrenceburg. The Ursulines have houses in Madison and Evansville; and the Servants of Mary at Mount Vernon. The Catholic population of the Diocese of Indianapolis (formerly Vincennes) in 1900 was 118,200; that of the Diocese of Fort Wayne was 96,405.

Catholics Distinguished in Public Life.—Individual Catholics have not been prominent in the higher offices of public life. Until recent years, predominant religious feeling would have barred such preferment. But to the highest lines of business and positions of trust, their ability and integrity have carried representative Catholics in large numbers. Timothy E. Howard, one of the judges for some time of the Supreme Court of Appeals, and John E. Lamb, for one term a member of Congress from the Terre-Haute district, are both Catholics.

J. WALTER WILSTACH.

Indianapolis, DIOCESE OF (INDIANAPOLITANA); suffragan of Cincinnati, established as the Diocese of Vincennes in 1834, but by brief dated 28 March, and promulgated 30 April, 1838, the pope changed the see to Indianapolis. It comprises the southern half of the State of Indiana, south of Fountain, Montgomery, Boone, Hamilton, Madison, Delaware, Randolph, and Warren counties, an area of 18,479 square miles. In 1834 the diocese extended over Indiana and eastern Illinois and was detached from the then Diocese of Bardstown. The Catholic history of Vincennes runs back to the establishment there of a fort by some French traders in 1702 and it takes its name from one of these intrepid Canadian explorers. In the settlement that grew up about it, as through all the Illinois, Kaskaskia, and Indiana country, Catholic families settled and rude churches were built for the Jesuit and Récollet missionaries who from time to time visited or were stationed among them. Père Sebastian Meurin, a Jesuit, settled there in 1764 to care for the desolate chapels and disorganized congregations. The British having taken possession of this territory in 1763, it formed part of the diocese of the Bishop of Quebec, who lived at Kaskaskia, and occasionally visited Vincennes, which had no priest. In 1769 he sent there Pierre Gibault, "the patriot priest of the West", who spent two months reviving religion among the Catholics of the district, about seven hundred in all. This was the same Father Gibault who, when Col. George Rogers Clark captured Vincennes in 1779 for the cause of the revolting colonies, was chiefly instrumental in persuading the settlers of this part of the West to throw in their fortunes against the English and immediately accept the new government of the colonies.

The Catholic population of the diocese was poor and ignorant, scattered widely, without priests except a few who belonged to other dioceses. To rule over them Rev. Simon William Gabriel Bruté de Rémur was consecrated as the first bishop on 28 October, 1834. "No priests, not one except those from other dioceses. Having come alone, I reside alone, in a most depressing situation", he wrote after having made a tour of his charge. He went to Europe to seek help, in July, 1835, and returned to Vincennes in August, 1836, bringing back nineteen priests and seminarians and enough money to start a seminary,

an orphan asylum and a school, to finish a humble cathedral in Vincennes and to aid several small churches elsewhere. This whole western section awakened to new religious life under his zealous inspiration, but the hardships of the missionary field broke down his strength and he died 26 June, 1839.

Celestine René Laurent Guynemer de la Hailandière, his vicar-general, succeeded him as second bishop. Born 2 May, 1798, at Friandin, near Cambour, France, he was ordained priest 28 May, 1825, and volunteered for the American missions in 1836. He had returned to France and was begging for aid in France when he was named titular of Axierne and coadjutor to Bishop Bruté, who died, however, before the new bishop was consecrated in Paris, 18 August, 1839. In 1841 he estimated the number of Catholics in the diocese at about 25,000, attended by 33 priests. The same year he introduced the Congregation of the Holy Cross (the present important foundation at Notre Dame) into the diocese, also the Eudists to take charge of a college and the Sisters of Providence. He subsequently became discontented with the lack of harmony between himself and his clergy and resigned the see 16 July, 1847, but took no titular appointment. He died in his native town to which he had retired, 1 May, 1882.

Jean Etienne Bazin, Vicar-General of Mobile, was appointed third bishop and consecrated 24 Oct., 1847. He was born at Duerne, near Lyons, France, 15 Oct., 1796, and ordained priest 22 July, 1822. He left France to minister in Mobile in October, 1830. He manifested great zeal on taking charge of his diocese; but he died 23 April, 1848.

Jacques Maurice de St. Palais, vicar-general of the diocese, was consecrated fourth bishop, 14 January, 1849. Born 15 November, 1811, at La Salvétat, France, he was ordained priest 28 May, 1836 and emigrated to Indiana, where he took up the work of a missionary. After his consecration he made an official visitation of his diocese, where he found about 30,000 Catholics with 35 priests, among whom he at once infused a hearty spirit of activity. He introduced a foundation of Benedictine monks from the Swiss Abbey of Einsiedeln in 1849, and began an orphan asylum. Under his direction the diocese increased steadily, the number of priests rose to 104, churches to 145 and the Catholic population to about 80,000, with schools, hospitals and other institutions. He died 28 June, 1877.

Francis Silas Chatard, then rector of the North American College, Rome, was appointed the fifth bishop and consecrated in Rome, 12 May, 1878. He was born in Baltimore, Maryland, 13 December, 1834, and studied at Mount St. Mary's college, Emmitsburg. He then took up the study of medicine and received the degree of doctor at the University of Maryland, but soon decided to enter Holy orders, became a student at the Propaganda College, Rome, and was ordained priest there in June, 1862, winning the doctor's degree the following year. In 1868 he succeeded Rt. Rev. William G. McCloskey as rector of the American College, having for several years previously been associated with its administration.

In 1900 Bishop Chatard asked for an auxiliary and Rev. Denis O'Donoghue, rector of St. Patrick's Church, Indianapolis, was consecrated 25 April, 1900, titular Bishop of Pomario and auxiliary to Bishop Chatard. Bishop O'Donoghue was born 30 Nov., 1848, in Davies county, Indiana, and received his early education at St. Meinrad's College, and at St. Thomas' Seminary, Bardstown, Kentucky. He studied theology at the Sulpician Seminary, Montreal, where he was ordained priest 6 Sept., 1874. He served as chancellor of the diocese for twenty-one years.

The religious communities now established in the diocese include: Men, 172—Benedictines, Franciscans (St. Louis and Cincinnati provinces and Minor

Conventuals), Brothers of the Sacred Heart. Women, 1762—Sisters of St. Benedict, Sisters of Charity, Poor Clares, Sisters of St. Francis, Sisters of the Good Shepherd, Sisters of St. Joseph, Little Sisters of the Poor, Sisters of Providence, Ursuline Sisters, and Servants of Mary.

STATISTICS (1909).—Bishops, 2; mitred abbot, 1; priests, 222 (religious, 62); churches with resident priests, 138; missions, 50; stations, 10; chapels, 30; seminary for seculars, 1, with 60 students; for religious, 1, with 35 students; colleges and academies for boys, 2, with 200 pupils; for girls, 10, with 583 pupils; parish schools, 108, with 15,097 pupils; orphan asylums, 2, inmates, 158; industrial and reform schools, 2, inmates, 221; total young people under Catholic care, 16,354; hospitals, 5; homes for aged poor, 3, inmates, 237; Catholic population, 118,420, in a total of 1,234,493.

THOMAS F. MEEHAN.

Indian Missions, BUREAU OF CATHOLIC, an institution originated (1874) by J. Roosevelt Bayley, Archbishop of Baltimore, for the protection and promotion of Catholic Indian mission interests in the United States of America. The United States Government holds the Indians of the Republic as its wards and, accordingly, supervises them in all their internal and external relations. Consequently, missionaries, philanthropists, traders, and others who have to do with the Indians or who live among them, are obliged to approach them through governmental channels, and to conduct all negotiations with them under permission and direction of Government Indian officials. Catholic Indian mission interests being extensive, varied, and scattered over many States and dioceses, the Church, as a measure of expediency bordering closely upon necessity, established, at the seat of Government, the Bureau of Catholic Indian Missions, through which to transact the affairs of the missions with the United States Indian Office—the director of the Bureau being the mouthpiece of the hierarchy and of the missionaries in their official relations, regarding Indian matters, with the Government. In order to do its work intelligently and effectively, the Bureau exercises a limited supervision over the missions and mission-institutions. At the present time the bishops and missionaries, generally speaking, look to the Bureau for the support of the mission schools and for material assistance in maintaining and establishing missions. To meet these demands, the Bureau, through various agencies, solicits alms for the missions from the Catholic body (Indian and white) throughout the United States.

The Bureau comprises: a board of incorporators—the Archbishop of Baltimore (president), James Cardinal Gibbons; Archbishop of Philadelphia, Most Rev. Patrick J. Ryan; Archbishop of New York, Most Rev. John M. Farley; a director, Rev. Wm. H. Ketcham; a treasurer, Very Rev. E. R. Dyer, S.S.; a secretary, Charles S. Lusk; a legal-adviser, Hon. Charles J. Bonaparte; a field-lecturer, Rev. Charles Warren Currier. The Archbishops of Baltimore and Philadelphia and the director form the executive board. As for the greater portion of the Indian population, the advent of the Catholic missionary antedates that of the United States Government. Prior to the creation of the Bureau, Catholic Indian affairs were adjusted locally between bishops and missionaries and Indian agents and other Government officials. Tired of destructive and expensive Indian wars, and realizing that the western Indians could not be kept in a pacific state by money or force or promises, Presi-

dent Grant looked for the solution of the Indian problem in the Christianizing of the tribes. Accordingly he announced to Congress (5 December, 1870) his "Indian Peace Policy";—"Indian agencies being civil offices, I determined to give all the agencies to such religious denominations as had heretofore established missionaries among the Indians, and perhaps to some other denominations who would undertake the work on the same terms—i. e., as a missionary work" This plan to give the agencies over to "such religious denominations as had heretofore established missionaries among the Indians" was fair and practicable and might have proved successful had it been carried out impartially. In 1870 there were seventy-two Indian agencies, and in *thirty-eight* of these Catholic missionaries had been the *first to establish themselves*. Despite this fact only *eight*—Colville and Tulalip in Washington Territory, Umatilla and Grand Ronde in Oregon, Flathead in Montana, Standing Rock and Devil's Lake in Dakota, Papago in Arizona—were assigned to the Catholic Church. Eighty thousand Catholic Indians passed from Catholic influences to Protestant control.

This condition necessitated vigorous defensive measures on the part of the Church. At the instance of bishops in whose jurisdictions there were Indians, Archbishop Bayley on 2 January, 1874, appointed General Charles Ewing Catholic Commissioner. The same year, Very Rev. J. B. A. Brouillet, Vicar-General of the Diocese of Nesqually, was called to Washington to assist General Ewing. In 1875 Catholic ladies of the city of Washington organized the Catholic Indian Missionary Association. Father Brouillet became the director and treasurer of The Catholic Indian Mission Work. In 1879 the Bureau was officially created with General Ewing, commissioner, Father Brouillet, director, and Rev. Felix Barotti, treasurer. On 13 June, 1879, the Sacred Congregation of the Propaganda gave a letter of commendation in favour of The Catholic Indian Mission Work. Father Barotti died in 1881 and was succeeded as treasurer by Charles S. Jones of Washington, D. C. On 14 June, 1881, the Bureau was incorporated under the general incorporation law of the United States. On 1 June, 1877, Pius IX created General Ewing a Knight of the Order of St. Gregory the Great. On General Ewing's death (1883), Captain John Mullan of San Francisco was appointed Catholic Commissioner. Father Brouillet died in 1884 and Rev. J. A. Stephan was appointed director. By a decree of the Third Plenary Council of Baltimore, the Bureau was formally recognized as an institution of the Church and placed under a committee of five prelates: James Cardinal Gibbons, Most Rev. Patrick W. Riordan, Archbishop of San Francisco, Right Rev. James A. Healy, Bishop of Portland, Right Rev. John B. Brondel, Bishop of Helena, and Right Rev. Martin Marty, Bishop of Sioux Falls—(in 1893 this committee was increased to seven by the addition of Most Rev. Patrick J. Ryan, Archbishop of Philadelphia, and Most Rev. Placide L. Chapelle, Archbishop of Santa Fe). The committee of five made appointments as follows: president, Right Rev. Martin Marty; vice-president, Most Rev. Placide L. Chapelle; director, Rev. J. A. Stephan; assistant director, Rev. George L. Willard; treasurer, Rev. J. A. Walter.

In 1894 the committee of regents was dissolved and the Bureau reconstituted. The old organization was superseded by a new corporation chartered in perpetuity by an Act of the General Assembly of the State of Maryland (approved 6 April, 1894), the Most Rev. Archbishops of Baltimore, New York, and Philadelphia being the incorporators, and the corporate title, The Bureau of Catholic Indian Missions.

Under the new organization Bishop Marty was retained as president and at his death (1896) was succeeded by Cardinal Gibbons. Right Rev. Monsignor J. A. Stephan was director until his death in 1901.

The office of assistant director, vacant since 1890, was successively filled by Rev. B. J. Kelly and Rev. E. H. Fitzgerald. The treasurer, appointed in 1894, still remains in office (1909), as also the secretary, who, as private secretary to General Ewing, has in reality served as secretary of the Bureau from its inception.

Work of the Bureau.—The Indian Peace Policy was in force from 1874 to 1882, but even after its discontinuance the need for the Bureau remained imperative. Being constantly in touch with the officials of the Indian Office, the Bureau has been instrumental in ameliorating the condition of the Indian, and in making tolerable the lot of the missionary, who, at all times, has been under close and galling Governmental supervision, and, in numerous instances, subjected to annoyances, humiliations, and petty persecutions on the part of Indian agents and agency employees. From 1874 to 1879, the Government authorities refused to concede to all religious denominations an equal right to go upon Indian reservations. For this sole reason a Catholic missionary was expelled from a reservation assigned to Protestants, and in 1880 the Indian Office declared itself unable to grant a permit for a Catholic missionary to go upon a Protestant reservation, though the fact that a reservation was under Protestant control did not signify that the Indians were Protestants. The same year, by order of the Department, a Protestant missionary was expelled from a Catholic agency (Devil's Lake). This wrought a change in popular sentiment, which, together with the agitation kept up by the Bureau, caused the recognition, rather theoretical than actual, of religious liberty for Indians and Indian missionaries. Even yet the rights of conscience, so far as Indians are concerned, are often violated, particularly in the case of Catholic Indian pupils attending Government schools.

A fund known as the Catholic Indian Mission Fund, created chiefly by the Catholic Indian Missionary Association and partly by charitable donations and bequests, provided support for the Bureau up to 1887, and supplied it with means to assist the missions. During the twenty-two years following its organization it received and disbursed from this fund \$48,717.88. All the officers of the Bureau serve without salary, with the exception of the director, secretary, and field-lecturer. The salaries and running-expenses of the Bureau since 1887 have been provided out of the annual Lenten collection for Indian and Negro missions. The influence of the Bureau for good has steadily increased. President Roosevelt recognized the value of the institution and during the present administration (1909) it has received marked consideration.

Impartial observers of Indian affairs admit that the greatest good accomplished for the Indians has been through the agency of religious schools and particularly of Catholic schools, and it is in this cause the Bureau has done its best work. In 1873 Catholic missionaries and Sisters had charge of seven Government schools (two boarding and five day), supported out of the U. S. treasury at a cost of \$8000. Only in this way was help received from the Government by Catholic missionaries and Sisters until 1877. Catholic Indian mission and school work was kept up in a measure by funds collected and disbursed by the Bureau. In 1877 the Bureau made application to the Government for contracts for the support and tuition of Indian pupils in Catholic mission schools. This application was favourably received and the "Contract School System" came into being. Not less than \$1,500,000 to erect and equip Catholic mission school buildings were furnished by the daughters of Francis A. Drexel of Philadelphia, particularly by Mother M. Katharine Drexel, the foundress of the Sisters of the Blessed Sacrament for Indians and Coloured People. In 1883 the Catholic

mission boarding schools numbered eighteen and received from Government allotments \$39,175. The highwater mark in the number of schools (forty-three boarding and seventeen day) was reached in 1890 and of Government compensation (\$397,756) in 1892.

The remarkable success of the Catholic schools aroused great opposition, Protestant denominations suddenly changed their policy and declined to accept Government help for their mission schools, popular sentiment unfavourable to the idea of the contract school system was created by the American Protective Association (q. v.), with the result that Congress in 1895 began to curtail its appropriations for education in mission schools, and in 1896 declared it "to be the settled policy of the Government to hereafter make no appropriation whatever for education in any sectarian school", and in 1900 made what it designated "the final appropriation for sectarian schools". During the term of the contract system, the Bureau secured from the Government for the tuition and support of Indian children in Catholic mission schools the grand total of \$4,510,263. Since the discontinuance of the contracts some schools have been closed; on the other hand, new missions and new schools have been established. Most of the existing schools have been supported by the Bureau, which also aids in maintaining the missions and in providing priests for the work of instructing Catholic Indian pupils of Government schools. At present Catholic Indian educational work, inclusive of Alaska, comprises fifty-three boarding and seven day schools. The Bureau furnishes support to forty-one of these boarding schools besides providing for the education of a number of Indian boys in an institution for whites. In 1907 it disbursed to the missions and schools \$231,517.31. This may be taken as an annual average of its work in this line.

The most important achievements of the Bureau within the last decade have been: (1) the revocation of the "Browning ruling" (1902) which denied the Indian parent the right to choose a school for his child, the Indian Office arrogating that right to itself; (2) the restoration of rations (1906), amounting approximately to \$20,000, to pupils of mission schools entitled to them by right of treaty, these rations having been denied the mission school children in 1901; (3) the securing of contracts, which produce to the contract schools an average yearly income of \$100,000, for the support and tuition of Indian pupils in certain mission schools payable out of Indian tribal funds, these contracts being granted by order of President Roosevelt (1904) and sustained by a decision of the Supreme Court of the United States, 18 May, 1908, in consequence of which the tuition and support of the pupils of the Catholic mission schools of the Menominees (Wisconsin), Sioux (South Dakota), Northern Cheyennes (Montana), Osages and Quapaws (Oklahoma), which tribes have tribal funds, are paid out of the moneys of these tribes; (4) the recognition of the right of Catholic Indian pupils in Government schools to be exempted from attending Protestant worship and instruction, and to be provided with opportunities for Catholic worship and instruction; (5) the securing of the enactment by Congress (1909) of a law granting patents in fee simple for the mission and school lands on Indian reservations (aggregating over 10,000 acres) which have been held by the Church as tenant at will.

Of the annual amount disbursed by the Bureau, Mother Katharine Drexel contributes more than half. In this way from 1898 to 1908 she expended \$799,157.37. Prior to 1891 no part of the annual Lenten collection was granted the Bureau for its educational work. Since that time it has received from that collection and disbursed to the schools \$276,286.74. The remainder of the funds disbursed by the Bureau have

been accumulated by means of an appeal which it issues annually, and by donations, bequests, and societies instituted for the soliciting of alms for the Indian missions.

Societies.—(1) The Catholic Indian Missionary Association (indults granted 16 July, 1876 and 20 July, 1876), for the support of the Bureau and its work, was organized (1875) in the city of Washington chiefly through the efforts of Mrs. General Wm. T. Sherman. This association accomplished its purpose. The contract school system rendered it unnecessary and it ceased to exist.

(2) Society for the Preservation of the Faith among Indian Children (indult granted 20 December, 1904), known as the Preservation Society, established by the Bureau in 1901, approved by the American hierarchy and commended by Pius X (3 April, 1908), collects from each of its members an annual fee of twenty-five cents for the benefit of the missions. It has maintained an average membership of from forty-five to fifty thousand. Recently the Most Reverend Incorporators of the Bureau have requested the American Federation of Catholic Societies to take a special interest in this society and to secure and maintain for it a membership of eight hundred thousand. The director of the Bureau is the President of the Preservation Society.

(3) The Marquette League, an auxiliary to the Preservation Society (blessing bestowed by Pius X, July, 1904), was organized in New York City (1904), chiefly through the agency of Rev. H. G. Ganss, who for several years devoted his time to the promoting of the Preservation Society. The League exacts a membership fee of two dollars yearly and secures offerings for the repair and building of chapels, the support of catechists, scholarships for Indian pupils in Catholic Institutions, and other missionary purposes. Its funds are distributed through the Bureau. Branches of the League have been established in various eastern centres, but the New York City League, under the able management of its successive presidents, Mr. E. Eyre, Mr. Joseph H. Fargis, Hon. Eugene A. Philbin, and the Brooklyn League, under its president, Mr. Alexander McKinney, have produced the best results.

Benefactors.—Mother M. Katharine Drexel has been the most generous helper of the Bureau and the Indian missions; in the Indian and Negro mission work of the American Church she holds a unique position. Other notable benefactors are: Cardinal Gibbons, Archbishop Corrigan, Archbishop Ryan, Archbishop Farley, Archbishop Keane, Bishop Horstmann, Rev. T. K. Crowley, Rev. N. Kersten, Mrs. Edward Morrell, Henry Heide, Theodore E. Tack, Thomas McMahon, E. Eyre, F. S. Horn, John J. Horn, Robert A. Johnston, John G. Kuhrie, Miss Juliana Klein, Michael Fogarty, Association of the Holy Childhood, Ludwig-Missions-Verein (Munich).

Bureau Publications.—From 1877 to 1881 the Bureau published "Annals of Catholic Indian Missions in America" In 1883 it published a pamphlet, "The Work of the Decade"; in 1895, a pamphlet, "The Bureau of Catholic Indian Missions 1874 to 1895". From time to time it has circulated statistics and various pamphlets on topics relating to Indian educational and mission work. It publishes each year a Report of the Director to the Most Reverend Incorporators and an annual, "The Indian Sentinel" (since 1902), in the interest of the Preservation Society. The present (1909) office of the Bureau is at 1326 New York Avenue, N. W., Washington, D. C.

WM. H. KETCHAM.

Indians, AMERICAN.—GENERAL.—When Columbus landed on the island of San Salvador in 1492 he was welcomed by a brown-skinned people whose physical appearance confirmed him in his opinion that he had at last reached India, and whom, therefore, he called *Indios*, Indians, a name which, however mistaken in this first application, continued to hold its own, and has long since won general acceptance, excepting in strictly scientific writing, where the more exact term *American* is commonly used. As exploration was extended north and south it was found that the same race was spread over the whole continent, from the Arctic shores to Cape Horn, everywhere alike in the main physical characteristics, with the exception of the Eskimo in the extreme North, whose features suggest the Mongolian.

Race Type.—The most marked physical characteristics of the Indian race type are brown skin, dark brown eyes, prominent cheek bones, straight black hair, and scantiness of beard. The colour is not red, as popularly supposed, but varies from very light in some tribes, as the Cheyenne, to almost black in others, as the Caddo and Tarumari. In a few tribes, as the Flatheads, the skin has a distinct yellowish cast. The hair is brown in childhood, but always black in the adult until it turns gray with age. Baldness is almost unknown. The eye is not held so open as in the Caucasian and seems better adapted to distance than to close work. The nose is usually straight and well shaped, and in some tribes strongly aquiline. The hands and feet are comparatively small. Height and weight vary as among Europeans, the Pueblos averaging but little more than five feet, while the Cheyenne and Arapaho are exceptionally tall, and the Tehuelche of Patagonia almost massive in build. As a rule, the desert Indians, as the Apache, are spare and muscular in build, while those of the timbered region are heavier, although not proportionately stronger. The beard is always scanty, but increases with admixture of white blood. The mistaken idea that the Indian has naturally no beard is due to the fact that in most tribes it is plucked out as fast as it grows, the eyebrows being treated in the same way. There is no tribe of "white Indians", but albinos with blond skin, weak pink eyes, and almost white hair and eyebrows, are occasionally found, especially among the Pueblos. In cubical brain-capacity the Indian is not far behind the white man, but in general intellectual ability, endurance, and vitality he is far inferior. Except when under strong excitement, he is usually more deliberate and less demonstrative than the white man, but is by no means the silent stoic that he has sometimes been represented to be. His most serious moral defects—which appear to be but slightly modified by education or religious teaching—are lack of persistence and of ambition to improve his condition, without which qualities there can be no permanent advancement.

Origin and Antiquity.—Various origins have been assigned to the Indian race—from Europe and the East, by way of Greenland or the mythic Island of Atlantis; from Asia, by way of Bering Straits, or lower down, by adventurous voyage from the Polynesian Islands; or as autochthones from a remote geologic period. The Eastern origin has almost as slender foundation as the Atlantis story itself and may be dismissed without argument. The Asiatic theory, both for Bering Straits and the Polynesian Islands,

has more advocates, as also more reasons in its favour. The fact that Japanese and other Asiatic adventurers have frequently landed upon the North Pacific coast of America is a matter of history, and tribal tradition and other evidence indicate that such contact was as frequent in prehistoric times, but whether all this has been sufficient to make permanent impression upon the physique or culture, let alone to account for a race, is an open question. For some years this problem has been under systematic investigation by the American Museum of New York City, with promise of important results. So far as at present known, the only permanent migration has been in the opposite direction, an Eskimo tribe from Alaska having taken up permanent residence in Siberia within the historic period.

The theory of autochthonous origin is usually, though not necessarily, connected with that of extreme antiquity, several writers claiming for the Indian, as for the primitive cave man of Europe, an existence contemporaneous with the glacial period. While this theory has many earnest advocates, basing their opinion upon such isolated finds as those of the Trenton gravels, the "Calaveras skull", and the "Lansing man", the consensus of scientific opinion is that evidence as to the original placement of these finds in undisturbed strata is not sufficient to establish the claim. With regard to shell heaps and other deposits in mass, the highest estimates of age do not give them more than a few thousand years, and Dall, our best authority for Alaska, allows the oldest middens on the Aleutian Islands not more than three thousand. The more civilized nations, as the Maya, the Totonac, the Muysca, and the Quichua, all probably had their origin, as such, within a thousand years, or within five hundred years of the discovery. Without going back to geologic periods, however, the practical similarity of physical type over both continents implies long occupancy.

The various claims for Jewish, Phœnician, Irish, or Welsh origin have no provable foundation, although the first especially has found advocates for nearly three centuries and has even furnished the motive for the Book of Mormon. The numerous mounds and other earthworks scattered over the eastern United States, with the cliff ruins and other house ruins in the South-West, have also given opportunity for much speculation and theorizing as to the former existence in those regions of highly civilized nations now extinct. Scientific examination, however, shows that the ruins and earthworks are of the most rudimentary architectural character, being rude in construction and inexact and unsymmetrical in dimensional measurements, while the various artifacts found within them are almost precisely identical with those still in use by the uncivilized tribes. The more important house ruins are historically or traditionally known to have been built and occupied by the ancestors of the Pueblo, Pima, and other tribes still inhabiting the same region. Some of the mounds of the eastern section are also known to have been in use as foundations for tribal "town-houses" within the historic period, but the majority of the larger earthworks, as those of Cahokia in Illinois, of Etowah in Georgia, the Serpent Mound and Newark earthworks in Ohio, are much more ancient, and probably originated with more populous tribes which afterwards moved down into more southern regions. The Aztec themselves, according to definite tribal tradition, reached the valley of Mexico from the far North, and linguistic evidence establishes their connexion with the great Shoshonian linguistic stock whose tribes extend almost continuously along the backbone of the continent from the Columbia River to the Isthmus of Panama. In the same way the Apache and Navaho of the Mexican border are known to have emigrated from the frozen shores of the Yukon and Mackenzie.

As in Europe and Asia, the general movement was from north to south, but the Algonkian (Ojibwa, etc.) and Siouan (Sioux, etc.) tribes moved westward from the Atlantic seaboard, while the Muskogean tribes of the Gulf States had their earlier home west of the Mississippi. One great South American stock—the Arawakan—after occupying the Antilles, completed the chain of connexion by planting a colony in Florida.

Languages.—One of the remarkable facts in American ethnology is the great diversity of languages. The number of languages and well-marked dialects may have reached one thousand, constituting some 150 separate linguistic stocks, each stock as distinct from all the others as the Aryan languages are distinct from the Turanian or the Bantu. Of these stocks approximately seventy were in the northern, and eighty in the southern continent. They were all in nearly the same primitive stage of development, characterized by minute exactness of description with almost entire absence of broad classification. Thus the Cherokee, living in a country abounding in wild fruits, had no word for *grape*, but had instead a distinct descriptive term for each of the three varieties with which he was acquainted. In the same way he could not say simply, "I am here", but must qualify the condition as standing, sitting, etc.

The earliest attempt at a classification of the Indian languages of the United States and British America was made by Albert Gallatin in 1836. The beginning of systematic investigation dates from the establishment of the Bureau of American Ethnology under Major J. W. Powell in 1879. For the languages of Mexico and Central America the basis is the "Geografia" of Orozco y Berra, of 1864, supplemented by the later work of Brinton, in his "American Race" (1891), and corrected and brought up to latest results in the linguistic map by Thomas and Swanton now in preparation by the Bureau of Ethnology. For South America, we have the "Catálogo" of Hervas (1784), which covers also the whole field of languages throughout the world; Brinton's work just noted, containing the summary of all known up to that time; and Chamberlain's comprehensive summary, published in 1907.

To facilitate intertribal communication, we frequently find the languages of the more important tribes utilized by smaller tribes throughout the same region, as Comanche in the southern plains and Navaho (Apache) in the South-West. From the same necessity have developed certain notable trade jargons, based upon some dominant language, with incorporations from many others, including European, all smoothed down and assimilated to a common standard. Chief among these were the "Mobilian" of the Gulf States, based upon Choctaw; the "Chinook jargon" of the Columbia and adjacent territories on the Pacific coast, a remarkable conglomerate based upon the extinct Chinook language; and the *lingoa geral* of Brazil and the Paraná region, based upon Tupi-Guaraní. To these must be added the noted "sign language" of the plains, a gesture code, which answered every purpose of ordinary intertribal intercourse from Canada to the Rio Grande.

UNITED STATES, BRITISH AMERICA, ETC.—Houses.

—In and north of the United States there were some twenty well-defined types of native dwellings, varying from the mere brush shelter to the five-storied stone *pueblo*. In the Eastern United States and adjacent parts of Canada the prevailing type was that commonly known under the Algonkian term of *wigwam*, of wagon-top shape, with perpendicular sides and ends and rounded roof, and constructed of stout poles set in the ground and covered with bark or with mats woven of grass or rushes. Doorways at each end served also as windows, and openings in the roof allowed the smoke to escape. Not even Pueblo architecture had evolved a chimney. In general the houses were communal, several closely related families occupying the same dwelling. The Iroquois houses were sometimes one hundred feet in length, divided into compartments about ten feet square, opening upon a central passageway, along which were ranged the fires, two families occupying opposite compartments at the same fire. Raised platforms around the sides of the room were covered with skins and served both as seats and beds. The houses of a settlement were usually scattered irregularly, according to the convenience of the owner, but in some cases, especially on disputed tribal frontiers, they were set compactly together in regular streets and surrounded by strong stockades. The Iroquois stockaded forts had platforms running around on the inside, near the top, from which the defenders could more easily shoot down upon the enemy. In the Gulf States every important settlement had its "town-house", a great circular structure, with conical roof, built of logs, and devoted to councils and tribal ceremonials. The *tipi* (the Sioux name for house), or conical tent-dwelling, of the upper lake and plains region was of poles set lightly in the ground, bound together near the top, and covered with bark or mats in the lake country, and with dressed buffalo skins on the plains. It was easily portable, and two women could set it up or take it down within an hour. On ceremonial occasion the *tipi* camp was arranged in a great circle, with the ceremonial "medicine lodge" in the centre. The semi-sedentary Pawnee, Mandan, and other tribes along the Missouri built solid circular structures of logs, covered with earth, capable sometimes of housing a dozen families. The Wichita and other tribes of the Texas border built large circular houses of grass thatch laid over a framework of poles. The Navaho *hogan*, was a smaller counterpart of the Pawnee "earth lodge". The communal pueblo structure of the Rio Grande region consisted of a number—sometimes of hundreds—of square-built

rooms of various sizes, of stone or adobe laid in clay mortar, with flat roofs, court-yards, and intricate passageways, suggestive of Oriental things. The Piute *wikiup* of Nevada was only one degree above the brush shelter of the Apache. California, with its long stretch from north to south and its extremes from warm plain to snowclad sierra, had a variety of types, including the semi-subterranean. Along the whole north-west coast, from the Columbia to the Eskimo border, the prevailing type was the rectangular board structure, painted with symbolic designs and with the great totem pole, carved with the heraldic crests of the owner, towering above the doorway. On the Yukon we find the subterranean dwelling, while the Eskimo had both the subterranean house and the dome-shaped *iglu*, built of blocks of hardened snow. Besides the regular dwellings, almost every tribe had also

SHOSHONI TIPI, WYOMING

some style of temporary structure, besides "sweat houses", summer arbors, provision caches, etc.

Food and its Procurement.—In the timbered region of the eastern and southern states and the adjacent portions of Canada, along the Missouri and among the Pueblos, Pima, and other tribes of the south-west, the chief dependence was upon agriculture, the principal crops being corn, beans, and squashes, besides a native tobacco. The New England tribes understood the principle of manuring, while those of the arid South-West built canals and practised irrigation. Along the whole ocean coast, in the lake region and on the Columbia, fishing was an important source of subsistence. On the south Atlantic seaboard elaborate weirs were in use, but elsewhere the hook and line, the seine, or the harpoon, were more common. Clams and oysters were consumed in such quantities along the Atlantic coast that in some favourite gathering-places the empty shells are piled into mounds ten feet high. From central California northward along the whole west coast, the salmon was the principal, and on the Columbia almost the entire, food dependence. The north-west coast tribes, as well as the Eskimo, were fearless whalers. Everywhere the wild game, of course, was an important factor in the food supply, particularly the deer in the timber region and the buffalo on the plains. The nomad tribes of the

plains, in fact, lived by the buffalo, which, in one way or another, furnished them with food, clothing, shelter, household equipment, and fuel.

In this connexion there were many curious tribal and personal taboos founded upon clan traditions, dreams, or other religious reasons. Thus the Navaho and Apache, so far from eating the meat of a bear, refuse even to touch the skin of one, believing the bear to be of human kinship. For a somewhat similar reason some tribes of the plains and arid South-West avoid a fish, while considering the dog a delicacy.

Besides the cultivated staples, nuts, roots, and wild fruits were in use wherever procurable. The Indians of the Sierras lived largely upon acorns and piñons. Those of Oregon and the Columbia region gathered large stores of camass and other roots, in addition to various species of berries. The Apache and other south-western tribes gathered the cactus fruit and roasted the root of the maguay. The tribes of the upper lake region made great use of wild rice, while those of the Ohio Valley made sugar from the sap of the maple, and those of the southern states extracted a nourishing oil from the hickory nut. Pemican and hominy are Indian names, as well as Indian inventions, and maple sugar is also an aboriginal discovery. Salt was used by many tribes, especially on the plains and in the South-West, but in the Gulf States lye was used instead. Cannibalism simply for the sake of food could hardly be said to exist, but, as a war ceremony or sacrifice following a savage triumph, the custom was very general, particularly on the Texas coast and among the Iroquoian and Algonquian tribes of the east. The Tonkawa of Texas were known to all their neighbours as the "Man-Eaters." Apparently the only native intoxicant was *tiswin*, a sort of mild beer fermented from corn by the Apache and neighbouring tribes.

Domesticated Animals.—The dog was practically the only domesticated animal before the advent of the whites and was found in nearly all the tribes, being used as a beast of burden by day and as a constant sentinel by night, while with some tribes the flesh also was a favourite dish. He was seldom, if ever, trained to hunting. Eagles and other birds were occasionally kept for their feathers, and the children sometimes had other pets than puppies. The horse, believed to have been introduced by the Spaniards, speedily became as important a factor in the life of the plains tribes as the buffalo itself. In the same way the sheep and goats, introduced by the early Franciscans, have become the chief source of wealth to the Navaho, numbering now half a million animals from which they derive an annual income of over a million dollars.

Industries and Arts.—In the fabrication of domestic implements, weapons, ornaments, ceremonial objects, boats, seines, and traps, in house-building, and in the making of pottery and baskets, the Indian showed considerable ingenuity of design and infinite patience of execution. In the division of labour the making of weapons, hunting and fishing requirements, boats, pipes, and most ceremonial objects fell to the men, while the domestic arts of pottery and basket-making, weaving and dressing of skins, the fashioning of clothing, and the preparation and preservation of food commonly devolved upon the women. Among the sedentary or semi-sedentary tribes house-building belonged usually to the men, although the women sometimes assisted. On the plains the entire making and keeping of the tipi were appointed to the women. In many tribes the man cut, sewed, and decorated his own buckskin suit, and in some of the Pueblo villages the men were the basket-weavers.

While the house, in certain tribes, evinced considerable architectural skill, its prime purpose was always utilitarian, and there was usually but little attempt at decorative effect, excepting among the Haida,

Tlingit, and others of the north-west coast, where the great carved and painted totem poles, sometimes sixty feet in height, set up in front of every dwelling, were a striking feature of the village picture. The same tribes were notable for their great sea-going canoes, hollowed out from a single cedar trunk, elaborately carved and painted, and sometimes large enough to accommodate forty men. The skin boat or *kaiak* of the Eskimo was a marvel of lightness and buoyancy, being practically unsinkable. The birch-bark canoe of the eastern tribes was especially well adapted to its purpose of inland navigation. In the southern states we find the smaller "dug-out" log canoe. On the plains the boat was virtually unknown, except for the tub-shaped skin boat of the Mandan and associated tribes on the upper Missouri.

The Eskimo were noted for their artistic carving of bone and walrus ivory; the north-west coast tribes for their slate carving; the Pueblos for their turquoise inlaid work and their wood-carving, especially of mythologic figurines; and the Atlantic and California coast tribes for their work in shell. The wampum, or shell beads, made chiefly from the shells of various clams found along the Atlantic coast, have become historic, having been extensively used not only for dress ornamentation, but also on treaty belts, as tribal tribute, and as a standard of value answering the purpose of money. The ordinary stone hammer or club, found in nearly every tribe, represented much patient labour, while the whole skill of the artist was frequently expended upon the stone-carved pipe. The black stone pipes of the Cherokee were famous in the southern states, and the red stone pipe of cat-linite from a single quarry in Minnesota was reputed sacred and was smoked at the ratification of all solemn tribal engagements throughout the plains and the lake region. Knives, lance-blades, and arrow-heads were also usually of stone, preferably flint or obsidian. Along the Gulf Coast keen-edged knives fashioned from split canes were in use. Corn mortars and bowls were usually of wood in the timber region and of stone in the arid country. Hide-scrappers were of bone, and spoons of wood or horn. Metal work was limited chiefly to the fashioning of gorgets and other ornaments hammered out from native copper, found in the southern Alleghenies, about Lake Superior, and about Copper River in Alaska. The art of smelting was apparently unknown. Under Franciscan and later Mexican teaching the Navaho have developed a silver-working art which compares in importance with their celebrated blanket weaving, the material used being silver coins melted down in stone moulds of their own carving. Mica was mined in the Carolina mountains by the local tribes and fashioned into gorgets and mirrors, which found their way by trade as far as the western prairies. All of these arts belonged to the men.

The making of pottery belonged to the women and was practised in nearly all the tribes, excepting those of the plains and interior basin, and the cold north. The Eastern pottery was usually decorated with stamped patterns. That of the Pueblo and other south-western tribes was smooth and painted with symbolic designs. A few specimens of glazed ware have been found in the same region, but it is doubtful if the process is of native origin. The Catawba and some other tribes produced a beautiful black ware by burning the vessel under cover, so that the smoke permeated the pores of the clay. The simple hand process by coiling was universally used.

Basket-weaving in wood splits, cane, rushes, yucca- or bark-fibre, and various grasses was practised by the same tribes which made pottery, and, excepting in a few tribes, was likewise a woman's work. The basket was usually stained in various designs with vegetable dyes. The Cherokee made a double-walled basket. Those of the Choctaw, Pueblo tribes,

Jicarilla, and Piute were noted for beauty of design and execution, but the Pomo and other tribes of California excelled all in closeness and delicacy of weaving and richness of decoration, many of their grass baskets being water-tight and almost hidden under an interweaving of bright-coloured plumage, and further decorated around the top with pendants of shining mother-of-pearl. The weaving of grass or rush mats for covering beds or wigwams may be considered as a variant of the basket-making process, as likewise the delicate porcupine quill *appliqué* work of the northern plains and upper Mississippi tribes.

The useful art of skin-dressing also belonged exclusively to the women, excepting along the Arctic coasts, where furs, instead of denuded skins, were worn by the Eskimo, while the entrails of the larger sea animals were also utilized for waterproof garments. The skins in most general use were those of the buffalo, elk, and deer, which were prepared by scraping, stretching, and anointing with various softening or preservative mixtures, of which the liver or brains of the animal were commonly a part. The timber tribes generally smoked the skin, a process unknown on the plains. A limited use was made of bird skins with the feathers intact.

The weaving art proper was also almost exclusively in the hands of the women. In the East, aside from basket- and mat-making, it was confined almost entirely to the twisting of ropes or bowstrings and the making of belts, the skin fabric taking the place of the textile. In the South-West the Pueblo tribes wove native cotton upon looms of their own device, and, since the introduction of sheep by the Franciscan missionaries in the sixteenth century, the Navaho, enlarging upon their Pueblo teaching, have developed a weaving art which has made the Navaho blanket famous throughout the country, the stripping, spinning, weaving, and dyeing of the wool being all their own. The Piute of Nevada and others of that region wore blankets woven from strips of rabbit fur. Some early writers mention feather-woven cloaks among the Gulf tribes, but it is possible that the feathers were simply overlaid upon the skin garment.

It is notable that the Indian worker, man or woman, used no pattern, carrying the design in the head. Certain designs, however, were standardized and hereditary in particular tribes and societies.

Games and Amusements.—Naturally careless of the future, the Indian gave himself up to pleasure when not under the spur of immediate necessity or danger, and his leisure time at home was filled with a constant round of feasting, dancing, story-telling, athletic contests, and gambling games. The principal athletic game everywhere east of the Missouri, as well as with some tribes of the Pacific coast, was the ball-play, adopted by the French of Canada under the name of lacrosse and in Louisiana as raquette. In this game the ball was caught not with the hand, but with a netted ball-stick somewhat resembling a tennis racket. A special dance and secret ceremonial preceded the contest. Next in tribal favour in the eastern region was the game known to the early traders under the corrupted Creek name of *chunkee*, in which one player rolled a stone wheel along the ground, while his competitor slid after it a stick curved

at one end like an umbrella handle, with the design of having the spout wheel fall within the curve at the end of its course. This game, which necessitated much hard running, was sometimes kept up for hours. A somewhat similar game, played with a netted wheel and a straight stick, was found upon the plains, the object being to dart the stick through certain netted holes in the wheel, known as the buffalo bull, calf, etc. Foot-races were very popular with certain tribes, as the Pueblos, Apache, Wichita, and Crows, being frequently a part of great ceremonial functions. On the plains horse-racing furnished exciting amusement. There were numerous gambling games, somewhat of the dice order, played with marked sticks, plum stones, carved bones, etc., these being in special favour with the women. Target shooting with bow and arrow, and various forms of dart throwing were also popular.

Among distinctly women's games were football and shinny, the former, however, being merely the bouncing of a ball from the toes with the purpose of keeping it in the air as long as possible. Hand games, in which a number of players ranged themselves in two opposing lines and alternately endeavoured to guess the whereabouts of a small object shifted rapidly from hand to hand, were a favourite tipi pastime with both sexes in the winter evenings, to the accompaniment of songs fitted to the rapid movement of the hands. Story-telling and songs, usually to the accompaniment of the rattle or small hand-drum, filled in the evening. The Indian was essentially musical, his instruments being the drum, rattle, flute or flageolet, eagle-bone whistle, and other more crude devices. Each had its special religious significance and ceremonial purpose, particularly the rattle, of which there were many varieties. Besides the athletic and gambling games, there were games of divination played only on rare occasions of tribal necessity with sacred paraphernalia in the keeping of special guardians. The Indian was fond also of singing and had songs for every occasion—love, war, hunting, gaming, medicine, satire, children's songs, and lullabies.

The children played with tops, whips, dolls, and other toys, or imitated their elders in shooting, riding, and "playing house"

War.—As war is the normal condition of savagery, so to the Indian warlike glory was the goal of his ambition, the theme of his oratory, and the purpose of his most elaborate ceremonial. His weapons were the knife, bow, club, lance, and tomahawk, or stone axe, which last was very soon superseded by the light steel hatchet supplied by the trader. To these certain tribes added defensive armour, as the body armour of rawhide or wooden rods in use along the north-west coast and in some other sections, and the shield more particularly used by the equestrian tribes of the plains. As a rule, the lance and shield were more common in the open country, and the tomahawk in the woods. The bow was usually of some tough and flexible wood with twisted sinew cord, but was sometimes of bone or horn backed with sinew wrapping. It is extremely doubtful if poisoned arrows were found north of Mexico, notwithstanding many assertions to the contrary.

Where the clan system prevailed the general con-

SAWANUKI, CHEROKEE BALL-PLAYER

duct of war matters was often in the keeping of special clans, and in some tribes, as the Creeks, war and peace negotiations and ceremonials belonged to certain towns designated respectively as "red" and "white" With the Iroquois, and probably with other tribes, the final decision for war or peace rested with a council of the married women. On the plains the warriors of a tribe were organized into military societies of differing degrees of rank, from the boys in training to the old men who had passed their active period. Military service was entirely voluntary with the individual, who, among the eastern tribes, signified his acceptance in some public manner, as by striking the red-painted war-post, or, on the plains, by smoking the pipe sent

BIG BOW AND SON, KIOWA INDIANS, IN FULL BUCKSKIN DRESS

round by the organizers of the expedition. Contrary to European practice, the command usually rested with several leaders of equal rank, who were not necessarily recognized as chiefs on other occasions. The departure and the return were made according to fixed ceremonial forms, with solemn chants of defiance, victory, or grief at defeat. In some tribes there were small societies of chosen warriors pledged never to turn or flee from an enemy except by express permission of their fellows, but in general the Indian warrior chose not to take large risks, although brave enough in desperate circumstance.

To the savage every member of a hostile tribe was equally an enemy, and he gloried as much in the death of the infant or its mother as in that of the warrior father. Victory meant indiscriminate massacre, with most revolting mutilation of the dead, followed in the early period in nearly every portion of the East and South by a cannibal feast. The custom of scalping the dead, so general in the later Indian wars, has been shown by Friederici to have been confined originally to a limited area east of the Mississippi, gradually superseding the earlier custom of beheading. In many western tribes the warrior's prowess was rated not by the number of his scalp trophies, but by the number of his *coups* (French term) or strokes upon the enemy, for which there was

a regular scale according to kind, the highest honour being accorded not to the one who secured the scalp, but to the warrior who struck the first blow upon the enemy, even though with no more than a willow rod. The scalp dance was performed not by the warriors, but by the women, who thus rejoiced over the success of their husbands and brothers. There was no distinctive "war dance".

Captives among the eastern tribes were either condemned to death with every horrible form of torture or ceremonially adopted into the tribe, the decision usually resting with the women. If adopted, he at once became a member of a family, usually as representative of a deceased member, and at once acquired full tribal rights. In the Huron wars whole towns of the defeated nation voluntarily submitted and were adopted bodily into the Iroquois tribes. On the plains torture was not common. Adults were seldom spared, but children were frequently saved and either regularly adopted or brought up in a mild sort of slavery. Along the north-west coast and as far south as California slavery prevailed in its harshest form and was the usual fate of the captive.

Social Organization.—Among most of the tribes east of the Mississippi, among the Pueblos, Navaho, and others of the South-West, and among the Tlingit and Haida of the north-west coast, society was based on the clan system, under which the tribe was subdivided into a number of large family groups, the members of which were considered as closely related and prohibited from intermarrying. The children usually followed the clan of the mother. The clans themselves were sometimes grouped into larger bodies of related kindred, to which the name of *phratries* has been applied. The clans were usually, but not always, named from animals, and each clan paid special reverence to its tutelary animal. Thus the Cherokee had seven clans, Wolf, Deer, Bird, Paint, and three others with names not readily translated. A Wolf man could not marry a Wolf woman, but might marry a Deer woman, or one of any other of the clans, and his children were of the Deer or other clan accordingly. In some tribes the name of the individual indicated the clan, as "Round Foot" in the Wolf clan and "Crawler" in the Turtle clan. Certain functions of war, peace, or ceremonial were usually hereditary in special clans, and revenge for injuries within the tribe devolved upon the clan relatives of the person injured. The tribal council was made up of the hereditary or elected chiefs of clans, and any alien taken into the tribe had to be specifically adopted into a family and clan.

The clan system was by no means universal, as supposed by Morgan and his followers of forty years ago, but is now known to have been limited to particular regions, and seems to have been originally an artificial contrivance to protect land and other property descent. It was absent almost everywhere west of the Missouri, excepting in the South-West, and appears also to have been unknown throughout the greater part of British America, the interior of Alaska, and probably among the Eskimo. Among the plains tribes the unit was the band, whose members camped together under their own chief in an appointed place in the tribal camp circle and were subject to no marriage prohibition, but usually married among themselves.

With a few notable exceptions, there was very little idea of tribal solidarity or supreme authority, and where a chief appears in history as tribal dictator, as in the case of Powhatan in Virginia, it was usually due to his own strong personality. The real authority was with the council as interpreter of ancient tribal customs. Even such well-known tribes as the Creeks and Cherokee were really only aggregates of closely cognate villages, each acting independently or in co-operation with the others as suited its immediate convenience. Even in the smaller and more compact

tribes there was seldom any provision for coercing the individual to secure common action, but those of the same clan or band usually acted together. In this lack of solidarity is the secret of Indian military weakness. In no Indian war in the history of the United States has a single large tribe ever united in solid resistance, while on the other hand other tribes have always been found to join against the hostiles. Among the Natchez, Timucua, and some other southern tribes, there is more indication of a central authority, resting probably with a dominant clan.

The Iroquois (q. v.) of New York had progressed beyond any other native people north of Mexico in the elaboration of a state and empire. Through a carefully planned system of confederation, originating about 1570, the five allied tribes had secured internal peace and unity, by which they had been able to acquire dominant control over most of the tribes from Hudson Bay to Carolina, and, if not prematurely checked by the advent of the whites, might in time have founded a northern empire to rival that of the Aztec.

Land was usually held in common, excepting among the Pueblos, where it was apportioned among the clans, and in some tribes of northern California, where individual right is said to have existed. Timber and other natural products were free, and hospitality was carried to such a degree that no man kept what his neighbour wanted. While this prevented extremes of poverty, on the other hand it paralysed individual industry and economy, and was an effectual barrier to progress. The accumulation of property was further discouraged by the fact that in most tribes it was customary to destroy all the belongings of the owner at his death. The word for "brave" and "generous" was frequently the same, and along the north-west coast there existed a curious custom known as *pollatch*, under which a man saved for half a lifetime in order to acquire the rank of chief by finally giving away his entire hoard at a grand public feast.

Enslavement of captives was more or less common throughout the country, especially in the Southern states, where the captives were sometimes crippled to prevent their escape. Along the north-west coast and as far south as California, not only the captives, but their children and later descendants were slaves and might be abused or slaughtered at the will of the master, being frequently buried alive with their deceased owner or butchered to provide a ceremonial cannibal feast. In the Southern slave states, before the Civil War, Indians were frequent owners of negro slaves.

Men and women, and sometimes even the older children, were organized into societies for military, religious, working, and social purposes, many of these being secret, especially those concerned with medicine and women's work. In some tribes there was also a custom by which two young men became "brothers" through a public exchange of names.

The erroneous opinion that the Indian man was an idler, and the Indian woman a drudge and slave, is founded upon a misconception of the native system of division of labour, under which it was the man's business to defend the home and to provide food by hunting and fishing, assuming all the risks and hardships of battle and the wilderness, while the woman attended to the domestic duties, including the bringing of wood and water, and, with the nomad tribes, the setting up of the tipi. The children, however, required little care after they were able to run about, and the house-keeping was of the simplest, and, as the women worked usually in groups, with songs and gossip, while the children played about, the work had much of pleasure mixed with it. In all that chiefly concerned the home the woman was the mistress, and in many tribes the woman's council gave the final decision upon important matters of public policy. Among the more

purely agricultural tribes, as the Pueblos, men and women worked in the fields together. In the far North, on the other hand, the harsh environment seems to have brought out all the savagery of the man's nature, and the woman was in fact a slave subject to every whim of cruelty, excepting among the Kutchin of the upper Yukon, noted for their kind treatment of their women. Polygamy existed in nearly all tribes excepting the Pueblos.

Religion and Mythology.—The Indian was an animist, to whom every animal, plant, and object in nature contained a spirit to be propitiated or feared. Some of these, as the sun, the buffalo, and the peyote plant, the eagle, and the rattlesnake, were more powerful or more frequently helpful than others, but there was no overruling "Great Spirit" as so frequently represented. Certain numbers, particularly four and seven, were held sacred. Colours were symbolic and had local abiding place, and sometimes sex. Thus with the Cherokee the red spirits of power and victory lived in the Sun Land, or East, while the black spirits of death dwelt in the Twilight Land of the West. Certain tribes had palladiums around which centred

WICHITA GRASS HOUSES

their most elaborate ritual. Each man had also his secret personal "medicine" The priest was likewise the doctor, and medicine and religious ritual were closely interwoven. Secret societies were in every tribe, claiming powers of prophecy, hypnotism, and clairvoyance. Dreams were in great repute, and implicitly trusted and obeyed, while witches, fairies, and supernatural monsters were as common as in medieval Europe. Human sacrifices, either of infants or adults, were found among the Timucua of Florida, the Natchez of Mississippi, the Pawnee of the plains, and some tribes of California and the north-west coast, the sacrifice in the last-mentioned region being frequently followed by a cannibal feast. From time to time, as among more civilized nations, prophets arose to purify the old religion or to preach a new ritual. Each tribe had its genesis, tradition, and mythical hero, with a whole body of mythologic belief and folklore, and one or more great tribal ceremonies. Among the latter may be noted the Green-Corn Dance thanksgiving festival of the eastern and southern tribes, the Sun Dance of the plains, the celebrated Snake Dance of the Hopi (q. v.), and the Salmon Dance of the Columbia tribes.

Burial.—The method of disposing of the dead varied according to the tribe and environment, inhumation being probably the most widespread. The Hurons and Iroquois allowed the bodies to decay upon scaffolds, after which the bones were gathered up and deposited with much ceremony in the common tribal sepulchre. The Nanticoke and Choctaw scraped the

flesh from the bones, which were then wrapped in a bundle and kept in a box within the dwelling. Tree, scaffold, and cave burial were common on the plains and in the mountains, while cremation was the rule in the arid regions farther to the west and south-west. Northward from the Columbia the body was deposited in a canoe raised upon posts, while cave burial reappeared among the Aleut of Alaska, and earth burial among the Eskimo. The dread of mentioning the name of the dead was as universal as the custom of destroying the property of the deceased, even to the killing of his horse or dog, while the custom of placing food near the grave for the spirit during the journey to the other world was almost as common. Laceration of the body, cutting off of the hair, general neglect

COMANCHE WARRIOR AND WIFE IN FULL DRESS

of the person, and ceremonial wailing, morning and evening, sometimes for weeks, were also parts of their funeral customs.

Language and Population.—Nearly two hundred native languages, besides minor dialects, were spoken north of Mexico, classified into fifty-one distinct linguistic stocks, as given below, of which nearly one-half were represented in California. Those marked with an asterisk are extinct, while several others are now reduced to less than a dozen individuals keeping the language: Algonquian, Athapascan (Déné), Attacapan, *Beothukan, Caddoan, Chimakuan, *Chimarikan, Chimmesyan, Chinookan, Chitimachan, *Chumashan, *Coahuiltecan (Pakawá), Copehan (Wintun), Costanoan, Eskimauan, *Esselenian, Iroquoian, Kalapooian, *Karankawan, Keresan, Kiowan, Kitunahan, Koluschan (Tlingit), Kulanapan (Pomo), *Kusan, Mariposan (Yokuts), Moquelumnan (Miwok) Muskogean, Pujunan (Maidu), Quoratean (Karok), *Salinan, Salishan, Shabaptian, Shoshonean, Siouan, Skittagetan (Haida), Takilman, *Timucuan, *Tonikan, Tonkawan, Uchean, *Waiilatpauan (Cayuse), Wakashan (Nootka), Washoan, Weitspekan (Yurok), Wishoshan, Yakonan, *Yanan (Nosi), Yukian, Yuman, Zuñian.

While the Indian population was never dense, the idea that the Indian has held his own, or even actually

increased in number, is a serious error, founded upon the fact that most official estimates begin with the Federal period, when the native race was already wasted by nearly three centuries of white contact and in many regions entirely extinct. An additional source of error is the fact that the law recognizes anyone of even remote Indian ancestry as entitled to Indian rights, including in this category, especially in the former "Five Civilized Nations" of Indian Territory (now Oklahoma), several thousand individuals whose claims have always been stoutly repudiated by the native tribal courts. Moreover, the original Indian was a full-blood, while his present-day representative has often so little aboriginal blood as to be practically a white man or a negro. Many broken tribes of to-day contain not a single full-blood, and some few not even one of half Indian blood. The Cherokee Nation, officially reported to number 36,000 persons of pure or mixed Cherokee blood contains probably not 4000 of even fairly pure blood, the rest being of all degrees of admixture down even to one-sixty-fourth or less of Indian blood, besides some 7000 claimants officially recognized, but repudiated by the former Indian Government. In Massachusetts an official census in 1860 reported a "Yarmouth tribe" of 105 persons, all descended from a single Indian woman with a negro husband residing there in 1797. It is obvious that the term *Indian* cannot properly be applied to such diluted mixtures.

The entire aboriginal population of Florida, of the mission period, numbering perhaps 30,000, is long since extinct without descendants, the Seminole being a later emigration from the Creeks. The aborigines of South Carolina, counting in 1700 some fifteen tribes, of which the Catawba, the largest tribe, numbered some six thousand souls, are represented to-day by about a hundred mixed-blood Catawba, together with some scattered mongrels, whose original ancestry is a matter of doubt.

The same holds good upon the plains. The celebrated Pawnee tribe of some 10,000 souls in 1838 is now reduced to 650; the Kansa of 1500 within the same period have now not 200 souls; and the aborigines of Texas, numbering in 1700 perhaps 40,000 souls in many small tribes with distinct languages, is extinct except for some 900 Caddo, Wichita, and Tonkawa. The last-named, estimated at 1000 in 1803, numbered 700 in 1849, 314 in 1861, 108 in 1882, and 48 in 1908, including several aliens. In California the aboriginal population has decreased within the same period from perhaps a quarter of a million to about 15,000, and nearly the same proportion of decrease holds good along the whole Pacific Coast into Alaska. Not merely have tribes dwindled, but whole linguistic stocks have become extinct within the historic period. The only apparent exceptions to the general rule of decay are the Iroquois, Sioux, and Navaho, the first two of whom have kept up their number by wholesale adoptions, while the Navaho have been preserved by their isolation. The causes of decrease may be summarized as: (1) introduced diseases and dissipation, particularly smallpox, sexual diseases, and whisky; (2) wars, also hardship and general enfeeblement consequent upon frequent removals and enforced change from accustomed habit. The present Indian population north of Mexico is approximately 400,000, of whom about 265,000 are within the United States proper.

MEXICO, CENTRAL AMERICA, AND WEST INDIES.—Between the Rio Grande and the Isthmus of Panama was a large number of tribes, constituting some twenty-five linguistic stocks, and representing every degree of culture from the lowest savagery to a fairly advanced civilization. Lowest of all were the tribes of the California peninsula, with the Seri of Tiburón Island. Of somewhat higher grade, but still savages, were the dwellers in the low coast-lands of Honduras, Nicaragua, and Costa Rica. The Tarumari, Tepehuan, Huichol, and others of the northern sierras were about on a level with our own Pueblo tribes, while the Aztecs, Totonac, Tarasco, Zapotec, and Mistec, the Maya, Kiché, and Cakchiquel, of the central regions, might almost be considered civilized nations, counting their citizens by hundreds of thousands, with agriculture and all the common industrial arts, a well-developed architecture, an established and orderly government, and a voluminous hieroglyphic literature.

As in the United States, the general direction of migration seems to have been from north to south, excepting for the tribes of Chibchan stock, an offshoot from the main body in Colombia. The celebrated Aztec, whose tribes occupied the valley of Mexico and its immediate environs, had a definite tradition of northern origin, and linguistic evidence shows them to have been closely cognate to the Pima and Shoshoni, while their culture was borrowed from the earlier and much more cultured, but less warlike, nations which they had overpowered some five centuries before their own conquest by Cortés in 1519. The empire which they had built up comprised many tribes of diverse stocks, held together only by the superior force of the conqueror, and easily disintegrated under the assaults of the Spaniards. The native civilizations, however, have left their permanent stamp upon both Mexico and Central America.

In general characteristics, the cultures of the several civilized nations were very similar. Agriculture was the basic industry and dependence; mountain-terracing, canal irrigation, and even floating lake-gardens, being all utilized to meet the necessities of a swarming population. Stone, and more particularly obsidian, was still the chief material for ordinary implements, but they had discovered the art of bronze-casting, and were expert designers in gold. The working of iron—the master metal—was practically unknown upon the American Continent. They were neatly clothed in cotton garments of various colours. Their pottery, especially that of the Tarasco, was beautiful both in design and manufacture, with glazed surface and inlay of precious metal. Their public architecture included magnificent temples and pyramids, of cut and polished stone set in mortar and covered with hieroglyphic inscriptions. The ruined cities of the Maya of Yucatan—Mayapan, Uxmal, and Chichén-Itzá, with scores of others, all occupied at the time of the conquest with such older ruins as Teotihuacan, and Copan, and Mitla—rival the great remains of classical antiquity.

The social and political organization seems to have been based upon the family group. There was a system of public education in which boys were taught military science, writing, and religious ritual, while girls were instructed in morals and domestic arts. Each civilized nation had an elaborate calendar system, that of the Maya proper being the most intricate, with cycles of 20, 52, and 260 years. The religious systems were characterized by the number and magnificence of their ceremonies, with armies of priests and priestesses, processions, feasts, and

sacrifices, and by the general bloody tenor of their rituals, especially among the Aztec, who yearly sacrificed thousands of captives to their gods, the bodies of the victims being afterwards eaten by the priests or by the original captors. The Maya religion, like the people, appears to have been of milder character, although still admitting human sacrifice. In all these nations the king was of absolute authority. Whole libraries of native literature existed, chiefly of ritual content, written in iconomatic or hieroglyphic characters upon paper of maguey fibre. Of those which have escaped the fanaticism of the first conquerors some of the most noted (Aztec) are exemplified in Lord Kingsborough's great work. Of the Maya nations the most valuable literary monument is the "Popol Vuh" of the Kiché of Guatemala, translated by the Abbé Brasseur de Bourbourg. For a comprehensive view of these native civilizations our best authorities are Gomara and Herrera, of the earlier period, with Prescott and Hubert H. Bancroft of our own time. In spite of the exterminating wars of the conquest and the subsequent awful oppression under the slave system, the descendants of the aboriginal races—largely Christianized and assimilated to Spanish forms—still constitute the great bulk of the population between the Rio Grande and the Isthmus.

The ruder coast tribes of Central America present no very distinguishing cultural features, subsisting by a limited agriculture, supplemented by hunting and fishing, without arts, monuments, or history of importance. The Ulva of Honduras practised head-flattening. The Carib of the same region were forced immigrants from the Antilles.

Practically the whole of the West Indies was occupied by tribes of two linguistic stocks, the earlier of Arawakan origin, the more recent being Cariban invaders from the northern coast of South America. The Arawakan aborigines were about in the cultural status of our own Gulf tribes, subsisting chiefly by agriculture and practising the simpler arts, but unfitted by their peaceful habit to withstand the inroads of the predatory Carib, whose very name is synonymous with "cannibal". Under the awful cruelties of their Spanish conquerors and taskmasters they were virtually exterminated within two generations of the discovery (see ARAWAKS).

As commonly recognized, the linguistic stocks represented in Mexico, Central America, and the West Indies were about twenty-five in number, as given below, those marked with an asterisk being also extra-limital: *Athapascan (Chihuahua etc.); *Cariban (Honduras and islands); Chiapanecan (Chihuahua, Nicaragua, Costa Rica); *Chibchan (Panama); Chinantecan (Oaxaca); Huavean (Oaxaca); Lenca (Honduras); Maratinian, or Tamaulipecan (Tamaulipas); Matagalpan (Nicaragua); Mayan (Yucatan, Tabasco, Chiapas, Guatemala); Mosquitian (Honduras); *Nahuatlán Shoshonian (Mexico, etc.); Olivean (Tamaulipas); Otomian (Guerrero, etc.); *Pakawan, or Coahuiltecan (Coahuila); Payan (Honduras); Serian (Sonora); Subtiaban (Nicaragua); Tarascan (Michoacan); Tequistlatecan (Oaxaca, Guerrero); Totonacan (Vera Cruz); Ulvan (Nicaragua etc.); Waikurian (California); Xanabrian (Tamaulipas); Xicaquan (Honduras); Xincan (Guatemala); *Yuman (California).

SOUTH AMERICA.—On the South American Continent there existed prior to European occupation a chain of highly developed native civilizations extending along the Andean Plateau from the Isthmus southward into Chile, while all the rest—including the narrow coast strip along the Pacific and the great forests and pampas stretching eastward to the Atlantic—were occupied by petty tribes of primitive culture status, from the sedentary agriculturists of the middle Orinoco and the Paraná to the rude savages of Tierra del Fuego.

Among the civilized nations, in order from north to south, were the Muysca or Chibcha of Colombia, the Yunca and Quichua of Peru, and the somewhat problematic Aymará of the Peru-Bolivia frontier. Of these the most populous, most important, and best known were the Quichua, whose great Empire of Peru, with its capital at Cuzco, dominated the whole region west of the great Cordillera from the Chibcha territory to about the 35th parallel in Chile, with outlying colonies among the Calchaqui of Cata-

marca, east of the Andes chain. Their ruling caste, the Incas, who claimed descent from the sun and to whom belonged the emperors and the nobility, appear to have been originally the nucleus tribe of the empire, which in the course of centuries had gradually absorbed and assimilated almost all the tribes of cognate Quichuan stock, together with a number of other tribes and nations of alien stocks and of greater or less degree of culture. Unlike the Aztec, who held the subjected tribes only by superior force, the Inca emperors pursued a systematic policy of removal and colonization with reference to the conquered tribes under which tribal differences rapidly disappeared, and the new subjects were completely fused into the body of the empire. The government, while nearly absolute, was mild and paternal, looking carefully after the welfare of every class and citizen, defining their privileges and duties, and holding each to a strict account in its contribution to the general welfare. The religion partook of the same benevolent character, having none of the bloody sacrificial and cannibalistic rites of the Aztec. The material civilization was probably the most advanced in aboriginal America, agriculture, pottery-making, weaving, and metal-working in gold and bronze being at their highest, while the stupendous temples, fortresses, and roads, in massive cut stone, were without parallel on the Continent and still defy the centuries. In sculptural art, however, they were behind the Aztec, Maya, and other northern nations, and in anything literary had not progressed beyond a simple system by means of *quipus* or knotted cords. Among the best accounts of the Inca civilization is that contained in Prescott's "Conquest of Peru", a description which will apply with approximate correctness to the others of the Andean region. The Chibcha race was virtually exterminated by the Spanish conquerors in their thirst for gold, but in Ecuador, Peru, and Bolivia the descendants of the old civilized nations still constitute the bulk of the population, and the Quichua is the dominant language outside of the cities.

The Araucanians (q. v.) of southern Chile, who have successfully resisted all attempts at their subjugation to the present day; the Moxos tribes of southern Bolivia and their neighbours, the Calchaqui of Argentina; the populous Guaraní tribes of the Paraguay; and the majority of the tribes of the middle Orinoco, were chiefly sedentary and agricultural in habit, and fairly well advanced in the simple native arts, including pottery-making, weaving, and the preparation of tapioca flour from the manioc root. The tribes of the great Amazon basin and of eastern Brazil, as a rule, were primarily hunters or fishers, and of lower culture, as were also the predatory equestrian tribes of the Chaco, central Argentina, and Patagonia, while the Ona and others of inclement Tierra del Fuego exemplified the lowest degree of savagery, being without clothing, shelter, structure, or any art worthy of the name. Cannibalism prevailed over a large portion of the continent, especially among the Botocudo, Guaraní, and others of the Paraná and eastern Brazil, in portions of Guiana and the great Orinoco region, and on some of the upper streams of the Amazon. Social organization and tribal laws and government, excepting among the sedentary tribes of the more southern region, were very loosely defined, and the religion of all seems to have been a simple animism, with apparently much less of ceremonial form than was common among the tribes of similar grade on the northern continent, probably due to the nature of the tropical wilderness, which made it difficult to come together in large numbers.

The eastern tribes were terribly wasted by the organized slave-raiders in the earlier period and until the Jesuits armed them for effective defence in the seventeenth century. Civilization, with its introduced vices and new diseases, particularly smallpox, has

been as destructive to them as to other savage races, and, in spite of missionary effort and sporadic government protection in some states, they seem rapidly marching to final extinction.

As tabulated by Chamberlain, our most recent authority (South American Linguistic Stocks, 1907), the number of South American linguistic stocks was approximately eighty, as given below, the list being liable to some change with more extended investigation. Of these the Tupian, or Tupí-Guaraní, alone occupies the greater portion of Brazil and Paraguay, and forms the basis of the *lingua geral* or trade language. Alikulufan (Tierra del Fuego), Andaquian (Colombia), Apoliston (Bolivia), Arauan (Brazil), Araucan or Aucan (Chile), Arawakan (Venezuela, &c.), Ardan (Ecuador), Atacameñan (Chile), Aymaran (Peru, Bolivia), Barbacora (Colombia), Betoyan (Colombia, Venezuela), Bororoan (Brazil), Calchaquian (Argentina), Canarian (Peru-Ecuador), Canichanan (Bolivia), Carajan (Brazil), Cariban (Venezuela, Guiana, &c.), Caririan (Brazil), Cayubaban (Bolivia), Changoan (Chile), Chayacuran (Bolivia), Charruan, (Uruguay), Chibchan (Colombia), Chiquitan (Bolivia), Chococan (Colombia), Cholonan (Peru), Chonoan (Chile), Churoyan (Colombia), Cocucan (Colombia), Corabecan (Bolivia), Cunan (Colombia), Curucucan (Bolivia), Curuminacan (Bolivia), Enomagan (Paraguay), Goyatacan (Brazil), Guahiban (Colombia), Guaraunan (Venezuela), Guatoan (Bolivia-Brazil), Guayacuran (Argentina), Itenean (Bolivia), Itonaman (Bolivia), Itucalcen (Peru), Jivaran (Ecuador), Laman (Peru), Lecan (Bolivia), Lorenzan (Peru), Lulcan (Argentina), Mainan (Ecuador), Makuan (Brazil), Matacan (Argentina, Paraguay), Miranhan (Brazil), Mocoan (Colombia), Mosetenan (Bolivia), Moviman (Bolivia), Muran (Brazil), Ocoronan (Bolivia), Onan (Tierra del Fuego), Otomacan (Venezuela), Otuquian (Bolivia), Paniquitan (Colombia), Panoan (Peru), Peban (Peru, Ecuador), Piaroan (Colombia, Venezuela), Puelchean (Argentina), Puinavian (Colombia), Puquinan (Peru), Quichuan (Peru, Ecuador, &c.), Salivan (Venezuela), Samucan (Bolivia), Tacanan (Bolivia), Tapuyan (Brazil, Colombia), Ticunian (Brazil), Timotean (Venezuela), Tupian (Brazil, Paraguay, Bolivia, &c.), Trumaian (Brazil), Tsonekan (Argentina), Utotan (Brazil), Yahganian (Tierra del Fuego), Yururan (Venezuela—Colombia), Yuncan (Peru), Yurucaran (Bolivia), Zaparan (Ecuador).

JAMES MOONEY.

Indiction. See CHRONOLOGY, GENERAL.

Indies, EAST, PATRIARCHATE OF THE.—In consequence of an agreement between the Holy See and the Portuguese Government in 1886, settling difficulties that had arisen from the Goan schism (see GOA, ARCHDIOCESE OF), the jurisdiction of the Archbishop of Goa was considerably restricted. Indeed, one of the causes of the schism had been that both the Archbishop of Goa and the Bishop of Macao had been exercising acts of jurisdiction within the vicariates Apostolic of the British East Indies, though these had been already expressly withdrawn from their jurisdiction. The Portuguese Government had sided with the archbishop and his supporters against Rome, claiming a royal *ius patronatus* over the whole of the Church of India (see PADROADO). As compensation for his shorn jurisdiction the Archbishop of Goa was given the title of patriarch. The suffragan sees of Goa are Damão, Cochin, Macao, Mylapur, and the *prælatúra nullius* of Mozambique.

Acta Sanctæ Sedis (Rome, 1886).

U. BENIGNI.

Indifferentism, RELIGIOUS, is the term given, in general, to all those theories, which, for one reason or another, deny that it is the duty of man to worship God by believing and practising the one true religion. This religious Indifferentism is to be distinguished from *political* indifferentism, which is applied to the policy of a state that treats all the religions within its borders as being on an equal footing before the law of the country. Indifferentism is not to be confounded with religious indifference. The former is primarily a theory disparaging the value of religion; the latter term designates the conduct of those who, whether they do or do not believe in the necessity and utility of religion, do in fact neglect to fulfil its duties.

I. **ABSOLUTE INDIFFERENTISM**.—Under the above general definition come those philosophic systems which reject the ultimate foundation of all religion, that is, man's acknowledgment of his dependence on a personal creator, whom, in consequence of this dependence, he is bound to reverence, obey, and love. This error is common to all atheistic, materialistic, pantheistic, and agnostic philosophies. If there is no God, as the Atheist professes to believe, or if God be but the sum of material forces, or if the Supreme Being is an all-embracing, all-confounding totality in which human individuality is lost, then the personal relationship in which religion takes its rise does not exist. Again, if the human mind is incapable of attaining certitude as to whether God exists or not, or is even unable to form any valid idea of God, it follows that religious worship is a mere futility. This error is shared also by the Deists, who, while they admit the existence of a personal God, deny that He demands any worship from His creatures. These systems are answered by the apologist who proves that every one is bound to practise religion as a duty towards God, and in order that he may attain the end for which he has been called into existence.

II. **RESTRICTED INDIFFERENTISM**.—In distinction from this absolute Indifferentism, a restricted form of the error admits the necessity of religion on account, chiefly, of its salutary influence on human life. But it holds that all religions are equally worthy and profitable to man, and equally pleasing to God. The classic advocate of this theory is Rousseau, who maintains, in his "Emile", that God looks only to the sincerity of intention, and that everybody can serve Him by remaining in the religion in which he has been brought up, or by changing it at will for any other that pleases him more (Emile, III). This doctrine is widely advocated to-day on the grounds that, beyond the truth of God's existence, we can attain to no certain religious knowledge; and that, since God has left us thus in uncertainty, He will be pleased with whatever form of worship we sincerely offer Him. The full reply to this error consists in the proof that God has vouchsafed to man a supernatural revelation, embodying a definite religion, which He desires that all should embrace and practise. Without appealing to this fact, however, a little consideration suffices to lay bare the inherent absurdity of this doctrine. All religions, indeed, may be said to contain some measure of truth; and God may accept the imperfect worship of ignorant sincerity. But it is injurious to God, Who is truth itself, to assert that truth and falsehood are indifferent in His sight. Since various religions are in disagreement, it follows that, wherever they conflict, if one possesses the truth the others are in error. The constituent elements of a religion are beliefs to be held by the intellect, precepts to be observed, and a form of worship to be practised. Now—to confine ourselves to the great religions of the world—Judaism, Mohammedanism, Christianity, and the religions of India and the Orient are in direct antagonism by their respective creeds, moral codes, and cults. To say that all these irreconcilable beliefs and cults are equally pleasing to God is to say that the Divine Being has no predilection

for truth over error; that the true and the false are alike congenial to His nature. Again, to hold that truth and falsehood equally satisfy and perfect the human intellect is to deny that reason has a native bent towards, and affinity for, truth. If we deny this we deny that any trust is to be placed in our reason. Turn to the ethical side of the question. Here again there is conflict over almost all the great moral issues. Let an illustration or two suffice. Mohammedanism approves polygamy, Christianity uncompromisingly condemns it as immoral. If these two teachers are equally trustworthy guides of life, then there is no such thing as fixed moral values at all. If the obscene orgies of phallic worship are as pure in the sight of God as the austere worship that was conducted in the temple of Jerusalem, then we must hold the Deity to be destitute of all moral attributes, in which case there would be no grounds for religion at all. The fact is that this type of Indifferentism, though verbally acknowledging the excellence and utility of religion, nevertheless, when pressed by logic, recoils into absolute Indifferentism. "All religions are equally good" comes to mean, at bottom, that religion is good for nothing.

III. **LIBERAL OR LATITUDINARIAN INDIFFERENTISM**.—(a) *Origin and Growth*.—The foregoing types of Indifferentism are conveniently called infidel, to distinguish them from a third, which, while acknowledging the unique Divine origin and character of Christianity, and its consequent immeasurable superiority over all rival religions, holds that what particular Christian Church or sect one belongs to is an indifferent matter; all forms of Christianity are on the same footing, all are equally pleasing to God and serviceable to man. On approaching this third error one may advantageously inquire into the genesis of Indifferentism in general. In doing so we shall find that liberal Indifferentism, as the third type is called, although it arises in belief, is closely akin to that of infidelity; and this community of origin will account for the tendency which is to-day working towards the union of both in a common mire of scepticism. Indifferentism springs from Rationalism. By Rationalism here we understand the principle that reason is the sole judge and discoverer of religious truth as of all other kinds of truth. It is the antithesis of the principle of authority which asserts that God, by a supernatural revelation, has taught man religious truths that are inaccessible to our mere unaided reason, as well as other truths which, though not absolutely beyond the native powers of reason, yet could not by reason alone be brought home to the generality of men with the facility, certitude, and freedom from error required for the right ordering of life. From the earliest ages of the Church the rationalistic spirit manifested itself in various heresies. During the Middle Ages it infected the teachings of many notable philosophers and theologians of the schools, and reigned unchecked in the Moorish centres of learning. Its influence may be traced through the Renaissance to the rise of the Reformation (see **RATIONALISM**).

From the beginning of the Reformation the rationalistic current flowed with ever-increasing volume through two distinct channels, which, though rising apart, have been gradually approaching each other. The one operated through purely philosophic thought which, wherever it set itself free from the authority of the Church, has on the whole served to display what has been justly called the "all-corroding, all-dissolving scepticism of the intellect in religious matters". Rationalistic speculation gave rise successively to the English Deism of the eighteenth century, to the school of the French Encyclopædists and their descendants, and to the various German systems of anti-Christian thought. It has culminated in the prevalent materialistic, monistic, and agnostic philosophies of to-day. When the Reformers rejected the dogmatic authority

of the living Church they substituted for it that of the Bible. But their rule of faith was the Bible, interpreted by private judgment. This doctrine introduced the principle of Rationalism into the very structure of Protestantism. The history of that movement is a record of continually increasing divisions, multiplications of sects, with a steady tendency to reduce the contents of a fixed dogmatic creed. In a few words Cardinal Newman has summed up the lesson of that history: "Experience proves surely that the Bible does not answer a purpose for which it was never intended. It may be accidentally the means of converting individuals; but a book after all cannot make a stand against the wild living intellect of man, and in this day it begins to testify, as regards its own structure and contents, to the power of that universal solvent which is so successfully acting upon religious establishments" (*Apologia pro Vita Sua*, London, 1883, v, 245). As divisions increased in the general body of Protestantism, and as domestic dissensions arose in the bosom of particular denominations, some of the leaders endeavoured to find a principle of harmony in the theory that the essential doctrines of Christianity are summed up in a few great, simple truths which are clearly expressed in Scripture, and that, consequently, whoever believes these and regulates his life accordingly is a true follower of Christ. This movement failed to stay the process of disintegration, and powerfully promoted the opinion that, provided one accepts Christianity as the true religion, it makes little difference to what particular denomination one adheres. The view spread that there is no creed definitely set forth in Scripture, therefore all are of equal value, and all profitable to salvation. Large numbers in the Church of England adopted this opinion, which came to be known as Liberalism or Latitudinarianism. It was not, however, confined to one form of Protestantism, but obtained adherents in almost every body inheriting from the Reformation. The effort was made to reconcile it with the official confessions by introducing the policy of permitting every one to interpret the compulsory formulæ in his own sense.

Indifferentism, liberal and infidel, has been vigorously promoted during the past half century by the dominance of Rationalism in all the lines of scientific inquiry which touch upon religion. The theory of evolution applied to the origin of man, Biblical criticism of the Old and the New Testament, the comparative study of religions, archaeology, and ethnology, in the hands of men who assume as their primary postulate that there is no supernatural, and that all religions, Christianity included, are but the offspring of the feeling and thought of the natural man, have propagated a general atmosphere of doubt or positive unbelief. As a result, large numbers of Protestants have abandoned all distinctly Christian belief, while others, still clinging to the name, have emptied their creed of all its essential dogmatic contents. The doctrine of Scriptural inspiration and inerrancy is all but universally abandoned. It would not, perhaps, be incorrect to say that the prevalent view to-day is that Christ taught no dogmatic doctrine, His teaching was purely ethical, and its only permanent and valuable content is summed up in the Fatherhood of God and the brotherhood of man. When this point is reached the Indifferentism which arose in belief joins hands with the Indifferentism of infidelity. The latter substitutes for religion, the former advocates as the only essential of religion, the broad fundamental principles of natural morality, such as justice, veracity, and benevolence that takes concrete form in social service. In some minds this theory of life is combined with Agnosticism, in others with a vague Theism, while in many it is still united with some vestiges of Christian Faith.

Along with the intellectual cause just noted, another has been what one might call the automatic

influence proceeding from the existence of many religions side by side in the same country. This condition has given rise to the political indifferentism referred to in the opening of this article. Where this state of affairs prevails, when men of various creeds meet one another in political, commercial, and social life, in order that they may carry on their relations harmoniously they will not demand any special recognition for their own respective denominations. Personal intercourse fosters the spirit of tolerance, and whoever does not unflinchingly hold to the truth that there is but one true religion is apt to be guided in his judgments by the maxim, "From their fruits ye shall know them." On observing that probity and good intention mark the lives of some of his associates who differ in their religious beliefs, he may easily come to the conclusion that one religion is as good as another. Probably, however, many who speak thus would acknowledge the fallacy of this view if pushed by argument. On the other hand, great numbers of theoretical Indifferentists display unmistakable hostility to the Catholic Church; while, again, persons devoid of all religious belief, favour the Church as an efficient element of police for the preservation of the social order.

(b) *Criticism*.—It would be beyond the scope of this article to develop, or even briefly sketch, the argument contained in the Scriptures and in the history of the Church for the truth that, from the beginning, Christianity was a dogmatic religion with a rule of faith, a rule of conduct, a definite, if not fully developed, system, with promises to be fulfilled for those who adhered to the creed, the discipline, and the system, and with anathemas for those who rejected them. The exposition and the proof of these facts constitute, in theology, the treatise on the Church (see CHURCH). One obvious consideration may be briefly pointed out which lays bare the inconsistency of liberal indifferentism. If, as this theory admits, God did reveal any truth to men, then He surely intended that it should be believed. He can not have meant that men should treat His revelation as of no importance, or that it should signify one thing to you and something entirely different to me, nor can He be indifferent as to whether men interpret it correctly or incorrectly. If He revealed a religion, reason certainly tells us that such a religion must be true, and all others that disagree with it false, and that He desires men to embrace it; otherwise, why should He have given any revelation at all? It is true that in many places the Scriptures are obscure and furnish to those who assume to interpret them by the light of private judgment alone many occasions of reaching irreconcilable conclusions. This fact, however, proves only the falseness of the Protestant rule of faith. The inference that flows from it is not that all interpretations are equally trustworthy, but that, since God has given us a revelation which is not so clearly or fully expressed in the Scriptures that reason can grasp it with certitude, He must have constituted some authority to teach us what is the burden of revelation.

The cogency of this reasoning when set forth at adequate length has led into the Catholic Church many sincere non-Catholics, who have observed how Rationalism is rapidly dissolving religious faith over wide areas once occupied by dogmatic Protestantism. Present signs seem to indicate that, in the near future, the religious struggle shall be, not between this or that form of religion, but between Catholicism and no religion at all. It is true, of course, that reason, as the Vatican Council teaches, can, by its own native powers, reach with certitude the truths which suffice to form the basis of a natural religion. But it is also true that, as Newman has said, the tendency of the human intellect, as such, has been, historically, towards simple unbelief in matters of religion: "No truth, however sacred, can stand against it in the long run; and hence it is that in the Pagan world, when our Lord came, the

last traces of the religious knowledge of former times were all but disappearing from those portions of the world in which the intellect had been active and had a career" (Apologia, chap. v). These words might stand with but little modification as a description of present-day conditions where the rationalistic spirit is in control. The only effective barrier to resist its triumphant march, leading scepticism in its train, is the principle of authority embodied in the Catholic Church.

JAMES J. FOX.

Individualism.—A comprehensive and logical definition of this term is not easy to obtain. Individualism is not the opposite of socialism, except in a very general and incomplete way. The definition given in the Century Dictionary is too narrow: "That theory of government which favours non-interference of the State in the affairs of individuals." This covers only one form of individualism, namely, political or civic. Perhaps the following will serve as a fairly satisfactory description: The tendency to magnify individual liberty, as against external authority, and individual activity, as against associated activity. Under external authority are included not merely political and religious governments, but voluntary associations, and such forms of restraint as are found in general standards of conduct and belief. Thus, the labourer who refuses on theoretical grounds to become a member of a trade union; the reformer who rejects social and political methods, and relies upon measures to be adopted by each individual acting independently; the writer who discards some of the recognized canons of his art; the man who regards the pronouncements of his conscience as the only standard of right and wrong; and the freethinker—are all as truly individualists as the Evangelical Protestant or the philosophical anarchist. Through all forms of individualism runs the note of emphasis upon the importance of *self* in opposition to either restraint or assistance from without. Individualism is scarcely a principle, for it exhibits too many degrees, and it is too general to be called a theory or a doctrine. Perhaps it is better described as a tendency or an attitude.

The chief recognized forms of individualism are religious, ethical, and political. Religious individualism describes the attitude of those persons who refuse to subscribe to definite creeds, or to submit to any external religious authority. Such are those who call themselves freethinkers, and those who profess to believe in Christianity without giving their adhesion to any particular denomination. In a less extreme sense all Protestants are individualists in religion, inasmuch as they regard their individual interpretation of the Bible as the final authority. The Protestant who places the articles of faith adopted by his denomination before his own private interpretation of the teaching of Scripture is not, indeed, a thorough-going individualist, but neither is he a logical Protestant. On the other hand, Catholics accept the voice of the Church as the supreme authority, and therefore reject outright the principle of religious individualism.

Ethical individualism is not often spoken of now, and the theories which it describes have not many professed adherents. Of course, there is a sense in

which all men are ethical individualists, that is, inasmuch as they hold the voice of conscience to be the immediate rule of conduct. But ethical individualism means more than this. It means that the individual conscience, or the individual reason, is not merely the decisive subjective rule, but that it is the only rule; that there is no objective authority or standard which it is bound to take into account. Among the most important forms of the theory are the intuitionism, or common-sense morality, of the Scottish School (Hutchinson, Reid, Ferguson, and Smith), the autonomous morality of Kant, and all those systems of Hedonism which make individual utility or pleasure the supreme criterion of right and wrong. At present the general trend of ethical theory is away from all forms of individualism, and toward some conception of social welfare as the highest standard. Here, as in the matter of religion, Catholics are not individualists, since they accept as the supreme rule, the law of God, and as the final interpreter of that law, the Church. Considered historically and in relation to the amount of attention that it receives, the most important form of individualism is that which is called political. It varies in degree from pure anarchism to the theory that the State's only proper functions are to maintain order and enforce contracts. In ancient Greece and Rome, political theory and practice were anti-individualistic; for they considered and made the State the supreme good, an end in itself, to which the individual was a mere means.

Directly opposed to this conception was the Christian teaching that the individual soul had an independent and indestructible value, and that the State was only a means, albeit a necessary means, to individual welfare. Throughout the Middle Ages, therefore, the ancient theory was everywhere rejected. Nevertheless the prevailing theory and practice were far removed from anything that could be called individualism. Owing largely to the religious individualism resulting from the Reformation, political individualism at length appeared: at first, partial in the writings of Hobbes and Locke; later, complete in the speculations of the French philosophers of the eighteenth century, notably Rousseau. The general conclusion from all these writings was that government was something artificial, and at best a necessary evil. According to the Social Contract theory of Rousseau, the State was merely the outcome of a compact freely made by its individual citizens. Consequently they were under no moral obligation to form a State, and the State itself was not a moral necessity. These views are no longer held, except by professional anarchists. In fact, a sharp reaction has occurred. The majority of non-Catholic ethical and political writers of to-day approach more or less closely to the position of ancient Greece and Rome, or to that of Hegel; society, or the State, is an organism from which the individual derives all his rights and all his importance. The Catholic doctrine remains as always midway between these extremes. It holds that the State is normal, natural, and necessary, even as the family is necessary, but that it is not necessary for its own sake; that it is only a means to individual life and progress.

Moderate political individualists would, as noted above, reduce the functions of the State to the minimum that is consistent with social order and peace. As they view the matter, there is always a presumption against any intervention by the State in the affairs of individuals, a presumption that can be set aside only by the most evident proof to the contrary. Hence they look upon such activities as education, sumptuary regulations, legislation in the interest of health, morals, and professional competency, to say nothing of philanthropic measures, or of industrial restrictions and industrial enterprises, as outside the

State's proper province. This theory has a much smaller following now than it had a century or even half a century ago; for experience has abundantly shown that the assumptions upon which it rests are purely artificial and thoroughly false. There exists no general presumption either for or against state activities. If there is any presumption with regard to particular matters, it is as apt to be favourable as unfavourable. The one principle of guidance and test of propriety in this field is the welfare of society and of its component individuals, as determined by experience. Whenever these ends can be better attained by state intervention than by individual effort, state intervention is justified.

It is against intervention in the affairs of industry that present-day individualism makes its strongest protest. According to the *laissez-faire*, or let alone, school of economists and politicians, the State should permit and encourage the fullest freedom of contract and of competition throughout the field of industry. This theory, which was derived partly from the political philosophy of the eighteenth century, already mentioned, partly from the Kantian doctrine that the individual has a right to the fullest measure of freedom that is compatible with the equal freedom of other individuals, and partly from the teachings of Adam Smith, received its most systematic expression in the tenets of the Manchester School. Its advocates opposed not only such public enterprises as state railways and telegraphs, but such restrictive measures as factory regulations, and laws governing the hours of labour for women and children. They also discouraged all associations of capitalists or of labourers. Very few individualists now adopt this extreme position. Experience has too frequently shown that the individual can be as deeply injured through an extortionate contract, as at the hands of the thief, the highwayman, or the contract breaker. The individual needs the protection of the State quite as much and quite as often in the former case as in any of the latter contingencies. As to state regulation or state ownership of certain industries and utilities, this too is entirely a question of expediency for the public welfare. There is no a priori principle, political, ethical, economic, or religious, by which it can be decided. Many individualists, and others likewise, who oppose state intervention in this field are victims of a fallacy. In their anxiety to safeguard individual liberty, they forget that reasonable labour legislation, for example, does not deprive the labourer of any liberty that is worth having, while it does ensure him real opportunity, which is the vital content of all true liberty; they forget that, while state control and direction of certain industries undoubtedly diminishes both the liberty and the opportunity of some individuals, it may increase the opportunities and the welfare of the vast majority. Both individualists and non-individualists aim, as a rule, at the greatest measure of real liberty for the individual; all their disagreement relates to the means by which this aim is to be realized.

As in the matter of the necessity and justification of the State, so with regard to its functions, the Catholic position is neither individualistic nor anti-individualistic. It accepts neither the "policeman" theory, which would reduce the activities of the State to the protection of life and property and the enforcement of contracts, nor the proposals of Socialism, which would make the State the owner and director of all the instruments of production. In both respects its attitude is determined not by any metaphysical theory of the appropriate functions of the State, but by its conception of the requisites of individual and social welfare.

JOHN A. RYAN.

Individual, Individuality (Lat. *individuum*; Germ. *Einzeln*; Fr. *individuel*). An individual being is defined by St. Thomas as "quod est in se indivisum, ab aliis vero divisum" (a being undivided in itself but separated from other beings). It implies therefore unity and separateness or distinctness. Individuality in general may be defined or described as the property or collection of properties by which the individual possesses this unity and is separated off from other beings. What is it that constitutes an individual, or individuality? This is a problem which has exercised most of the great schools of philosophy. It may be considered from the metaphysical or the psychological standpoint, though these are intimately connected. Again, there is a sense in which individuality presents interesting questions to ethics and pedagogics.

METAPHYSICS.—The surrounding universe manifests itself to us, at all events at first sight, as a *plurality*, a collection of individual things. We recognize as individually distinct beings a multiplicity of material objects—animals, men, and the like. We speak of the stacks of corn or the stones scattered over a field as so many individual things. Yet a little reflection reveals to us that the nature of the unity, and consequently of the individuality, possessed by many of these objects is of a very imperfect kind. A stack of corn is after all merely an aggregate of separate ears; and a stone is merely a group of smaller stones or particles of matter in accidental local contact, and bounded off by some other kind of matter. The unity of such an object is entirely extrinsic and accidental, whilst the separateness is due merely to the discontinuity beyond its surfaces of the kind of material of which the object is composed. Portions of lifeless matter have thus only an inferior or imperfect kind of individuality. Higher in the scale of beings come plants and animal organisms, though in the lower forms of life it is often a difficult problem for the scientist to decide whether a particular specimen is better described as a single living being or a colony of beings.

However, the broad fact remains that we look on the real world presented to our senses as made up of a vast number of separate individual beings. On the other hand, as soon as our mind begins to think, judge, or reason, or to make any sort of significant statements about these objects, it conceives them under universal aspects. It does not manipulate them as mere disconnected individuals, but groups them under certain common points of view. If the mind is to make any progress at all in knowledge, it is compelled to organize its sensible experiences, to handle the individual facts presented to it by means of universal ideas. The psychological genesis of these ideas, their precise character, and the nature of the reality outside of the mind which corresponds to them—in other words the great problem of universals—were keenly discussed by Plato and Aristotle, and became a still more burning question in the Christian and Arabic schools of philosophy from the tenth to the twelfth century (see *IDEA*). But a counterpart of the same problem is the question of the individual. And this latter topic in the form of the controversy respecting the *principium individuationis* became almost as prominent in the schools during the thirteenth and fourteenth centuries.

What constitutes an individual being? What gives it its own peculiar individuality? By what is it

distinguished from all other beings, and especially from other beings of the same species? One obvious answer is given in the enumeration of such differences as those of place, time, figure. But these are merely extrinsic relations. Nor is perfect identity, even in place, between two beings wholly inconceivable. These extrinsic differences, in fact, presuppose *intrinsic* differences. Two things must first differ in relation to each other before they can differ in relation to a third or extrinsic thing, such as space. Hence the question which exercised the philosophical schools referred especially to intrinsic difference. What is the intrinsic principle of individuation by which one being is distinct from another? In the Aristotelean theory the corporeal objects around us are composite beings ultimately constituted of two principles, one passive and determinable (matter), the other active and determining (form). The latter gives the being its specific nature. The former is the ground of divisibility and multiplicity; and this is for Aristotle the source of individuation. The question, however, received much fuller development and discussion in the Middle Ages, and we find a number of different replies advanced by different philosophers.

According to St. Thomas, who developed the Aristotelean doctrine, the form, in so far as corporeal beings are concerned, gives specific unity and determinateness to the thing. But many individuals can exist in the same species; it is thus the specific form which furnishes the common basis for the universal idea. The form, therefore, cannot be the source of individuation, since it itself needs a principle by which it may be individuated. This principle, the *ratio distinctionis*, the cause of difference between one individual and another, must be sought in the limiting principle which receives the form, and is the ground of divisibility and multiplicity—the matter. This teaching of St. Thomas is made clearer by his doctrine concerning the nature of *intelligentia*, or angels. They are pure forms devoid of any material element. Consequently the angelic nature contains no ground within it for multiplication; there can be only one in a species. Unlike men, who differ numerically in the same species, the several angels must differ specifically. In composite corporeal beings, the matter is the principle of limitation and individuation. But St. Thomas insists that it is *materia signata quantitate*. How precisely this is to be interpreted has been much disputed by the commentators. Cajetan understands *materia* here as the foundation and root of quantity, others as matter endowed with actual quantity. (For different views see especially Suarez, "Disp. Metaph.", V.) On the other hand, Durandus and Averrhoes taught that form was the internal principle of individuation conferring numerical unity on the subject which it constitutes. Scotus tends partly towards this view, adding, however, a further entity to the form proper. Matter, he argues, cannot be the principle of individuation, because it is essentially universal. Hence the principle must lie in the form, not, however, simply as universal nature, but with a particular formality added. This further difference determining the species down to the individual, he calls by the name, *haecceitas* (*thisness*).

The Nominalist teaching on universals led its advocates to a solution of this question quite different from that of either St. Thomas or Scotus. According to them the universal has no existence outside of the mind, no foundation in external nature. Every reality, as such, is individual. As Occam urged: "Quælibet res singularis seipsa est singularis, unum per se"; hence dispute about an internal principle of individuation is futile. If we speak of a cause of individuation we can only intelligibly allude to the creative will, or efficient cause, which gave existence to the thing. Others, however, who are very far from being Nominalists, also hold this view. Indeed

it is adopted by Suarez himself, who maintains: "Omnem substantiam singularem nec alio indigere individuationis principio præter suam entitatem, vel præter principia intrinseca quibus ejus entitas constat" (each singular substance is individualized by its own entity, and requires no other principle for its individuation). This solution he holds to be the clearest of all—*omnium clarissimam*. (There is an exhaustive discussion of the whole question with abundant references to all the chief medieval philosophers, scholastic and Arabic, in Suarez, "Disp. Metaph.", V.) A view akin to that of Suarez was advocated by Leibniz in his treatise "De principio individui".

Nowadays interest in the more subtle phases of the old metaphysical problem has declined, but a more fundamental question, raised by the theory of Monism, has come to the fore. Instead of the question, "How, precisely, do individual beings of the same species differ from each other?" we are asked, "Are there any truly individual beings in the universe at all? Or are the seemingly distinct, independent objects of the world around us, including our fellow-men, merely modes, phases, or aspects of the Absolute, of the Infinite, of the underlying substratum or ground of all things?" For Spinoza "omnis determinatio est negatio"—every individual determination is merely a negation, a limitation of the universal, and nothing has positive existence except the one infinite substance, of which the seemingly distinct, individual, finite beings are merely parts or modes. This denial of true individuality to all finite beings is the doctrine of Monism which, whether in an idealistic or materialistic form, has acquired steadily increasing influence since the time of Spinoza, and especially during the last century. Consequently the question of individuality is now shifted to that of the personality of human beings; for, obviously, it is in regard to them that the question becomes of most interest, and at the same time most capable of decisive proof.

PSYCHOLOGY.—It is only of persons that individuality can in the strict sense be predicated. A *person* is usually defined as an individual substance of a rational nature. It implies independence or existence in itself. Neither animals nor lifeless matter are persons, and so they do not possess this complete individuality. The strongest proof of the reality of human beings in the world around us rests therefore on the evidence for human personality, and for each of us ultimately on the proof of our own personality. My conviction of my personality and individual existence is the outcome of my experience. Rational self-consciousness combined with memory assure me of the abiding identity of my own being. That I am the same person who underwent a dangerous illness long ago as a child, who acquired a knowledge of certain branches of learning during my youth, who have recently gone through some particular experiences, and who am now engaged in writing these sentences, is affirmed with irresistible clearness and force by my intellect. Further, I have been conscious of exercising free volition and determining my own actions. I have found myself acted upon by certain impulses, and I have resisted or freely yielded to them. I have realized in and after such acts that *they were mine*, and that I was responsible for them. I have had it constantly impressed upon me that there is an external world which no effort of my will can annihilate. My reason assures me of my separateness from it and of its independence of me. If any truth is certain to me, then it must be that of my own abiding existence as a rational person responsible for my deliberate acts. But this implies my own individuality—the unity of my being together with the independence or separateness of my existence.

The self-conscious ego is thus the perfect type of the individual being. But if I assert my own existence

as an individual being, I must allow that the existence of other similar beings is, at all events, not impossible. But, the possibility once conceded, all the evidence establishes the existence of other men like myself. Further, experience can establish nothing with more irresistible force for me than that I am not any of these other men, that none of them is myself, that we are distinct individual beings. Finally, the combined experience of my limitations, the self-conscious cognition of my own abiding existence, the self-intimate awareness of my own free volition, the irrefragable assurance that I am answerable for my conduct—all combine to convince me that I am no mere irresponsible mode of some pantheistic Absolute, no mere flickering dream of an impersonal Mind, but a real unitary being, a free, self-conscious, separate personality, possessed of a genuine individual existence of my own. It is clear that any philosophical theory which is compelled to repudiate or explain away this conviction of my own individuality, whatever other problems it may claim to solve, cannot claim to be a very rational account of the universe.

Psychology presents us also with a secondary or derived meaning of the word *individuality*—the collection of more marked or prominent qualities of intellect, feeling, and will, by which the character of one man is distinguished from that of other men. We speak of St. Francis of Assisi, or Bismarck, or Abraham Lincoln, or Daniel O'Connell, as men of marked individuality; but the term is applicable to normal mankind also. Every adult human being differs from other men by a collection of qualities possessed in varying degrees by each. When the deviation from the normal is marked, yet not of a desirable kind, we speak of it as *eccentricity*. The root of the qualities which subsequently constitute a man's individual character lies in his congenital endowment, partly mental and partly physical, though the intimate dependence of soul on body renders it impossible, sometimes, to distinguish them. Obviously, the efficiency of the intellectual powers is conditioned by the perfection of the brain and nervous system. The aptitudes and dispositions due to his physical constitution are the main factors in the formation of the individual's *temperament*. (See CHARACTER.) It has long been recognized that this is largely due to inheritance. But the scientific study of heredity is still in a most elementary stage. The work of Galton, though useful and suggestive, carries us but a little way. The experiments of Abbot Mendel, however, have started lines of research which promise to shed much new light on the principles governing the inheritance of many characteristics throughout the animal kingdom. At the same time, in studying man we must be on our guard in ascribing to heredity traits which are the effect of imitation, training, and community of family environment. This is especially to be borne in mind in regard to the children of criminals. The total collection of elements which go to make up the mental constitution of man belong to the cognitive or appetitive faculties, or, according to the modern division, to the intellectual, emotional, or conative activities of the soul. Experience shows that each of these varies in power and range in different human beings. To some the emotional capacity, to others will-power or intellectual aptitude may be more liberally allotted at the start. But, strictly speaking, the child is not possessed of a definite, actual individuality. It is endowed rather with potentialities which fix an outside limit in various directions to the individual character possible of realization. For, besides the original capital of congenital aptitudes, there is the manner and degree—certainly of not less importance in the final total product—in which each of these aptitudes shall be fostered or starved. Exercise or indulgence during the plastic period develops each faculty and

inclination, whilst each, on the other hand, becomes atrophied and enfeebled by neglect or suppression of function. The observation of young children, even of members of the same family, impresses us with the great variety of native capacity and disposition. Delicacy of sense-perception and observation, power of attention, tenacity of memory, alertness of mind, generosity, passionateness, self-will, already exhibit themselves in quite different proportions in children of the age of three or four years. But the relative strength to which each faculty will ultimately attain will be conditioned by its future activity. The final result is, in fact, the outcome of nature and nurture combined. A very important point to note, however, is that the general aptitudes and tendencies which contribute most towards the determination of the individual character, although so elastic and modifiable during the plastic period of youth, congeal and harden rapidly after the period of manhood has been reached, so that there is little capability of change of character later in life—the aggregate of traits and personal qualities that make up the man's individuality have crystallized. Hence the priceless worth of the period of youth for education.

ETHICS.—The value of individuality as an element of well-being to the individual and the nation or the race is a problem for ethical and political philosophy. Among the chief factors which go to constitute individuality, or at all events marked individuality, are qualities of will and the conative faculty generally. The man of remarkable personality, of strong character, of striking individuality, is one in whom certain aspects of the volitional powers are predominant. These tendencies may in some cases make for evil. Henry VIII and Napoleon each possessed an individuality not less distinct than that of Blessed Thomas More or George Washington. Still, the possibility of abuse does not annihilate the value of God's gifts; and amongst these are those excellencies of mind and heart and will which, when permitted a natural and just development, result in strong and varied individualities. Men are distinguished from the lower animals by the possession of individual characters; and enlarged freedom of opportunity invariably issues in increased variety of attainment. Mankind thus becomes richer. God does not repeat himself in the formation of human faces, nor does He in the creation of human souls. Variety is an essential element in the beauty of the universe—mental and moral as well as physical. It would be a poor world in which men or minds were turned out of a single or a few common moulds. Multiplicity of peoples and languages and forms of government is part of the order of Providence which governs the earth; and the smaller nations have contributed not less precious elements to the well-being of mankind than the largest empires. One disastrous effect of socialism is precisely the crushing out of personal individuality. Indeed a grave evil of modern civilization is the menace to individuality involved in the enormous extension of machinery and of production on the large scale, in the influence of the press, in state education, and the triumph of the largest nations in the struggle for life. In spite of his errors and exaggerations, there is a considerable measure of truth in Mill's eloquent plea for the worth of individuality to the human race (On Liberty, c. iii).

PEDAGOGICS.—If individuality is a valuable asset in the adult man, then a first maxim for the teacher must be: "Respect the individuality of the pupil." As a matter of fact, good teachers have always instinctively done so. For what does the maxim mean? Study your pupils. Observe their diverse capabilities. Note the tastes, tendencies, and impulses of each. Ascertain their exact present attainments, and their varying powers of application. Then modify your method of action so as to adapt it to each child.

Do not treat all in the same way. Be sympathetic. Constantly study how to get the most and the best out of each student. What are all these rules, as old as the art of teaching, but diverse expressions of the one universal principle: "Appreciate the individuality of your pupils"? This individuality will often exhibit itself in an inconvenient or disagreeable way. It will at times sorely exercise the narrow or unsympathetic teacher. The temptation to suppress and crush it will often be very strong. The unoriginal mind finds intense difficulty in tolerating individuality. Yet the educator must remember that it is his duty to draw out and cultivate in his pupil every element that is good, to repress only that which is evil; and he should never forget that the individual nature of each is the precious root out of which personal character is to be developed. The chief difficulty is in regard to aptitudes and inclinations, which, though in themselves indifferent, may easily make for evil by over-indulgence or want of sufficient general self-control. Thus, an impulsive disposition or an unbending will are traits of character in a pupil which often come into disagreeable collision with the teacher's efforts; yet they may contain some precious elements of the raw material out of which, with patience and by judiciously guided development, a fine type of personality may be formed. On the other hand a levelling-down method of education by constant repression and steady discouragement may enfeeble or altogether extinguish what would have been admirable features of individual character.

MICHAEL MAHER.

Indo-China, the most easterly of the three great peninsulas of Southern Asia, is bounded on the north by the Mountains of Assam, the Plateau of Yun-nan, and the Mountains of Kwang-si; on the east by the Province of Kwang-si (Canton), the Gulf of Tong-king, and the Sea of China; on the south by the Sea of China, the Gulf of Siam, and the Strait of Malacca; on the west by the Gulf of Martaban and the Bay of Bengal. This territory is divided politically into: Upper and Lower Burmah, which belong to Britain; the Malay Peninsula, which England shares with Siam; the Empire of Siam; and French Indo-China, which includes the Colony of Cochin China, the vassal Kingdoms of Cambodia and Annam, the Tong-king and Laos Protectorates, and—although not geographically included in Indo-China—the Territory of Kwang-chau-wan, leased in 1898 for ninety-nine years from the Chinese Government. The length of the peninsula from the Chinese frontier to Cape Cambodia is about 1200 miles; at its widest point, between the Gulf of Tong-king and the Bay of Bengal, its breadth is 1000 miles. Its approximate area is 735,000 square miles, or about one-fourth the area of the United States. Its population is estimated at 34,000,000, that is 46 inhabitants to the square mile. In the present article, only general reference will be made to the British territories and Siam, for particulars concerning which the reader is referred to the articles INDIA and SIAM respectively in THE CATHOLIC ENCYCLOPEDIA.

PHYSICAL FEATURES, ETC.—While manifesting a

certain degree of uniformity in its physical formation, in the ethnographical relations of its inhabitants, and, to a lesser degree, in its fauna and flora, Indo-China lacks that political unity which characterizes its sister peninsula, Hindustan. As both this want of unity and the comparatively deserted state of the Indo-Chinese peninsula are almost entirely due to the configuration of the land, a clear exposition of the natural formation of the peninsula must necessarily precede every attempt to treat intelligently of its history, civilization, peoples, and produce. In Indo-China we have a vast tract of territory almost four times the size of France, blessed with a soil capable of producing almost any crop, free from the barren wastes which mar so many countries in the same latitude, richly watered by innumerable rivers and streams, possessing a mineral wealth not greatly inferior to its agricultural possibilities, endowed by nature with numerous superb harbours, the natural rendezvous of traders between the West and the Far East, situated in the midst of an ocean of vast islands—many of which are unexcelled for the richness of their soil—and yet exhibiting in spite of all these natural advantages a backwardness difficult at first to understand. Though perhaps referable to some extent to the character of the inhabitants, the cause of the backward state of Indo-China compared with Hindustan, as already stated, is primarily a geographical one. Francis Garnier, the famous explorer of the peninsula, compared the territory to the human hand with extended fingers. The fingers serve to indicate roughly the courses of the five great rivers which rise in the high plateau to the north of the peninsula: the Song-koi (Red River) flowing through Tong-king, the Me-kong through Laos and Cambodia, the Me-nam through Siam, and the Salwin and Irawadi through Burmah. The upper basins of these rivers are effectually separated from one another by lofty mountain ranges, the geological continuation of the Great Tibetan Plateau. As one descends towards the south, the river-valleys widen, the soil falls rapidly, and consequently the variation of climate, soil, animals, and plants is much more abrupt than that occasioned by a mere change of latitude. Thus, while the mountains between the river basins were an effectual bar to the development of a feeling of national unity among the tribes occupying the upper courses of the great rivers, the difficulties arising from the rapid change of climate served as an almost equally effectual check to their natural tribal growth, which in ancient times was effected by migration along the banks of the rivers. In India on the other hand, where all the great rivers, except the Indus, run parallel to the equator, this natural growth of the population could take place without the necessity of encountering absolutely novel climatic and agricultural conditions.

The principal mountain ranges are the mountains of Assam (the Blue Mountain, 7100 feet) and Arakan-Yoma between the Brahmaputra and the Irawadi, the Shañ-Yoma between the latter and the Salwin, which rises to the height of 10,500 feet; the Tanentaung-gyi Mountains between the Me-kong and the Salwin (Lai-pang-ngoun in the Shan Country, 8100 feet). The mountains between the Me-kong and the Song-koi continue southwards as the Annamite Coast Range between the Me-kong and the sea, turn westwards on reaching the south of the peninsula, and, thus describing a figure which may be compared to a rude S, have a very important influence on the climate of the different countries. Another chain runs parallel to the western coast, many peaks of which exceed 7000 feet.

ETHNOLOGY AND NATIVE HISTORY.—The early periods of the history of Indo-China are shrouded in a darkness illumined only by such stray gleams of information as can be obtained from a comparative study of its peoples, languages, civilizations, and customs. It is now universally accepted that its primitive

inhabitants were savage tribes of Malay origin, probably from the islands of the Pacific, and that they are represented to-day by the numerous wild tribes scattered over the great eastern range of mountains from Yun-nan to Cochin China. They are variously named in the different localities: Moïs in Annam, Pnongs in Cambodia, Khas in Laos, etc. They probably occupied at first the greater portion of the peninsula, but were driven by the invading races into the mountains, where they lead to-day a wretched, if practically independent existence. They are in general small (about five feet), dolichocephalic, of a swarthy complexion, and wavy hair. The difference of type found among them is due mainly to intermarriage with members of the invading races who fled to the mountains to evade war, justice, or creditors. They represent every degree of civilization from the almost absolute savagery of the Khas and Souis on the banks of the Se-bang-hieng on the western slopes of the Annamite Range to the half-civilization of the Muongs in the north-east of Tong-king and of the Thos of the River Lang-son. The Muongs are possibly more nearly related to the Laotines (see below): their writing is phonographic, as distinct from the ideological characters of the Chinese and Annamites, while their language bears more than the usual resemblance to Laotian. As one proceeds southwards the mountain tribes become less and less civilized—a phenomenon traceable to the increasing dread of the people of seeing their women and children carried off by bands of kidnapers from the plains to be sold as slaves in the markets of Laos, Siam, and Cambodia. This form of slave-hunting is practised mainly by the Laotines. The various tribes of the Annamite Range name themselves Phou-tays, Souis, Bahnars, Stiengs, Moïs, Kouys, Pnongs, etc.: almost all are of Malay origin, and their language always resembles Laotian.

At a very remote period two great floods of immigration poured into Indo-China. The first of these currents consisted of the tribes of Aryan race coming from Northern India via Burma and Siam—a tradition of the royal house of Cambodia makes the neighbourhood of Benares the cradle of the Khmer people. Driving the primitive inhabitants to the mountains the Aryans possessed themselves of the districts known to-day as Laos, Siam, Cambodia, Cochin China, and Central and Southern Annam. That all these territories were once included in the mighty Khmer Empire seems established by the numerous existing monuments and inscriptions, by the striking similarity between the constitutions of Cambodia and Siam, and by the many resemblances between the characteristics, legends, and languages of the Khmers and Ciampas. It seems impossible to fix definitively the date or sequence of the Aryan and Mongol invasions of Indo-China. We are, however, justified in supposing that the Khmers anticipated the peoples of yellow race, unless indeed the organization of their realms was much more rapid.

The second early current of immigration was that of the Mongols from the plateaux of Southern China. Establishing themselves first in Tong-king, they later proceeded southwards, occupied North Annam, and founded the Annamite Empire. If credence is to be attached to local legends, these invaders—whom we may henceforth call the Annamites—intermingled freely with the primitive inhabitants and gradually absorbed them. A reference to the Annamites as the *Giao-chi* (i. e. the "big-toed"—the wide separation of the big toe from the others is still a distinctive characteristic of the Annamite), found in the Chinese Annals in 2357 B. C., affords us a faint clue to the great antiquity of the Annamite race, which some ethnologists believe not descended from, but coeval with the Chinese. According to Annamite legends, however, their first rulers were descended from the royal house of China, and the Chinese dynasty ruled Annam as

vassals to the Celestial Empire until 257 B. C. From 257-110 B. C. the Annamite Empire was governed by two native dynasties, both feudatory to China, but in the latter year China occupied Annam, and from 110 B. C. to A. D. 939 Annam was administered by Chinese governors, except during the domination of a few short-lived native dynasties.

It is also to the Chinese Annals that we are indebted for our earliest documentary information concerning the Khmer Empire. From these we learn that early in our era China reduced the Khmers to a state of vassalage, though the entire absence from Chinese records of all mention of Angkor until 1296 seems to suggest that the suzerainty of China may perhaps have been of a shadowy kind. As their subjugation by China must be taken as the first indication of Khmer decadence, our documentary information concerning the Khmer Empire, meagre as it is, relates only to the period of its decline. What the history of Khmer civilization may have been is still a mystery, but its glorious remains are ample evidence of the mightiness of Khmer power in its day of greatness. Only a nation, to whom fear of invasion was unknown, could conceivably have undertaken public works of such magnitude; a prolonged era of peace was indispensable for the completion of such monuments, and for the evolution of that high standard of civilization, whose existing remains indicate a culture unsurpassed in the Far East. The striking resemblance of the carving and of the features of the statues to the productions of Hindu art demonstrate clearly that the artistic greatness of the nation was contemporaneous with Aryan predominance, and the decline of the Khmers is probably to be attributed to the weakening of the Aryan element in the population occasioned by intermarriage with the surrounding yellow races and Malays. A second indication of Khmer decline was the establishment of the Kingdom of the Ciampas in Central and Southern Annam about the fifth century. That the Khmers and Ciampas belonged to the same race is now undisputed, although some hold that the latter belonged to a later Indian immigration than that of the Khmers.

Concerning the first nine centuries of our era we have little historical information about Indo-China. About the beginning of the tenth century the Annamite chiefs revolted, cast off the Chinese yoke, and set up a native dynasty, although China continued to exercise a nominal suzerainty over Annam until the intervention of France in the nineteenth century. At this period Annamite influence extended only over Tong-king and Northern Annam, but henceforth, unembarrassed by China, Annam directed all its forces against the Ciampas. The vigorous opposition offered to the Annamite advance may be judged from the fact that, notwithstanding the almost incessant warfare, Hue was still the capital of the Ciampese Kingdom as late as the fifteenth century. Forced subsequently into the southern provinces, the Ciampas chose Chaban as their head-quarters, but, towards the close of the fifteenth century, Chaban also was seized by the Annamites, and by the end of the seventeenth century the Kingdom of the Ciampas had disappeared. The ruin of the Khmer Empire occurred about the same period. In 1658 the King of Cambodia was defeated by the united Annamites and Ciampas on the northern frontiers of Cochin China, and compelled to acknowledge himself Annam's vassal. Civil war having broken out in his territories, Annam interfered in 1675 to re-establish peace, and, on the pacification of the country, set up one king at Odong and another at Saigon. In 1689 Annam took advantage of a new revolution in Cambodia to establish in the country a royal commissary, who colonized various districts with malefactors from Annam. The Empire of Annam now included all the territories which constitute the modern countries of Tong-king, Annam, and Cochin China, and was fur-

thermore suzerain of Cambodia. Southern Annam and Cochinchina formed one province, administered by a governor of the Nguyen family.

The last decades of the eighteenth century are notable for the great insurrection called the *Tay Shon Thong Tac* (the War of the Great Mountains of the West), which has given the name of "Tay-shons" to its leaders—two brothers of the Nguyen family, Nguyen van Nhat and Nguyen van Hue. The rebellion was at first entirely successful, the last member of the royal family of Le being forced to take refuge in China. Subsequently Nguyen-an, hereditary governor (*chua*) of the southern province, succeeded in eliciting French assistance, seized Saigon in 1789 from the Tay-shons, and Hue in 1801. In 1802 he entered Ke-so (Hanoi), the capital of Tong-king, and had himself declared emperor under the title of Gia-long—a name he was destined to make famous.

Now undisputed master of all the territories (except Laos) embraced in the present French Indo-China, Gia-long devoted his whole energy to the organization of the country. To him the peninsula is indebted for numbers of its canals and roads, especially for the great road, which, starting from Saigon, traverses Annam and Tong-king, and, passing through Hue and Hanoi, terminates at Lang-son on the Chinese frontier. Minh-mang (1820–41), Gia-long's successor, was as notable for hatred of, as his father had been for benevolence towards Europeans. During Minh-mang's reign (1834) Siam snatched Cambodia from Annam, and made it tributary to the Siamese government, annexing the provinces of Battambang and Siem-reap (see below under *Cambodia*) to Siamese territories. It was the policy initiated by Minh-mang that led finally to French intervention, the history of which is so closely bound up with Christianity that it may be more properly considered under that heading.

The centre of the Indo-Chinese peninsula had meanwhile been the theatre of a third invasion. Whether the Thais or Shans (both terms signify the "Free"), the last of the great invading races, came originally from the north-east of China or the plateaux of Southern China is still disputed: they first appear in history about the beginning of our era, when they occupied the upper basin of the Irawadi. As in the case of the other invading races, our information concerning the history of the Thais is very meagre. Having established themselves in the territories known to-day as Laos and the Shan States, they began their march southwards about the end of the sixth century, and before 1160—a date established by an inscription—had extended their dominion to the Gulf of Siam. They early split up into two branches: the *Thainyai*—the "Great Thai" or Shans proper, of whom the Laotines are the direct descendants—and the *Thainoi*—the "Little Thai" or Siamese, whose history will be more fully treated under SIAM. The Shans were the first to found a powerful empire. According to their own historians, all the early conquests of the Thais until the end of the thirteenth century are to be attributed to the Shans. Later their power began to wane, while that of the Siamese increased. Incessant wars with Burmah and China between the fourteenth and the sixteenth centuries resulted in a great diminution of the Shan territories, and at the close of the seventeenth century Shan power was represented mainly by the Laotine kingdom with Vien-tian as its capital. Enfeebled by protracted quarrels with the hill-tribes, the Laotines were so unfortunate as to invoke the aid of Siam. From this moment Siam gradually extended its dominion over the Laos states, and by the middle of the eighteenth century Laos was a Siamese dependency. The Laotines made an attempt to shake off the Siamese yoke in 1767, after the Burmese had sacked Ayuthia, but their effort was unsuccessful. In 1820, exasperated by the merciless pillaging of the Siamese officers connived at by Siam,

the King of Vien-tian made a final attempt to break the fetters which bound his nation. The Siamese general, Praya Mitop (to this day the bugbear of Laotine children), was at once despatched against Vien-tian, seized and destroyed the town, burnt numbers of the people alive, and, in obedience to true Oriental ethics of warfare, performed every imaginable barbarity to impress upon the people the awfulness of Siamese wrath. Luang Prabang, after Vien-tian the principal Laotine centre, showed more prudence on this occasion, and, though having to submit to the numerous indignities always heaped by Orientals on subject native races, is still the principal centre of the Laotine nation. Eastern Laos (see below) became a French protectorate in 1893.

Neglecting the wild tribes which occupy the mountainous districts the distribution of races at the present day is as follows: (1) the French Colony of Cochinchina, for which alone proper statistics are forthcoming, includes in its population 1,968,000 Annamites, 232,000 Cambodians (Khmers), 92,000 Chinese, 7,800 Europeans (including about 2,500 French troops); (2) in Annam and Tong-king the population is almost exclusively Annamite; (3) Cambodia is peopled by the descendants of the ancient Khmers and Ciampas, and some Annamite and Chinese colonies; (4) the people of Laos (the Laotines) are probably the purest race in Indo-China, and the direct descendants of the Thai or Shan nation.

FRENCH INDO-CHINA, which embraces the whole of the eastern and a large portion of the northern and southern sections of the peninsula, is bounded on the north and north-east by the Chinese provinces of Yunnan and Kwang-si, on the east and south-east by the Gulf of Tong-king and the Sea of China; on the south-west by the Gulf of Siam; on the west by a conventional line between Siam and Cambodia and then by the right bank of the Me-kong, which separates it from Siam and Burmah. Its area has been estimated at 262,000 square miles, but this does not include (a) the provinces of Battambang and Siem-reap restored to Cambodia in accordance with the terms of the Franco-Siamese Treaty of 1907; (b) the neutral zone 25 kilometres wide (roughly 15½ miles) on the right bank of the Me-kong, which is placed under French control; (c) the new region between the basins of the Me-kong and Me-nan, estimated approximately at 77,000 square miles, lately conceded to French influence. The Annamite Range extends from the extreme north, where it branches out into numerous steep and rugged ranges, to Cape St. Jacques in the south. It is covered for the most part with thick forests, and towards the centre and south approaches so close to the sea that it seems at times to rise abrupt from the waters. This range separates the basin of the Me-kong from the river systems of Tong-king and Annam. French Indo-China has a coast-line of about 1,500 miles. Beginning from the north, the first 375 miles of its shores are washed by the Gulf of Tong-king. For about 100 miles the sea is studded with islands—Kc-bao, Kak-ba, and the Pirate Islands, long the haunt of Chinese corsairs, being the most notable. To the south of Kak-ba, the coast is low-lying and marshy, and characterized by the numerous mouths of the rivers Thai-bing, Song-koi, Song-ma, Song-ka, whose alluvium has formed the delta of Tong-king as well as the fertile plains of Thanh-hoa and Nghe-an. From Cape Bung-kwiua to Cape St. Jacques steep promontories—the termination of minor chains thrown off by the Annamite Range—alternate with low sandy plains formed by the numberless short rivers which rush down from the mountains into the Sea of China. The principal harbours are that formed by the River of Hue (at Thuan-an), the Bay of Turan, the Ports of Kwi-nhon and Song-kau, the Bays of Van-fong, Nha-trang, Kam-rang, and Fan-thiet.

From Cape St. Jacques to Ha-tien the coasts are again

low and intersected by the numerous embouchures of the Me-kong, to the alluvial deposits of which this fertile section of Indo-China owes its existence. From Ha-tien to the conventional Siamese frontier cliffs and sandy plains again alternate. The Me-kong, the great river to which Indo-China owes so much of its fertility and territory, rises in the central plateau of Asia and on entering the peninsula is already a mighty river. Owing to its numerous rapids, the river can be used for purposes of navigation only on restricted stretches, until below the Rapids of Khone. Even later there are some minor rapids which are not, however, an insurmountable obstacle to traffic. From Pnom-penh, where the river divides into two branches, the navigation is easy. These branches—known to the French colonists as the *Fleuve antérieur* and the *Fleuve postérieur*—subdivide in turn, and form the network of streams which are the chief means of communication between the various commercial centres of Cochin China and Cambodia. Other rivers of importance will be referred to later in treating of the separate political division.

Climate and Hygienic Conditions.—Although the climate of Indo-China is, in general, like that of other intertropical countries, characterized by great heat and dampness, there exists a great difference in the climatic conditions of the various districts. In Cochin China the wet and dry seasons succeed each other with the utmost regularity, and correspond with the monsoons. The period of the north-easterly monsoon, which blows from October to April, is the dry season, during which the thermometer registers between 78.8° and 80.6° by day and 68° by night. About the middle of April the monsoon changes to the south-west, the temperature rises to 98°, and the season of daily rain begins. The climate of Cambodia resembles in general that of Cochin China, except that, deprived in the north of the sea breezes, the heat is much more rigorous. In Annam the climate is less regular. The heavy rains do not coincide with the south-west monsoon, which is intercepted by the Annamite Range, but fall usually during the season of the north-east. In Hue they begin in September and last until December, the temperature falling below 60°, and so consistent and heavy is the downpour that it is often impossible to leave the house for several successive days. The other seasons are by no means rainless; there is, however, no regularity in the intervals between the showers, which are very heavy but last only a few hours. Tong-king has two clearly defined seasons corresponding with the monsoons: a winter from October to April, and a summer during the remaining period of the year. April and October are themselves months of transition, and resemble somewhat our spring and autumn. During the winter the temperature is comparatively low, the thermometer falls to 42° or 40°, and instances of white frost have been recorded. During this season the wind blows from the north-east, but, when it chances to veer to the south, the thermometer rises suddenly 12, 15, or even 20 degrees. The weather is most changeable, being now bright and clear and now foggy and rainy. Heavy rains are, however, rare, and the length of the winter allows one to recuperate one's strength after the exhausting summer. A fine rain falls almost unceasingly from January to April. In the latter month the wind changes to the south-east, and the temperature rises to 75°. In July and August, the hottest months, the temperature varies between 80° and 86°, although not infrequently the thermometer rises to 95°, 100°, and even 104°, and remains there for days. As the wind usually falls away at sunset, the nights are often as hot as the days. During the summer the rains are rare, and usually very heavy and accompanied by violent storms. The heaviest showers fall between May and August, and a rainfall of four inches within twenty-four hours has been recorded in the latter month.

Between the climatic conditions of Northern and Southern Laos there is a marked difference. In general there are two clearly defined seasons: the dry from October to March, with very occasional rain-storms, and the wet from April to October, during which period there are abundant and almost daily rains. In Northern Laos the temperature during the former season is relatively low—43° (even lower in the more elevated districts) in December and January. During the summer, especially in April and May, the heat is overwhelming: the thermometer often rises to 100° and 104°, and there is little difference between the day and the night readings. The climate of Southern Laos is much more tolerable, and is free from the rapid variations of temperature common in the north. The northern territories of Indo-China, particularly Tong-king, are frequently visited by typhoons, the southern sections very rarely. Two kinds are distinguished: (1) the continental cyclones, which originate in Siberia and Eastern China and advance towards the sea; (2) the typhoons which originate in the Pacific Ocean. Though frequent during both seasons, the typhoons are much more violent in winter. When the barometer falls to 28.5°, a typhoon may be confidently predicted. Notwithstanding the terrific rapidity of its rotary motion, the typhoon advances with comparative slowness, and warning is usually received by telegraph from the observatories along the southern coast of China in ample time to permit shipping and inhabitants to seek shelter before its approach. The typhoons of 1851 and 1882, when the sea invaded the southern coasts of Tong-king, are the most violent recorded. Father Legrand de la Lyraie relates that 10,000 perished in 1851 in consequence of the inroads of the sea. In 1882, the sea rose twenty-seven feet above its ordinary level at high tide, and 40,620 corpses were recovered, 205 having entirely disappeared.

The climate of Indo-China is very unhealthy for Europeans, who can never become acclimatized. As a rule the mountainous and wooded regions are the most insalubrious—a phenomenon attributable partly to the vast accumulation of animal and vegetable detritus in the dense brushwood undisturbed for centuries, and partly to the dampness caused by the nocturnal mists and the excessive density of the vegetation. Here intermittent fevers (e. g. the terrible wood-fever) and dysentery menace the inhabitants at every season, and spare neither colonist nor native. Reasonable exploitation of the timber, for which however proper modes of conveyance are still wanting, or the clearing away of sections of the vast forests which cover the land, should have a beneficial effect on the hygienic conditions of these regions. The low, cultivated plains are the least unhealthy, for, though even here intermittent fevers are by no means rare, they have not the severity one witnesses in other localities. In no district can the European escape dysentery and anæmia, but, by avoiding heavy exercise and every excess and by guarding against the extreme heat of the day and the dampness of the night, he can evade all the more serious attacks of the maladies. Periodical sojourns in less rigorous countries to recuperate his strength are of course indispensable. The maritime districts are the most tolerable for Europeans: the regular breezes from the sea counteract to a great extent the injurious effects of the climate, and facilitate sleep. The winter in Tong-king, which necessitates warmer clothing and even the artificial heating of the houses, allows the settler to recover his strength after the exhausting summer. The hot season is, however, terrible, and intermittent fevers, affections of the liver, and cholera make great ravages among the French troops. To engage in industrial or agricultural labour is always fatal for Europeans. Thanks to its favourable situation along the coast the summer heat in Annam is less extreme, and the maladies are neither

so frequent nor so serious as in Tong-king. Of all the divisions of Indo-China, the heat of Cochin China and Cambodia is the severest test for foreigners in consequence of the unvarying elevation of the temperature, especially in districts remote from the sea. Only the most careful avoidance of mid-day heat and all unusual exertion can safeguard the European. He must also take great care to guard against changes of temperature, for even the slightest variation at night often suffices to occasion attacks of dysentery almost impossible to cure. Wooded and mountainous, Laos is in general very unhealthy, and the climate is rendered the more intolerable for foreigners by the privations necessitated by the absence of proper or regular communication with Tong-king and Annam.

Government of French Indo-China.—The authority of the French Republic is represented by the Governor-General, whose powers have been defined by decree of 21 April, 1891. Having the sole right to correspond with the French Government, he is in direct communication not alone with the ministers in France, but also with all the French diplomatic representatives in the Far East. He has complete control of the land and sea forces in Indo-China, and, only in case of an emergency which demands immediate action, can any military or naval operation take place without his authorization. He is also intrusted with the organization and administration of the native police and all public services. All or any of his powers may be delegated to the Lieutenant-General of Cochin China, or to the Resident Superior of any other of the political divisions. The Residents Superior, in addition to their political and diplomatic relations with the sovereigns of the vassal territories, have charge of the local budgets and the general administration of the political divisions to which they are appointed. The Governor-General is assisted by two councils, the *Conseil supérieur* of Indo-China and the *Conseil de défense*. To the former belong the Governor-General (president), the commanders-in-chief of the French naval and military forces, the Lieutenant-General of Cochin China, the Residents Superior of the other divisions, the heads of various councils, and two indigenous members appointed annually by the Governor-General. This council sits each year to consider the general budget for Indo-China (including Kwang-chau-wan since 1900), and the local budgets for the five constituent territories, to make the necessary naval and military appropriations, and to discuss in general matters of public interest. The place of assembly lies in the discretion of the Governor-General. The *Conseil de défense*, which also sits under the presidency of the Governor-General, is attended by the chiefs of all the important divisions of the land and sea forces, its deliberations being mainly concerned with measures for the preservation of peace within the territories. Though all effective authority is thus vested in the French representatives, certain local powers are exercised in matters of purely native interest by the native sovereigns.

Administration of Justice.—On taking possession of its Indo-Chinese territories, France found itself confronted with a very serious judicial problem. The natives had naturally to be judged in conformity with their own laws, which were not merely completely unknown to Europeans, but were either written and not translated, or customary and not formulated. The appearance in French of many excellent treatises on native law having made its study possible for Europeans, a decree of 25 July, 1864, declared that thenceforth the Annamite Law should regulate all civil and commercial conventions and litigations between natives and Asiatics in general, while all other causes were to be decided by French Law. The chief law officer for the French possessions is the *Procureur Général* at Saigon. At present there is one Supreme Court of Appeal for Indo-China with three chambers, two at Saigon and one at Hanoi. To decide civil dis-

putes three mixed tribunals have been instituted—at Saigon, Hanoi, and Haiphong. There is one general court of first instance at Saigon; tribunals of first instance (first class) at Mytho, Vinh-long, Hanoi, and Hai-fong, and (second class) at Bentré, Chaudoc, Travinh, Long-xuyen, Cantho, and Pnom-penh. In Cochin China the French tribunals are competent to decide even purely native disputes, and here remains no trace of the ancient indigenous justice. Of the native courts some mention will be made in treating of Annam.

Public Education.—In spite of the increasing tendency to centralize all the fundamental offices of government, the organization of public education in the various divisions is still entrusted to the five territorial *Conseils*. A short description may be here given of the educational system in Cochin China, where alone it is at present properly developed. The direction of education in this colony is entrusted to a *Directeur*, immediately responsible to the Lieutenant-General. Every village of any importance has its *école cantonale* (primary school), at which the native children above six years are first instructed in French and *quoc-gnu*, and elementary arithmetic. The *écoles d'arrondissement* (district schools) impart secondary education, and are directed by a European professor, assisted by native teachers. The *École professionnelle* at Saigon aims at producing expert workmen for various industries (e. g. bookbinders, leather-workers, coach builders, etc.), a special staff of professors giving the practical instruction, while the scientific is supplied by the staff of the Collège Chasseloup-Laubat. This last-named college, together with that at Mytho, are the leading educational institutions of the peninsula. *Ecoles de caractères chinois*, in which the Chinese and Annamite ideologic characters are taught, are kept by old native scholars in almost every canton. Save in the case of these alone education in Indo-China is free. In imitation of the native custom throughout the Far East the French make no provision for the education of the native women. For the daughters of European or European and native parents, the *Institution municipale* has been instituted, as also an *Ecole maternelle*. The mistresses and staff of both these institutions are appointed by the Mayor of Saigon. In 1899 the *Ecole française de l'Extrême-Orient* was founded at Saigon for the study of the history, races, languages, and religions of Indo-China, while, within the last few years, a *Grande école* has been instituted at Cholon to supply the young Chinese with the education which they had previously sought in Japan. The recent organization of a *Conseil supérieur de l'enseignement indigène* for Indo-China is another instance of the growing desire of France to respect the ancient civilization of the people, while imparting to them a proper acquaintance with Western learning. The numerous schools carried on by the various religious orders will be dealt with under the heading of Christianity.

Political Divisions of French Indo-China.—(1) Cochin China.—This term, which was formerly applied to the territories of the Annamite Empire (Tong-king, Annam, and Cochin China proper), is now confined to the French colony in the south-east of the peninsula. Cochin China proper is bounded on the north and north-east by Cambodia and the Province of Binh-thuan (Annam), on the east and south by the Sea of China, and on the west by the Gulf of Siam. Its area is estimated at 23,000 square miles; its population at 2,973,128 inhabitants (1909). For purposes of administration, the colony is divided into 21 *arrondissements* (districts), comprising 207 *cantons* and 2,425 *communes*. Each *arrondissement* is administered by a French functionary known as the *administrateur des affaires indigènes*, and, through its *conseil d'arrondissement*, votes a special budget, called the *budget régional*. The Islands of Poulo Condore are included

in Cochin China, the largest being used as a penitentiary for criminals whose sentences are at least ten years. Cochin China is represented in Parliament by one deputy. Situated on the route from Europe and India to Japan and China, Cochin China seems destined by nature to play a leading part in the development of the Far East. Its plains, watered by the various arms of the Me-kong and numberless canals and arroyos (see natural channels) which connect them, must be reckoned among the most fertile in the world. More than one-fourth of the whole surface is devoted to the cultivation of rice, of which 2,000,000 tons are produced annually. After rice the chief crops are arecanuts, earth-nuts, peppers (the cultivation of which has greatly increased of recent years), betel-nuts, pine-apple, mulberry, maize, cotton, and indigo. River and sea-fishing provides occupation for a great number of natives, over 75,000 boats being engaged in this industry. Cochin China being one of the greatest rice-producing countries of the world, its principal export is naturally rice (\$30,000,000 in 1907). Rice is shipped principally to China, Manila, Japan, France and other European countries. The other important exports are fish and fish oil (\$2,000,000), pepper (\$1,385,000), live animals, cotton, gamboge, indigo, hides, silks, and woods (bamboo, iron-wood, rotang, tamarind, etc.). There are some important salt mines at Bien-hoa and granite quarries at Bien-hoa and Chaudoc; to the last-mentioned Cochin China is indebted for the stone necessary for the construction of roads.

Saigon, the former capital of French Indo-China, is situated on the Saigon River about forty miles from the coast. It has a population of 50,870 inhabitants, of whom 5,500 are French. Owing to the great depth of the river, ships of the largest tonnage can sail upstream to the Port of Saigon, from which 824 ships of 1,290,430 tons cleared in 1907. Under the French Saigon has assumed the aspect of a European city. Its streets are wide, well-planned, and decorated with gardens and monuments. It possesses a celebrated collection of the flora and fauna of Indo-China in its botanical and zoological gardens, while its government palace has an architectural fame throughout the Far East. Saigon is one of the seven chartered cities of French Indo-China. The mayor is elected according to a restricted franchise: its *Conseil municipal* also includes ten French members and four native councillors. Cholon, the chief commercial centre (163,000 inhabitants), is situated about four miles to the south-west of Saigon. It is inhabited mainly by the Chinese, who, here as elsewhere throughout the peninsula, almost monopolize the commerce. It is the centre of the rice trade, the rice being here prepared and put in sacks. Cholon is connected with the capital by a steam railroad and by an arroyo. The former passes through the celebrated "Plain of the Tombs", a vast deserted wilderness of imposing mausoleums and modest tombs. This is the Annamite cemetery, and the mournful appearance of the scene is increased by the treeless and almost verdureless character of the landscape. The mayor of Cholon, nominated by the Governor-General, is assisted by three deputies—one French, one Annamite, one Chinese—and nine councillors, three being from each of the representative races. The French are nominated by the Lieutenant-General; the Annamite and Chinese by the *notables* (see below under Annam) among the inhabitants. Mytho (226,000), the chief town of the homonymous *arrondissement*, was the ancient capital of the Annamite Province of Dinh-Tuong. It is situated on the left bank of the northern arm of the Me-kong, at a distance of about 23 miles from the sea and 41 miles from Saigon, with which it is connected by railway and by the boats of the *Service des Messageries fluviales*. The centre of a rich rice-producing district, it is an important port of call for trading vessels.

(2) Annam, which formerly contained nine of the

thirty-one provinces constituting the Annamite Empire—Tong-king being composed of sixteen and Cochin China of six—embraces to-day twelve provinces, Thanh-hoa, Nghe-an, and Ha-tinh having been added to its territories by the Treaty of 6 June, 1884. Its coast line extends from Cape Bake in the south to the Tong-king frontier about twenty-six miles north-east of Thanh-hoa—that is about 810 miles. It is bounded on the north by Tong-king, on the west by Laos—from which it is separated by the Annamite Range—and Cochin China, while on the south and east it is washed by the Sea of China. Of its numberless rivers only the Song-ma and Song-ka, which water the rich alluvial plain in the extreme north of the territory, are of importance. The mountainous regions between Annam and Laos—known as the Territories of the Mois, Pou-euns, and Phou-tays—are direct dependencies of Annam. The distance between the sea and the foot of the mountains varies from eighteen to fifty miles. The area of Annam is about 52,000 square miles, and its population, according to a recent estimate (1909), 7,096,465 inhabitants. Although the people of the Annamite dependencies are receiving increased attention of recent years, even an approximate estimate of their numbers is impossible; the area of their territories is about 37,000 square miles. Hue (population 100,000), the capital of Annam, is situated on the left bank of the river of the same name. It has two distinct divisions: the citadel fortified according to plans supplied by French engineers and occupied by the French and Annamite administrations and French troops, and the districts occupied by the natives. The principal ports in Annam are Turan, Kwi-nhon, and Xuan Day.

While the soil of Annam is most fertile and admirably adapted for the cultivation of the most varied crops, its advantages are marred on the one hand by the terrible droughts of the dry season—which, as distinct from the climate of Cochin China, is also its summer—and on the other by the devastating inundations of the rivers which rise in the mountains and hurl themselves after a short course into the sea. At present, although two crops are sown annually, one in every three harvests fails, and the rice produced is insufficient to satisfy local needs. To overcome these obstacles to cultivation proper systems of irrigation and protective measures against the inundations must be instituted on a large scale. Tea and coffee, the planting of which is a comparatively recent experiment of Europeans, are now extensively grown, and the excellence of the former leads one to believe that Annam will rapidly develop into a serious rival of India and China in the production of this commodity. The other agricultural products include maize, sugar, potatoes, cotton, earth-nuts, mulberry, *ricinus communis* (castor-oil plant), indigo, cocoa, areca-nut, tobacco, and cinnamon. Apart from agriculture the chief industries of Annam are the threshing and winnowing of rice and the extraction of the oil, the shelling of cotton, and the preparation of jute, indigo, and tobacco. Silk is manufactured everywhere, but little pains are taken to produce a high quality. Of more importance is crepon, in the manufacture of which the Annamite excels the Chinese. The river and the sea fishing are both of great importance, dried fish forming an important article of diet here as elsewhere in Indo-China. The sugar-industry is monopolized by the Chinese. The salt-mines of Kwi-nhon, Phu-yen, Binh-thuan, and Ha-tinh supply a sufficient surplus over local needs to permit of the exportation of more than 1,000,000 tons of salt yearly. Pure anthracite coal is mined at Nong-son in the province of Turan; the mine is situated about forty miles from the coast on the banks of a river, whose mouth is unfortunately obstructed by a bar. Copper mines are found at Duc-bo and gold at Bong-nieu. The latter, which were worked for centuries by the

natives, are being at present exploited by a French company. The domestic animals are the buffalo, ox, horse, and pig. In the unpopulated districts of the interior, the tiger, leopard, elephant, stag, peafowl, and numerous species of reptiles abound. The wild game includes teal, snipe, wild-goose, and quail.

A little space may be devoted to a description of the domestic organization of Annam, which formerly extended (and still extends with modifications, more or less serious) also to Tong-king and Cochin-China. The whole constitution is patriarchal, i. e. the sovereign—the “son of heaven”, the “infallible one”—is regarded also as the father and high-priest of the community. The emperor thus enjoys at least theoretically absolute authority; his acts may no more be questioned by his subjects, than the actions of parents by their children. He is assisted by a *Co-mat*, or secret council, without whose advice he gives no important decision. Apart from this idea of absolute authority, rather sentimental than really operative, there is complete equality among registered citizens; all are eligible for public office, and the only social distinctions are the adventitious ones of fortune and office. The inhabitants are divided into two classes: the registered (*inscrits*, *Dzan-bo*) and the non-registered (*non-inscrits*, *Dzan-lan*). By the latter are meant the citizens who are considered too poor to be placed upon the roll of tax-payers. The registered citizens alone enjoy civil rights, and only of their number does the government keep a record. It is on these lists of tax-payers that every estimate of the population is based, the ratio between the assessable and the non-assessable citizens being accepted as one to fifteen. Only the registered citizens can become “notables” (i. e. hold office). According to the importance of their offices, the *notables* are divided into two classes, *major* and *minor*. The *notables*, who are appointed by their predecessors for a fixed period (though varying in different localities), constitute the *Conseil de commune*, in which the *minor notables* may advise but have no vote. In addition to his duties as councillor, each *major notable* fulfils some special function in the community. The mayor, who is nominated by the *major notables*, is the only official whose election must be submitted for the sanction of the government. He is neither the head nor president of the council, but merely its agent. It is his duty to execute all the orders of the Government respecting his commune, to collect taxes, and, as chief of the communal police, to bring to justice all delinquents. The constitution of the higher councils is analogous to that of the communal, and their powers are strictly defined by law and custom.

In Annam legislative and judicial powers are never separated. Every legal action, criminal and civil, begins in the commune and is first investigated by the communal administration, which, having heard the evidence, either pronounces sentence, or, if the matter be grave, refers the case to the tribunal of the sub-prefecture or of the prefecture. The competence of every court is carefully defined by Annamite Law. Very grave matters must be referred to the governor of the province, and every penalty of death must receive the emperor's sanction before being put into execution. In civil matters disputes between members of the same family are usually decided by the head of the family, against whose decision there is rarely an appeal.

There are very few countries in which education is held in higher esteem than in Annam, and very few in which the instruction is less scientific and less practical. Almost every village possesses its school, and illiteracy is extremely rare among the natives. Although all state functions are open to public competition, the instruction is confined to the history, customs, and laws of the country, and the tenets of Confucianism. Even among the most accomplished there is an abso-

lute and universal ignorance of our physical, mathematical, and natural sciences. Although attendance is not compulsory, few children absent themselves from the communal schools kept by private teachers dependent on the contributions of parents. On leaving these primary schools, those who wish to continue their studies attend the district schools, the principals of which are appointed by the state. Provincial examinations (*Khoa*) are held periodically, and successful students are exempted from portion of the military service.

The Annamite is of low stature; his limbs are short, his body well-made but ungraceful, his hair black and coarse, his mouth big, his lips thick, his nose flat, and his nostrils dilated. His skull is short and rather wide, his cheek-bones protrude, his eyes are lozenge-shaped, his complexion varies from brown to yellow. In Annam both men and women wear their hair rolled up in a chignon, but in Tong-king the women wear their hair in coils around the head. The great blot on the Annamite character is an overpowering propensity toward deceit and dishonesty, which Christianity—as attested by hostile French officials—has done much to remove. In general sober and industrious, the Annamite is greatly attached to his family and his home, and, though naturally of a gentle and timid disposition, exhibits on occasion a courageous scorn of death. Devoted to song, poetry, the theatre, and feasts, his literature is composed mainly of ballads, dramas, romances, and legends—almost all of which are borrowed from the religious traditions of the Khmers—and countless philosophical treatises. Though theoretically the Annamites, as Buddhists, should not believe in a God (at least in the Western acceptance of the term), they pray to the *Ong-phat* (the Supreme Being), the Governor of the world, whose image one remarks on the altar at the hearth in almost every home. Nor are they free from superstition, the fear of maleficent genii dominating even the most highly-educated. To-day, indeed, the absolute idea of the Buddhist Nirvana exercises as little influence among the masses of the people as Confucianism does among the rich. The real religion of the Annamite is ancestor-worship. Every house has its altar consecrated to the ancestors, before which on fixed occasions (e. g. the beginning of the new year, on the anniversaries of the death of his paternal ancestors for four generations) the head of the family prostrates himself in the presence of all his kinsmen, and on which he burns offerings of wine, rice, and odoriferous twigs. These ceremonies are performed in the morning, when the *manes* are supposed to arrive, and again in the evening, when they take their departure. At Tet—the beginning of the year—they are performed on three consecutive days. In rich families a certain portion of their property is reserved for the necessities of this worship, and the greatest concern of the Annamite is to leave a son—since females are ineligible to officiate—to discharge his obsequial honours.

Polygamy is recognized by Annamite Law, but the first wife alone is married officially and with all the formal rites. Should the first wife die, the husband may take another official wife, even though he has wives of second rank still living. On the death of the husband the whole management of the family devolves upon the official wife, except in the matter of the sacrifices, which are performed by the eldest son. Even on his marriage the son seldom leaves the house of his parents: to leave home without his father's permission is contrary at once to the laws consecrated by custom and those enacted by the State. It is this very principle which constitutes the sharp distinction between Annamite and Western legislation. To the Annamite legislator individuals and their interests are no concern—the defence and preservation of these he leaves to the family and the commune. The office of the laws of Annam is to watch over the family and

society, to secure obedience to the parental and royal authority.

(3) *Tong-king* is bounded on the north and north-east by China, on the east by the Gulf of Tong-king, on the south by Annam, and on the west by Laos. Its area is about 46,300 square miles; its population is estimated variously between ten and fifteen millions. Its surface may be divided into three distinct sections: (1) the flat alluvial plain (the Delta) to the south and east, which constitutes about one-seventh of the total surface; (2) an intermediate plateau of about 15,000 square miles, and (3) the mountainous and mineral region bordering China. The Delta, which alone contains about 10,000,000 inhabitants, is the great centre of industry, and, both in the fertility of its soil and in the number of its waterways, bears a striking resemblance to Cochin China. The principal rivers are the Song-koi (Red River), which rises in Yun-nan, and its two great tributaries, the Song-lo and Song-bo (the Clear and the Black River). Linked by a myriad of canals and *arroyos*, these afford an easy, if slow means of communication between the various commercial centres, but their utility is greatly impaired by the violence of their currents during the wet season, and by the bars, shelving ridges, and shallows, which obstruct their courses. The remarkable absence of large trees in the Delta is attributable to the typhoons: the great forests of the interior are still practically unexploited owing to the lack of proper means of transport. It is a noteworthy fact, for which no scientific explanation seems yet forthcoming, that along the coast of Tong-king there is but one tide daily for the greater portion of the year. This is believed to be the only part of the world where this phenomenon occurs.

As elsewhere in Indo-China rice is the principal crop. It gives two harvests annually, but periodical failures, here as in Annam, contrast unfavourably with the constancy of the harvests in Cochin China. Maize, sugar-cane, buckwheat, millet, sorgho, and tea are also extensively cultivated. All the European vegetables thrive in the country, and experimental plantations of coffee have met with a most gratifying success. The gardens surrounding the villages are filled with banana, orange, papaw, tamarind, cinnamon, and pine-apple trees. Cotton and mulberry-trees are cultivated everywhere along the banks of the rivers, while the cultivation of jute has greatly increased of recent years. Some of the mines of Tong-king are of great importance, although the disturbed history of the country has prevented their development. Along the coast is a large bed of anthracite of excellent quality, which is at present being worked at Hongay and on the Island of Ke-bao. The mountainous regions contain almost every variety of mineral, but little attempt has yet been made to exploit them. Lead, argentiferous copper, sulphur, tin, cinabar, and nitre have received attention; the gold-mines, however, are almost abandoned, and on the silver and iron mines work has ceased.

Although the administration of Tong-king bears a great resemblance to that of Annam, there are some marked differences, all tending to inflate the influence of France. In Tong-king the office of France is not confined to a general direction of the central government and public services as in Annam: the Treaty of 1884 entitles her to appoint, side by side with the Annamite functionaries, *residents* in all important centres, where their presence should be deemed desirable. Although these officials take no part in the details of the local administration, they control the acts of the district mandarins, and have thus the virtual direction of the political, judicial, and financial administration of the interior. Hanoi (106,260), the chief town of Tong-king, replaced Saigon as capital of French Indo-China on 1 January, 1902. It is situated on the right bank of the Song-koi about eighty miles from the coast.

Founded during the early centuries of our era, it was until recently little more than a collection of native villages. Rid to-day of the marshes which disfigured it, it is rapidly becoming a charming town. Its green lawns, luxuriant shrubberies, and quaint intermixture of native and European building form a pleasing frame for the celebrated Pagoda of Vong-dinh. The railroad from Haiphong to Hanoi passes over the huge bridge across the Song-koi. In view of the extreme fierceness of the river during the period of the floods, this bridge (about $1\frac{1}{2}$ miles in length) must be regarded as a triumph of engineering skill. Haiphong, the principal commercial port of Tong-king, is situated at the confluence of the Cua-cam and Song-tambac, about twenty miles from the coast. Vessels of more than twenty feet draught can cross the bar only at high tide. When Haiphong was conceded to France by Annam in 1874, the town was only a small native market; it is to-day a prosperous city of over 20,000 inhabitants. Hanoi and Haiphong are both incorporated cities administered by a mayor and municipal council. Besides the mayor, who is appointed by the Governor-General, each council contains fourteen members—ten elected by French residents and naturalized citizens of France and four by notables. At Hanoi the four native councillors must be Annamite; at Haiphong two are Annamite and two Chinese.

(4) *Cambodia*, the centre of the ancient Khmer Empire, is bounded on the north-west and north by Siam and the Laos territories; on the east by Annam; on the south by Cochin China; on the south-west by the Gulf of Siam. To celebrate the restoration of the provinces of Battambang and Siem-reap—in which territory stand the famous ruins of Angkor, the capital of the Khmer Empire—the *Conseil Supérieur* met at Pnom-penh in December, 1907, on which occasion King Sisowath declared the deep debt of gratitude which Cambodia owed to France. The area of Cambodia is about 37,500 sq. miles; its population is estimated at from 1,500,000 to 2,500,000. The population of Cambodia is almost entirely confined to the vicinity of the ports and the banks of the rivers. The country is covered with immense forests yielding gamboge, gumlake, and cinnamon, and frequented by elephants, tigers, and countless other species of wild game. From the elevated regions in the west of the territory rush down impetuous torrents, which, on reaching the plain, develop into great rivers and after a short course enter the sea or the Me-kong. The chief agricultural products are rice, cotton, areca-nut, indigo, mulberry-trees, tobacco, cardamoms, and pepper. Successful experiments have within late years been made in tea and coffee plantation. Fishing is an important industry of the country—not alone for the fish ascending the Me-kong and along the coasts, but also for mother-of-pearl and holothures. The little port of Ha-tien has become the central market of the mother-of-pearl industry, which is practically monopolized by the Annamites. The silks woven by the Cambodian women according to a method inherited from a long-past civilization are much sought after. Cambodia possesses iron, gold, and sapphire mines, still in general awaiting development. Being a maritime country, it has a brisk commerce. This is almost entirely in the hands of the Chinese, who import European produce and export rice, pepper, mother-of-pearl, shells, and silk. Jet is found on the Island of Fukwok; of this the natives make charming trinkets mounted on gold, which have a brisk demand.

Cambodia is divided into fifty-seven provinces, and the administration differs little from that of Tong-king. Pnom-penh (population 50,000) on the right bank of the Me-kong is the capital of the country and the seat of the royal residence. Its mayor is always chosen by the Governor-General from the ranks of the higher civil servants of Indo-China. The municipal council also includes five French and three Asiatic

(Cambodian, Annamite, and Chinese) councillors, all of whom are appointed by the Resident Superior on the recommendation of the mayor. Kampot, situated opposite the Island of Fu-kwok, is an important port of call for coast-traders. Situated near the northern shore of Tonli Sap in the midst of dense forests are the ruins of Angkor Thom (Great Angkor), once the capital of the Khmer Empire. Its former extent can be traced from the remains of the fortifications, fifty feet broad and thirty feet high, and from the ditch 380 feet wide, which surround the ruins. There were once four entrances to the town, across bridges supported by gigantic statues. Within the walls still remain superb palaces, bastions, terraces, a glorious temple of three stories with concentric galleries, above which rise forty-two turrets (covered like the walls with delicate carvings) and a central tower 130 feet high, looming above the circular colonnades. Between these ruins and the lake stands the temple of Angkor-Wat, perhaps the vastest and most glorious monument raised by the hand of man in the Far East. It is constructed of massive blocks of sandstone, many weighing more than eight tons and fitted together with the greatest accuracy although no cement was used. The surrounding galleries, the towers, the gigantic and seemingly endless staircases, the square and round columns are covered with carvings rivaling the most beautiful remains of Hindoo art (cf. Clifford, "Further India", pp. 146-66). It is impossible to fix definitely the date at which this temple was built, but we may assume that its erection must have occurred during the golden period of the Khmer power and civilization. Whether the temple was consecrated to Buddha, or whether the sanctuary in the central tower, ornamented with gigantic statues looking towards the cardinal points, contained an enormous lingam is also disputed, but, in view of the numerous lingams found in various parts of Cambodia, the latter opinion is the more probable.

The Cambodians or Khmers, although their type is in general greatly modified by intermarriage with other races, still preserve the Aryan characteristics. Taller than the Annamite or Thai, their eyes are rarely oblique, their nose is straight, and, though their complexion is now yellow, they preserve their agglutinative or polysyllabic language intact in the midst of races speaking isolating or monosyllabic tongues. Though lazy, given to opium-smoking, and unfit for almost every employment, they have, apart from their mysterious and glorious past, a great attraction for the sociological student owing to their gentleness, courtesy, loyalty, and their naïve pride which makes them prefer to submit to any misery rather than labour for another. They practise Buddhism slightly tinged with Brahminism. Very superstitious, they believe that the noise of trumpets drives away the evil geni, and that a man seen in the open country silhouetted against the sky above the horizon is doomed to an early death. Attached to each pagoda is a college of bonzes, who are highly esteemed by every class. The bonzes are easily distinguished from the rest of the people by their shaven heads and yellow robes; they are bound to celibacy, live in community, and depend for their sustenance on the rice which they receive each day ready-cooked in the villages. At definite periods they assemble the men in the pagoda and read from the sacred books, written in a language not seldom unintelligible to both reader and audience. Besides the religious books and romances concerning the past existences of the Buddha, the libraries connected with the pagodas contain ancient works dealing with astrology, chiromancy, the vulgar Cambodian tongue, and Pali, together with works on education and historical treatises, unfortunately relating only to recent times. The bonzes are also the teachers of the Cambodian youth, and the only teaching body in the kingdom, excepting of course

the Catholic orders. The Khmers are monogamous, and greatly attached to their families. Marriages, religious ceremonies, the celebration of the first day of the year, the ceremony of the first cutting of the hair, which occupies an important place in the social life, are all occasions of great rejoicing. The theatre is the great national amusement, from the Royal Theatre at Pnom-penh to the little travelling shows which play under the palm or fruit-tree. The parts are enacted by little girls of about fourteen, dressed in costumes exactly like those seen on the bas-reliefs of the ancient ruins.

(5) Laos.—The principalities of the Laos or Lawa nation included at the most flourishing period of its history the whole valley of the Me-kong from China to Cambodia, the upper basin of the Me-nam, and portion of the basin of the Salwin. To-day its extent is confined to the valley of the Me-nam (Western Laos), which is subject to Siam, and the valley of the Me-kong (Eastern Laos), which, being under the protection of France, alone concerns us in the present article. French Laos is bounded by China on the north, by Tong-king and the Annamite Range on the east, by Cambodia on the south, while on the west it is separated from the Siamese and British territories by the Me-kong, except that a narrow strip of country on the right bank of the Me-kong and to the west of Luang Prabang, averaging about fifty miles in breadth, is included in French Laos. Within these limits Laos has an area of 98,000 square miles, and a population of perhaps 1,000,000. The whole north of the country is occupied by a lofty and compact group of mountains, between ridges of which the Me-kong has hollowed out a narrow and rocky course. At about 18° north latitude, the basin widens and thenceforth the river pursues its course through undulating plains which keep on enlarging until the delta is reached. The whole country is covered by an immense forest, which covers the sides of the mountains, crowns their summits, descends into the deep gorges, and stretches over the plains. Almost every genus of tree grows on this wonderfully fertile soil. Teak, benzoin, cinnamon, gamboge, and cardamom are furnished by the plains, while the higher altitudes supply varieties of oak, chestnut, elm, and other trees, usually associated with countries in a more northern latitude.

The Laotines have established themselves in little villages along the banks of the rivers. Their plantations of cabbage-palm, banana, and cocoa-trees stand out in welcome relief from the gloomy background of the forest. In these little settlements, rescued from the forests, the cultivation of rice occupies the foremost place. Buckwheat, potatoes, peaches, pears, prunes, and various other fruits are also grown. Tea is produced in considerable quantities, and, as an indication of its unrivalled quality, it may be mentioned that here are grown the famous teas reserved for the Emperor of China. Laos possesses no coast-line, but its river-fishing is of great importance. The Me-kong yields a gigantic fish, called by the natives the *pla-beuk*, which, when dried, forms an important element of the native dietary. Another industry of the Laotines is the raising of cattle and buffaloes for the Cambodian and Siamese markets. Laos contains some very important iron mines, exploited by the natives; deposits of sapphire, copper, and gold are very numerous—gold being also found in the beds of various streams. Sulphurous thermal springs abound in the country, and there are several notable salt-mines. Many concessions have been recently given to French mining companies, but progress is at present greatly retarded owing to the almost inaccessible position of the country for commercial purposes. The construction of the long-canvassed railroad to connect Laos with the coast would afford the country an opportunity of competing in the outer markets, but a tremendous development of the country would have to be effected

before a line, presenting so many engineering difficulties, could be a financial success. The Government of Laos is directed by a French administrator in the name of the king; six-thirteenths of the cost of administration is borne by Cochin China, five-thirteenths by Annam-Tong-king, and two-thirteenths by Cambodia.

The Laotian is taller than the Annamite, and more graceful if less robust. His forehead is high and narrow; his face long and oval, his complexion varies from yellow to brown. His eyes in general have the obliquity characteristic of so many of the Far Eastern races, his hair is straight and black, and he seldom wears moustache or beard. Light-hearted and indolent he limits his exertions to such as are indispensable at the moment, the fertile and inexhaustible soil of his smiling valleys making all serious struggle unnecessary. The men work but six months of the year, during which they prepare the rice-fields, fish, hunt, or ply on the Great River their trim *pirogues*, guiding them with a careless skill through the most dangerous rapids. The remainder of the year is spent peacefully in the midst of their families, and all labour is henceforth thrown exclusively on the women, without, however, lessening in any degree their imperturbable gaiety. In the Laotian home a word of anger, a dispute is unknown; the greatest misfortunes are accepted in a spirit of quiet resignation, the outcome equally of the attractive disposition and the religious beliefs of the people. It is at Luang Prabang, the residence of the king and the French administrator, that Laotian life may be seen under the most favourable conditions. Situated in the midst of lofty mountains clad with primeval forests, life in this town is one endless succession of promenades, choral entertainments in the cool of the evening, dances, theatres, regattas, etc. The old capital, Vien-tian, destroyed by the Siamese in 1828, is already overgrown with jungle. Apart from its historical associations it contains to-day nothing to attract the visitor save the remains of the palace and a pagoda, which for beauty of architecture and originality of ornamentation are still unrivalled in Laos. For the Catholic Vien-tian possesses a further interest as the scene of the first attempt to preach Christianity in the then extensive Kingdom of Laos. The Portuguese Jesuit, Giovanni Maria Leria, preached the Gospel here for five years, until, in consequence of the violent opposition of the bonzes, he was compelled to leave in December, 1647.

In Laos as in Annam, Buddhism, though its tenets have somewhat tinged popular beliefs, can no longer be regarded as the popular religion. Its philosophy, scarcely understood by a few of the bonzes and educated laity, is a mystery to the mass of the population. The Laotian of the present day is a nature-worshipper and a fatalist. *Pha ya gnom phi ban*, the great chief of the *Phi-ba* (or genii), watches over all beings on this earth, and each day sends his emissaries to distribute illness and death to men in accordance with the decrees fixed from all eternity. With a curious disregard for consistency in his fatalism, the Laotian believes that these *phis*, the immediate cause of all good and evil, are accessible to prayer. The supposed intervention of these occult powers is sufficient explanation for every natural phenomenon. If a native falls ill and ordinary medicines fail, the *phis* are the cause and the sorcerer alone can save the invalid. The sorcerer consulted proceeds, after certain prescribed prayers, to half-bury an egg in a bowl of rice. Some additional grains are then let fall on the egg, and the even or odd number remaining thereon is conclusive proof of the presence or otherwise of the *phi* in the invalid's body. If present, the *phi* is questioned in the same manner as to his wishes. Is it the sacrifice of a buffalo or a pig that he desires? According to Laotian beliefs, spirits are everywhere and one must exercise the greatest care to preserve health and life. The *Ngnuoc* lies in wait for boatmen who fail to discharge their debt of

prayers and offerings; the *Phi-pet* and the *Phi-loc* infest the villages; the *Phi-huen* can be prevented from entering the houses and insinuating themselves into the bodies of the owners only by daily offerings of water and rice placed on the little altars built for the purpose near the huts. In Laos there are certain men—the *Phi-pop*—who are supposed to communicate with the demons and to have marvellous powers of making themselves invisible, introducing evil genii into the bodies of men to consume their vitals, etc. Once suspected of belonging to this class, a native is no longer tolerated in the village, but is banished to one of the numerous hamlets specially reserved for the *Phi-pop* and avoided by all travellers. Although amulets are common in Laos, they are seldom worn on the person. The retailing of the teeth of a boar, horns of a stag, tiger-claws, and religious verses as amulets is an important requisite of the bonzes.

(6) *Kwang-chau-wan*.—According to the terms of the Franco-Chinese Convention of 10 April, 1898, China agreed to lease to France a bay on its southern coast, and granted to the latter country, among other concessions, the permission to build a railway—at present in course of construction—from Tong-king to Yun-nan. The group of little islands at the entrance to the bay were ceded to France in August, 1899, the total French territory having now an area of about 200 square miles and a population of 180,000. The bay is situated near Hai-nan Strait about 200 miles west-south-west of Hong-kong. It has two narrow, easily defended entrances, is about twenty miles in length, and is perfectly sheltered from storms. A large river empties itself into the bay, and on its bank stands the town of Chek-hem, an important commercial centre with an extensive coast trade. The imports include cotton yarns, cottons, and opium; the principal exports are earth-nuts, mats, sacks, and sails. As the possession of the bay includes the control of the prefectures of Lei-chau, Lien-chau, and Ka-chau, the whole peninsula of Lei-chau is under French influence.

CHRISTIANITY.—There are numerous references to Indo-China—the classical *Chryse*, i. e. the Golden Island, as it was at first esteemed, or the Golden Chersonese—in early Western literature. In his "Antiquities of the Jews", Josephus identifies it with the Ophir from which Solomon drew his stores of gold. Cosmas Indicopleustes, the Alexandrian monk, visited it between 530 and 550, and was the first to spread clear ideas concerning the relative positions of it and other countries in the Far East. We owe much of our earliest information concerning the customs of the natives to Blessed Odoric of Pordone, a Franciscan who journeyed through the East between 1318 and 1330. But it was only after Vasco da Gama had doubled the Cape of Good Hope in 1497 that regular communication between the West and the Far East was made possible, and the work of evangelization could be begun in earnest.

The appearance of Christianity in Indo-China may fitly be dated from the beginning of the sixteenth century, when it was preached by some Portuguese missionaries. The early missions do not seem to have made much impression on the natives, owing perhaps to the great hatred of Europeans infused into the Easterns by the cruelties of the Portuguese fillibusters, but on the arrival of Jesuit missionaries in the early decades of the seventeenth century Christianity began at once to make rapid headway. Both in Cochin China and in Tong-king the Jesuits worked with incredible zeal from 1618. Between 1627 and 1630 Fathers Alexander de Rhodes and Anton Marquez of the French Province converted over 6,000, including numerous bonzes, who, during the temporary expulsion of the Jesuits dictated by fear of their wonderful success, kept alive the Faith. So rapidly did the Christian community increase that in 1659 the spiritual administration of Tong-king and Cochin China

was entrusted to Mgr. Pallu and Mgr. de la Motte-Lambert, the first vicars Apostolic of the Society of Foreign Missions. Under their direction parishes were established, seminaries built, and many foundations of the Amantes de la Croix (i. e. Votaries of the Cross) instituted. Recognizing that amicable relations with a Catholic country could not fail to inculcate a deeper respect for and knowledge of Christianity, Mgr. Pallu's great ambition was to establish friendly commercial relations between France and Tong-king. In 1672 he urged Colbert, the French minister, to establish a French counting-house in the latter country, and later petitioned Louis XIV to use his influence to prevail on King Le-hi-tong to allow the freedom of Christian worship. Louis dispatched a letter accompanied by presents to the Annamite monarch, in which he made overtures for a commercial agreement between the countries, described the beauty and grandeur of the Christian Faith, and urged the king to protect and embrace it. Although Louis' mission did not effect the removal of the interdiction of Catholic worship, it secured for the Christians a few years of comparative peace and the cessation of the many annoyances caused them by the avaricious and spiteful mandarins. In 1678 the Vicariate Apostolic of Tong-king was divided into two vicariates, those of Eastern and Western Tong-king; the former was entrusted to the Spanish Dominicans, who were destined later to bear the brunt of one of the terrible persecutions, and the latter to the Society of Foreign Missions. The rapidly growing religious influence exercised by the priests and bishops soon led to a renewal of persecution, and for over 100 years the missionaries had to contend with every imaginable obstacle. Banished repeatedly from the country, they had scarcely lost sight of shore before they turned their ships towards land again. Their single-minded, unremitting zeal during this period presents none of those striking situations which constitute the frame-work of history: it was only when the day of active persecution later called for martyrs, and thousands of the Annamites—a race whose name has become a byword for fickleness—gladly laid down their lives for the Faith, that we recognize how exceedingly fruitful had been the ministry of those hidden apostles.

On 2 November, 1741, was born at Béhaine, France, a man who was destined to influence profoundly the whole subsequent religious and secular history of Indo-China. This was Pierre-Joseph Pigneaux. After the usual preparation for the priesthood, he set out for the Far East in 1765, and there displayed such zeal that in 1771 he was named Vicar Apostolic of Cochin China and Bishop of Adran. On one of his journeys through his spiritual dependencies, he met Nguyen-an, then a fugitive from the rebellious Tay-shons. A friendship having quickly sprung up between the bishop and the exiled prince, who had already spent years of fruitless effort in trying to recover his lost kingdom, Mgr. Pigneaux offered to enlist the help of France against the Tay-shons. Nguyen-an accepted the proposal, and entrusted his young son and the grand seal of Cambodia to the bishop to serve as his credentials at the French Court. Without delay Mgr. Pigneaux set out for France, and, as plenipotentiary of the Annamite prince, signed a convention on 28 November, 1787, according to which France was to assist Nguyen-an to recover his throne, and was to receive in return the Port of Turan and the Island of Poulo-Condore, as well as the exclusive privilege of trading with Cochin China. Assured of French assistance, the bishop returned to his vicariate, but on his arrival was dismayed to find that France had—owing probably to the terrible crisis at home—entirely abandoned its project of aiding Nguyen-an. Setting out immediately for Pondicherry, Mgr. Pigneaux succeeded in prevailing on 20 officers and about 500 men to accompany him. Thanks to the assist-

ance of this force—far from insignificant when contrasted with the badly-armed, ill-disciplined Annamites—Nguyen-an succeeded not only in recovering his lost territories in Cochin China, but in making himself Emperor of Annam.

Christianity made wonderful progress throughout the Annamite Empire during the reign of Gia-long (Nguyen-an), as if in preparation for future trials. In 1819 the Christian community included 4 bishops, 25 European and 180 native priests, 1000 catechists, and 1500 nuns. Gia-long was succeeded by the cruel and profligate Minh-mang (1820-41), who immediately manifested his fierce hatred of Christianity. Having dismissed M. Chaigneau, the French Consul and Gia-long's trusted friend, he engaged on a campaign to obliterate every vestige of Christianity within his realms. He first issued an order excluding all new missionaries and summoning those already in the country to appear at court, believing that the flock, deprived of its pastors, would be rapidly dispersed. His object was, however, defeated at once by the zeal of the missionaries, who regardless of personal danger neglected the decree, and by the venality of the mandarins, who, granted that sufficient bribes were forthcoming, were always willing to close their eyes when new missionaries arrived in port. The advocacy of the Viceroy of Cochin China, an old soldier of Gia-long who fearlessly remonstrated with Minh-mang for his persecution of the missionaries to whom his father owed his throne, prevented the emperor from adopting more serious measures for the time, but the viceroy's death in 1832 was quickly followed by the Edict of 6 January, 1833. This ordered all Christians to renounce their Faith, and, in token of the sincerity of their recantation, to trample the crucifix under foot. All churches and religious houses were to be razed to the ground, and teachers of Christianity to be treated with the utmost rigour. In 1836 all ports were closed to Europeans except Turan, and penalty of death pronounced against priests. Ships coming to port were submitted to a rigid examination, and all officials were commanded under threats of the severest penalties to hunt down the missionaries, for which duty special troops were also appointed. A secret clause to the edict ordered the immediate dispatch of all priests to the capital. These edicts were the signal for the outburst of a persecution, which, with short intermissions, lasted for fifty years.

In 1833 Father Gagalin, Pro-vicar of Cochin China, was arrested and beheaded. Father Marchand was sentenced in 1835 to "the hundred wounds", Father Cornay to dismemberment in 1837. Martyrdom awaited Mgr. Borie in 1838, in which year Bishop Delgado, then in his eighty-fourth year, died in prison, his coadjutor (aged eighty-one) being executed with numerous Dominicans and native Christians. In 1840 Father Delamotte died in prison. Flying from place to place to administer the consolations of religion and to instruct their spiritual children, the intrepid missionaries managed to keep the lamp of Faith burning during this terrible period. No little credit is due to the fidelity of the natives to their pastors: regardless of danger, they sheltered the proscribed priests, escorted them by concealed paths to their next place of hiding and ministry, and, although the prisons were filled with Christians, cases of apostasy were extremely rare. Even the unfortunate Christians, who, subjected to horrible tortures, renounced their religion, seized in almost every instance the first opportunity of becoming reconciled with the Church, which only physical weakness had led them to forsake.

The persecution abated somewhat on the death of Minh-mang in 1841. The new emperor, Tien-tri (1841-7), had not the energy of his predecessor, and was in addition sobered by the English successes in China and the threat of France to intervene, if the

persecution continued. In 1844 Cochin China was divided into the Vicariates Apostolic of Eastern and Western Cochin China, while in 1846 the Vicariates Apostolic of Western and Southern Tong-king replaced the ancient Vicariate of Western Tong-king. Cambodia and the northern provinces of Cochin China were formed into new vicariates in 1850. The accession of Tu-duc in 1848 was quickly followed by an edict setting a price on the heads of the missionaries. In 1851 a second edict was issued, accusing the Christians of conspiracy against the emperor, and ordering the European priests to be cast into the sea or the rivers and the native priests to be cut in two. The first result of this sanguinary edict was the decapitation of Fathers Augustin Schoffler (1851) and Bonnard (1852). In 1855 a universal proscription of Christians was issued: Christian mandarins were commanded to abjure the Faith within a month, all others within six months, while a reward of \$480 was offered for the detention of each European, and \$160 for the detention of each native priest. The persecution was now renewed with increased fury, and at last Napoleon III determined to intervene. The ships, however, which accompanied the French envoys, were separated in a storm, and, thus deprived of the force necessary to impress the native potentate, the embassy failed to achieve anything tangible. Before departing M. de Montigny, the French plenipotentiary, was seized with the unlucky thought of threatening Annam with French vengeance, if the execution of Christians continued. This only led the Annamite authorities to suspect the Christians of having invited French intervention, and thenceforth a political motive for persecution was added to the religious one. On 20 July, 1856, Father Tru was beheaded, and the general massacre of Christians began. The Spanish bishop, Mgr. Diaz, was executed in 1857; in January, 1858, a town occupied by the Christians was set aflame, and all the inhabitants butchered. Roused by the slaughter of their countrymen, France and Spain took action in the autumn of 1858 to demand redress for the violence committed against the Christians of the Annamite Empire (then estimated at 600,000). On 31 August, 1858, the joint expedition under Vice-admiral Rigault de Genouilly and Colonel Lanzarote seized Turan, and defied every attempt of the Annamites to dislodge them. Having vainly awaited reinforcements for some months, Genouilly, finding that sickness was decimating his troops, changed his tactics, sailed southwards, and seized Saigon early in 1859, but, through lack of proper forces, was again prevented from pressing his advantage home. Seeing no immediate hope of reinforcements, since France was fully occupied with the war against Italy, Genouilly retained only the fort to the south of Saigon, sailed back to Turan, and resumed possession of that town.

The persecution meanwhile raged with unabated vigour: Bishop Hermosilla, and three other Spanish bishops, twenty-eight Dominicans, and thousands of Christians were tortured and executed. Two other European priests, who had been imprisoned and tortured, were only saved from execution by the Peace of June, 1862. But perhaps the greatest glory of this self-sacrificing mission lies in the number of native Christians who joyfully laid down their lives for the Faith. Within the space of a little more than four years (1857-62), the list of martyrs included 115 Annamite priests (one-third of the native clergy), 100 Annamite nuns, and more than 5000 of the faithful. This list of executions gives only a faint idea of the horrors of the time. All the prisons were filled with confessors of the Faith; eighty convents and almost one hundred towns, the centres of the Christian community, were razed to the ground, and their inhabitants scattered throughout the land. According to the most conservative estimate, of the 300,000 Christians thus dispersed, about 40,000 died of ill-treat-

ment, starvation, and unheard-of miseries, while all the possessions of the remainder were confiscated.

The Peace of 1862, which brought to a close this terrible period, was in no way due to a change in Tu-duc's feelings, but entirely to his fear lest the revolutionary party, which had taken up arms in Tong-king, should secure the support of France. According to this treaty Annam ceded to France the southern provinces of Cochin China (Bien-hoa, Saigon, and Mytho), paid an indemnity of \$4,000,000 to France and Spain, and guaranteed freedom of religious worship, provided that no compulsion should be used to force the natives to become Christians against their will—a strange proviso in view of the "compulsion" which had been used during the preceding years. Relieved of the ban of proscription and fertilized by the blood of so many martyrs, the missions began again to yield abundant fruit. The fearlessness shown by the Christians in the face of torture and death had greatly impressed the natives, who, seeing that converts were no longer viewed with marked displeasure by the administration, now hastened to seek instruction in the Christian Faith. In 1865 the baptisms of adults numbered 1365; in 1869 the number baptized was 4005. A still greater number of Annamites came to the missionaries, and, while declaring that they themselves were too old to change their religion, begged that their children might be received into the Church. In 1863 Mgr. Mische used his influence with King Norodom of Cambodia to bring about the treaty, according to which Cambodia placed itself under the protection of France.

While the Christians in the South were thus enjoying complete freedom from interference, their brethren in other districts of the Annamite Empire were not equally favoured. Removed from the centre of French power in the peninsula, they were subjected to many molestations and annoyances owing to the hatred of the mandarins. The ill-feeling among the pagan natives culminated in the assassination of Francis Garnier and four companions by the Black Flags on 21 December, 1873. Fearful of the consequences, the mandarins had already yielded to the influence of Mgr. Puginier and Mgr. Sohier, and expressed their readiness to sign a convention guaranteeing the freedom and security of Christians and foreigners, when a letter was received from M. Philastre, French Inspector of Native Affairs at Saigon, ordering the suspension of all negotiations until his arrival. Disregarding every dictate of prudence and the reiterated warnings and entreaties of Mgr. Puginier, this functionary ordered the immediate evacuation of Tong-king, and thus made France break faith with the huge body of Christians, who had accepted Garnier's proposals, and promised to assist France in its endeavour to secure liberty of worship and civil recognition for Christians. Misinterpreting the French departure for weakness, as Mgr. Puginier had foreseen, the pagans now prepared to surfeit their hatred against the Christians. The whole Vicariate of Western Tong-king was completely wrecked; that of Southern Tong-king was left a heap of ruins. In view of this system of universal butchery the missionaries had given the faithful permission to take up arms, when the persecution came to an abrupt close in a remarkable manner. In the Province of Nghe-an (Northern Annam) one of those periodical local revolts, with which Annamite history is littered, had assumed threatening proportions: the royal forces had been signally defeated in several engagements, a large tract of country had within a short period fallen into the hands of the rebels, and it needed only the defection of certain high dignitaries, then wavering in their allegiance, to ensure the complete success of the revolution. In this crisis the mandarins hastened to summon to the defence of legitimate authority the Christians, whom they had

but a few days before delivered over to massacre and pillage. Reinforced by the Catholics, the regular army defeated the rebels in several successive engagements, and quickly restored tranquillity throughout the territories. On 15 March, 1874, a new treaty was signed between France and Annam, which guaranteed explicitly religious freedom and the safety of the missionaries. All enactments against the Christians were annulled; perfect liberty was accorded the Annamites to embrace and to practise Christianity; religion was to form no obstacle to public employment; all terms and phrases in the official codes etc., objectionable to Catholics, were to be removed; priests and bishops were accorded unrestricted freedom to move about the empire without being subjected to interrogation or espionage; all confiscated property, not yet occupied, was to be restored to its Christian owners.

From 1874 to 1882 the Christians enjoyed a period of relative peace, but in the latter year the mandarins had again begun to act with such an absolute disregard of the treaty that France was once more compelled to interfere. Finding it impossible to secure any satisfactory engagement from the mandarins, Commander Rivière seized the citadel of Hanoi on 25 April and then occupied Nam-dinh, but was slain in an engagement with the Black Flags on 19 May. On 26 May Father Bechet and numbers of his catechists and flock were decapitated by the Annamites. A proposal in the Royal Council to decree a general massacre of Christians was vetoed by Tu-duc. This was one of the Annamite monarch's last important acts, and contrasted favourably with his general policy throughout his long reign (1847-83). Stirred now from its inaction, France dispatched strong reinforcements under General Bouet and Admiral Courbet. The bombardment of Thuan-an and the capture of Hue led to the Treaty of 25 August, 1883. As, however, the Black Flags still continued to massacre and pillage about Hanoi, Admiral Courbet proceeded against Son-tai, and, despite its desperate defense, captured the town on 17 December. To avenge themselves for their defeats the Annamite authorities forthwith decreed a general massacre of Christians. Troops were dispersed throughout the country to rob, burn, pillage, slay, and leave no trace of Christianity in the land. The French troops meanwhile gained victory after victory; Bac-ninh, Kep, Thai-nguyen, and Hung-hoa were successively captured, and on 2 June, 1884, a treaty was signed promising indemnity to the Christians and a general amnesty to those who had assisted France. But the ambushade laid by the Annamites and Chinese for the French at Bac-le (24 June, 1884) indicated clearly what confidence could be reposed in Annamite faith. France at once attacked China, annihilated the Chinese fleet, bombarded Fouchou, seized the Pescadores, and blockaded Formosa. Such salutary terror did this prompt action cause the Chinese authorities that they hastened to conclude peace on 9 June, 1885. The Franco-Annamite Treaty of 1884 was ratified on 23 February, 1886. Annam became a French protectorate, and the influence which China had exercised over its affairs for more than 4000 years came to an end.

A detailed description of the sufferings of the missions during the "Great Massacres" cannot be attempted here. The following figures given in Piolet (op. cit. infra, II, pp. 470-1) will sufficiently indicate the ruthlessness of the butchery and the fierce determination of the Annamite authorities to destroy every vestige of the Christian Faith. In Eastern Cochin China the martyrs included 15 priests (7 native), 60 catechists, 270 nuns, and 24,000 Christians (out of 41,234); all the charitable institutions and ecclesiastical buildings of the mission—including the episcopal curia, churches, presbyteries, 2 seminaries, a printing establishment, 17 orphanages, 10

convents, and 225 chapels—were destroyed. In Southern Cochin China, 10 native priests and 8585 Christians were massacred in the Province of Quang-tri alone—the two remaining provinces supplied hundreds of martyrs; two-thirds of the churches, presbyteries, etc., of the mission were pillaged and burned. In the Mission of Southern Tong-king 163 churches were burned; 4799 Catholics were executed, while 1181 died of hunger and misery. These figures apply only to the year 1885: in 1883-4 eight French missionaries, one native priest, 63 catechists, and 400 Christians were massacred in Western Tong-king, while 10,000 Catholics only saved themselves by flight. The carnage extended even to the remote forests of Laos, where seven missionaries, several native priests, and thousands of Christians were butchered.

Present Condition of the Catholic Church in French Indo-China.—Although but twenty-five years have elapsed since it had to endure a persecution, without parallel since the fiercest days of the Reformation, the Catholic Church has never been in so flourishing a condition in Indo-China as it is to-day (1910). Beginning with 5782 conversions of adults in 1887, the annual figure mounted rapidly and steadily, and averages at present about fifty thousand. It will be instructive to set down here the latest statistics (at the beginning of 1909) for the twelve vicariates apostolic, into which Indo-China is at present divided, at the same time warning the reader that the vicariates are not to be taken as conterminous with the geographical territories suggested by their names:—

(1) Western Cochin China: vicar, Mgr. Mossard, titular Bishop of Medea (residence, Saigon); total population, 1,566,000; Catholics, 63,640; catechumens, 1600; priests, 134 (58 European); 50 catechists; 2 seminaries with 122 students; 72 Brothers of the Christian Schools; nuns (Carmelite, St. Paul of Chartres, Filles de Marie), 6 houses with 713 sisters; 237 churches and chapels; 122 schools with 7960 pupils; 15 orphanages with 1109 inmates; 15 hospitals; 15 pharmacies;

(2) Eastern Cochin China: vicar, Mgr. Grangeon, titular Bishop of Utina (residence, Binh-dinh, Annam); population, 3,500,000; Catholics, 83,000; catechumens, 10,000; priests, 101 (64 European); 83 catechists; 2 seminaries with 204 students; Sisters of St. Paul of Chartres, 1 house with 6 religious; Amantes de la Croix, 10 houses with (in 1901) 238 religious; 555 churches and chapels; 42 schools with 1889 pupils; 20 orphanages with 1567 inmates; 1 hospital; 3 dispensaries;

(3) Northern Cochin China: vicar, Mgr. Allys, titular Bishop of Phacusa (residence, Hue, Annam); population, 2,700,000; Catholics, 58,633; priests, 100 (48 European); 47 catechists; 2 seminaries with 123 students; Sisters of St. Paul of Chartres, 3 houses with 11 religious; Filles de Marie, 18 houses with 523 religious; Brothers of the Christian Schools, 1 house with 8 religious; 205 churches and chapels; 30 schools with 707 pupils; 3 orphanages with 478 inmates; 2 hospitals (1 for lepers); 8 pharmacies;

(4) Cambodia: vicar, Mgr. Bouchut, titular Bishop of Panemotic (residence, Pnom-penh); population, 2,300,000; Catholics, 36,107; catechumens, 4500; 77 priests (45 European); 95 catechists; 1 seminary with 103 students; Sisters of Providence, 168 (37 European); Filles de Marie, 32; 156 churches and chapels; 72 schools with 4235 pupils; 6 orphanages with 951 inmates; 7 hospitals; 5 pharmacies;

(5) Laos—formerly included in the Vicariate Apostolic of Siam—erected on 4 May, 1899: vicar, Mgr. Cuaz, titular Bishop of Hermopolis Minor (residence, Nong-seng); population, 2,500,000 (about one-third in French territory); Catholics, 10,682; catechumens, 1172; 33 priests (29 European); 33 catechists; 1 seminary with 8 students; Sisters of St. Paul of

Chartres, 2 houses with 8 religious; Amantes de la Croix, 15; 54 churches and chapels; 35 schools with 797 pupils; 22 orphanages with 304 inmates;

(6) Maritime Tong-king, erected on 15 January, 1901: vicar, Mgr. Marcou, titular Bishop of Lysiade (residence, Phat-liem); population, 2,000,000; Catholics, 90,000; priests, 88 (33 European); catechists, 172; seminaries, 2 with 223 students; Sisters of St. Paul of Chartres, 3 houses with 12 religious; Amantes de la Croix, 6 houses with 112 religious; 356 churches and chapels; 453 schools with 10,400 pupils; 5 orphanages with 1173 inmates; 18 hospitals (2 for lepers with 324 patients);

(7) Southern Tong-king: vicar, Mgr. Pineau, titular Bishop of Calama (residence, Xa-doai); population, 2,000,000; Catholics, 132,266; catechumens, 350; priests, 115 priests (37 European); 280 catechists; 2 seminaries with 342 students; Amantes de la Croix, 6 houses with 148 religious; 395 churches and chapels; 182 schools with 5932 pupils; 6 orphanages with 1730 inmates; 12 pharmacies;

(8) Western Tong-king: vicar, Mgr. Gendreau, titular Bishop of Chrysolis (residence, Hanoi); population, 2,200,000; Catholics, 140,379; catechumens, 6329; priests, 134 (42 European); catechists, 380; 2 seminaries with 288 students; Carmelite Sisters, 1 house with 17 religious; Sisters of St. Paul of Chartres, 1 house with 35 religious; Amantes de la Croix, 16 houses with 330 religious; 502 churches and chapels; 600 schools with 17,480 pupils; 5 orphanages with 2436 inmates; 5 hospitals; 2 pharmacies;

(9) Upper Tong-king, erected 15 April, 1895: vicar, Mgr. Ramond, titular Bishop of Linoe (residence, Hang-hoa); population, 2,000,000; Catholics, 21,130; 47 priests (28 European); 87 catechists; 1 seminary with 64 students; Sisters of St. Paul of Chartres, 2 houses with 12 religious; Amantes de la Croix, 4 houses with 106 religious; 117 chapels and churches; 75 schools with 1599 pupils; 3 orphanages with 165 inmates; 7 hospitals (3 for lepers); 5 pharmacies;

These nine vicariates Apostolic have been entrusted to the Society of Foreign Missions (Paris). The remaining three are administered by the Dominicans:

(10) Central Tong-king: vicar, Mgr. Munagorre y Obyneta, titular Bishop of Pityus (residence, Bui-chu); population, 2,000,000; Catholics, 219,650; 114 priests (22 European); 259 catechists; 2 seminaries with 150 students; Third Order of St. Dominic, 16 houses with 427 sisters; Amantes de la Croix, 3 houses with 33 religious; Sisters of St. Paul of Chartres, 15; 615 churches and chapels; 679 schools; 5 orphanages with 500 inmates; 7 hospitals (5 for lepers with 500 inmates);

(11) Eastern Tong-king: vicar, Mgr. Arellanos, titular Bishop of Cocussus (residence, Hai-duong); population, 2,000,000; Catholics, 54,200; catechumens, 400; 57 priests (17 European); 110 catechists; 2 seminaries with 102 students; Third Order of St. Dominic, 4 houses with 81 religious; Sisters of St. Paul of Chartres, 2 houses with 23 religious; 264 churches and chapels; 104 schools; 4 orphanages with 352 inmates; 7 hospitals;

(12) Northern Tong-king: vicar, Mgr. Velasco, titular Bishop of Amorium; population, 2,500,000; Catholics, 31,016; 46 priests (20 European); 66 catechists; 2 seminaries with 46 students; Third Order of St. Dominic, 2 houses with 45 religious; Sisters of St. Paul of Chartres, 3 houses with 12 religious; 162 churches and chapels; 167 schools; 3 orphanages with 43 inmates; 1 hospital.

Total for the twelve vicariates (an asterisk signifies that the returns are incomplete): population (estimated), 27,266,000; Catholics, 940,703; catechumens, 24,351*; bishops, 12; priests, 1046 (443 European); catechists, 1662; 21 seminaries with 1775 students; 109* convents with 3122* sisters; 3618

churches and chapels; 80* Brothers of the Christian Schools; 2561 schools with 50,999* pupils; 97 orphanages with 10,808 inmates; 70* hospitals; 50* pharmacies.

Training of the Native Clergy, Religious Institutions, etc.—The native clergy are more numerous in Indo-China than in any other missionary country in the world. Their intimate acquaintance with the feelings and superstitions of their compatriots, whose mentality differs so widely from that of Western races, renders them of incalculable service to the missions. Of the solidity of their faith they have given abundant testimony during times of persecution, when their constancy rivalled that of their European apostles. Twenty-six of their number have been already declared venerable. In accordance with the regulations of the Synod of 1795 each priest chooses a certain number of the most promising boys from the leading Catholic families of his district: as the choice is considered universally among the Christian flock to confer a great honour on the family, the priest finds no difficulty in recruiting a sufficient number of neophytes. Their training usually begins between the ages of ten and twelve; they serve the priest, study the Chinese characters, and learn a little elementary Latin. At the age of seventeen or eighteen, those who have given evidence of a true vocation are sent to the seminary to follow the course of studies proper to the priesthood: the others remain with the priest until the age of twenty or twenty-two, when they are sent to the school of catechists. Each priest is expected to supply at least one candidate for the priesthood annually, but so healthy is the Christian sentiment of the people that the seminaries are unable to accommodate all who seek admission. After a course of six or seven years' study, the candidates are subjected to a most searching catechetical examination to test their competence to teach Christian doctrine. If successful, they receive the diploma of catechist, are attached to one of the parishes—each is supposed to have at least three—and begin their real apostolate. Under the guidance of the priest, they instruct the catechumens, prepare the people for the reception of the sacraments, attend the sick, and discharge many of the minor duties of the ministry. After about six years of this valuable training, the catechists, who have been especially conspicuous for their exemplary conduct and Christian zeal, are sent to the theological seminary, where after three years' further study they are admitted to the priesthood—usually between the ages of thirty-five and forty.

The principal religious institute for women in Indo-China is the (native) Congregation of Amantes de la Croix, who have in Cochin China recently modified their regulations and adopted the title of Filles de Marie. Founded more than two centuries ago, they evinced, like the native priests, an unflinching faith during all the persecutions, sheltering the fugitives, nursing the sick and wounded, carrying food and consolation to the prisoners, and in many cases bearing the Viaticum to those who were about to seal their Faith with their blood. The aims of the congregation are personal sanctification, the performance of works of charity, and the instruction of the catechumens. They are often called upon—since the priests and catechists are frequently unable to fulfil all the duties of the rapidly growing missions—to proceed to remote villages and instruct rude and uncultured neophytes in the truths of Christianity. This apostolate has been blessed with wonderful results: to the activity of a single religious (Sister Mieu), Father Gernot, a recent pro-vicar Apostolic at Saigon, declared he owed 1200 converts. The order has itself been the first vindication of womanhood in Indo-China. Living in the midst of a pagan society, which regards women as creatures of a lower order and their education as nugatory, these sisters

have been a conspicuous illustration of the Catholic ideal of the dignity of woman. To Catholicism belongs the credit, in Indo-China as in so many other countries, of having first undertaken the education of the native women—a task with which it alone concerns itself even at the present day (1910).

The Brothers of the Christian Schools first appeared in Indo-China in 1867, but their numerous and flourishing schools were closed in 1881–82 by order of the colonial administration, which has seldom shown a proper appreciation of the great work of civilization performed by the missions. Since their recall in 1895 they have been taking an even more prominent part in the education of the natives, and now direct many prosperous schools.

The Sisters of St. Paul of Chartres and the Sisters of Providence also render important services to the missions. In addition to the military hospital at Saigon, the former have opened numerous orphanages and hospitals for lepers (c. g. at Hue); the latter have been entrusted with the principal schools of the missions in many districts, with the Orphanages of the Holy Childhood, and various native hospitals.

It is impossible to do adequate justice to the services which the Society of Foreign Missions, the Order of St. Dominic, and, in earlier days, the Society of Jesus have performed throughout the peninsula in the name of Christianity and civilization. The value of their services to the cause of religion may be judged from the present healthiness and vitality of the Church in Indo-China, while, as the pioneers of civilization, they have laboured unaided for centuries to raise the lot of the natives, and are even to-day practically the sole civilizing agents throughout these vast territories. The widespread respect which the inhabitants feel for the Western races was won by the French missionaries, who, deserted by their fellow-countrymen, remained to face torture and death with their flock, when every dictate of prudence seemed to urge them to take flight. Judging France not by her breaches of faith in the past, nor by her unsympathetic administration (see Ajalbert, *op. cit. infra*, *passim*), but by her noble sons, who sacrificed everything at the call of duty, the native Christians have given a ready acquiescence to the French domination. To the missionaries we are primarily indebted for our present knowledge concerning the languages, history, and customs of the inhabitants. The ingenious system (*quoc-gnu*), by which, with the aid of certain accents and signs, we can represent the Annamite sounds in our letters, we owe to the Jesuits. This system, which has spared both Annamite and Western the infinity of pains necessary to master the complicated Annamite ideographic system, is at present taught in all the Christian and government schools. The Society of Foreign Missions was the first to issue dictionaries of the various Indo-Chinese languages and dialects; it has regularly supplied interpreters to the French Government, and has laboured earnestly to foster among the natives a respect for French authority—services which few unbiased students of the history of Indo-China will declare have been yet repaid.

For a complete and scientifically compiled bibliography see CORDIER, *Bibliotheca Sinica* (Paris, 1904—), or IDEM, *Bibliotheca Sinica: Essai d'une Bibliographie des ouvrages relatifs à la presqu'île indo-chinoise in T'oung Pao Archifs pour servir à l'étude de l'Asie Orientale* (2nd series), IV (Leyden, 1903—). Concerning the geography, hydrography, etc. of the peninsula, consult RECLUS, *Nouvelle Géographie Universelle*, VIII (Paris, 1883); PAVIE, *Mission Pavie Indo-Chine, 1879–95. Géographie et Voyages* (Paris, 1899–1906); DE LANESSAN, *La Colonisation française en Indo-Chine* (Paris, 1895), which furthermore gives an excellent account of the state of the French possessions towards the close of the nineteenth century; HENRI D'ORLÉANS, *Autour du Tonkin* (Paris, 1894), tr. PITMAN, *Around Tonkin and Siam* (London, 1894); GARNIER, *Voyage d'Exploration en Indo-Chine* (2 vols., Paris, 1873). For native history, populations, etc., see LAUNAY, *Histoire de l'Annam* (Paris, 1884); LEGRAND DE LA LYRAIE, *Notes historiques sur la nation annamite* (Paris, s. d.); TRUONG-VINH-KY, *Cours d'his-*

toire annamite (Saigon, 1875); *Les Annamites: religions, mœurs, coutumes* (Paris, 1906), ed. THOMAS KENNEDY.

Induction, the conscious mental process by which we pass from the perception of particular phenomena (things and events) to the knowledge of general truths. The sense perception is expressed logically in the singular or particular judgment (symbolically: "This S is P", "Some S's are P", "If S is M it may be P"); the general truth, in the universal judgment ("All S is P", "S as such is P", "If S is M it is P").

I. INDUCTION AND DEDUCTION.—Deductive reasoning always starts from at least one universal premiss (see DEDUCTION), bringing under the principle embodied therein all the applications of the latter; hence it is called synthetic reasoning. But of greater importance than this is the process by which, starting as we do from the individual, disconnected data of sense-experience, we attain to a certain knowledge of judgments that are necessarily true and therefore universally valid in reference to those data. Universal judgments are of two classes. Some are seen intuitively to be necessarily true as soon as the mind has grasped the meaning of the ideas involved in them (called "analytic", "verbal", "explicative", "essential", "in materia necessaria", etc.), or are inferred deductively from such judgments (as in the pure mathematical sciences, for example). Others are seen to be true only by and through experience (called "synthetic", "real", "ampliative", "accidental", "in materia contingenti", etc.). We reach the former (e. g. "The whole is greater than its part") by merely abstracting the concepts ("whole", "greater", "part") from sense-experience, seeing immediately the necessary connexion between those abstract concepts and forthwith generalizing this relation. This process may be called induction in a wide and improper sense of the word, but it is with the second

class of universal judgments only, generalizations based on experience, that induction proper has to deal.

II. SCIENTIFIC INDUCTION.—Although induction is equally applicable in all departments of generalization from experience, in the historical and anthropological no less than in the physical sciences, still it is in its application to the discovery of the causes and laws of physical phenomena, animate and inanimate, that it lends itself most readily to logical analysis. Hence it is that logical textbooks ordinarily speak of “physical” induction. The process is often described as a ratiocinative or inferential process, and from this standpoint is contrasted with deductive reasoning. But if by logical inference we are to understand the conscious passage of the mind from one or more judgments as premises to another new judgment involved in them as conclusion, then this is certainly not the essence of the inductive process, although there are indeed ratiocinative steps involved in the latter, subsidiary to its essential function which is the discovery and proof of some universal truth or causal law of phenomena. Induction is really a logical method involving many stages and processes besides the central step of generalization itself; and it is opposed to deduction only in the sense that it approaches reality from the side of the concrete and individual, while deduction does so from that of the abstract and universal.

The first of these steps is the observation of some fact or facts of sense-experience, usually a repeated coexistence in space or sequence in time of certain things or events. This naturally prompts us to seek its explanation, i. e. its causes, the total combination of proximate agencies to which it is due, the law according to which these causes secure its regular recurrence, on the assumption that the causes operative in the physical universe are such that acting in similar circumstances they will always produce similar results. Logic prescribes practical directions to guide us in observing, in finding out accurately what accompanies or follows what, in eliminating all the merely accidental concomitant circumstances of a phenomenon, so as to retain for analysis only those that are likely to be causally, as distinct from casually, connected with the event under investigation.

Next comes the stage at which the tentative, empirical generalization is made; the suggestion occurs that the observed connexion (between S and P) may be universal in space and time, may be a natural causal connexion the ground of which lies in a suspected agency or group of agencies operative in the total sense-experience that gives us the elements under investigation (S and P). This is the formation of a scientific hypothesis. All discovery of laws of physical nature is by way of hypothesis; and discovery precedes proof; we must suspect and guess the causal law that explains the phenomenon before we can verify or establish the law. A hypothesis is conceived as an abstract judgment: “If S is M it is P”, which we—relying on the uniformity of nature—forthwith formally generalize: “Whenever and wherever S is M it is P”, a generalization which has next to be tested to see whether it is also materially accurate. A hypothesis is therefore a provisional supposition as to the cause of a phenomenon, made with the object of ascertaining the real cause of the latter. Logic cannot, of course, suggest to us what particular supposition we ought to make in a given case. This is for the investigator himself. This is where the scientific imagination, originality, and genius come into play. But logic does indicate in a general way the sources from which hypotheses are usually drawn, and, more especially, it lays down conditions to which a hypothesis must conform if it is to be of any scientific value. The most fertile source of hypotheses is the

observation of analogies, i. e. resemblances between the phenomenon under investigation and other phenomena whose causes are already partially or fully known. When the state of our knowledge does not enable us to make any likely guess about the cause of the phenomenon, we must be content with a working hypothesis which will be perhaps merely a description of the events observed. A hypothesis that purports to be explanatory must be consistent with itself throughout, free from evident and irremediable conflict with known facts and laws, and capable of verification. This latter condition will be fulfilled only when the hypothesis is based on some analogy with known causes. Were the supposed cause totally unique and *sui generis*, we could form no conjecture as to how it would work in any given or conceivable set of circumstances, and we could therefore never detect whether it was really there or not. A hypothesis may be legitimate and useful in science even though it may turn out to be inaccurate; few hypotheses are altogether accurate at first. It may even have to be rejected altogether as disproved after a time and yet have served to lead to other discoveries or have put investigators on the right track. Or, as is more usually the case, it may have to be moulded, modified, limited, or extended in the course of verifying it by further observation and experiment.

It is to help the investigator in this work of analyzing the facts of sense-experience so as to discover and prove causal connexions or natural laws by the formation and verification of hypotheses, that modern logicians have dealt so exhaustively with the “canons of inductive inquiry”, or “experimental methods”, first outlined by Herschel in his “Preliminary Discourse on the Study of Natural Philosophy” and first popularized by John Stuart Mill in his “System of Logic”. These canons—of agreement, difference, concomitant variations, residues, positive and negative agreement, combined agreement and difference—all merely formulate various ways of applying to the analysis of phenomena the principle of eliminating what is casual or accidental so as to leave behind what is causal or essential; they are all based upon the principle that whatever can be eliminated from a set of things or events without thereby eliminating the phenomenon under investigation, is not causally connected with the latter, and whatever cannot be so eliminated without also eliminating the phenomenon is causally connected with it. Stating a hypothesis in the symbols, “If S is M it is P”, we have in M the supposed real or objective cause of P, and also the mental or logical ground for predicating P of S. We test or verify such a hypothesis by endeavouring to establish, through a series of positive experiments or observations, that whenever and wherever M occurs so does P; that M necessitates P; and, secondly, through a series of negative experiments or observations, that wherever and whenever M is absent so is P, that M is indispensable to P, that it is the only possible cause of P. If these tests can be applied successfully the hypothesis is fully verified. The supposed cause of the phenomenon is certainly the real one if it can be shown to be indispensable, in the sense that the phenomenon cannot occur in its absence, and necessitating, in the sense that the phenomenon must occur when it is present and operative. This sort of verification (often only very imperfectly and sometimes not at all attainable) is what the scientist aims at. It establishes the two propositions “If S is M it is P”, and “If S is not M it is not P”—the latter being equivalent to the reciprocal of the former (to “If S is P it is M”). Whenever we attain to this ideal (of the reciprocal hypothetical) we can infer from consequent to antecedent, from effect to cause, just as reliably as vice versa. But over what range of phenomena are we to carry on our negative observations and experiments in order to

make sure that our hypothesis offers the only possible explanation of the phenomenon, that M is the only cause in the universe capable of producing P—that, for instance, the necessity which beset the early Christians of securing a place of refuge for themselves and of burial for their dead could alone account for the formation of the Roman catacombs as we find them? This is obviously a matter for the prudence of the investigator, and, incidentally, it indicates one limitation of the certitude we can reach by induction. What is known as a crucial instance or experiment will, if it occur, enable us summarily to dismiss one of two conflicting hypotheses as erroneous, thus establishing the other, provided this other is the only conceivable one in the circumstances—that is to say, the only one reasonably suggested by the facts; for there is scarcely any hypothesis to which some fanciful alternative might not be imagined; and here again prudence must guide the investigator in forming his conviction. Is he, for instance, to suspend his assent to the physical hypothesis of a universal ether because the alternative of *actio in distans* is at any rate not evidently an intrinsic impossibility?

When a hypothesis cannot be rigorously verified by establishing the reciprocal universal judgment, it may nevertheless steadily grow in probability in proportion to the number and importance of other cognate phenomena which it is found capable of accounting for, in addition to the one it was invented to explain. A hypothesis is rendered highly probable if it foretells or explains cognate phenomena; this is called by Whewell *consilience of inductions* (*Novum Organum Renovatum*, pp. 86, 95, 96). This process of verification runs somewhat on these lines: "If M be a really operative cause, then in such and such circumstances it ought to produce or account for the effect X, and in such others for Y and so on; but (by observation or experiment we proceed to find that) in these circumstances these effects are produced or explained by it; therefore probably they are due to M." They are *probably* attributable only, because the argument does not formally yield a certain conclusion; but the more we extend our hypothesis, and the larger the groups of phenomena it is found competent to explain, the firmer does our conviction naturally grow, until it reaches practical or moral certitude that we have hit on the true law of the phenomena examined. Thus, for instance, was Newton's gravitation hypothesis gradually extended by him so as to explain the motions of the moon and the tides, the motions of the satellites around the planets and of these around the sun, until finally it came to be regarded as applicable throughout the whole material universe. The aim of the inductive process is to explain isolated facts by bringing them under some law, i. e. by discovering all the causes to the co-operation of which they are due and laying down those general propositions called *laws of nature* which embody and express the constant mode of operation of those causes. It is thus that we transform the observed sequences of sense-experience into understood or intellectually explained consequences of cause and effect. Scientific explanation also aims at reducing these separate and narrower laws themselves to higher and wider laws by showing them to be partial applications of the latter, thus obeying the innate tendency of the human mind to synthesize and unify, as far as may be, the manifold and chaotic data of sense experience.

III. *Rational Foundations and Scope of Induction.*

—The inductive generalization by which, after examining a limited number of instances of some connexion or mode of happening of phenomena, we assert that this connexion, being natural, will always recur in the same way, is a mental passage from particular to general, from what is within experience to what is beyond experience. Its legitimacy needs justification. It rests on the assumption of a few important

metaphysical principles. One of these is the principle of causality: "Whatever happens has a cause." Since by the cause of a thing or event we mean whatever contributes positively to its being or happening, the principle of causality is clearly a self-evident, necessary, analytic principle. And it is obviously presupposed in all inductive inquiry: we should not seek for the causes of phenomena did we believe it possible that they could be or happen without causes. A somewhat wider objective principle than this is the principle of sufficient reason: "Nothing real can be as it is without a sufficient reason why it is so"; and, applied to the subjective, mental, or logical order, the principle states: "No judgment can be true without a sufficient reason for its truth". This principle, too, is presupposed in induction; we should not seek for general truths as an explanation or reason for the individual judgments that embody our sense-experience did we not believe it possible to find in the former a rational explanation of the latter. But there is yet another principle, more directly assumed, involved in the inductive generalization, viz. the principle of the uniformity of nature: "Natural or non-free causes, i. e. the causes operative in the physical universe apart from the free will of man, when they act in similar circumstances always and everywhere produce similar results"; "Physical causes act uniformly."

Since human free will is excluded from the scope of this principle, it follows that the phenomena which issue directly from the free activity of man do not furnish data for strict induction. It would, however, be a mistake to conclude that the influence of free will renders all science of human and social phenomena impossible. Such is not the case. For even those phenomena have a very large measure of uniformity, depending largely, as they do, on a whole group of influences and agencies other than free will: on racial and national character, social habits and surroundings, education, climate, etc. They are, therefore, manifestations of stable causes and laws, though not of mechanical or physical laws, and form a suitable, though difficult domain, for inductive inquiry—difficult, because the operative influences are hidden under a mass of chaotic data which must be prepared by statistics and averages based on painstaking and long-continued observations and comparisons.

In the domain of physical induction proper we have to do only with natural or non-free causes. Above these, therefore, the question next arises: by what right do we assume the universal truth of the principle of uniformity as just stated, or what kind or degree of certitude does it guarantee to our inductive generalizations? Obviously it can give us no higher degree of certitude about the latter than we have about the principle itself. And this latter certitude will be determined by the grounds and origin of our belief in the principle. How, then, do we come to formulate consciously for ourselves, and give our assent to, the general proposition that the causes operative in the physical universe around us are of such a kind that they are determined each to one line of action, that they will not act capriciously, but regularly, uniformly, always in the same way in similar circumstances? The answer is that by our continued experience of the order and regularity and uniformity of the ordinary course of nature we gradually come to believe that physical causes have by their nature a fixed, determined line of action, and to expect that unless something unforeseen and extraordinary interfere with them, they act beyond our experience as they do within it. Mill is right in saying that the principle is a gradual generalization from experience, and, furthermore, that it need not be consciously grasped in all its fullness anterior to any particular act of inductive generalization. But this is not enough; for, whether

we take it partially or fully in a given case, the question still remains: What is our ultimate rational justification for extending it at all beyond the limits of our actual personal experience? The answers given to this question by logicians, as indeed their entire expositions of the inductive process, are as divergent and conflicting as their general philosophical views regarding the ultimate nature of the universe and of all reality. The fact to be explained and justified is that we believe the world outside our personal experience to be a piece with the world within our experience. But the Empirical or Positivist philosophy, represented by Hume and Mill, makes all rational justification of this belief impossible; for it there is no world outside experience; it reduces all reality in ultimate analysis to the present actual sensations of the individual's consciousness; and the alleging of mere custom, mere actual experience of uniformity, as a reason for belief in unexperienced uniformity, it regards not as a rational expectation based on a reasoned view about the nature of reality, but simply a blind leap in the dark. The explanation of the current Monistic Idealism, which would identify the laws of physical phenomena with the laws of logical thought and reduce all reality to one system of intellectually necessary thought-relations, is no less unsatisfactory, for it confounds the phenomena of existing, contingent being with the metaphysical relations between abstract, possible essences—relations which have their ultimate basis only in the nature of the Necessary Being, God Himself. The answer of scholastic philosophy is that the ultimate rational justification for our belief in the uniformity of nature is our reasoned conviction that nature is the work of an All-Wise Creator and Conservator, Who has endowed physical agencies with regular constant modes of activity with which He will not interfere unless by way of miracle for motives of the higher or moral order. The certitude of our belief in the principle and its applications is thus hypothetical, physical, not absolute, not metaphysical: "If God continues to conserve and concur with created physical agencies, if He does not miraculously interfere with them, if no other unknown cause intervene, then those agencies will continue to act uniformly."

Physical induction sometimes inquires into the constitutive ("formal" and "material") causes of phenomena (as, for instance, in chemical and physical researches into the constitution of matter), sometimes into their purpose (or "final" causes, as in the biological sciences); but mainly into their proximate efficient causes, i. e. the total group of proximate agencies sufficient and indispensable for the production of any given phenomenon. To these primarily is inductive research restricted, for the agencies operative in the physical universe are so intimately interwoven and interdependent that, were we to trace the chains of causality outward and backward from any effect indefinitely, we should see that in a sense all the agencies in the universe are in some remote way operative in the production of any single effect. Much controversy has been needlessly imported into Logic regarding the concept of cause. The rejection of "efficiency" or "positive influence" from this concept and the substitution of "invariable and unconditional sequence" is a feature of Empiricism. But it can have no influence on inductive generalization about the conduct of phenomena in space and time. For reliable generalization about the latter the only objective condition needed is uniformity or regularity of occurrence. The scope of induction will, however, be unduly and unjustifiably narrowed if by physical cause we are always to understand with Mill something which is itself a phenomenon, perceptible by the senses, and if we are to eschew all inquiry into causes which are not themselves sense-phenomena but active qualities

rooted in the natures of things and discernible only by intellectual reasoning. No doubt it is to inductive research for mere phenomenal antecedents—for material masses and energies—and to their exact mathematical measurement in terms of mechanical work that the applied sciences owe their greatest triumphs. But though the only concern of the engineer is to know how to secure useful coexistences and sequences of material masses and motions, yet the man of thought, be he physical scientist or philosopher, will rightly resent being prohibited by Positivism from prosecuting a further investigation into the rational *why* and *wherefore* of these occurrences, into the natures and properties which reason alone can discover through those phenomena. Men will ever and rightly insist on inquiring inductively after *vera causæ*, which, though they produce effects perceptible by the senses, are not themselves phenomena. However, when we push back our inquiry into the more remote conditions, causes, origin, and constitution of wider and wider fields of phenomena, analogies from known proximate causes—which aided us in our more specialized researches—begin to fail us; and so our wider theoretical conceptions—about atoms, electrons, ether, etc.—must ever remain more or less probable hypotheses, never fully verified. When, finally, we inquire into the absolutely ultimate origin, nature, and destiny of the universe, where analogies fail us altogether, we must abandon induction proper, which seeks to compare and classify the causes it discovers, and have recourse to the a posteriori argument, which simply infers, from the existence of an effect, that there must exist a cause capable of producing it, but gives us no further information about the nature of this cause than that it must have higher perfection, excellence, being, than the effect produced by it. Such, for instance, are the arguments by which we prove the existence of God.

IV. HISTORICAL.—Scientific induction, as just set forth, was not unknown to Aristotle and the medieval scholastics. It is not, however, the process referred to by Aristotle as *ἐπαγωγή* (Anal. Prior., II, 23) and usually described as the "inductive syllogism", or "enumerative induction". This is simply the process of inferring that what can be predicated of each member of a class separately can be predicated about the whole class. It is of no scientific value; for, when the enumeration of instances is perfect, or complete, the conclusion is not a scientific universal, a general law, but a mere collective universal; and when the enumeration of individuals is imperfect, or incomplete, the collective conclusion is hazardous, more or less probable, but not certain. Aristotle was, however, well aware of the possibility of reaching a certain conclusion after an incomplete enumeration of instances, by abandoning mere enumeration and undertaking an analysis of the nature of the instances as in modern induction. He refers to this process repeatedly under the name of *ἐμπερία* in the "Posterior Analytics" (c. xix; xxxi; i, §4; cf. Rhet., II: *παράδειγμα*), though he did not investigate the conditions under which such analysis would produce certitude. The prevalent belief that the medieval scholastics treated only "enumerative induction" is erroneous. They were also familiar with scientific induction, using the terms *experimentum*, *experientia*, to translate Aristotle's *ἐμπερία*. Albertus Magnus (In An. Post. I, tr. I, c. ii, iii), Duns Scotus (I Sent., dist. iii, q. iv, n. 9), and St. Thomas Aquinas (In An. Post. II, lect. xx) examined it, without, however, attempting to treat of the conditions of its application, for the very good reason that the apparatus for scientific research did not exist in their day. But the achievements of Roger Bacon, a Franciscan monk of the thirteenth century, in this direction, are perhaps sounder than those of his better known namesake, Francis Bacon, of the sixteenth and seventeenth.

With the progress of the physical sciences in the eighteenth and nineteenth centuries the attention of logicians was concentrated almost exclusively on the application of the inductive method to the discovery and proof of the laws of nature; and at the present time its philosophical foundations are giving rise to considerable discussion.

P. COFFEY.

Indulgences.—The word *indulgence* (Lat. *indulgentia*, from *indulgeo*, to be kind or tender) originally meant kindness or favour; in post-classic Latin it came to mean the remission of a tax or debt. In Roman law and in the Vulgate of the Old Testament (Is., lxi, 1) it was used to express release from captivity or punishment. In theological language also the word is sometimes employed in its primary sense to signify the kindness and mercy of God. But in the special sense in which it is here considered, an indulgence is a remission of the temporal punishment due to sin, the guilt of which has been forgiven. Among the equivalent terms used in antiquity were *pax*, *remissio*, *donatio*, *condonatio*.

WHAT AN INDULGENCE IS NOT.—To facilitate explanation, it may be well to state what an indulgence is not. It is not a permission to commit sin, nor a pardon of future sin; neither could be granted by any power. It is not the forgiveness of the guilt of sin; it supposes that the sin has already been forgiven. It is not an exemption from any law or duty, and much less from the obligation consequent on certain kinds of sin, e. g., restitution; on the contrary, it means a more complete payment of the debt which the sinner owes to God. It does not confer immunity from temptation or remove the possibility of subsequent lapses into sin. Least of all is an indulgence the purchase of a pardon which secures the buyer's salvation or releases the soul of another from Purgatory. The absurdity of such notions must be obvious to any one who forms a correct idea of what the Catholic Church really teaches on this subject.

WHAT AN INDULGENCE IS.—An indulgence is the extra-sacramental remission of the temporal punishment due, in God's justice, to sin that has been forgiven, which remission is granted by the Church in the exercise of the power of the keys, through the application of the superabundant merits of Christ and of the saints, and for some just and reasonable motive. Regarding this definition, the following points are to be noted: (1) In the Sacrament of Baptism not only is the guilt of sin remitted, but also all the penalties attached to sin. In the Sacrament of Penance the guilt of sin is removed, and with it the eternal punishment due to mortal sin; but there still remains the temporal punishment required by Divine justice, and this requirement must be fulfilled either in the present life or in the world to come, i. e., in Purgatory (q. v.). An indulgence offers the penitent sinner the means of discharging this debt during his life on earth. (2) Some writs of indulgence—none of them, however, issued by any pope or council (Pesch, *Tr. Dogm.*, VII, 196, §464)—contain the expression, "*indulgentia a culpâ et a pœnâ*," i. e. release from guilt and from punishment; and this has occasioned considerable misunderstanding (cf. Lea, "*History*" etc. III, 54 sqq.). The real meaning of the formula is that, indulgences presupposing the Sacrament of Penance, the penitent, after receiving sacramental absolution from the guilt of sin, is afterwards freed from the temporal penalty by the indul-

gence (Bellarmine, "*De Indulg.*", I, 7). In other words, sin is fully pardoned, i. e. its effects entirely obliterated, only when complete reparation, and consequently release from penalty as well as from guilt, has been made. Hence Clement V (1305-1314) condemned the practice of those purveyors of indulgences who pretended to absolve "*a culpâ et a pœnâ*" (Clement, I, v, tit. 9, c. ii); the Council of Constance (1418) revoked (Sess. XLII, n. 14) all indulgences containing the said formula; Benedict XIV (1740-1758) treats them as spurious indulgences granted in this form, which he ascribes to the illicit practices of the "quæstores" or purveyors (De Syn. diœces., VIII, viii, 7). (3) The satisfaction, usually called the "penance", imposed by the confessor when he gives absolution is an integral part of the Sacrament of Penance; an indulgence is extra-sacramental; it presupposes the effects obtained by confession, contrition, and sacramental satisfaction. It differs also from the penitential works undertaken of his own accord by the repentant sinner—prayer, fasting, alms-giving—in that these are personal and get their value from the merit of him who performs them, whereas an indulgence places at the penitent's disposal the merits of Christ and of the saints, which form the "Treasury" of the Church. (4) An indulgence is valid both in the tribunal of the Church and in the tribunal of God. This means that it not only releases the penitent from his indebtedness to the Church or from the obligation of performing canonical penance, but also from the temporal punishment which he has incurred in the sight of God and which, without the indulgence, he would have to undergo in order to satisfy Divine justice. This, however, does not imply that the Church pretends to set aside the claim of God's justice or that she allows the sinner to repudiate his debt. As St. Thomas says (Suppl., xxv. a. 1 ad 2^{um}), "He who gains indulgences is not thereby released outright from what he owes as penalty, but is provided with the means of paying it." The Church therefore neither leaves the penitent helplessly in debt nor acquits him of all further accounting; she enables him to meet his obligations. (5) In granting an indulgence, the grantor (pope or bishop) does not offer his personal merits in lieu of what God demands from the sinner. He acts in his official capacity as having jurisdiction in the Church, from whose spiritual treasury he draws the means wherewith payment is to be made. The Church herself is not the absolute owner, but simply the administratrix, of the superabundant merits which that treasury contains. In applying them, she keeps in view both the design of God's mercy and the demands of God's justice. She therefore determines the amount of each concession, as well as the conditions which the penitent must fulfil if he would gain the indulgence.

VARIOUS KINDS OF INDULGENCES.—An indulgence that may be gained in any part of the world is universal, while one that can be gained only in a specified place (Rome, Jerusalem, etc.) is local. A further distinction is that between perpetual indulgences, which may be gained at any time, and temporary, which are available on certain days only, or within certain periods. Real indulgences are attached to the use of certain objects (crucifix, rosary, medal); personal are those which do not require the use of any such material thing, or which are granted only to a certain class of individuals, e. g. members of an order or confraternity. The most important distinction, however, is that between plenary indulgences and partial. By a plenary indulgence is meant the remission of the entire temporal punishment due to sin so that no further expiation is required in Purgatory. A partial indulgence commutes only a certain portion of the penalty; and this portion is determined in accordance with the penitential discipline of the early Church. To say that an indulgence of so many days or years is

granted means that it cancels an amount of purgatorial punishment equivalent to that which would have been remitted, in the sight of God, by the performance of so many days or years of the ancient canonical penance. Here, evidently, the reckoning makes no claim to absolute exactness; it has only a relative value. God alone knows what penalty remains to be paid and what its precise amount is in severity and duration. Finally, some indulgences are granted in behalf of the living only, while others may be applied in behalf of the souls departed. It should be noted, however, that the application has not the same significance in both cases. The Church in granting an indulgence to the living exercises her jurisdiction; over the dead she has no jurisdiction and therefore makes the indulgence available for them by way of suffrage (*per modum suffragii*), i. e. she petitions God to accept these works of satisfaction and in consideration thereof to mitigate or shorten the sufferings of the souls in Purgatory (see PURGATORY).

WHO CAN GRANT INDULGENCES.—The distribution of the merits contained in the treasury of the Church is an exercise of authority (*potestas jurisdictionis*), not of the power conferred by Holy orders (*potestas ordinis*). Hence the pope, as supreme head of the Church on earth, can grant all kinds of indulgences to any and all of the faithful; and he alone can grant plenary indulgences. The power of the bishop, previously unrestricted, was limited by Innocent III (1215) to the granting of one year's indulgence at the dedication of a church and of forty days on other occasions. Leo XIII (Rescript of 4 July, 1899) authorized the archbishops of South America to grant eighty days (Acta S. Sedis, XXXI, 758). Pius X (28 Aug., 1903) allowed cardinals in their titular churches and dioceses to grant 200 days; archbishops, 100; bishops, 50. These indulgences are not applicable to the souls departed. They can be gained by persons not belonging to the diocese, but temporarily within its limits; and by the subjects of the granting bishop, whether these are within the diocese or outside—except when the indulgence is local. Priests, vicars-general, abbots, and generals of religious orders cannot grant indulgences unless specially authorized to do so. On the other hand, the pope can empower a cleric who is not a priest to give an indulgence (St. Thomas, "Quodlib.", II, q. viii, a. 16).

DISPOSITIONS NECESSARY TO GAIN AN INDULGENCE.—The mere fact that the Church proclaims an indulgence does not imply that it can be gained without effort on the part of the faithful. From what has been said above, it is clear that the recipient must be free from the guilt of mortal sin. Furthermore, for plenary indulgences, confession and Communion are usually required, while for partial indulgences, though confession is not obligatory, the formula *corde saltem contrito*, i. e. "at least with a contrite heart", is the customary prescription. Regarding the question discussed by theologians whether a person in mortal sin can gain an indulgence for the dead, see PURGATORY. It is also necessary to have the intention, at least habitual, of gaining the indulgence. Finally, from the nature of the case, it is obvious that one must perform the good works—prayers, alms deeds, visits to a church, etc.—which are prescribed in the granting of an indulgence. For details see "Raccolta".

AUTHORITATIVE TEACHING OF THE CHURCH.—The Council of Constance condemned among the errors of Wyclif the proposition: "It is foolish to believe in the indulgences granted by the pope and the bishops" (Sess. VIII, 4 May, 1415; see Denzinger-Bannwart, "Enchiridion", 622). In the Bull "Exsurge Domine", 15 June, 1520, Leo X condemned Luther's assertions that "Indulgences are pious frauds of the faithful"; and that "Indulgences do not avail those who really gain them for the remission of the penalty

due to actual sin in the sight of God's justice" (Enchiridion, 758, 759). The Council of Trent (Sess. XXV, 3-4, Dec., 1563) declared: "Since the power of granting indulgences has been given to the Church by Christ, and since the Church from the earliest times has made use of this Divinely given power, the holy synod teaches and ordains that the use of indulgences, as most salutary to Christians and as approved by the authority of the councils, shall be retained in the Church; and it further pronounces anathema against those who either declare that indulgences are useless or deny that the Church has the power to grant them" (Enchiridion, 989). It is therefore of faith (1) that the Church has received from Christ the power to grant indulgences, and (2) that the use of indulgences is salutary for the faithful.

BASIS OF THE DOCTRINE.—An essential element in indulgences is the application to one person of the satisfaction performed by others. This transfer is based on: (1) *The Communion of Saints*.—"We being many, are one body in Christ, and every one members one of another" (Rom., xii, 5). As each organ shares in the life of the whole body, so does each of the faithful profit by the prayers and good works of all the rest—a benefit which accrues, in the first instance, to those who are in the state of grace, but also, though less fully, to the sinful members. (2) *The Principle of Vicarious Satisfaction*.—Each good action of the just man possesses a double value: that of merit and that of satisfaction, or expiation. Merit is personal, and therefore it cannot be transferred; but satisfaction can be applied to others, as St. Paul writes to the Colossians (i, 24) of his own works: "Who now rejoice in my sufferings for you, and fill up those things that are wanting of the sufferings of Christ, in my flesh, for his body, which is the Church." (See SATISFACTION.) (3) *The Treasury of the Church*.—Christ, as St. John declares in his First Epistle (ii, 2), "is the propitiation for our sins; and not for ours only, but also for those of the whole world." Since the satisfaction of Christ is infinite, it constitutes an inexhaustible fund which is more than sufficient to cover the indebtedness contracted by sin. Besides, there are the satisfactory works of the Blessed Virgin Mary undiminished by any penalty due to sin, and the virtues, penances, and sufferings of the saints vastly exceeding any temporal punishment which these servants of God might have incurred. These are added to the treasury of the Church as a secondary deposit, not independent of, but rather acquired through, the merits of Christ. The development of this doctrine in explicit form was the work of the great Schoolmen, notably Alexander of Hales (Summa, IV, Q. xxiii, m. 3, n. 6), Albertus Magnus (In IV Sent., dist. xx, art. 16), and St. Thomas (In IV Sent., dist. xx, q. i, art. 3, sol. 1). As Aquinas declares (Quodlib., II, q. vii, art. 16): "All the saints intended that whatever they did or suffered for God's sake should be profitable not only to themselves but to the whole Church." And he further points out (Contra Gent., III, 158) that what one endures for another, being a work of love, is more acceptable as satisfaction in God's sight than what one suffers on one's own account, since this is a matter of necessity. The existence of an infinite treasury of merits in the Church is dogmatically set forth in the Bull "Unigenitus", published by Clement VI, 27 Jan., 1343, and later inserted in the "Corpus Juris" (Extrav. Com., lib. V, tit. ix, c. ii): "Upon the altar of the Cross", says the pope, "Christ shed of His blood not merely a drop, though this would have sufficed, by reason of the union with the Word, to redeem the whole human race, but a copious torrent . . . thereby laying up an infinite treasure for mankind. This treasure He neither wrapped up in a napkin nor hid in a field, but entrusted to Blessed Peter, the key-bearer, and his successors, that they

might, for just and reasonable causes, distribute it to the faithful in full or in partial remission of the temporal punishment due to sin." Hence the condemnation by Leo X of Luther's assertion that "the treasures of the Church from which the pope grants indulgences are not the merits of Christ and the saints" (Enchiridion, 757). For the same reason, Pius VI (1794) branded as false, temerarious, and injurious to the merits of Christ and the saints, the error of the synod of Pistoia that the treasury of the Church was an invention of scholastic subtlety (Enchiridion, 1541).

According to Catholic doctrine, therefore, the source of indulgences is constituted by the merits of Christ and the saints. This treasury is left to the keeping, not of the individual Christian, but of the Church. Consequently, to make it available for the faithful, there is required an exercise of authority, which alone can determine in what way, on what terms, and to what extent, indulgences may be granted.

THE POWER TO GRANT INDULGENCES.—Once it is admitted that Christ left the Church the power to forgive sins (see PENANCE), the power of granting indulgences is logically inferred. Since the sacramental forgiveness of sin extends both to the guilt and to the eternal punishment, it plainly follows that the Church can also free the penitent from the lesser or temporal penalty. This becomes clearer, however, when we consider the amplitude of the power granted to Peter (Matt., xvi, 19): "I will give to thee the keys of the kingdom of heaven. And whatsoever thou shalt bind upon earth, it shall be bound also in heaven: and whatsoever thou shalt loose on earth, it shall be loosed also in heaven." (Cf. Matt., xviii, 18, where like power is conferred on all the Apostles.) No limit is placed upon this power of loosing, "the power of the keys", as it is called; it must, therefore, extend to any and all bonds contracted by sin, including the penalty no less than the guilt. When the Church, therefore, by an indulgence, remits this penalty, her action, according to the declaration of Christ, is ratified in heaven. That this power, as the Council of Trent affirms, was exercised from the earliest times, is shown by St. Paul's words (I Cor., ii, 5-10) in which he deals with the case of the incestuous man of Corinth. The sinner had been excluded by St. Paul's order from the company of the faithful, but had truly repented. Hence the Apostle judges that to such a one "this rebuke is sufficient that is given by many", and adds: "To whom you have pardoned any thing, I also. For what I have pardoned, if I have pardoned any thing, for your sakes have I done it in the person of Christ." St. Paul had bound the guilty one in the fetters of excommunication; he now releases the penitent from this punishment by an exercise of his authority—"in the person of Christ." Here we have all the essentials of an indulgence.

These essentials persist in the subsequent practice of the Church, though the accidental features vary according as new conditions arise. During the persecutions, those Christians who had fallen away but desired to be restored to the communion of the Church often obtained from the martyrs a memorial (*libellus pacis*) to be presented to the bishop, that he, in consideration of the martyrs' sufferings, might admit the penitents to absolution, thereby releasing them from the punishment they had incurred. Tertullian refers to this when he says (Ad martyres, c. i, P. L., I, 621): "Which peace some, not having it in the Church, are accustomed to beg from the martyrs in prison: and therefore you should possess and cherish and preserve it in you that so you perchance may be able to grant it to others." Additional light is thrown on this subject by the vigorous attack which the same Tertullian made after he had become a Montanist. In the first part of his treatise "De pud-

icitia", he attacks the pope for his alleged laxity in admitting adulterers to penance and pardon, and flouts the peremptory edict of the "pontifex maximus episcopus episcoporum". At the close he complains that the same power of remission is now allowed also to the martyrs, and urges that it should be enough for them to purge their own sins—"Sufficiat martyri propria delicta purgasse" And, again, "How can the oil of thy little lamp suffice both for thee and me?" (c. xxii). It is sufficient to note that many of his arguments would apply with as much and as little force to the indulgences of later ages.

During St. Cyprian's time (d. 258), the heretic Novatian claimed that none of the *lapsi* should be re-admitted to the Church; others, like Felicissimus, held that such sinners should be received without any penance. Between these extremes, St. Cyprian holds the middle course, insisting that such penitents should be reconciled on the fulfilment of the proper conditions. On the one hand, he condemns the abuses connected with the *libellus*, in particular the custom of having it made out in blank by the martyrs and filled in by any one who needed it. "To this you should diligently attend", he writes to the martyrs (Ep. xv), "that you designate by name those to whom you wish peace to be given." On the other hand, he recognizes the value of these memorials: "Those who have received a *libellus* from the martyrs and with their help can, before the Lord, get relief in their sins, let such, if they be ill and in danger, after confession and the imposition of your hands, depart unto the Lord with the peace promised them by the martyrs" (Ep. xiii, P. L., IV, 261). St. Cyprian, therefore, believed that the merits of the martyrs could be applied to less worthy Christians by way of vicarious satisfaction, and that such satisfaction was acceptable in the eyes of God as well as of the Church.

After the persecutions had ceased, the penitential discipline remained in force, but greater leniency was shown in applying it. St. Cyprian himself was reproached for mitigating the "Evangelical severity" on which he at first insisted; to this he replied (Ep. lii) that such strictness was needful during the time of persecution not only to stimulate the faithful in the performance of penance, but also to quicken them for the glory of martyrdom; when, on the contrary, peace was secured to the Church, relaxation was necessary in order to prevent sinners from falling into despair and leading the life of pagans. In 380 St. Gregory of Nyssa (Ep. ad Letojum) declares that the penance should be shortened in the case of those who showed sincerity and zeal in performing it—"ut spatium canonibus præstitum possit contrahere" (can. xviii; cf. can. ix, vi, viii, xi, xiii, xix). In the same spirit, St. Basil (379), after prescribing more lenient treatment for various crimes, lays down the general principle that in all such cases it is not merely the duration of the penance that must be considered, but the way in which it is performed (Ep. ad Amphilo-chium, c. lxxxiv). Similar leniency is shown by various Councils—Ancyra (314), Laodicea (320), Nicæa (325), Arles (330). It became quite common during this period to favour those who were ill, and especially those who were in danger of death (see Amort, "Historia", 28 sq.). The ancient penitentials of Ireland and England, though exacting in regard to discipline, provide for relaxation in certain cases. St. Cummian, e. g., in his Penitential (seventh century), treating (cap. v) of the sin of robbery, prescribed that he who has often committed theft shall do penance for seven years or for such time as the priest may judge fit, must always be reconciled with him whom he has wronged, and make restitution proportioned to the injury, and thereby his penance shall be considerably shortened (multum breviabit pœnitentiam ejus). But should he be unwilling or unable (to comply with these conditions), he must do penance for

the whole time prescribed and in all its details. (Cf. Moran, "Essays on the Early Irish Church", Dublin, 1864, p. 259.)

Another practice which shows quite clearly the difference between sacramental absolution and the granting of indulgences was the solemn reconciliation of penitents. These, at the beginning of Lent, had received from the priest absolution from their sins and the penance enjoined by the canons; on Maundy Thursday they presented themselves before the bishop, who laid hands on them, reconciled them with the Church, and admitted them to communion. This reconciliation was reserved to the bishop, as is expressly declared in the Penitential of Theodore, Archbishop of Canterbury; though in case of necessity the bishop could delegate a priest for the purpose (lib. I, xiii). Since the bishop did not hear their confession, the "absolution" which he pronounced must have been a release from some penalty they had incurred. The effect, moreover, of this reconciliation was to restore the penitent to the state of baptismal innocence and consequently of freedom from all penalties, as appears from the so-called Apostolic Constitutions (lib. II, c. xli) where it is said: "Eritque in loco baptismi impositio manuum"—i. e. the imposition of hands has the same effect as baptism (cf. Palmieri, "De Pœnitentia", Rome, 1879, 459 sq.).

In a later period (eighth century to twelfth) it became customary to permit the substitution of some lighter penance for that which the canons prescribed. Thus the Penitential of Egbert, Archbishop of York, declares (XIII, 11): "For him who can comply with what the penitential prescribes, well and good; for him who cannot, we give counsel of God's mercy. Instead of one day on bread and water let him sing fifty psalms on his knees or seventy psalms without genuflecting.

But if he does not know the psalms and cannot fast, let him, instead of one year on bread and water, give twenty-six *solidi* in alms, fast till None on one day of each week and till Vespers on another, and in the three Lents bestow in alms half of what he receives." The practice of substituting the recitation of psalms or the giving of alms for a portion of the fast is also sanctioned in the Irish Synod of 807, which says (c. xxiv) that the fast of the second day of the week may be "redeemed" by singing one psalter or by giving one *denarius* to a poor person. Here we have the beginning of the so-called "redemptions" which soon passed into general usage. Among other forms of commutation were pilgrimages to well-known shrines such as that at St. Albans in England or at Compostela in Spain. But the most important place of pilgrimage was Rome. According to Bede (674-735) the "visitatio liminum", or visit to the tomb of the Apostles, was even then regarded as a good work of great efficacy (Hist. Eccl., IV, 23). At first the pilgrims came simply to venerate the relics of the Apostles and martyrs; but in course of time their chief purpose was to gain the indulgences granted by the pope and attached especially to the Stations. Jerusalem, too, had long been the goal of these pious journeys, and the reports which the pilgrims gave of their treatment by the infidels finally brought about the Crusades (q. v.). At the Council of Clermont (1095) the First Crusade was organized, and it was decreed (can. ii): "Whoever, out of pure devotion and not for the purpose of gaining honour or money, shall go to Jerusalem to liberate the Church of God, let that journey be counted in lieu of all penance". Similar indulgences were granted throughout the five centuries following (Amort, op. cit., 46 sq.), the object being to encourage these expeditions which involved so much hardship and yet were of such great importance for Christendom and civilization. The spirit in which these grants were made is expressed by St. Bernard, the preacher of the Second Crusade (1146): "Receive the sign of the Cross, and thou shalt like-

wise obtain the indulgence of all thou hast confessed with a contrite heart" (ep. cccxxii; al., cccclxii).

Similar concessions were frequently made on special occasions, such as the dedication of churches, e. g., that of the old Temple Church in London, which was consecrated in honour of the Blessed Virgin Mary, 10 Feb., 1185, by the Lord Heraclius, who to those yearly visiting it indulged sixty days of the penance enjoined them—as the inscription over the main entrance attests. The canonization of saints was often marked by the granting of an indulgence, e. g. in honour of St. Laurence O'Toole by Honorius III (1226), in honour of St. Edmund of Canterbury by Innocent IV (1248), and in honour of St. Thomas of Hereford by John XXII (1320). A famous indulgence is that of the Portiuncula (q. v.), obtained by St. Francis in 1221 from Honorius III. But the most important largess during this period was the plenary indulgence granted in 1300 by Boniface VIII to those who, being truly contrite and having confessed their sins, should visit the basilicas of Sts. Peter and Paul (see JUBILEE).

Among the works of charity which were furthered by indulgences, the hospital held a prominent place. Lea in his "History of Confession and Indulgences" (III, 189) mentions only the hospital of Santo Spirito in Rome, while another Protestant writer, Uhlhorn (Gesch. d. Christliche Liebthätigkeit, Stuttgart, 1884, II, 244) states that "one cannot go through the archives of any hospital without finding numerous letters of indulgence". The one at Halberstadt in 1284 had no less than fourteen such grants, each giving an indulgence of forty days. The hospitals at Lucerne, Rothenberg, Rostock, and Augsburg enjoyed similar privileges (see also the list of concessions in Lallemand, "Hist. de la Charité", Paris, 1906, III, 99).

ABUSES.—It may seem strange that the doctrine of indulgences should have proved such a stumbling-block, and excited so much prejudice and opposition. But the explanation of this may be found in the abuses which unhappily have been associated with what is in itself a salutary practice. In this respect of course indulgences are not exceptional: no institution, however holy, has entirely escaped abuse through the malice or unworthiness of man. Even the Eucharist, as St. Paul declares, means an eating and drinking of judgment to the recipient who discerns not the body of the Lord (I Cor., xi, 27-9). And, as God's forbearance is constantly abused by those who relapse into sin, it is not surprising that the offer of pardon in the form of an indulgence should have led to evil practices. These again have been in a special way the object of attack because, doubtless, of their connexion with Luther's revolt (see LUTHER). On the other hand, it should not be forgotten that the Church, while holding fast to the principle and intrinsic value of indulgences, has repeatedly condemned their misuse: in fact, it is often from the severity of her condemnation that we learn how grave the abuses were.

Even in the age of the martyrs, as stated above, there were practices which St. Cyprian was obliged to reprehend, yet he did not forbid the martyrs to give the *libelli*. In later times abuses were met by repressive measures on the part of the Church. Thus the Council of Clovesho in England (747) condemns those who imagine that they might atone for their crimes by substituting, in place of their own, the austerities of mercenary penitents (Haddan and Stubbs, "Councils", III, 373; cf. Lingard, "History and Antiquities of the Anglo-Saxon Church", 2nd. ed., London, 1858, I, 311). Against the excessive indulgences granted by some prelates, the Fourth Council of the Lateran (1215) decreed that at the dedication of a church the indulgence should not be for more than a year, and, for the anniversary of the dedication or any other case, it should not exceed forty days, this being the limit observed by the pope himself on such occa-

sions. The same restriction was enacted by the Council of Ravenna in 1317. In answer to the complaint of the Dominicans and Franciscans, that certain prelates had put their own construction on the indulgences granted to these Orders, Clement IV in 1268 forbade any such interpretation, declaring that, when it was needed, it would be given by the Holy See. In 1330 the brothers of the hospital of Haut-Pas falsely asserted that the grants made in their favour were more extensive than what the documents allowed: John XXII had all these brothers in France seized and imprisoned. Boniface IX, writing to the Bishop of Ferrara in 1392, condemns the practice of certain religious who falsely claimed that they were authorized by the pope to forgive all sorts of sins, and exacted money from the simple-minded among the faithful by promising them perpetual happiness in this world and eternal glory in the next. When Henry, Archbishop of Canterbury, attempted in 1420 to give a plenary indulgence in the form of the Roman Jubilee, he was severely reprimanded by Martin V, who characterized his action as "unheard-of presumption and sacrilegious audacity". In 1450 Cardinal Nicholas of Cusa, Apostolic Legate to Germany, found some preachers asserting that indulgences released from the guilt of sin as well as from the punishment. This error, due to a misunderstanding of the words "a culpa et a poenâ", the cardinal condemned at the Council of Magdeburg. Finally, Sixtus IV in 1478, lest the idea of gaining indulgences should prove an incentive to sin, reserved for the judgment of the Holy See a large number of cases in which faculties had formerly been granted to confessors (Extrav. Com., tit. de poen. et remiss.).

Traffic in Indulgences.—These measures show plainly that the Church long before the Reformation, not only recognized the existence of abuses, but also used her authority to correct them. In spite of all this, disorders continued and furnished the pretext for attacks directed against the doctrine itself, no less than against the practice, of indulgences. Here, as in so many other matters, the love of money was the chief root of the evil; indulgences were employed by mercenary ecclesiastics as a means of pecuniary gain. Leaving the details concerning this traffic to a subsequent article (see REFORMATION), it may suffice for the present to note that the doctrine itself has no natural or necessary connexion with pecuniary profit, as is evident from the fact that the abundant indulgences of the present day are free from this evil association: the only conditions required are the saying of certain prayers or the performance of some good work or some practice of piety. Again, it is easy to see how abuses crept in. Among the good works which might be encouraged by being made the condition of an indulgence, almsgiving would naturally hold a conspicuous place, while men would be induced by the same means to contribute to some pious cause such as the building of churches, the endowment of hospitals, or the organization of a crusade. It is well to observe that in these purposes there is nothing essentially evil. To give money to God or to the poor is a praiseworthy act, and, when it is done from right motives, it will surely not go unrewarded. Looked at in this light, it might well seem a suitable condition for gaining the spiritual benefit of an indulgence. Yet, however innocent in itself, this practice was fraught with grave danger, and soon became a fruitful source of evil. On the one hand there was the danger that the payment might be regarded as the price of the indulgence, and that those who sought to gain it might lose sight of the more important conditions. On the other hand, those who granted indulgences might be tempted to make them a means of raising money: and, even where the rulers of the Church were free from blame in this matter, there was room for corruption in their officials and agents, or among the popular preachers of indulgences. This

class has happily disappeared, but the type has been preserved in Chaucer's "Pardoner", with his bogus relics and indulgences.

While it cannot be denied that these abuses were widespread, it should also be noted that, even when corruption was at its worst, these spiritual grants were being properly used by sincere Christians, who sought them in the right spirit, and by priests and preachers, who took care to insist on the need of true repentance. It is therefore not difficult to understand why the Church, instead of abolishing the practice of indulgences, aimed rather at strengthening it by eliminating the evil elements. The Council of Trent in its decree "On Indulgences" (Sess. XXV) declares: "In granting indulgences the Council desires that moderation be observed in accordance with the ancient approved custom of the Church, lest through excessive ease ecclesiastical discipline be weakened; and further, seeking to correct the abuses that have crept in . . . it decrees that all criminal gain therewith connected shall be entirely done away with as a source of grievous abuse among the Christian people; and as to other disorders arising from superstition, ignorance, irreverence, or any cause whatsoever—since these, on account of the widespread corruption, cannot be removed by special prohibitions—the Council lays upon each bishop the duty of finding out such abuses as exist in his own diocese, of bringing them before the next provincial synod, and of reporting them, with the assent of the other bishops, to the Roman Pontiff, by whose authority and prudence measures will be taken for the welfare of the Church at large, so that the benefit of indulgences may be bestowed on all the faithful by means at once pious, holy, and free from corruption." After deploring the fact that, in spite of the remedies prescribed by earlier councils, the traders (*quæstores*) in indulgences continued their nefarious practice to the great scandal of the faithful, the council ordained that the name and method of these *quæstores* should be entirely abolished, and that indulgences and other spiritual favours of which the faithful ought not to be deprived should be published by the bishops and bestowed gratuitously, so that all might at length understand that these heavenly treasures were dispensed for the sake of piety and not of lucre (Sess. XXI, c. ix). In 1567 St. Pius V cancelled all grants of indulgences involving any fees or other financial transactions.

Apocryphal Indulgences.—One of the worst abuses was that of inventing or falsifying grants of indulgence. Previous to the Reformation, such practices abounded and called out severe pronouncements by ecclesiastical authority, especially by the Fourth Council of the Lateran (1215) and that of Vienne (1311). After the Council of Trent the most important measure taken to prevent such frauds was the establishment of the Congregation of Indulgences. A special commission of cardinals served under Clement VIII and Paul V, regulating all matters pertaining to indulgences. The Congregation of Indulgences was definitively established by Clement IX in 1669 and reorganized by Clement XI in 1710. It has rendered efficient service by deciding various questions relative to the granting of indulgences and by its publications. The "Raccolta" (q. v.) was first issued by one of its consultors, Telesforo Galli, in 1807; the last three editions 1877, 1886, and 1898 were published by the Congregation. The other official publication is the "Decreta authentica", containing the decisions of the Congregation from 1668 to 1882. This was published in 1883 by order of Leo XIII. See also "Rescripta authentica" by Joseph Schneider (Ratisbon, 1885). By a Motu Proprio of Pius X, dated 28 January, 1904, the Congregation of Indulgences was united to the Congregation of Rites, without any diminution, however, of its prerogatives.

SALUTARY EFFECTS OF INDULGENCES.—Lea (History, etc., III, 446) somewhat reluctantly acknowledges

that "with the decline in the financial possibilities of the system, indulgences have greatly multiplied as an incentive to spiritual exercises, and they can thus be so easily obtained that there is no danger of the recurrence of the old abuses, even if the finer sense of fitness, characteristic of modern times, on the part of both prelates and people, did not deter the attempt." The full significance, however, of this "multiplication" lies in the fact that the Church, by rooting out abuses, has shown the vigour of her spiritual life. She has maintained the practice of indulgences, because, when these are used in accordance with what she prescribes, they strengthen the spiritual life by inducing the faithful to approach the sacraments and to purify their consciences of sin. And further, they encourage the performance, in a truly religious spirit, of works that redound, not alone to the welfare of the individual, but also to God's glory and to the service of the neighbour.

W. H. KENT.

Indulgences, APOSTOLIC.—The indulgences known as Apostolic or Apostolical are those which the Roman pontiff, the successor of the Prince of the Apostles, attaches to the crosses, crucifixes, chaplets, rosaries, images, and medals which he blesses, either with his own hand or by those to whom he has delegated this faculty. The principles set forth in the general article on indulgences apply here also. But since these Apostolic indulgences are among the most frequent and abundant of those now in use throughout the Church, they seem to require a separate and more detailed treatment. As the name implies, they are indulgences granted by the pope himself. Some of them, as will be seen from the subjoined list, are plenary, and others are partial indulgences. It may be observed that the possession of the cross or medal or other indulgenced object is not the sole or immediate condition for gaining the indulgences attached thereto by the blessing of the Holy Father or his delegate. But the possession enables the recipient to gain the various indulgences on the performance of certain prescribed good works or acts of piety. In this respect the possession of the object may be regarded as analogous to the local or personal limitation of other indulgences. For in blessing the objects presented to him, the Holy Father thereby grants the indulgences, not to all the faithful indiscriminately, but to certain persons, to wit the actual or prospective possessors of these crosses, medals, etc., which may thus be regarded as the marks or tokens distinguishing those persons to whom this special privilege is given. At the same time, since it is open to all the faithful to obtain such blessed objects, especially now, when the faculty for giving this blessing is so readily granted to the clergy throughout the world, the Apostolic indulgences can hardly be reckoned with those that are merely local or personal.

Although the popes have been in the habit of granting indulgences from a much earlier date, some of them having an analogous limitation or connexion with the holding or wearing of a blessed object, the Apostolic indulgences, as we now know them, date only from the year 1587—just a lifetime after the

publication of Luther's famous theses against indulgences. And a curious interest attaches to the first origin of this familiar practice. Before that date popes had simply blessed medals or other objects presented to them for that purpose. But as Pope Sixtus V sets forth in his Bull "Laudemus viros gloriosos" (1 December, 1587), the workmen engaged in his restoration and adornment of the Lateran Basilica, in pulling down some very old walls, had accidentally brought to light a number of ancient coins bearing on one side a cross and on the other the likeness of one or other of the early Christian emperors. This remarkable discovery led the pontiff, in accordance with the opening words of his Bull, to sing the praises of those old rulers of Christendom, such as Constantine, Theodosius, and Marcianus. And, by a happy thought, he made their old coins again pass current, though bearing, as befitted their new life, not an earthly but a heavenly and spiritual value. In other words, he granted a number of indulgences, on the performance of certain pious works, to all who became possessors of the old coins enriched with this new blessing. The list of special indulgences set forth in this Bull as thus attached to those coins of the Christian emperors is the first instance of the Apostolic indulgences which the popes now attach to the medals, etc. presented for their benediction. It must not be supposed, however, that the Apostolic indulgences, now so generally given in this familiar manner, are in all respects the same as those granted on this special occasion by Pope Sixtus V. A comparison of the aforesaid Bull "Laudemus viros gloriosos" with the list in the instruction annexed to the customary faculty for blessing rosaries etc., attaching indulgences thereto, will show many points of difference, both in the extent of the indulgences and in the good works prescribed as conditions for gaining them. And it will be found, as might have been anticipated, that in some cases the indulgences given in the Sixtine Bull are more abundant than the others. In at least one important point both lists are in agreement. Thus it will be seen that in both cases a plenary indulgence may be gained by those who devoutly invoke the Holy Name of Jesus at the hour of death (*in mortis articulo*). But, on the other hand, the plenary indulgence for confession and Communion which the possessors of the Lateran coins could apparently gain on any day can only be gained by holders of ordinary indulgenced objects on certain great festivals, and that on the fixed condition of reciting certain prayers. In like manner the partial indulgences granted in the Sixtine Bull are in some cases as much as two or three hundred years; none of these in the modern lists are higher than seven years and seven quarantines (or spaces of forty days); and others are no more than one hundred days or fifty days.

The following list gives the indulgences now attached to chaplets, crosses, and medals blessed by the Holy Father or by any priest holding the delegated *facultas benedicendi coronas, cruces et sacra numismata*:—

(1) A plenary indulgence, to be gained by all who shall recite at least once a week the chaplet of Our Lord, or that of the Blessed Virgin, or the rosary, or the third part thereof, or the Divine Office, or the Little Office of the Blessed Virgin, or the Office of the Dead, or the Seven Penitential Psalms, or the Gradual Psalms; or who shall teach the rudiments of the Faith, or visit those who are in prison or in a hospital, or succour the poor, or hear or say Mass, if being truly contrite and having confessed to a priest approved by the bishop, they receive the Holy Eucharist on any one of the following days, to wit: Christmas, the Epiphany, Easter, Ascension Day, Whit Sunday, Trinity Sunday, Corpus Christi, the Purification, Annunciation, Assumption, Nativity, and Immaculate Conception of the Blessed Virgin, the feasts of St. John the Baptist and the Apostles Peter and Paul,

Andrew, James, John, Thomas, Philip and James, Bartholomew, Matthew, Simon and Jude, Matthias, the feast of St. Joseph and All Saints' Day; and shall pray devoutly for the uprooting of heresies and schisms, for the propagation of the Catholic Faith, for peace and concord among Christian princes, and for the other needs of the Church.

(2) An indulgence of seven years and seven quarantines to be gained on the same conditions on any other feast of Christ or of the Blessed Virgin.

(3) An indulgence of five years and five quarantines to be gained on the same conditions on any Sunday or feast of the year.

(4) An indulgence of one hundred days, to be gained on the same conditions on any other day in the year.

(5) All who are accustomed to recite at least once a week the chaplet, or the rosary, or the Office of the Blessed Virgin, or of the Dead, or Vespers, or at least one Nocturn with Lauds, or the Seven Penitential Psalms with their litanies and prayers, shall gain an indulgence of one hundred days every time they do so.

(6) Whosoever *in articulo mortis* devoutly commends his soul to God, and being ready to accept death peacefully and willingly from the hands of God, and truly penitent, and having confessed and been refreshed with Holy Communion, or if this be not possible, at least contrite, shall invoke the Name of Jesus with the lips if possible, or, if not, at least with the heart, shall receive the fruit of a plenary indulgence.

(7) Whosoever shall make a devout preparation before saying Mass, or receiving the Holy Eucharist or reciting the Divine Office or the Little Office of the Blessed Virgin, shall receive an indulgence of fifty days every time he does this.

(8) All who visit those in prison or the sick in the hospitals, helping them by some good work, or teach Christian doctrine in a church, or at home to their children, kindred, or servants, shall gain an indulgence of two hundred days.

(9) Whosoever at the sound of a church bell shall say the Angelus morning, noon, or evening, or, not knowing it, shall say once an Our Father and Hail Mary, or at the evening signal for praying for the dead shall recite the psalm *De Profundis*, or if he know it not an Our Father and Hail Mary shall gain an indulgence of one hundred days.

(10) All who on Friday shall devoutly meditate on the Passion and Death of Christ and say three Our Fathers and Hail Marys shall gain one hundred days indulgence.

(11) Whosoever, being truly penitent, and firmly purposing to amend his life, shall examine his conscience, and devoutly repeat the Our Father and Hail Mary thrice in honour of the Blessed Trinity, or five times in reverence for the Five Wounds of Christ, shall likewise gain one hundred days' indulgence.

(12) Whosoever prays with devotion for those in their agony, or says for them at least an Our Father and Hail Mary, shall gain an indulgence of fifty days.

In order to gain any of these indulgences the person must have the blessed medal, etc. with him at the time, or else have it kept in his room in some seemly place and say the prescribed prayers there. It is expressly declared in the instruction annexed to the faculty that this blessing and indulgence is not given to painted or printed images or to crosses etc. made of iron, pewter, lead, or any fragile material. The images, moreover, must represent canonized saints or those whose names are in the Roman Martyrology. The indulgence is confined to the person to whom the object is first given and it is lost if the object be given or lent for the purpose of transferring the indulgence; it is not lost, however, when lent for another purpose, e. g. for use in reciting the rosary. And when medals etc. have been enriched with these indulgences, it is strictly forbidden to sell them.

W. H. KENT.

Indult, PONTIFICAL (Lat. *Indultum*, found in Roman Law, bk. I, Cod. Theodos. 3, 10, and 4, 15; V, 15, 2; concession, privilege). Indults are general faculties (q. v.), granted by the Holy See to bishops and others, of doing something not permitted by the common law. General needs, peculiar local conditions, the impossibility of applying to Rome in individual cases, etc., are sufficient reasons for making these concessions. They are granted for a definite term, three, five, ten years, or for a specific number of cases; they are ordinary or extraordinary, contained in certain formulæ, and are of the nature of privileges or quasi-privileges. Indults are personal in so much as they must be used by the bishop himself (or his vicar-general), unless he be allowed to communicate them to others. Permission to communicate indults is conceded in some formulæ, denied in others, while in others it is granted conditionally. The one to whom these faculties are communicated is the agent or commissary of the ordinary rather than his delegate. Indults are communicated as they are received; are possessed and exercised not in the name of the one communicating them, but in the name of him to whom they have been communicated: consequently they do not cease with the death or loss of jurisdiction of the ordinary through whom they were communicated. Faculties that are subdelegated may be restricted in regard to persons, number of cases, etc., and are exercised not in one's own name, but in the name of another: the power of the subdelegate ceases on the death of the delegate.

It is to be noted moreover that the word *indult*, employed in a less restricted sense, is synonymous with privilege, grace, favour, concession, etc. (Decretals, L. V., tit. 33, c. 17, 19, tit. 40, c. 21; Conc. Trid., VI, c. 2, De Ref.). Hence we speak of the Lenten indult, an indult of secularization granted to a religious, an indult to absent oneself from the recitation of the Divine Office in choir, an indult permitting the celebration of Mass at sea, the indult of a private oratory, a privileged altar, and so on. An indult or privilege differs from a dispensation, since the former grants a permanent (not necessarily perpetual) concession, while the latter is given for a particular case, outside which the obligation of observing the law remains. (See FACULTIES, CANONICAL.)

VON KOBER in *Kirchenlex.*, s. v. *Indult*; TAUNTON, *Law of the Church* (London, 1906).

ANDREW B. MEEHAN.

Ine (INI or INA), SAINT, King of the West Saxons, d. 728. He was a son of the underking Cenred and ascended the West-Saxon throne in 688, a year before the death of his predecessor Cædwalla. For thirty-seven years he ruled over a turbulent and warlike people, and by virtue of a varied genius was equally successful as a warrior and legislator. His first efforts were directed towards establishing internal peace, and in the fifth year of his reign he drew up a set of laws which regulated the administration of justice and fixed the legal status of the various classes of his subjects. With the exception of the Kentish laws this code is the earliest extant specimen of Anglo-Saxon legislation, and for that reason is of particular interest. When matters in his own realm had been adjusted, Ine turned his attention to Withred, King of Kent, and at the head of a formidable army demanded *weregild* for the death of Mul (or Mollo), brother of Cædwalla. Withred paid the full compensation—thirty thousand pounds of silver—

and admitted the supremacy of the West-Saxons over all the country held by the English south of the Thames. By successive conquests, Ine added several districts to the western provinces of his domain, and after a bitter war conquered Geraint, King of Cornwall, and built a fortress on the Tone, at the site of the present Taunton. Throughout his entire reign Ine was particularly solicitous for the welfare of religion and religious establishment, founding many monasteries and endowing those already in existence. The Abbey of Glastonbury was erected by him, with the funds, it is thought, which came from the wergild collected from Withred. Other monastic establishments which were recipients of his bounty were those at Malmesbury, Wimborne, Nursling, Tisbury, Waltham, and Sherborne.

Worn out by his long rule, Ine determined to abdicate in favour of Æthelheard and Oswald, and to make his peace with God. In pursuance of this project, he convened the Witenagemot and formally announced his abdication. With his wife he proceeded to Rome, to watch and pray at the tomb of the Apostles in the guise of a poor and pious pilgrim. While there he founded a hospice or home for English pilgrims, in the district known as Burgus Saxonum, the modern Borgo. Some historians trace the foundation of the English College at Rome back to this hospice. The memory of the hospice still lives in the Church of San Spirito in Sassia, formerly S. Maria in Saxia; it is thought that King Ine and his Queen, Ethelburga, lie buried in this church or in the atrium of St. Peter's. They died blessing God that they had been allowed to lay their dust in the consecrated soil of Rome.

STANLEY QUINN.

Infallibility, (in general) exemption or immunity from liability to error or failure; (in particular) in theological usage, the supernatural prerogative by which the Church of Christ is, by a special Divine assistance, preserved from liability to error in her definitive dogmatic teaching regarding matters of faith and morals. In this article the subject will be treated under the following heads: I. True Meaning of Infallibility; II. Proof of the Church's Infallibility; III. Organs of Infallibility—(A) Œcumenical Councils; (B) The Pope; IV. Scope and Object of Infallibility; V. What Teaching is Infallible?

I. TRUE MEANING OF INFALLIBILITY.—It is well to begin by stating the ecclesiological truths that are assumed to be established before the question of infallibility arises. It is assumed (a) that Christ founded His Church as a visible and perfect society; (b) that He intended it to be absolutely universal and imposed upon all men a solemn obligation actually to belong to it, unless inculpable ignorance should excuse them; (c) that He wished this Church to be one, with a visible corporate unity of faith, government, and worship; (d) and that in order to secure this threefold unity, He bestowed on the Apostles and their legitimate successors in the hierarchy—and on them exclusively—the plenitude of teaching, governing, and liturgical powers with which He wished this Church to be endowed. And this being assumed, the question that concerns us is whether, and in what way, and to what extent, Christ has made His Church to be infallible in the exercise of her doctrinal authority. It is only in connexion with doctrinal authority as such that, practically speaking, this question of infallibility arises; that is to say, when we speak of the Church's infallibility we mean, at least primarily and principally, what is sometimes called active as distinguished from passive infallibility. We mean in other words that the Church is infallible in her objective definitive teaching regard-

ing faith and morals, not that believers are infallible in their subjective interpretation of her teaching. This is obvious in the case of individuals, any one of whom may err in his understanding of the Church's teaching; nor is the general or even unanimous consent of the faithful in believing a distinct and independent organ of infallibility. Such consent, indeed, when it can be verified as apart, is of the highest value as a proof of what has been, or may be, defined by the teaching authority, but, except in so far as it is thus the subjective counterpart and complement of objective authoritative teaching, it cannot be said to possess an absolutely decisive dogmatic value. It will be best therefore to confine our attention to active infallibility as such, as by so doing we shall avoid the confusion which is the sole basis of many of the objections that are most persistently and most plausibly urged against the doctrine of ecclesiastical infallibility. (See below II, C.)

Infallibility must be carefully distinguished both from Inspiration (q. v.) and from Revelation (q. v.). Inspiration signifies a special positive Divine influence and assistance by reason of which the human agent is not merely preserved from liability to error but is so guided and controlled that what he says or writes is truly the word of God, that God Himself is the principal author of the inspired utterance; but infallibility merely implies exemption from liability to error. God is not the author of a merely infallible, as He is of an inspired, utterance; the former remains a merely human document. Revelation, on the other hand, means the making known by God, supernaturally, of some truth hitherto unknown, or at least not vouchered for by Divine authority; whereas infallibility is concerned with the interpretation and effective safeguarding of truths already revealed. Hence when we say, for example, that some doctrine defined by the pope or by an œcumenical council is infallible, we mean merely that its inerrancy is Divinely guaranteed according to the terms of Christ's promise to His Church, not that either the pope or the Fathers of the Council are inspired as were the writers of the Bible or that any new revelation is embodied in their teaching. It is well further to explain (a) that infallibility means more than exemption from actual error; it means exemption from the possibility of error; (b) that it does not require holiness of life, much less imply impeccability in its organs; sinful and wicked men may be God's agents in defining infallibly; (c) and finally that the validity of the Divine guarantee is independent of the fallible arguments upon which a definitive decision may be based, and of the possibly unworthy human motives that in cases of strife may appear to have influenced the result. It is the definitive result itself, and it alone, that is guaranteed to be infallible, not the preliminary stages by which it is reached. If God bestowed the gift of prophecy on Caiphas who condemned Christ (John, xi, 49-52; xviii, 14), surely He may bestow the lesser gift of infallibility even on unworthy human agents. It is, therefore, a mere waste of time for opponents of infallibility to try to create a prejudice against the Catholic claim by pointing out the moral or intellectual shortcomings of popes or councils that have pronounced definitive doctrinal decisions, or to try to show historically that such decisions in certain cases were the seemingly natural and inevitable outcome of existing conditions, moral, intellectual, and political. All that history may be fairly claimed as witnessing to under either of these heads may freely be granted without the substance of the Catholic claim being affected.

II. PROOF OF THE CHURCH'S INFALLIBILITY.—That the Church is infallible in her definitions on faith and morals is itself a Catholic dogma, which, although it was formulated œcumenically for the first time in the Vatican Council, had been explicitly taught long before and had been assumed from the very beginning without question down to the time of the Protestant ref-

ormation. The teaching of the Vatican Council is to be found in Sess. III, cap. iv (Denzinger-Bannwart, "Enchiridion", 1800), where it is declared that "the doctrine of faith, which God has revealed, has not been proposed as a philosophical discovery to be improved upon by human talent, but has been committed as a Divine deposit to the spouse of Christ, to be faithfully guarded and infallibly interpreted by her"; and in Sess. IV, cap. iv (Enchiridion, 1839), where it is defined that the Roman pontiff when he teaches ex cathedra "enjoys, by reason of the Divine assistance promised to him in blessed Peter, that infallibility with which the Divine Redeemer wished His Church to be endowed in defining doctrine regarding faith and morals". Even the Vatican Council, it will be seen, only introduces the general dogma of the Church's infallibility as distinct from that of the pope obliquely and indirectly, following in this respect the traditional usage according to which the dogma is assumed as an implicate of œcumenical magisterial authority. Instances of this will be given below and from these it will appear that, though the word *infallibility* as a technical term hardly occurs at all in the early councils or in the Fathers, the thing signified by it was understood and believed in and acted upon from the beginning. We shall confine our attention in this section to the general question, reserving the doctrine of papal infallibility for special treatment (see III, B.). This arrangement is adopted not because it is the best or most logical, but because it enables us to travel a certain distance in the friendly company of those who cling to the general doctrine of ecclesiastical infallibility while rejecting the papal claims. Taking the evidence both scriptural and traditional as it actually stands, one may fairly maintain that it proves papal infallibility in a simpler, more direct, and more eogent way than it proves the general doctrine independently; and there can be no doubt but that this is so if we accept as the alternative to papal infallibility the vague and unworkable theory of œcumenical infallibility which most High-Church Anglicans would substitute for Catholic teaching. Nor are the Eastern schismatic Churches much better off than the Anglican in this respect, except that each has retained a sort of virtual belief in its own infallibility, and that in practice they have been more faithful in guarding the doctrines infallibly defined by the early œcumenical councils. Yet certain Anglicans and all the Eastern Orthodox agree with Catholics in maintaining that Christ promised infallibility to the true Church, and we welcome their support as against the general Protestant denial of this truth.

A. *Proof from Scripture.*—(1) In order to prevent misconception and thereby to anticipate a common popular objection which is wholly based on a misconception, it should be premised that when we appeal to the Scriptures for proof of the Church's infallible authority we appeal to them merely as reliable historical sources, and abstract altogether from their inspiration. Even considered as purely human documents they furnish us, we maintain, with a trustworthy report of Christ's sayings and promises; and, taking it to be a fact that Christ said what is attributed to Him in the Gospels, we further maintain that Christ's promises to the Apostles and their successors in the teaching office include the promise of such guidance and assistance as clearly implies infallibility. Having thus used the Scriptures as mere historical sources to prove that Christ endowed the Church with infallible teaching authority, it is no vicious circle, but a perfectly legitimate logical procedure, to rely on the Church's authority for proof of what writings are inspired. (2) Merely remarking for the present that the texts in which Christ promised infallible guidance especially to Peter and his successors in the primacy might be appealed to here as possessing an a fortiori value, it will suffice to consider the classical texts

usually employed in the general proof of the Church's infallibility; and of these the principal are: Matt., xxviii, 18-20, and xvi, 18; John, xiv, xv, and xvi; I Tim., iii, 14-15; and Acts, xv, 28 sq.

(a) In Matt., xxviii, 18-20, we have Christ's solemn commission to the Apostles delivered shortly before His Ascension: "All power is given to me in heaven and in earth. Going therefore, teach ye all nations; baptizing them in the name of the Father, and of the Son, and of the Holy Ghost; teaching them to observe all things whatsoever I have commanded you: and behold I am with you all days, even to the consummation of the world." In Mark, xvi, 15-16, the same commission is given more briefly with the added promise of salvation to believers and the threat of damnation to unbelievers; "Go ye into the whole world, and preach the gospel to every creature. He that believeth and is baptized shall be saved; but he that believeth not shall be condemned." Now it cannot be denied by anyone who admits that Christ established a visible Church at all, and endowed it with any kind of effective teaching authority, that this commission, with all it implies, was given not only to the Apostles personally for their own lifetime, but to their successors to the end of time, "even to the consummation of the world". And assuming that it was the omniscient Son of God Who spoke these words, with a full and clear realization of the import which, in conjunction with His other promises, they were calculated to convey to the Apostles and to all simple and sincere believers to the end of time, the only reasonable interpretation to put upon them is that they contain the promise of infallible guidance in doctrinal teaching made to the Apostolic College in the first instance and then to the hierarchial college that was to succeed it.

In the first place it was not without reason that Christ preface His commission by appealing to the fullness of power He Himself had received: "All power is given to me", etc. This is evidently intended to emphasize the extraordinary character and extent of the authority He is communicating to His Church—an authority, it is implied, which He could not personally communicate were not He Himself omnipotent. Hence the promise that follows cannot reasonably be understood of ordinary natural providential guidance, but must refer to a very special supernatural assistance. In the next place there is question particularly in this passage of doctrinal authority—of authority to teach the Gospel to all men—if Christ's promise to be with the Apostles and their successors to the end of time in carrying out this commission means that those whom they are to teach in His name and according to the plenitude of the power He has given them are bound to receive that teaching as if it were His own; in other words they are bound to accept it as infallible. Otherwise the perennial assistance promised would not really be efficacious for its purpose, and efficacious Divine assistance is what the expression used is clearly intended to signify (see Murray, "De Ecclesia", vol. II, p. 199 sqq., where a long catena of parallel texts illustrating this point will be found). Supposing, as we do, that Christ actually delivered a definite body of revealed truth, to be taught to all men in all ages, and to be guarded from change or corruption by the living voice of His visible Church, it is idle to contend that this result could be accomplished effectively—in other words that His promise could be effectively fulfilled—unless that living voice can speak infallibly to every generation on any question that may arise affecting the substance of Christ's teaching.

Without infallibility there could be no finality regarding any one of the great truths which have been identified historically with the very essence of Christianity; and it is only with those who believe in historical Christianity that the question need be discussed. Take, for instance, the mysteries of the Trinity and Incarnation. If the early Church was

not infallible in her definitions regarding these truths, what compelling reason can be alleged to-day against the right to revive the Sabellian, or the Arian, or the Macedonian, or the Apollinarian, or the Nestorian, or the Eutychian controversies, and to defend some interpretation of these mysteries which the Church has condemned as heretical? One may not appeal to the inspired authority of the Scriptures, since for the fact of their inspiration the authority of the Church must be invoked, and unless she be infallible in deciding this one would be free to question the inspiration of any of the New Testament writings. Nor, abstracting from the question of inspiration, can it be fairly maintained, in face of the facts of history, that the work of interpreting scriptural teaching regarding these mysteries and several other points of doctrine that have been identified with the substance of historical Christianity is so easy as to do away with the need of a living voice to which, as to the voice of Christ Himself, all are bound to submit.

Unity of Faith was intended by Christ to be one of the distinctive notes of His Church, and the doctrinal authority He set up was intended by His Divine guidance and assistance to be really effective in maintaining this unity; but the history of the early heresies and of the Protestant sects proves clearly, what might indeed have been anticipated *a priori*, that nothing less than an infallible public authority, capable of acting decisively whenever the need should rise and pronouncing an absolutely final and irreformable judgment, is really efficient for this purpose. Practically speaking the only alternative to infallibility is private judgment, and this after some centuries of trial has been found to lead inevitably to utter rationalism. If the early definitions of the Church were fallible, and therefore reformable, perhaps those are right who say to-day that they ought to be discarded as being actually erroneous or even pernicious, or at least that they ought to be re-interpreted in a way that substantially changes their original meaning; perhaps, indeed, there is no such thing as absolute truth in matters religious! How, for example, is a Modernist who takes up this position to be met except by insisting that definitive teaching is irreversible and unchangeable; that it remains true in its original sense for all time; in other words that it is infallible? For no one can reasonably hold that fallible doctrinal teaching is irreformable, or deny the right of later generations to question the correctness of earlier fallible definitions and call for their revision or correction, or even for their total abandonment.

From these considerations we are justified in concluding that if Christ really intended His promise to be with His Church to be taken seriously, and if He was truly the Son of God, omniscient and omnipotent, knowing history in advance and able to control its course, then the Church is entitled to claim infallible doctrinal authority. This conclusion is confirmed by considering the awful sanction by which the Church's authority is supported: all who refuse to assent to her teaching are threatened with eternal damnation. This proves the value Christ Himself set upon His own teaching and upon the teaching of the Church commissioned to teach in His name; religious indifferentism is here reprobated in unmistakable terms. Nor does such a sanction lose its significance in this connexion because the same penalty is threatened for disobedience to fallible disciplinary laws, or even in some cases for refusing to assent to doctrinal teaching that is admittedly fallible. Indeed, every mortal sin, according to Christ's teaching, is punishable with eternal damnation. But if one believes in the objectivity of eternal and immutable truth, he will find it difficult to reconcile with a worthy conception of the Divine attributes a command under penalty of damnation to give unqualified and irrevocable internal assent to a large body of professedly Divine doctrine,

the whole of which is possibly false. Nor is this difficulty satisfactorily met, as some have attempted to meet it, by calling attention to the fact that in the Catholic system internal assent is sometimes demanded, under pain of grievous sin, to doctrinal decisions that do not profess to be infallible. For, in the first place, the assent to be given in such cases is recognized as being not irrevocable and irreversible, like the assent required in the case of definitive and infallible teaching, but merely provisional; and in the next place, internal assent is obligatory only on those who can give it consistently with the claims of objective truth on their conscience—this conscience, it is assumed, being directed by a spirit of generous loyalty to genuine Catholic principles. To take a particular example, if Galileo, who happened to be right, while the ecclesiastical tribunal which condemned him was wrong, had really possessed convincing scientific evidence in favour of the heliocentric theory, he would have been justified in refusing his internal assent to the opposite theory, provided that in doing so he observed with thorough loyalty all the conditions involved in the duty of external obedience. Finally, it should be observed that fallible provisional teaching, as such, derives its binding force principally from the fact that it emanates from an authority which is competent, if need be, to convert it into infallible definitive teaching. Without infallibility in the background it would be difficult to establish theoretically the obligation of yielding internal assent to the Church's provisional decisions.

(b) In Matt., xvi, 18, we have the promise that "the gates of hell shall not prevail" against the Church that is to be built on the rock; and this also, we maintain, implies the assurance of the Church's infallibility in the exercise of her teaching office. Such a promise, of course, must be understood with limitations according to the nature of the matter to which it is applied. As applied to sanctity, for example, which is essentially a personal and individual affair, it does not mean that every member of the Church or of her hierarchy is necessarily a saint, but merely that the Church, as a whole, will be conspicuous among other things for the holiness of life of her members. As applied to doctrine, however—always assuming, as we do, that Christ delivered a body of doctrine the preservation of which in its literal truth was to be one of the chief duties of the Church—it would be a mockery to contend that such a promise is compatible with the supposition that the Church has possibly erred in perhaps the bulk of her dogmatic definitions, and that throughout the whole of her history she has been threatening men with eternal damnation in Christ's name for refusing to believe doctrines that are probably false and were never taught by Christ Himself. Could this be the case, would it not be clear that the gates of hell can prevail and probably have prevailed most signally against the Church?

(c) In Christ's discourse to the Apostles at the Last Supper several passages occur which clearly imply the promise of infallibility: "I will ask the Father, and he shall give you another Paraclete, that he may abide with you for ever. The spirit of truth . . . he shall abide with you, and shall be in you" (John, xiv, 16, 17). "But the Paraclete, the Holy Ghost, whom the Father will send in my name, he will teach you all things, and bring all things to your mind, whatsoever I shall have said to you" (ibid., 26). "But when he, the Spirit of truth, is come, he will teach you all truth" (John, xvi, 13). And the same promise is renewed immediately before the Ascension (Acts, i, 8). Now what does the promise of this perennial and efficacious presence and assistance of the Holy Ghost, the Spirit of truth, mean in connexion with doctrinal authority, except that the Third Person of the Blessed Trinity is made responsible for what the Apostles and

their successors may define to be part of Christ's teaching? But in so far as the Holy Ghost is responsible for Church teaching, that teaching is necessarily infallible: what the Spirit of truth guarantees cannot be false.

(d) In I Tim., iii, 15, St. Paul speaks of "the house of God, which is the church of the living God, the pillar and ground of the truth"; and this description would be something worse than mere exaggeration if it had been intended to apply to a fallible Church; it would be a false and misleading description. That St. Paul, however, meant it to be taken for sober and literal truth is abundantly proved by what he insists upon so strongly elsewhere, viz., the strictly Divine authority of the Gospel which he and the other Apostles preached, and which it was the mission of their successors to go on preaching without change or corruption to the end of time. "When you had received of us", he writes to the Thessalonians, "the word of the hearing of God, you received it not as the word of men, but (as it is indeed) the word of God, who worketh in you that have believed" (I Thess., ii, 13). The Gospel, he tells the Corinthians, is intended to bring "into captivity every understanding unto the obedience of Christ" (II Cor., x, 5). Indeed, so fixed and irreformable is the doctrine that has been taught that the Galatians (i, 8) are warned to anathematize any one, even an angel from heaven, who should preach to them a Gospel other than that which St. Paul had preached. Nor was this attitude—which is intelligible only on the supposition that the Apostolic College was infallible—peculiar to St. Paul. The other Apostles and Apostolic writers were equally strong in anathematizing those who preached any other Christianity than that which the Apostles had preached (cf. II Peter, ii, 1 sqq.; I John, iv, 1 sqq.; II John, 7 sqq.; Jude, 4); and St. Paul makes it clear that it was not to any personal or private views of his own that he claimed to make every understanding captive, but to the Gospel which Christ had delivered to the Apostolic body. When his own authority as an Apostle was challenged, his defence was that he had seen the risen Saviour and received his mission directly from Him, and that his Gospel was in complete agreement with that of the other Apostles (see, v. g., Gal., ii, 2-9). Finally, the consciousness of corporate infallibility is clearly signified in the expression used by the assembled Apostles in the decree of the Council of Jerusalem: "It hath seemed good to the Holy Ghost and to us, to lay no further burden upon you", etc. (Acts, xv, 28). It is true that the specific points here dealt with are chiefly disciplinary rather than dogmatic, and that no claim to infallibility is made in regard to purely disciplinary questions as such; but behind, and independent of, disciplinary details there was the broad and most important dogmatic question to be decided, whether Christians, according to Christ's teaching, were bound to observe the Old Law in its integrity, as orthodox Jews of the time observed it. This was the main issue at stake, and in deciding it the Apostles claimed to speak in the name and with the authority of the Holy Ghost. Would men who did not believe that Christ's promises assured them of an infallible Divine guidance have presumed to speak in this way?—And could they, in so believing, have misunderstood the Master's meaning?

B. Proof from Tradition.—If, during the early centuries, there was no explicit and formal discussion regarding ecclesiastical infallibility as such, yet the Church, in her corporate capacity, after the example of the Apostles at Jerusalem, always acted on the assumption that she was infallible in doctrinal matters and all the great orthodox teachers believed that she was so. Those who presumed, on whatever grounds, to contradict the Church's teaching were treated as representatives of Antichrist (cf. I John, ii, 18 sq.),

and were excommunicated and anathematized. It is clear from the letters of St. Ignatius of Antioch how intolerant he was of error, and how firmly convinced that the episcopal body was the Divinely ordained and Divinely guided organ of truth; nor can any student of early Christian literature deny that, where Divine guidance is claimed in doctrinal matters, infallibility is implied. So intolerant of error was St. Polycarp that, as the story goes, when he met Marcion on the street in Rome, he did not hesitate to denounce the heretic to his face as "the firstborn of Satan". This incident, whether it be true or not, is at any rate thoroughly in keeping with the spirit of the age, and such a spirit is incompatible with belief in a fallible Church. St. Irenæus, who in the disciplinary Paschal question favoured compromise for the sake of peace, took an altogether different attitude in the doctrinal controversy with the Gnostics; and the great principle on which he mainly relies in refuting the heretics is the principle of a living ecclesiastical authority, for which he virtually claims infallibility. For example he says: "Where the Church is, there also is the Spirit of God, and where the Spirit of God is there is the Church, and every grace: for the Spirit is truth" (Adv. Hær., III, xxiv, 1); and again, "Where the charismata of the Lord are given, there must we seek the truth, i. e. with those to whom belongs the ecclesiastical succession from the Apostles, and the unadulterated and incorruptible word. It is they who are the guardians of our faith . . . and securely [*sine periculo*] expound the Scriptures to us" (op. cit., IV, xxvi, 5). Tertullian, writing from the Catholic standpoint, ridicules the suggestion that the universal teaching of the Church can be wrong: "Suppose now that all [the Churches] have erred . . . [This would mean that] the Holy Spirit has not watched over any of them so as to guide it into the truth, although He was sent by Christ, and asked from the Father for this very purpose—that He might be the teacher of truth" (*doctor veritatis*—"De Præscript", xxxvi, in P. L., II, 49). St. Cyprian compares the Church to an incorruptible virgin: "Adulterari non potest sponsa Christi, incorrupta est et pudica" (De unitate eccl.). It is needless to go on multiplying citations, since the broad fact is indisputable that in the ante-Nicene, no less than in the post-Nicene, period all orthodox Christians attributed to the corporate voice of the Church, speaking through the body of bishops in union with their head and centre, all the fullness of doctrinal authority which the Apostles themselves had possessed; and to question the infallibility of that authority would have been considered equivalent to questioning God's veracity and fidelity. It was for this reason that during the first three centuries the concurrent action of the bishops dispersed throughout the world proved to be effective in securing the condemnation and exclusion of certain heresies and maintaining Gospel truth in its purity; and when from the fourth century onwards it was found expedient to assemble œcumenical councils, after the example of the Apostles at Jerusalem, it was for the same reason that the doctrinal decision of these councils were held to be absolutely final and irreformable. Even the heretics, for the most part, recognized this principle in theory; and if in fact they often refused to submit, they did so as a rule on the ground that this or that council was not really œcumenical, that it did not truly express the corporate voice of the Church, and was not, therefore, infallible. This will not be denied by anyone who is familiar with the history of the doctrinal controversies of the fourth and fifth centuries, and within the limits of this article we cannot do more than call attention to the broad conclusion in proof of which it would be easy to cite a great number of particular facts and testimonies.

C. Objections Alleged.—Several of the objections usually urged against ecclesiastical infallibility have

been anticipated in the preceding sections; but some others deserve a passing notice here. (1) It has been urged (v. g. Martineau, "Seat of Authority in Religion", pp. 66-68) that neither a fallible individual nor a collection of fallible individuals can constitute an infallible organ. This is quite true in reference to natural knowledge and would be also true as applied to Church authority if Christianity were assumed to be a mere product of natural reason. But we set out from an entirely different standpoint. We assume as antecedently and independently established that God can supernaturally guide and enlighten men, individually or collectively, in such a way that, notwithstanding the natural fallibility of human intelligence, they may speak and may be known with certainty to speak in His name and with His authority, so that their utterance may be not merely infallible but inspired. And it is only with those who accept this standpoint that the question of the Church's infallibility can be profitably discussed.

(2) Again, it is said that even those who accept the supernatural view-point must ultimately fall back on fallible human reasoning in attempting to prove infallibility; that behind any conclusion that is proposed on so-called infallible authority there always lurks a premise which cannot claim for itself more than a merely human and fallible certainty; and that, since the strength of a conclusion is no greater than that of its weaker premise, the principle of infallibility is a useless as well as an illogical importation into Christian theology. This is a line of argument frequently used by Salmon (Infallibility, pp. 47-49, 57 sq., 79, 279, etc.), one of the subtlest of the recent opponents of infallibility who have written from what might be described as the orthodox Protestant standpoint. In reply it is to be observed that this argument, if valid, would prove very much more than it is here introduced to prove; that it would indeed undermine the very foundations of Christian faith. For example, on purely rational grounds I have only moral certainty that God Himself is infallible or that Christ was the infallible mediator of a Divine Revelation; yet if I am to give a rational defence of my faith, even in mysteries which I do not comprehend, I must do so by appealing to the infallibility of God and of Christ. But according to the logic of the objection this appeal would be futile and the assent of faith considered as a rational act would be no firmer or more secure than natural human knowledge. The truth is that the inferential process here and in the case of ecclesiastical infallibility transcends the rule of formal logic that is alleged. Assent is given not to the logical force of the syllogism, but directly to the authority which the inference serves to introduce; and this holds good in a measure even when there is question of mere fallible authority. Once we come to believe in and rely upon authority we can afford to overlook the means by which we were brought to accept it, just as a man who has reached a solid standing place where he wishes to remain no longer relies on the frail ladder by which he mounted. It cannot be said that there is any essential difference in this respect between Divine and ecclesiastical infallibility. The latter of course is only a means by which we are put under subjection to the former in regard to a body of truth once revealed and to be believed by all men to the end of time, and no one can fairly deny that it is useful, not to say necessary, for that purpose. Its alternative is private judgment, and history has shown to what results this alternative inevitably leads.

(3) Again, it is urged that the kind of submission demanded by infallible authority is incompatible with the rights of reason and of legitimate inquiry and speculation, and tends to give to one's faith in his Creed a dry, formal, proud, and intolerant character which contrasts unfavourably with the warm-hearted, humble, and tolerant faith of the man who

believes on conviction after free personal inquiry. In reply it is sufficient to say that submission to infallible authority implies no abdication of reason, nor does it impose any undue check on the believer's freedom to pursue inquiry and speculation. Were it so, how could one believe in revealed doctrine at all without being accused, as unbelievers do accuse Christians, of committing intellectual suicide? If one believes in revelation at all one does so in deference to God's authority, an authority that is surely infallible; and so far as the principle of the objection is concerned there is no difference between ecclesiastical and Divine infallibility. It is somewhat surprising, therefore, that professing Christians should recur to such an argument, which, if consistently urged, would be fatal to their own position. And as regards freedom of inquiry and speculation in reference to revealed doctrines themselves, it should be observed that true freedom in this as in other matters does not mean unbridled licence. Really effective authoritative control is always necessary to prevent liberty from degenerating into anarchy, and in the sphere of Christian doctrine—we are arguing only with those who admit that Christ delivered a body of doctrine that was to be held as eternally true—from the very nature of the case, the only effective barrier against Rationalism—the equivalent of political anarchy—is an infallible ecclesiastical authority. This authority, therefore, by its decisions merely curtails personal freedom of inquiry in religious matters in the same way, and by an equally valid title, as the supreme authority in the State, restricts the liberty of private citizens.

Moreover, as in a well ordered state there remains within the law a large margin for the exercise of personal freedom, so in the Church there is a very extensive domain which is given over to theological speculation; and even in regard to doctrines that have been infallibly defined there is always room for further inquiry so as the better to understand, explain, defend, and expand them. The only thing one may not do is to deny or change them. Then, in reply to the charge of intolerance, it may be said that if this be taken to mean an honest and sincere repudiation of Liberalism and Rationalism, infallibilists must plead guilty to the charge; but in doing so they are in good company. Christ Himself was intolerant in this sense; so were His Apostles; and so were all the great champions of historical Christianity in every age. Finally, it is altogether untrue, as every Catholic knows and feels, that faith which allows itself to be guided by infallible ecclesiastical authority is less intimately personal or less genuine in any way than faith based on private judgment. If this docile loyalty to Divine authority which true faith implies means anything, it means that one must listen to the voice of those whom God has expressly appointed to teach in His name, rather than to one's own private judgment deciding what God's teaching ought to be. For to this, in final analysis, the issue is reduced; and he who chooses to make himself, instead of the authority which God has instituted, the final arbiter in matters of faith is far from possessing the true spirit of faith, which is the foundation of charity and of the whole supernatural life.

(4) Again, it is urged by our opponents that infallibility as exercised by the Catholic Church has shown itself to be a failure, since, in the first place, it has not prevented schisms and heresies in the Christian body, and, in the second place, has not attempted to settle for Catholics themselves many important questions, the final settlement of which would be a great relief to believers by freeing them from anxious and distressing doubts. In reply to the first point it is enough to say that the purpose for which Christ endowed the Church with infallibility was not to prevent the occurrence of schisms and heresies, which He foresaw and

foretold, but to take away all justification for their occurrence; men were left free to disrupt the unity of Faith inculcated by Christ in the same way as they were left free to disobey any other commandment, but heresy was intended to be no more justifiable objectively than homicide or adultery. In reply to the second point we would observe that it seems highly inconsistent for the same objector to blame Catholics in one breath for having too much defined doctrine in their Creed and, in the next breath, to find fault with them for having too little. Either part of the accusation, in so far as it is founded, is a sufficient answer to the other. Catholics as a matter of fact do not feel in any way distressed either by the restrictions, on the one hand, which infallible definitions impose or, on the other hand, by the liberty as to non-defined matters which they enjoy, and they can afford to decline the services of an opponent who is determined at all costs to invent a grievance for them. The objection is based on a mechanical conception of the function of infallible authority, as if this were fairly comparable, for example, to a clock which is supposed to tell us unerringly not only the large divisions of time such as the hours, but also, if it is to be useful as a time-keeper, the minutes and even the seconds. Even if we admit the propriety of the illustration, it is obvious that a clock which records the hours correctly, without indicating the smaller fractions of time, is a very useful instrument, and that it would be foolish to refuse to follow it because it is not provided with a minute or a second hand on the dial. But it is perhaps best to avoid such mechanical illustrations altogether. The Catholic believer who has real faith in the efficiency of Christ's promises will not doubt but that the Holy Ghost Who abides in the Church, and Whose assistance guarantees the infallibility of her definitions, will also provide that any definition that may be necessary or expedient for the safeguarding of Christ's teaching will be given at the opportune moment, and that such definable questions as are left undefined may, for the time being at least, be allowed to remain so without detriment to the faith or morals of the faithful.

(5) Finally, it is objected that the acceptance of ecclesiastical infallibility is incompatible with the theory of doctrinal development which Catholics commonly admit. But so far is this from being true that it is impossible to frame any theory of development, consistent with Catholic principles, in which infallible authority is not recognized as a guiding and controlling factor. For development in the Catholic sense does not mean that the Church ever changes her definitive teaching, but merely that as time goes on and human science advances, her teaching is more deeply analysed, more fully comprehended, and more perfectly coordinated and explained in itself and in its bearings on other departments of knowledge. It is only on the false supposition that development means change in definitive teaching that the objection has any real force. We have confined our attention to what we may describe as the rational objections against the Catholic doctrine of infallibility, omitting all mention of the interminable exegetical difficulties which Protestant theologians have raised against the Catholic interpretation of Christ's promises to His Church. The necessity for noticing these latter has been done away with by the growth of Rationalism, the logical successor of old-time Protestantism. If the infallible Divine authority of Christ, and the historicity of His promises to which we have appealed, be admitted, there is no reasonable escape from the conclusion which the Catholic Church has drawn from those promises.

III. ORGANS OF INFALLIBILITY.—Having established the general doctrine of the Church's infallibility, we naturally proceed to ask what are the organs through which the voice of infallible authority makes itself heard. We have already seen that it is only in

the episcopal body which has succeeded to the college of Apostles that infallible authority resides, and that it is possible for the authority to be effectively exercised by this body, dispersed throughout the world, but united in bonds of communion with Peter's successor, who is its visible head and centre. During the interval from the council of the Apostles at Jerusalem to that of their successors at Nicaea this ordinary every-day exercise of episcopal authority was found to be sufficiently effective for the needs of the time, but when a crisis like the Arian heresy arose, its effectiveness was discovered to be inadequate, as was indeed inevitable by reason of the practical difficulty of verifying that fact of moral unanimity, once any considerable volume of dissent had to be faced. And while for subsequent ages down to our own day it continues to be theoretically true that the Church may, by the exercise of this ordinary teaching authority, arrive at a final and infallible decision regarding doctrinal questions, it is true at the same time that in practice it may be impossible to prove conclusively that such unanimity as may exist has a strictly definitive value in any particular case, unless it has been embodied in a decree of an œcumenical council, or in the ex cathedra teaching of the pope, or, at least, in some definite formula such as the Athanasian Creed. Hence, for practical purposes and in so far as the special question of infallibility is concerned, we may neglect the so-called "magisterium ordinarium" and confine our attention to œcumenical councils and the pope.

A. *Œcumenical Councils*.—(1) An œcumenical or general, as distinguished from a particular or provincial council, is an assembly of bishops which juridically represents the universal Church as hierarchically constituted by Christ; and, since the primacy of Peter and of his successor, the pope, is an essential feature in the hierarchical constitution of the Church, it follows that there can be no such thing as an œcumenical council independent of, or in opposition to, the pope. No body can perform a strictly corporate function validly without the consent and co-operation of its head. Hence (a) the right to summon an œcumenical council belongs properly to the pope alone, though by his express or presumed consent given *ante* or *post factum*, the summons may be issued, as in the case of most of the early councils, in the name of the civil authority. For œcumenicity in the adequate sense all the bishops of the world in communion with the Holy See should be summoned, but it is not required that all or even a majority should be present. (b) As regards the conduct of the deliberations, the right of presidency, of course, belongs to the pope or his representative; while as regards the decisions arrived at unanimity is not required. (c) Finally, papal approbation is required to give œcumenical value and authority to conciliar decrees, and this must be subsequent to conciliar action, unless the pope, by his personal presence and conscience, has already given his official ratification (for details see COUNCILS, GENERAL).

(2) That an œcumenical council which satisfies the conditions above stated is an organ of infallibility will not be denied by anyone who admits that the Church is endowed with infallible doctrinal authority. How, if not through such an organ, could infallible authority effectively express itself—unless indeed through the pope? If Christ promised to be present with even two or three of His disciples gathered together in His name (Matt., xviii, 20), a fortiori will He be present efficaciously in a representative assembly of His authorized teachers; and the Paraclete whom He promised will be present, so that whatever the council defines may be prefaced with the Apostolic formula, "it hath seemed good to the Holy Ghost and to us." And this is the view which the councils held regarding their own authority and upon which the defender of orthodoxy insisted. The councils insisted on their defini-

tions being accepted under pain of anathema, while St. Athanasius, for example, says that "the word of the Lord pronounced by the œcumenical synod of Nicæa stands for ever" (Ep. ad Afros, n. 2, in P. G., XXVI, 1031), and St. Leo the Great proves the unchangeable character of definitive conciliar teaching on the ground that God has irrevocably confirmed its truth—"universæ fraternitatis irtractabili firmavit assensu" (Ep. cxx, 1, in P. L., LIV, 1047).

(3) It remains to be observed, in opposition to the theory of conciliar infallibility usually defended by High Church Anglicans, that once the requisite papal confirmation has been given the doctrinal decisions of an œcumenical council become infallible and irreformable; there is no need to wait perhaps hundreds of years for the unanimous acceptance and approbation of the whole Christian world. Such a theory really amounts to a denial of conciliar infallibility, and sets up in the final court of appeal an altogether vague and ineffective tribunal. If the theory be true, were not the Arians perfectly justified in their prolonged struggle to reverse Nicæa, and has not the persistent refusal of the Nestorians down to our own day to accept Ephesus and of the Monophysites to accept Chalcedon been sufficient to defeat the ratification of those councils? No workable rule can be given for deciding when such subsequent ratification as this theory requires becomes effective; and even if this could be done in the case of some of the earlier councils whose definitions are received by the Anglicans, it would still be true that since the Photian schism it has been practically impossible to secure any such consensus as is required—in other words that the working of infallible authority, the purpose of which is to teach every generation, has been suspended since the ninth century, and that Christ's promises to His Church have been falsified. It is consoling, no doubt, to cling to the abstract doctrine of an infallible authority, but if one adopts a theory which represents that authority as unable to fulfil its appointed task during the greater part of the Church's life, it is not easy to see how this consolatory belief is anything more than a delusion.

B. *The Pope*.—(1) The Vatican Council has defined as "a divinely revealed dogma" that "the Roman Pontiff, when he speaks *ex cathedra*—that is, when in the exercise of his office as pastor and teacher of all Christians he defines, by virtue of his supreme Apostolic authority, a doctrine of faith or morals to be held by the whole Church—is, by reason of the Divine assistance promised to him in blessed Peter, possessed of that infallibility with which the Divine Redeemer wished His Church to be endowed in defining doctrines of faith and morals; and consequently that such definitions of the Roman Pontiff are irreformable of their own nature (*ex sese*) and not by reason of the Church's consent" (Denzinger, no. 1839—old no. 1680). For the correct understanding of this definition it is to be noted, in the first place, that what is claimed for the pope is infallibility merely, not impeccability or inspiration (see above under I). In the next place the infallibility claimed for the pope is the same in its nature, scope, and extent as that which the Church as a whole possesses; nor does his *ex cathedra* teaching, in order to be infallible, require to be ratified by the Church's consent. The pope teaching *ex cathedra* is an independent organ of infallibility. In the third place, infallibility is not attributed to every doctrinal act of the pope, but only to his *ex cathedra* teaching; and the conditions required for *ex cathedra* teaching are mentioned in the Vatican decree: (a) The pontiff must teach in his public and official capacity as pastor and doctor of all Christians, not merely in his private capacity as a theologian, preacher or allocutionist, nor in his capacity as a temporal prince or as a mere ordinary of the Diocese of Rome. It must be clear that he speaks as spiritual head of the Church universal. (b) Then it is only when, in this capacity, he teaches some

doctrine of faith or morals that he is infallible (see below, IV). (c) Further it must be sufficiently evident that he intends to teach with all the fullness and finality of his supreme Apostolic authority, in other words that he wishes to determine some point of doctrine in an absolutely final and irrevocable way, or to define it in the technical sense (see DEFINITION). These are well-recognized formulæ by means of which the defining intention may be manifested. (d) Finally for an *ex cathedra* decision it must be clear that the pope intends to bind the whole Church, to demand internal assent from all the faithful to his teaching under pain of incurring spiritual shipwreck (*naufragium fidei*), according to the expression used by Pius IX in defining the Immaculate Conception of the Blessed Virgin. Theoretically, this intention might be made sufficiently clear in a papal decision which is addressed only to a particular Church; but in present day conditions, when it is so easy to communicate with the most distant parts of the earth and to secure a literally universal promulgation of papal acts, the presumption is that unless the pope formally addresses the whole Church in the recognized official way, he does not intend his doctrinal teaching to be held by all the faithful as *ex cathedra* and infallible.

It should be observed in conclusion that papal infallibility is a personal and incommunicable charisma, which is not shared by any pontifical tribunal. It was promised directly to Peter, and to each of Peter's successors in the primacy, but not as a prerogative the exercise of which could be delegated to others. Hence doctrinal decisions or instructions issued by the Roman congregations, even when approved by the pope in the ordinary way, have no claim to be considered infallible. To be infallible they must be issued by the pope himself in his own name according to the conditions already mentioned as requisite for *ex cathedra* teaching.

(2) *Proof of Papal Infallibility*.—(a) From Holy Scripture.—From Holy Scripture, as already stated, the special proof of the pope's infallibility is, if anything, stronger and clearer than the general proof of the infallibility of the Church as a whole, just as the proof of his primacy is stronger and clearer than any proof that can be advanced independently for the Apostolic authority of the episcopate.

(i) " . . . thou art Peter (Kepha)", said Christ, "and upon this rock (kepha) I will build my church, and the gates of hell shall not prevail against it" (Matt., xvi, 18). Various attempts have been made by opponents of the papal claims to get rid of the only obvious and natural meaning of these words, according to which Peter is to be the rock-foundation of the Church, and the source of its indefectibility against the gates of hell. It has been suggested, for example, that "this rock" is Christ Himself, or that it is Peter's faith (typifying the faith of future believers), not his person and office, on which the Church is to be built. But these and similar interpretations simply destroy the logical coherency of Christ's statement and are excluded by the Greek and Latin texts, in which a kind of play upon the words Πέτρος (Petrus) and πέτρα (petra) is clearly intended, and still more forcibly by the original Aramaic which Christ spoke, and in which the same word *Képha* must have been used in both clauses. And granting, as the best modern non-Catholic commentators grant, that this text of St. Matthew contains the promise that St. Peter was to be the rock-foundation of the Church, it is impossible to deny that Peter's successors in the primacy are heirs to this promise—unless, indeed, one is willing to admit the principle, which would be altogether subversive of the hierarchial system, that the authority bestowed by Christ on the Apostles was not intended to be transmitted to their successors, and to abide in the Church permanently. Peter's headship was as much emphasized by Christ Himself, and was as clearly

recognized in the infant Church, as was the enduring authority of the episcopal body; and it is a puzzle which the Catholic finds it hard to solve, how those who deny that the supreme authority of Peter's successor is an essential factor in the constitution of the Church can consistently maintain the Divine authority of the episcopate. Now, as we have already seen, the doctrinal indefectibility is certainly implied in Christ's promise that the gates of hell shall not prevail against His Church, and cannot be effectively secured without doctrinal infallibility; so that if Christ's promise means anything—if Peter's successor is in any true sense the foundation and source of the Church's indefectibility—he must by virtue of this office be also an organ of ecclesiastical infallibility. The metaphor used clearly implies that it was the rock-foundation which was to give stability to the superstructure, not the superstructure to the rock.

Nor can it be said that this argument fails by proving too much—by proving, that is, that the pope should be impeccable, or at least that he should be a saint, since, if the Church must be holy in order to overcome the gates of hell, the example and inspiration of holiness ought to be given by him who is the visible foundation of the Church's indefectibility. From the very nature of the case a distinction must be made between sanctity or impeccability, and infallible doctrinal authority. Personal sanctity is essentially incommunicable as between men, and cannot affect others except in fallible and indirect ways, as by prayer or example; but doctrinal teaching which is accepted as infallible is capable of securing that certainty and consequent unity of faith by which, as well as by other bonds, the members of Christ's visible Church were to be "compacted and fitly joined together" (Eph., iv, 16). It is true, of course, that infallible teaching, especially on moral questions, helps to promote sanctity among those who accept, but no one will seriously suggest that, if Christ had made the pope impeccable as well as infallible, He would thereby have provided for the personal sanctity of individual believers any more efficiently than, on Catholic principles, He has actually done.

(ii) Christ said to St. Peter—and to his successors in the primacy: "Simon, Simon, behold Satan hath desired to have you, that he may sift you as wheat: But I have prayed for thee, that thy faith fail not: and thou, being once converted, confirm thy brethren" (Luke, xxii, 31-32.) This special prayer of Christ was for Peter *alone* in his capacity as head of the Church, as is clear from the text and context; and since we cannot doubt the efficacy of Christ's prayer, it follows that to St. Peter and his successors the office was personally committed of authoritatively confirming the brethren—other bishops, and believers generally—in the faith; and this implies infallibility.

(iii) In John, xxi, 15-17, we have the record of Christ's thrice-repeated demand for a confession of Peter's love and the thrice-repeated commission to feed the lambs and the sheep: "When therefore they had dined, Jesus saith to Simon Peter: Simon, son of John, lovest thou me more than these? He saith to him: Yea, Lord, thou knowest that I love thee. He saith to him: Feed my lambs. He saith to him again: Simon, son of John, lovest thou me? He saith to him: Yea, Lord, thou knowest that I love thee. He saith to him: Feed my lambs. He said to him the third time: Simon, son of John, lovest thou me? Peter was grieved, because he had said to him the third time: Lovest thou me? And he said to him: Lord, thou knowest all things: thou knowest that I love thee. He said to him: Feed my sheep." Here the complete and supreme pastoral charge of the whole of Christ's flock—sheep as well as lambs—is given to St. Peter and his successors, and in this is undoubtedly comprised supreme doctrinal authority. But, as we have already seen, doctrinal authority in the Church cannot

be really effective in securing the unity of faith intended by Christ, unless in the last resort it is infallible. It is futile to contend, as non-Catholics have often done, that this passage is merely a record of Peter's restoration to his personal share in the collective Apostolic authority, which he had forfeited by his triple denial. It is quite probable that the reason why Christ demanded the triple confession of love was as a set-off to the triple denial; but if Christ's words in this and in the other passages quoted mean anything, and if they are to be understood in the same obvious and natural way in which defenders of the Divine authority of the episcopate understand the words elsewhere addressed to the Apostles collectively, there is no denying that the Petrine and papal claims are more clearly supported by the Gospels than are those of a monarchical episcopate. It is equally futile to contend that these promises were made, and this power given, to Peter merely as the representative of the Apostolic college: in the texts of the Gospel, Peter is individually singled out and addressed with particular emphasis, so that, unless by denying with the rationalist the genuineness of Christ's words, there is no logical escape from the Catholic position. Furthermore, it is clear from such evidence as the Acts of the Apostles supply, that Peter's supremacy was recognized in the infant Church (see PRIMACY), and if this supremacy was intended to be efficacious for the purpose for which it was instituted, it must have included the prerogative of doctrinal infallibility.

(b) Proof from Tradition.—One need not expect to find in the early centuries a formal and explicit recognition throughout the Church either of the primacy or of the infallibility of the pope in the terms in which these doctrines are defined by the Vatican Council. But the fact cannot be denied that from the beginning there was a wide-spread acknowledgment by other churches of some kind of supreme authority in the Roman pontiff in regard not only to disciplinary but also to doctrinal affairs. This is clear, for example, from Clement's Letter to the Corinthians at the end of the first century, from the way in which, shortly afterwards, Ignatius of Antioch addresses the Roman Church; from the conduct of Pope Victor in the latter half of the second century, in connexion with the paschal controversy; from the teaching of St. Irenæus, who lays it down as a practical rule that conformity with Rome is a sufficient proof of Apostolicity of doctrine against the heretics (Adv. Hær., III, iii); from the correspondence between Pope Dionysius and his namesake at Alexandria in the second half of the third century; and from many other facts that might be mentioned (see PRIMACY.) Even heretics recognized something special in the doctrinal authority of the pope, and some of them, like Marcion in the second century and Pelagius and Cœlestius in the first quarter of the fifth, appealed to Rome in the hope of obtaining a reversal of their condemnation by provincial bishops or synods. And in the age of the councils, from Nicæa onwards, there is a sufficiently explicit and formal acknowledgment of the doctrinal supremacy of the Bishop of Rome. St. Augustine, for example, voices the prevailing Catholic sentiment when in reference to the Pelagian affair he declares, in a sermon delivered at Carthage after the receipt of Pope Innocent's letter, confirming the decrees of the Council of Carthage: "Rome's reply has come: the case is closed" (*Inde etiam rescripta venerunt: causa finita est.* Serm. cxxxi, c. x, in P. L., XXXVIII, 734); and again when in reference to the same subject he insists that "all doubt has been removed by the letter of Pope Innocent of blessed memory" (C. Duas Epp. Pelag., II, iii, 5, in P. L., XLIV, 574). And what is still more important, is the explicit recognition in formal terms, by councils which are admitted to be œcumenical, of the finality, and by

implication the infallibility, of papal teaching. Thus the Fathers of Ephesus (431) declare that they "are compelled" to condemn the heresy of Nestorius "by the sacred canons and by the letter of our holy father and co-minister, Celestine the Bishop of Rome" (Hardouin, I, 1471). Twenty years later (451) the Fathers of Chalcedon, after hearing Leo's letter read, make themselves responsible for the statement: "so do we all believe . . . Peter has spoken through Leo" (Hardouin, II, 306). More than two centuries later, at the Third Council of Constantinople (680-681), the same formula is repeated: "Peter has spoken through Agatho" (Hardouin, III, 1422). After the lapse of still two other centuries, and shortly before the Photian schism, the profession of faith drawn up by Pope Hormisdas was accepted by the Fourth Council of Constantinople (869-870), and in this profession, it is stated that, by virtue of Christ's promise: "Thou art Peter, etc.," "the Catholic religion is preserved inviolable in the Apostolic See" (Thiel, *Epp. Rom. Pont.*, I, 853; Denzinger, 171-2—old no. 141). Finally the reunion Council of Florence (1438-1445), repeating what had been substantially contained in the profession of faith of Michael Palæologus approved by the Second Council of Lyons (1274) (Denzinger, 466—old no. 389), defined "that the holy Apostolic see and the Roman pontiff holds the primacy over the whole world; and that the Roman pontiff himself is the successor of the blessed Peter, Prince of the Apostles and the true Vicar of Christ, and the head of the whole Church, and the father and teacher of all Christians, and that to him in blessed Peter the full power of feeding, ruling and governing the universal Church was given by our Lord Jesus Christ, and this is also recognized in the acts of the œcumenical council and in the sacred canons (*quemadmodum etiam . . . continetur*—Denzinger, 694—old no. 587). Thus it is clear that the Vatican Council introduced no new doctrine when it defined the infallibility of the pope, but merely re-asserted what had been implicitly admitted and acted upon from the beginning and had even been explicitly proclaimed and in equivalent terms by more than one of the early œcumenical councils. Until the Photian Schism in the East and the Galilean movement in the West (see GALLICANISM) there was no formal denial of papal supremacy, or of papal infallibility as an adjunct of supreme doctrinal authority, while the instances of their formal acknowledgment that have been referred to in the early centuries are but a few out of the multitude that might be quoted.

(e) Objections alleged.—The only noteworthy objections against papal infallibility, as distinct from the infallibility of the Church at large, are based on certain historical instances in which it is alleged that certain popes in the *ex cathedra* exercise of their office have actually taught heresy and condemned as heretical what has afterwards turned out to be true. The chief instances usually appealed to are those of Popes Liberius, Honorius, and Vigilius in the early centuries, and the Galileo affair at the beginning of the seventeenth century.

(i) Liberius, it is alleged, subscribed an Arian or Semi-Arian creed drawn up by the Council of Sirmium and anathematized St. Athanasius, the great champion of Nicæa, as a heretic. But even if this were an accurate statement of historical fact, it is a very inadequate statement. The all-important circumstance should be added that the pope so acted under pressure of a very cruel coercion, which at once deprives his action of any claim to be considered *ex cathedra*, and that he himself, as soon as he had recovered his liberty, made amends for the moral weakness he had been guilty of. This is a quite satisfactory answer to the objection, but it ought to be added that there is no evidence whatever that Liberius ever anathematized St. Athanasius expressly as a heretic,

and that it remains a moot point which of three or four Sirmian creeds he subscribed, two of which contained no positive assertion of heretical doctrine and were defective merely for the negative reason that they failed to insist on the full definition of Nicæa (see LIBERIUS, SAINT, POPE).

(ii) The charge against Pope Honorius is a double one: that, when appealed to in the Monothelite controversy, he actually taught the Monothelite heresy in his two letters to Sergius; and that he was condemned as a heretic by the Sixth œcumenical Council, the decrees of which were approved by Leo II. But in the first place it is quite clear from the tone and terms of these letters that, so far from intending to give any final, or *ex cathedra*, decision on the doctrinal question at issue, Honorius merely tried to allay the rising bitterness of the controversy by securing silence. In the next place, taking the letters as they stand, the very most that can be clearly and incontrovertibly deduced from them is, that Honorius was not a profound or acute theologian, and that he allowed himself to be confused and misled by the wily Sergius as to what the issue really was and too readily accepted the latter's misrepresentation of his opponents' position, to the effect that the assertion of two wills in Christ meant two contrary or discordant wills. Finally, in reference to the condemnation of Honorius as a heretic, it is to be remembered that there is no œcumenical sentence affirming the fact either that Honorius's letters to Sergius contain heresy, or that they were intended to define the question with which they deal. The sentence passed by the fathers of the council has œcumenical value only in so far as it was approved by Leo II; but, in approving the condemnation of Honorius, his successor adds the very important qualification that he is condemned, not for the doctrinal reason that he taught heresy, but on the moral ground that he was wanting in the vigilance expected from him in his Apostolic office and thereby allowed a heresy to make headway which he should have crushed in its beginnings (see HONORIUS, POPE).

(iii) There is still less reason for trying to found an objection to papal infallibility on the wavering conduct of Pope Vigilius in connexion with the controversy of the Three Chapters; and it is all the more needless to delay upon this instance as most modern opponents of the papal claims no longer appeal to it (see VIGILIUS, POPE; THREE CHAPTERS).

(iv) As to the Galileo affair (see GALILEO), it is quite enough to point out the fact that the condemnation of the heliocentric theory was the work of a fallible tribunal. The pope cannot delegate the exercise of his infallible authority to the Roman Congregations, and whatever issues formally in the name of any of these, even when approved and confirmed in the ordinary official way by the pope, does not pretend to be *ex cathedra* and infallible. The pope, of course, can convert doctrinal decisions of the Holy Office, which are not in themselves infallible, into *ex cathedra* papal pronouncements, but in doing so he must comply with the conditions already explained—which neither Paul V nor Urban VIII did in the Galileo case.

The broad fact, therefore, remains certain that no *ex cathedra* definition of any pope has ever been shown to be erroneous.

C. *Mutual Relations of the Organs of Infallibility.*—

(1) A few brief remarks under this head will serve to make the Catholic conception of ecclesiastical infallibility still clearer. Three organs have been mentioned: the bishops dispersed throughout the world in union with the Holy See; œcumenical councils under the headship of the pope; and the pope himself separately. Through the first of these is exercised what theologians describe as the *ordinarium magisterium*, i. e. the common or everyday teaching authority of the Church; through the second and third the *magisterium solemne*, or undeniably definitive authority. Practi-

cally speaking, at the present day, and for many centuries in the past, only the decisions of œcumenical councils and the *ex cathedra* teaching of the pope have been treated as strictly definitive in the canonical sense, and the function of the *magisterium ordinarium* has been concerned with the effective promulgation and maintenance of what has been formally defined by the *magisterium solemne* or may be legitimately deduced from its definitions.

(2) Even the *ordinarium magisterium* is not independent of the pope. In other words, it is only bishops who are in corporate union with the pope, the Divinely constituted head and centre of Christ's mystical body, the one true Church, who have any claim to share in the charisma by which the infallibility of their morally unanimous teaching is divinely guaranteed according to the terms of Christ's promises. And as the pope's supremacy is also an essential factor in the constitution of an œcumenical council—and has in fact been the formal and determining factor in deciding the œcumenicity of those very councils whose authority is recognized by Eastern schismatics and Anglicans—it naturally occurs to enquire how conciliar infallibility is related to papal. Now this relation, in the Catholic view, may be explained briefly as follows: (a) Theories of conciliar and papal infallibility do not logically stand or fall together, since in the Catholic view the co-operation and confirmation of the pope in his purely primatial capacity are necessary, according to the Divine constitution of the Church, for the œcumenicity and infallibility of a council. This has, *de facto*, been the formal test of œcumenicity; and it would be necessary even in the hypothesis that the pope himself were fallible. An infallible organ may be constituted by the head and members of a corporate body acting jointly, although neither taken separately is infallible. Hence the pope teaching *ex cathedra* and an œcumenical council subject to the approbation of the pope as its head are distinct organs of infallibility. (b) Hence, also, the Gallican contention is excluded, that an œcumenical council is superior, either in jurisdiction or in doctrinal authority, to a certainly legitimate pope, and that one may appeal from the latter to the former. Nor is this conclusion contradicted by the fact that, for the purpose of putting an end to the Great Western Schism and securing a certainly legitimate pope, the Council of Constance deposed John XXIII, whose election was considered doubtful, the other probably legitimate claimant, Gregory XII, having resigned. This was what might be described as an extra-constitutional crisis; and, as the Church has a right in such circumstances to remove reasonable doubt and provide a pope whose claims would be indisputable, even an acephalous council, supported by the body of bishops throughout the world, was competent to meet this altogether exceptional emergency without thereby setting up a precedent that could be erected into a regular constitutional rule, as the Gallicans wrongly imagined. (c) A similar exceptional situation might arise were a pope to become a public heretic, i. e., were he publicly and officially to teach some doctrine clearly opposed to what has been defined as *de fide catholica*. But in this case many theologians hold that no formal sentence of deposition would be required, as, by becoming a public heretic, the pope would *ipso facto* cease to be pope. This, however, is a hypothetical case which has never actually occurred; even the case of Honorius, were it proved that he taught the Monothelite heresy, would not be a case in point.

IV. SCOPE AND OBJECT OF INFALLIBILITY.—(1) In the Vatican definition infallibility (whether of the Church at large or of the pope) is affirmed only in regard to doctrines of faith or morals; but within the province of faith and morals its scope is not limited to doctrines that have been formally revealed. This, however, is clearly understood to be what theologians

call the direct and primary object of infallible authority: it was for the maintenance and interpretation and legitimate development of Christ's teaching that the Church was endowed with this charisma. But if this primary function is to be adequately and effectively discharged, it is clear that there must also be *indirect* and *secondary* objects to which infallibility extends, viz., doctrines and facts which, although they cannot strictly speaking be said to be revealed, are nevertheless so intimately connected with revealed truths that, were one free to deny the former, he would logically deny the latter, and thus defeat the primary purpose for which infallibility was promised by Christ to His Church. This principle is expressly affirmed by the Vatican Council when it says that "the Church, which, together with the Apostolic office of teaching received the command to guard the deposit of faith, possesses also by Divine authority (*divinitus*) the right to condemn science falsely so called, lest anyone should be cheated by philosophy and vain conceit (cf. Col., ii, 8)" (Denz., 1798, old no. 1645).

(2) Catholic theologians are agreed in recognising the general principle that has just been stated, but it cannot be said that they are equally unanimous in regard to the concrete applications of this principle. Yet it is generally held, and may be said to be theologically certain, (a) that what are technically described as "theological conclusions", i. e. inferences deduced from two premises, one of which is revealed and the other verified by reason, fall under the scope of the Church's infallible authority. (b) It is also generally held, and rightly, that questions of dogmatic fact, in regard to which definite certainty is required for the safe custody and interpretation of revealed truth, may be determined infallibly by the Church. Such questions, for example, would be: whether a certain pope is legitimate, or a certain council œcumenical, or whether objective heresy or error is taught in a certain book or other published document. This last point in particular figured prominently in the Jansenist controversy, the heretics contending that, while the famous five propositions attributed to Jansenius were rightly condemned, they did not truly express the doctrine contained in his book "Augustinus" (Clement XI, in condemning this subterfuge (see Denz., 1350, old no. 1317) merely reasserted the principle which had been followed by the fathers of Nicæa in condemning the "Thalia" of Arius, by the fathers of Ephesus in condemning the writings of Nestorius, and by the Second Council of Constantinople in condemning the Three Chapters. (c) It is also commonly and rightly held that the Church is infallible in the canonization of saints, that is to say, when canonization takes place according to the solemn process that has been followed since the ninth century. Mere beatification, however, as distinguished from canonization, is not held to be infallible, and in canonization itself the only fact that is infallibly determined is that the soul of the canonized saint departed in the state of grace and already enjoys the beatific vision. (d) As to moral precepts or laws, as distinct from moral doctrine, infallibility goes no farther than to protect the Church against passing universal laws which in principle would be immoral. It would be out of place to speak of infallibility in connexion with the opportuneness or the administration of necessarily changing disciplinary laws, although, of course, Catholics believe that the Church receives appropriate Divine guidance in this and in similar matters where practical spiritual wisdom is required.

V. WHAT TEACHING IS INFALLIBLE?—A word or two under this head, summarizing what has been already explained in this and in other articles will suffice. (a) As regards matter, only doctrines of faith and morals, and facts so intimately connected with these as to require infallible determination, fall under the scope of infallible ecclesiastical teaching.

These doctrines or facts need not necessarily be revealed; it is enough if the revealed deposit cannot be adequately and effectively guarded and explained, unless they are infallibly determined. (b) As to the organ of authority by which such doctrines or facts are determined, three possible organs exist. One of these, the *magisterium ordinarium*, is liable to be somewhat indefinite in its pronouncements and, as a consequence, practically ineffective as an organ. The other two, however, are adequately efficient organs, and when they definitively decide any question of faith or morals that may arise, no believer who pays due attention to Christ's promises can consistently refuse to assent with absolute and irrevocable certainty to their teaching. (c) But before being bound to give such an assent, the believer has a right to be certain that the teaching in question is definitive (since only definitive teaching is infallible); and the means by which the definitive intention, whether of a council or of the pope, may be recognized have been stated above. It need only be added here that not everything in a conciliar or papal pronouncement, in which some doctrine is defined, is to be treated as definitive and infallible. For example, in the lengthy Bull of Pius IX defining the Immaculate Conception

the strictly definitive and infallible portion is comprised in a sentence or two; and the same is true in many cases in regard to conciliar decisions. The merely argumentative and justificatory statements embodied in definitive judgments, however true and authoritative they may be, are not covered by the guarantee of infallibility which attaches to the strictly definitive sentences—unless, indeed, their infallibility has been previously or subsequently established by an independent decision.

Formal controversy on infallibility only began with the Reformation. Among early theologians see STAPLETON, *Principiorum fidei doctrinalium demonstratio methodica* (Paris, 1579), and BELLARMINI, *De conciliis et ecclesiâ*; IDEM, *De Romano Pontifice* (incorporated in *De controversiis fidei*). Among modern Catholic theologians, see MURRAY, *De Ecclesiâ*, II, 169 sq., III, 778 sq. (Dublin, 1866), and the pertinent sections in standard manuals like those of PERRONE, PESCH, TANQUEREY, etc. Among Catholic writers in English are MANNING, *Petri Privilegium*; GIBBONS, *Faith of Our Fathers*; RIVINGTON, *The Primitive Church and The See of Peter* (London, 1894); RYDER, *Catholic Controversy* (a reply to LITTLEDALE, *Plain Reasons*); CHAPMAN, *Bishop Gore and the Catholic Claims* (a reply to GORE, *Roman Catholic Claims*). SALMON, *Infallibility*, is the cleverest modern attack on the Catholic position. Among High-Church Anglicans who defend the principle of infallibility, while denying papal claims, see GORE, *Roman Catholic Claims*, and HALL, *Authority Ecclesiastical and Biblical* (1908).
