So far the pope. If now we turn to the Modernist leaders for an account of their defections, we find none attributing it to pride or arrogance, but they are almost unanimous in allowing that curiosity—the desire to know how the old faith stands in relation to the new science—has been the motive power behind them. In the last instance, they appeal to the sacred voice of their individual conscience which forbids them outwardly to profess what inwardly they honestly hold to be untrue. Loisy, to whose case the Decree "Lamentabili" applies, tells his readers that he was brought to his present position "by his studies chiefly devoted to the history of the Bible, of Christian origins and of comparative religion". Tyrrell says in self-defence: "It is the irresistible facts concerning the origin and composition of the Old and New Testaments; concerning the origin of the Christian Church, of its hierarchy, its institutions, its dogmas; concerning the gradual development of the papacy; concerning the history of religion in general—that create a difficulty against which the synthesis of scholastic theology must be and is already shattered to pieces." "I am able to put my finger on the exact point or moment in my experience from which my 'immanenism' took its rise. In his 'Rules for the Discernment of Spirits' . . . Ignatius of Loyola says . . . etc." It is psychologically interesting to note the turning-point or rather the breaking-point of faith in the autobiographies of seceders from the Church. A study of the personal narratives in "Roads to Rome" and "Roads from Rome" leaves one with the impression that the heart of man is a sanctuary impenetrable to all but to God and, in a certain measure, to its owner. It is, therefore, advisable to leave individuals to themselves and to study the spread of heresy, or the origin of heretical societies.

(b) *Spread of Heresy.*—The growth of heresy, like the growth of plants, depends on surrounding influences, even more than on its vital force. Philosophies, religious ideals and aspirations, social and economic conditions, are brought into contact with revealed truth, and from the impact result both new affirmations and new negations of the traditional doctrine. The first requisite for success is a forceful man, not necessarily of great intellect and learning, but of strong will and daring action. Such were the men who in all ages have given their names to new sects. The second requisite is accommodation of the new doctrine to the contemporary mentality, to social and political conditions. The last, but by no means the least, is the support of secular rulers. A strong man in touch with his time, and supported by material force, may deform the existing religion and build up a new heretical sect. Modernism fails to combine into a body separate from the Church because it lacks an acknowledged leader, because it appeals to only a small minority of contemporary minds, namely, to a

small number who are dissatisfied with the Church as she now is, and because no secular power lends it support. For the same reason, and proportionately, a thousand small sects have failed, whose names still encumber the pages of church history, but whose tenets interest only a few students, and whose adherents are nowhere. Such were, in the Apostolic Age, the Judeo-Christians, Judeo-Gnostics, Nicolaites, Docetæ, Cerinthians, Ebionites, Nazarenes, followed, in the next two centuries, by a variety of Syrian and Alexandrian Gnostics, by Ophites, Marcionites, Encratites, Montanists, Manichæans, and others. All the early Eastern sects fed on the fanciful speculations so dear to the Eastern mind, but, lacking the support of temporal power, they disappeared under the anathemas of the guardians of the *depositum fidei*.

Arianism (q. v.) is the first heresy that gained a strong footing in the Church and seriously endangered its very nature and existence. Arius appeared on the scene when the theologians were endeavouring to harmonize the apparently contradictory doctrines of the unity of God and the Divinity of Christ. Instead of unravelling the knot, he simply cut it by bluntly asserting that Christ was not God like the Father, but a creature made in time. The simplicity of the solution, the ostentatious zeal of Arius for the defence of the "one God", his mode of life, his learning and dialectic ability won many to his side. "In particular he was supported by the famous Eusebius of Nicomedia who had great influence on the Emperor Constantine. He had friends among the other bishops of Asia and even among the bishops, priests, and nuns of the Alexandrian province. He gained the favour of Constantine, the emperor's sister, and he disseminated his doctrine among the people by means of his notorious book which he called *θήλεια* or 'Entertainment' and by songs adapted for sailors, millers, and travellers." (Addis and Arnold, "A Catholic Dictionary", 7th ed., 1905, 54.) The Council of Nicæa anathematized the heresiarch, but its anathemas, like all the efforts of the Catholic bishops, were nullified by interference of the civil power. Constantine and his sister protected Arius and the Arians, and the next emperor, Constantius, assured the triumph of the heresy: the Catholics were reduced to silence by dire persecution. At once an internecine conflict began within the Arian pale, for heresy, lacking the internal cohesive element of authority, can only be held together by coercion either from friend or foe. Sects sprang up rapidly: they are known as Eunomians, Anomæans, Exucontians, Semi-Arians, Acacians. The Emperor Valens (364-378) lent his powerful support to the Arians, and the peace of the Church was only secured when the orthodox Emperor Theodosius reversed the policy of his predecessors and sided with Rome. Within the boundaries of the Roman empire the faith of Nicæa, enforced again by the General Council of Constantinople (381), prevailed, but Arianism held its own for over two hundred years longer wherever the Arian Goths held sway: in Thrace, Italy, Africa, Spain, Gaul. The conversion of King Recared of Spain, who began to reign in 586, marked the end of Arianism in his dominions, and the triumph of the Catholic Franks sealed the doom of Arianism everywhere.

Pelagianism, not being backed by political power, was without much difficulty removed from the Church. Eutychianism, Nestorianism, and other Christological heresies which followed one upon another as the links of a chain, flourished only so long and so far as the temporal power of Byzantine and Persian rulers gave them countenance. Internal dissensions, stagnation, and decay became their fate when left to themselves. Passing over the great schism that rent East from West, and the many smaller heresies which sprang up in the Middle Ages without leaving a deep impression on the Church, we arrive at the modern sects which date from Luther and go by the collective name of Protes-

tantism (q. v.). The three elements of success possessed by Arianism reappear in Lutheranism and cause these two great religious upheavals to move on almost parallel lines. Luther was eminently a man of his people: the rough-hewn, but withal sterling, qualities of the Saxon peasant lived forth under his religious habit and doctor's gown; his winning voice, his piety, his learning raised him above his fellows yet did not estrange him from the people: his conviviality, the crudities in his conversation and preaching, his many human weaknesses only increased his popularity. When the Dominican John Tetzel began to preach in Germany the indulgences proclaimed by Pope Leo X for those who contributed to the completion of St. Peter's Basilica in Rome, opposition arose on the part of the people and of both civil and ecclesiastical authorities. Luther set the match to the fuel of widespread discontent. He at once gained a number of adherents powerful both in Church and State; the Bishop of Würzburg recommended him to the protection of the Elector Frederick of Saxony. In all probability Luther started on his crusade with the laudable intention of reforming undoubted abuses. But his unexpected success, his impetuous temper, perhaps some ambition, soon carried him beyond all bounds set by the Church. By 1521, that is within four years from his attack on abuse of indulgences, he had propagated a new doctrine; the Bible was the only source of faith; human nature was wholly corrupted by original sin, man was not free, God was responsible for all human actions good and bad; faith alone saved; the Christian priesthood was not confined to the hierarchy but included all the faithful. The masses of the people were not slow in drawing from these doctrines the practical conclusion that sin was sin no longer, was, in fact, equal to a good work.

With his appeal to the lower instincts of human nature went an equally strong appeal to the spirit of nationality and greed. He endeavoured to set the German emperor against the Roman pope and generally the Teuton against the Latin; he invited the secular princes to confiscate the property of the Church. His voice was heard only too well. For the next 130 years the history of the German people is a record of religious strife, moral degradation, artistic retrogression, industrial breakdown; of civil wars, pillage, devastation, and general ruin. The Peace of 1648 established the principle: *Cujus regio illius et religio*; the lord of the land shall be also lord of religion. And accordingly territorial limits became religious limits within which the inhabitant had to profess and practise the faith imposed on him by the ruler. It is worthy of remark that the geographical frontier fixed by the politicians of 1648 is still the dividing line between Catholicism and Protestantism in Germany. The English Reformation, more than any other, was the work of crafty politicians. The soil had been prepared for it by the Lollards or Wycliffites, who at the beginning of the sixteenth century were still numerous in the towns. No English Luther arose, but the unholy work was thoroughly done by kings and parliaments, by means of a series of penal laws unequalled in severity.

(c) *Persistence of Heresy*.—We have seen how heresy originates and how it spreads; we must now answer the question why it persists, or why so many persevere in heresy. Once heresy is in possession it tightens its grip by the thousand subtle and often unconscious influences which mould a man's life. A child is born in heretical surroundings: before it is able to think for itself its mind has been filled and fashioned by home, school, and church teachings, the authority of which it never doubted. When, at a riper age, doubts arise, the truth of Catholicism is seldom apprehended as it is. Innate prejudices, educational bias, historical distortions stand in the way and frequently make approach impossible. The

state of conscience technically termed *bona fides*, good faith, is thus produced. It implies inculpable belief in error, a mistake morally unavoidable and therefore always excusable, sometimes even laudable. In the absence of good faith worldly interests often bar the way from heresy to truth. When a government, for instance, reserves its favours and functions for adherents of the state religion, the army of civil servants becomes a more powerful body of missionaries than the ordained ministers. Prussia, France, and Russia are cases in point.

VI. CHRIST, THE APOSTLES, AND THE FATHERS ON HERESY.—Heresy, in the sense of falling away from the Faith, became possible only after the Faith had been promulgated by Christ. Its advent is clearly foretold, Matt., xxiv, 11, 23-26: “. . . many false prophets shall rise, and shall seduce many. . . . Then if any man shall say to you: Lo here is Christ, or there, do not believe him. For there shall rise false Christs and false prophets, and shall show great signs and wonders, insomuch as to deceive (if possible) even the elect. Behold I have told it to you, beforehand. If therefore they shall say to you: Behold he is in the desert, go ye not out: Behold he is in the closets, believe it not.” Christ also indicated the marks by which to know the false prophets: “Who is not with me is against me” (Luke, xi, 23); “and if he will not hear the Church let him be to thee as the heathen and the publican” (Matt., xviii, 17); “he that believeth not shall be condemned” (Mark, xvi, 16). The Apostles acted upon their Master’s directions. All the weight of their own Divine faith and mission is brought to bear upon innovators. “If any one”, says St. Paul, “preach to you a gospel, besides that you have received, let him be anathema” (Gal., i, 9). To St. John the heretic is a seducer, an antichrist, a man who dissolves Christ (I John, iv, 3; II John, 7); “receive him not into the house nor say to him, God speed you” (II John, 10). St. Peter, true to his office and to his impetuous nature, assails them as with a two-edged sword: “. . . lying teachers who shall bring in sects of perdition, and deny the Lord who bought them: bringing upon themselves swift destruction. . . . These are fountains without water, and clouds tossed with whirlwinds, to whom the mist of darkness is reserved” (II Pet., ii, 1, 17). St. Jude speaks in a similar strain throughout his whole epistle. St. Paul admonishes the disturbers of the unity of faith at Corinth that “the weapons of our warfare. . . are mighty to God unto the pulling down of fortifications, destroying counsels, and every height that exalteth itself against the knowledge of God. . . and having in readiness to revenge all disobedience” (II Cor., x, 4, 5, 6).

What Paul did at Corinth he enjoins to be done by every bishop in his own church. Thus Timothy is instructed to “war in them a good warfare, having faith and a good conscience, which some rejecting have made shipwreck concerning the faith. Of whom is Hymeneus and Alexander, whom I have delivered up to Satan, that they may learn not to blaspheme” (I Tim., i, 18-20). He exhorts the ancients of the Church at Ephesus to “take heed to yourselves, and to the whole flock, wherein the Holy Ghost hath placed you bishops, to rule the church of God, . . . I know that, after my departure, ravening wolves will enter in among you, not sparing the flock. . . . Therefore watch, . . .” (Acts, xx, 28, 29, 31). “Beware of dogs”, he writes to the Philippians (iii, 2), the dogs being the same false teachers as the “ravering wolves”. The Fathers show no more leniency to perverters of the faith. A Protestant writer thus sketches their teaching (Schaff-Herzog, s. v. Heresy): “Polycarp regarded Marcion as the first-born of the Devil. Ignatius sees in heretics poisonous plants, or animals in human form. Justin and Tertullian condemn their errors as inspirations of the Evil One;

Theophilus compares them to barren and rocky islands on which ships are wrecked; and Origen says, that as pirates place lights on cliffs to allure and destroy vessels in quest of refuge, so the Prince of this world lights the fires of false knowledge in order to destroy men. [Jerome calls the congregations of the heretics synagogues of Satan (Ep. 123), and says their communion is to be avoided like that of vipers and scorpions (Ep. 130).]” These primitive views on heresy have been faithfully transmitted and acted on by the Church in subsequent ages. There is no break in the tradition from St. Peter to Pius X.

VII. VINDICATION OF THEIR TEACHING.—The first law of life, be it the life of plant or animal, of man or of a society of men, is self-preservation. Neglect of self-preservation leads to ruin and destruction. But the life of a religious society, the tissue that binds its members into one body and animates them with one soul, is the symbol of faith, the creed or confession adhered to as a condition *sine quâ non* of membership. To undo the creed is to undo the Church. The integrity of the rule of faith is more essential to the cohesion of a religious society than the strict practice of its moral precepts. For faith supplies the means of mending moral delinquencies as one of its ordinary functions, whereas the loss of faith, cutting at the root of spiritual life, is usually fatal to the soul. In fact the long list of heresiarchs contains the name of only one who came to resipiscence: Berengarius. The jealousy with which the Church guards and defends her deposit of faith is therefore identical with the instinctive duty of self-preservation and the desire to live. This instinct is by no means peculiar to the Catholic Church; being natural it is universal. All sects, denominations, confessions, schools of thought, and associations of any kind have a more or less comprehensive set of tenets on the acceptance of which membership depends. In the Catholic Church this natural law has received the sanction of Divine promulgation, as appears from the teaching of Christ and the Apostles quoted above. Freedom of thought extending to the essential beliefs of a Church is in itself a contradiction; for, by accepting membership, the members accept the essential beliefs and renounce their freedom of thought so far as these are concerned.

But what authority is to lay down the law as to what is or is not essential? It is certainly not the authority of individuals. By entering a society, whichever it be, the individual gives up part of his individuality to be merged into the community. And that part is precisely his private judgment on the essentials: if he resumes his liberty he *ipso facto* separates himself from his church. The decision, therefore, rests with the constitutional authority of the society—in the Church with the hierarchy acting as teacher and guardian of the faith. Nor can it be said that this principle unduly curtails the play of human reason. That it does curtail its play is a fact, but a fact grounded in natural and Divine law, as shown above. That it does not curtail reason unduly is evidenced by this other fact: that the deposit of faith (1) is itself an inexhaustible object of intellectual effort of the noblest kind, lifting human reason above its natural sphere, enlarging and deepening its outlook, soliciting its finest faculties; (2) that, side by side with the deposit, but logically connected with it, there is a multitude of doubtful points of which discussion is free within the wide bounds of charity—“in necessariis unitas, in dubiis libertas, in omnibus charitas.” The substitution of private judgment for the teaching *magisterium* has been the dissolvent of all sects who have adopted it. Only those sects exhibit a certain consistency in which private judgment is a dead letter and the teaching is carried on according to confessions and catechisms by a trained clergy.

VIII. CHURCH LEGISLATION ON HERESY.—HERESY, being a deadly poison generated within the organism

of the Church, must be ejected if she is to live and perform her task of continuing Christ's work of salvation. Her Founder, who foretold the disease, also provided the remedy: He endowed her teaching with infallibility (see CHURCH). The office of teaching belongs to the hierarchy, the *ecclesia docens*, which, under certain conditions, judges without appeal in matters of faith and morals (see COUNCILS). Infallible decisions can also be given by the pope teaching *ex cathedra* (see INFALLIBILITY). Each pastor in his parish, each bishop in his diocese, is in duty bound to keep the faith of his flock untainted; to the supreme pastor of all the Churches is given the office of feeding the whole Christian flock. The power, then, of expelling heresy is an essential factor in the constitution of the Church. Like other powers and rights, the power of rejecting heresy adapts itself in practice to circumstances of time and place, and, especially, of social and political conditions. At the beginning it worked without special organization. The ancient discipline charged the bishops with the duty of searching out the heresies in their diocese and checking the progress of error by any means at their command. When erroneous doctrines gathered volume and threatened disruption of the Church, the bishops assembled in councils, provincial, metropolitan, national, or oecumenical. There the combined weight of their authority was brought to bear upon the false doctrines. The first council was a meeting of the Apostles at Jerusalem in order to put an end to the judaizing tendencies among the first Christians. It is the type of all succeeding councils: bishops in union with the head of the Church, and guided by the Holy Ghost, sit as judges in matters of faith and morals. The spirit which animates the dealings of the Church with heresy and heretics is one of extreme severity. St. Paul writes to Titus: "A man that is a heretic, after the first and second admonition, avoid: knowing that he, that is such a one, is subverted, and sinneth, being condemned by his own judgment" (Tit., iii, 10-11). This early piece of legislation reproduces the still earlier teaching of Christ: "And if he will not hear the church, let him be to thee as the heathen and the publican" (Matt., xviii, 17); it also inspires all subsequent anti-heretical legislation. The sentence on the obstinate heretic is invariably excommunication. He is separated from the company of the faithful, delivered up "to Satan for the destruction of the flesh, that the spirit may be saved in the day of our Lord Jesus Christ" (I Cor., v, 5).

When Constantine had taken upon himself the office of lay bishop, *episcopus ceterminus*, and put the secular arm at the service of the Church, the laws against heretics became more and more rigorous. Under the purely ecclesiastical discipline no temporal punishment could be inflicted on the obstinate heretic, except the damage which might arise to his personal dignity through being deprived of all intercourse with his former brethren. But under the Christian emperors rigorous measures were enforced against the goods and persons of heretics. From the time of Constantine to Theodosius and Valentinian III (313-424) various penal laws were enacted by the Christian emperors against heretics as being guilty of crime against the State. "In both the Theodosian and Justinian codes they were styled infamous persons; all intercourse was forbidden to be held with them; they were deprived of all offices of profit and dignity in the civil administration, while all burdensome offices, both of the camp and of the curia, were imposed upon them; they were disqualified from disposing of their own estates by will, or of accepting estates bequeathed to them by others; they were denied the right of giving or receiving donations, of contracting, buying, and selling; pecuniary fines were imposed upon them; they were often proscribed and banished, and in many cases scourged before being sent into

exile. In some particularly aggravated cases sentence of death was pronounced upon heretics, though seldom executed in the time of the Christian emperors of Rome. Theodosius is said to be the first who pronounced heresy a capital crime; this law was passed in 382 against the Encratites, the Saccophori, the Hydroparastatae, and the Manichæans. Heretical teachers were forbidden to propagate their doctrines publicly or privately; to hold public disputations; to ordain bishops, presbyters, or any other clergy; to hold religious meetings; to build conventicles or to avail themselves of money bequeathed to them for that purpose. Slaves were allowed to inform against their heretical masters and to purchase their freedom by coming over to the Church. The children of heretical parents were denied their patrimony and inheritance unless they returned to the Catholic Church. The books of heretics were ordered to be burned." (Vide "Codex Theodosianus", lib. XVI, tit. 5, "De Hæreticis".)

This legislation remained in force and with even greater severity in the kingdom formed by the victorious barbarian invaders on the ruins of the Roman Empire in the West. The burning of heretics was first decreed in the eleventh century. The Synod of Verona (1184) imposed on bishops the duty to search out the heretics in their dioceses and to hand them over to the secular power. Other synods, and the Fourth Lateran Council (1215) under Pope Innocent III, repeated and enforced this decree, especially the Synod of Toulouse (1229), which established inquisitors in every parish (one priest and two laymen). Everyone was bound to denounce heretics, the names of the witnesses were kept secret; after 1243, when Innocent IV sanctioned the laws of Emperor Frederick II and of Louis IX against heretics, torture was applied in trials; the guilty persons were delivered up to the civil authorities and actually burnt at the stake. Paul III (1542) established, and Sixtus V organized, the Roman Congregation of the Inquisition, or Holy Office, a regular court of justice for dealing with heresy and heretics (see ROMAN CONGREGATIONS). The Congregation of the Index, instituted by St. Pius V, has for its province the care of faith and morals in literature; it proceeds against printed matter very much as the Holy Office proceeds against persons (see INDEX OF PROHIBITED BOOKS). The present pope, Pius X (1909), has decreed the establishment in every diocese of a board of censors and of a vigilance committee whose functions are to find out and report on writings and persons tainted with the heresy of Modernism (Encycl. "Pascendi", 8 Sept., 1907). The present-day legislation against heresy has lost nothing of its ancient severity; but the penalties on heretics are now only of the spiritual order; all the punishments which require the intervention of the secular arm have fallen into abeyance. Even in countries where the cleavage between the spiritual and secular powers does not amount to hostility or complete severance, the death penalty, confiscation of goods, imprisonment, etc., are no longer inflicted on heretics. The spiritual penalties are of two kinds: *latae* and *ferendae sententiae*. The former are incurred by the mere fact of heresy, no judicial sentence being required; the latter are inflicted after trial by an ecclesiastical court, or by a bishop acting *ex informata conscientia*, that is, on his own certain knowledge, and dispensing with the usual procedure.

The penalties (see CENSURES, ECCLESIASTICAL) *latae sententiae* are: (1) Excommunication specially reserved to the Roman pontiff, which is incurred by all apostates from the Catholic Faith, by each and all heretics, by whatever name they are known and to whatever sect they belong, and by all who believe in them (*credentes*), receive, favour, or in any way defend them (Const. "Apostolicae Sedis", 1869). Heretic here means *formal* heretic, but also includes the *positive* doubter, that is, the man who posits his doubt as defensible by rea-

son, but not the *negative* doubter, who simply abstains from formulating a judgment. The believers (*credentes*) in heretics are they who, without examining particular doctrines, give a general assent to the teachings of the sect; the favourers (*fautores*) are they who by commission or omission lend support to heresy and thus help or allow it to spread; the receivers and defenders are they who shelter heretics from the rigours of the law. (2) "Excommunication specially reserved to the Roman Pontiff incurred by each and all who knowingly read, without authorization from the Apostolic See, books of apostates and heretics in which heresy is defended; likewise readers of books of any author prohibited by name in letters Apostolic, and all who retain possession of, or print, or in any way defend such books" (Apost. Sedis, 1869). The *book* here meant is a volume of a certain size and unity; newspapers and manuscripts are not books, but serial publications intended to form a book when completed fall under this censure. To read knowingly (*scienter*) implies on the reader's part the knowledge that the book is the work of a heretic, that it defends heresy, and that it is forbidden. "Books . . . prohibited by name in letters Apostolic" are books condemned by Bulls, Briefs, or Encyclicals emanating directly from the pope; books prohibited by decrees of Roman Congregations, although the prohibition is approved by the pope, are not included. The "printers" of heretical books are the editor who gives the order and the publisher who executes it, and perhaps the proof-reader, but not the workman who performs the mechanical part of printing.

Additional penalties to be decreed by judicial sentences: Apostates and heretics are *irregular*, that is, debarred from receiving clerical orders or exercising lawfully the duties and rights annexed to them; they are *infamous*, that is, publicly noted as guilty and dishonoured. This note of infamy clings to the children and grandchildren of unrepentant heretics. Heretical clerics and all who receive, defend, or favour them are *ipso facto* deprived of their benefices, offices, and ecclesiastical jurisdiction. The pope himself, if notoriously guilty of heresy, would cease to be pope because he would cease to be a member of the Church. Baptism received without necessity by an adult at the hands of a declared heretic renders the recipient irregular. Heresy constitutes an impediment to marriage with a Catholic (*mixta religio*) from which the pope dispenses or gives the bishops power to dispense (see IMPEDIMENTS). *Communicatio in sacris*, i. e. active participation in non-Catholic religious functions, is on the whole unlawful, but it is not so intrinsically evil that, under given circumstances, it may not be excused. Thus friends and relatives may for good reasons accompany a funeral, be present at a marriage or a baptism, without causing scandal or lending support to the non-Catholic rites, provided no active part be taken in them: their motive is friendship, or maybe courtesy, but it nowise implies approval of the rites. Non-Catholics are admitted to all Catholic services but not to the sacraments.

IX. PRINCIPLES OF CHURCH LEGISLATION.—The guiding principles in the Church's treatment of heretics are the following: Distinguishing between formal and material heretics, she applies to the former the canon, "Most firmly hold and in no way doubt that every heretic or schismatic is to have part with the Devil and his angels in the flames of eternal fire, unless before the end of his life he be incorporated with, and restored to the Catholic Church." No one is forced to enter the Church, but having once entered it through baptism, he is bound to keep the promises he freely made. To restrain and bring back her rebellious sons the Church uses both her own spiritual power and the secular power at her command. Towards material heretics her conduct is ruled by the saying of St. Augustine: "Those are by no means to

be accounted heretics who do not defend their false and perverse opinions with pertinacious zeal (*animositas*), especially when their error is not the fruit of audacious presumption but has been communicated to them by seduced and lapsed parents, and when they are seeking the truth with cautious solicitude and ready to be corrected" (P. L., XXXIII, ep. xliii, 160). Pius IX, in a letter to the bishops of Italy (10 Aug., 1863), restates this Catholic doctrine: "It is known to Us and to You that they who are in invincible ignorance concerning our religion but observe the natural law . . . and are ready to obey God and lead an honest and righteous life, can, with the help of Divine light and grace, attain to eternal life . . . for God . . . will not allow any one to be eternally punished who is not wilfully guilty" (Denzinger, "Enchir.", n. 1529).

X. ECCLESIASTICAL JURISDICTION OVER HERETICS.—The fact of having received valid baptism places material heretics under the jurisdiction of the Church, and if they are in good faith, they belong to the soul of the Church. Their material severance, however, precludes them from the use of ecclesiastical rights, except the right of being judged according to ecclesiastical law if, by any chance, they are brought before an ecclesiastical court. They are not bound by ecclesiastical laws enacted for the spiritual well-being of its members, e. g. by the Six Commandments of the Church.

XI. RECEPTION OF CONVERTS.—Converts to the Faith, before being received, should be well instructed in Catholic doctrine. The right to reconcile heretics belongs to the bishops, but is usually delegated to all priests having charge of souls. In England a special licence is required for each reconciliation, except in case of children under fourteen or of dying persons, and this licence is only granted when the priest can give a written assurance that the candidate is sufficiently instructed and otherwise prepared, and that there is some reasonable guarantee of his perseverance. The order of proceeding in a reconciliation is: first, abjuration of heresy or profession of faith; second, conditional baptism (this is given only when the heretical baptism is doubtful); third, sacramental confession and conditional absolution.

XII. RÔLE OF HERESY IN HISTORY.—The rôle of heresy in history is that of evil generally. Its roots are in corrupted human nature. It has come over the Church as predicted by her Divine Founder; it has rent asunder the bonds of charity in families, provinces, states, and nations; the sword has been drawn and pyres erected both for its defence and its repression; misery and ruin have followed in its track. The prevalence of heresy, however, does not disprove the Divinity of the Church, any more than the existence of evil disproves the existence of an all-good God. Heresy, like other evils, is permitted as a test of faith and a trial of strength in the Church militant; probably also as a punishment for other sins. The disruption and disintegration of heretical sects also furnishes a solid argument for the necessity of a strong teaching authority. The endless controversies with heretics have been indirectly the cause of most important doctrinal developments and definitions formulated in councils to the edification of the body of Christ. Thus the spurious gospels of the Gnostics prepared the way for the canon of Scripture; Patristicarian, Sabellian, Arian, and Macedonian heresies drew out a clearer concept of the Trinity; the Nestorian and Eutychian errors led to definite dogmas on the nature and Person of Christ. And so down to Modernism, which has called forth a solemn assertion of the claims of the supernatural in history.

XIII. INTOLERANCE AND CRUELTY.—The Church's legislation on heresy and heretics is often reproached with cruelty and intolerance. Intolerant it is; in fact its *raison d'être* is intolerance of doctrines subversive of the Faith. But such intolerance is essential to all that

is, or moves, or lives, for tolerance of destructive elements within the organism amounts to suicide. Heretical sects are subject to the same law: they live or die in the measure they apply or neglect it. The charge of cruelty is also easy to meet. All repressive measures cause suffering or inconvenience of some sort: it is their nature. But they are not therefore cruel. The father who chastises his guilty son is just and may be tender-hearted. Cruelty only comes in where the punishment exceeds the requirements of the case. Opponents say: Precisely; the rigours of the Inquisition violated all humane feelings. We answer: they offend the feelings of later ages in which there is less regard for the purity of faith; but they did not antagonize the feelings of their own time, when heresy was looked on as more malignant than treason. In proof of which it suffices to remark that the inquisitors only pronounced on the guilt of the accused and then handed him over to the secular power to be dealt with according to the laws framed by emperors and kings. Medieval people found no fault with the system, in fact heretics had been burned by the populace centuries before the Inquisition became a regular institution. And whenever heretics gained the upper hand, they were never slow in applying the same laws: so the Huguenots in France, the Hussites in Bohemia, the Calvinists in Geneva, the Elizabethan statesmen and the Puritans in England. Toleration came in only when faith went out; lenient measures were resorted to only where the power to apply more severe measures was wanting. The embers of the *Kulturkampf* in Germany still smoulder; the separation and confiscation laws and the ostracism of Catholics in France are the scandal of the day. Christ said: "Do not think that I came to send peace upon earth: I came not to send peace, but a sword" (Matt., x, 34). The history of heresy verifies this prediction and shows, moreover, that the greater number of the victims of the sword is on the side of the faithful adherents of the one Church founded by Christ (see INQUISITION).

For historical development of anti-heretical legislation see DE CAUZONS, *Histoire de l'inquisition en France*, I (Paris, 1909); it is the best work of its kind.—For Canon law: TAUNTON, *The Law of the Church for English-speaking Countries* (London, 1906).—For information on special sects, etc.: ARNOLD and SCANNELL, *A Catholic Dictionary* (London, 1905); BLUNT, *Dictionary of Sects* (London, 1903); SCHAFF, *The Creeds of Christendom* (London, 1878).

J. WILHELM.

Hergenröther, JOSEPH, church historian and canonist, first Cardinal-Prefect of the Vatican Archives, b. at Würzburg, 15 Sept., 1824; d. at Mehrerau (Bodensee), 3 Oct., 1890. He was the second son of Johann Jacob Hergenröther, professor of medicine in the University of Würzburg. In 1842 Hergenröther completed with notable success his gymnasium course in his native town, and entered the University of Würzburg to take up a two-year course of philosophical studies, to which he added certain branches of theology. His historical tendencies exhibited themselves at this early age in a dramatic poem entitled "Papst Gregor VII" (Würzburg, 1841). Bishop von Stahl took a lively interest in the promising youth, and in 1844 sent him to the Collegium Germanicum at Rome, whither he had already sent Denzinger and Hettinger. Among his scholarly teachers were Perrone and Passaglia in doctrinal theology, Tomei in moral theology, Ballerini in church history, Patrizi in Scriptural exegesis, and Marzio in canon law. The political troubles of 1848 prevented the completion of his theological studies at Rome; he was ordained to the priesthood 28 March of that year, and returned to Würzburg, where he pursued his ecclesiastical preparation for another year. In 1849 he was appointed chaplain at Zelligen, and for some time devoted himself with zeal to the duties of his office. In 1850 he stood successfully for the degree of doctor of theology before the University of Munich, and offered as his dissertation a treatise on

the Trinitarian teaching of St. Gregory Nazianzen (Die Lehre von der göttlichen Dreieinigkeit nach d. heil. Gregor von Nazianz, Ratisbon, 1850). The brilliant qualities of the young doctor induced the theological faculty of Munich to offer him a place as instructor (*privatdocent*) in theology, which he accepted. Following ancient usage, he justified the confidence of the university by a printed thesis (*Habilitationschrift*) on the later Protestant theories of the origins of the Catholic Church (De catholicae ecclesiae primordiis recentiorum Protestantium systemata expendantur, Ratisbon, 1851). Henceforth he devoted himself without reserve to his professional duties. In 1852 he was called to Würzburg, as professor extraordinary of canon law and church history; after three years (1855) he was promoted to the full possession of that chair. To his other duties he added the teaching of patrology. In those years Würzburg rejoiced in the possession of such brilliant theologians as Hettinger, Denzinger, Hähnlein, and Hergenröther; their reputation spread far and wide the fame of this old Franconian school. Hergenröther was often honoured by election to the office of dean of his faculty, and occasionally to the University Senate; the latter office he never held after 1871, because of his opposition to Döllinger. For a similar reason he was never chosen to be rector of the university. Until 1869 Hergenröther was occupied as teacher and writer, chiefly with early Christian and Byzantine ecclesiastical history. The discovery (1851) of the Greek Christian text known as the *Φιλοσοφούμενα* led him to examine its disputed authorship in a series of studies in the "Tübinger Theol. Quartalschrift" (1852) and in the supplementary volume (1856) to the first edition of the "Kirchenlexikon" of Wetzer and Welte. He again defended the authorship of Hippolytus in the "Österreichische Vierteljahrschrift f. kath. Theol." (1863).

Hergenröther was especially interested in the career of Photius and in the origins of the Greek Schism, and kept up continuous research in the principal libraries for manuscripts of the works of Photius, in order to exhibit the original materials in as perfect a text as could be established. This led to the publication (Ratisbon, 1857) of the work, "Photii Constantino-politani Liber de Spiritu Sancti mystagogia." He contributed essays on the same work and on the "Amphilochia" of Photius to the "Tüb. Theol. Quartalschrift" (1858). In 1860 appeared at Paris the Migne edition of "Photius" (P. G., CI-CIV). It offered many textual emendations that were owing to Hergenröther, particularly in the "Amphilochia"; it was against his will that his earlier edition of the "Liber de Sp. Sancti mystagogia" was reprinted by Migne. When Pichler's work on the history of the separation of the Eastern and Western Churches appeared (Munich, 1864), Hergenröther was prepared to criticize it in the most thorough manner, which he did in a series of studies in a Würzburg theological periodical, the "Chilianeum" (1864-65), and in the "Archiv f. kath. Kirchenrecht" (1864-65). The results of his twelve years of research in the history of the Greek Schism appeared finally in the classical work, "Photius Patriarch von Constantinopel, sein Leben, seine Schriften, und das griechische Schisma" (3 vols., Ratisbon, 1867-69). An additional volume bears the title: "Monumenta Graeca ad Photium ejusque historiam pertinentia" (Ratisbon). In this monumental work it is difficult to say whether the palm belongs to the author's extensive knowledge of all the manuscript material, to his profound erudition, or to his calm objective attitude. Krumbacher, the historian of Byzantine literature, says that the work cannot be surpassed. In these volumes Hergenröther laid bare in minute detail the origins of the Byzantine Church, its development since the fourth century, and after the death of Photius until the unfortunate completion of the schism in the twelfth and thirteenth centuries.

While professor of canon law at Würzburg, Hergenröther published several important historico-canonical essays on such subjects as early ecclesiastical reordinations (*Ester. Vierteljahrsh. f. kath. Theol.*, 1862), the canonical relations of the various rites in the Catholic Church (*Archiv f. kath. Kirchenrecht*, 1862), the politico-ecclesiastical relations of Spain and the Holy See (*ibid.*, 1863-66), and the canon law of the Greeks to the end of the ninth century (*ibid.*, 1870). His interest in the ecclesiastical vicissitudes of his own day was manifested by valuable essays on the States of the Church after the French Revolution (*Hist.-polit. Blätter*, 1859), spirit of the age (*Zeitgeist*) and papal sovereignty (*Der Katholik*, 1861), and the Franco-Sardinian Treaty (Frankfort, 1865). Among his historico-apologetic essays we may count his treatises on the modern errors condemned by the Holy See in the Encyclical (*Syllabus*) of 8 Dec., 1864 (in the *Chilianeum*, 1865), the veneration of the Blessed Virgin in the first ten centuries of the Christian Era (*Münster*, 1870). He was a regular contributor of similar but briefer articles to the Würzburg periodicals, "*Die katholische Wochenschrift*" and the "*Chilianeum*". Hergenröther was constantly engaged in attempting to develop a genuine Catholic sentiment and truly Christian life among the faithful. He preached frequently, and was always a welcome speaker at the general assemblies of the German Catholic associations (*Vereine*; 1863-77). For the Fulda meeting of the Prussian bishops (1870) he prepared an exhaustive historical study on the spoliation of the Papal States, in which he developed at length the arguments for the temporal power of the papacy.

Together with other Catholics of prudence and insight, Hergenröther deplored the attitude that certain Catholic theologians assumed from about 1860, in particular that of the celebrated historian Döllinger. The latter's work "*Kirche und Kirchen, Papsttum und Kirchenstaat*" (1861) was criticized by Hergenröther in "*Der Katholik*". At the Munich meeting of Catholic savants (1863), Hergenröther was one of the eight who sent in a written protest against the opening discourse of Döllinger on the past and present of Catholic theology. Among the other signers were Heinrich Muffang von Schäßler, Haffner, Philipps, Hettinger, and Scheeben. Hergenröther was soon called on to answer the pamphlet of Dr. Michelis, "*Kirche oder Partei? Ein offenes u. freies Wort an den deutschen Episkopat*" (Church or Faction? A Frank Address to the German Episcopate), in which this writer attacked violently the "*Mainz*" and the "*Roman*" theologians. Hergenröther's answer appeared in the "*Chilianeum*" (1865) under the title of "*Kirche u. nicht Partei. Eine Antwort auf die jüngste Broschüre des Herrn Dr. Fr. Michelis*" (Church and not Faction: an Answer to the latest Brochure of Dr. Michelis). In the same review (1863) Hergenröther had written a critical account of the latest efforts of Western Catholics for ecclesiastical reunion with the Oriental Churches.

The opening of the Vatican Council (1870) brought to a head the domestic conflict in Germany. Hergenröther was the foremost defender of the council and its decrees; as early as 1868 he had been appointed, with Hettinger, consultant for the preparation of the council's work and had taken up his residence at Rome. His inexhaustible knowledge of ecclesiastical history, canon law, and Catholic dogma made him a valuable co-labourer in the many careful and detailed preliminary meetings of the council commission. In the meantime he prepared, with Hettinger, and published in the "*Chilianeum*" (1869) a memorial of the theological faculty of Würzburg in reply to five questions, submitted by the Bavarian Government, concerning the approaching council. He also published (*Der Katholik*, 1871) another outlined memorial concerning the Vatican Council, in reply to eleven questions submitted by the Bavarian Minister of

Worship to the theological and law faculties of Würzburg. This memorial, though projected, was never formally called for by the Government. The opposition to the Vatican Council reached its acme in the notorious work, "*Der Papst und das Concil*", by "*Janus*" (Döllinger). In the same year (1869) Hergenröther prepared his "*Anti-Janus*", an historico-theological critique (Freiburg, 1870). He also published a number of small brochures in favour of the council and against Döllinger, e. g. "*Die Irrthümer von mehr als vier hundert Bischöfen und ihr theologischer Censor*" (Freiburg, 1870), and a critique of Dr. Döllinger's declaration of 28 March, 1871 (Freiburg, 1871). His pen was also active in the "*Historisch-politische Blätter*", where he published (1870) a series of articles on the "*Allgemeine Zeitung*" and its letters from the council, on papal infallibility before the Vatican Council, and on ancient Gallicans and modern Appellants. In 1871 he published the solid study, "*Das unfehlbare Lehramt des Papstes*" [The Infallible Magisterium (teaching office) of the pope, Passau, 1871]. These grave and exhausting labours were crowned and partially summarized by a new work, "*Katholische Kirche u. christlicher Staat in ihrer geschichtlichen Entwicklung u. in Beziehung auf die Gegenwart*" (The Catholic Church and the Christian State, in their historical development and their relations to the present), together with an "*Anti-Janus vindicatus*" (Freiburg, 1872, 2nd annotated ed., Freiburg, 1876). The former is a *thesaurus* of information concerning politico-ecclesiastical conflicts of the past, and is marked throughout by an uncompromising Catholic tone. It was translated into Italian (Pavia, 1877) and into English (London, 1876; Baltimore, 1889).

The friends and disciples of Hergenröther had often urged him to compose a manual of ecclesiastical history, but the labours of the Vatican Council had left him no time for such a task; moreover, he had been considering an extensive work on Church and State in the eighteenth century. He yielded, however, to the general desire, and published his "*Handbuch der allgemeinen Kirchengeschichte*" (Manual of General Church History) in the "*Theological Library*" of Herder (Freiburg, 1876). A second annotated edition appeared in 1879; in 1880 a third volume was added, containing the notes and documentary evidence. This work was then and remains yet unsurpassed for abundance of information, accuracy of narrative, and manifold sources of historical proof. A third edition appeared (1884-86), in which the notes are no longer printed apart, but accompany the text. The writer of this article is the editor of a fourth edition (3 vols., Freiburg, 1902-1909). When it was proposed to bring out a new edition of the "*Kirchenlexikon*" of Wetzer and Welte, Hergenröther was naturally suggested as the savant most capable of executing this gigantic task. He accepted it, but was compelled to abandon it when scarcely begun; his elevation to the dignity of cardinal with the obligation of a Roman residence, left him no freedom for the enterprise. The first volume contains many articles from his pen, some of them quite lengthy. He was unable to do as much for the other volumes—in all there are eighty-seven articles signed by him. Other minor literary tasks consumed his spare hours in the last period of his life at Würzburg. The various subjects were Pius IX (Würzburg, 1876); Athanasius the Great (Cologne, 1876); Cardinal Maury in "*Katholische Studien*" (Würzburg, 1878); a short history of the popes (Würzburg, 1876); the vow of poverty among the Oriental monks in "*Archiv f. kath. Kirchenrecht*" (1877); the canonical significance of nomination (*ibid.*, 1878). Hergenröther's solid and important works in the departments of church history and canon law, and his firm attitude on the great ecclesiastical questions of the day, won for

him the confidence of all the bishops and Catholic scholars of Germany. In 1877 Pius IX had recognized his services to the Vatican Council and the ecclesiastical sciences by making him a domestic prelate. When Leo XIII determined to open the Vatican Archives to the scholars of the world, he found in him the savant to whom he might safely entrust the practical execution of this generous act. Hergenröther was made Cardinal-Deacon of San Nicolò in Carcere, 12 May, 1879, to the great joy of all German, and particularly Bavarian, Catholics. At a later date he was transferred to Santa Maria in Via Lata. He was also appointed Cardinal-Prefect of the Apostolic Archives, a new office, which he was the first to fill, and in which he was charged with the establishment of research work in the Vatican Archives and the systematizing, on scientific lines, of scholarly work amid these rich treasures. That he executed the views of Leo XIII in a satisfactory and even generous manner, is acknowledged by the numerous historical workers who have laboured in the archives since 1879. Hergenröther was also a member of several Roman congregations (Index, Studies, and Extraordinary Ecclesiastical Affairs), and protector of several religious institutes. He undertook, moreover, to edit the official correspondence (Regesta) of Leo X, a rather thankless task, and one of great difficulty, because of the exceedingly bad handwriting of that day. He was efficiently aided by his youngest brother, Franz Hergenröther, who had accompanied him to Rome. Before his death the cardinal published eight parts or *fasciculi* of this extensive work, "Leonis X Pont. Maximi Regesta", Vol. I (Freiburg, 1884-85). A small part of the second volume was brought out (Freiburg, 1891) by his brother and fellow-editor, since which time the publication has ceased by reason of the latter's return to Würzburg as canon capitular of the cathedral.

Despite the grave burdens that now weighed upon him, Cardinal Hergenröther undertook another work of the most exacting nature, the continuation of Hefele's "History of the Councils", two volumes of which he published before his death (vol. VIII, Freiburg, 1887; vol. IX, 1890). The latter volume contains the preliminary history of the Council of Trent and is also a history of the Lutheran Reformation. He suffered much in the last years of his life, as the result of an apoplectic attack which crippled him grievously though it did not affect the brightness and vigour of his intellect. He was able to keep up his literary labours to the day of his death. During the summer vacation of 1880 he took up his residence in the Cistercian Abbey of Mehrerau (on the Bodensee) the hospitality of which he had more than once enjoyed. In this secluded spot he met with another apoplectic stroke, and died. He was laid to rest in the church of the abbey. In 1897 a suitable monument was erected to his memory by his friends, and dedicated (25 March).

J. P. KIRSCH.

Heribert, SAINT, Archbishop of Cologne; b. at Worms, c. 970; d. at Cologne, 16 March, 1021. His father was Duke Hugo of Worms. After receiving his education at the cathedral school of Worms, he spent some time as guest at the monastery of Gorze, after which he became provost at the cathedral of Worms. In 994 he was ordained priest; in the same year King Otto III appointed him chancellor for Italy and four years later also for Germany, a position which

he held until the death of Otto III on 23 January, 1002. As chancellor he was the most influential adviser of Otto III, whom he accompanied to Rome in 996 and again in 997. He was still in Italy when, in 999, he was elected Archbishop of Cologne. At Benevento he received ecclesiastical investiture and the pallium from Pope Sylvester II on 9 July, 999, and on the following Christmas Day he was consecrated at Cologne. In 1002 he was present at the death-bed of the youthful emperor at Paterno. While returning to Germany with the emperor's remains and the imperial insignia, he was held captive for some time by the future King Henry II, whose candidacy he at first opposed. As soon as Henry II was elected king, on 7 June, 1002, Heribert acknowledged him as such, accompanied him to Rome in 1004, mediated between him and the House of Luxemburg, and served him faithfully in many other ways; but he never won his entire confidence until the year 1021, when the king saw his mistake and humbly begged pardon of the archbishop. Heribert founded and richly endowed the Benedictine monastery and church of Deutz, where he lies buried. He was already honoured as a saint during his lifetime. Between 1073 and 1075 he was canonized by Pope Gregory VII. His feast is celebrated on 16 March.

Heribertus in Die Heiligen auf dem bischöflichen bezw. erzbischöflichen Stuhle von Köln*, II (Cologne, 1895-8).

MICHAEL OTT.

Heribert (ARIBERT), Archbishop of Milan (1018-1045), an ambitious and warlike prince of the Church; d. at Monza, 16 January, 1045. After Conrad II was elected King of Germany in 1024, Heribert visited the new king at Constance in 1025, and in consideration of various privileges promised to help him to secure the crown of Lombardy. On 23 March, 1026, Heribert crowned Conrad II at Milan with the iron crown of Lombardy, and a year later was present at his imperial coronation, which was performed in Rome by John XIX on 26 March, 1027. In 1034 he assisted Conrad II in the conquest of Burgundy. In his ambition to be the supreme spiritual ruler of Upper Italy, he disregarded the rights of other dioceses, and consequently came into collision with the Metropolitan of Ravenna. He, moreover, committed many acts of violence against the inferior nobility, the so-called *valvassores*, who in consequence revolted against him. Upon his request the emperor came to Italy to quell the revolt. When, however, the emperor demanded that the archbishop should give an account of his actions, the latter refused to do so on the plea that he was not a subject, but the equal of the emperor. Upon this the emperor had him arrested. The Milanese looked upon this act as a national insult, and, after the archbishop's escape, assisted him loyally against all the attempts of the emperor to gain possession of Milan, even after the archbishop was excommunicated by Benedict IX in March, 1038. In the same year Heribert introduced the famous *carroccio* as the military insignia of Milan. It was afterwards accepted by the cities of Lombardy and Tuscany and by Rome. After the death of Conrad II, Heribert made peace with the new emperor, Henry III, at Ingelheim in 1040.

MICHAEL OTT.

Heriger of Lobbes, medieval theologian and historian; b. about 925; d. 31 October, 1007. After studying at the cathedral school of Liège, he became a Benedictine monk at the monastery of Lobbes,

where for many years he was *scholasticus* of the monastic school. He was an intimate friend of Bishop Notger of Liège, whom he accompanied to Rome in 989, and at whose instance he wrote a few works. In 990 he was elected to succeed the deceased Folcwin as Abbot of Lobbes. By long and assiduous study of the Fathers of the Church and the writers of classical antiquity he amassed an amount of learning quite unusual in those times. On the whole, he wrote with more historical criticism than most of his contemporaries, though as a hagiographer he at times sinks to the level of an ascetical novelist. His chief work is a history of the bishops of Liège, "*Gesta episcoporum Leodiensium*", which, however, reaches only to the death of St. Remaclus in 667. It was first published by Chapeauville in "*Auctores de Gestis Pontificum Tungrensium et Leodiensium*" (Liège, 1618), 1-98; a better edition was issued by Martène and Durand in "*Veterum Scriptorum Amplissima Collectio*" (Paris, 1724-33), IV, 837-912; finally, it was published with a valuable historical disquisition on the writings of Heriger by Köpke in "*Mon. Germ. Hist.: Script.*", VII, 134-94, whence it was reprinted in Migne, P. L., CXXXIX, 958-1068. The history was continued to the year 1048 by Anselm of Liège. Heriger's other writings are: the "Life of the Virgin St. Berendis", published in "*Acta SS.*", February, I, 378-81; the "Life of St. Landoald", *ibidem*, March, III, 35-42; a metrical "Life of St. Ursmar", of which only a few fragments remain; a treatise on the Body and Blood of Christ, "*De Corpore et Sanguine Domini*", which is little else than a compilation of excerpts from the Fathers, and must not be confounded with another work of the same title, generally ascribed to Gerbert; and a few other works on hagiological and liturgical subjects. Most of these works are printed in Migne, P. L., CXXXIX, 999-1136. Heriger is also the author of an arithmetical work entitled "*Regulæ de numerorum abaci rationibus*", which was published by Bubnov in the "*Opera Mathematica*" of Gerbert (Berlin, 1899), 205-25.

KÖPKE, *loc. cit.* above; KURTH in *Biographie nat. de Belgique*, IX (Brussels, 1886), 245-51; BERLIÈRE, *Monasticon Belge* (Bruges, 1890-7), I, 209; DÜMMLER in *Neues Archiv der Gesellschaft für ältere deutsche Geschichtskunde*, XXVI (Hanover, 1900), 755-9; EBERT, *Allgem. Gesch. der Literatur des Mittelalters im Abendlande* (Leipzig, 1879-87), III, 405-9.

MICHAEL OTT.

Herincx, WILLIAM, theologian, b. at Helmond, North Brabant, 1621; d. 17 Aug., 1678. After receiving his preliminary education at 'S Hertogenbosch he entered the University of Louvain, where he devoted himself with great ardour to the study of the ancient classics and obtained the degree of Doctor of Philosophy. As a student he was distinguished for his diligence, modesty, and piety. After completing his university course, he resolved to embrace the religious state and entered the Franciscan Order. In 1653 he was appointed lecturer in theology at Louvain. His superiors, who had observed his great talents and success in teaching, ordered him (1658) to draw up a course of theology for use in the Franciscan schools, and the first volume of his work was published in 1660. The style is concise and clear. A spirit of piety pervades the work. In the preface to his "*Summa Theologica*", he writes: "The teaching of theology does not consist alone in the search after truth, but it behooves us to make use of the truth for our own sanctification and for the sanctification of others, and above all for kindling and nourishing in ourselves and in others the love of God." According to the constitutions of his order, Father Herincx propounds the doctrine of Duns Scotus, but he does not neglect the teachings of St. Bonaventure or St. Thomas.

Father Herincx was a Probabilist, and his tractate "*De conscientia*" is a masterpiece. He shows that

the system of Probabilism is not altogether new, and he draws his proofs from St. Thomas, St. Bonaventure, St. Antonine, and Scotus, although the Subtle Doctor is not so explicit on the matter as the other ancient writers. According to Herincx, the tempest that arose in the seventeenth century against Probabilism had its origin in Jansenism, for Rigorism was unknown among the theologians of the Middle Ages. The decrees of Alexander VII, issued in 1665 and 1666, after the publication of Herincx's work, called for some modifications in the latter, and Father Van Goorlacken, *lector jubilate*, was commissioned to bring out a new edition. After fifteen years spent in teaching theology, Father Herincx was honoured with the title of *Lector Jubilate*, equivalent to the university degree of Doctor of Divinity. He was twice elected minister provincial, then definitor general, and finally commissary general for the northern countries of Europe. On 28 April, 1677, whilst making a canonical visitation in England, he received word at Newport that Charles II had nominated him Bishop of Ypres. He was consecrated on 24 October in the same year, in the Franciscan church, Brussels. He left immediately for his diocese but ruled it for less than a year; he died while making his first diocesan visitation. The epitaph on his tombstone in the cathedral of Ypres says: "Ob virtutem et omnimodam eruditionem ad has infulas assumptus". Letters found in his room after his death show that his promotion to the cardinalate had been determined on by the pope. His "*Summa Theologica Scholastica et Moralis*" was published at Antwerp, 1660-63; 2nd ed., 1680; 3rd, 1702-04.

FOPPENS, *Bibliotheca Belgica* (Brussels, 1739), contains a portrait of Herincx; SCHOUVENS, *Martyrologium Minarico-Belgicum*; HURTER, *Nomenclator*; DIRKS, *Histoire littéraire et bibliographique des Frères Mineurs en Belgique et dans les Pays-Bas* (Antwerp, 1885); *Bibliotheca Univ. Franciscana* (Madrid).

GREGORY CLEARY.

Hermann I, Landgrave of Thuringia (1190-1217), famous as a patron of medieval German poets. He was the second son of Ludwig surnamed *der Eiserne* (the iron one) and of Judith, sister of the Emperor Frederick I. Together with his brother Ludwig, he warred against Henry the Lion, Duke of Saxony, who had been put under the ban of the empire. The brothers were defeated and taken prisoners in the battle of Weissensee (1180) but released the following year. Ludwig had been made Count Palatine of Saxony as a reward for his services to the emperor, but he transferred the dignity to Hermann, who now took up his residence at Neuenburg on the Unstrut (at present Freiburg), which he exchanged for the Wartburg castle near Eisenach, when in 1190 on the death of Ludwig he became Landgrave of Thuringia. He successfully maintained his possessions against the ambitious designs of Henry VI. In 1197 he took part in a crusade, but returned on the news of Henry's decease. In the wars between the rival kings, Philip of Swabia and Otto of Brunswick (1198-1208), he played a conspicuous, but not very glorious, part, changing sides more than once for material advantage. As a consequence his dominions suffered fearfully, being repeatedly overrun and devastated by the armies of the rival factions. When Otto was excommunicated by Pope Innocent III, a number of German princes, among them Hermann, assembled at Nuremberg, in 1211, and chose in his place Frederick of Hohenstaufen, King of Sicily. In the struggle that ensued Thuringia was again invaded by Otto, and Hermann was reduced to great distress, from which he was saved only by the timely arrival of Frederick, the newly elected emperor, at the news of which Otto turned back. Henceforth he remained loyal to Frederick, though he was always regarded with distrust. He died at Gotha, 25 April, 1217, and was buried at Reinhardsbrunn. Hermann was twice

married, his second wife being Sophia, daughter of Duke Otto of Bavaria. His oldest son Ludwig, who succeeded him, was the husband of St. Elizabeth.

The liberality of the art-loving landgrave made the Thuringian Court the meeting-place of poets from all parts of Germany. Heinrich von Veldeke, Walther von der Vogelweide, and Wolfram von Eschenbach were among those who enjoyed the landgrave's hospitality. Wolfram wrote his "Willehalm", and Herbot von Fritzlar his "Liet von Troye", at Hermann's suggestion. That this generosity was not always discriminating, and hence was liable to be abused, is attested by Walther as well as Wolfram. "If a cart-load of wine", exclaims the former, "should cost a thousand pounds, he [Hermann] would nevertheless not allow any knight's goblet to be empty." The famous poetic contest, which is said to have occurred at the Wartburg in 1207, and which is the subject of a poem of the thirteenth century, of unknown authorship, is purely legendary.

Hermann Contractus (HERIMANUS AUGIENSIS, HERMANN VON REICHENAU), chronicler, mathematician, and poet; b. 18 February, 1013, at Altshausen (Swabia); d. on the island of Reichenau, Lake Constance, 21 September, 1054. He was the son of Count Wolverad II von Altshausen. Being a cripple from birth (hence the surname *Contractus*) he was powerless to move without assistance, and it was only by the greatest effort that he was able to read and write; but he was so highly gifted intellectually, that when he was but seven years of age his parents confided him to the learned Abbot Berno, on the island of Reichenau. Here he took the monastic vows in 1043, and probably spent his entire life. His iron will overcame all obstacles, and it was not long before his brilliant attainments made him a shining light in the most diversified branches of learning, including, besides theology, mathematics, astronomy, music, the Latin, Greek, and Arabic tongues. Students soon flocked to him from all parts, attracted not only by the fame of his scholarship, but also by his monastic virtue and his lovable personality. We are indebted to him chiefly for a chronicle of the most important events from the birth of Christ to his day. It is the earliest of the medieval universal chronicles now extant, and was compiled from numerous sources, being a monument to his great industry as well as to his extraordinary erudition and strict regard for accuracy. While it is not improbable that this work was based on a previous state chronicle of Suabia, since lost (called "Chronicon Universale Suevicum", or "Epitome Sangallensis". See Bresslau, "Hermann von Reichenau und die sogenannte Epitome Sangallensis" in "Neues Archiv für ältere Deutsche Geschichtskunde", II, 566), it has nevertheless a significance entirely its own. But the full measure of his genius appears from the objectivity and clearness with which he wrote the history of his own time, the materials of which were accessible to him only by means of verbal tradition. The chronicle has repeatedly been published; first by J. Sichard (Basle, 1529), and by Ussermann, in P. L., CXLIII, 55-264; but its best reproduction was in "Mon. Germ. Hist.: Script.", V, 67-133. It was translated into German by Nobbe (Berlin, 1851, and Leipzig, 1893) "Geschichtschreiber der deutschen Vorzeit", XLII.

He also wrote mathematico-astronomical works (cf. Cantor, "Geschichte der Mathematik", I, 759 sq.). Of his poems the most successful was the "De octo vitiis principalibus", which he addressed to nuns, and in which he gave proof of uncommon skill in the handling of different kinds of metres, as well as in the charm

with which he contrived to blend earnestness with a happy mirth. He composed religious hymns, and is not infrequently credited with the authorship of the "Alma Redemptoris Mater", and the "Salve Regina". Finally, it may be mentioned that Hermann constructed astronomical and musical instruments.

PATRICIUS SCHLAGER.

Hermann Joseph, BLESSED, Premonstratensian monk and mystic; b. at Cologne about 1150; d. at Hoven, 7 April, 1241. According to the biography by Razo Bonvisinus, contemporary prior of Steinfeld (Acta SS., April, I, 679), Hermann was the son of poor parents who had once been rich. At the age of seven he attended school and very early he began the tender devotion to the Blessed Virgin for which he was known during his entire life. At every available moment he could be found at the church of St. Mary on the Capitol, where he would kneel wrapt in prayer and childlike appeal to Mary. One day he is said to have presented an apple, saved from his own scanty repast, to the Child Who accepted it. According to still another legend, on another occasion, when on a bitter cold day he made his appearance with bare feet, Mary procured him the means of getting shoes. At the age of twelve he entered the monastery of the Norbertine or Premonstratensian Canons at Steinfeld, in the present Rhenish Prussia, made his studies in the Netherlands, and on his return was entrusted with the service of the refectory and later of the sacristy.

After he had been ordained priest, it was remarkable with what reverence and devotion he offered the Holy Sacrifice. He was known for his gentle demeanour and affability, his humility, his extraordinary mortifications, but, above all, for his affection for the Mother of God, before whose altar he remained for hours in pious intercourse and ecstatic visions, and in whose honour he composed wonderful prayers and hymns. Mary, in turn, showed him her predilection, called him her chaplain and her spouse, and confirmed his surname Joseph, given to him by his brothers in religion. Hermann was sometimes sent out to perform pastoral duties and was in frequent demand for the making and repairing of clocks. He had under his charge the spiritual welfare of the Cistercian nuns at Hoven near Zülpich. Here he died and was buried in the cloister. His body was later transferred to Steinfeld, where his marble tomb and large picture may be seen to the present day; portions of his relics are at Cologne and at Antwerp. He is represented in art as kneeling before a statue of the Virgin and Child and offering an apple. The process of his canonization was begun in 1626, at the request of Archbishop Ferdinand of Cologne and the Emperor Ferdinand II, but was interrupted. His feast was, however, celebrated on 7 April, and the name of Blessed Hermann is in the Premonstratensian supplement to the Roman Martyrology. They also celebrate the translation of his relics on 24 May. His works are: "A Commentary on the Canticle of Canticles", which is lost; "Opuscula" (new edition, Namur, 1899), including: "Duodecim gratiarum actiones"; "Jubilus seu Hymnus de SS. undecim millibus Virginibus"; "Oratio ad Dominum nostrum Jesum Christum", taken to a great extent from the Canticle of Canticles; "Alia Oratio"; "Precula de quinque Gaudiis B. Mariæ V." It is not quite certain whether the last three are the works of Hermann, though they are generally ascribed to him.

FRANCIS MERSHMAN.

Hermann of Altach (NIEDERALTAICH), a medieval historian; b. 1200 or 1201; d. 31 July, 1275. He received his education at the Benedictine monastery of Niederaltaich, where he afterwards made his vows and was appointed *custos* of the church. In this capacity he became thoroughly acquainted with the records of the monastery. Under Abbot Ditmar (1232-42) he was sent on important missions concerning the interests of the monastery, first to the emperor at Verona, then to the Roman Curia in 1239 and again in 1240. On 27 October, 1242, he was elected Abbot of Niederaltaich. During his abbacy of thirty-one years the monastic discipline and the finances of the monastery were greatly improved. On 12 March, 1273, he resigned his office on account of ill-health and old age, and spent the remaining two years of his life in retirement at his monastery. Hermann is the author of a few historical works, of which the chief is the "Annales Hermanni", reaching from 1137 to 1273. Up to 1146 they are based on previous chronicles; but from 1146 to 1173 they are the independent work of Hermann and are considered one of the most important historical sources for that period, especially as regards the countries of Bavaria, Bohemia, and Austria. His other literary productions are: "De rebus suis gestis", an account of the various architectural improvements made at Niederaltaich while he was abbot; "De institutione monasterii Altahensis", a short narration of the foundation of Altach; "De advocatis Altahensibus", a brief history of the Dukes of Bogen, patrons of Altach. The works of Hermann were published by Jaffé in "Mon. Germ. Hist.", XVII, 351-427, German translation by Weiland in "Geschichtschreiber der deutschen Vorzeit" (Berlin, 1871; second edition, Leipzig, 1898).

MICHAEL OTT.

Hermann of Fritzlar.—With this name are connected two works on mysticism written in German. The first, "Das Heiligenleben", preserved in a single manuscript, is a collection of ninety-one short sermons on the lives of the saints, composed between 1343 and 1349, the matter being drawn from other books, as is expressly stated in the introductory sermon. The sermons, which begin with the feast of St. Andrew, contain here and there mystical considerations, wholesome and concise, which give the work a distinct place in the history of mysticism. Some are merely theoretical, as definitions, notes on union with God, the birth of Christ in the soul, etc.; others are based on the personal experience of the writer. This work, for a long time attributed to Hermann of Fritzlar, whose name is quoted at the end, was compiled, at his request, by Gisiler of Slatheim, one of the Dominican preachers of that period, who played a prominent part in the history of German mysticism. Gisiler, formerly a reader of theology at Cologne and Erfurt, had made for himself a collection of sermons; now he compiled another work, drawing largely from his former one, and adding, with several of his own sermons, extracts from the travels and mystical considerations of Hermann; the simultaneous use of the first and third person may be easily noticed.

The other work attributed to Hermann, "Blume der Schauung" (Flower of Contemplation), and quoted in the sermon on the Annunciation, has been lately found in a manuscript of Nuremberg; it consists of a number of questions, often loosely thrown together, on union with God through the contemplative life, the various models to be assigned to this life, the road to perfect contemplation, etc.; many authori-

ties are quoted, especially St. Augustine, St. Bernard, St. Thomas, Pseudo-Dionysius, Origen, Eckhart, etc. In their mysticism the two works show traces of the influence of Eckhart; but in neither can be exactly determined the part due personally to Hermann. Even the person of Hermann is only known from the scattered suggestions and reminiscences in his works; he was neither a Dominican nor a Franciscan, but a pious layman; he sometimes attacks the manners of the clergy; he had travelled much, but stories of travel, descriptions of customs, etc., cannot always be used as a proof of Hermann's authorship, as they are found also in other collections of sermons (for instance the carnival at Rome); the writer speaks chiefly of Rome, then of Spain and St. James of Compostela, for he has visited the tombs of all the Apostles save those of Sts. John and Thomas; he has seen also Lisbon, Paris, and St-Denis, Salerno, Amalfi, etc. The sermons, at least the first set compiled by Gisiler, were written at Erfurt.

J. DE GHELLINCK.

Hermann of Minden, provincial of the German province of Dominicans; b. at or near Minden on an unknown date; d. shortly after 1294. He belonged to the noble family of Scynne (Schinna), took the religious garb of St. Dominic at Minden, became papal penitentiary and chaplain, acted as vice-provincial "super Rhenum" during the provincialate of Conrad von Eschingen (1277-81), was provincial of the German Dominican province 1286-90, and vicar of the provincial in 1293 and 1294. In the capacity of provincial he attended the German national Council of Würzburg in March, 1287. Hermann's provincialate occurred in one of the most turbulent periods in the history of the German Dominicans. The secular clergy and the laity combined to prevent the spread of the youthful order. Especially serious were the quarrels of the order with the cities of Warburg and Strasburg, and with the cathedral chapters of Ratisbon and Zofingen. It was due to the energy and tact of Hermann that, despite all efforts to the contrary, the order continued to flourish in Germany. His literary activity was confined to two juridical works, "Tractatus de interdicto" and "De criminum inquisitionibus", and a number of letters. The first was a concise treatise on the ecclesiastical interdict and based on the recent decrees of Innocent IV. It was written in 1270. The second work, of which neither manuscript nor print exists, regulated the inquisitorial proceedings against members of his order. His numerous letters, which are of great historical value, were published by Finke (loc. cit. infra). An instruction concerning the "curam monialium", which Hermann sent in 1287 to those of his subjects who were entrusted with the spiritual guidance of nuns, was published by Denifle in "Archiv für Literatur und Kirchengeschichte" (Berlin, 1886), II, 649-651.

MICHAEL OTT.

Hermann of Salza, fourth Grand Master of the Teutonic Order, descendant of the noble Thuringian house of Salza; b. 1180 at Langensalza in Thuringia; d. 19 March, 1239, at Barletta in Southern Italy. Nothing is known of him until in 1210 he succeeded Hermann Bart as Grand Master of the Teutonic Order. Soon after his accession he became one of the most influential persons in Europe, and the Teutonic

Order, which had dwindled down to a mere handful of knights, enjoyed a period of unprecedented prosperity during his term of office. In 1211 King Andrew II of Hungary applied to Hermann for assistance against the pagan Cumans who had repeatedly devastated the south-eastern portion of Transylvania. Hermann sent some of his knights to settle in that district and protect it against further devastation. As reward he received the so-called Burzaland, a territory along the River Burza, including Kronstadt and its vicinity. The Hungarian nobility, however, protested against this grant and the knights were compelled to leave Burzaland in 1225. About this time Duke Conrad of Masovia and Bishop Christian of Prussia agreed to ask the Grand Master for assistance against the pagan Prussians who continually harassed the Christian settlers in and near Prussia. In case the Prussians were subdued by the order, the Duke of Masovia offered Hermann the district of Culm and all the territory which the order could bring under subjection in Prussia. In a diploma of March, 1226, Emperor Frederick II allowed Hermann to accept the offer and gave him all the rights of a sovereign. The Grand Master appointed Hermann von Balk to take charge of the hostile operations against the Prussians, and under his direction began, in 1230, that memorable series of expeditions which finally resulted in the Christianization of Prussia and raised the Teutonic Order to one of the great powers of the Middle Ages. The strength of the order was materially increased when in 1237 it absorbed the Order of the Brothers of the Sword.

Amidst these activities of the Teutonic Order in the north, Hermann never lost sight of the main object of his order, the recovery of the Holy Land. With many of his knights he accompanied the German crusaders to the Holy Land and distinguished himself for his heroism at the taking of Damietta in 1219. In reward for his bravery John of Brienne, the King of Jerusalem, honoured him with the Golden Cross of Jerusalem, which he thereafter wore beside the black cross of his order. He incessantly urged Emperor Frederick II to undertake the crusade which he had repeatedly promised to Honorius III, and in order to join the interests of the Holy Land with those of the emperor he influenced him to marry the daughter of John of Brienne, Yolande, who was heiress to the throne of Jerusalem. It was chiefly due to the efforts of Hermann that in 1226 a reconciliation was effected between the emperor and the Lombard cities. In 1228-9 he accompanied the excommunicated emperor to Jerusalem, and upon their return to Italy he effected the famous Treaty of San Germano on 23 July, 1230, by which the Patrimony of St. Peter was reconstituted and the ban removed from Frederick II. Hermann spent the remaining nine years of his life mostly in Italy, working incessantly for the welfare of the Teutonic Order.

MICHAEL OTT.

Hermas, SAINT, Martyr.—The Roman Martyrology sets down for 18 August (XV Kal. Septembris) the feast of the holy martyrs Hermas, Serapion, and Polyænus, with the statement that they suffered death in Rome for the Faith. The Greek calendars note all three names for the same day; but there is nothing in the historical notices of the Menæa and Synaxaria from which any inference can be drawn either as to the circumstances or the time of their martyrdom. The Martyrologium Hieronymianum does not give these names under the above date. On the other hand, the 28 August (V Kal. Septembris) is the day set apart for the feast of the Roman martyr Hermes and of several others who were buried in the catacomb of Hermes and Basilla, and under the same date appear two Alexandrian martyrs, Polienus and

Serapion. The writer surmises that the three martyrs of 18 August are identical with those of the 28th of the same month, namely, with the Roman martyrs Hermes and the Alexandrians Polienus and Serapion. Their appearance under the earlier date could have been the result of a mistake easily accounted for (XV instead of V Kal. Septembris). The name Hermas also appears for Hermæus (*Ἑρμαῖος*), a priest mentioned in the Roman Martyrology and in the Greek Menæa as companion of Bishop Nicander of Myra in Lycia, and whose feast as a martyr is set down for 4 November. It would seem from the Greek calendars that both saints had been ordained by St. Titus, the disciple of St. Paul.

Acta SS., August, III, 546-547; *Martyrologium Hieronymianum*, ed. DE ROSSI AND DUCHESNE, 112; NILLES, *Kalendarium manuale utriusque ecclesie*, I (Innsbruck, 1896), 315; *Synaxarium ecclesie Constantinopolitane*, ed. DELEHAYE (Brussels, 1902), 908.

J. P. KIRSCH.

Hermas (first or second century), author of the book called "The Shepherd" (*Ποιμήν*, Pastor), a work which had great authority in ancient times and was ranked with Holy Scripture. Eusebius tells us that it was publicly read in the churches, and that while some denied it to be canonical, others "considered it most necessary". St. Athanasius speaks of it, together with the Didache, in connexion with the deuterocanonical books of the Old Testament, as uncanonical yet recommended by the ancients for the reading of catechumens. Elsewhere he calls it a most profitable book. Rufinus similarly says that the ancients wished it to be read, but not to be used as an authority as to the Faith. It is found with the Epistle of Barnabas at the end of the New Testament in the great Sinaitic Bible \aleph (fourth century), and between the Acts of the Apostles and the Acts of Paul in the stichometrical list of the Codex Claromontanus. In accordance with this conflicting evidence, we find two lines of opinion among the earlier Fathers. St. Irenæus and Tertullian (in his Catholic days) cite the "Shepherd" as Scripture. Clement of Alexandria constantly quotes it with reverence, and so does Origen, who held that the author was the Hermas mentioned by St. Paul, Rom., xvi, 14. He says the work seems to him to be very useful, and Divinely inspired; yet he repeatedly apologizes, when he has occasion to quote it, on the ground that "many people despise it". Tertullian, when a Montanist, implies that Pope St. Callistus had quoted it as an authority (though evidently not as Scripture), for he replies: "I would admit your argument, if the writing of the Shepherd had deserved to be included in the Divine Instrument, and if it were not judged by every council of the Churches, even of your own Churches, among the apocryphal and false." And again, he says that the Epistle of Barnabas is "more received among the Churches than that apocryphal Shepherd" (De pudic., 10 and 20). Tertullian was no doubt right, that the book had been excluded at Rome from the Bible *Instrumentum*, but he is exaggerating in referring to "every council" and to a total rejection, for the teaching of the "Pastor" was in direct contradiction with his own rigid views as to penance. His earlier use of it is paralleled by the Acts of Sts. Perpetua and Felicitas, before the end of the second century, but there is no trace of it in St. Cyprian, so that it would seem to have gone out of use in Africa during the early decades of the third century. Somewhat later it is quoted by the author of the pseudo-Cyprianic tract "Adv. aleatores" as "Scriptura divina", but in St. Jerome's day it was "almost unknown to the Latins". Curiously, it went out of fashion in the East, so that the Greek MSS. of it are but two in number, whereas in the West it became better known and was frequently copied in the Middle Ages.

CONTENTS.—The book consists of five visions,

twelve mandates, or commandments, and ten similitudes, or parables. It commences abruptly in the first person: "He who brought me up sold me to a certain Rhoda, who was at Rome. After many years I met her again, and began to love her as a sister." As Hermas was on the road to Cumæ, he had a vision of Rhoda, who was presumably dead. She told him that she was his accuser in heaven, on account of an unchaste thought he had once had concerning her, though only in passing; he was to pray for forgiveness for himself and all his house. He is consoled by a vision of the Church in the form of an aged woman, weak and helpless from the sins of the faithful, who tells him to do penance and to correct the sins of his children. Subsequently he sees her made younger through penance, yet wrinkled and with white hair; then again, as quite young but still with white hair—this is the Church of the forgiven. Lastly, she shows herself all glorious as a Bride—this is the Church of the end of the days. In the second vision she gives Hermas a book, which she afterwards takes back in order to add to it. He is to give this writing to the presbyters, who will read it to the people; another copy is for "Grapte", who will communicate it to the widows; and a third is to be sent by Clement to the foreign Churches, "for this is his office". We see here the constitution of the Roman Church: the presbyters set over different parishes; Grapte (no doubt a deaconess) who is connected with the widows; Clement, the pope, who is the organ of communication with other Churches; indeed, the constant communication between Rome and the rest of the Church in the second century is well known to us from other sources. The fifth vision, which is represented as taking place twenty days after the fourth, introduces "the Angel of repentance" in the guise of a shepherd, from whom the whole work takes its name. He delivers to Hermas a series of precepts (*mandata, ἐντολαί*) as to the belief in one God, simplicity, truthfulness, chastity, long-suffering, faith, fear, continence, confidence, cheerfulness, humility, good desires. These form an interesting development of early Christian ethics. The only point which needs special mention is the assertion of a husband's obligation to take back an adulterous wife on her repentance. The eleventh mandate, on humility, is concerned with false prophets who desire to occupy the first seats (that is to say, among the presbyters). It is possible that we have here a reference to Marcion, who came to Rome about 142-4 and desired to be admitted among the priests (or possibly even to become pope). After the *mandata* come ten similitudes (*παραβολαί*) in the form of visions, which are explained by the angel. The longest of these (ix) is an elaboration of the parable of the building of a tower, which had formed the matter of the third vision. The tower is the Church, and the stones of which it is built are the faithful. But in Vis. iii it looked as though only the holy are a part of the Church; in Sim. ix it is clearly pointed out that all the baptized are included, though they may be cast out for grave sins, and can be readmitted only after penance.

The whole book is thus concerned with the Christian virtues and their exercise. It is an ethical, not a theological, work. The intention is above all to preach repentance. A single chance of restoration after fall is given to Christians, and this opportunity is spoken of as something new, which had never been clearly published before. The writer is pained by the sins of the faithful and is sincerely anxious for their conversion and return to good works. As a layman, Hermas avoids dogma, and, when incidentally it comes in, it is vague or incorrect. It has been thought with some reason that he did not distinguish the Son from the Holy Ghost, or that he held that the Holy Ghost became the Son by His Incarnation. But his words are not clear, and his ideas

on the subject may have been rather misty and confused than definitely erroneous.

AUTHORSHIP AND DATE.—It is not easy to decide whether the writer has given us a genuine fragment of autobiography and a true account of visions which he saw or imagined that he saw, or whether the entire work is fictitious both in form and in setting. Three dates are suggested by the variety of evidence available. The reference to St. Clement as pope would give the date 89-99 for at least the first two visions. On the other hand, if the writer is identified with the Hermas mentioned by St. Paul, an earlier date becomes probable, unless he wrote as a very old man. But three ancient witnesses, one of whom claims to be contemporary, declare that he was the brother of Pope St. Pius I, who was not earlier than 140-55. These three are (a) the Muratorian fragment; (b) the Liberian catalogue of popes, in a portion which dates from 235 (Hippolytus?); (c) the poem of Pseudo-Tertullian against Marcion, of the third or fourth century. (a) "Pastorem uero nuperrime temporibus nostris in urbe Roma Herma conscripsit, sedente cathedra urbis Romæ ecclesiæ Pio episcopo fratre ejus. Et ideo legi eum quidem oportet, se publicare uero in ecclesia populo neque inter prophetas completos numero, neque inter apostolos in fine temporum, potest"—"And very recently, in our own times, in the city of Rome, Herma wrote the Pastor, when his brother Pius, the bishop, sat upon the chair of the Church of the city of Rome. And therefore that [book] ought to be perused, but it cannot be publicly read to the people assembled in church, neither among the Prophets, whose number is complete, nor among the Apostles [who came] in the end of times." (b) "Sub hujus [Pii] episcopatu frater ejus Ermes librum scripsit, in quo mandatum continetur quæ [quod] præcepit ei angelus, cum venit ad illum in habitu Pastoris"—"Under his [Pius's] episcopate, his brother Ermes wrote a book in which are contained the precepts which the angel delivered to him, coming to him in the guise of a shepherd." (c) "Post hunc deinde Pius, Hermas cui germine frater, angelicus Pastor, quia tradita verba locutus."—"Then, after him, Pius, whose brother according to the flesh was Hermas, the angelic shepherd, because he spoke the words given to him." The three authorities are probably citing the same papal catalogue (of Hegesippus?). As (c) quotes some details from this list which are absent from (b), it would seem that he is independent of (b). (a) has added the inference that the "Pastor" may be read publicly, provided it be not numbered among the fourteen prophets, nor among the Apostolic writings. The statement that Hermas wrote during his brother's pontificate may similarly be an inference from the fact that it was in a list of popes, against the name of Pius, that the writer found the information that Hermas was that pope's brother. He may have been an elder brother of the pope, who was probably an old man in 140. Hence it is quite possible that Hermas might have been past thirty when Clement died, at the time of his first and second visions. But because this is possible, it does not follow that it is very probable.

Older critics unanimously attributed the authorship to the Hermas of Rom., xvi, 14—Bellarmine, Cave, Le Nourry, Remi Ceillier, Lardner, etc., with Baronius, who strangely thought the same Hermas might have been brother to Pius I. In the middle of the eighteenth century Mosheim and Schröck preferred the testimony of the Muratorian Canon, which was published in 1740; but Gallandi and Lumper adhered to the earlier view. Zahn, in an early work (1868), stood by the reference to St. Clement and imagined a Hermas, neither known to St. Paul nor brother to St. Pius, but writing in the last decade of the first century. He was followed by Peters and Caspari. But Hefele had been teaching that we cannot refuse the contem-

porary witness of the Muratorian Fragment, and this view has in the end prevailed amongst scholars, being now almost universally received. The question remains how we are to explain the mention of St. Clement. It was suggested above that Hermas may have been older than his brother Pius. But Harnack, holding that moniscopacy was unknown in Rome until Anicetus, the successor of Pius, has no difficulty in holding that Clement really lived into the beginning of the second century, and that Pius was the most prominent among the priests at Rome even before 140. He therefore dates part of Visio ii, the kernel of the whole, before 110, and the final redaction not earlier than 135, nor later than 145. It is indeed true that the book itself describes the various parts as having been written down successively, and the process may well have taken three or four years, but hardly a decade or two. Perhaps the most probable view is that the historical data in the book are fictitious; the author was really the brother of Pope Pius, and wrote during his brother's pontificate. The evils of the Church in his day which he describes are not impossible in the first century, but they certainly suit the second better. There is a possible reference to Marcion's visit to Rome about 142, and there is a probable reference to Gnostic theories in Simil. viii, ix. The writer wished to be thought to belong to the preceding generation—hence the name of Clement, the most famous of earlier popes, instead of the name of Pius. We cannot even be sure that the writer's name was really Hermas. It is a suitable name for a slave, being a shortened form of *Hermogenes*, *Hermodoros*, or some such word. Dr. Rendel Harris has urged in an interesting essay that where Hermas describes twelve mountains in Arcadia (Simil. ix, 1), the description of the locality is taken from Pausanias. Dr. Armitage Robinson thought that we must even suppose that Hermas knew the place himself, and had been brought up in Arcadia. But all this is inconclusive, though plausible. The notion of De Champagne (who was followed by Dom Guéranger), that the "Shepherd" is made up of two works, the one (Vis. i-iv) by the disciple of St. Paul, the remainder by the brother of Pope Pius, is sufficiently refuted by the unity of style and matter, as Baumgärtner has shown. The same is to be said of Hilgenfeld's opinion, that we have before us a fusion of works by three authors. Spitta has brought into patristic study the method he has applied to the Acts of the Apostles and the Apocalypse, and he finds in Hermas traces of a Christian enlargement of a Jewish writing, as Völter had said of the Apocalypse. It is natural that Völter should have approved this theory, but Spitta has not been followed by patristic scholars. Haussleiter formerly attributed only Vis. v—Simil. x to the brother of Pius, regarding Vis. i-iv as an addition made at the end of the second century in order to recommend the book as the work of Hermas, disciple of St. Paul. But that personage is not even mentioned.

There is but one direct quotation in the "Shepherd", and that is from the apocryphal book of "Eldad and Modat, who prophesied to the people in the wilderness", and the reference is apparently ironical. But there are many indirect citations from the Old Testament. According to Swete, Hermas never cites the Septuagint, but he uses a version of Daniel akin to that of Theodotion. He shows acquaintance with one or other of the Synoptic Gospels, and, since he also uses that of St. John, he probably knew all three. He appears to employ Ephesians and other Epistles, including perhaps I Peter and Hebrews. But the books he most certainly and most often uses are the Epistle of St. James and the Apocalypse. His matter is rather dull to us moderns, and the simplicity of his manner has been characterized as childish. But the admiration of Origen was not given to a work without depth or value; and, even with regard to the style,

Westcott has reason to say ("On the Canon", pt. I, ch. ii): "The beauty of the language and conception in many parts has never been sufficiently appreciated. Much of it may be compared with the 'Pilgrim's Progress' and higher praise than this cannot be given to a book of its kind." There is indeed some resemblance between the intensity and directness of the ancient Roman Catholic and that of the persecuted Puritan, however antipodean the antithesis between the individualism of the one and the conception of a Universal Church which dominates the whole thought of the other.

The "Shepherd" was first printed in Latin by Faber Stapulensis (Lefèvre d'Étaples) in "Liber trium virorum et trium spiritualium virginum" (Paris, 1513); better edition by Fell (Oxford, 1685), and especially by Hilgenfeld (Leipzig, 1873), and von Gebhardt (Leipzig, 1877). This version, which is contained in many MSS., and has been frequently reprinted in the editions of the Apostolic Fathers, is known as the Vulgate. It was certainly known to the author of the "Adversus aleatores" (third or fourth cent.), and possibly to Tertullian, and the translation was probably made in the second century. Another version is contained in a single MS. (Vat. Palat. 150, sæc. xiv), and has been printed by Dressel, "Patres Apost." (Leipzig, 1857 and 1863), and von Gebhardt and Harnack ("Patres Apost.", Leipzig, 1877). It is of the fifth century, according to Harnack, and the translator has used the Vulgate version as an aid. Haussleiter's attempt to show that the Palatine is the older is rejected by Harnack and Funk. An Ethiopic version was discovered in 1847 by d'Abbadie; it has unfortunately a few lacunæ and accidental omissions. It seems to have been made in the year 543. The Greek original was first known from a fourteenth-century MS. on Mount Athos. The well-known forger Simonides stole four of the leaves and copied the rest. But he sold to the library of the University of Leipzig a Greek version which he had composed himself. This was published in 1856 by Rudolf Anger, with preface and index by Dindorf. The fraud was soon discovered. The four leaves and Simonides' copy were procured by the library, and the true readings were published by Anger in the "Leipziger Repertorium der deutschen und ausländischen Literatur", III (1856), 138. Since then the six leaves which remain on Mount Athos have been collated by J. Armitage Robinson. The Codex Sinaiticus discovered by Tischendorf, and published by him in 1862, contains the "Pastor", but in both MSS. the end is wanting. Two fragments of the book are found on a papyrus leaf from the Fayoum, now at Berlin.

On the MSS. of the Vulgate version, see HARNACK, *Gesch.*, I, 51; DELEHAYE in *Bull. crit.*, 1894, p. 14; EHRHARD, *Altkirchl. Literatur*, 104. The Palatine MS. has been carefully collated by FUNK in *Zeitschr. für die österr. Gymn.*, XXXVI (1885), 245. On the date and style of the Palatine version, HAUSSLEITER, *De versionibus Pastoris Hermæ latinis* (Erlangen, 1884); IDEM in *Z. für wiss. Theol.*, XXXVI (1883), 345. For the Ethiopic version, see D'ABBADIE AND DILLMAN, *Hermæ Pastor*, with Latin translation, in *Abhandlungen für die Kunde des Morgenlandes*, II (Leipzig, 1860), 1. The true Greek text appeared first in DRESSSEL, *Patres Apostolici* (Leipzig, 1857 and 1863), and has been frequently republished in similar collections, as by HILGENFELD (1866 and 1881), GEBHARDT, and HARNACK (1877—); LIGHTFOOT AND HARMER with English translation (1891), FUNK (1901). On the Athos MS., LAMBROS AND ROBINSON, *A Collation of the Athos Codex of the Shepherd* (Cambridge, 1888); HILGENFELD in *Z. Wiss. Theol.*, XXXII (1889), 94. The Berlin Papyrus is given in facsimile by WILCKEN, *Tafeln zur älteren griechischen Paläogr.* (Leipzig, 1891); a citation is found in a papyrus in GRENFELL AND HUNT, *The Oxyrhynchus papyri*, I (London, 1898), 8. On both papyri see DIELS AND HARNACK in *Sitzungsber. der K. preussischen Akad. der Wiss.* (Berlin, 1891), p. 427, and EHRHARD in *Theolog. Quartalschrift*, LXXIV (1892), 294.

The literature dealing with Hermas is very large, and only a selection is here mentioned. The best introduction and notes, in Latin, are by FUNK, *Patres Apostolici*, I (Tübingen, 1901). An excellent summary account by BARDENHEWER, *Gesch. der altkirchl. Litt.*, I (Freiburg im Br., 1902), 557-578; see also HARNACK, *Gesch. der altkirchl. Litt.*, I, 49, and *Chronol.*, I, 257; KRÜGER (who dates the book c. 100), *Gesch. der altkirchl. Litt.* (1895), 29; ZAHN, *Der Hirt des Hermas untersucht* (Gotha, 1868); IDEM, *Gesch. des N. T. Kanons*, I (1888), 326; NIRSCHL,

Der Hirt des Hermas (Passau, 1879); BRÜLL, *Der H. des H.* (Freiburg im Br., 1882); RENDEL HARRIS, *Hermas in Arcadia in Journal of Soc. of Bibl. Lit. and Exeg.* (1887, and reprinted, Cambridge, 1888). On Hermas's use of the N. T. see the works of WESTCOTT, ZAHN, GREGORY, etc. on the Canon; and C. TAYLOR, *The witness of Hermas to the four Gospels* (London, 1892); IDEM, *Hermas and Cebes* (an attempt to show that Hermas has used the *nikaios* of the Stoic philosopher Cebes) in *Journal of Philol.*, XXVIII (1900), 276. On the plural authorship, DE CHAMPAGNY, *Les Antonins*, I (Paris, 1863); SPIRITA, *Zur Gesch. und Litt. des Urchristentums*, II (Göttingen, 1896); VILTER, *Die Visionen des Hermas, die Sybille, und Klemens von Rom* (Berlin, 1900). For the unity, LINK, *Die Einheit des Pastor Hermas* (Marburg, 1888); BAUMGÄRTNER, *Die Einheit des Hermasbuches* (Freiburg im Br., 1889); FUNK in *Theol. Quartalschr.*, LXXXI (1899), 321; STRAHL, *Patristische Untersuchungen* (Berlin, 1901—), gives the date as 165-70, after the appearance of Montanism; RÉVILLE, *La valeur du témoignage historique du Pasteur d'Hermas* (Paris, 1900). On the theology of the Shepherd, LINK, *Christi Person und Werk im Hirten des Hermas* (Marburg, 1886); BENOIST in *Bessarione*, VI (1899); HEURTER, *Le dogme de la Trinité dans l'épître de S. Clément, et le Pasteur d'H.* (Lyons, 1900). Further bibliography in RICHARDSON, *Synopsis*; CHEVALIER, *Répertoire*, and BARDENHEWER, *loc. cit.*

JOHN CHAPMAN.

Hermeneutics, derived from a Greek word connected with the name of the god Hermes, the reputed messenger and interpreter of the gods. It would be wrong to infer from this that the word denotes the interpretation or exegesis of Sacred Scripture. Usage has restricted the meaning of hermeneutics to the science of Biblical exegesis, that is, to the collection of rules which govern the right interpretation of Sacred Scripture. Exegesis is therefore related to hermeneutics, as language is to grammar, or as reasoning is to logic. Men spoke and reasoned before there was any grammar or logic; but it is very difficult to speak correctly and reason rightly at all times and under any circumstances without a knowledge of grammar and logic. In the same way our early Christian writers explained Sacred Scripture—as it is interpreted in particular cases even in our days by students of extraordinary talent—without relying on any formal principles of hermeneutics, but such explanations, if correct, will always be in accordance with the canons of our present-day science of exegesis.

I. NECESSITY OF HERMENEUTICS.—The reader must not infer from what has been said that hermeneutics is a mere accomplishment in the Biblical exegete, that its knowledge is not necessary for the Bible student. It is true that in the early Church the science of exegesis was not developed; but it must be remembered that the so-called sacred languages were the vernacular tongues of the Syrian and Greek writers, who were familiar with what are to us Biblical antiquities, and who were also imbued with the early oral traditions containing the true explanation of the many difficult passages of Sacred Scripture. As soon as these natural aids of the Christian interpreter began to wane, the principles of hermeneutics began to develop. Even at the time of St. Augustine they were collected into a single book, so that they could be made known and put into practice without much difficulty. Anyone acquainted with the variety of opinion concerning the meaning of some of the most important passages of the Bible will wonder rather at the suggestion of explaining Scripture without the aid of hermeneutics, than at the claim for its urgent necessity. Nor can it be said that the variety of exegetical results on the part of writers well-versed in the principles of scientific interpretation shows the uselessness of hermeneutics in the explanation of Sacred Scripture. No scientific principles have ever done away with all disagreement of scientists in any branch of knowledge; besides, in the case of Scripture study, hermeneutics has diminished the number of the opinions of interpreters by eliminating the views not supported by any solid scientific principle. Such principles are even more necessary for the Biblical interpreter than a study of logic is for the thinker; for while the laws of thought are based on an inborn tendency of the mind, the rules of hermeneutics rest to a great extent on facts external to

the mind. And the results flowing from the application of the principles of hermeneutics are not less important than those derived by means of the formal laws of logic, since the controversies between Jews and Christians, between Christians and Rationalists, between Catholics and Protestants, are in the end brought back to hermeneutic questions.

II. LIMITS OF HERMENEUTICS.—Though the influence of hermeneutics is so far-reaching, its efficiency must not be overestimated. Hermeneutics does not supply a deficiency of natural ability, nor does it rectify false philosophical principles or perverse passions, nor again does it impart the needed philological and historical erudition. Secondly, of itself hermeneutics does not investigate the objective truth of a writer's meaning, which has been established by its canons; it does not inquire what is true or false, but only what the writer intended to say. Hence a hermeneutic truth may be an objective falsehood, unless the writing subjected to the hermeneutic rules be endowed with the prerogative of inferrancy. Thirdly, hermeneutics does not inquire into the authenticity of a writing, nor into the genuineness of its text, nor again into its special character—for instance, whether it be of a sacred or profane nature. Biblical hermeneutics presupposes, therefore, a knowledge of the history of the Canon of both the Old and the New Testament, an acquaintance with the results of the lower or textual criticism, and a study of the dogmatic treatise on inspiration. The number of limitations of hermeneutics will not render the reader impatient, if he keeps in mind that he bears with the limits which circumscribe the field of other branches of learning; no one blames grammar, for instance, because it does not confer any special linguistic aptitude on the grammarian, or because it does not improve the melody or the syntactical structure of the language.

III. OBJECT OF HERMENEUTICS.—After removing what is foreign to hermeneutics, we are enabled to understand its proper object more thoroughly. Its material object is the book or writing which is to be explained; its formal object is concerned with the sense expressed by the author of the book in question. Thus, Biblical hermeneutics deals with Sacred Scripture as its material object, furnishing a complex set of rules for finding and expressing the true sense of the inspired writers, while the discovery and presentation of the genuine sense of Sacred Scripture may be said to be its formal object.

IV. DIVISION OF HERMENEUTICS.—The most direct and simple method of determining the meaning of an author consists in the latter's statement of the sense he intended to convey. Such a statement, whether it proceed from the author himself or from another person who has certain knowledge of the author's mind, is called an authentic interpretation. The legal interpretation differs from the authentic in that it proceeds, not from the lawgiver himself, but from his successor, or from his equal in legislative power, or from the supreme legal authority. The scientific interpretation differs from both the authentic and the legal; its value is not derived from authority, but from the trustworthiness and the learning of the commentator, from the weight of his arguments, and from his faithful adherence to the rules of hermeneutics. Authority as such does not enter into the field of general hermeneutics. The rules of hermeneutics, thus circumscribed, may be either of universal or particular application, that is, they may be valid for the right explanation of any book or writing, or they may be adapted for a particular class of books, e. g., Sacred Scripture or canon law. Biblical hermeneutics belongs to this second class, not because the universal rules of exegesis are inapplicable to the Sacred Books, but because the sacred character of the Bible demands additional rules of interpretation which are not applicable to profane writings. Finally, Biblical herme-

neutics is either general or special, according to the character of the exegetical rules it contains: it is general if its rules are applicable to the whole Bible; it is special if they are intended for the explanation of particular books only, e. g., the Psalms or the Pauline Epistles. But, as in logic the species contains all the essential notes of the genus, so does special hermeneutics contain all the exegetical rules of general hermeneutics, and so does particular hermeneutics embrace all the laws of interpretation imposed by universal hermeneutics.

V. FIRST PRINCIPLE IN HERMENEUTICS.—Since the more special hermeneutical laws do not contradict the more general laws, but only determine them more accurately in order to adapt them to the particular writings which they are to explain, it ought to be possible to determine the first and highest principle or law of hermeneutics, from which all the special exegetical rules are derived. The reader will remember that such first principles exist in other sciences, too; in logic, for instance, and in ethics, we have the principle of contradiction and the principle of doing good respectively. Returning to hermeneutics, thought must be derived from language according to the same law which regulates the expression of thought in language, the process alone being inverted. In this respect language in general does not differ from a cipher message which must be read according to the code in which it was written. Now a writer commonly uses the code of his day and of his own peculiar circumstances; he employs language in accordance with its peculiar usages and its rules of grammar; he follows in the expression of his thoughts the sequence of logic, and his words reflect his mental as well as his physical and social conditions. If the interpreter wishes to fully understand the writer, he must be guided by these quasi-criteria of the author's meaning: his language, his train of thought or the context, and his psychological and historical condition at the time of writing. Hence flows the first and highest principle of hermeneutics: Find the sense of a book by way of its language (grammatically and philologically), by way of the rules of logic (from the context), and by way of the writer's mental and external condition. Expressing the same truth negatively, we may say that any meaning of a passage which does not agree with its grammar, its context, and the internal and external conditions of its author, cannot be the true sense of the writer. In the case of Scripture, the fact of its inspiration and of its authentic interpretation by the Church must be added to the three common criteria of interpretation; hence any meaning not in keeping with Scriptural grammar, context, or the concrete conditions of the Biblical writers, or not in harmony with the fact of inspiration and the spirit of the Church's interpretation, cannot be the true sense of Scripture. Regard to only the first three of these criteria renders the exegesis rationalistic; observance of the first four is a recognition of the specific Christian doctrine of Biblical inspiration; but it is only the conjunction of the fifth with the other four that gives birth to true Catholic exegesis without destroying the rational and simply Christian character of the interpretation.

VI. SOURCES OF HERMENEUTIC PRINCIPLES.—The foregoing remarks reveal the sources from which hermeneutics derives its secondary principles. It presupposes a grammatical and philological knowledge of the language in which the work is written, an acquaintance with the laws of logic and rhetoric, and a familiarity with the data of psychology and the facts of history. These are the sources of the rules of universal hermeneutics; in the case of the Sacred Scriptures, the scientific interpreter must be well-grounded in the so-called Sacred or Biblical languages; he must be well-versed in Biblical history, archæology, and geography; he should know the various Christian dogmas

bearing on the Bible and their history; finally he must be instructed in patrology, ecclesiastical history, and Biblical literature. Before entering on the explanation of any particular book of Scripture, the commentator must also be versed in the dogmatic, moral, philosophical, and scientific questions connected with his particular subject. In the light of these many requirements, one easily understands why it is so hard to find commentaries which are fully satisfactory, and one also realizes the need of reading several commentaries before one can claim fully to understand the Scriptures or any part thereof.

VII. HISTORICAL DEVELOPMENT OF HERMENEUTICS.—Seeing the importance of Biblical hermeneutics, it may seem a matter for surprise that this branch of study was not developed earlier. But the history of every science shows that practice precedes theory. Language, for instance, had been in use for many generations before systematic grammars were written; health had been the object of care for centuries before the growth of the science of medicine. In a similar way, the books of Sacred Scripture were read and explained by means of what may be called natural hermeneutics before the science of exegesis was thought of. Deut., xvii, 8-12, 18; xxi, 5; xxxi, 9-13, 24-26, may be regarded as containing at least implied testimony in favour of the practice of exegesis, though it is impossible to determine the hermeneutical laws then in force.

(1) *Jewish Development.*—Not long after the days of Christ, R. Hillel set forth seven hermeneutic rules (*middoth*), among which are found the inference from the greater to the less, from the general to the particular, from the context, and from parallel passages. At the beginning of the second century R. Yishma 'el ben Elisha increased the number of Hillel's rules to thirteen, treating among other questions the way of harmonizing contradictory passages. About the middle of the second century R. Eli'ezer derived thirty-two hermeneutic rules from the then prevailing method of interpretation, and these are still to be found in the editions of the Talmud after the treatise "Berakhoth". In the Middle Ages Aben Ezra and Maimonides explained certain hermeneutic rules, but no rabbinic writer has written *ex professo* any complete treatise on Biblical hermeneutics.

(2) *Christian Development.*—(a) The First Three Centuries.—Among the earliest Christians, too, the Scriptures were read and explained without the guidance of any acknowledged rules of hermeneutics. We may infer from the sayings of the Fathers that tradition and the analogy of faith were the sovereign laws of the early Christian interpreters. In the second century Melito of Sardis composed a hermeneutic treatise, entitled "The Key", in which he explained the Biblical tropes. The Fathers of the third and fourth centuries suggested many rules of interpretation without collecting them into any distinct work. Besides Tertullian and Clement of Alexandria, Origen proposed and defended against Jews and heretics his rules of exegesis in his work "De principiis", lib. IV; Diodorus of Tarsus (d. before 394) wrote on the difference between type and allegory, but his work "Quomodo differt theoria ab allegoriâ" has been lost; St. John Chrysostom urges the commentator to study the context, the author, the readers, the intention of the speaker, the occasion, place, time, and manner of writing (Hom. in Jer. x, 33; Hom. xv in Joan.). St. Jerome, too, has left many hints on the proper method of interpretation ("Ep. ad Pammach.", "De optimo genere interpretandi"; "Lib. quæst. Hebr. in Gen."; "De nominibus et loc. Hebr."; "Præf. in 12 prophet."; "In quat. evang.", etc.).

(b) From the Fourth to the Fourteenth Century.—About A. D. 390 the Donatist Tychonius published a work entitled "Septem regulæ ad inquirendum et inveniendum sensum S. Scripturæ", which was both

incomplete and infected with error; it was on this account that St. Augustine (d. 430) wrote his work "De doctrinâ Christianâ libri quatuor", in which he treated the rules of interpretation more satisfactorily than had ever been done before his time. Hermeneutic principles may be found scattered also in other works of the great African Doctor, e. g., in his "De Genes.", his "Exposit. Psalm.", and his "De civit. Dei". Isidore of Pelusium (d. about 440-450) left letters explaining the hermeneutic principles of the School of Antioch, and also a work entitled "De interpretatione divinæ scripturæ". To Eucherius of Lyons (d. about 450) we are indebted for two hermeneutic works, "Formulae spiritualis intelligentiæ ad Uranium liber unus" and "Instructionum ad Salonium filium libri duo". In the fifth century, too, or at the beginning of the sixth, the monk Adrian explained the figurative expressions of Sacred Scripture, especially of the Old Testament, according to the principles of the School of Antioch in a work entitled "Introductio ad divinas scripturas". About the middle of the sixth century Junilius Africanus wrote his celebrated letter to Primasius, "De partibus divinæ legis", in which he expounds the rules of Biblical interpretation, as he received them from an adherent of the School of Edessa. About the same time M. Aurelius Cassiodorus (d. about 565-75) wrote, among other works, "De institutione divinarum litterarum", "De artibus et disciplinis liberalium litterarum", and "De schematibus et tropis".

(c) To the Council of Trent.—Though we meet with fewer complete hermeneutic works during the period of the Middle Ages, still we have copious exegetical rules in the commentaries and introductions of St. Venerable Bede, Alcuin, Rabanus Maurus, Hugh of St. Victor, and especially St. Thomas (Summ. theol., I, Q. i, n. 9 sq.). There were several special reasons which led to the promotion of Biblical and hermeneutical studies in the fourteenth and fifteenth centuries. The Council of Vienne (1311) ordained that chairs of Oriental languages were to be erected in the universities; the humanistic studies began to flourish anew and reacted favourably on the pursuit of the Biblical languages; the discovery of the art of printing (1440-1450) facilitated the spread of the Scriptures; the taking of Constantinople by the Turks (1453) occasioned the westward emigration of numerous learned Greeks, who carried with them their literary treasures as well as their learning and artistic skill. It was during this period, too, that Nicolaus Lyranus (d. 1340) wrote his works, "Tractatus de differentiâ nostræ translationis ab Hebr. litterâ" and "Liber differentiarum V. et N. Testamenti", and John Gerson (d. 1429) produced his hermeneutic treatise entitled "Propositiones de sensu litterali Scripturæ Sacræ", in which he considers the various kinds of Scriptural sense, and expresses his preference for the literal sense to be determined according to the teaching of tradition and the pronouncements of the Church. In the sixteenth century the so-called Reformers began with regarding the analogy of faith and the symbols as the criteria of Biblical exegesis, but in the end they had to fall back on the rules of Christian and even rationalistic hermeneutics, so that they naturally prepared the way for the Biblical rationalism of the eighteenth century. The Catholic hermeneutic literature also grew during these centuries, partly owing to the rivalry between Catholic and Protestant scholars. As this tended to enlarge the hermeneutic works, clearness and thoroughness demanded the separation from hermeneutics of critical, historical, and dogmatic questions, and the development and solid proof of the strictly hermeneutic principles.

VIII. RELATION OF HERMENEUTICS TO THE OTHER BRANCHES OF SACRED STUDY.—It may be of interest to consider the relation in which hermeneutics, thus reduced to its own specific limits, stands to the other

branches of Scriptural studies. Needless to say, the first step in the scientific study of the Bible consists in acquainting oneself with the foundation and the extent of the human and Divine authority with which the Scripture is endowed; the so-called historico-critical introduction to Sacred Scripture teaches us all this. The second step leads us to the key for the right understanding of this doubly authoritative collection of books, that is, to the study of hermeneutics proper. The final stage of Bible study is exegesis, which opens to us the innermost treasures of the inspired writings. All this would be very simple and clear, if the second stage did not demand the additional erudition now taught by three distinct branches of knowledge: sacred philology, history, and sacred archaeology. It would be quite impossible to apply the rules of hermeneutics without possessing this knowledge. Finally, those who arrange theological studies systematically place philosophy and Bible study, together with ecclesiastical history and patrology, among the preambles preparing us for theoretic theology (fundamental, dogmatic, and apologetic), practical theology (moral), pastoral theology, and canon law.

IX. CONTENTS OF HERMENEUTICS.—After considering hermeneutics in its relation to its cognate branches of study, we may return to a more accurate scrutiny of its own contents. We have seen that the science of interpretation has for its formal object the discovery and the presentation of the sense of Sacred Scripture. Starting from this fact, we may infer that (1) a complete treatise of hermeneutics ought to treat first of the sense of Scripture in general; (2) it must lay down definite rules for finding this sense; (3) it must teach us how to present this sense to others. These three questions have been fully explained in the article EXEGESIS (vol. V, 692 sqq.), so that it is unnecessary to repeat their respective developments here. It will be useful, however, for the reader to have before his eyes a summary of the principal points treated in that article.

X. SUMMARY OF HERMENEUTIC PRINCIPLES.—(1) The genuine sense of Sacred Scripture is first divided into (a) the literal, and (b) the typical sense. Then follows a consideration of (a) the nature, (β) the division, (γ) the ubiquity, and (δ) the unity and multiplicity of the literal sense. Next comes a brief study of the two kinds of a so-called sense of Scripture which at best bear only an analogy to the real Biblical sense, (ε) the derivative or consequent sense, and (ζ) Biblical accommodation. Then, as to the typical sense, the writer (a) describes the nature of the typical sense, (β) gives its divisions, (γ) shows its existence, (δ) considers its occurrence in the Old Testament and in the New, (ε) indicates its criterion, and (ζ) investigates its theological value.

(2) In the next place the writer treats of the method of finding the genuine sense of Scripture, considering: (a) the human character of the Bible, which demands an historico-grammatical interpretation so that the commentator must keep in mind (α) the significance of the literary expression of its sacred and Scriptural language; (β) the sense of its literary expression, which is often determined by the subject matter of the writing, by its occasion and purpose, by the grammatical and logical context, and by parallel passages; (γ) the historical setting of the book and its author. (b) The Divine or inspired character of the Bible requires a so-called Catholic interpretation, which involves additional directions of both (α) a negative character preventing (i) all irreverence and (ii) the admission of any error, and (β) of a positive nature, which bid the interpreter to respect (i) the definitions of the Church, (ii) the patristic interpretation, and (iii) the analogy of faith.

(3) After the genuine sense of Sacred Scripture has been found, it has to be presented to others by means

of (a) the version, (b) the paraphrase, (c) the gloss and scholion, (d) the dissertation, (e) or finally the commentary. The homily may also be classed among the more popular method of Biblical exposition.

(4) The concluding pages of the article EXEGESIS are devoted to a brief history of the subject: (a) Jewish exegesis is divided into (α) Palestinian and (β) Hellenistic; (b) Christian exegesis comprises, (α) the patristic period, i. e., (i) the Apostolic Fathers and apologists, (ii) the Greek Fathers of both Alexandrian and Antiochene tendencies, (iii) the Latin Fathers; (β) the time from the Patristic age (in its narrower sense) to the Council of Trent, where we again meet with (i) Greek writers, and (ii) Latin scholars, either pre-Scholastic or Scholastic; (γ) the period after the Council of Trent with (i) its Catholic writers of the golden age, of the transition period, and of recent times, and (ii) the non-Catholic exegetes, whether they be of the number of the early Reformers, or of their immediate successors, or again of the rationalists. We have added this survey of the history of exegesis because it throws light on the historic development of hermeneutics.

XI. TWO SPECIAL QUESTIONS.—No difficulties will be raised against the Biblical interpreter as long as he remains within the sphere of the rules which govern his grammatico-historical exegesis; but protest will rise up on every side as soon as he urges the principle of Biblical inerrancy, and the duty of bowing to the authority of the Church. A few additional observations on these two points will therefore not be out of place.

(1) *Inerrancy*.—(a) Nature of Inerrancy.—The inerrancy of Scripture means that its hermeneutic truth is also objectively true, and that its genuine sense is adequately presented by its literal expression, at least by its complete literal expression, found in the original text interpreted in the light of the special purpose of the Holy Ghost and of its intended circle of readers. But this perfection of literary presentation does not remove obscurity and ambiguity of expression, defects which flow naturally from the human authors of the various books of Sacred Scripture, and were foreseen, and for good reasons permitted or even intended, by the Holy Ghost. Nor does the absolute truthfulness of Sacred Scripture imply that the Bible always presents the whole truth under all its aspects, nor does it demand that all the sayings quoted by the Bible as historical facts are objectively true. Words quoted in Scripture as spoken by infallibly truthful speakers, e. g., by God Himself, or the good angels, or the prophets and apostles actually inspired, or by the sacred writer himself while under the influence of inspiration, all these words are not merely historically, but also objectively, true; but words quoted in Scripture as proceeding from speakers open to error are not necessarily objectively true, though they are historically true. If however such profane words are expressly approved of by the inspired writers, they are also objectively true.

(b) Consequences flowing from Inerrancy.—It follows from what has been said that there can be no contradictions in the Bible, and that there can be no real opposition between Biblical statements and the truths of philosophy, science, or history.

(a) No Contradictions in Sacred Scripture.—The impossibility of any contradiction existing in the Bible itself flows from the fact that God is the author of Sacred Scripture, and would be responsible for any such discrepancy. But how are we to remedy apparent contradictions in Scripture, the existence of which cannot be denied?

(i) In some cases it is practically certain that our present text has been corrupted. I Kings, xiii, 1, says that Saul was a child of one year when he began to reign, and he reigned two years over Israel, though, according to Acts, xiii, 21 (and Joseph., *Antiq.*, VI,

xiv) Saul reigned forty years, beginning at the age of twenty-one. In the former case, the letters of the Hebrew text denoting forty and twenty respectively must have been lost. A similar corruption must be admitted in III Kings, iv, 26, which grants to Solomon 40,000 stalls of chariot horses instead of the 4000 assigned to him in II Par., ix, 25 (Hebrew text).

(ii) In other cases the apparent contradictions in the Bible are due to an erroneous exegesis of one or both of the passages in question. Such wrong interpretations are easily caused by the change of the meaning of a word; by the assumption of a wrong nexus of ideas (chronological, real, or psychological); by a restriction or an extension of the meaning of a passage beyond its natural limits; by an interchange of figurative with proper, of hypothetical with absolute, language; by a concession of Divine authority to mere quotations from profane sources, or by a neglect of the difference between the Old and the New Testament. Thus the word "tempt" has one sense in Gen., xxii, 1, and quite another sense in James, i, 13; the expressions "faith" and "works" have not the same sense in Rom., iii, 28, and James, ii, 14, 24; the "sincere companion" of Phil., iv, 3, does not mean "wife" and does not place this passage in opposition to I Cor., vii, 8; the "hatred of parents" inculcated in Luke, xiv, 26, is not the hatred prohibited by the commandment of the decalogue; the nexus of events in the First Gospel is not chronological, and does not establish an opposition between St. Matthew and the other Evangelists; in I Kings, xxxi, 4, the inspired writer testifies that Saul killed himself, while in II Kings, i, 10, the lying Amalecite boasts that he slew Saul; in John, i, 21, the Baptist denies that he is "the prophet", without contradicting the statement of Christ in Matt., xi, 9, that John is a prophet; etc.

(iii) Apparent contradictions in the Bible may have their source in an erroneous identification of distinct words or facts, in a neglect of the difference of standpoint of different writers or speakers, or finally in an erroneous assumption or opposition between two really concordant passages. Thus Gen., xii, 11 sqq., refers to facts wholly different from those related in Gen., xx, 2, and xxvi, 7; the healing of the centurion's servant related in Matt., viii, 5 sqq., is entirely distinct from the healing of the king's son mentioned in John, iv, 46 sqq.; the multiplication of loaves in Matt., xiv, 15 sqq., is distinct from that described in Matt., xv, 32 sqq., the cleansing of the temple related in John, ii, 13 sqq., is not identical with the event told in Matt., xxi, 12 sqq.; the anointing described in Matt., xxvi, 6 sqq., and John, xii, 3 sqq., differs from that told in Luke, vii, 37 sqq.; the prophets view the coming of Christ now from an historical, now from a moral, and again from an eschatological, standpoint, etc.

(β) No Opposition between Biblical and Profane Truth. (i) Proof.—Thus far we have considered apparent contradictions between different statements of Sacred Scripture; a word must be added about the opposition which may appear to exist between the teaching of the Bible and the tenets of philosophy, science, and history. The Bible student must be convinced that there can be no such real opposition. The Vatican Council declares expressly: "Though faith is above reason, still there can never be a true discrepancy between faith and reason, since the same God, who reveals mysteries and infuses faith, implants in the human mind the light of reason" (Sess. III, *Constit. de fide cath.*, cap. iv). The same truth is upheld by Leo XIII in the Encyclical "Providentissimus Deus": "Let the learned maintain steadfastly that God the creator and ruler of all things is also the author of the Scriptures, and that therefore nothing can be gathered from nature, nothing from historical documents, which really contradicts the Scriptures." Consequently, any opposition between Biblical and profane truth is only apparent. Such an appearance

of opposition may spring from one of three sources: Scripture may be wrongly interpreted, there may be a mistake in reputed profane truth, or finally the proof establishing the opposition between profane and Biblical truth may be fallacious.

(ii) Apparent Opposition.—Any statement resting on a faulty text, or an exegesis neglecting one or more of the many hermeneutic rules, cannot be said to be a Biblical truth. On the other hand, a mere theory in philosophy, or a mere hypothesis in science, or again a mere conjecture in history, cannot claim the dignity or right of a profane truth. Many mistakes have been made by Scriptural exegeses, but their number is not greater than that of scientific blunders. But even in cases in which the sense of the Bible is certain, and the reality of the profane truth cannot be doubted, the proof of their mutual opposition may be faulty. It is all the easier to go wrong in the proof of such an opposition, because the language of the Bible is not that of philosophy, or of science, or of the professional historian. The Scriptures do not claim to teach *ex professo* either philosophical theses, or scientific facts, or historical chronology. The expressions of Scripture must be interpreted in the light of their own age and of their original writer, before they are placed in opposition to any profane truth. There are expressions even in the language of to-day (for instance, the rising and the setting of the sun, etc.) which contradict acknowledged scientific truths, if no attention be paid to the conformity of such language with "sensible appearances".

(iii) Relation between Hermeneutics and Profane Learning.—What is, therefore, to be the relation between the interpreter and the scientist? (1) It would be wrong to make Scripture the criterion of science, to decide our modern scientific questions from our Biblical data. In certain historical controversies this course may be followed, because some of the books of Scripture are truly historical works. But in scientific questions, it suffices to hold that "in matters of faith and morals" Scripture agrees with the truths of science; and that in other matters, Scripture rightly understood does not oppose true scientific results. (2) Towards the use of profane truths in Biblical exegesis, the attitude adopted by commentators is not so uniform. The ultra-conservatives are inclined to explain Scripture without any regard to the progress of profane learning. This method is opposed even to the warning of St. Thomas (I, Q. lxxviii, a. 1). The conservatives are prone to adhere to traditional scientific views until such are evidently superseded by modern results; these exegeses expose themselves to the danger of at least seeming defeat—a disgrace which reflects on Biblical exegesis. It is well, therefore, to temper our conservatism with prudence; prescind from "matters of faith and morals" in which there can be no change, we should be ready to accommodate our exegesis to the progress of historians and scientists in their respective fields, showing at the same time that such harmonizing expositions of Scripture represent only a progressive stage in Bible study which will be perfected with the progress of profane learning. To repeat once more, with regard to "matters of faith and morals" there is no progress of the faith in the faithful, but only progress of the faithful in the faith; with regard to other matters, the progress of profane knowledge may throw additional light on the true sense of Sacred Scripture.

(2) *Authority of the Church*.—Thus far we have considered the inerrancy of the Bible which can never be lost sight of by the believing interpreter; we come now to the question of authority to which the Catholic exegete owes obedience.

(a) *Law of the Church*.—The Council of Trent (Sess. IV, De edit. et usu ss. ll.) forbids that, in "matters of faith and morals belonging to the building-up of Christian doctrine", the Bible be explained against

the sense held by the Church, or against the unanimous consent of the Fathers. The Tridentine Confession of Faith and the Vatican Council (Sess. III, Const. de fide cath., cap. ii) enjoin in a positive form that in "matters of faith and morals belonging to the building-up of Christian doctrine", the Scriptures be explained according to the teaching of the Church and the unanimous consent of the Fathers. In the article EXEGESIS the rules have been laid down which will ensure due conformity of Catholic exegesis with Catholic and patristic teaching; but little has been said about the meaning of the clause "in matters of faith and morals" and about the relation of ecclesiastical authority to those truths which do not belong to "matters of faith and morals".

(b) *Meaning of "Matters of Faith and Morals"*.—The phrase "matters of faith and morals" has been compared with St. Thomas's truths revealed on their own account as distinct from truths revealed, accidentally as it were, on account of their connexion with the former (II-II, Q. i, a. 6, ad 1um); matters not of "faith and morals" have been found in the Angelic Doctor's expression, "in his quæ de necessitate fidei non sunt" (II Sent., dist. ii, Q. i, a. 3); Vacant extends the words "matters of faith and morals" to the dogmas of faith and the truths pertaining to the custody of the deposit of faith; Granderauth identifies "matters of faith and morals" with all religious truths as distinct from merely profane verities; Egger is inclined to comprise under "matters of faith and morals" all revealed truth, and again the whole deposit of faith, in which he includes all Biblical truths; Vinati appears to extend "matters of faith and morals" to all truths that must be believed with Catholic or Divine faith, adding that all Biblical statements fall under these groups; Nisius seems to identify "matters of faith and morals" with the truths contained in the deposit of faith without including all Biblical statements in this collection (cf. "Theologische Zeitschrift", 1895, 368 sqq.; 1899, 282 sqq., 460 sqq.; 1900, 672 sqq.; "Science catholique", 1900, 500 sqq.; "Revue biblique", 1900, 135 sqq.). Whatever may be thought of the foregoing opinions, it appears to be clear that "matters of faith and morals" contain all truths that must be believed with either Catholic, Divine, or theological faith. The further clause, pertaining to "the building-up of Christian doctrine", includes all the truths necessarily connected with the Christian system of doctrine and morals whether by way of foundation, or necessary proof, or, again, logical inference.

(c) *As to Matters not of Faith or Morals*.—Certain writers have inferred from the fact that the decrees of the councils do not say anything explicitly about the interpreter's subjection to authority in case of Biblical truths not included among "matters of faith and morals", that the Church has left the commentator perfectly free in this part of Biblical exegesis. The laws of logic hardly justify this inference. On the contrary, logic demands that he should not give any explanation which would not be in keeping with the analogy of faith. The most reasonable view of this question maintains that in matters not of faith or morals the teaching of the Church offers no positive guide to the commentator, but that it supplies a negative aid, inasmuch as it tells the Catholic student that any explanation must be false which is not conformable with the spirit of the Catholic Faith. To illustrate the foregoing rules, we may consider the attitude of the Bible towards the movement of the earth as involved in the Galileo question: (a) If the Bible evidently teaches the stability of the earth, it is not permitted by Biblical inerrancy to say that the earth moves; (β) If the Biblical teaching needs any explanation with regard to this point, the question arises whether the stability of the earth belongs to the "matters of faith and morals"; this is a question of

right; (7) if the question of right be answered in the affirmative, it is followed by the question of fact: does the teaching of the Church, or the analogy of faith, or again the unanimous consent of the Fathers maintain the stability of the earth? Or even if the second question be answered in the negative, is there any unanimous consent of the Fathers on this point which compels the reverent consideration of the Catholic interpreter? A careful study of these points will show how the rules of hermeneutics affect the judgment passed on Galileo.

A. J. MAAS.

Hermengild, SAINT, date of birth unknown; d. 13 April, 585. Leovigild, the Arian King of the Visigoths (569-86), had two sons, Hermengild and Recared, by his first marriage with the Catholic Princess Theodosia. Hermengild married, in 576, Ingundis, a Frankish Catholic princess, the daughter of Sigebert and Brunhilde. Led by his own inclination, and influenced by his wife as well as by the instructions of St. Leander of Seville, he entered the Catholic fold. Leovigild's second wife, Goswintha, a fanatical Arian, hated her daughter-in-law and sought by ill-treatment to force her to abandon the Catholic Faith. Hermengild had accordingly withdrawn, with his father's sanction, to Andalusia, and had taken his wife with him. But when Leovigild learned of his son's conversion he summoned him back to Toledo, which command Hermengild did not obey. The fanatical Arianism of his step-mother, and his father's severe treatment of Catholics in Spain, stirred him to take up arms in protection of his oppressed co-religionists and in defence of his own rights. At the same time he formed an alliance with the Byzantines. Leovigild took the field against his son in 582, prevailed on the Byzantines to betray Hermengild for a sum of 30,000 gold *solidi*, besieged the latter in Seville in 583, and captured the city after a siege of nearly two years. Hermengild sought refuge in a church at Cordova, whence he was enticed by the false promises of Leovigild, who stripped him in camp of his royal raiment and banished him to Valencia (584). His wife, Ingundis, fled with her son to Africa, where she died, after which the boy was given, by order of Emperor Mauritius, into the hands of his grandmother, Brunhilde. We are not fully informed as to Hermengild's subsequent fate.

Gregory the Great relates (*Dialogi*, III, 31, in P. L., LXXII, 289-93) that Leovigild sent an Arian bishop to him in his prison, on Easter Eve of 585, with a promise that he would forgive him all, provided he consented to receive Holy Communion from the hands of this bishop. But Hermengild firmly refused thus to abjure his Catholic belief, and was in consequence beheaded on Easter Day. He was later venerated as a martyr, and Sixtus V (1585), acting on the suggestion of King Philip II, extended the celebration of his feast (13 April) throughout the whole of Spain.

Hermes, SAINT, martyr, Bishop of Salona (Spalato), in Dalmatia. Very little is known about him; in Rom., xvi, 14, St. Paul says: "Salute Asyncritus, Phlegon, Hermas, Patrobas, Hermes, and the brethren that are with them." This last name is supposed by many to refer to the subject of this article, who is also said to have succeeded Titus as Bishop of Dalmatia, and to have been martyred. A passing mention is made of a Hermas in the *Acta SS.* Bolland., April 8, under Herodion; and Pape says he was one of the seventy-two disciples of Our Lord. Hermes was a very common name among slaves. Migne (P. G., 4 November) says he was one of the seventy disciples, along with Patrobas, Linus, Gaius and Philologus; and Canisius talks of a "Hermæus presbyter" . . . who converted many from idols to Christ, suffered for his faith with Nicander, Bishop of Myra, and was "lacerated and hanged".

C. F. WEMYSS BROWN.

Hermes, GEORGE, philosopher and theologian, b. at Dreierwalde near Rheine (Westphalia), 22 April, 1775; d. at Bonn on the Rhine, 26 May, 1831. After completing his course in the gymnasium, or high school, at Rheine, Hermes studied philosophy at the University of Münster from 1792 until 1794. He then took up theology in order to remove the doubts regarding faith awakened in his mind by the study of Kant and Fichte. Initiated as he was into the science of theology by professors of limited ability, and altogether dissatisfied with the traditional methods of proof, he determined for the time being to adhere to the faith of the Church as set forth in the Catechism, but afterwards to seek on his own account a better basis for the truths of Christianity. In 1797 Hermes became professor at the Münster gymnasium; in 1799 he was ordained a priest. The first work he wrote, "Untersuchung über die innere Wahrheit des Christentums" (Münster, 1805), in which he sought to demonstrate the harmony between reason and revelation, was received with so much favour that in 1807 its author, warmly commended by the Protestant theologian Niemeyer, at Halle, was appointed to a chair of theology at the University of Münster.

Hermes lectured on dogmatic theology, and, with especial zest, on the introduction to theology. Impressive and attractive in appearance, he was highly esteemed by his students because of his extraordinary pedagogic ability and his exemplary priestly bearing. He also earned the respect and appreciation of his colleagues by his zealous devotion to the interests of the university; up to 1819 they elected him dean three times. But his rationalistic methods of instruction, which were out of harmony with the theology of the past, roused opposition among the ruling circles at Münster including several men of eminence, such as Clement August von Droste-Vischering (later Archbishop of Cologne), Frederick von Stolberg, Overberg, Katerkamp, Kistemaker, Kellermann. When the Vicar-General von Droste-Vischering, who was at the head of the administration of the diocese during a vacancy of the see, demanded that Hermes should continue the use of the Latin tongue in the dogmatic lectures, the latter refused to obey. The same prelate, by order of the pope, denied the legality of the uncanonical reorganization of the cathedral chapter by Napoleon I, refused to acknowledge the wrongful

appointment of Baron von Spiegel (later Archbishop of Cologne) as vicar-general, and on 31 March, 1813, took back into his own hands the government of the diocese. Thereupon Hermes published a voluminous opinion disputing his right to such a procedure ("Gutachten in Streitsachen des Münsterischen Domkapitels mit dem Generalvikar des Kapitels. Mit Bewilligung des hochwürdigsten Domkapitels herausgegeben", Münster, 1815). As confidential adviser of the Prussian ministry he wrote at its request, particularly between the years 1815 and 1819, several important opinions, e. g. the one published in 1818 concerning the establishment of a theological faculty at the new University of Bonn. His loyalty to the Church is attested by the opinion he wrote condemning the inaccurate and erroneous translation of the Bible by Carl and Leander van Ess and the first-named author's "Geschichte der Vulgata". Although the Prussian ministry, to his deep regret, reduced the Münster University to the rank of an academy in 1818, Hermes refused a call to the new University of Bonn just as firmly as he had declined, in 1816, the offer of a professorial chair at the University of Breslau.

In 1819 Hermes published "Die philosophische Einleitung", the first part of his principal work "Einleitung in die christ-katholische Theologie" (Münster, 1819; 2nd ed., 1831). The purpose of this book was to put an end to all doubts regarding three questions which are of fundamental importance to all religious conviction, and especially to that of the Christian. These questions are: Whether there is any truth at all; whether God exists, and what are His attributes; whether a supernatural revelation is possible, and under what conditions. The theological faculty of Breslau conferred on him the degree of Doctor of Theology *honoris causâ* for his "Philosophische Einleitung". After that Hermes, yielding to the persistent urging of the Prussian Government, accepted the chair of dogmatic theology at Bonn, 27 April, 1820. His inaugural lecture dealt with the relation of positive theology to the general principles of science (see "Zeitschrift für Philosophie und katholische Theologie", 1833, pp. 52-61). His election, 3 August, 1820, as "Rector Magnificus", which he declined, and the degree of Doctor of Philosophy *honoris causâ*, which the philosophical faculty of Bonn subsequently conferred on him, in 1821, are ample evidence of the respect paid to him in Bonn. The University of Freiburg im Breisgau tried in vain to secure him for its faculty. His lectures on philosophy, the introduction to theology, and dogmatic theology attracted a tremendous following in Bonn, being attended even by large numbers of philologists and jurists. The Prussian ministry suspended the theological faculty in Münster for six months, on account of the interdict which the Vicar-General Clement August issued against Hermes, forbidding all theological students in the Diocese of Münster to attend any outside university without his permission. It was revoked immediately upon the retirement of the vicar-general. The theologians in the Diocese of Paderborn were also forbidden by the ecclesiastical authorities to attend Hermes' lectures. To please Hermes, the Government in 1825 dismissed his colleague Seber who was not in sympathy with him. Moreover, the Archbishop Baron von Spiegel, who had been a patron of Hermes even in his Münster days, appointed him a member of the cathedral chapter, examiner to the synod, and ecclesiastical counsellor in Cologne, without disturbing his professorial duties or obliging him to reside at Cologne.

As examiner, Hermes was a bitter opponent of all ecclesiastics who did not share his views. Like the theological faculty at Bonn, to which only pupils of Hermes had been appointed since 1826 (Achterfeldt, Braun, Vogelsang, Müller), the seminary at Cologne and a large part of the clergy were soon imbued with his ideas. Even the other faculties of Bonn included

followers of his, particularly Professor Clement August von Droste-Hülshoff in law and Elvenich in philosophy. In a very short time the theological faculties of Breslau, Münster, and Braunsberg, the seminary at Trier, many cathedral chapters and instructorships in religion at the gymnasia were filled with Hermesians. In 1830 Hermes cast the decisive vote against calling Möhler and Döllinger to the chair of ecclesiastical history at Bonn. On the other hand the appointment of Professor Klee for Biblical exegesis and dogmatic theology implied a distinct concession to the anti-Hermesian movement which in the meantime had been slowly gathering strength. Hermes began to publish the second part of his "Introduction to Theology", the "Positive Einleitung", or "Positive Introduction", in 1829 (Münster, 1829, 2nd ed., 1834). Therein he sought to demonstrate the truth of Christianity by way of completing the "Philosophical Introduction". "The 'Philosophical Introduction' having shown the possibility of proving that Christianity is both extrinsically and intrinsically true, and having shown also how the demonstration should proceed, we have now got to the point of furnishing this proof—such is the purpose of the 'Positive Introduction'" (Positive Introduction, 1). In carrying out this purpose he investigates five questions: (1) Are the books of the New Testament externally (historically) true? (2) Is the so-called oral tradition likewise historically true? (3) Are the expositions and interpretations of Jesus' doctrine, as communicated by the oral teaching of the Catholic Church, infallibly correct? (4) Are the teachings of Jesus contained in the books of the New Testament intrinsically true? (5) Are the teachings of Jesus that have been handed down by oral tradition likewise intrinsically true?

In its essence Hermes' theological system, or "Hermesianism", was rationalism; and, though in many respects opposed to the doctrines of Kant and Fichte, it was strongly influenced by them. According to Hermes our knowledge is subjectively true when we are convinced in our minds that it coincides with its object. This conviction, however, becomes a certainty when it is irresistible. The necessity of our conviction, therefore, is the criterion of objective truth. This necessity is either physical or moral, that is, it is either independent of, or dependent on, duty and conscience. It comes to pass in two ways: it is either forced upon us, or we admit it freely. In the first case, we call our conviction belief in a truth, in the second, acceptance of a truth. Belief in a truth is a matter of theoretical reason, while acceptance is a matter of practical, or obligating, reason. Belief in a truth is in part the result of mediate necessity, in which case it is founded either on imagination, i. e. on the clearness and vividness of the mental content, or on insight (understanding); in part, also, it springs from immediate necessity, and only in this case is knowledge philosophically certain. "It is of immediate necessity that we must accept the following proposition as true, together with all propositions subordinate to it: 'Everything that is must have a sufficient reason'" (Philosophische Einleitung, § 14). Now the first and most immediate reality, that is forced upon the reason of direct necessity, is inseparably connected with the consciousness that *I know*, and with the thought that *something is there*. In order to discover the sufficient reason for this first reality, we are referred to the world as it appears to us, both within and outside of ourselves. The variations which occur in these phenomena require a sufficient reason in order to account for them; the variations in the origin of things call for a sufficient and absolute reason for their origin, and this ultimately can only be found in the idea of God. In such wise Hermes proves the existence of God along the lines of theoretical reason in contradistinction to

Kant, who treated the acknowledgment of God's existence as a postulate of practical reason.

The knowledge of the existence of God and of His attributes, which determine His relation to the world and to mankind, is a preliminary condition indispensable to the solution of the question as to whether supernatural revelation is possible. Hermes answers this question in the affirmative, first, because God is able directly to produce representations in the human mind, and secondly, because by means of representations man can be convinced of the intrinsic truth of conceptions supernaturally imparted to him, and also of conceptions naturally produced by himself, the truth of which he cannot himself demonstrate (cf. *Philosophische Einleitung*, § 74). The question of the fact of a supernatural revelation must be distinguished from the question of its possibility. Revelation, said Hermes, must be admitted as a fact so soon as it can be shown that a message has emanated supernaturally from God. But the duty of the practical reason to admit revelation as a fact is demonstrated if in any alleged Divine revelation all the conditions are present on fulfilment of which it can and must be accepted for what it purports to be. Hermes, however, deems it necessary to make a very questionable distinction between philosophers and non-philosophers in regard to the duty of accepting revelation. No precept of practical reason, he says, can oblige the philosopher, who has a well-founded confidence in his knowledge, to accept a revelation that was imparted to him supernaturally, even if he had ascertained its supernatural character, and even if it fulfilled all the conditions of a Divine origin. For the philosopher can through his own discerning perceive very definitely his natural duties, and he will always be convinced that he does so perceive them. Consequently, practical reason cannot oblige him to look for this perception outside of himself, or to accept it if offered to him unsought, whether by another person or by superhuman agency.

On the other hand, when a revelation known to be supernatural is offered to a person unversed in philosophy, he is bound by practical reason to accept it in order that he may learn his natural obligations. He must accept it, since he could not otherwise acquire the sum total of needful knowledge, being unable to attain it by philosophical methods. If, however, it is incumbent on the great majority of mankind—consisting, of course, of non-philosophers—to obey the behests of practical reason by believing in revelation, then neither can the philosopher refuse to accept the truth of revelation; reflective theoretical reason obliges him to accept it. At the most he could refuse to do so only on the ground that he had not yet been convinced of its Divine origin, since the fact that it could not be of any advantage to him would be no reason for withholding his acquiescence in its Divine origin. In order, therefore, to deny this certainty of the Divine origin of revelation, he must assume that what others, millions in fact, are in strictest duty bound to assume as true may possibly be untrue, and that obligatory reason when it leads mankind of absolute necessity to believe something to be true can guide them to the opposite of objective truth. Hermes' rationalistic conception of the idea of revelation follows from this line of argument; and furthermore he says expressly that reason cannot teach the existence of truths of such primary importance and yet declare that it is unable to know them.

Again, Hermes' opinions on the *motiva credibilitatis* were quite absurd. Theoretical reason, he said, can accept the probability of the Divine origin of extraordinary phenomena (miracles and prophecies) only because it does not know all the laws of the natural world, while practical reason, for the sake of duty, can accept their supernatural origin as certainly true. Theoretical reason, for example, could

not assert with certainty that the revival of a decomposing corpse was of supernatural origin, whereas practical reason could. For, if such a phenomenon could have a natural cause, men should be allowed to act accordingly and, in this case, to delay the burial of the corpse because the possibility of a natural reanimation was as yet by no means excluded. In this way Hermes sought to demonstrate the moral duty of accepting miracles under certain circumstances, in opposition to Kant who had laid it down as a moral principle never to presuppose the miraculous. Furthermore, Hermes denied that miracles afforded conclusive testimony in favour of revelation; he distinguished between the proof of the supernaturalness of miracles and the proof of the Divinity of a revelation. That many of the supernatural miracles worked by higher intelligent powers are of Divine origin can only be proved by the contents of the revelation and its moral character. A revelation shown to be genuine to the satisfaction of practical reason demonstrates the Divinity of the miracles.

According to Hermes, the starting-point and chief principle of every science, and hence of theology also, is not only methodical doubt, but positive doubt. One can believe only what one has perceived to be true from reasonable grounds, and consequently one must have the courage to continue doubting until one has found reliable grounds to satisfy the reason. We may follow only where reason leads us, because this is the only guide that the Author of our being has given us for this life. Hermes differentiated the *Herzensglaube*, or belief of the heart, i. e. the accepting of revealed truths dictated by the will, from the *Vernunftglaube*, or belief of the reason, brought about by scientific demonstration. "In order that one's faith may be efficacious it is not enough", he says, "for the intellect, impelled by the laws of our cognitive faculties, to acquiesce in the evidence of all these truths which reason or revelation teaches or establishes, nor to adhere firmly to the same in consequence, but it is also required that men should surrender themselves to these truths (realities). Efficacious faith is not the faith dictated by reason, which is subject to necessity and can, therefore, be demonstrated, but the faith of the heart, that cannot be compelled by any proof, but is accepted by a free, unconditional surrender of the will. It is for reason to prevent us from believing blindly or in a visionary way, but it is for the will as a free agent to impel us to work by faith" (*Christkatholische Dogmatik*, III, § 285).

Although he was absolutely lacking in originality as a philosopher, and although as a theologian his acquaintance with the traditional theology was very limited, Hermes soon acquired a following. In philosophy there were Esser, Biunde, and Elvenich; in ethics G. Braun and Vogelsang; in natural and ecclesiastical law Droste-Hülshoff, all of whom treated their subjects according to the Hermesian way of thinking, while Achterfeldt and Siemers wrote for use in the higher schools textbooks of religious instructions incorporating his views. Among his other disciples were Baltzer, Hilgers, Rosenbaum, and J. W. J. Braun. The last-named, together with Achterfeldt, founded the "*Zeitschrift für Philosophie und katholische Theologie*" (1832-52) in defence of Hermes' ideas. The Archbishop of Cologne, Baron von Spiegel, continued to champion Hermesianism even after the death of its author, and he silenced by repeated favourable reports the doubts that had been awakened in Rome as to the correctness of the new doctrine.

Hitherto only individual attacks had been made on the Hermesian theology. With the exception of a few anonymous articles in Mastiaux's "*Literaturzeitung*" (1820, p. 369-394), and in the "*Aschaffenburger Kirchenzeitung*", Windischmann was the first to write an incisive and thorough criticism of

Hermes' doctrines, in the "Katholik", 1825. But the controversy became sharp and bitter when Pope Gregory XVI, in a Brief of 26 September, 1835, condemned the Hermesian system and placed both "Introductions" as well as the first part of the "Dogmatik" on the Index. The same fate befell the second and third parts of the "Dogmatik" in a decree of 7 January, 1836. Prior to the issuing of this condemnation, the Holy See, at the solicitation of several German bishops, advised by Windischmann and Binterim among others, had ordered the most thorough investigation possible. Prominent theologians, such as Reisach, director of studies in the Propaganda and later cardinal, and Father Perrone, the Jesuit dogmatist, were entrusted with the task of examining Hermesian doctrines. The papal Brief characterized the theological errors of Hermesianism as "false, rash, captious, leading to scepticism and indifferentism, erroneous, scandalous, harmful to Catholic schools, subversive of Divine faith, savouring of heresy, and already condemned by the Church". The decree expressly designated the doctrinal points in which Hermes had diverged from the Catholic Church, namely: on the nature and rule of faith; on Holy Writ and tradition, Revelation, and the teaching office of the Church; the *motiva credibilitatis*, the proofs of the existence of God, and the doctrines concerning the nature, holiness, justice, and freedom of God, and His ultimate purpose in His works *ad extra*; on the necessity of grace and its bestowal; on the reward and punishment of men; on the original state of our first parents; on original sin and on the powers of man in the fallen state.

The Hermesians tried to weaken the force of the impression produced by this unexpected condemnation and to prevent the carrying out of the Brief. In fact, they succeeded in inducing the Prussian Government to forbid the publication of the Brief, and Hüngen, Vicar Capitular of Cologne, enjoined "strict silence" on his clergy in respect to the condemnation, on the pretext that the document had not come to him in the regular course of official procedure, through the Prussian Government. On the contrary, the new Archbishop of Cologne, Clement August von Droste-Vischering, former Vicar-General of Münster, demanded the submission of the theological professors at Bonn, forbade theological students to attend the lectures of recusant professors, and compelled the clergy, on their appointment, to repudiate the Hermesian errors in eighteen theses. Although it was not in sympathy with the archbishop's measures, the Prussian Government, on 21 April, 1837, forbade the theological professors at Bonn, as well as the philosopher Windischmann and the canonist Walter, to take part in any controversy on the subject of Hermesianism. The Bonn professors, Braun and Elvenich, made a last attempt to vindicate the system, journeying to Rome in May, 1837, in order to prevail upon the pope to withdraw the condemnation by emphasizing the (Jansenist) *distinctio juris et facti*. The repeated personal interviews they had with the Secretary of State, Cardinal Lambruschini, and with the General of the Jesuits, Father Roothan, who had been entrusted with their case, were just as fruitless as was their comprehensive treatise on Hermesianism entitled: "Meletemata theologica", which was handed back to them unopened (printed, in Latin, at Leipzig, in 1839; in German, at Cologne, in 1839, under the title "Theologische Studien"). After their return in April, 1838, they both gave a one-sided version of their unsuccessful mission in the monograph "Acta Romana" (printed at Hanover and Leipzig, 1838).

Most of the Hermesians now gave up their cause for lost and submitted, some of them spontaneously, and some at the demand of their bishops. Thanks to the energetic action of Cardinal-Archbishop von Geissel of Cologne in particular, Hermesianism was completely

eradicated, and in 1860 even the most stubborn Hermesians, Braun and Achterfeldt, returned to their allegiance. Since their dismissal from their academic professorships in 1844, they had for a long time continued their defence of Hermesianism in their periodical and in polemical pamphlets, but they had only a few followers. The Vatican Council, with special reference to the doctrines of Hermes (cf. Conc. Coll. Lac., VII, 166d, 184be), in the "Constitutio de fide catholica", cap. iii, can. v, defined the freedom of the act of faith and the necessity of grace for faith (see Denzinger-Bannwart, 1814).

A complete bibliography on Hermes and Hermesianism is furnished in GLA, *Repertorium der katholisch-theologischen Literatur*, I (Paderborn, 1904), ii, 355-70; WERNER, *Geschichte der katholischen Theologie* (1889), 405 sqq., 423 sqq.; BRÜCK, *Geschichte der katholischen Kirche in Deutschland im neunzehnten Jahrhundert*, II (1903), 496 sqq.; REUSCH in *Allgemeine Deutsche Biographie*, XII, 192 sqq.; KESSEL in *Kirchenlex.*, s. v.; SCHMID-TSCHACKERT in *Protestantische Realencyklopädie*, VII, 750 sqq. JOSEPH SCHULTE.

Hermite, CHARLES, b. at Dieuze, Lorraine, 24 December, 1822; d. at Paris, 14 January, 1901; one of the greatest mathematicians of the nineteenth century. He studied at the Collège de Nancy and then, in Paris, at the Collège Henri IV and at the Collège Louis-le-Grand. As a boy he read some of the writings of Lagrange on the solution of numerical equations, and of Gauss on the theory of numbers. In 1842, his first original contribution to mathematics, in which he gave a simple proof of the proposition of Abel concerning the impossibility of obtaining an algebraic solution for the equation of the fifth degree, was published in the "Nouvelles Annales de Mathématiques". The same year he entered the Ecole Polytechnique, where he remained as a student but one year. A correspondence with Jacobi, begun in 1843 and continued in 1844, led to the insertion, in the complete edition of Jacobi's works, of two articles by Hermite, one concerning the extension to Abelian functions of one of the theorems of Abel on elliptic functions, and the other concerning the transformation of elliptic functions. In 1848, Hermite returned to the Ecole Polytechnique as *répétiteur* and *examinateur d'admission*. In 1856, through the influence of Cauchy and of a nun who nursed him, he resumed the practice of his religion. On 14 July, of that year, he was elected to fill the vacancy created by the death of Binet in the Académie des Sciences. In 1869, he succeeded Duhamel as professor of mathematics, both at the Ecole Polytechnique, where he remained until 1876, and in the Faculty of Sciences of Paris, which position he occupied until his death. From 1832 to 1873 he was lecturer at the Ecole Normale Supérieure. Upon his seventieth birthday, on the occasion of his jubilee which was celebrated at the Sorbonne under the auspices of an international committee, he was promoted grand officer of the Legion of Honour.

As a teacher Hermite was inspiring. His correspondence with Stieltjes testifies to the great aid he gave those entering scientific life. His efforts in teaching were directed not towards too rigorous minuteness, but towards exciting admiration for things simple and beautiful. His published courses of lectures have exercised a wide influence. His important original contributions to pure mathematics, published in the leading mathematical journals of the world, dealt chiefly with Abelian and elliptic functions and the theory of numbers. In 1858 he solved the equation of the fifth degree by elliptic functions; and in 1873 he proved e , the base of the natural system of logarithms, to be transcendental. This last was used by Lindemann to prove (1882) the same for π . The following is a list of his works. "Cours d'analyse de l'Ecole Polytechnique", Paris, 1873; "Cours professé à la Faculté des Sciences", edited by Andoyer, 4th ed., Paris, 1891; "Correspondance", edited by Baillaud and Bourget, Paris, 1905, 2 vols. The "Œuvres de Charles Her-

mite" were edited by Picard for the Academy of Sciences, 2 vols., Paris, 1905 and 1908.

PAUL H. LINEHAN.

Hermits (or EREMITES, "inhabitants of a desert", ἐρημίτης or ἐρημίτης), also called anchorites, were men who fled the society of their fellow-men to dwell alone in retirement. Not all of them, however, sought so complete a solitude as to avoid absolutely any intercourse with their fellow-men. Some took a companion with them, generally a disciple; others remained close to inhabited places, from which they procured their food. This kind of religious life preceded the community life of the cenobites. Elias is considered the precursor of the hermits in the Old Testament. St. John the Baptist lived like them in the desert. Christ, too, led this kind of life when He retired into the mountains. But the eremitic life proper really begins only in the time of the persecutions. The first known example is that of St. Paul, whose biography was written by St. Jerome. He began about the year 250. There were others in Egypt; St. Athanasius, who speaks of them in his life of St. Anthony, does not mention their names. Nor were they the only ones. These first solitaries, few in number, selected this mode of living on their own initiative. It was St. Anthony who brought this kind of life into vogue at the beginning of the fourth century. After the persecutions the number of hermits increased greatly in Egypt, then in Palestine, then in the Sinaitic peninsula, Mesopotamia, Syria, and Asia Minor. Cenobitic communities sprang up among them, but did not become so important as to extinguish the eremitic life. They continued to flourish in the Egyptian deserts, not to speak of other localities. Discussions arose in Egypt as to the respective merits of the cenobitic and the eremitic style of life. Which was the better? Cassian, who voices the common opinion, believed that the cenobitic life offered more advantages and less inconveniences than the eremitic life. The Syrian hermits, in addition to their solitude, were accustomed to subject themselves to great bodily austerities. Some passed years on the top of a pillar (stylites); others condemned themselves to remain standing, in open air (stationaries); others shut themselves up in a cell so that they could not come out (recluses).

Not all these hermits were models of piety. History points out many abuses among them; but, considering everything, they remain one of the noblest examples of heroic asceticism the world has ever seen. Very many of them were saints. Doctors of the Church, like St. Basil, St. Gregory of Nazianzus, St. John Chrysostom, St. Jerome, belonged to their number; and we might also mention Sts. Epiphanius, Ephraem, Hilarion, Nilus, Isidore of Pelusium. We have no rule giving an account of their mode of life, though we may form an idea of it from their biographies, which are to be found in Palladius, "Historia Lausiaca", P. L., XXXIV, 901-1262; Rufinus, "Historia Monachorum", P. L., XXI, 387-461; Cassian, "Collationes Patrum; De Institutis cenobitarum", P. L., IV; Theodoret, "Historia religiosa", P. G., LXXXII, 1279-1497; and also in the "Verba Seniorum", P. L., LXXIV, 381-843, and the "Aphthegmata Patrum", P. G., LXV, 71-442.

The eremitic life spread to the West in the fourth century, and flourished especially in the next two centuries, that is to say, till experience had shown by its results the advantages of the cenobitic organization. St. Gregory the Great, in his "Dialogues", gives an account of the best-known solitaries of central Italy (P. L., LXXVII, 149-430). St. Gregory of Tours does the same for a part of France (Vitæ Patrum, P. L., LXXI, 1009-97). Oftentimes those who helped most to spread the cenobitic ideal were originally solitaries themselves, for instance, St. Severinus of Norica and St. Benedict of Nursia. Monasteries frequently, though by no means always, sprang from the cell of a hermit, who drew a band of disciples around him. From the beginning of the seventh century we meet with instances of monks who at intervals led an eremitic life. As an example we may cite St. Columbanus, St. Riquier, and St. Germer. Some monasteries had isolated cells close by, where those religious who were judged capable of living in solitude might retire. Such was especially the case at the monastery of Cassiodorus, at Viviers in Calabria, and the Abbey of Fontenelles, in the Diocese of Rouen. Those who felt the want of solitude were advised to reside near an oratory or a monastic church. The councils and the monastic rules did not encourage those who were desirous of leading an eremitic life.

The widespread relaxation of monastic discipline drove St. Odo, the great apostle of reform in the sixth century, into the solitude of the forest. The religious fervour of the succeeding age produced many hermits. But to guard against the serious dangers of this kind of life, monastic institutes were founded that combined the advantages of solitude with the guidance of a superior and the protection of a rule. Thus, for example, we had the Carthusians and the Camaldolese at Vallombrosa and Monte Vergine. Nevertheless there still continued to be a large number of isolated hermits, and an attempt was made to form them into congregations having a fixed rule and a responsible superior. Italy especially was the home of these congregations at the beginning of the thirteenth century. Some drew up an entirely new rule for themselves; others adapted the Rule of St. Benedict to meet their wants; while others again preferred to base their rule on that of St. Augustine. Pope Alexander IV united the last into one order, under the name of the Hermits of St. Augustine (1256). Three congregations of hermits were called after St. Paul, one formed in 1250 in Hungary, another in Portugal, founded by Mendo Gomez de Simbria, who died in 1481, and the third in France, established by Guillaume Callier (1620); these last hermits were known also by the name of the Brothers of Death. Eugene IV formed into a congregation, to be called after St. Ambrose, the hermits who dwelt in a forest near Milan (1441). We may mention also the Brothers of the Apostles (1484), the Colorites (1530), the Hermits of Monte Senario (1593), and those of Monte Luco, who were in Italy; those of Mont-Voirion, whose constitutions were drawn up by St. Francis de Sales; those of St-Sever, in Normandy, founded by Guillaume, who had previously been a Camaldolese; those of St. John the Baptist, in Navarre, approved by Gregory XIII; the hermits of the same name, founded in France by Michel de Sainte-Sabine (1630); those of Mont-Valérien, near Paris (seventeenth century); those of Bavaria, established in the Diocese of Ratisbon (1769). The Venerable Joseph Cottolengo founded a congregation of hermits in Lombardy in the middle of the nineteenth century. Some Benedictine monasteries had hermitages depending on them. Thus we have the case of St. William of the Desert (1330) and the hermits of Our Lady of Montserrat, in Spain. The latter were well known from the sixteenth century, from their connexion with García de Cisneris. They disappeared in the eigh-

teenth century. At the present time there exists a body of hermits on a mountain near Cordova.

We see, therefore, that the Church has always been anxious to form the hermits into communities. Nevertheless, many preferred their independence and their solitude. They were numerous in Italy, Spain, France, and Flanders in the seventeenth century. Benedict XIII and Urban VIII took measures to prevent the abuses likely to arise from too great independence. Since then the eremitic life has been gradually abandoned, and the attempts made to revive it in the last century have had no success. (See AUGUSTINE, RULE OF SAINT; CAMALDOLESE; CARMELITE ORDER; CARTHUSIAN ORDER; HIERONYMITES; also under GREEK CHURCH, Vol. VI, p. 761.)

Benedicti* (6 vols., Paris, 1703-39); HÉLYOT, *Histoire des ordres monastiques*, III, IV, VIII (Paris, 1792); HEIMBUCHER, *Die Orden und Kongregationen der katholischen Kirche*, I (Paderborn, 1908).

J. M. BESSE.

Hermits of St. Augustine (generally called AUGUSTINIANS and not to be confounded with the Augustinian Canons), a religious order which in the thirteenth century combined several monastic societies into one, under this name. The order has done much to extend the influence of the Church, to propagate the Faith, and to advance learning.

FOUNDATION.—As is well known, St. Augustine of Hippo, first with some friends and afterwards, as bishop, with his clergy, led a monastic community life. Vows were not obligatory, but the possession of private property was prohibited. Their manner of life led others to imitate them. Instructions for their guidance were found in several writings of St. Augustine, especially in "De opere monachorum" (P. L., XL, 527), mentioned in the ancient *codices regularum* of the eighth or ninth century as "The Rule of St. Augustine". Epistola cccxi, otherwise cix (P. L., XXXIII, 958), contains the early "Augustinian Rule for Nuns"; epistola cccly and ccclyi (P. L., XXXIX, 1570) "De moribus clericorum". The instructions herein contained formed the basis of the rule which, in accordance with the decree of the Lateran Synod, in 1059, was adopted by canons desiring to practise a common apostolic life (Holstenius, "Codex regularum", II, Rome, 1661, 120). Thence the title "Canons Regular of St. Augustine". Later, many monastic societies and brotherhoods, especially in Italy, adopted the Augustinian Rule, either voluntarily or by command of the pope, without, however, giving up certain peculiarities of life and dress introduced by the founder, or handed down by custom. These differences led to their being confounded with other orders (e. g., the Friars Minor) and gave rise to quarrels. To remedy these evils and to ensure harmony and unity amongst the various religious congregations, Pope Alexander IV sought to unite them into one order. For this purpose he commanded that two delegates be sent to Rome from each of the hermit monasteries, to discuss, under the presidency of Cardinal Richard of Santi Angeli, the question of union. The first meeting of the delegates took place on the first of March, 1256, and resulted in a union. Lanfranc Septala of Milan, Prior of the Bonites, was appointed the first prior-general of the new order. A uniform black habit was adopted, and the staves formerly carried by the Bonites to distinguish them from Friars Minor were dispensed with. The Bull "Licet ecclesiæ catholicæ", issued on 4 May, 1256 (Bullarium Taurinense, 3rd ed., 635 sq.), ratified these proceedings and may be regarded as the foundation-charter of the "Ordo Eremitarum S. Augustini"; and furthermore, the pope commanded that all hermit monasteries which had sent no delegates, should conform to the newly drawn up Constitutions.

EXTENSION OF THE ORDER.—The Bull "Licet ec-

clesiæ catholicæ" mentions the hermit convents which had been invited to take part in the proceedings at Rome, in 1256, which led to the union. "Quædam [domus] S. Guillelmi, quædam S. Augustini ordinum, nonnullæ autem fratris Joannis Boni, aliquæ vero de Fabali, aliæ vero de Britinis."—According to this statement, the original branches of the hermits were: (1) The Williamites, founded by St. William of Maleval shortly before his death in 1157. From this congregation sprang two others, the principal houses being at Stabulum Rodis, in the valley of Maleval, and at Fabali on Monte Fabali. The mode of life, originally very severe, was mitigated by Pope Gregory IX, under whom the majority of the Williamite monasteries adopted the Rule of St. Benedict. When these were required by the Bull "Licet ecclesiæ catholicæ" to join the new order, they raised objections and obtained a prohibition to exchange the Benedictine Rule for the milder one of the Augustinians. (See Guil. de Waha, "Explanatio vitæ S. Guillelmi Magni" etc., 1693; "Acta Sanct. Boll.", Feb., II, 450 sqq.; "Kirchenlex.", 2nd ed., XII, 1609 sqq.) (2) Several unspecified houses of the Order of St. Augustine, established chiefly in Italy, and forming separate congregations. To these belong the Hermits of the Holy Trinity in Tuscany, who had already been united into an Augustinian congregation by Pope Innocent IV, in 1243, with Cardinal Richard for a protector, and with indulgences granted to those who visited their churches (in 1244). (3) The Bonites, so called from their founder, Blessed John Buoni, a member of the Buonomini family, born about 1168 in Mantua. He lived a hermit's life at Cesena, and died in his native city in 1249 (Lodi, "Vita e miracoli del b. Giov. Buoni", Mantua, 1591; "Acta SS. Boll.", Oct., IX, 693 sq.). In the year 1256 the Bonites possessed eleven monasteries and gave the first general to the Augustinian Order (see above). (4) The Brittinians (Britinians), so called from their oldest foundation, that of St. Blasius de Brittinis, near Fano, in the district of Ancona. Many congregations, such as the Brothers of Penance of Christ (*Saccati*, or "Sack-bearers"), the foundations of Durandus of Huesca (Osca), and those of the "Catholic Poor", united with the Bonites.

The Hermits of St. Augustine spread rapidly, partly because they did not radiate from a single parent monastery, and partly because, after violent conflicts in the previously existing congregations, the active life was finally adopted by the greater number of communities, following the example of the Friars Minor and the Dominicans. To the Brittinians alone, in 1260, was granted permission to continue following the contemplative life. A few years after the reorganization of the Augustinian Order, Hermit monasteries sprang up in Germany, France, and Spain. Germany soon possessed forty, many of them large and important, such as those at Mainz, Würzburg, Worms, Nuremberg, Speyer, Strasburg, Ratisbon, all built between 1260 and 1270. As early as the year 1299, the German province was divided into four sub-provinces: the Rhenish-Swabian, the Cologne, the Bavarian, and the Saxon. At the period of its greatest prosperity the order possessed 42 provinces and 2 vicariates numbering 2000 monasteries and about 30,000 members. (Cf. Aug. Lubin, "Orbis Augustinianus sive conventuum O. Erem. S. A. chorographica et topographica descriptio", Paris, 1659, 1671, 1672.)

PRESENT CONDITION OF THE ORDER.—Since the sixteenth century the order, owing to many causes, particularly to the Reformation, lost numbers of monasteries. During the French Revolution the greater part of the 157 monasteries were destroyed, as well as all the monasteries of the Discalced Augustinian Hermits. The secularization of the religious houses in Germany, Austria, and Italy brought about great losses. In 1835, out of a total of 153 in Spain, 105 were suppressed. The Augustinian monasteries in

Mexico were suppressed in 1860; in Russia, in 1864; in the Kingdom of Hanover, in 1875. The Philippine Islands, however, suffered the heaviest losses, during the disturbances of 1896. Hence the Augustinian Order of to-day has only a tenth of the monasteries which it possessed at the time of its greatest prosperity.

Without counting the Discalced Augustinians, the order comprises 19 provinces, 2 commissariates, 2 congregations, and 60 large monasteries (with 6 or more fathers), in all, including residences and mission stations, 275 foundations, with 2050 members (priests, clerical novices, and lay brothers). These provinces, according to the "Catalogus Fratrum O. Erem. S. Augustini" (Rome, 1908) are:—

1. *Provincia Romana* (Rome), with 13 convents.
2. *Provincia Picena* (north-eastern Italy), with 16 convents.

3. *Provincia Castellæ* (Spain), with 5 colleges and 2

HERMIT OF ST. AUGUSTINE IN ORDINARY HABIT

residences (S. German and Cabo Rojo) in Porto Rico.

4. *Provincia Hollandica*, with 6 convents.

5. *Provincia Belgica*, with 3 convents.

6. *Provincia Umbria*, with 9 convents.

7. *Provincia Bavarico - Germanica et Polonica*, with 7 convents in Bavaria, 1 in Prussia, and 1 in Austrian Galicia.

8. *Provincia Bohemica*, with 7 convents in Bohemia.

9. *Commissarius Neapolitanus*, with 2 convents.

10. *Commissarius Siculus*, with 8 convents in Sicily.

11. *Provincia Etruria*, with 5 convents.

12. *Provincia Hibernia*, with 12 convents in Ireland (Dublin, Galway, Cork, Limerick, Drogheda, Callan, Dungarvan, New Ross, Fethard, Ballyhaunis, Clonmines, and Orlagh), 3 in England (Hoxton, West Kensington, and Hythe), 3 in Australia (Echuca, Rochester, and Kyabram), and 1 in Italy (St. Patrick's, Rome).

13. *Provincia Liguria*, with 5 convents.

14. *Provincia Michoacanensis* (Mexico), with 10 convents, 16 vicariates or parishes, and 1 chaplaincy.

15. *Provincia SS. Nominis Jesu Insularum Philippinarum*. This comprises 2 residences at Madrid; the Real Colegio at Valladolid; 4 other residences and 7 convents in other parts of Spain; a procurator's house (*domus procurationis*) at Rome; 3 convents and 10 parish residences in the Philippines; a procurator's house and 6 mission stations in China; one college and five houses in the Republic of Colombia; 1 convent, 3 colleges, and 3 mission stations in Peru; a procurator's house and 16 other houses (including 1 diocesan seminary) in Brazil; 5 colleges, 1 school, and 4 other houses in Argentina.

16. *Provincia S. Michaelis Quitensis* (Ecuador), with 3 convents.

17. *Provincia Mexicana SS. Nominis Jesu* (Mexico), with 6 convents and 7 vicariates.

18. *Provincia Chilensis* (Chile), with 6 convents and 1 house.

19. *Provincia Melitensis* (Malta), with 3 convents.

20. *Provincia S. Thomæ a Villanova in Statibus Fœderatis America Septentrionalis* (United States of America) comprises, besides the college of Villanova, in Pennsylvania, and that of St. Augustine, at Havana, Cuba, 9 convents and 11 houses.

21. *Provincia Matritensis SS. Cordis Jcsu* (Spain), with 2 chapels in Madrid, a convent and 2 colleges in the Escorial, 1 college each at Palma (Majorca), Guernica, and Ronda, and a school at Portugalete.

22. *Congregatio S. Joannis ad Carbonariam* (Naples), with 4 convents.

23. *Congregatio S. Mariæ de Nemore Sicilia* (Sicily), with 2 convents.

The convents of St. Thomas, at Alt Brunn, Moravia, and of Our Lady of Good Counsel, Philadelphia, U. S. A., are immediately subject to the general of the Augustinian Order.

The chief house of the order is the International College of St. Monica at Rome, Via S. Ufficio No. 1. It is also the residence of the general of the order (*prior generalis*) and of the *curia generalis*. Another monastery of the Augustinian Hermits in Rome is that of S. Augustinus de Urbe, established in 1483, near the church of St. Augustine, in which the remains of St. Monica, the mother of St. Augustine, were deposited when they were brought from Ostia in the year 1430. This, formerly the chief monastery of the order, is now occupied by the Italian Ministry of Marine, and the Augustinian Fathers who serve the church retain only a small portion of their former property. Another Augustinian convent in Rome is S. Maria de Populo de Urbe.

In 1331 Pope John XXII had appointed the Augustinian Hermits guardians of the tomb of St. Augustine in the church of S. Pietro in Ciel d'Oro at Pavia. They were driven thence in 1700, and fled to Milan. Their monastery being destroyed in 1799, and the church desecrated, the remains of St. Augustine were taken back to Pavia and placed in its cathedral. In recent times the church of S. Pietro was restored, and on 7 October, 1900, the body of the saint was removed from the cathedral and replaced in San Pietro—an event commemorated in a poem by Pope Leo XIII. The Augustinians are again in possession of their old church of S. Pietro.

REFORM MOVEMENTS.—In the fourteenth century, owing to various causes, such as the mitigation of the rule, either by permission of the pope, or through a lessening of fervour, but chiefly in consequence of the Plague and the Great Western Schism, discipline became relaxed in the Augustinian monasteries; hence reformers appeared who were anxious to restore it. These reformers were themselves Augustinians and instituted several reformed congregations, each having its own vicar-general (*vicarius generalis*), but all under the control of the general of the order. The most important of these congregations of the "Regular Observants" were those of Illiceto, in the district of Siena, established in 1385, having 12, and subsequently 8, convents; of St. John ad Carbonariam (founded c. 1390), having 14 convents, of which 4 still exist; of Perugia (1491), having 11; the Lombardic Congregation (1430), 56; the Congregation of the Spanish Observance (1430), which since 1505 has comprised all the Castilian monasteries; of Monte Ortono near Padua (1436), having 6 convents; of the Blessed Virgin at Genoa, also called Our Lady of Consolation (c. 1470), 25; of Apulia (c. 1490), 11; the German, or Saxon, Congregation (1493) (see next paragraph); the Congregation of Zampani in Calabria (1507), 40; the Dalmatian Congregation (1510), 6; the Congregation of the Colorites, or of Monte Colorito, Calabria (1600), 11; of Centorbio in Sicily (1590), 18 (at present 2, which form the Congregation of S. Maria de Nemore Siciliæ); of the "Little Augustinians" of Bourges, France (c. 1593), 20; of the Spanish, Italian,

and French congregations of Discalced, or Barefooted, Augustinians (see below), and the Congregation del Bosco in Sicily established in the year 1818 and having 3 convents.

Among these reformed congregations, besides those of the Barefooted Augustinians, the most important was the German (Saxon) Congregation. As in Italy, Spain, and France, reforms were begun as early as the fifteenth century in the four German provinces existing since 1299. Johannes Zachariæ, an Augustinian monk of Eschwege, Provincial of the Order from 1419-1427, and professor of theology at the University of Erfurt, began a reform in 1492. Andreas Proles, prior of the Himmelpforten monastery, near Wernigerode, strove to introduce the reforms of Father Heinrich Zolter in as many Augustinian monasteries as possible. Proles, aided by Father Simon Lindner of Nuremberg and other zealous Augustinians, worked indefatigably till his death, in 1503, to reform the Saxon monasteries, even calling in the assistance of the secular ruler of the country. As the result of his efforts, the German, or Saxon, Reformed Congregation, recognized in 1493, comprised nearly all the important convents of the Augustinian Hermits in Germany. Johann von Staupitz his successor, as vicar of the congregation, followed in his footsteps. Staupitz had been prior at Tübingen, then at Munich, and had taken a prominent part in founding the University of Wittenberg in 1502, where he became a professor of theology and the first dean of that faculty. He continued to reform the order with the zeal of Proles, as well as in his spirit and with his methods. He collected the "Constitutiones fratrum eremitarum S. Aug. ad apostolicorum privilegiorum formam pro Reformatione Alemanniæ", which were approved in a chapter held at Nuremberg in 1504. A printed copy of these is still to be seen in the university library of Jena. Supported by the general of the order, Ægidius of Viterbo, he obtained a papal Brief (15 March, 1506), granting independence under their own vicar-general to the reformed German congregations and furthermore, 15 December, 1507, a papal Bull commanding the union of the Saxon province with the German Congregation of the Regular Observants. All the Augustinian convents of Northern Germany were, in accordance with this decree, to become parts of the regular observance. But when, in 1510, Staupitz commanded all the hermits of the Saxon province to accept the regular observance on pain of being punished as rebels, and to obey him as well as the general of the order, and, on 30 September, published the papal Bull at Wittenberg, seven convents refused to obey, among them that of Erfurt, of which Martin Luther was a member. In fact, Luther seems to have gone to Rome on this occasion as a representative of the rebellious monks.

In consequence of this appeal to Rome, the consolidation did not take place. Staupitz also continued to favour Luther even after this. They had become acquainted at Erfurt, during a visitation, and Staupitz was responsible for Luther's summons to Wittenberg in 1508; nay, even after 1517 he entertained friendly sentiments for Luther, looking upon his proceedings as being directed only against abuses. From 1519 on he gradually turned away from Luther. Staupitz resigned his office of vicar-general of the German congregations in 1520. Father Wenzel Link, preacher at Nuremberg, former professor and dean of the theological faculty at Wittenberg, who was elected his successor, cast in his lot with Luther, whose views were endorsed at a chapter of the Saxon province held in January, 1522, at Wittenberg. In 1523 Link resigned his office, became a Lutheran preacher at Altenberg, where he introduced the Reformation and married, and went in 1528 as preacher to Nuremberg, where he died in 1547. The example of Luther and Link was followed by many Augustinians of the Saxon province, so that their convents were more and more

deserted, and that of Erfurt ceased to exist in 1525. The German houses that remained faithful united with the Lombardic Congregation. There were, however, many Augustinians in Germany who by their writings and their sermons opposed the Reformation. Among them Bartholomæus Arnoldi of Usingen (d. 1532 at Würzburg), for thirty years professor at Erfurt and one of Luther's teachers, Johannes Hoffmeister (d. 1547), Wolfgang Cäppelmair (d. 1531), and Konrad Treger (d. 1542).

THE DISCALCED AUGUSTINIANS (sometimes called the Barefooted Augustinians, or Augustinian Recollects).—More fortunate than that of the German (Saxon) province was the reform of the order begun in Spain in the sixteenth century, which extended thence to Italy and France. The originator of this reform was Father Thomas of Andrada, afterwards called Thomas of Jesus. Born at Lisbon, in 1529, he entered the Augustinian Order in his fifteenth year. Although aided in his efforts at reform by the Cardinal Infante Henry of Portugal, and his teacher, Louis of Montoya, his plans were impeded at first by the hesitation of his brethren, then by his captivity among the Moors (1578), on the occasion of the crusade of the youthful King Sebastian of Portugal, and lastly by his death in prison which took place on 17 April, 1582. The celebrated poet

HERMIT OF ST. AUGUSTINE IN FULL OR CHORAL HABIT

and scholar Fray Luis Ponce de León (d. 1591), of the Augustinian monastery at Salamanca, took up the work of Thomas of Andrada. Appointed professor of theology at the University of Salamanca in 1561, he undertook the revision of the constitutions of his order and in 1588 Father Díaz, with the support of Philip II, established at Talavera the first monastery of the Spanish Regular Observance. In a short time many new monasteries of Discalced Augustinians sprang up in Spain and were followed by others in the Spanish colonies. In 1606 Philip III sent some Discalced Augustinians to the Philippine Islands where, as early as 1565, Fray Andrés de Úrdaneta, the well-known navigator and cosmographer (cf. "La Ciudad de Dios", 1902; "Die katholischen Missionen", 1880, pp. 4 sqq.), had founded the first mission station on the island of Cebú. In a few years many mission stations of the Discalced Augustinians sprang up in the principal places on the islands and developed a very successful missionary activity. In 1622 Pope Gregory XV permitted the erection of a separate congregation for the Discalced, with its own vicar-general. This congregation comprised four provinces: three in Spain and the Philippine province, to which was later added that of Peru. When the Discalced Augustinians in Spain were either put to death or obliged to flee, during the revolution of 1835, they continued to flourish in the Philippines and in South America.

In Italy, Father Andrés Díaz introduced the reformed congregations in 1592, the first house being

that of Our Lady of the Olives, at Naples, which was soon followed by others at Rome and elsewhere. As early as 1624 Pope Urban VIII permitted the division of the Italian congregations of Barefooted Augustinians into four provinces (later, nine). In 1626 a house of this congregation was founded at Prague and another at Vienna, in 1631, of which the celebrated Abraham a Sancta Clara was a member in the eighteenth century. In France, Fathers François Amet and Matthew of St. Frances, of Villar-Benoît, completed the reform of the order in 1596. The French Congregation of Discalced Augustinians comprised three provinces, of which all the houses were destroyed during the French Revolution. As the only convent of Calced Augustinian Hermits, St. Monica, at Nantes, is at present untenanted, there is now not a single Augustinian convent in France. The Italian Congregation of Discalced Augustinians in Italy possess seven houses, six in Italy and one in Austria (Schlüsselburg, with a parish in the Diocese of Budweis). The chief house of this congregation is that of St. Nicholas of Tolentino in Rome (Via del Corso 45). Including the scattered members of the Spanish Congregation in the Philippine Islands and South America, the Discalced Augustinians still number about 600 members. They are independent of the Augustinian general and are divided into two congregations, under two vicars-general.

ORGANIZATION OF THE ORDER.—The Augustinian Hermits, while following the rule known as that of St. Augustine, are also subject to the Constitutions drawn up by Bl. Augustinus Novellus (d. 1309), prior general of the order from 1298 to 1300, and by Bl. Clement of Osimo. The Rule and Constitutions were approved at the general chapters held at Florence in 1287 and at Ratisbon in 1290. A revision was made at Rome in 1895. The Constitutions have frequently been printed: at Rome, in 1581, and, with the commentary of Girolamo Seripando, at Venice, in 1549, and at Rome, in 1553. The newly revised Constitutions were published at Rome in 1895, with additions in 1901 and 1907.

The government of the order is as follows: At the head is the prior general (at present, Tomás Rodríguez, a Spaniard), elected every six years by the general chapter. The prior general is aided by four assistants and a secretary, also elected by the general chapter. These form the *Curia Generalitia*. Each province is governed by a provincial, each commissariate by a commissary general, each of the two congregations by a vicar-general, and every monastery by a prior (though the monastery of Alt-Brünn, in Moravia, is under an abbot) and every college by a rector. The members of the order are divided into priests and lay brothers. The Augustinians, like most religious orders, have a cardinal protector (at present, Mariano Rampolla del Tindaro). The choir and outdoor dress of the monks is of black woollen material, with long, wide sleeves, a black leather girdle, and a long pointed cowl reaching to the girdle. The indoor dress consists of a black habit with scapular. In many monasteries white was formerly the colour of the house garment, also worn in public, in places where there were no Dominicans. Shoes and (out of doors) a black hat complete the costume.

The Discalced Augustinians have their own constitutions, differing from those of the other Augustinians. Their fasts are more rigid, and their other ascetic exercises stricter. They wear sandals, not shoes (and are therefore not strictly *discalced*). They never sing a high Mass. As an apparent survival of the hermit life, the Discalced Augustinians practise strict silence and have in every province a house of recollection situated in some retired place, to which monks striving after greater perfection can retire in order to practise severe penance, living only on water, bread, fruits, olive oil, and wine.

PRIVILEGES OF THE ORDER.—Privileges were granted to the order almost from its beginning. Alexander IV freed the order from the jurisdiction of the bishops; Innocent VIII, in 1490, granted to the churches of the order indulgences such as can only be gained by making the Stations at Rome; Pius V placed the Augustinians among the mendicant orders and ranked them next to the Carmelites. Since the end of the thirteenth century the sacristan of the papal palace has always been an Augustinian. This privilege was ratified by Pope Alexander VI and granted to the order forever by a Bull issued in 1497. The present holder of the office is Guglielmo Pifferi, titular Bishop of Porphyra, rector of the Vatican parish (of which the chapel of St. Paul is the parish church). To his office also belongs the duty of preserving in his oratory a consecrated Host which must be renewed weekly and kept in readiness in case of the pope's illness, when it is the privilege of the papal sacristan to administer the last sacraments to His Holiness. The sacristan must always accompany the pope when he travels, and during a conclave it is he who celebrates Mass and administers the sacraments. He lives in the Vatican with a sub-sacristan and three lay brothers of the order (cf. Rocca, "*Chronistoria de Apostolico Sacrario*", Rome, 1605). The Augustinian Hermits always fill one of the chairs of the Sapienza University, and one of the consultorships in the Congregation of Rites.

The work of the Augustinians includes teaching, scientific study, the cure of souls, and missions. The history of education makes frequent mention of Augustinians who distinguished themselves particularly as professors of philosophy and theology at the great universities of Salamanca, Coimbra, Alcalá, Padua, Pisa, Naples, Oxford, Paris, Vienna, Prague, Würzburg, Erfurt, Heidelberg, Wittenberg, etc. Others taught successfully in the schools of the order. The order also controlled a number of secondary schools, colleges, etc. In 1685 the Bishop of Würzburg, Johann Gottfried II, of Guttenberg, confided to the care of the Augustinians the parish and the gymnasium of Münnerstadt in Lower Franconia (Bavaria), a charge which they still retain. Connected with the monastery of St. Michael in that place is a monastic school, while the seminary directed by the Augustinians forms another convent, that of St. Joseph. From 1698 to 1805 there existed an Augustinian gymnasium at Bedburg in the district of Cologne. The order also possesses altogether fifteen colleges, academies, and seminaries in Italy, Spain, and America. The chief institutions of this kind in Spain are that at Valladolid and that in the Escorial. As a pedagogical writer, we may mention the general of the order Ægidius Colonna, also called Ægidius Romanus, who died Archbishop of Bourges in 1316. Ægidius was the preceptor of the French king, Philip IV, the Fair, at whose request he wrote the work "*De regimine Principum*". (An extract from this book "on the care of parents for the education of their children" will be found in the "*Bibliothek der katholischen Pädagogik*", Freiburg, 1904.) Jacques Barthélemy de Buillon, a French Augustinian exiled by the Revolution, fled to Munich and began the education of deaf and dumb children. Ægidius of Colonna was a disciple of St. Thomas Aquinas, and founded the school of theology known as the Augustinian, which was divided into an earlier and a later. Among the representatives of the earlier Augustinian school (or Ægidians), we may mention besides Ægidius himself (*Doctor fundatissimus*) Thomas of Strasburg (d. 1357), and Gregory of Rimini (d. 1358), both generals of the order, and Augustine Gibbon, professor at Würzburg (d. 1676). The later Augustinian school of theology is represented by Cardinal Henry Noris (d. 1704), Fred. Nicholas Gavardi (d. 1715), Fulgentius Bellelli (d. 1742), Petrus Manso (d. after 1729), Joannes Laurentius Berti (d. 1766),

and Michelangelo Marcelli (d. 1804). The following were notable theologians: James of Viterbo (Giacomo di Capoccio), Archbishop of Benevento and Naples (d. 1308), called *Doctor speculativus*; Alexander a S. Elpideo (also called Fassitelli or A. de Marchia) (d. 1326), Bishop of Melfi; Augustinus Triumphus (d. 1328); Bartholomew of Urbino (also called de Carusis) (d. 1350), Bishop of Urbino; Henry of Friemar (d. 1354); Blessed Herman of Schildesche (Schildis, near Bielefeld) (d. 1357), called *Doctor Germanus* and *Magnus legista*; Giacomo Caraccioli (d. 1357); Simon Baringuedus (d. after 1373); Johann Klenkok (Klenke) (d. 1374), author of the "Decadicon", an attack upon the "Sachsenspiegel"; Johannes Zachariæ (d. 1428), known for his controversy with John Hus at the Council of Constance and for his "Oratio de necessitate reformationis"; Paulus (Nicolettus) de Venetiis (d. 1429); Giovanni Dati (d. 1471); Ambrose of Cora (Corianus, Coriolanus) (d. 1485), general of the order after 1476; Thomas Pencket (d. 1487); Ægidius of Viterbo (d. 1532); Cosmas Damian Hortulanus (Hortola) (d. 1568); Caspar Casal (d. 1587), Bishop of Coimbra; Pedro Aragón (d. 1595); Giovanni Battista Arrighi (d. 1607); Gregorio Nuñez Coronel (d. 1620); Ægidius a Præsentatione Fonseca (d. 1626); Luigi Alberti (d. 1628); Basilius Pontius (d. 1629); Ludovicus Angelicus Aprosius (d. 1681); Nikolaus Gireken (d. 1717). Giovanni Michele Cavalieri (d. 1757) was a rubricist of note. Father Angelo Rocca, papal sacristan and titular Bishop of Tagaste (d. 1620), known for his liturgical and archæological researches, was the founder of the Angelica Library (Bibliotheca Angelica), which was called after him and is now the public library of the Augustinians in Rome.

Many Augustinians have written ascetic works and sermons. In the department of historical research the following are worthy of mention: Onofrio Panvini (d. 1568); Joachim Brulius (d. after 1652), who wrote a history of the colonization and Christianizing of Peru (Antwerp, 1615), also a history of China; Enrique Flórez (d. 1773), called "the first historian of Spain", author of "España Sagrada"; and, lastly, Manuel Risco (d. 1801), author of a history of printing in Spain.

To the missionaries of the order we owe many valuable contributions in linguistics. Father Melchor de Vargas composed, in 1576, a catechism in the Mexican Otomi language; Father Diego Basalenque (d. 1651) and Miguel de Guevara compiled works in the languages of the savage Matlaltzinkas of Mexico; Father Manuel Pérez translated the Roman Catechism into Aztec in 1723. Others have made researches in the languages of the Philippine Islands, such as Father Diego Bergano and, in more recent times, José Sequi (d. 1844), a prominent missionary of the order, who baptized 30,000 persons. Many wrote grammars and compiled dictionaries. Father Herrera wrote a poetical life of Jesus in the Tagalog language in 1639. Fathers Martín de Hereda and Hieronymus penetrated into the interior of China in 1577, to study Chinese literature with the intention of bringing it into Europe. Father Antonius Aug. Georgius (d. 1797) composed the "Alphabetum Tibetanum" for the use of missionaries. Father Agostino Ciasca (d. 1902), titular Archbishop of Larissa and cardinal, a prominent member of the order in recent times, established a special faculty for Oriental languages at the Roman Seminary, published an Arabic translation of Tatian's "Diatessaron" and wrote "Bibliorum Fragmenta Copto-Sahidica". Father Dionysius of Borgo San Sepolcro (d. 1342), Bishop of Monopoli in Lower Italy, is the author of a commentary on the "Factorum et dictorum memorabilium libri IX" of Valerius Maximus, and was also much esteemed for his talents as poet, philosopher, and orator. The missionaries of the order have also given us valuable descrip-

tive works on foreign countries and peoples. In this class of writing Cipriano Navarro's important work on "The Inhabitants of the Philippines" and a monumental work in six volumes entitled "La Flora de Filipinas" (Madrid, 1877—), are valuable contributions to literature and learning. Manuel Blanco, Ignacio Mercado, Antonio Llanos, Andrés Naves, and Celestino Fernández are also worthy of mention. Fathers Angelo Pérez and Cecilio Guemes published in 1905 a work in four volumes entitled "La Imprenta de Manila".

A number of mathematicians, astronomers, and musicians are also found among the members of the order, but it was the great scientist, Johann Gregor Mendel, abbot of the monastery of St. Thomas at Alt-Brünn in Moravia (d. 1884) who shed glory on the Augustinian Order in recent times. He was the dis-

CHURCH OF S. AGOSTINO, ROME

coverer of the Mendelian laws of heredity and hybridization (see under EVOLUTION, V, 659; and MENDEL, GREGOR). The value set upon learning and science by the Augustinian monks is proved by the care given to their libraries and by the establishment of their own printing-press in their convent at Nuremberg, in 1479, as well as by the numerous learned men produced by the order and still contributing valuable additions to knowledge. Father Tomás Cámara y Castro (d. 1904), Bishop of Salamanca, founded a scientific periodical, "La Ciudad de Dios", formerly entitled "Revista Agustiniana", and published by the Augustinians at Madrid since 1881. In Spain the order possesses besides several meteorological stations, the observatory of the Escorial. Among the Augustinian writers of the present time should be mentioned: Zacarías Martínez Nuñez, a celebrated Spanish orator and master of natural science; Honorato del Val, author of a great work on dogma; Aurelio Palmieri, one of the best authorities on the Russian language, literature, and church history.

The Augustinian Order has devoted itself from its beginning, with great zeal to the cure of souls. Only those engaged in teaching and inmates of the houses of recollection, among the Discalced, are exempt from

the obligation to this duty, to follow which the order, though retaining its name *Hermits*, exchanged the contemplative life for the active. Seeing the good done by the Friars Minor and the Dominicans, they wished to share in the harvest, undertaking to preach and instruct the people. Augustinians became the confessors and advisers of popes, princes, and rulers. Many became bishops, several cardinals, exercising these offices for the good of the Church and the honour of their order. At present the order has a cardinal, Sebastiano Martinelli (formerly Apostolic delegate for the United States), several bishops—Guglielmo Pifferi (see above); Stephen Reville, Bishop of Sandhurst in Australia; Arsenio Campo y Monasterio, Bishop of Nueva Cáceres in the Philippine Islands; Giovanni Camilleri, Bishop of Gozzo; José López de Mendoza y García, Bishop of Pampeluna, Spain; Giuseppe Capecci, Bishop of Alessandria in Italy; Francisco Xavier Valdés y Norieja, Bishop of Salamanca; William A. Jones, Bishop of Porto Rico; and the Vicars Luis Pérez of Northern Hu-nan (China) and Dominic Murray, Cooktown, Australia; the Prefect Apostolic (Paulino Díaz Alonso) of San León de Amazonas—and, finally, two mitred abbots.

The order has produced many saints, for example, Sts. Nicholas of Tolentino (d. 1305), John of Sahagún (a Sancto Facundo) (d. 1479), and Thomas of Villanova (d. 1555). Stefano Bellesini (d. 1840), the Augustinian parish priest of Genazzano, in the Roman province, was beatified by Pius X, 27 December, 1904. The process for the beatification of seven Augustinians, among them the papal sacristan Bartolommeo Menochio (d. 1827), is under consideration.

As to the devotional practices specially connected with the Augustinian Order, and which it has striven to propagate, we may mention the veneration of the Blessed Virgin under the title of "Mother of Good Counsel", whose miraculous picture is to be seen in the Augustinian church at Genazzano in the Roman province. This devotion has spread to other churches and countries, and confraternities have been formed to cultivate it. Several periodicals dedicated to the honour of Our Lady of Good Counsel are published in Italy, Spain, and Germany by the Augustinians (cf. Meschler on the history of the miraculous picture of Genazzano in "Stimmen aus Maria-Laach", LXVII, 482 sqq.). Besides this devotion the order fosters the Archconfraternity of Our Lady of Consolation, a so-called girdle confraternity, the members of which wear a blessed girdle of black leather in honour of Sts. Augustine, Monica, and Nicholas of Tolentino, recite daily thirteen Our Fathers and Hail Marys and the *Salve Regina*, fast strictly on the eve of the feast of St. Augustine, and receive Holy Communion on the feasts of the three above-named saints. This confraternity was founded by Pope Eugene IV at S. Giacomo, Bologna, in 1439, made an archconfraternity by Gregory XIII, in 1575, aggregated to the Augustinian Order, and favoured with indulgences. The Augustinians, with the approbation of Pope Leo XIII, also encourage the devotion of the Scapular of Our Lady of Good Counsel and the propagation of the Third Order of St. Augustine for the laity, as well as the veneration of St. Augustine and his mother St. Monica, in order to instil the Augustinian spirit of prayer and self-sacrifice into their parishioners.

The Augustinians hold an honourable place in the history of foreign missions. Before the middle of the fourteenth century, Father Nikolaus Teschel (d. 1371), auxiliary Bishop of Ratisbon, where he died, with some brethren preached the Gospel in Africa. In 1533, after the subjugation of Mexico by Cortez, some Augustinians, sent by St. Thomas of Villanova, accomplished great missionary work in that country. Monasteries sprang up in the principal places and became the centres of Christianity, art, and civilization. The Patio (Cloister) of the former monastery of St.

Augustine, now the post office, at Querétaro, is one of the most beautiful examples of stone-carving in America. The Augustinian monasteries in Mexico are to-day either deserted or occupied by a few fathers only; some even only by one. The Provincia Michoacensis (see above, PRESENT CONDITION) at present has about 55 members, while the Provincia Mexicana has 31, most of whom are priests. Augustinian missionaries extended their labours to South America (Colombia, Venezuela, Peru) with great success. Political events in these countries prevented the order from prospering and hindered the success of its undertakings, so that in course of time the monasteries became deserted. Late events in the Philippine Islands, however, have permitted the Augustinians to return to their former churches and monasteries and even to found new ones.

In the Republic of Colombia, 26 members of the Philippine province are employed, including 6 at the residence of Santa Fe de Bogotá, 8 in the college at Facativá, and 12 at other stations. In Peru 49 members of the same province are employed: 14 priests and 2 lay brothers belonging to the convent at Lima; 12 priests to the college in the same city; 6 in each of the two seminaries at Cuzco and Ayacucho. In the Prefecture Apostolic of San León de Amazonas, at the mission stations of Peba, Río Tigre, and Leticia in the territory of the Iquito Indians there are 9 priests. In June, 1904, Father Bernardo Calle, the lay brother, Miguel Vilajoli, and more than 70 Christians, were murdered at the recently erected mission station, Huabico, in Upper Marañon and the station itself was destroyed. The Augustinian settlements in Brazil also belong to the Philippine province. In the procurator house at S. Paulo (Rua Apeninos 6) and in the college at Brotas there are 4 Augustinians each; in the diocesan seminary at S. José de Manaos, 6; and in the other settlements, 27 priests—in all, 42 members of the order, including one lay brother. In Argentina, there are 25 priests and two lay brothers in the six colleges and schools of the order. In Ecuador, which forms a province by itself, there are 21 members of the order; 9 priests and 7 lay brothers in the monastery at Quito; 3 priests in the convent at Latagun and 2 in that at Guayaquil. The province of Chile has 56 members, including 18 lay brothers; 11 at Santiago, 4 at La Serena, 5 at Concepción, 22 at Talca, 8 at San Fernando, 4 at Melipilla, and 2 in the residence at Picazo. The province of the United States of America is very large, as the Augustinians driven out of many European countries in 1848 sought refuge in that republic. This province now numbers 200 members. The largest convent is at Villanova, Pa.; it is also the novitiate for North America, and among the 117 religious occupying the convent 21 are priests (see above, PRESENT CONDITION). The other convents contain 60 members, of whom 5 are lay brothers. To the province of the United States belongs also St. Augustine's College at Havana, Cuba, where there are 5 priests and 3 lay brothers.

The greatest missionary activity of the Augustinian Order has been displayed in the Philippine Islands, and the first missionaries to visit these islands were Augustinians. When Magalhães discovered the Philippines (16 March, 1521) and took possession of them in the name of the King of Spain, he was accompanied by the chaplain of the fleet, who preached the Gospel to the inhabitants, baptizing Kings Colambu and Siagu and 800 natives of Mindanao and Cebu, on Low Sunday, 7 April, 1521. The good seed, however, was soon almost destroyed; Magalhães was killed in a fight with natives on the little island of Mactan on 27 April and the seed sown by the first Spanish missionaries all but perished; nor were those missionaries brought from Mexico in 1543 by Ruy López Villalobos more successful, for they were obliged to return to Europe by way of Goa, having gained very little hold

on the islanders. Under the Adelantado Legaspi, who in 1565 established the sovereignty of Spain in the Philippines and selected Manila as the capital in 1571, Father Andrés de Urdaneta and 4 other Augustinians landed at Cebú in 1565, and at once began a very successful apostolate. The first houses of the Augustinians were established at Cebú, in 1565, and at Manila, in 1571. In 1575, under the leadership of Father Alfonso Gutiérrez, twenty-four Spanish Augustinians landed in the islands and, with the provincials Diego de Herrera and Martín de Rado, worked very successfully, at first as wandering preachers. The Franciscans first appeared in the Philippines in 1577 and were warmly welcomed by the Augustinians. Soon they were joined by Dominicans and Jesuits. Sent by Philip III, the first Barefooted Augustinians landed in 1606. All these orders shared in the labours and difficulties of the missions. Protected by Spain, they prospered, and their missionary efforts became more and more successful. In 1773 the Jesuits, however, were obliged to give up their missions in consequence of the suppression of the Society.

The religious orders have suffered much persecution in the Philippines in recent times, especially the Augustinians. In 1897 the Calced Augustinians, numbering 319 out of 644 religious then in the Philippine province, had charge of 225 parishes, with 2,377,743 souls; the Discalced (Recollects), numbering about 220, with 233 parishes and 1,175,156 souls; the Augustinians of the Philippine province numbered in all 522, counting those in the convents at Manila, Cavité, San Sebastian, and Cebú, those at the large model farm at Imus, and those in Spain at the colleges of Monteagudo, Marcilla, and San Millán de la Cogulla. Besides the numerous parishes served by the Calced Augustinians, they possessed several educational institutions: a superior and intermediate school at Vigan (Villa Fernandina) with 209 students, an orphanage and trade school at Tamborn near Manila, with 145 orphans, etc. In consequence of the disturbances, the schools and missions were deserted; six fathers were killed and about 200 imprisoned and sometimes harshly treated. Those who escaped unmolested fled to the principal house at Manila, to Macao, to Han-kou, to South America, or to Mexico. Up to the beginning of 1900, 46 Calced and 120 Discalced Augustinians had been imprisoned. Upon their release, they returned to the few monasteries still left them in the islands or set out for Spain, Colombia, Peru, Brazil, Argentina, and China. The province of the United States sent some members to supply the vacancies in the Philippines. The monastery of St. Paul, at Manila, now has 24 priests and 6 lay brothers; that at Cebú, 5 members of the order, that at Iloilo, on the island of Panay, 11 priests and 2 lay brothers, while in the 10 residences there are 20 fathers; so that at the present time there are only 68 Calced Augustinians in the islands. In all, the Provincia Ss. Nominis Jesu Insularum Philippinarum, including theological students and the comparatively small number of lay brothers, has 600 members: 359 in Spain, 185 of whom are priests; 68 in the Philippines; 29 in China; 26 in Colombia; 49 in Peru; 42 in Brazil; 27 in Argentina.

The Augustinian missions in the Philippines have provided missionaries for the East since their first establishment. In 1603 some of them penetrated into Japan, where several were martyred, and in 1653 others entered China, where, in 1701, the order had six missionary stations. At present the order possesses the mission of Northern Hu-nan, China, where there are 24 members, 2 of whom are natives; 6 in the district of Yo-chou; 6 in the district of Ch'ang-te; 9 in the district of Li-chu; three other religious are also labouring in other districts—all under the vicar Apostolic, Mgr. Pérez. The mission comprises about 3000 baptized Christians and 3500 catechumens

in a population of 11 millions of heathens. In 1891 there were only 219 Christians and 11 catechumens, as well as 29 schools, with 420 children and 750 orphans. There are, moreover, two priests at the mission house at Han-kou and two at the procuration house at Shanghai (Yang-tsze-poo Road, 10). The missionary history of Persia also mentions the Augustinians. Towards the close of the sixteenth century, Alexio de Menezes, Count of Cantanheda (d. 1617), a member of the order, appointed Archbishop of Goa in 1595, and of Braga in 1612, Primate of the East Indies, and several times Viceroy of India, sent several Augustinians as missionaries to Persia while he himself laboured for the reunion of the Thomas Christians, especially at the Synod of Diamper, in 1599, and for the conversion of the Mohammedans and the heathens of Malabar. (Govea, "Jornada do Arcebispo de Goa Dom Alexio de

INTERIOR OF S. AGOSTINO, ROME

Menezes", Coimbra, 1606; also, "Histoire Orient. de grands progrès de l'église Romaine en la réduction des anciens chrestiens dit de St. Thomas" translated from the Spanish of Franc. Muñoz by J. B. de Glen, Brussels, 1609; Joa. a.S. Facundo Raulin, "Historia ecclesiæ malabaricæ", Rome, 1745.)

The Augustinians also established missions in Oceania and Australia. Here the Spanish Discalced Augustinians took over the missions founded by Spanish and German Jesuits in the Ladrões, which now number 7 stations, with about 10,000 souls, on Guam and about 2500 on each of the German islands of Saipan, Rota, and Tinian. The mission on the German islands was separated from the Diocese of Cebú on 1 October, 1906, and made a prefecture Apostolic on 18 June, 1907, with Saipan as its seat of administration, and the mission is now in charge of the German Capuchins. In Australia the Calced Augustinians are established in the ecclesiastical Province of Melbourne and in the Vicariate Apostolic of Cooktown, Queensland, where there are at present twelve priests of the Irish province under Monsignor James D. Murray. Three monasteries, each with two priests, in other parts of Australia also belong to this province. The order has furnished some prominent bishops to Aus-

tralia, among them, James Alipius Gould. The Irish Augustinian college of St. Patrick at Rome, built in 1884 by Father Patrick Glynn, O.S.A., is the training college for the Australian missions. The present rector is Reginald Maurice McGrath.

AUGUSTINIAN NUNS.—These regard as their first foundation the monastery of nuns for which St. Augustine wrote the rules of life in his *Epistola cccxi* (*alius cix*) in 423. It is certain that this epistle was called the Rule of St. Augustine for nuns at an early date, and has been followed as the rule of life in many female monasteries since the eleventh century. These monasteries were not consolidated in 1256, like the religious communities of Augustinian monks. Each convent was independent and was not subject to the general of the order. This led to differences in rule, dress, and mode of life. Only since the fifteenth century have certain Augustinian Hermits reformed a number of Augustinian nunneries, become their spiritual directors, and induced them to adopt the Constitution of their order. Henceforth, therefore, we meet with female members of the Order of Hermits of St. Augustine in Italy, France, Spain, Belgium, and later in Germany, where, however, many were suppressed during the Reformation, or by the secularizing law of 1803. In the other countries many nunneries were closed in consequence of the Revolution. The still existing houses, except Cascia, Renteria (Diocese of Vittoria), Eibar (Diocese of Vittoria), and Cracow, are now under the jurisdiction of the bishop of the diocese. Many convents are celebrated for the saints whom they produced, such as Montefalco (in Central Italy, the home of Blessed Clara of the Cross (Clara of Montefalco, d. 1308), and Cascia, near Perugia, where St. Rita died in 1457. In the suppressed convent of Agnetenberg near Dülmen, in Westphalia, lived Anne Catherine Emmerich celebrated for her visions.

Mention should also be made of the monastery of the Augustinians called delle Vergini, at Venice, founded in 1177 by Alexander III after his reconciliation with Frederick Barbarossa, whose daughter Julia, with twelve girls of noble birth, entered the monastery and became first abbess. Doge Sebastiano Zani, who had endowed the institution, was appointed patron, with the privilege of approving the election of the abbess before the granting of the papal confirmation. On the French occupation in the eighteenth century the religious went to America, where they devoted themselves to the work of teaching and the care of the sick. Later they established monasteries in Italy and in 1817 at Paris. Towards the end of the sixteenth century communities of female Discalced Augustinians appeared in Spain. The first convent, that of the Visitation, was founded at Madrid, in 1589, by Prudencia Grillo, a lady of noble birth, and received its Constitution from Father Alfonso of Orozco. Juan de Ribera, Archbishop of Valencia (d. 1611), founded a second Discalced Augustinian congregation at Alcoy, in 1597. It soon had houses in different parts of Spain, and in 1663 was established at Lisbon by Queen Louise of Portugal. In addition to the Rule of St. Augustine these religious observed the exercises of the Reformed Carmelites of St. Teresa. In the convent at Cybar, Mariana Manzanedo of St. Joseph instituted a reform which led to the establishment of a third, that of the female Augustinian Recollects. The statutes, drawn up by Father Antónlez, and later confirmed by Paul V, bound the sisters to the strictest interpretation of the rules of poverty and obedience, and a rigorous penitential discipline. All three reforms spread in Spain and Portugal, but not in other countries. A congregation of Augustinian nuns under the title "Sisters of St. Ignatius" was introduced into the Philippines and South America by the Discalced Augustinian Hermits. They worked zealously in aid of the missions, schools, and orphanages in the island, and founded the colleges of Our Lady of Consolation

and of St. Anne at Manila, and houses at Neuva Segovia, Cebú, and Mandaloya on the Pasig, where they have done much for the education of girls.

MAX HEIMBUCHER.

Hermon [הרמון, sacred (mountain); Sept., Ἀεψούν], a group of mountains forming the southern extremity of Anti-Lebanon, and marking on the east of the Jordan the northern boundary of Israel. The primitive name among the Sidonians was *Siryon*, and by the Amorrites the most prominent part of the group was called *Samir* (Deut., iii, 9), corresponding to the *Sa-ni-ru* of the cuneiform inscriptions. These varying forms all signify a cuirass or coat of armour, and were probably applied to one or other of the peaks, either on account of its shape, or because its snow-clad heights shone in the sunlight after the manner of a polished shield. The name sometimes occurs in the plural form *Hermonim*, doubtless because the range has three conspicuous peaks. In the Talmud and in the Targums Hermon is designated the "mountain of snow", and the same appellation is used by the old Arab geographers. The modern name is *Jebel-esh-Sheikh*, "mountain of the sheikh or chief", because in the tenth century A. D. Hermon became the centre of

the Druse religion, viz. when its founder, Sheikh-ed-Derazi retired thither from Egypt. It is sometimes called the Great Hermon to distinguish it from the Small Hermon situated to the east of the plain of Esdrelon, between Thabor and Gelboe, and so named through an erroneous interpretation of Ps. lxxxviii (Heb., lxxxix), 13.

The geological formation of the range is calcareous with occasional veins of basalt. Hermon is noted as offering the most striking piece of mountain scenery in Palestine. The view from the summit is also magnificent, embracing the Lebanon and the plain of Damascus. It is at the foot of Hermon that the River Jordan takes its rise. The highest peak, which is covered with snow until late in summer, rises to a height of 9200 ft. above the level of the Mediterranean. On the summit of one of the peaks is to be seen an extensive mass of ruins, probably the remains of an early pagan sanctuary dedicated to Baal, whence the designation Baal-Hermon applied to the mountain in two Biblical passages (Judges, iii, 3; I Par., v, 23).

In the O. T., Hermon is hardly mentioned except as the northern boundary of Palestine. Poetical allusions occur in the Psalms (v. g. Ps. lxxxviii, 13, Heb., lxxxix, 13) and in the Canticle of Canticles, iv, 8. In Ps. cxxxii (Heb., cxxxiii), 3, the happiness of brotherly love is compared to the "dew of Hermon, which descendeth upon mount Sion". In which connexion it may be noted that in no other locality of Palestine is the dew so heavy and abundant as in the vicinity of this mountain group. Some scholars think it probable that Hermon is the "high mountain" near Cæsarea Philippi which was the scene of the Transfiguration (Matt., xvii, 1; Mark, ix) and which by Luke, ix, 28, is called simply "a mountain".

JAMES F. DRISCOLL.

Hermopolis Magna, a titular see of Thebais Prima, suffragan of Antinoe, in Egypt. The native name was Khmounoun; in Coptic, Chmoun. It is to-day the village of Ashmounein on the left bank of the Nile, about four miles south-west of Rôda (a station on the Cairo-Thebes railway, 180 miles from Cairo). Khmounoun dates from a very remote antiquity, and at a very early period was an important religious centre. It worshipped a moon-god Thoth (Hermes), ibis or baboon, attended by four pairs of deities, whence the name Khmounoun (the eight). It played an important part from the sixth to the eleventh dynasties; and later became the chief town of the nome of Hermopolis. To the west of the village is the Ibeum, or burial place of the animals sacred to Thoth; at the foot of Gebel-el-Bershêh is the necropolis of the local rulers. Palladius (Hist. Laus., lii) records a tradition to the effect that the Holy Family came to Hermopolis. St. Colluthus suffered martyrdom there under Maximian and Diocletian. For a time, also, St. Athanasius lived there. Lequien (Oriens Christianus, II, 595) mentions eight bishops; and the place is still a see for the Monophysite Copts. In 1895 it was re-established by Leo XIII for the Coptic Catholics, but the titular lives at Minieh.

S. PÉTRIDÈS.

Hermopolis Parva, a titular see of Ægyptus Prima, suffragan of Alexandria. Its ancient name, Dimanhoru or Tema-en-Hor, signifies the town of Horus. The Copts call it Tuininhor, and the Arabs, Damanhur. Situated on the canal uniting Lake Mareotis (Mariout) to the Canopic branch of the Nile, it has no history and no ruins. It was near Damanhur that, on 10 July, 1798, Bonaparte, walking unaccompanied, barely escaped being taken by the Mamelukes. The

modern Damanhur, forty miles from Alexandria, on the Cairo-Alexandria railway, has 20,000 inhabitants and is the chief town of the province of Behera. It is famous for its silk, linen, and cotton stuffs. Lequien (Or. Christ., II, 513 sqq.) mentions a dozen bishops of Hermopolis Parva, among them Dracontius, about 354, who suffered exile for the faith under Constantius; St. Isidore, his successor (feast kept 3 January); Dioscorus, the oldest of the four famous monks of Nitria, known as the Tall Brethren.

S. PÉTRIDÈS.

Herod (Gr. Ἡρώδης, from Ἡρώς) was the name of many rulers mentioned in the N. T. and in history. It was known long before the time of the biblical Herods. (See Schürer, "Hist. of the Jewish People", etc., Div. I, v, I, p. 416, note.) The Herods connected with the early history of Christianity are the following:—

I. HEROD, surnamed THE GREAT, called by Grätz "the evil genius of the Judean nation" (Hist., v, II, p. 77), was a son of Antipater, an Idumæan (Jos., "Bel. Jud.", I, vi, 2). The Idumæans were brought under subjection by John Hyrcanus towards the end of the second century B.C., and obliged to live as Jews, so that they were considered Jews (Jos., "Ant.", XIII, ix, 4). Yet Antigonos called Herod a half-Jew (Jos., "Ant.", XIV, xv, 2, and note in Whiston), while the Jews, when it furthered their interests, spoke of Herod their king as by birth a Jew (Jos., "Ant.", XX, viii, 7). Antipater, the father of Herod, had helped the Romans in the Orient, and the favour of Rome brought the Herodian family into great prominence and power. Herod was born 73 B.C., and he is first mentioned as governor of Galilee (Jos., "Ant.", XIV, ix, 2). Here the text says he was only fifteen years old, evidently an error for twenty-five, since about forty-four years later he died, "almost seventy years of age" (Jos., "Bel. Jud.", I, xxxiii, 1). His career was more wonderful than that of many heroes of fiction. Among the rapidly changing scenes of Roman history he never failed to win the good will of fortune's favourites. In 40 B.C. the young Octavian and Antony obtained for him from the Roman senate the crown of Judea, and between these two powerful friends he went up to the temple of Jupiter to thank the gods of Rome. Antigonos was beheaded in 37 B.C., and from this date Herod became king in fact as well as in name. He married Mariamne in 38 B.C., and thereby strengthened his title to the throne by entering into matrimonial alliance with the Hasmoneans, who were always very popular among the Jews (Jos., "Bel. Jud.", I, xii, 3).

The reign of Herod is naturally divided into three periods: 37–25 B.C., years of development; 25–13, royal splendour; 13–4, domestic troubles and tragedies. During the first period he secured himself on the throne by removing rivals of the Hasmonean line. He put to death Hyrcanus, grandfather of Mariamne, and Aristobulus her brother, whom though but seventeen years old he had appointed high-priest. Their only offence was that they were very popular (Jos., "Ant.", XV, vi, 1, iii, 3). Mariamne also was executed in 29 B.C.; and her mother Alexandra, 28 B.C. (Jos., "Ant.", XV, vii; "Bel. Jud.", I, xxii). As Herod was a friend to Antony, whom Octavian defeated at Actium 31 B.C., he was in great fear, and set out for Rhodes like a criminal with a halter around his neck to plead with the conqueror; but Cæsar confirmed him in the kingdom, with a grant of additional territory (Jos., "Bel. Jud.", I, xx).

Herod and his children were builders. Having the reins of government well in hand, and having wreaked vengeance upon his enemies, he adorned his kingdom by building cities and temples in honour of the emperor and of the gods. Samaria was built and called

Sebaste, from the Greek name for Augustus. Cæsarea with its fine harbour was also built; and, being a Greek in his tastes, Herod erected theatres, amphitheatres, and hippodromes for games, which were celebrated at stated times even at Jerusalem (Jos., "Ant.", XV, viii, 1, XVI, v, 1; "Bel. Jud.", I, xxi, 1, 5). As he built temples to the false gods—one at Rhodes, for instance, to Apollo (Jos., "Ant.", XVI, v, 3)—we may judge that vanity rather than piety suggested the greatest work of his reign, the temple of Jerusalem. It was begun in his eighteenth year as king (Jos., "Ant.", XV, xi, 1), i.e. about 22 B.C. (Grätz, "Gesch. d. Jud.", V, iii, 187). In Josephus (Bel. Jud., I, xxi, 1) the text has the fifteenth year, but here the historian counts from the death of Antigonus, 37 B.C., which gives the same date as above. The speech of Herod on the occasion, though full of piety, may be interpreted by what he said to the wise men: "that I also may come and adore him" (Matt., ii, 8; Jos., "Ant.", XV, xi, 1). The temple is described by Josephus ("Ant.", XV, xi, cf. Edersheim, "The Temple its Ministry and Services", i and ii), and the solidity of its architecture referred to in the N. T. (Matt., xxiv, 1; Mark, xiii, 1). In John, ii, 20, forty-six years are mentioned since the building was undertaken, but it requires some juggling with figures to make this number square with the history of either the second temple, or the one built by Herod (see Maldonatus, who thinks the text refers to the second temple, and MacRory, "The Gospel of St. John", for the other view).

The horrors of Herod's home were in strong contrast with the splendour of his reign. As he had married ten wives (Jos., "Bel. Jud.", I, xxviii, 4—note in Whiston) by whom he had many children, the demon of discord made domestic tragedies quite frequent. He put to death even his own sons, Aristobulus and Alexander (6 B.C.), whom Antipater, his son by Doris, had accused of plotting against their father's life (Jos., "Ant.", XVI, xi). This same Antipater, who in cruelty was a true son of Herod, and who had caused the death of so many, was himself accused and convicted of having prepared poison for his father, and put to death (Jos., "Bel. Jud.", I, xxxiii, 7). The last joy of the dying king was afforded by the letter from Rome authorizing him to kill his son; five days later, like another Antiochus under a curse, he died. The account of his death and of the circumstances accompanying it is so graphically given by Josephus ("Ant.", XVII, vi, vii, viii; "Bel. Jud.", I, xxxiii), who follows Nicholas of Damascus, Herod's friend and biographer, that only an eye-witness could have furnished the details. In the hot springs of Callirrhoe, east of the Dead Sea, the king sought relief from the sickness that was to bring him to the grave. When his end drew near, he gave orders to have the principal men of the country shut up in the hippodrome at Jericho and slaughtered as soon as he had passed away, that his grave might not be without the tribute of tears. This barbarous command was not carried into effect; but the Jews celebrated as a festival the day of his death, by which they were delivered from his tyrannical rule (Grätz, "Gesch. d. Jud.", III, 195—"Hist." (in Eng.), II, 117). Archelaus, whom he had made his heir on discovering the perfidy of Antipater, buried him with great pomp at Herodium—now called Frank Mountain—S.E. of Bethlehem, in the tomb the king had prepared for himself (Jos., "Ant.", XVII, viii, 2, 3; "Bel. Jud.", I, xxxiii, 8, 9).

The death of Herod is important in its relation to the birth of Christ. The eclipse mentioned by Josephus (Ant., XVII, vi, 4), who also gives the length of Herod's reign—thirty-seven years from the time he was appointed by the Romans, 40 B.C.; or thirty-four from the death of Antigonus, 37 B.C. (Ant., XVII, viii, 1)—fixes the death of Herod in the spring of 750 A.U.C., or 4 B.C. Christ was born before Herod's

death (Matt., ii, 1), but how long before is uncertain: the possible dates lie between 746 and 750 A.U.C. (see a summary of opinions and reasons in Gigot, "Outlines of N. T. Hist.", 42, 43).

Herod's gifts of mind and body were many. "He was such a warrior as could not be withstood . . . fortune was also very favourable to him" (Jos., "Bel. Jud.", I, xxi, 13), yet "a man of great barbarity towards all men equally and a slave to his passions; but above the consideration of what was right" (Jos., "Ant.", XVII, viii, 1). His ruling passions were jealousy and ambition, which urged him to sacrifice even those that were nearest and dearest to him: murder and munificence were equally good as means to an end. The slaughter of the Innocents squares perfectly with what history relates of him, and St. Matthew's positive statement is not contradicted by the mere silence of Josephus; for the latter follows Nicholas of Damascus, to whom, as a courtier, Herod was a hero. Hence Armstrong (in Hastings, "Dict. of Christ and the Gospels", s. v. "Herod") justly blames those who, like Grätz (Gesch. d. Jud., III, 194—Hist. (Eng.), II, 116), for subjective reasons, call the evangelist's account a later legend. Macrobius, who wrote in the beginning of the fifth century, narrates that Augustus, having heard that among the children whom Herod had ordered to be slain in Syria was the king's own son, remarked: "It is better to be Herod's swine than his son" (Saturn., II, 4). In the Greek text there is a *bon mot* and a relationship between the words used that etymologists may recognize even in English. The law among the Jews against eating pork is hinted at, and the anecdote seems to contain extra-biblical elements. "Cruel as the slaughter may appear to us, it disappears among the cruelties of Herod. It cannot, then, surprise us that history does not speak of it" [Maas, "Life of Christ" (1897), 38 (note); the author shows, as others have done, that the number of children slain may not have been very great].

II. ARCHELAUS, son of Herod the Great, was, with Antipas his brother, educated at Rome (Jos., "Ant." XVII, i, 3), and he became heir in his father's last will (Jos., "Ant.", XVII, viii, 1). After the death of his father he received the acclamations of the people, to whom he made a speech, in which he stated that his title and authority depended upon the good will of Cæsar (Jos., "Ant.", XVII, viii, 4). The death of Herod having delivered the Jews from his tyrannical rule, they petitioned Cæsar to put them under the jurisdiction of the presidents of Syria. He, however, not willing to set aside Herod's will, gave to Archelaus the half of his father's kingdom, with the title of ethnarch, the royal title to follow should he rule "virtuously". The N. T. says that he reigned (Matt., ii, 22), and in Josephus (Ant., XVII, viii, 2, ix, 2) he is called king, by courtesy, for the Romans never so styled him. His territory included Judea, Samaria, and Idumæa, with the cities of Jerusalem, Cæsarea, Sebaste, and Joppa (Jos., "Ant.", XVII, xi, 2, 4, 5). He soon aroused opposition by marrying his brother's wife—a crime like that of Antipas later—and having been accused of cruelty by his subjects, "not able to bear his barbarous and tyrannical usage of them", he was banished to Vienne, Gaul, A.D. 7, in the tenth year of his government (Jos., "Ant.", XVII, ix, xiii, 1, 2). The N. T. tells us that Joseph, fearing Archelaus, went to live at Nazareth (Matt., ii, 22, 23); and some interpreters think that in the parable (Luke, xix, 12-27) our Lord refers to Archelaus, whom the Jews did not wish to rule over them, and who, having been placed in power by Cæsar, took vengeance upon his enemies. "Whether our Lord had Archelaus in view, or only spoke generally, the circumstances admirably suit his case" (MacEvilly, "Exp. of the Gosp. of St. Luke").

III. ANTIPAS was a son of Herod the Great, after whose death he became ruler of Galilee. He married

the daughter of Aretas, King of Arabia, but later lived with Herodias, the wife of his own half-brother Philip. This union with Herodias is mentioned and blamed by Josephus (*Ant.*, XVIII, v) as well as in the N. T., and brought Antipas to ruin. It involved him in a war with Aretas in which he lost his army, a calamity that Josephus regarded "as a punishment for what he did against John that was called the Baptist; for Herod slew him, who was a good man, and commanded the Jews to exercise virtue, both as to righteousness towards one another, and piety towards God, and so to come to baptism" (*Ant.*, XVIII, v, 2). The N. T. gives the reason why Herodias sought John's head. As she had married Herod Philip—not the tetrarch of the same name—who lived as a private citizen at Rome, by whom she had a daughter, Salome, she acted against the law in leaving him to marry Antipas. John rebuked Antipas for the adulterous union, and Herodias took vengeance (*Matt.*, xiv, 3-12; *Mark*, vi, 17-29). Josephus does not say that John's death was caused by the hatred of Herodias, but rather by the jealousy of Herod on account of John's great influence over the people. He was sent to the frowning fortress of Machærus on the mountains east of the Dead Sea, and there put to death (*Jos.*, "*Ant.*", XVIII, v, 2). Grätz (*Gesch. d. Jud.*, III, xi, 221—*Hist.* (Eng.), II, 147) as in other instances thinks the gospel story a legend; but Schürer admits that both Josephus and the evangelists may be right, since there is no contradiction in the accounts (*Hist. of the Jewish People*, etc., Div. I, V, ii, 25). The most celebrated city built by Antipas was Tiberias on the western shore of the Sea of Galilee. He named it after his friend the Emperor Tiberius, and made it the capital of the tetrarchy. The city gave its name to the sea, and yet stands; it was for a long time a great school and centre of Jewish learning. It was before this Herod that Our Lord appeared and was mocked (*Luke*, xxiii, 7-13). Antipas had come to Jerusalem for the Pasch, and he is named with Pilate as a persecutor of Christ (*Acts*, iv, 27). The enmities that existed between him and Pilate were caused by Pilate's having put to death some Galileans, who belonged to Herod's jurisdiction (*Luke*, xiii, 1); a reconciliation was effected as related in *Luke*, xxiii, 12. When Herodias saw how well her brother Agrippa had fared at Rome, whence he returned a king, she urged Antipas to go to Caesar and obtain the royal title, for he was not king, but only tetrarch of Galilee—the N. T. however sometimes calls him king (*Matt.*, xiv, 9; *Mark*, vi, 14), and Josephus likewise so styles Archelaus (*Ant.*, XVIII, iv, 3), though he was never king, but only ethnarch. Contrary to his better judgment he went, and soon learned that Agrippa by messengers had accused him before Caligula of conspiracy against the Romans. The emperor banished him to Lyons, Gaul (France), A.D. 39, and Herodias accompanied him (*Jos.*, "*Ant.*", XVIII, vii, 2). Josephus (*Bel. Jud.*, II, ix, 6) says: "So Herod died in Spain whither his wife had followed him". The year of his death is not known. To reconcile the two statements of Josephus about the place of exile and death, see Smith, "*Dict. of the Bible*", s. v. "Herodias" (note).

IV. AGRIPPA I, also called the Great, was a grandson of Herod the Great and Mariamne, son of Aristobulus, and brother of Herodias. The history of his life and varying fortunes is stranger than romance. He was deeply in debt and a prisoner in Rome under Tiberius; but Caius, having come to the throne in A.D. 37, made him king over the territories formerly ruled by Philip and Lysanias, to which the tetrarchy of Antipas was added when the latter had been banished in A.D. 39 (*Jos.*, "*Ant.*", XVIII, vi, vii). In A.D. 41 Judea and Samaria were given to him by the Emperor Claudius, whom he had helped to the throne (*Jos.*, "*Ant.*", XIX, iv, 1), so that the whole kingdom which he then governed was greater than that of Herod his grandfather

(*Jos.*, "*Ant.*", XIX, v, 1). He was, like many other Herods, a builder, and, according to Josephus, he so strengthened the walls of Jerusalem that the emperor became alarmed and ordered him "to leave off the building of those walls presently" (*Ant.*", XIX, vii, 2). He seems to have inherited from his Hasmonean ancestors a great love and zeal for the law (*Jos.*, "*Ant.*", XIX, vii, 3). This characteristic, with his ambition to please the people (*ibid.*), explains why he imprisoned Peter and beheaded James (*Acts*, xii, 1-3). His death is described in "*Acts*", xii, 21-23; "eaten up by worms, he gave up the ghost." He died at Cæsarea during a grand public festival; when the people having heard him speak cried out, "It is the voice of a god and not of a man"; his heart was elated, and "an angel of the Lord struck him, because he had not given the honour to God". Josephus gives substantially the same account, but states that an owl appeared to the king to announce his death, as it had appeared many years before to predict his good fortune (*Jos.*, "*Ant.*", XIX, viii, 2). His death occurred in A.D. 44, the fifty-fourth year of his age, the seventh of his reign (*ibid.*). Grätz considers him one of the best of the Herods (*Gesch. d. Jud.*, III, xii—*Hist.* (Eng.), II, vii); but Christians may not be willing to subscribe fully to this estimate.

V. AGRIPPA II was the son of Agrippa I, and in A.D. 44, the year of his father's death, the Emperor Claudius wished to give him the kingdom of his father, but he was dissuaded from his purpose because a youth of seventeen was hardly capable of assuming responsibilities so great (*Jos.*, "*Ant.*", XIX, ix). About A.D. 50 he was made King of Chalcis (*Jos.*, "*Bel. Jud.*", II, xii, 1), and afterwards ruler of a much larger territory including the lands formerly governed by Philip and Lysanias (*Jos.*, "*Bel. Jud.*", II, xii, 8). He was also titular king of Judea, and in twenty years appointed seven high-priests (Grätz, "*Gesch. d. Jud.*", III, xiv—"Hist." (Eng.), II, ix). When the Jews wished to free themselves from the dominion of Rome in the time of Florus, Agrippa showed them the folly of violent measures, and gave them a detailed account of the vast resources of the Roman empire (*Jos.*, "*Bel. Jud.*", II, xvi, 4). St. Paul pleaded before this king, to whom Festus, the governor, referred the case (*Acts*, xxvi). The Apostle praises the king's knowledge of the "customs and questions that are among the Jews" (v. 3); Josephus likewise appeals to his judgment and calls him a most admirable man—*θαυμαστότατος* (*Cont. Ap.*, I, ix). It was, therefore, not out of mere compliment that Festus invited him to hear what St. Paul had to say. His answer to the Apostle's appeal has been variously interpreted: it may mean that St. Paul had not quite convinced him, which sense seems to suit the context better than the irony that some see in the king's words. The indifference, however, which he manifested was in harmony with the "great pomp" with which he and his sister Berenice had entered the hall of audience (*Acts*, xxv, 23). After the fall of Jerusalem he lived at Rome, where he is said to have died in the third year of Trajan, A.D. 100. Grätz (*Gesch. d. Jud.*, III, xvii, 410) gives A.D. 71-72 as the date of his death, a date based upon a more correct reading of a Greek text as authority.

Many histories and special studies throw light upon the Herodian age and family, but nearly all we know about the Herods comes through Josephus. The following, among many works, may be consulted:

SCHÜRER, *Gesch. d. Jüd. Volkes im Zeitalter Jesu Christi* (Leipzig, 1898-1901), with comprehensive bibliography; tr. *A Hist. of the Jewish People in the Time of J. C.* (Edinburgh, 1897-1898); GRÄTZ, *Gesch. d. Jud.* (III, 11 vols., Leipzig); tr. *Hist. of the Jews*, 6 vols. (Jew. Pub. Soc., Phila., 1891-1902), without notes or references; II: MILMAN, *The History of the Jews* (3 vols., New York, 1870); and histories by JOST, EWALD, etc.; HASTINGS, *A Dict. of Christ and the Gospels* (New York, 1907); EDERSHEIM, *The Life and Times of Jesus the Messiah*, I; FARRAR, *The Herods*; JOSEPHUS, *Ant.*, Books XIV-XX; IDEM, *Bel. Jud.*, Books I and II.

JOHN J. TIERNEY.

Herodias (Gr., Ἡρωδίας), daughter of Aristobulus—son of Herod the Great and Mariamne—was a descendant of the famous Hasmonean heroes, the Machabees, who had done so much for the Jewish nation. Having married Herod Philip, her own uncle, by whom she had a daughter, Salome, Herodias longed for social distinction, and accordingly left her husband and entered into an adulterous union with Herod Antipas, Tetrarch of Galilee, who was also her uncle (Jos., Ant., XVIII, v, 1, 4). St. John the Baptist rebuked Antipas for this union and thus aroused the hatred of Herodias, who by the dance of her daughter brought about the death of the prophet (Matt., xiv, 3-12; Mark, vi, 17-29). Josephus gives the main facts, but adds that John was put to death because Herod feared his influence over the people (Ant., XVIII, v, 2, 4). Schürer admits that here both the Evangelists and Josephus may be right; since all the motives mentioned may have urged Herod to imprison and murder John [Hist. (Eng. tr.) Div. I, V, ii, 25].

When Agrippa, the brother of Herodias became king, she persuaded Antipas to go to Rome in search of the royal title, as his claim to it was far greater than that of her brother. Instead of a crown, however, he found awaiting him a charge of treason against the Romans, with Agrippa as chief accuser, who in advance had sent messengers to defeat the ambitious plans of Antipas. He was therefore banished to Lyons in Gaul. At the same time Herodias, spurning the kind offers of the emperor, preferred exile with Antipas to a life of splendour in the palace of her brother Agrippa (Jos., Ant., XVIII, vii). This generosity, if we may so style it, came from her Hasmonean blood, but her cruelty she inherited from her grandfather Herod (see HEROD under ANTIPAS).

JOSEPHUS, *Ant.*, XVIII, v, vii; *Idem*, *de Bell. jud.*, I, xxviii, II, ix; also authorities mentioned under HEROD.

JOHN J. TIERNEY.

Heroic Act of Charity.—A decree of the Sacred Congregation of Indulgences dated 18 Dec., 1885, and confirmed the following day by Leo XIII, says: "The Heroic Act of Charity in favour of the souls detained in purgatory consists in this, that a member of the Church militant (*Christifidelis*), either using a set formula or simply by an act of his will, offers to God for the souls in purgatory all the satisfactory works which he will perform during his lifetime, and also all the suffrages which may accrue to him after his death. Many Christians devoted to the B. V. Mary, acting on the advice of the Theatine Regular Cleric Father Gaspar Olieder, of blessed memory, make it a practice to deposit the said merits and suffrages as it were into the hands of the Bl. Virgin that she may distribute these favours to the souls in Purgatory according to her own merciful pleasure". Olieder lived at the beginning of the eighteenth century.

The Heroic Act is often called a vow, yet it partakes more of the nature of an offering made to God and to Mary, and it is also, unlike a vow, revocable at will. This point has been decided by the S. C. Indulg., 20 Feb., 1907, in answer to a question from Chicoutimi in Canada. A special vow "never to revoke the Act" would probably be binding, because its subject matter is an act of the personal will of which man can freely dispose, whereas he has not the disposal of his satisfactory works in favour of the departed; that depends on God; for man it is only a matter of pious desire, and only in this sense a *votum*. It always remains doubtful to what extent God accepts the oblation, and it is certain that the holy souls altogether lack the power of accepting it. The practice of the Heroic Act is based on the communion of saints, in virtue of which the good deeds of one member of Christ's body benefit all other members. Its meritoriousness results from the more intense charity

(love of God and His suffering friends) which inspires it, and on which the intrinsic perfection of all our good deeds depends. Its heroicity arises from the willingness it involves to take upon one's self the dreadful pains of purgatory for the love of one's neighbour, although there remains the reasonable hope that God in His goodness, and the sainted souls in their gratitude, will not allow the punishment to be exacted to the full.

The Heroic Act has been enriched with numerous indulgences by Benedict XIII (1728), Pius VI (1788), and Pius IX (1852). Priests who make it receive the *personal* privilege of gaining a plenary indulgence for a soul of their choice each time they say Mass (see ALTAR, under *Privileged Altar*). Laymen gain a similar indulgence each time they receive Holy Communion, also each Monday they hear Mass for the departed; in both cases the usual visit to a church and prayers for the intention of the pope are required.

J. WILHELM.

Heroic Virtue.—The notion of heroicity is derived from hero, originally a warrior, a demigod; hence it connotes a degree of bravery, fame, and distinction which places a man high above his fellows. St. Augustine first applied the pagan title of hero to the Christian martyrs; since then the custom has prevailed of bestowing it not only on martyrs, but on all confessors whose virtues and good works greatly outdistance those of ordinary good people. Benedict XIV, whose chapters on heroic virtue are classical, thus describes heroicity: "In order to be heroic a Christian virtue must enable its owner to perform virtuous actions with uncommon promptitude, ease, and pleasure, from supernatural motives and without human reasoning, with self-abnegation and full control over his natural inclinations." An heroic virtue, then, is a habit of good conduct that has become a second nature, a new motive power stronger than all corresponding inborn inclinations, capable of rendering easy a series of acts each of which, for the ordinary man, would be beset with very great, if not insurmountable, difficulties.

Such a degree of virtue belongs only to souls already purified from all attachment to things worldly, and solidly anchored in the love of God. St. Thomas (I-II, Q. lxi, a. 4) says: "Virtue consists in the following, or imitation, of God. Every virtue, like every other thing, has its type [*exemplar*] in God. Thus the Divine mind itself is the type of prudence; God using all things to minister to His glory is the type of temperance, by which man subjects his lower appetites to reason; justice is typified by God's application of the eternal law to all His works; Divine immutability is the type of fortitude. And, since it is man's nature to live in society, the four cardinal virtues are social [*politica*] virtues, inasmuch as by them man rightly ordains his conduct in daily life. Man, however, must raise himself beyond his natural life unto a life Divine: 'Be you therefore perfect, as also your heavenly Father is perfect' (Matt., v, 48). It is, therefore, necessary to posit certain virtues midway between the social virtues, which are human, and the exemplary virtues, which are Divine. These intermediate virtues are of two degrees of perfection: the lesser in the soul still struggling upwards from a life of sin to a likeness with God—these are called purifying virtues [*virtutes purgatorie*]; the greater in the souls which have already attained to the Divine likeness—these are called virtues of the purified soul [*virtutes jam purgati animi*]. In the lesser degree, prudence, moved by the contemplation of things Divine, despises all things earthly and directs all the soul's thought unto God alone; temperance relinquishes, as far as nature allows, the things required for bodily wants; fortitude removes the fear of departing this life and facing the life beyond; justice approves of the aforesaid dispositions. In the higher perfection of souls already purified and firmly

HERODIAS WITH THE HEAD OF ST. JOHN THE BAPTIST
TITIAN, PALAZZO DORIA, ROME

united with God, prudence knows nothing but what it beholds in God; temperance ignores earthly desires; fortitude knows nothing of passions; justice is bound to the Divine mind by a perpetual compact to do as it does. This degree of perfection belongs to the blessed in heaven or to a few of the most perfect in this life." These few *perfectissimi* are the heroes of virtue, the candidates for the honours of the altar, the saints on earth.

Together with the four cardinal virtues the Christian saint must be endowed with the three theological virtues, especially with Divine charity, the virtue which informs, baptizes, and consecrates, as it were, all other virtues; which associates and unifies them into one powerful effort to participate in the Divine life. Some remarks on the "proofs of heroicity" required in the process of beatification will serve to illustrate in detail the general principles exposed above.

As charity stands at the summit of all virtues, so faith stands at their foundation. For by faith God is first apprehended, and the soul lifted up to supernatural life. Faith is the secret of one's conscience; to the world it is made manifest by the good works in which it lives, "Faith without works is dead" (James, ii, 26). Such works are: the external profession of faith, strict observance of the Divine commands, prayer, filial devotion to the Church, the fear of God, the horror of sin, penance for sins committed, patience in adversity, etc. All or any of these attain the grade of heroicity when practised with unflinching perseverance, during a long period of time, or under circumstances so trying that by them men of but ordinary perfection would be deterred from acting. Martyrs dying in torments for the Faith, missionaries spending their lives in propagating it, the humble poor who with infinite patience drag out their wretched existence to do the will of God and to reap their reward hereafter, these are heroes of the Faith.

Hope is a firm trust that God will give us eternal life and all the means necessary to obtain it; it attains heroicity when it amounts to unshakeable confidence and security in God's help throughout all the untoward events of life, when it is ready to forsake and sacrifice all other goods in order to obtain the promised felicity of heaven. Such hope has its roots in a faith equally perfect. Abraham, the model of the faithful, is also the model of the hopeful "who against hope believed in hope and he was not weak in faith; neither did he consider his own body now dead . . . nor the dead womb of Sara" (Rom., iv, 18-22).

Charity inclines man to love God above all things with the love of friendship. The perfect friend of God says with St. Paul: "With Christ I am nailed to the cross. And I live, now not I; but Christ liveth in me" (Gal., ii, 19-20). For love means union. Its type in heaven is the Divine Trinity in Unity; its highest degree in God's creatures is the beatific vision, i. e. participation in God's life. On earth it is the fruitful mother of holiness, the one thing necessary, the one all-sufficient possession. It is extolled in I Cor., xiii, and in St. John's Gospel and Epistles; the beloved disciple and the fiery missionary of the cross are the best interpreters of the mystery of love revealed to them in the Heart of Jesus. With the commandment to love God above all Jesus coupled another: "And the second is like to it: *Thou shalt love thy neighbour as thyself*. There is no other commandment greater than these" (Mark, xii, 31). The likeness, or the linking of the two commandments, lies in this: that in our neighbour we love God's image and likeness, His adopted children and the heirs of His Kingdom. Hence, serving our neighbour is serving God. And the works of spiritual and temporal mercy performed in this world will decide our fate in the next: "Come, ye blessed of my Father, possess

you the kingdom . . . For I was hungry, and you gave me to eat . . . Amen I say to you, as long as you did it to one of these my least brethren, you did it to me" (Matt., xxv, 34-40). For this reason the works of charity in heroic degree have been, from the beginning to this day, a distinctive mark of the Catholic Church, the pledge of sanctity in countless numbers of her sons and daughters.

Prudence, which enables us to know what to desire or to avoid, attains heroicity when it coincides with the "gift of counsel", i. e. a clear, Divinely aided insight into right and wrong conduct. Of St. Paschasius Radbert, the Bollandists say: "So great was his prudence that from his mind a bourn of prudence seemed to flow. For he beheld together the past, the present, and the future, and was able to tell, by the counsel of God, what in each case was to be done" (2 January, c. v, n. 16).

Justice, which gives every one his due, is the pivot on which turn the virtues of religion, piety, obedience, gratitude, truthfulness, friendship, and many more. Jesus sacrificing His life to give God His due, Abraham willing to sacrifice his son in obedience to God's will, these are acts of heroic justice.

Fortitude, which urges us on when difficulty stands in the way of our duty, is itself the heroic element in the practice of virtue; it reaches its apex when it overcomes obstacles which to ordinary virtue are insurmountable.

Temperance, which restrains us when passions urge us to what is wrong, comprises becoming deportment, modesty, abstinence, chastity, sobriety, and others. Instances of heroic temperance: St. Joseph, St. John the Baptist.

In fine it should be remarked that almost every act of virtue proceeding from the Divine principle within us has in it the elements of all the virtues; only mental analysis views the same act under various aspects.

J. WILHELM.

Herp (or HARP, Lat. CITHARÆDUS, or ERP as in the old manuscripts), HENRY, a fifteenth century Franciscan of the Strict Observance and a distinguished writer on mysticism, praised by Mabillon, Bona, etc. Only the last thirty years of his life are known to us. Born either at Düren (Marcoduranus), at Erp near Düren, or at Erps-Querbs near Louvain, Herp appears as rector of the Brethren of the Common Life, first in 1445 at Delft in Holland, then at Gouda, "to the great good of his subjects". In 1450, on a pilgrimage to Rome, he took the habit of St. Francis at the Convent of Ara Coeli. Twenty years later we find him provincial of the Province of Cologne (1470-73), then guardian of the convent of Mechlin in Belgium, where he died in 1478. The Franciscan Martyrology of Arturus of Rouen gives him the title of Blessed. Of his works, only one was printed during his life-time, "Speculum aureum decem præceptorum Dei" (Mainz, 1474); it is a collection of 213 sermons on the Commandments for the use of preachers and confessors. Another collection of 222 sermons (*Sermones de tempore, de sanctis, etc.*) was printed in 1484, etc. Both frequently quote the Doctors of the Middle Ages, especially St. Thomas, Alexander of Hales, St. Bernard, etc., and were often reprinted.

The other works of Herp, of which some—still unpublished—are to be found in the libraries of Cologne, Brussels, etc., are devoted to mystical subjects. The principal of these is the "Theologica Mystica", written on Mount Alverno and published in full at Cologne in 1538 by the Carthusian Th. Loher, with a dedication to George Skotborg, Bishop of Lund. It

was reprinted five times before 1611, and translated into French, German, etc. The whole work comprises three parts: "Soliloquium divini Amoris", "Directorium Aureum contemplativorum", "Paradisus contemplativorum". The second part, the most famous, was written originally in Flemish (Spiegel der Volcomenheyt), printed in 1501, etc.; then, with several short treatises on kindred matters, it was translated into Latin under the title given above (Cologne, 1513, etc.), into Italian, Spanish, German, etc. The edition of the mystical theology, dedicated to St. Ignatius in 1556 by Loher, was censured by the Index (1559, 1580, 1583, etc.). Corrected editions followed with an "Introductio ad doctrinam" (Rome, 1585), an "Index Expurgatorius" (Paris, 1598), where can be found, as well as in the "Index of Sotomayor" (1640), the opinions to be corrected. As a whole and in the chief divisions of his doctrine, Herp shows several points of contact with his compatriot John of Ruysbroeck; he has some beautiful passages on the love of God and of Christ. The Franciscan Chapter of Toledo in 1663 recommended his works as standard writings in mystic theology.

A.* (Cologne, 1904), and *Zum Leben des Franziskaners H. Harp in Der Katholik* (1905), II, 46-48.

J. DE GHELLINCK.

Herrad of Landsberg (or LANDSPERG), a twelfth-century abbess, author of the "Hortus Deliciarum"; b. about 1130, at the castle of Landsberg, the seat of a noble Alsatian family; d. 1195. At an early age she entered the convent of Odilienberg, or Hohenburg, which crowns one of the most beautiful of the Vosges mountains, about fifteen miles from Strasburg. Here she succeeded to the dignity of Abbess in 1167, and continued in that office until her death. As early as 1165 Herrad had begun within the cloister walls the work "Hortus Deliciarum", or "Garden of Delights", by which she is best known. The text is a compendium of all the sciences studied at that time, including theology. The work, as one would expect from what we know of the literary activity of the twelfth century, does not exhibit a high degree of originality. It shows, however, a wide range of reading and when we remember that it was intended for the use of the novices of Odilienberg, we are enabled to glean from it a correct idea of the state of education in the cloister schools of that age. Its chief claim to distinction is the illustrations, three hundred and thirty-six in number, which adorn the text. Many of these are symbolical representations of theological, philosophical, and literary themes, some are historical, some represent scenes from the actual experience of the artist, and one is a collection of portraits of her sisters in religion. The technique of some of them has been very much admired and in almost every instance they show an artistic imagination which is rare in Herrad's contemporaries. The poetry which accompanies the excerpts from the writers of antiquity and from pagan authors is not the least of Herrad's titles to fame. It has, of course, the defects peculiar to the twelfth century, faults of quantity, words and constructions not sanctioned by classical usage, and peculiar turns of phrase which would hardly pass muster in a school of Latin poetry at the present time. However, the sentiment is sincere, the lines are musical, and above all admirably adapted to the purpose for which they were intended, namely, the service of God by song. Herrad, indeed, tells us that she considers her community to be a congregation gathered together to serve God by singing the divine praises. The fate of Herrad's manuscript is well-known. After having been preserved for centuries at her own monastery it passed about the time of the French Revolution into the municipal

library of Strasburg. There the miniatures were copied by Engelhardt in 1818. The text was copied and published by Straub and Keller, 1879-1899. Thus, although the original perished in the burning of the Library of Strasburg during the siege of 1870, we can still form an estimate of the artistic and literary value of Herrad's work.

STRAUB u. KELLER, *Hortus Deliciarum*, folio ed. with plates (Strasburg, 1899); ENGELHARDT, *Herrad von Landsberg* (Stuttgart and Tübingen, 1819); SCHMIDT, *Herrade de Landsberg* (Strasburg, 1892); articles in: *Bibl. de l'école des Chartes*, I, 239; *Gazette d'archéologie*, IX, 57; *Congrès archéol. de France*, XXXVI, 274; see chapter in ECKSTEIN, *Woman under Monasticism* (Cambridge, 1896), 238 sqq.

WILLIAM TURNER.

Herregouts.—There were three artists of the name of Herregouts, father, son, and grandson, of whom the chief was Hendrik, the son of David, and the father of Jan.

DAVID HERREGOUTS, historical painter; b. at Mechlin in 1603; d. at Ruremonde. He was a pupil of his cousin Salmier and a member of the corporation of painters in his own city in 1624. The latter part of his life he spent at Ruremonde, where he was received in 1647 a member of the Guild of St. Luke. One of his pictures is still preserved in the little town, but his chief work, "St. Joseph Awakened by an Angel", is at Mechlin in the church of St. Catherine.

HENDRIK, hisson; b. at Mechlin in 1633; d. at Antwerp in 1724. When his father left Mechlin for Ruremonde, Hendrik went to Rome, to which city he became so attached that he added the name of Romain to his signature on certain of his pictures. We hear of him at Cologne in 1660, where he was married the following year. In 1664 he was admitted a member of the Guild of St. Luke at Antwerp and practised his art in that city. Two years afterwards he came back to Mechlin and was admitted into the guild there, remaining in his native place for some years. In 1680 he was once more in Antwerp, and his studio was full of pupils, one of them being Abraham Goddyn. His best work, "The Last Judgment", is now to be seen at Bruges; his "Martyrdom of St. Matthew" in the cathedral at Antwerp is a very fine picture, and in Brussels there are two important works, the chief of which is "St. Jerome in the Desert." He was employed by the Corporation of Antwerp to design and eventually decorate a triumphal arch which was erected to celebrate the jubilee of the restoration of the Catholic Faith in the city, and for this work, which was executed in 1685, he was thanked and honoured by the citizens. His work is imposing, as the figures are noble and expressive, and the colouring admirable.

JAN, d. at Bruges, 1721. It is uncertain where Jan was born. Some authorities say his birth took place at Rome, others Termonde. Of his early life we know nothing, the first date we have in connexion with him being 1677, when he was admitted to the Guild of St. Luke at Antwerp. He eventually settled in Bruges, was a member of its guild, held many important positions in its Corporation, and was one of the founders of its Academy. It was there he died in 1721, and his best pictures are to be seen in the Academy, and in the churches of St. Anne and of the Carmelites. His portraits of his grandfather and of himself are admirable, and his chief picture in the Carmelites' church is of the Blessed Virgin and saints kneeling before Christ. He practised engraving and also etching, his "St. Cecilia" being a notable work. He was an artist of distinct merit, and his colouring is particularly good.

SANDRART, *German Academy; Werdenberger und Obertoggenburger* (1902).

GEORGE CHARLES WILLIAMSON.

Herrera, FERNANDO DE, Spanish lyric poet; b. 1537; d. 1597. The head of a school of lyric poets who gathered about him at Seville, Herrera was an avowed

disciple of Garcilasso de la Vega, whose form he perfects and to whose expression he adds more pathos and dignity. Although a cleric, having taken minor orders, he rarely reflects in his verse the feelings of a churchman. On the contrary, it is the martial note that he sounds most loudly and most frequently, when he is not singing in Petrarchian strains of his Platonic attachment—it should be remembered that he had only minor orders, and had probably taken them only that he might enjoy certain ecclesiastical benefices—to Eliodora, that is, Leonor de Milan, Condesa de Gelves and wife of Alvaro de Portugal. The most famous of his compositions are the odes in which he extols the prowess of Don John of Austria, as exhibited in the suppression of the outbreak of the Moriscos in the region of the Alpujarras and at the battle of Lepanto, and commemorates the death of Dom Sebastian, King of Portugal, who perished with the flower of the Portuguese nobility during a Quixotic expedition against the tribes in Northern Africa. These are classics of Spanish literature. That Herrera was not devoid of critical acumen is proved by his prose "Anotaciones á las obras de Garcilaso de la Vega", his poetical master. In the opinion of Ticknor, he deliberately undertook to create a new poetical diction and style in Spanish, deeming that the language as written before his time lacked the full measure of dignity, sonority, and poetic pliancy that it should have; but Ticknor has probably exaggerated the endeavours of Herrera in this direction, in so far as any conscious process is concerned. However the case may be, it must be admitted that there is real beauty and majesty in the verse of Herrera, and that his countrymen are right in terming him "the divine" (*el divino*). He himself published only part of his verse, "Algunas obras" (Seville, 1582). His "Poesías" are accessible in the "Biblioteca de autores españoles", vol. XXXII; the ode "Por la victoria de Lepanto" was edited critically by Morel-Fatio (Paris, 1893).

Fernando de Herrera, Controversia sobre sus anotaciones á las obras de Garcilaso de la Vega, Poesías inéditas (Seville, in publications of the Sociedad de bibliófilos andaluces); BOURCIEZ, *Les sonnets de F. de H.* in the *Annales de la Faculté des Lettres de Bordeaux* (1891); FITZMAURICE-KELLY, *History of Spanish Literature*; TICKNOR, *History of Spanish Literature*.

J. D. M. FORD.

Herrera, (1) FRANCISCO (EL VIEJO, THE ELDER), a Spanish painter, etcher, medallist, and architect; b. in Seville, 1576; d. in Madrid, 1656. Luiz Fernandez was his teacher, but Herrera soon broke away from the timid style and Italian traditions of Spanish painting of his day, and became the pioneer of that bold, vigorous, effective, and natural style whose pre-eminent exponent was Velasquez. Herrera was the first to use long brushes, which may, in part, account for his "modern" technique and dexterous brushwork. Many authorities ascribe to him the foundation of the Spanish School. His great talent brought him many pupils, whom his passionate temper and rough manners soon drove away. Velasquez, when thirteen years old, was placed under this great professor, and remained a year with him. Herrera, who was an accomplished worker in bronze, engraved medals skilfully. This gave rise to the charge of counterfeiting, and he fled for sanctuary to the Jesuit College, for which he painted "The Triumph of St. Hermengild", a picture so impressive that when Philip IV saw it (1621) he immediately pardoned the painter. Herrera thereupon returned to Seville. His ungoverned temper soon drove his son to Rome and his daughter to a nunnery. Herrera's pictures are full of energy, the drawing is good and the colouring so cleverly managed that the figures stand out in splendid relief. Many of his small easel pictures, in oil, represent fairs, dances, interiors of inns, and deal with the intimate life of Spain. His large works are nearly

all religious. In Seville he painted a "St. Peter" for the cathedral and a "Last Judgment" for the church of San Bernardo, the latter being considered his masterpiece. After executing many commissions in his native town he removed to Madrid (1650), where he won great renown. In the archiepiscopal palace are four large canvases, one of which, "Moses Smiting the Rock", is celebrated for its dramatic qualities and daring technique. In the cloister of the Merced Calzada is a noteworthy series of paintings whose subjects are drawn from the life of St. Ramon. He painted much in fresco, in which medium his best effort is believed to have been on the vault of San Bonaventura, but this, with all his other frescoes, has disappeared. None of his architectural productions are mentioned, and there remain but a few of his etchings, all of which were reproductions of his paintings. One of his pictures, "St. Basil dictating his doctrine", is in the Louvre, and another, "St. Matthew", is in the Dresden Gallery. Herrera left two sons, "el Rubio" (the ruddy) who died before he fulfilled the great promise of his youth, and "el Mozo" (the younger).

(2) FRANCISCO HERRERA (EL MOZO, THE YOUNGER), a Spanish painter and architect; b. in Seville, 1622; d. in Madrid, 1655. He was the second son of Herrera, "el Viejo", and began his career under his father's instruction, but the elder's violent temper at last became so intolerable that the youth fled to Rome. For six years the younger Herrera assiduously devoted himself to the study of architecture, perspective, and the antique, his aim being fresco painting. But it was still life in which he excelled. He already painted *bodegones*, fish so cleverly done that the Romans called him: "il Spagnuolo degli pesci". In 1656 he returned to Seville, founded the Seville Academy, and in 1660 became its sub-director under Murillo. He is said to have been vain, suspicious, hot-tempered, and jealous; at any rate he resented his subordinate post and went to Madrid about 1661 (Cean Bermúdez). Before leaving his native city he painted two large pictures for the cathedral and a "St. Francis" for the chapel of this saint. Sir E. Head declares the latter to be his masterpiece. In Madrid he painted a great "Triumph of St. Hermengild" for the church of the Carmelite friars, and so beautiful a group of frescoes in San Felipe el Real that Philip IV commanded him to paint the dome of the chapel of Our Lady of Atocha, and thereafter made him painter to the king and superintendent of royal buildings. Besides his marvellous work in still life he painted many portraits, and while these lacked the vigour, colour, and bold design which characterize his father's work, they exhibit a far greater knowledge and use of *chiaroscuro*. Charles II kept him at his Court and made him master of the royal works. For this king Herrera renovated the cathedral of El Pilar, in Saragossa. The Madrid gallery contains his "St. Hermengild".

RADCLIFFE, *Schools and Masters of Painting* (New York, 1907); STIRLING-MAXWELL, *Annals of the Artists of Spain* (London, 1845).

LEIGH HUNT.

Herrera Barnuevo, SEBASTIANO DE, painter, architect, sculptor and etcher; b. in Madrid, 1611 or 1619; d. there, 1671; son of Antonio Herrera, a sculptor of fair ability, who, after teaching his son the rudiments of his art, placed him with Cano. Under this famous artist he made such great progress in both painting and sculpture that Philip IV took him into his service, commanded him to decorate the chapel of Our Lady of Atocha, and made him guardian of the Escorial, for which he henceforth worked. Most of his pictures are in Madrid. His masterpiece is the "St. Barnabas", in the hall of the council-chamber in the Escorial, and was long regarded as by the hand of Guido. Nearly as famous is the "Beatification of St.

Augustine" in the chapel of the Augustinian Recollects and the "Nativity" in the church of San Gerónimo. Barnuevo's colouring was as brilliant and harmonious as that of Titian, whom he imitated; his style was scarcely to be differentiated from Guido's; his draughtsmanship was excellent, and his work with the graver and etching-needle highly esteemed. He was an able architect, and won such fame in this branch of art that he received many commissions from the Court and the nobility. He was a simple, modest, urbane, and deeply religious man, as well as a most versatile artist.

SANTOS, *La Descripción del Escorial* (Madrid, 1657); QUELLET, *Dictionnaire des peintres espagnols* (Paris, s. d.); SIRET, *Dictionnaire historique des peintres* (Louvain, 1883).

LEIGH HUNT.

Herrera y Tordesillas, ANTONIO DE, Spanish historian; b. at Cuellar, in the province of Segovia, in 1559; d. at Madrid, 27 March, 1625. He was a great-grandson of the Tordesillas who was put to death by the Comuneros at Seville. He studied in Spain and Italy, and became secretary to Vespasiano Gonzaga, a brother of the Duke of Mantua, who was afterwards Viceroy of Navarre and Valencia, and who recommended him to Philip II in the last year of that monarch's reign. Philip appointed him grand historiographer (*cronista mayor*) of America and Castile, and he filled that office during part of his royal patron's reign, the whole reign of Philip III, and the beginning of that of Philip IV. At his death his body was conveyed to Cuellar, and interred in the church of Santa Marina, where his tomb is still to be seen.

His most famous work is the "Historia General de los Hechos de los Castellanos en las Islas y Tierra Firme del Mar Océano" (General History of the deeds of the Castilians on the Islands and Mainland of the Ocean Sea), divided into eight periods of ten years each, and comprising all the years from 1472 to 1554. This work was printed at Madrid in 1601; reprinted by Juan de la Cuesta in 1615; revised and augmented by Andrés González and published at Madrid by Nicolás Rodríguez in 1726, and at Antwerp, by Juan Bautista Verdussen, in 1728. Worthy of note is the "Description of the West Indies", in the first volume of his work, which was translated into Latin and published at Amsterdam, by Gaspar Barleo, in 1622, a French version being published at Paris in the same year. In 1660 there appeared a French translation of the first three decades of his "Historia" by Nicolás de la Corte. In writing his great work Tordesillas made use of all the public archives, having access to documents of every kind. It is evident in his writings that he had to deal with a large number of historical manuscripts, and contented himself with relating events as he found them recorded. A great part of his work is more or less a transcript of the History of the Indies left by the famous Bishop Bartolomé de las Casas, though expurgated of wellnigh everything unfavourable to the settlers. A painstaking and conscientious investigator for the most part, his style does not correspond to his other admirable qualifications. He was a learned and judicious man, though, particularly in the later decades, somewhat prone to overpraise the conquerors and their exploits.

In addition to that already mentioned, his most important works are: "A General History of the World during the time of Philip II from the year 1559 to the King's death"; "Events in Scotland and England during the forty-four years of the lifetime of Mary Stuart, Queen of Scotland" (Historia de lo sucedido en Escocia é Inglaterra en los cuarenta y quatro años que vivió Maria Estuardo Reina de Escocia); Five books of the history of Portugal and the conquests of the Azores in the years 1582, 1583; "History of events in France from 1585 to 1594" (a work published in Madrid in 1598, but suppressed by command of the king); "A Treatise, Relation, and Historical Discourse on the

Disturbances in Aragon in the years 1591 and 1592" (Tratado, relación y discurso histórico de los movimientos en Aragón en los años de 1591 y 1592); "Commentary on the deeds of the Spaniards, French, and Venetians in Italy, and of other Republics, Potentates, famous Italian Princes and Captains, from 1281 to 1559"; "Chronicle of the Turks, following chiefly that written by Juan Maria Vicentino, chronicler to Mahomet, Bajazet, and Suleiman, their lords" (unpublished); various works translated from the French and Italian, preserved in the National Library at Madrid.

CAMILLUS CRIVELLI.

Herrgott, MARQUARD, a Benedictine historian and diplomat; b. at Freiburg in the Breisgau, 9 October, 1694; d. at Krozingen near Freiburg, 9 October, 1762. After studying humanities at Freiburg and Strasburg, he became tutor in a private family at the latter place and accompanied his two pupils to Paris, where he remained two years. Upon his return to Germany he entered the Benedictine Abbey of St. Blasien in the Black Forest, made his vows on 17 Nov., 1715, and was sent to Rome to study theology. After being ordained priest on 17 Dec., 1718, he returned to St. Blasien. In 1721 he went to the Abbey of St. Gall to study Oriental languages, but was soon recalled in order to accompany his abbot to Vienna, where he devoted himself for a few months to the study of history. Shortly after, he was sent to the Abbey of Saint-Germain-des-Prés to continue his historical studies under the direction of the learned Maurist Benedictines. The first fruit of these studies was a valuable work on old monastic customs, "Vetus disciplina monastica" (Paris, 1726). Shortly after the publication of this work, Herrgott returned to St. Blasien, gathered material for a history of the Diocese of Constance and wrote a history of St. Blasien, which is preserved in manuscript at St. Paul's Abbey in Carinthia. In 1728 he was sent to the imperial Court of Vienna as diplomatic representative of the Estates of Breisgau, which then belonged to Austria, and filled this position very creditably over twenty years. While at Vienna he made a thorough study of the history of the imperial house of Hapsburg and, after eight years of diligent researches, published the first three volumes of his valuable work on the Austrian Imperial family "Genealogia diplomatica Augustæ Gentis Habsburgicæ" (Vienna, 1737). The continuation of this work he published under the title "Monumenta Augustæ Domus Austriacæ", vol. I (Vienna, 1750), vol. II (Freiburg, 1753), vol. III (Freiburg, 1760), second edition (St. Blasien, 1773). As reward for his labours he had been appointed imperial councillor and historiographer in 1737. In 1749 he gave offence to the imperial Court by courageously defending the rights of the Church and the privileges of the Estates, and, in consequence, was forced to resign his office. His abbot appointed him provost of Krozingen and governor of Staufien and Kirchhofen, which were dependencies of the Abbey of St. Blasien.

MICHAEL OTT.

Herrnhuter. See BOHEMIAN BRETHREN.

Hersfeld, ancient imperial abbey of the Benedictine Order, situated at the confluence of the Geisa and Haune with the Fulda, in the Province of Hesse-Nassau, Prussia. Sturmi, a disciple of St. Boniface, originally founded a monastery here in 742, but, owing to its position being exposed to attacks from the Saxons, he transferred it to Fulda. Some years later (about 768) after the defeat of the Saxons by the Franks, Lullus, Bishop of Mainz, refounded the monastery at Hersfeld. Charlemagne (who had re-

cently succeeded to the crown) and other benefactors provided endowments, and Pope Stephen III granted exemption from episcopal jurisdiction to the house, which soon possessed 1050 hides of land and a community of 150 monks. It became a place of pilgrimage after 780, owing to the bringing thither of the relics of St. Wigbert, and the reputed occurrence of miracles. A valuable library was collected, the annals of the monastery were regularly kept, and it became renowned as a seat of piety and learning. Towards the close of the tenth century Hersfeld suffered from the general decadence of the age, and the monastic discipline became relaxed. Some years later, however, the observance was reformed by St. Gotthard (afterwards Bishop of Hildesheim), and we find members of the community sent out to other houses of the order to carry out in them the work of religious revival.

During the long struggle between the Emperor Henry IV and Pope Gregory VII, Hersfeld espoused the imperial cause. Henry himself visited it not infrequently, sometimes accompanied by his consort; and their son Conrad (who afterwards succeeded to the throne) was born and baptized within the precincts of the abbey. In the last decade of the eleventh century the abbey seems to have been fully restored to papal favour, and it continued to prosper for a long subsequent period. The town of Hersfeld, outside the abbey walls, also grew and flourished, one result of this being that it found itself strong enough to assert its independence of the rule of the monks, and in 1371 formally placed itself under the protection of the Landgraves of Hesse. As time went on the state of the monastery again deteriorated, and in 1513 it was at so low an ebb that the abbot (Wolpert) resigned his office into the hands of Pope Leo X, and the Abbot of Fulda was authorized by the Emperor Maximilian to incorporate the house into his own famous abbey. A melancholy account has come down to us of the condition into which the venerable Abbey of Hersfeld had at this time been allowed to fall. The library was in a state of ruin and decay, many precious volumes had altogether disappeared, and manuscripts containing the archives and records of the house were used in the kennels as litter for the dogs. This forced union between Hersfeld and Fulda lasted little more than two years, and a new Abbot of Hersfeld was chosen. Abbot Krato, who held office in 1517, was in sympathy with Lutheranism, and he swore allegiance to Philip, the Lutheran Landgrave of Hesse, in 1525. The abbey church was consequently closed to Catholic worship, the Holy Sacrifice of the Mass being said only in a chapel within the monastery.

During the remainder of the century the abbey dragged on an inglorious existence, and on the death of the last abbot (Joachim Röhl) in 1606, Otto, hereditary Prince of Hesse, was elected lay administrator. The pope made a fruitless endeavour, after Otto's death, to replace the abbey under Catholic administration. It continued in the hands of the princely family until about the middle of the seventeenth century, when, after the conclusion of the Treaty of Westphalia, Hersfeld was, as an imperial fief, united to Hesse under the title of a principality. The town of Hersfeld continued to rank as the capital of a principality until 1828. It is now the chief town of a circle in the government district of Kassel, and has a population of nearly 8000, with some important manufactures. The Stadtkirche, dating from about 1300, was restored in 1899, and there is a Rathaus of the sixteenth century. The ruined collegiate church, in the Romanesque style, was built in the early part of the twelfth century, but was destroyed by the French in 1761, in the course of the Seven Years War. Outside the town, of which the old walls are still preserved, are the remains of the once famous monastery, with

its extensive surrounding grounds. The "Annales Hersfeldienses" are often cited as sources of medieval German history (see below).

D. O. HUNTER-BLAIR.

Herst, RICHARD. See HURST.

Hervás y Panduro, LORENZO, a Spanish Jesuit and famous philologist; b. at Horcajo, 1 May, 1735; d. at Rome, 24 Aug., 1809. Having entered the Jesuit Order at Madrid, he studied at Alcalá de Henares, devoting himself with special zeal to architecture and linguistics. For a time he taught at the royal seminary in Madrid and at the Jesuit college of Murcia; then he went to America as a missionary and remained there until 1767, when in connexion with the abolition of the Jesuits the establishments of the Society were taken away from the order. Hervás now returned to Europe, taking up his residence at first at Cesena, Italy, and then in 1784 at Rome. In 1799 he went back to his native land, but four years later left Spain and lived in Rome for the remainder of his life. He was held in high honour; Pope Pius VII made him prefect of the Quirinal library, and he was a member of several learned academies. In Italy he had a chance to meet many Jesuits who had flocked thither from all parts of the world after the suppression of the order. He availed himself diligently of the exceptional opportunity thus afforded him of gaining information about remote and unknown idioms that could not be studied from literary remains. The results of his studies he laid down in a number of works, written first in Italian, and subsequently translated into Spanish.

The greatest work of Hervás is the huge treatise on cosmography, "Idea dell' Universo" (Cesena, 1778-87, in 21 vols. in 4^{to}). It consists of several parts, almost all of which were translated into Spanish and appeared as separate works. Of these the most important, which had appeared separately in Italian in 1784, is entitled "Catálogo de las lenguas de las naciones conocidas, y numeración, división y clase de éstas según la diversidad de sus idiomas y dialectos" (Madrid, 1800-5, 6 vols.). Here Hervás attempts to investigate the origin and ethnological relationship of different nations on the basis of language. The main object of the book is, therefore, not really philological. Vol. I treats of American races and idioms; vol. II of those of islands in the Indian and Pacific Oceans; the remaining volumes, devoted to the European languages, are inferior in value to the first two. The American dialects are certainly better described and classified than they had been before; the existence of a Malay and Polynesian speech-family is established. For determining affinity of languages similarity in grammar is emphasized as against mere resemblance in vocabulary. While there were gross errors and defects in the work, it is conceded that it presented its material with scholarly accuracy and thus proved useful to later investigators. Other parts of the work to appear separately in Italian and later in Spanish were "Virilità dell' Uomo" (4 vols., 1779-80); "Vecchiaja e Morte dell' Uomo" (1780); "Viaggio statico al Mondo planetario" (1780); "Storia della Terra" (1781-83, 6 vols.); "Origine, formazione, meccanismo ed armonia degl' Idiomi" (1785); "Vocabolario Poliglotto, con prolegomeni sopra più di CL lingue" (1787); "Saggio pratico delle Lingue, con prolegomeni e una raccolta di orazioni dominicali in più di trecento lingue e dialetti" (1787).

Hervás also wrote a number of educational works for deaf-mutes, the most notable being "La escuela

española de sordo-mudos ó arte para enseñarles á escribir y hablar el idioma español" (Madrid, 1795), and other works of miscellaneous character, of which we mention "Descripción de los archivos de la corona de Aragón y Barcelona", etc. (Cartagena, 1801). He left also a number of works that have not been edited: "Historia de la Escritura"; "Paleografía universal"; "Moral de Confucio"; "Historia de las primeras colonias de América"; "El hombre vuelto á la religión", as well as tracts of a controversial or theological nature.

Consult the article in *Diccionario Enciclopédico Hispano-Americano de Literatura, Ciencias y Artes*, X, 258; AUGUSTIN and ALOIS DE BACKER, *Bibliothèque des écrivains de la compagnie de Jésus* (Liège, 1859), 302-6. For a critical appreciation of Hervey's philological work see MAX MÜLLER, *Lectures on the Science of Language* (New York, 1862), 139-42, and especially BENEFY, *Geschichte der Sprachwissenschaft* (Munich, 1869), 269-71.

ARTHUR F. J. REMY.

Hervetus, GENTIAN, a French theologian and controversialist; b. at Olivet, near Orleans, in 1499; d. at Reims, 12 September, 1584. After studying the humanities at Orleans, he went to Paris where he became tutor of Claude d'Aubespine, afterwards secretary of state. Here he became acquainted with Thomas Lupset, an Englishman, whom he later followed to England, where he was charged with the education of a brother of Cardinal Reginald Pole. He accompanied his scholar to Rome, where he remained some time in the house of Cardinal Pole, occupying himself chiefly with the Latin translation of various Greek Fathers. Returning to France he taught the humanities for a short time at the College of Bordeaux, then went back to Rome and became secretary to Cardinal Cervini, the future Pope Marcellus II. In 1545 he accompanied this cardinal to the Council of Trent, and delivered an oration before the assembled fathers against clandestine marriages. In 1556, when he was already fifty-seven years old, he was ordained priest. Soon after, he became Vicar-General of Noyon and received a canonry at Reims. As pastor he preached very successfully against the Calvinists and wrote numerous pamphlets against them. In 1562 he returned to the Council of Trent in company of Cardinal Charles of Lorraine. He is the author of "Le saint, universel et general concile de Trente" (Reims, 1564; Rouen, 1583; Paris, 1584), and numerous controversial pamphlets. He also translated into Latin and French many works of the Greek Fathers, collections of canons, decrees of councils, etc.

MICHAEL OTT.

Herzogenbusch. See BOIS-LE-DUC, DIOCESE OF.

Hesebon (A. V. HESHBON; Gr. Ἑρεβών, Ἐρβούς; Lat. *Esbus*), a titular see of the province of Arabia, suffragan of Bostra. It is the ancient Hesebon beyond the Jordan, the capital of Schon, King of the Amorrites (Num., xxi, 26). Hesebon was taken by the Israelites on their entry to the Promised Land, and was assigned to the tribe of Ruben (Num. xxxii, 37); afterwards it was given to the tribe of Gad (Jos., xxi, 37; I Par., vi, 81). The Canticle of Canticles (vii, 4) speaks of the magnificent fish-pools of Hesebon. The Prophets mention it in their denunciations of Moab (Is., xv, 4, xvi, 8, 9; Jer., xlvi, 2, 34, 45). Alexander Jannæus (106-79 B. C.) took it, and made it a Jewish town, and Herod established a fort there (Josephus, Ant., XV, viii, 5). It occurs in Josephus very often under the form Esbonitis or Sebonitis (Antiq., XIII, xv, 4, XII, iv, 11; Bell. Jud., II, xviii, 1). After the Jewish War (A. D. 68-70) the country was invaded by the tribe that Pliny calls (Hist. Nat., V, xii, 1) *Arabes Esbonitæ*. Restored under the name of Esbous or Esbouita, it is mentioned among the

towns of Arabia Petraea by Ptolemy (Geogr., V, xvi) Under the Byzantine domination, as learned from Eusebius (Onomasticon), it grew to be a town of note in the province of Arabia; George of Cyprus refers to it in the seventh century, and it was from Hesebon that the milestones on the Roman road to Jericho were numbered.

Christianity took root there at an early period. Lequien (Oriens Christ., II, 863-64), and Gams (Series Episcoporum, 435) mention three bishops between the fourth and seventh centuries. Gennadius, present at Nicæa (Gelzer, Patrum Nicæn. Nomina, p. lxi) Zosius, whose name occurs in the lists of Chalcedon and Theodore, champion of orthodoxy against Monothelism, who received (c. 649) from Martin I a letter congratulating him on his resistance to the heresy and exhorting him to continue the struggle in conjunction with John of Philadelphia. To the latter the pope had entrusted the government of the patriarchates of Antioch and Jerusalem. Eubel (Hierarchia Catholica, II, 168) mentions two Latin titulars of Hesebon in the latter part of the fifteenth century. At the beginning of the Arab domination Hesebon was still the chief town of the Belka, a territory corresponding to the old Kingdom of Schon. It seems never to have been taken by the Crusaders. The ruins are to be seen at Hesbân, to the north of Mádaba, on one of the highest summits of the mountains of Moab.

S. SALAVILLE.

Heslin, THOMAS. See NATCHEZ, DIOCESE OF.

Hesse (HESSEN), the name of a German tribe, and also of a district in Germany extending along the Lahn, Eder, Fulda, Werra, and the Lower Main and Rhine. The district comprises to-day the Grand Duchy of Hesse-Darmstadt and the Prussian province of Hesse-Nassau (capital, Kassel). The territory of the Hessians—the descendants of the Chatti who, with the Cherusci, were masters of Germany before the Roman domination—was divided during the period of the Frankish empire into several *Gaue* (i. e. districts—Saxon Hessengau, Frankish Hessengau, Buchonia, Oberlahngau, etc.), ruled over by counts.

About 350 Christianity was preached in a portion of this territory by St. Lubentius of Trier, who built a church at Dietkirchen near Limburg. In the sixth century St. Goar preached the Gospel along the Rhine while in the following century St. Kilian (d. 686) preached in the districts along the Main and the Rhön. The chief missionary of the Hessians was St. Boniface. He baptized two counts at Amönebur about 722, founded a Benedictine abbey there, felled the celebrated sacred oak of Thor at Geismar, and founded at Büraberg near Fritzlar the first Hessian bishopric in 741, consolidated with Mainz in 774, and also the monastery of St. Peter at Fritzlar. Commissioned by the saint, his disciple Sturm founded the monastery of Fulda and St. Lullus the Abbey of Hersfeld. From these centres of Christian culture many religious communities and cloisters were founded on the conclusion of the Saxon wars, and Christianity subsequently made rapid progress among the people. The greater portion of the land was throughout the Middle Ages under the ecclesiastical jurisdiction of the Archbishops of Mainz; the smaller portion under the exempt Abbots of Fulda and Hersfeld, or under the Bishops of Trier (10 churches in Lahngau) and Paderborn (4).

Under the weak successors of Charles the Great, the old constitution of the *Gaue* gradually changed, and the counts (*Grafen*) from responsible officials became independent lords. As the bishops and monasteries also acquired much landed property, Hesse was part

celled up into numerous territories. Among the Hessian nobility, the most prominent in the tenth and eleventh centuries were the Counts of Ziegenhain, of Felsberg, of Schaumburg, of Diez, but above all the Gisos, Counts of Gudensberg. The daughter of the fourth and last Giso married in 1122 Count Louis I of Thuringia, who in 1130 was raised to the rank of landgrave by Emperor Lothair. As the Hessian nobility recognized him as their overlord, Hesse was thus united with Thuringia. Louis at the same time received the protectorate of the most important religious foundations of the land, and for a period of more than a century the union of Hesse and Thuringia continued unbroken. With Henry Raspe, the brother-in-law of St. Elizabeth of Thuringia, the male line of the Thuringian landgraves became extinct in 1247, whereupon the Hessians chose Henry of Brabant, Elizabeth's grandson, as their landgrave. Hesse was separated from Thuringia, and, after a long struggle with other claimants of the title, Henry established his authority as Landgrave of Hesse. For a large portion of his territories he owed fealty to the Archbishops of Mainz; for his allodial estate and the imperial fiefs which he possessed, he received in 1292 from King Adolph of Nassau the hereditary rank of prince of the empire. He chose Kassel as his residence, and from him is descended the present princely house of Hesse, which can thus trace its line back to St. Elizabeth.

By the acquisition of previously independent territories (Giessen, Treffurt, Schmalkalden, Katzenellenbogen, Diez, etc.) Henry's successors increased the domain of the landgraviate to such an extent that it became one of the most powerful German principalities. Hermann I (1377-1413) played an important rôle in ecclesiastical affairs. Intended originally for Holy orders and surnamed "the learned" on account of his love of the sciences, he espoused during the Great Schism the cause of Gregory XII in opposition to Mainz. The slumbering quarrel with Mainz broke out under Hermann's son, Louis I the Peaceful (1413-58), and Archbishop Conrad of Mainz suffered a decisive defeat at Fulda in 1427. The schism and the wrangles between the landgraves and the archbishops greatly contributed to disturb ecclesiastical order, and in many of the numerous monasteries the ancient discipline had fallen into decay. On the whole, however, the Hessian Church was in an excellent condition at the outbreak of the Reformation in Germany.

After repeated divisions, all the Hessian lands were reunited by William II. Philip the Magnanimous (1509-67), William's son and successor, at first adopted a hostile attitude towards the doctrines of Luther, which soon found adherents in the Franciscan Jacob Limburg of Marburg and the Augustinian provincial Tilemann Schnabel of Alsfeld. He banished or imprisoned the heretical preachers, and came to be regarded by them as the most dangerous opponent of "the Gospel". In 1525, however, he was won over to Protestantism by Joachim Camerarius and Melancthon, who wrote for him the "Epitome renovatæ ecclesiasticæ doctrinæ". The recess of the Diet of Speyer in 1526 enabled him to set up a territorial Church. At a synod of the higher dignitaries of the regular and secular clergy at Homberg in October, 1526, the reform regulations devised by the ex-Franciscan, Lambert of Avignon, were adopted. The Franciscan guardian, Nikolaus Ferber of Marburg, alone raised his voice against their adoption, but his protest was disregarded. At the Convention of Hitzkirch, in 1528, the Archbishop of Mainz, Albert of Brandenburg, found himself compelled to waive temporarily his claims to ecclesiastical jurisdiction in Hesse. Thus the Reformatory ordinances (*Reformatiionsordnung*)—which were of an extreme type, rejecting the Mass, feasts of the saints, pilgrimages, pictures, relics, etc.—spread rapidly over the country. Foun-

dations and monasteries were suppressed, their property confiscated, public worship forbidden to Catholics. To establish the new teaching on a firmer basis the first Protestant university was founded at Marburg in 1527, while the Rituals of 1537, 1539, and 1566, in the composition of which Bucer's influence is unmistakable, fixed the constitution of the Hessian Church on an episcopal synodal basis.

Philip's imprisonment by Charles V scarcely exercised a perceptible influence on the progress of the Reformation, and in 1551 Sebastian von Heusenstamm, Archbishop of Mainz, was compelled to resign finally all claims to jurisdiction in Hesse. In this manner was the Church founded by St. Boniface almost entirely annihilated. The Reformation was also introduced into the territories which were subsequently (e. g. in 1648) acquired by Hesse; only in the domain of the Abbey of Fulda and in a few enclaves belonging to the Archbishopric of Mainz (Fritzlar, Amöneburg, Neustadt) did the Catholic Faith survive. Philip the Magnanimous divided Hesse at his death among his four legitimate sons, but, as two of these died without heirs in 1583 and 1604 respectively, his family was split into two chief lines—that of Hesse-Darmstadt, represented by George I, and that of Hesse-Kassel, represented by William IV. From these two lines sprang in the course of time some collateral lines, but no member of the family at present occupies a throne. In contrast to his father, the first Landgrave of Hesse-Darmstadt, George I (1567-96) espoused the cause of the Hapsburgs. He increased his family possessions considerably, and in this his example was followed by his eldest son Louis V (1596-1626), who for his attachment to the emperor was called "the Faithful". He founded the University of Giessen in 1607. George II (1628-61) acquired a portion of Upper Hesse in 1648; his brother Frederick returned to the Catholic Faith, became Cardinal and Prince-Bishop of Breslau, and died in 1682. Although three sons of Louis VI (1661-78) also returned to Catholicism, there was no mitigation in the stern Lutheranism of the land.

Only in the territory belonging to the collateral branch, Hesse-Rheinfels-Rotenburg, which became Catholic in 1652 and extinct in 1834, was the Catholic Church tolerated. Landgraves Ernest Louis (1678-1739) and Louis VIII (1739-68) sought an understanding with Austria. Louis IX (1768-90) afforded free religious facilities to the Reformed Churches; in 1786 he granted to the Catholics of Darmstadt as a "privilege" permission to hold Divine service. General freedom was first received by the Catholics under Louis X (1790-1830), who created the present Grand Duchy of Hesse. In the war against revolutionary France, the possessions of Hesse-Darmstadt on the right bank of the Rhine were ceded to the French by the Peace of Lunéville, a few districts in Baden and Nassau being also lost. In compensation Louis received the Duchy of Westphalia, which had previously belonged to the Archdiocese of Cologne, and some districts in the Archdiocese of Mainz and the Bishopric of Worms, and later (1809) three Hessian domains of the German Order, the Fulda domain of Herbstein, and the estates of the Order of Malta in Hesse. In 1806 Louis received the title of Grand Duke (Louis I); at the Congress of Vienna he received in compensation for the Duchy of Westphalia, which fell to Prussia, the old ecclesiastical and palatinate lands on the left bank of the Rhine together with the towns Mainz and Worms. With the accession of such Catholic territories, the existing anomalous ecclesiastical conditions could no longer be maintained. Hesse therefore took part in the negotiations of several German states, which resulted in the erection of the ecclesiastical province of the Upper Rhine by the papal Bulls "Provida solersque" (1821) and "Ad Dominicæ gregis custodiam" (1827). In furtherance of these arrange-

ments, the Grand Duchy of Hesse founded the new Bishopric of Mainz, which was made subject to the Archbishopric of Freiburg. Although the organic decrees of 1803 had created a kind of national Church, they were only partially carried out, and the position of the Catholic Church was here more favourable than in the other states of the ecclesiastical province of the Upper Rhine (e. g. in Baden). Under Louis III (1848-77), who began to rule during the lifetime of his father Louis II (1830-48), conditions were at first favourable to the Catholics. In 1854 Bishop Ketteler concluded with the Minister von Dalwigk the Convention of Mainz, which ensured for the Church a greater measure of freedom and independence, but on the other hand made great concessions to the State. In consequence of the opposition of the Estates, the convention had to be withdrawn in 1866. After the foundation of the German Empire, the *Kulturkampf* extended also to Hesse under the Liberal ministries of Hofmann and von Starck, that is from 1871 to 1884. The five ecclesiastical laws of 23 April, 1875, are in their *Kulturkampf* spirit an exact reproduction of the Prussian "May Laws". After the death of Bishop Ketteler in 1877, the episcopal See of Mainz remained vacant until 1886. It was only under Grand Duke Louis IV (1877-92) and during the Finger ministry, that the church laws were revised, and those of 1875 modified. Under Ernest Louis, who succeeded in 1892, further changes facilitated the admission of religious orders. (Concerning the ecclesiastical statistics of the Grand Duchy of Hesse, whose boundaries coincide with those of the Bishopric of Mainz, see MAINZ.)

In Hesse-Kassel William IV (1567-92) was succeeded by Moritz "the Learned" (1592-1627), during whose reign the Thirty Years' War broke out. His son, William V (1627-37), allied himself with Gustavus Adolphus and was forced to retire into exile. Under William VI (1637-63) the foundation of Hersfeld and a portion of Upper Hesse were acquired by Hesse-Kassel. The succeeding rulers were William VII (1663-70) and then Charles (1670-1730), whose son became King of Sweden as Frederick I in 1720, and later, during his government of Hesse (1730-51), was represented by his brother William (landgrave, 1751-60). William's son, Frederick II, reverted to the Catholic Church in 1749, but, when his conversion became known, his father, in concert with the Estates, with Prussia, and Hanover, demanded that Frederick as landgrave should neither appoint a Catholic to a public position nor permit public Catholic worship. To these demands Frederick, to preserve his right of succession, was compelled to agree. During his reign (1760-85) the abuse of selling soldiers to England reached its culmination. In North America between 15,000 and 20,000 Hessians fought for England against the colonies struggling for freedom. His son, William IX (1785-1821), in accordance with the Peace of Lunéville, received rich compensation (mostly in ecclesiastical territory) for Rheinfels, ceded to the French, and was granted in 1803 the title of elector. From 1806 to 1813, Hesse-Kassel belonged to the Kingdom of Westphalia, founded by Napoleon. After the Restoration the greater part of the estates of the Abbey of Fulda was assigned to Hesse-Kassel. The Revolution of 1830 compelled William II (1821-47) to give the land a constitution which ensured to every citizen complete liberty of conscience and freedom to practise his religion. The status of Catholics was regulated by the creation of the ecclesiastical province of the Upper Rhine, when Electoral Hesse was placed under the Bishopric of Fulda. The profligacy of William II, the tyrannical rule of his son Frederick William I (1847-66), and the suppression of all political freedom caused an estrangement between princes and people. In the conflict between Prussia and Austria in 1866, when the elector, after a period of

neutrality, voted against Prussia at the German Diet and ordered the mobilization of his troops, his territories were occupied by the Prussian army, and united with Prussia on 20 September, 1866, since which date they have shared the destiny of Prussia. It now forms with other territories acquired by Prussia in 1866 (the Duchy of Nassau, the Landgraviate of Hesse-Homburg, Frankfurt-on-the-Main, etc.) the Prussian province of Hesse-Nassau. The Catholics of the government district of Kassel and those of Bockenheim, one of the wards of the city of Frankfurt, belong to the Diocese of Fulda; the remainder belong to the Diocese of Limburg. The ecclesiastical statistics will be found under these articles.

Hessels, JEAN, a distinguished theologian of Louvain; b. 1522; d. 1566. He had been teaching for eight years in Parc, the Dominican house near Louvain, when he was appointed professor of theology at the university. Like Baius, who was his senior colleague, Hessels preferred drawing his theology from the Fathers, especially from Augustine, rather than from the Schoolmen, without, however, ever swerving from traditional doctrine. In 1559 he accompanied the elder Jansen (later Bishop of Ghent, d. 1576) and Baius to Trent and took an active part in the council, e. g. he prepared the decree "De invocatione et reliquiis sanctorum et sacris imaginibus". Even at Trent the Scholastic party found fault with his departure from the beaten tracks of learning; after his return the attacks continued. Hessels, however, used his energy against the Protestants instead of wasting it in dogmatic quarrels. He upheld the doctrine of the Immaculate Conception (impugned by Baius), and he is a protagonist of papal infallibility in his "De perpetuitate Cathedræ Petri et ejus indefectibilitate", which is an appendix to his polemical work "Confutatio novitiæ fidei quam specialem vocant, adv. Johannem Monhemium" (Louvain, 1565). His other polemical works are: "De invocatione sanctorum . . . censura" (1568); "Probatio corporalis præsentia corporis et sanguinis dominici in Eucharistia (Cologne, 1563); "Confutatio confessionis hæreticæ, teutonice emissæ, qua ostenditur Christum esse sacrificium propitiatorium" (Louvain, 1565); "Oratio de officio pii viri exurgente et vigente hæresi" (Louvain, 1565); "Declaratio quod sumptio Eucharistiæ sub unica panis specie neque Christi præcepto aut institutioni adversetur" (Louvain). He also wrote commentaries: "De Passione Domini" (Louvain, 1568); "de I Tim. et I Petri" (Louvain, 1568); "Com. de Evang. Matthæi" (Louvain, 1572); "Com. de Epp. Johannis" (Douai, 1601). His chief dogmatic work is an excellent "Catechism", first published in 1571, by Henry Gravius, who removed from it all traces of Baianism. Hessels is not a brilliant writer, but his judgment is accurate and all his work most conscientious. J. WILHELM.

Hesychasm (Gr., *ἡσυχος*, quiet).—The story of the system of mysticism defended by the monks of Athos in the fourteenth century forms one of the most curious chapters in the history of the Byzantine Church. In itself an obscure speculation, with the wildest form of mystic extravagance as a result, it became the watchword of a political party, and incidentally involved again the everlasting controversy with Rome. It is the only great mystic movement in the Orthodox Church. Ehrhard describes it rightly as "a reaction of national Greek theology against the invasion of Western scholasticism" (Krumbacher, *Byzant. Litt.*, p. 43). The clearest way of describing the movement will be to explain first the point at issue and then its history.

I. THE HESYCHAST SYSTEM.—Hesychasts (*ἡσυχασταί*—quietist) were people, nearly all monks, who defended the theory that it is possible by an elaborate system of asceticism, detachment from earthly cares, submission to an approved master, prayer, especially perfect repose of body and will, to see a mystic light, which is none other than the *uncreated light* of God. The contemplation of this light is the highest end of man on earth; in this way is a man most intimately united with God. The light seen by Hesychasts is the same as appeared at Christ's Transfiguration. This was no mere created phenomenon, but the eternal light of God Himself. It is not the Divine essence; no man can see God face to face in this world (John, i, 18), but it is the Divine action or operation. For in God action (*ἐνέργεια*, *actus*, *operatio*) is really distinct from essence (*οὐσία*). There was a regular process for seeing the uncreated light; the body was to be held immovable for a long time, the chin pressed against the breast, the breath held, the eyes turned in, and so on. Then in due time the monk began to see the wonderful light. The likeness of this process of auto-suggestion to that of fakirs, Sunnysis, and such people all over the East is obvious.

Hesychasm then contains two elements, the belief that quietist contemplation is the highest occupation for men, and the assertion of real distinction between the divine essence and the divine operation. Both points had been prepared by Greek theologians many centuries before. Although there was comparatively little mysticism in the Byzantine Church, many Greek Fathers and theologians had maintained that knowledge of God can be obtained by purity of soul and prayer better than by study. The quotations made by Hesychasts at the councils (see below) supply many such texts. Clement of Alexandria was most often invoked for this axiom. Pseudo-Dionysius seems to have brought the statement a step nearer to Hesychasm. He describes a medium in which God may be contemplated; this medium is a mystic light that is itself half darkness. But it was Simeon, "the new theologian" (c. 1025-c. 1092; see Krumbacher, *op. cit.*, 152-154), a monk of Studion, the "greatest mystic of the Greek Church" (*loc. cit.*), who evolved the quietist theory so elaborately that he may be called the father of Hesychasm. For the union with God in contemplation (which is the highest object of our life) he required a regular system of spiritual education beginning with baptism and passing through regulated exercises of penance and asceticism under the guidance of a director. But he had not conceived the grossly magic practices of the later Hesychasts; his ideal is still enormously more philosophical than theirs. There seems also to have been a strong element of the pantheism that so often accompanies mysticism in the fully developed Hesychast system. By contemplating the uncreated light one became united with God so intimately that one became absorbed in Him. This suspicion of pantheism (never very remote from neo-Platonic theories) is constantly insisted on by the opponents of the system.

The other element of fourteenth-century Hesy-

chasm was the famous real distinction between *essence* and *attributes* (specifically one attribute—energy) in God. This theory, fundamentally opposed to the whole conception of God in the Western Scholastic system, had also been prepared by Eastern Fathers and theologians. Remotely it may be traced back to neo-Platonism. The Platonists had conceived God as something in every way unapproachable, remote from all categories of being known to us. God Himself could not even touch or act upon matter. Divine action was carried into effect by demiurges, intermediaries between God and creatures. The Greek Fathers (after Clement of Alexandria mostly Platonists) had a tendency in the same way to distinguish between God's unapproachable essence and His action, energy, operation on creatures. God Himself transcends all things. He is absolute, unknown, infinite above everything; no eye can see, no mind conceive Him. What we can know and attain is His action. The foundation of a real distinction between the unapproachable essence (*οὐσία*) and the approachable energy (*ἐνέργεια*) is thus laid. For this system, too, the quotations made by Hesychasts from Athanasius, Basil, Gregory, especially from Pseudo-Dionysius, supply enough examples. The Hesychasts were fond of illustrating their distinction between God's essence and energy (light) by comparing them to the sun, whose rays are really distinct from its globe, although there is only one sun. It is to be noted that the philosophic opponents of Hesychasm always borrow their weapons from St. Thomas Aquinas and the Western Schoolmen. They argue, quite in terms of Latin Aristotelean philosophy, that God is simple; except for the Trinity there can be no distinctions in an *actus purus*. This distinct energy, uncreated light that is not the essence of God, would be a kind of demiurge, something neither God nor creature; or there would be two Gods, an essence and an energy. From one point of view, then, the Hesychast controversy may be conceived as an issue between Greek Platonist philosophy and Latin rationalist Aristoteleanism. It is significant that the Hesychasts were all vehemently Byzantine and bitter opponents of the West, while their opponents were all latinizers, eager for reunion.

II. HISTORY OF THE CONTROVERSY.—The leaders of either side were Palamas the Hesychast and Barlaam, from whom the other side is often called that of the Barlaamites. Gregory Palamas (d. about 1360; Krumbacher, *op. cit.*, 103-105) was a monk at Athos, then from 1349 Bishop of Thessalonica. He wrote no less than sixty works in defence of Hesychasm, one especially against the Scholastic identification of God's essence and attributes. He found fifty heresies in his opponents. He was also vehemently anti-Latin, wrote a refutation of John Beccus's latinizing work, and did his duty by Orthodoxy in supplying the usual treatise against the double procession of the Holy Ghost. Naturally his opponents call him a deist, while he considers them Arians, Sabellians, and Epicureans. Barlaam (Krumbacher, *op. cit.*, 100), his chief adversary, was a monk from Calabria who came to Constantinople in the reign of Andronicus III (1328-1341). At first he opposed the Latins, but eventually he wrote in defence of reunion, of the *Filioque*, and the papal primacy. In 1348 he left Constantinople and became Bishop of Gerace in Calabria. The date of his death is unknown. It was from this Barlaam that Petrarch learned Greek. Gregory Akindynos, a friend and contemporary of Barlaam, also a monk, wrote a work against the Hesychasts "*Ἐπεὶ οὐσίας καὶ ἐνεργείας*," in six books, of which the first two are nothing but translations from St. Thomas's "*Summa contra Gentes*". Nicophorus Gregoras (*ib.*, 101, 293-298), the historian (d. after 1359), was also one of the chief opponents of Hesychasm. He came to the emperor's court as a young man, was educated by the most famous scholars of that time the

Patriarch John Glycus (John XIII, 1316–1320), and the Great Logothete Theodorus Metochites, and became himself perhaps the most distinguished man of learning in the Greek world of the fourteenth century. He wrote theology, philosophy, astronomy, history, rhetoric, poetry, and grammar. His best-known work is a Roman history in thirty-seven books, describing the period from 1204 to 1329. In the midst of so many occupations he made the acquaintance of Barlaam, and entered the lists with him against Palamas and the Hesychasts. He wrote a number of controversial works to confute these people, and tells the story of the quarrel in his history (books XV, XVIII, XIX, XXII) with much animus against them. Like most of the anti-Hesychasts Gregoras was a pronounced latinizer. At the time when Barlaam was opposed to the Latins Gregoras wrote against him; with Palamas too he discussed the question of reunion with the West in a friendly and conciliatory way. Eventually Gregoras fell into disfavour with the Court and disappeared.

The monks of Athos might have contemplated their uncreated light without attracting much attention, had not the question become mixed up with the unending Latin controversy and with political issues. They had already practised their system of auto-suggestion for a long time when Barlaam, arriving at Constantinople, began to denounce it as superstitious and absurd. There had been some opposition before. People had heard Palamas boast that he could see the light of God with his eyes, and had accused him of blasphemy; but, since Isaias, the Patriarch of Constantinople (1323–1334), was himself a monk of Athos and a disciple of Palamas, the opposition had not been very successful. However, from the year 1339, when Barlaam arrived in the city, began the really serious quarrel which for twenty years was to rend Orthodox theology, cause enormous commotion at Constantinople, Athos, and all the great centres of the Orthodox world, and lead even to active persecution. Barlaam, like all opponents of Hesychasm, based his objections mainly on a vehement denial of the possibility of an uncreated light that was yet not God's essence; throughout the controversy he and his party used the arguments they had learned in the West to show the impossibility of such distinctions in God. He also made bitter mockery of what he calls the *'Ομφαλοψυχία* of the monks who sit with bent heads gazing at their own person, and brought various accusations against Palamas's life and manners. After Isaias, John XIV (John Apenus, 1334–47) had become patriarch. Barlaam demanded of him a synod to settle the question. For a time the patriarch refused to take the matter so seriously; eventually, since the quarrel became more and more bitter, in 1341 the first synod of the Hesychast question was summoned at Constantinople. The emperor (Andronicus III) presided. This first synod considered only two questions: (1) Whether the light of Thabor (that of the Transfiguration) was created or not; (2) a certain prayer used by Hesychasts, stated by Barlaam to contain ditheism. The enormous influence of the monks at Court and the want of energy of the patriarch (who was in his heart on Barlaam's side) made this first synod a victory for Hesychasm. In both points the monks and their theory were approved, and Barlaam was forced to withdraw his accusations. Soon afterwards he left Constantinople forever; his cause was taken up by Gregory Akindynos. The emperor died a few days after the synod. John VI, Cantacuzenus (1341–1355), who gradually usurped the imperial power, first as rival, then as fellow-emperor, of Andronicus's son John V. Palaeologus (1341–76), was always a friend of Palamas and the Hesychast monks. The second Hesychast synod under Cantacuzenus, but without the patriarch, condemned Akindynos and introduced a new element by representing him and all its oppo-

nents as latinizers who were trying to destroy Orthodoxy.

In 1345 the patriarch summoned the third synod. By now he had definitely made up his mind to withstand the Hesychasts. This synod then, under his direction, excommunicated Palamas and Isidore Buchiras, Bishop elect of Monembasia in Thessaly, one of Palamas's disciples. Buchiras and Palamas withdrew their heresy outwardly, and waited for a better chance. The chance came in 1347. By this time their protector John Cantacuzenus had entered Constantinople in triumph and had been crowned emperor. The other party (that of the child-emperor John Palaeologus and of his mother Ann of Savoy) was now helpless. The controversy from this time is complicated by a political issue. Cantacuzenus and his friends were Hesychasts; the party of the Palaeologi were Barlaamites. As long as Cantacuzenus triumphed the Hesychasts triumphed with him; by the time he fell Hesychasm had become so much identified with the cause of the Orthodox Church against the Latins that the other side never succeeded in ousting it. On 2 February, 1347, the fourth Hesychast synod was held. It deposed the patriarch, John XIV, and excommunicated Akindynos. Isidore Buchiras, who had been excommunicated by the third synod, was now made patriarch (Isidore I, 1347–1349). In the same year (1347) the Barlaamites held the fifth synod, refusing to acknowledge Isidore and excommunicating Palamas. From this time Nicephorus Gregoras becomes the chief opponent of Hesychasm. Isidore I died in 1349: the Hesychasts replaced him by one of their monks, Callistus I (1350–1354). In 1351 the sixth synod met in the Blachernæ palace under Cantacuzenus. Gregoras defended his views boldly and skillfully, but again the Hesychasts had it all their own way, deposed Barlaamite bishops, and used violence against their own opponents. In this synod six questions about God's essence and attributes were answered, all in the Hesychast sense, while Palamas was declared to be without any doubt orthodox and unimpeachable. The synod finally published, in defence of Palamas and his views, a decree (*Τόμος*) which eventually was looked upon as an authentic declaration of the Orthodox Church. From this time Hesychasm may be said to have defeated all opposition. Gregoras was arrested and kept in custody in his own house. He was not set free till Cantacuzenus (with whom rests the eternal disgrace of having first invited the Turks to Europe) was deposed and the Palaeologi triumphed in 1354. Cantacuzenus then withdrew to Athos, became a monk himself, taking the name of Joasaph, and spent the rest of his life writing a history of his own times and contemplating the uncreated light. This history in four books (in Migne, P. G., CLIII, CLIV) covers the period from 1320 to 1356, and tells the whole story of the Hesychast controversy. Being written by a violent partisan, it forms an interesting contrast to that of Gregoras.

After the deposition of Cantacuzenus, the Barlaamites held an anti-Hesychast synod at Ephesus; but the patriarchs of Constantinople and the great mass of the people had by now become too firmly persuaded that the cause of Hesychasm was that of Orthodoxy. To oppose it was to incur the guilt of latinizing; so even Cantacuzenus's fall was not enough to turn the scale. Hesychasm from this time is always triumphant. About 1360 Palamas died. In 1368 the seventh Synod of Constantinople (concerning this matter) under the Patriarch Philotheus (1364–1376: Callistus's successor) excommunicated the Barlaamite monk Prochorus Cydonius, confirmed the "Tomus" of 1351 as a "Faultless Canon of the true faith of Christians", and canonized Palamas as a Father and Doctor of the Church. So by the end of the fourteenth century Hesychasm had become a dogma of the Orthodox Church. It is so still. The interest in

the question gradually died out, but the Orthodox still maintain the Tomus of 1351 as binding; the real distinction between God's essence and operation remains one more principle, though it is rarely insisted on now, in which the Orthodox differ from Catholics. Gregory Palamas is a saint to them. They keep his feast on the second Sunday of Lent and again on 14 November (Nilles, "Kalendarium manuale", Innsbruck, 1897, II, 124-125). The office for this feast was composed by the Patriarch Philotheus. In the nineteenth century there was among the Orthodox a certain revival of interest in the question, partly historical, but also speculative and philosophical. Nicodemus, a monk of Athos, defended the Hesychasts in his *Ἐγχειρίδιον συμβουλευτικόν* (1801); Eugenius Bulgariis and others, especially Athos monks, have again discussed this old controversy; it is always evident that their theology still stands by the Tomus of 1351, and still maintains the distinction between the Divine essence and energy.

There was a very faint echo of Hesychasm in the West. Latin theology on the whole was too deeply impregnated with the Aristotelean Scholastic system to tolerate a theory that opposed its very foundation. That all created beings are composed of *actus* and *potentia*, that God alone is *actus purus*, simple as He is infinite—this is the root of all Scholastic natural theology. Nevertheless one or two Latins seem to have had ideas similar to Hesychasm. Gilbertus Porretanus (de la Porrée, d. 1154) is quoted as having said that the Divine essence is not God—implying some kind of real distinction; John of Varennes, a hermit in the Diocese of Reims (c. 1396), said that the Apostles at the Transfiguration had seen the Divine essence as clearly as it is seen in heaven. About the same time John of Brescain made a proposition: *Creatam lucem infinitam et immensam esse*. But these isolated opinions formed no school. We know of them chiefly through the indignant condemnations they at once provoked. St. Bernard wrote to refute Gilbert de la Porrée; the University of Paris and the legate Odo condemned John of Brescain's proposition. Hesychasm has never had a party among Catholics. In the Orthodox Church the controversy, waged furiously just at the time when the enemies of the empire were finally overturning it and unity among its last defenders was the most crying need, is a significant witness of the decay of a lost cause.

I. *Sources*: The chief sources for the whole story are NIKEPHOROS GREGORAS, *Ῥωμαϊκὴ ἱστορία*, ed. by SCHOPEN in 2 vols. (Bonn, 1829-1830), MIGNÉ, *P. G.*, CXLVIII-CXLIX; JOHN VI. KANTAKUZENOS, *ἱστορία*, ed. SCHOPEN in 3 vols. (Bonn, 1828-1832); and in *P. G.*, CLIII-CLIV. The published works of PALAMAS are in *P. G.*, CL-CLII; those of BARLAAM in *P. G.*, CLI; of AKINDYNOS, *ib.*, CLI. KYDONES, *Adv. Greg. Palam.* in ARCDIUS, *Opusc. aurea theol.* (Rome, 1870). Further bibliography and accounts of the various writers who took part in this controversy in KRUMBACHER, *Byzantinische Litteratur* (2nd ed., Munich, 1897), 100-06, 293-300, etc.

Jahrh.* (Vienna, 1874); HOLL, *Enthusiasmus und Bussgewalt bei dem griechischen Mönchtum* (1898); ENGELHART, *Die Arsenier und Hesychasten* in *Zeitschr. f. histor. Theologie*, VIII (1838), 48 sqq.; MIKLOSHICH AND MÜLLER, *Acta patriarchatus Constantinop.* (Vienna, 1860).

ADRIAN FORTESCUE.

Hesychius of Alexandria, grammarian and lexicographer; of uncertain date, but assigned by most authorities to the later fourth or earlier fifth century. We have no information whatever about him, his parentage, or his life; beyond what can be learned from the epistolary preface to his Lexicon. This purports to be written by "Hesychius of Alexandria, Grammarian, to his friend Eulogius": its authenticity was needlessly questioned by Valckenaer. It tells us that the author bases his work on that of Diogenianus (probably Diogenianus of Heraclea, who in Hadrian's reign composed one of the successive anthologies of Greek minor poetry which are imbedded

in the "Anthologia Palatina"), who first digested into a single lexicon the various dictionaries of Homeric, comic, tragic, lyric, and oratorical Greek, adding also the vocabularies of medicine and history. The letter ends with "I pray to God that you may in health and well-being enjoy the use of this book"; but Hesychius is commonly held to have been a pagan. The work has certainly not come down to us in its original form: it contains biblical and ecclesiastical glosses, of which the preface gives no hint. It is generally agreed that these are a later interpolation; and there is no good ground for identifying this Hesychius (as Fabricius did) with his namesakes, a third-century bishop and a translator of the Scriptures (Bardenheuer, tr. Shahan, 160). The classical part of the Lexicon is of the greatest importance to Greek scholars, not only as a rich vocabulary of otherwise unknown words and rare usages, but as a mine of information about ancient *Realien* and lost authors; few instruments have been equally serviceable for the critical emendation of Greek poetry texts.

The disturbance in that alphabetical order which Hesychius (in the preface) says he carefully followed, is only one of many evidences that the book has been altered in the process of tradition: Ernesti held that the true author lived in the first century, and that his work, excerpted by Diogenianus, was roughly brought up to date by the interpolated additions of an otherwise unknown Hesychius; others, that Hesychius's book was "contaminated" with a lexicon attributed to St. Cyril of Alexandria. Whoever it may have been who added the "Glossæ Sacræ" to Hesychius, they have received much separate attention. They derive, says Ernesti, from three sources: (1) the *parallelism* of Scripture, i. e. a word is glossed by the correlative word in the parallel half-verse; (2) the synonym, or explanatory doublets of the sacred writer; (3) the early commentators, such as Aquila, Symmachus, Theodotion. The difficulties of exploring Hesychius's sources and utilizing his stores are aggravated by the bad state of the text: the Lexicon, first printed by Musurus (fol. ap. Aldum) at Venice in 1514, had only been transmitted in a single deeply-corrupt fifteenth-century codex.

The standard complete edition is by SCHMIDT (Jena, 1857); of the *Glossæ Sacræ*, by ERNESTI (Leipzig, 1785). Discussions and elucidations in BENTLEY, *Epistole*; VALCKENAER, *Opuscula*, i, 175; also MÜLLER AND DONALDSON, *Literature of Ancient Greece*, iii, 384; CROISSET, *Hist. de la litt. Gr.*, V, 975; and in general, PAULY, *Real-Encyclopædie*, s. v.

J. S. PHILLIMORE.

Hesychius of Jerusalem, presbyter and exegete, probably of the fifth century. Nothing certain is known as to the dates of his birth and death (433?), or, indeed concerning the events of his life. Bearing as he does the title *τοῦ πρεσβυτέρου*, he is not to be confused with Bishop Hesychius of Jerusalem, a contemporary of Gregory the Great. A monograph on this brilliant scholar, whose fame has been so long obscured, would fill one of the most urgent needs of patristic theology.

The writings of Hesychius of Jerusalem have been in part lost, in part handed down and edited as the work of other authors, and some are still buried in libraries in MS. Whoever would collect and arrange the fragments of Hesychius which have come down to us must go back to the MSS.: for in the last edition of the Fathers (*P. G.*, XCIII, 787-1560) the works of various writers named Hesychius are thrown together without regard for order under the heading "Hesychius, Presbyter of Jerusalem". About half of the matter under "Hesychius" must be discarded, namely, the commentary on Leviticus (787-1180) which is extant only in Latin and is unauthentic, being based on the Vulgate text rather than the Septuagint, and therefore the work of a later Latin (Isychiunt). The collection of ascetic

maxims (1479-1544) is the work of Hesychius of Sinai (q. v.), and not of his namesake of Jerusalem. Neither are all the homilies (1449-80) as certainly the work of Hesychius of Jerusalem as the sixth, the authenticity of which is supported by an ancient Escorial MS. (φ, III, 20, ssec. 9). Unfortunately, this collection does not include the homily on Bethlehem from the Turin MS., C IV⁴, ssec. 12-13, a gem of religious rhetoric worthy of furnishing the lessons for an Office of the Church. Subjoined to the "Legend of the Martyrdom of St. Longinus" (P. G., XCIII, 1545-60) is the testimony of "Hesychius Presbyter of Jerusalem" himself, that he had found the MS. in the library of the Holy Sepulchre at Jerusalem.

Method and Importance of his Exegetical Writings.—Judging from the extant fragments, Hesychius must have been a very prolific writer on Biblical, particularly Old-Testament, exegetics. The notice in the Greek Menology under 28 March, in which mention is made of the exposition of the entire Scriptures, can refer to none other than Hesychius of Jerusalem. In hermeneutics he adheres closely to the allegorico-mystical method of the Alexandrines; he finds in every sentence of the Bible a mystery of dogma, and reads into texts of the Old Testament the whole complexus of ideas in the New. He follows Origen in choosing for the enunciative form of exegesis the shortest possible marginal gloss (*παρὰθέρεις*). His comment on Is., xix, 1, "the Lord will ascend upon a swift cloud, and will enter into Egypt", is "Christ in the arms of the Virgin". Water represents always to him "the mystical water" (of baptism), and bread, "the mystical table" (of the Eucharist). It is this hyper-allegorical and glossarial method which constitutes the peculiar characteristic of his exegesis, and proves a valuable help to the literary critic in distinguishing authentic Hesychiana from the unauthentic. The anti-Semitic tone of many *scholia* may find an explanation in local conditions; likewise geographical and topographical allusions to the holy places of Palestine would be expected of an exegete living at Jerusalem. The importance of Hesychius for textual criticism lies in the fact that many of his paraphrases echo the wording of his exemplar, and still more in his frequent citation of variants from other columns of the Hexapla or Tetrapla, particularly readings of Symmachus, whereby he has saved many precious texts. He is likewise of importance in Biblical stichometry. His "Capitula" (P. G., XCIII, 1345-86) and commentaries show the early Christian division into chapters of at least the Twelve Minor Prophets and Isaias, which corresponds to the inner sequence of ideas of the respective books far better than the modern division. In the case of certain separate books, Hesychius has inaugurated an original stichic division of the Sacred Text—for the "citizen of the Holy City" (*ἀγιοπολίτης*) cited in the oldest MSS. of catenæ of the Psalms, and the Canticles, is none other than Hesychius of Jerusalem. It has been discovered by Mercati that in some MSS. the initial letter of each division according to Hesychius is indicated in colour. Hesychius must have been generally known as an authority, for he is quoted simply as Hagiopolites, or, elsewhere, by the equally laconic expression "him of Jerusalem" (*τοῦ Ἱεροσολύμων*).

Separate Commentaries.—It is certain that Hesychius was the author of consecutive commentaries on the Psalms, the Canticle of Canticles, the Twelve Minor Prophets, Isaias, and Luke (Chapter 1?). His name occurs in catenæ in connexion with an occasional *scholium* to texts from other books (Genesis, I and II Kings, Ezechiel, Daniel, Matthew, John, Acts, the Catholic Epistles), which, however, apart from the question of their authenticity, are not necessarily taken from complete commentaries on the respective books. Likewise the citations from Hesychius in ascetic florilegia, as in Bodl. Barocc. 143,

ssec. 12, are taken from exegetical works. The most perplexing problem is the connexion of Hesychius with the commentary on the Psalms attributed to him. The numerous citations from Hesychius in catenæ of the Psalms and the exegetical works on the Psalms handed down over his name, particularly in Oxford and Venice MSS., are so widely at variance with each other as to preclude any question of mere variations in different transcriptions of one original; either Hesychius was the author of several commentaries on the Psalms or the above-mentioned commentaries are to be attributed to several authors named Hesychius. As a matter of fact Spanish MSS. clearly distinguish between Hesychius the Monk, author of commentaries on the Psalms and Canticles, and Hesychius the Priest. In 1900 the present writer explained the commentary on the Psalms included among the works of St. Athanasius (P. G., XXVII, 649-1344) as the glossary of Hesychius issued over a pseudonym. This hypothesis has since been confirmed by further evidence (Escorial ψ, I, 2, ssec. 12).

A complete commentary of Hesychius on the Canticles of the Old and New Testament, which is known to have constituted a distinct book in the early Christian Bible, is preserved in MS.; any edition of this must be based on the Bodl. Miscell., 5, ssec. 1. Another codex which would have been particularly valuable for this edition and for the solution of the Hesychius problem, the Turin MS. B, VII, 30, ssec. 8-9, has unfortunately been destroyed by fire. The Mechitarists of San Lazzaro have in their possession an Armenian commentary on Job over the name of Hesychius of Jerusalem. The *scholia* of Hesychius to the Twelve Minor Prophets are preserved in six MSS. at Rome, Paris, and Moscow, and await publication. His commentary on Isaias was discovered in 1900 in the anonymous marginal notes to an eleventh-century Vatican MS. (Vatic., 347) by the present writer, who published it with a facsimile; the authenticity of these 2860 *scholia* was later confirmed by ninth-century Bodleian MS. (Miscell., 5).

Scholia to the Magnificat, in the catenæ of Canticle and MSS. at Paris and Mount Athos establish beyond doubt the fact that Hesychius left a commentary on the Gospel of St. Luke, at least on the first chapter. For evidence as to the authenticity of the "Harmony of the Gospels" (P. G., XCIII, 1391-1448) the treatise on the Resurrection must first be examined. This is extant in two forms, a longer (under Gregor of Nyssa, in P. G., XLVI, 627-52) and a shorter, the latter an abridgment of the former and as yet unpublished. In tenth-, eleventh-, and twelfth-century MSS. of the former, to "Hesychius Presbyter of Jerusalem" is added the further title "the theologian". The works of Hesychius of Jerusalem so far published are to be found in P. G., XCIII, 787-156 (see also loc. cit., 781-88 for the older literary and historical notices), Faulhaber, "Hesychii Hierosolymitani interpretatio Isaia: prophetæ nunc primum in lucem edita" (Freiburg, 1900), and Jagić, "Ein unedierter griechischer Psalmenkommentar" (Vienna, 1906), also Mercati, "Studi e Testi".

MICHAEL FAULHABER.

Hesychius of Sinai, a priest and monk of the Order of St. Basil in the Thorn-bush (*βάρως*) monastery on Mt. Sinai, and ascetic author of the Byzantine period in literature. Nothing definite is known concerning his career or the exact time at which he lived. Only a few paltry fragments of the literary remains of the almost completely forgotten author have been preserved, and they have still to be collected and separately criticized. In manuscripts, as a rule, he is given

the honorary title of "Our Holy Father" (*τοῦ ὁσίου πατρὸς ἡμῶν Ἡσυχίου πρεσβυτέρου*) and, in cases where the authenticity of this title on a manuscript is certain, it is sufficient to distinguish him from others of the same name, and especially from the celebrated Hesy-chius of Jerusalem (q. v.). Examination of the Bible text on which the treatises of one or the other Hesy-chius are based is just as important a test as this external criterion; thus, Hesy-chius of Sinai in his Bible quotations regularly follows the version of the "Codex Sinaiticus". How much of the literary material in the latest edition of the works of the Fathers (Migne, P. G., XCIII, 787-1560), published without any attempt at critical selection under the title of "Hesy-chius, Presbyter of Jerusalem", should properly be ascribed to Hesy-chius of Sinai, can only be determined by monographic investigation. The pivotal point about which such investigation would turn is a collection of 200 ascetic maxims (*Περὶ νήψεως καὶ ἀρετῆς*, De temperantia et virtute) which Migne, loc. cit. 1479-1544, attributes to Hesy-chius of Jerusalem under a pseudonym, but which should, without doubt, be credited to Hesy-chius of Sinai. For the author of these maxims acknowledges, by a play on words (*ὁ ἡσυχίας φερώνυμος*), that his name is Hesy-chius and that he is a Basilian monk; furthermore a number of manuscripts support this intrinsic evidence (Bodl. Barocc. 118, sæc. XII-XIII; Bodl. Laud. 21, sæc. XIV; Bodl. Canon. 16, sæc. XV; Mus. Brit. Burn. 113, sæc. XV et al.). The text of the Migne edition could be completed and improved to particular advantage from English MSS. (Mus. Brit. Addit. 9347, sæc. XII, and Bodl. Cromwell. 6, sæc. XV). The fact that the maxims are dedicated to a certain Theodulus has given rise in certain manuscripts to the erroneous statement that Theodulus was their author. It cannot be determined here how many of these maxims were derived from older ascetics or how many were adopted by later ones. It is probable that the ascetic and Biblical-ascetic fragments that I have found in Turin Codices (B V 25, sæc. XV, fol. 171-174 and C VI 8, sæc. XIV, fol. 39 verso 41) under the name of "Our Holy Father Hesy-chius" should also be attributed to Hesy-chius of Sinai.

MICHAEL FAULHABER.

Hethites (A. V. HITTITES), one of the many peoples of North-Western Asia, styled *Hittim* in the Hebrew Bible, *Khiti* or *Kheta* on the Egyptian monuments, and *Hatti* in the cuneiform documents. For many centuries the existence of the Hethites was known only from scanty allusions in the Bible. Egyptian and Assyrian documents revealed to the scholars of the latter part of the nineteenth century the power of the Hethite empire, and discoveries now pursued at the very home of this long-forgotten people almost daily supply important new information concerning it, whetting the interest of scholars, and fostering the hope that before long Hethite history will be as well known as that of Egypt and Assyria. In the latter part of the eighteenth century a German traveller had noticed two figures carved on a rock near Ibreez, in the territory of the ancient Lycaonia. Major Fischer rediscovered them in 1838, and made a drawing of the figures and a copy of the two short inscriptions in strange-looking characters which accompanied these figures. But what they were no one could tell at the time. In his travels along the Orontes (1812) Burckhardt had likewise noticed at Hamah, the site of the ancient city of Hamath, a block covered with what appeared to be an inscription, although the characters were unknown. He mentioned this discovery in his "Travels in Syria" (p. 146), without, however, attracting the attention of travellers and Orientalists. Almost sixty years later three other slabs of the same description were found in the same place by Johnson and Jessup; and in 1872 Dr. W.

Wright had the stones removed to the Imperial Museum of Constantinople. The characters carved in relief on the stones were long designated as "Hamathite writing", although as early as 1874 Dr. Wright had suggested that they were of Hethite origin. Comparing the inscriptions of Ibreez with those from Hamah, E. J. Davis noticed that the former were also in the "Hamathite writing". Soon new texts were discovered at Aleppo, Jerabûls, Ninive, Ghiaur-kallesi, Boghaz-Keui, Mount Sipylus, the Pass of Karabel: all presented the same strange hieroglyphic characters, engraved in relief and in *boustrophedon* fashion. When figures accompanied the inscriptions, they likewise bore a striking resemblance to one another: all were clad in a tunic reaching to the knees, were shod with boots with turned-up ends, and wore a high peaked cap. It became certain that these monuments belonged to the Hethite population located by Egyptian and Assyrian inscriptions in the east of Asia Minor. The true home of the Hethite monuments, indeed, extends from the Euphrates to the Halys River; monuments found beyond these limits either mark the site of eccentric colonies, or are memorials of military conquests. This geographical distribution, as well as some of the features noticeable in the figures carved on these monuments, makes it clear that the Hethites must have been originally inhabitants of a cold and mountainous region, and that the high plateaux of Cappadocia should be regarded as their primeval home. Both their own and the Egyptian monuments describe them as ugly in appearance with yellow skins, black hair, receding foreheads, oblique eyes, and protruding upper jaws. The type may still be found in Cappadocia.

As to their language, it may be said, despite the researches of Conder, Sayce, and others, to have so far challenged the patience and genius of Orientalists. The first Hethite texts known were all written in the so-called Hamathite characters; the royal archives discovered since 1905 at Boghaz-Keui, under the auspices of the "Deutsche Orient-Gesellschaft", contain many Hethite texts written in cuneiform characters. It is to be hoped that this will enable scholars to detect the secret of that old language which still lingered in Lycaonia at the time of St. Paul's missionary journeys in these regions. Little likewise is known of the Hethite religion. The special difficulty here arises partly from the syncretic tendencies manifest in the religious development of the ancient peoples in the East, and partly from the scarcity of information bearing on distinctly Hethite worship. Lucian's description of the great temple of Mabog and its worship may contain some features of the worship going on in the older city of Carchemish; but it seems to be a hopeless task to try to trace back these features over a gap of some ten centuries. Owing to the permanence of popular customs in remote country places, and particularly in mountainous regions, less accessible to foreign influence, there is perhaps more reliable information to gather on the primitive Hethite worship from Strabo's description of Cappadocian religious solemnities in classical times (Strabo, XII, ii, 3, 6, 7). The Hethite pantheon is known, however, to a certain extent, from the proper names which quite frequently contain as a constitutive element the title of some deity. Among the divine names most usually employed may be mentioned here: Tarqu, Rho, Sandan, Kheba, Tishûbû, Ma, and Hattû. The compact entered upon by Ramses II and Hattusil suggests the idea that heaven, earth, rivers, mountains, lands, cities, had each its male or female Sutekh, a kind of *genius loci*, like the Aramæan Ba'al or Ba'alath. A treaty between the same Hattusil and the ruler of Mitanni mentioning first deities of Babylonian origin, then others of a more distinctly Hethite character, and lastly some Indo-Persian gods, witnesses to the syncretic character of the Hethite religion as early as

the fourteenth century B. C. Thanks to the Egyptian and Assyrian documents we are in possession of more details concerning the history of the Hethites. At an early date some of their tribes forced their way through the defiles of the Taurus range into Northern Syria and established themselves in the valley of the Orontes: Hamath and Cades (A. V. Kadesh) were very early Hethite cities. Some bands, pursuing their march southwards, settled in the hilly region of Southern Palestine, where they intermingled with the Amorrites, then in possession of the land. Ezechiel, stating that the mother of Jerusalem was a Hethite (an Hittite—A. V., xvi, 3, 45; D. V.: Cethite), very likely refers to an old tradition concerning the origin of the city. At all events, when Abraham came to Chanaan he found a Hethite colony clustered around Hebron (Gen., xxiii, 3; xxvi, 34, etc.). The bulk of the nation established itself in the Naharina (comp. Hebr.: *Aram Naharaim*), between the River Balikh and the Orontes, on the slopes of the Amanus range and in the Cilician plains. This position, between the two foremost empires of the ancient world, namely Chaldee and Egypt, made the territory occupied by the Hethites, on the road followed by the merchants of both nations, one of the richest commercial countries in the East.

But the population was perhaps still more inclined to war than to commerce, and local monuments, no less than Egyptian records, bear witness to the military conquests and the power of the Hethites in the distant regions of Western and Southern Asia Minor. There are some grounds for the belief that certain traditions lingering on in those regions centuries later (origin of the Lydian dynasty, legend of the Amazons) originated in the Hethite conquests, and that we may recognize the swarthy Cappadocian warriors in the *Kḗtριοι* mentioned in *Odyss.*, XI, 516-521. Certain it is, at any rate, that the Troad, Lydia, and the shores of the Cilician Sea acknowledged the Hethite supremacy at the beginning of the eighteenth century B. C.

The Hethites first appear in historical documents at the time of the eighteenth Egyptian dynasty (about 1550 B. C.). Thothmes I, in the first year of his reign, carried his arms to N. Syria and set up his trophies on the banks of the Euphrates, perhaps near Carchemish. His grandson, Thothmes III, was a great warrior. Twice, he tells us, in 1470 and 1463 B. C., the king of the land of the Hethites, "the Greater", paid him tribute. After a signal victory at Megiddo, and the taking of this city, which was the key to the Syrian valleys, Thothmes III repeatedly seized Cades and Carchemish and invaded the Naharina. At his death the Egyptian empire bordered on the land of the Hethites. The successes of the Egyptian armies did not dishearten their sturdy neighbours. Their restless enterprises forced Ramman-Nirari, King of Assyria, to invoke the aid of Thothmes IV against the Hethites of Merash; and the help was apparently given, for an inscription tells us that the first campaign of the Egyptian prince was directed against the Khetas. These, however, with their allies the Minni, the Amurru, the Kasi, and the King of Zinzar, did not cease to press southwards, thereby causing serious alarm to the Egyptian governors. Held in check until the death of Amenhotep III by the King of Mitanni, Dushratti, who had made alliance with the King of Egypt, the Hethites resumed the offensive during the reign of Amenhotep IV. They were led by Etaqqama, son of Sutarna, Prince of Cades, who had formerly warred against them, had been made captive, and, although professing to be still acting on behalf of the pharaoh, had become their warm supporter. Before Etaqqama, Teuwaatti, Arzawya, and Dasa, one by one the Syrian cities and the Egyptian strongholds fell, and Cades on the Orontes, conquered, became for centuries a strong centre of Hethite power. Subbiluliuma, during whose reign the Hethite empire won, by

its military successes, a place of prominence in the Eastern world, is the first great Hethite sovereign named in inscriptions: Carchemish, Tunip, Nii, Hamath, Cades, are mentioned among the principal cities of his empire; the Mitanni, the Arzapi, and other principalities along the Euphrates acknowledged his suzerainty; and Troad, Cilicia, and Lydia owned his sway.

The successors of Amenhotep IV, hampered by the trouble and disorder prevailing at home, were no match for such a powerful neighbour; Ramses I, the founder of the nineteenth dynasty, after an attack, the success of which seems to have been doubtful, was compelled to conclude with Subbiluliuma a treaty which left the Hethites their entire freedom of action. His son and successor, Seti I, attempted to reconquer Syria. At first he was victorious. Marching his armies through Syria as far as the Orontes, he fell suddenly upon Cades which he wrested from the hands of Muttalu. The success of this campaign was, however, by no means decisive, and an honourable peace was concluded with the Hethite ruler, Mursil.

The epoch of Seti's death was one of revolution in the Hethite Government. Muttallu, the son of Mursil, having been murdered, his brother Hattusil was called to the throne (about 1343 B. C.). He at once mustered all his forces against Egypt. The encounter took place near the city of Cades: in a hard-fought battle in which the Egyptian king, surprised from an ambush, hardly escaped, the northern confederacy was defeated and the Hethite ruler sued for peace. The treaty then concluded was, however, but a short truce, and only sixteen years later, the twenty-first year of Ramses, on the twenty-first day of the month Tybi, was peace finally signed between the Egyptian ruler and "the great king of the Hethites". The treaty, the Egyptian text of which has long been known in full, and of which a Babylonian minute was found in 1906 at Boghaz-Keui, was a compact of offensive and defensive alliance between the two powers thus put on a par; this treaty, as well as the marriage of Hattusil's daughter to Ramses in the thirty-fourth year of the latter's reign, shows forcibly the position then attained by the Hethite empire. So powerful a prince indeed was Hattusil that he pretended to interfere in Babylonian politics. An alliance had been entered upon between him and Katakman-Turgu, King of Babylon. At the latter's death Hattusil threatened to sever the alliance if the son of the deceased prince was not given the crown. The peaceful relations of the Hethite empire with its southern neighbour continued during the reign of Ramses' son, Mineptah, the pharaoh of the Exodus; this prince, indeed, soon after his accession, sent corn to the Hethites at a time when Syria was devastated by famine. It is true that Egypt had to repel on its own shores an invasion of the Libyans and other peoples of Asia Minor; but, although these peoples seem to have been vassals to the Hethites, nothing indicates that the latter had any interest in the enterprise. Such was not the case under Ramses III. A formidable confederacy of the nations of the coast and of the islands of the Ægean Sea swept N.-W. Asia, conquered the Hethites and other inland peoples and, swollen by the troops of the conquered kingdoms, fell upon the shores of Egypt. The invading army met with a complete disaster, and, among other details, Ramses III records that the King of the Hethites was captured in the battle. The Hethite empire was no longer a political unity, but had been split into independent states: perhaps some tribes in the far west and the south of Asia Minor had shaken off the Hethite allegiance; however, we learn from Thelath-phalasar I (A. V. Tiglath-pileser) that, towards the end of the twelfth century, the "land of the Hatti" still extended from the Lebanon to the Euphrates and the Black Sea. As early as the close of the four-

teenth century B. C., Hattusil had showed good political foresight in warning the Babylonian king against the progress of Assyria. It was indeed at the hands of the Assyrians that the Hethites were to meet their doom. The first dated mention of the latter in the Assyrian documents is found in the annals of Theglathphalasar I (about 1110 B. C.). In various expeditions against the land of Kummukh (Commagene), he penetrated farther and farther into the Hethite country; but he never succeeded in forcing his way across the fords of the Euphrates: the city of Carchemish, commanding them, compelled his respect.

The two hundred years which followed the death of Theglathphalasar I were for the Assyrian empire a period of decay. The relations of the Hethites with the Israelite kingdom, which, under David and Solomon, rose then to prominence, seem to have been few. David, we are told, had Hethites in his army and in his bodyguard (I Kings, xxvi, 6; II Kings, xi, 6, etc.); these were possibly descendants of the Hethites settled in S. Palestine. Bethsabee, Solomon's mother, perhaps belonged to their race. At any rate, it seems that Adarezer, King of Soba, was endeavouring to extend his possessions at the expense of the Hethites' Syrian dominion (II Kings, viii, 3) when he was smitten by David. It is known also from II Kings, xxiv, 6, that the officers of David went as far as Cades on the Orontes (Hebrew text to be corrected) when they were sent to take the census of Israel. The text of III Kings, x, 28, sq., adds that in Solomon's time Israelite merchants bought horses in Egypt and from the Syrian and Hethite princes. What Adarezer could not effect the rulers of Damascus succeeded in doing; they built up their power partly out of the empire of Solomon and partly out of the Hethite dominion, which betokens that the once unshaken supremacy of Carchemish was apparently on the wane. Of this the inscriptions of Assurnasirpal (885-860) leave no doubt. Renewing the campaigns of Theglathphalasar I against the Eastern Hethite tribes, he succeeded in crossing the Euphrates; Carchemish escaped assault at the hands of the Assyrian conqueror by buying him off at a tremendous price. Continuing his raid westwards, Assurnasirpal appeared before the capital of the Khattinians: like Carchemish, the city bribed him away and induced him to turn towards the Phœnician cities. A few centuries of profitable commercial operations had, it seems, altogether changed the warlike spirit of the once aggressive Hethite race. Year after year Shalmaneser II (860-825)—D. V. Salmanasar—led his armies against the various Hethite states, with the purpose of possessing himself of the high road between Phœnicia and Nimve. The overthrow of the Khattinians finally aroused once more the warlike spirit of the Hethite princes; a league was formed under the leadership of Sangara of Carchemish; but the degenerate Hethites, unable to withstand the Assyrian onslaught, were compelled to purchase peace by the payment of a heavy tribute (855). This victory, breaking the power of the Hethites of Syria, and reducing them to the rank of tributaries, opened to the Assyrians the way to Phœnicia and Palestine. The very next year Shalmaneser came into contact with Damascus and Israel. Carchemish, however, was still in the hands of the Hethites. A period of decadence for the Assyrian empire followed Shalmaneser's death; during this period the mutual relations of the two nations appear to have remained unaltered. But new enemies from the East were pressing close on the land of the Hethites. Vannic inscriptions record the raids of Menuas, King of Dushpas, against the cities of Surisilis and Tarkhigamas, in the territory of the Hethite prince Sadahalis. In another expedition Menuas defeated the King of Gupas and overran the Hethite country as far as Malatiyeh. Menuas's son, Argistis I, again marched his armies in the same direction, conquering

the country along the banks of the Euphrates from Palu to Malatiyeh. The accession of Theglathphalasar III (745) put a stop to the conquests of the Vannic kings; but this meant no respite for the much weakened Hethites; their country indeed was soon again visited by the Assyrian troops, and, in 739, King Pisiris of Carchemish had to pay tribute to the Ninivite ruler. Profiting, it seems, by the political troubles which marked the close of the reign of Shalmaneser IV, Pisiris, with the help of some neighbouring chieftains, declared himself independent. It was, however, of no avail; in 717 Carchemish fell before Sargon, its king was made a prisoner, and its wealth and trade passed into the hands of the Assyrian colonists established there by the conqueror. The fall of the great Hethite capital resounded through the whole Eastern world and found an echo in the prophetic utterances of Isaiahs (x, 9); it marked indeed the final doom of a once powerful empire. Henceforth the Hethites, driven back to their original home in the fastnesses of the Taurus, ceased to be reckoned among the peoples worth retaining the attention of historians.

CHARLES L. SOUVAY.

Hettinger, FRANZ, Catholic theologian; b. 13 January, 1819, at Aschaffenburg; d. 26 January, 1890, at Würzburg. He attended the gymnasium in his native city and afterwards, from 1836 to 1839, the academy in the same city, where he finished philosophy and began theology. As the teaching of the latter science was discontinued in this academy in 1839, he entered the ecclesiastical seminary at Würzburg and continued his studies there from the autumn of 1839 to that of 1841. Acting on the advice of Bishop Georg Anton Stahl of Würzburg, who had taught him Christian doctrine in the gymnasium of Aschaffenburg, and had then been his professor of dogmatic theology at Würzburg until 1840, he went to Rome in the fall of 1841 for a four years' course in the German College. Here he was ordained on 23 September, 1843, by Cardinal Patrizi, and upon the completion of his studies, in 1845, he received the degree of Doctor of Theology. In the first volume of his work, "Aus Welt und Kirche", Hettinger gives a full and interesting account of his student days in Rome.

After his return home, he was made chaplain at Alzenau, 3 October, 1845. On 25 October, 1847, he was appointed assistant, and on 20 May, 1852, sub-regent, in the ecclesiastical seminary of Würzburg. On 1 June, 1856, he became extraordinary professor, and on 16 May, 1857, ordinary professor, of patrology and propædeutics in the University of Würzburg. He took up the teaching of apologetics and homiletics, with the direction of the homiletic seminary, on 1 January, 1867. From 1871 he lectured on dogmatic theology in the place of Denzinger, whose health had failed, and after the latter's death, he became ordinary professor of dogmatic theology (16 Dec., 1884). In 1859 he received the honorary degree of Doctor of Philosophy from the philosophical faculty of Würzburg. Twice, 1862-63 and 1867-68, he was rector

of the university. Hettinger and his colleagues, Hergenröther and Denzinger, formed a brilliant constellation to which the theological faculty of Würzburg owed the high repute which it enjoyed for many years. Hettinger's merits were also recognized abroad. He was made an honorary member of the college of doctors of the theological faculty of the University of Vienna in 1866, honorary doctor of theology of Louvain in 1884, and, in 1885, honorary member of the *Academia Religionis Catholicae* of Rome. He was called to Rome with Hergenröther in 1868 to assist in the preliminary work of the Vatican Council, and appointed consultor to the theologico-dogmatic commission. On 21 November, 1879, he was appointed a domestic prelate by Leo XIII.

With the qualities of a distinguished scholar of wide culture, of a clear and penetrating thinker, and of an enthusiastic teacher singularly fitted for academic instruction, Hettinger joined the brilliant gifts of a classic writer. His famous masterpiece, the "Apologie des Christenthums", was published in 2 vols. in 5 parts (Freiburg im Br., 1863-67; 2nd ed., 1865-67; 3rd ed., 1867-69; 4th ed., 1871-73; 5th ed., 1875-80; 6th ed., 1885-87). After the death of Hettinger, his pupil, Professor Eugen Müller, of Strasburg, prepared the further editions in 5 vols.; 7th ed., 1895-98; 8th ed., 1899-1900; 9th ed., 1906-8. It was translated into French, English, Portuguese, and Spanish. This work was not intended for theologians alone, but also for circulation among people of culture generally. It is one of the most important productions of apologetic literature, on account of the richness of its content and its thoroughness of argument, combined with classic clearness and beauty of language and exposition, even in its most technical and complicated passages. This was followed by the more strictly scientific "Lehrbuch der Fundamental-Theologie oder Apologetik" (2 parts, Freiburg, 1879; 2nd ed. in 1 vol., 1888). If we except the "Apologie des Christenthums", the beautiful work "Aus Welt und Kirche; Bilder und Skizzen" has had the widest circulation of any of Hettinger's writings (2 vols., Freiburg, 1885; 2nd ed., 1887; 3rd ed., 1893; 4th ed., 1897; 5th ed., 1902). It was the fruit of his repeated sojourns in Italy, and particularly Rome, and of his other vacation trips through various parts of Germany, Austria (especially Tyrol), Switzerland, and France. Some of the sketches of travel from which this work was compiled appeared first in various issues of the "Historisch-politische Blätter" (1874-84). His long and intimate study of Dante inspired the following productions: "Grundidee und Charakter der göttlichen Komödie von Dante Alighieri" (Bonn, 1876); "Die Theologie der göttlichen Komödie des Dante Alighieri in ihren Grundzügen dargestellt" (Cologne, 1879); "Die göttliche Komödie des Dante Alighieri nach ihrem wesentlichen Inhalt und Charakter dargestellt. Ein Beitrag zu deren Würdigung und Verständniss" (Freiburg, 1880; 2nd ed., 1889, tr. by Father Sebastian Bowden as "Dante's Divina Commedia, Its Scope and Value", London, 1887); "De theologiae speculativae ac mysticae connubio in Dantis praesertim trilogia" (Würzburg, 1882); "Dante und Beatrice" (Frankfort, 1883); "Dantes Geistesgang" (Cologne, 1888). To the domain of practical theology belong the two following excellent and invaluable works, which were the last written by Hettinger: "Aphorismen über Predigt und Prediger" (Freiburg, 1888; 2nd ed., edited by P. Hüls, 1907), and "Timotheus. Briefe an einen jungen Theologen" (Freiburg, 1890; the following editions prepared by Albert Ehrhard: 2nd ed., 1897; 3rd ed., 1909; also tr. into Spanish and English, Freiburg, 1901 and 1902).

Of Hettinger's lesser writings there remain to be mentioned: "Das Priestertum der katholischen Kirche. Primizpredigten" (Ratisbon, 1851; 2nd ed.

edited by Eugen Müller, 1897); "Die kirchlichen und sozialen Zustände von Paris" (Mainz, 1852); "Di Idee der geistlichen Übungen nach dem Plane de hl. Ignatius von Loyola" (Ratisbon, 1853; 2nd ed. prepared by Rudolf Handmann, S.J., 1908); "Herr den du liebst, der ist krank. Ein Kranken- und Trostbuch" (Würzburg, 1855, 3rd ed., 1878; 5th ed., 1904); "Die Liturgie der Kirche und die lateinische Sprache" (Würzburg, 1856); "Der Organismus der Universitätswissenschaften und die Stellung der Theologie in demselben" (rectoral discourse, Würzburg, 1862); "Die Kunst im Christenthum" (rectoral discourse Würzburg, 1867); "Die kirchliche Vollgewalt des apostolischen Stuhles" (Freiburg, 1873; 2nd ed., 1887); "Der kleine Kempis, Brosamen aus den meist unbekanntenen Schriften des Thomas von Kempis" (Freiburg, 1874; 2nd ed., 1900); "David Friedrich Strauss. Ein Lebens- und Literaturbild" (Freiburg, 1875); "Thomas von Aquin und die europäische Civilisation" (Frankfort, 1880); "Die 'Krisis des Christenthums', Protestantismus und katholische Kirche" (Freiburg, 1881); "Dreifaches Lehramt. Gedächtnissrede auf Denzinger" (Freiburg, 1883). Numerous treatises and some more considerable essays, which were partly preparations for his great works, were published by Hettinger in various reviews: "Katholische Wochenschrift" (Würzburg, 1853-56); "Katholik" (1860-62); "Chilaneum" (Würzburg, 1862-69); "Oesterreichische Vierteljahresschrift für katholische Theologie" (1865); "Historisch-politische Blätter" (1874-90); "Theologisch-praktische Quartalschrift" (Linz, 1881-87, 1889-90). "Gutachten der theologischen Facultät der k. Julius-Maximilians-Universität in Würzburg über fünf ihr vorgelegte Fragen das bevorstehende ökumenische Concil in Rom betreffend" (printed in "Chilaneum", New Series, Vol. II, 1869, pp. 258-307; and separately, Würzburg, 1870) was written jointly by Hettinger and Hergenröther, the former being the author of the parts concerning dogma, and the latter, of the historico-canonical matter.

FRIEDRICH LAUCHERT.

Heude, PIERRE, missionary to China and zoologist; b. at Fougères, in the Department of Ille-et-Vilaine, France, 25 June, 1836; d. in the Jesuit college at Zi-ka-wei, near Shanghai, 3 January, 1902. Heude entered the Society in 1856 and was ordained to the priesthood in 1867. He went in 1868 to China, where he was destined to accomplish most of his scientific work. As a boy he had secured a manual of botany and eagerly studied its secrets. Even after his arrival in China he continued his botanical researches, but soon turned to zoology, in which for more than thirty years he was to labour with admirable and unflinching zeal. His first step was to travel through middle and eastern China, chiefly by water routes, between 1868 and 1881, his chief subjects of investigation then being the fresh-water molluscs of those regions. The results of these researches are to be found in "Conchyliologie fluviatile de la province de Nanking et de la Chine centrale" (Paris, 1876-85), which appeared in ten numbers. It contained eighty plates which made known numerous new species and received high commendation from the scientific colleagues of the author. To this day the most important work on the land molluscs of China is Heude's treatise: "Notes sur les mollusques terrestres de la vallée du Fleuve Bleu" (188 pages of text and 32 plates). This essay may be found in the first volume of the "Mémoires concernant

l'histoire naturelle de l'Empire Chinois" (Shanghai, Imprimerie de la Mission Catholique), founded by the Jesuits of Zi-ka-wei in 1882. Of these "Mémoires" there had appeared at the time of Heude's death four volumes, of four numbers each, and the first number of volume V, containing in all more than 800 pages and, in round numbers, 200 illustrations and plates, partly coloured, in royal folio. There is in the first volume a short article by P. C. Rathouis; the rest is due to the pen of Father Heude, who by this time had taken up the study of mammals. He had in the meanwhile (1881-83) founded, with the co-operation of a number of missionaries, a museum in Zi-ka-wei for the natural history of Eastern Asia, and had visited Europe to study the great museums of natural history in Paris, London, Antwerp, and Leyden.

Henceforth he directed his studies particularly to the systematic and geographical propagation of Eastern Asiatic species of mammals, as well as to a comparative morphology of classes and family groups according to tooth-formation and to skeleton. His fitness for this work arose from an extremely keen eye, an accurate memory, and the enormous wealth of material which he partly accumulated in the course of his earlier travels, partly found in the museum of Zi-ka-wei, and partly ferreted out in new expeditions which he undertook in all directions. These expeditions covered chiefly the years from 1892 to 1900. They took him to the Philippines (which he visited three times), to Singapore, Batavia, the Celebes, the Moluccas, New Guinea, Japan, Vladivostock, Cochinchina, Cambodia, Siam, Tongking. Volumes II to V of the "Mémoires" give the results of these studies in numerous articles which treat practically of all classifications of mammals, notably the "Etudes odontologiques", and, lastly, discuss the tooth-formation of the anthropoid apes and of man. As an investigator in connexion with his morphological treatises, Heude carried on his work with absolute independence of method. He contented himself with the facts before him and sought little assistance from authorities. He did not fear to deduce theoretical conclusions from his own observations, which flatly contradicted the views of other investigators—e. g., Rüttimeyer—consequently, he was drawn into controversies. Heude fell seriously ill at Tongking in July, 1900 (his travelling diary, which he kept scrupulously up to date, began in November, 1867, and ended 22 July, 1900), and after October, 1900, resided in Zi-ka-wei, where, though in bad health, he continued his scientific work until just before his death.

Etudes, XC (Paris, 1902); *Natur und Offenbarung*, XLVIII (Münster, 1902).

JOSEPH ROMPEL.

Hewett (alias WELDON), JOHN, English martyr, son of William Hewett of York, date of birth unknown; executed at Mile End Green, 5 October, 1588. The two names Hewett and Weldon gave rise to some confusion, and Challoner in his "Memoirs", in addition to his sketch of "John Hewit", records under the same date one John Weldon "priest of the College of Douay according to Champney and Molanus". That but one martyr is referred to is proved by Law in "Martyrs of the Year of the Armada" (The Month, XVI, 3rd ser., 71-85), chiefly on the testimony of a certain tract dated 24 Oct., 1588, entitled: "A True Report of the inditement, arraignment, conviction, condemnation, and Execution of John Weldon, William Hartley, and Robert Sutton; Who suffered for high Treason, in several places, about the Citie of London, on Saturday the fifth of October, Anno 1588. With the Speeches, which passed between a learned Preacher and them: Faithfullie collected, even in the same wordes, as neere as might be remembered. By one of credit, that was present at the same" (London, 1588). From Caius College, Cambridge, Hewett passed to the English College, Reims, where, in 1583,

he received minor Orders. Later he went to England, where he was captured and banished, reaching Reims once more in November, 1585. After his ordination he returned to England, where he was again captured and exiled, early in 1587, to the Netherlands, this time only to fall into the hands of the Earl of Leicester, who arrested him on a false accusation and sent him back to England for trial. In October, 1588, he was formally arraigned on a charge of obtaining ordination from the See of Rome and entering England to exercise the ministry. He was sentenced to death, and the day following was taken through the streets of London to Mile End Green, where before his execution he held disputes with two preachers, one of whom seems to have been the author of the above-mentioned tract.

CHALLONER, *Memoirs of English Catholics*, I (London, 1878); *Douay Diaries*, ed. KNOX; GILLOW, *Bibl. Dict. Eng. Cath.*

F. M. RUDGE.

Hewit, AUGUSTINE FRANCIS, priest and second Superior General of the Institute of St. Paul the Apostle; b. at Fairfield, Conn., U. S. A., 27 November, 1820; d. in New York, 3 July, 1897. His father was Rev. Nathaniel Hewit, D.D., a prominent Congregationalist minister; and his mother, Rebecca Hillhouse Hewit, was a daughter of Hon. James Hillhouse, United States Senator from Connecticut. He was educated at the Fairfield public school, Phillips (Andover) Academy, and Amherst College, from which he was graduated in 1839. Although strictly educated in the religious sect of his parents, his aversion to its peculiar Calvinistic tenets prevented him from joining their Church until after his graduation from college, when, as he declares, he first learned that "a baptized person may claim the privilege of a Christian, if he is willing to acknowledge and ratify the covenant of which the sacrament is the sign and seal". Shortly after his conversion he began the study of theology at the Congregationalist seminary at East Windsor, Conn. Scarcely had he finished its prescribed course and been licensed to preach when he became convinced that episcopacy is of Divine origin and he entered the Episcopal Church. The Oxford Movement in that Church had already extended to America, and Hewit became one of its most ardent followers. He received the Anglican order of deacon in 1844, but with the expressed condition that he might interpret the Thirty-nine Articles in the sense of "Tract 90". The conversion of Newman in 1845 gradually unsettled his belief in the validity of the claims of Anglicanism, and he made his submission to the Catholic Church, 25 March, 1846. He then studied Catholic theology privately under the direction of Dr. Patrick N. Lynch, afterwards Bishop of Charleston, S. C., and Dr. James A. Corcoran, subsequently professor at Overbrook Seminary, Philadelphia. He was ordained priest on the first anniversary of his profession of faith by Right Rev. Ignatius A. Reynolds, D.D., Bishop of Charleston. He then became a teacher in a collegiate institute founded by Bishop England at Charleston, and assisted Bishop Reynolds in the compilation of Bishop England's works for publication. This occupation called him to Baltimore and Philadelphia, where he resided with Bishop Francis P. Kenrick and became acquainted with the Venerable John Nepomucen Neumann, C. SS. R. Here he was attracted to the Congregation of the Most Holy Redeemer, which he entered in 1849. He made his religious profession 28 Nov., 1850. As a Redemptorist he laboured principally on missions with Fathers Isaac T. Hecker, Clarence A. Walworth, Francis A. Baker, and George Deshon, until with them he was dispensed from his religious vows by a decree of the Roman Congregation of Bishops and Regulars, 6 March, 1858. Under the leadership of Father Hecker all of these priests immediately formed the Institute

of St. Paul the Apostle in New York, with a rule enjoining poverty and obedience without the obligations of the vows. Father Hewit, on account of his rare judgment, learning, and piety, was chosen to draft the first constitution and laws of this new institute, which aims to satisfy the aspirations of clerics who desire to lead an apostolic and religious life in community without assuming the canonical responsibilities of the religious state, strictly so called. As a Paulist, Father Hewit laboured assiduously in the parochial and missionary fields and in the establishment and management of "The Catholic World" magazine. He was a deep student of philosophy, theology, patristic literature, church history, and Scripture, and taught all of these branches to the first novices of the institute. He was also a prolific writer and for twenty years was one of the foremost Catholic apologetists in the United States. In this field he was chiefly noted for his loyalty to the magisterium of the Church and his agreement with the opinions of the most approved theologians. He wrote nothing that could be styled original; he simply aimed to explain and popularize the teaching of the doctors and saints of Holy Church. Most of his articles were published in "The Catholic World" and "The American Catholic Quarterly Review", and a few of them have reappeared in a volume entitled "Problems of the Age with Studies in St. Augustine on Kindred Topics". His most popular book was "The Life of Rev. Francis A. Baker", one of his companions, who died in 1865. "The King's Highway", which he wrote in 1874, is an excellent work to place in the hands of Protestants who are seeking truth from Scripture. Upon the death of Father Hecker (1888), Father Hewit was almost unanimously chosen superior general of the institute and held this office until his death. One of his first acts as superior was to pledge the Paulist community to support the Catholic University at Washington, D. C. St. Thomas College for the education of candidates of the institute was accordingly opened in one of the university buildings in 1889. Under his direction, Rev. Walter Elliott, C. S. P., gave the first regular missions to non-Catholics in the United States, and a new foundation of the institute was established in San Francisco, Cal.

Baker* (New York, 1865); ELLIOTT, *Life of Isaac Thomas Hecker* (New York, 1891); WALWORTH, *The Oxford Movement in America* (New York, 1895).

HENRY H. WYMAN.

Hexaemeron signifies a term of six days, or, technically, the history of the six days' work of creation, as contained in the first chapter of Genesis. The Hexaemeron in its technical sense—the Biblical Hexaemeron—is the subject of the present article. We shall consider: I. TEXT; II. SOURCE; III. MEANING.

I. TEXT OF THE HEXAEMERON.—The Hexaemeron proper deals with the six days of the earth's formation, or the so-called *Second Creation*. In its Biblical setting it is preceded by the account of the *First Creation*, and is followed by the mention of the seventh day, or the *Day of Rest*. Completeness and clearness render it advisable to give the text of both of these additions.

A. *First Creation*.—Verse 1: In the beginning God created heaven, and earth. 2: And the earth was void and empty, and darkness was upon the face of the deep; and the spirit of God moved over the waters.

B. *Second Creation*.—(a) Work of Division.—First Day.—Verse 3: And God said: Be light made. And light was made. 4: And God saw the light that it was good; and he divided the light from the darkness. 5: And he called the light Day, and the darkness Night; and there was evening and morning one day.

Second Day.—Verse 6: And God said: Let there be a firmament made amidst the waters: and let it divide the waters from the waters. 7: And God made a firmament, and divided the waters that were under the firmament, from those that were above the firmament, and it was so. 8: And God called the firmament, Heaven; and the evening and morning were the second day.

Third Day.—Verse 9: God also said: Let the waters that are under the heaven, be gathered together into one place: and let the dry land appear. And it was so done. 10: And God called the dry land, Earth; and the gathering together of the waters, he called Seas. And God saw that it was good.

(b) Work of Adornment.—Verse 11: And he said: Let the earth bring forth the green herb, and such as may seed, and the fruit tree yielding fruit after its kind, which may have seed in itself upon the earth. And it was so done. 12: And the earth brought forth the green herb, and such as yieldeth seed according to its kind, and the tree that beareth fruit, having seed each one according to its kind. And God saw that it was good. 13: And the evening and the morning were the third day.

Fourth Day.—Verse 14: And God said: Let there be lights made in the firmament of heaven, to divide the day and the night, and let them be for signs, and for seasons, and for days and years: 15: To shine in the firmament of heaven, and to give light upon the earth. And it was so done. 16: And God made two great lights: a greater light to rule the day; and a lesser light to rule the night: and the stars. 17: And he set them in the firmament of heaven to shine upon the earth. 18: And to rule the day and the night, and to divide the light and the darkness. And God saw that it was good. 19: And the evening and morning were the fourth day.

Fifth Day.—Verse 20: God also said: Let the waters bring forth the creeping creature having life, and the fowl that may fly over the earth under the firmament of heaven. 21: And God created the great whales, and every living and moving creature, which the waters brought forth, according to their kinds, and every winged fowl according to its kind. And God saw that it was good. 22: And he blessed them, saying: Increase and multiply, and fill the waters of the sea: and let the birds be multiplied upon the earth. 23: And the evening and morning were the fifth day.

Sixth Day.—Verse 24: And God said: Let the earth bring forth the living creature in its kind, cattle and creeping things, and beasts of the earth, according to their kinds. And it was so done. 25: And God made the beasts of the earth according to their kinds, and cattle, and every thing that creepeth on the earth after its kind. And God saw that it was good.

26: And he said: Let us make man to our image and likeness: and let him have dominion over the fishes of the sea, and the fowls of the air, and the beasts, and the whole earth, and every creeping creature that moveth upon the earth. 27: And God created man to his own image: to the image of God he created him: male and female he created them. 28: And God blessed them, saying: Increase and multiply, and fill the earth, and subdue it, and rule over the fishes of the sea, and the fowls of the air, and all living creatures that move upon the earth. 29: And God said: Behold I have given you every herb bearing seed upon the earth, and all trees that have in themselves seed of their own kind, to be your meat: 30: And to all beasts of the earth, and to every fowl of the air, and to all

that move upon the earth, and wherein there is life, that they may have to feed upon. And it was so done. 31: And God saw all the things that he had made, and they were very good. And the evening and morning were the sixth day.

C. *Day of Rest*.—Chapter ii, verse 1: So the heavens and the earth were finished, and all the furniture of them. 2: And on the seventh day God ended his work which he had made: and he rested on the seventh day from all his work which he had done. 3: And he blessed the seventh day, and sanctified it: because in it he had rested from all his work which God created and made.

The work of division separates between light and darkness, between the waters above and the waters below, between the seas and the dry land; the work of adornment covers the earth with vegetation, beautifies the firmament with heavenly bodies, fills the waters with fishes, the air with birds, and the continents with animal life. The third day and the sixth are distinguished by a double work, while each of the other four days has only one production assigned to it. Including the account of what is called the First Creation, God intervenes nine distinct times: (1) He creates matter; (2) He produces light; (3) He develops the firmament (the atmosphere); (4) He raises the continents; (5) He produces vegetation; (6) He causes the heavenly bodies to be visible; (7) He produces aquatic and bird life; (8) He calls into being the land animals; (9) finally, He creates man and makes him ruler of the earth. Hence the suspicion arises that the division of God's creative acts into six days is really a schematism employed to inculcate the importance and the sanctity of the seventh day. A trace of schematism may also be detected in the grouping of the Hexaemeron into the works of division and the works of adornment, in the division of things immovable (first three days) and things that move (second three days), and even in the separate accounts of each day. These latter begin with the respective Divine edict, add in the second place the description of its fulfilment, and end with the Divine approval of the work. On each of the first three days the Creator gives a name to His new production, and He imparts His special blessing at the end of each of the last two days.

II. SOURCE OF THE HEXAEMERON.—The critics no longer ask whether the Biblical cosmogony taught by the Hexaemeron can be reconciled with the results of natural science, but whence the cosmogonic ideas expressed in the Old Testament have been derived. Prescinding from minor variations, the various views as to the source of the Hexaemeron may be reduced to four: (1) The Hebrews borrowed their ideas from others; (2) the Hebrew cosmogony is an independent development of a primitive Semitic myth; (3) the Biblical cosmogony is the resultant of two elements: Divine inspiration and Hebrew folk-lore; (4) the Hexaemeron is derived from Divine Revelation.

(1) *Babylonian Source*.—Professor J. P. Arendzen has treated of the various cosmogonic ideas of the principal ancient and modern nations in the article *COSMOGONY* (Vol. IV, pp. 405 sqq.). For our present purpose it suffices to keep in mind a summary of the Babylonian traditions. The Babylonian account carries us back to a period prior to the existence of any god. The universe begins with a double, purely material, principle, Apsu and Tiamtu, male and female, probably personifying the mass of salt and sweet water, mixed into one. From these sprang first Lahmu and Lahamu, more probably the personifications of dawn and twilight than the monsters and demons with which popular mythology identified them. After a long interval Ansar and Kisar were produced, the personified ideas of the above and the below, or of heaven and earth in their most general acceptation. Another long interval intervened, and then Anu, Bel,

and Ea (the sky, the earth, and the water) sprang forth. Then Ea and his consort Dauke gave birth to Belos or Marduk, the sun-god.

After this the differentiation of the watery All is seriously threatened. Tiamtu creates a set of monsters which endeavour to bring back the original chaos. Who were these monsters? Nightly darkness obscuring and enveloping all nature in the primeval shroud; black mists and vapours of fantastic shape, reuniting at times the waters of heaven and earth; continued rains threatening to deluge the earth and again to convert the celestial and terrestrial waters into the one vast original ocean; the crashing thunder and the fierce tornado, too, were among the offspring and the abettors of Tiamtu in her bitter warfare against the established order. Ansar, the lord of the comprehensive heavens, attempted in vain to overcome these foes; Ea, the deity of the earthly waters, availed still less. Finally, Marduk, the rising sun, is sent. A fearful storm ensues, a battle between Marduk and Tiamtu; but the god of the rising sun dispels the darkness, lifts the vapours in masses on high, subdues the tempest, reopens the space between heaven and earth. According to the personifying ideas of the Babylonian records, Marduk slays Tiamtu, establishes the superiority of Ansar, cleaves Tiamtu in twain, and with one half overshadows the heavens. Then he measures the watery abyss opposite the heavens and finds an edifice like Ishara, which he had built as heaven, and lets Anu, Bel, and Ea occupy their dwellings. Then he embellishes the heavens, prepares places for the great gods, makes the stars, sets the Zodiac, founds a place for Nibiru, fixes the poles, opens the gates provided with locks on either side, causes the moon to shine forth and establishes its laws. The remainder of the Babylonian tablet-series, as first known, is fragmentary, narrating only the creation of plants (possibly) and animals. Any reference to man it may have contained is broken off. But Berosus, priest of Bel, supplies this deficiency. Bel commanded one of the gods to remove his (Bel's) head and mix the earth with the thence-flowing blood, and to form men and beasts capable of enduring the light. The more recently recovered additional fragments of the Babylonian Creation Epos agree with Berosus. "Let me gather my blood", says Marduk, "and let me [take my] bone, let me set up man".

We do not here consider the question of some remote connexion between the Babylonian creation story and the Hexaemeron—which is of course possible. But we ask: can the Babylonian story claim to be the source of the Biblical account? Their difference in form is striking, though not fully decisive. The Babylonian story knows nothing of a division into days, whereas a division into six days forms the whole framework of the Hebrew account. Again, the Babylonian presentation amplifies the plain narrative of creation with the account of the choice and of the deeds of a demiurgus; it is highly figurative and anthropomorphic to the highest degree. The Hexaemeron, on the contrary, is the sober recital, in simple yet stately prose, of the impressive teaching concerning the development of the ordered universe from chaos. This literary excellence of the Hebrew account might be due to the special capability of the inspired writer; if no other considerations prevented it, the Hebrew writer might be thought to have borrowed his material from the Babylonian cosmogony. But the discrepancy of ideas between the profane and the inspired writer prevents such an assumption. The cuneiform record goes back to a time when the gods did not exist: the Hebrew account places God before all creation. The Babylonian cosmogony knows nothing about the production of the original chaotic matter; the Hebrew writer derives even the primeval matter from the action of God. There is no idea of any creative action in the Babylo-

nian tablets; the inspired account opens with God's creative act. The Babylonian record starts with a double material principle; the Hebrew text knows only one God. The Babylonian stories taken together describe the primeval waters as spontaneously generative; the Hebrew account represents the material of the universe as lying waste and lifeless, and as not assuming order or becoming productive of life until the going forth of the Divine command. The Babylonian course of cosmic development is interrupted by the opposition of Tiamtu; the Hebrew Hexaemeron proceeds uninterrupted from the less to the more perfect. According to the Babylonians the world arises out of a struggle between chaos and order, between good and evil; according to the Hebrew conception there is no opposition to the power of the Divine command. In the light of all these discrepancies between the Babylonian and the Hebrew cosmogonies, it is hardly possible to consider the former the source of the latter.

In reply, the critics grant that "the cosmogony of Gen., i, cannot have been simply taken over from the Babylonians"; they add, therefore, the following two modifications: (a) The Hebrew Hexaemeron does not correspond to the first part of the Babylonian account, but only to the formative work ascribed to Marduk. (b) "Circumstanced as the Israelites were, we must allow for the possibility of Phœnician, Egyptian, and Persian, as well as Babylonian influences, and we must not refuse to take a passing glance at cosmogonies of less civilized peoples."

Both of these modifications deserve a passing examination. (a) It is urged that in Marduk's work the primeval light, the primeval flood, the production of heaven by the division of the primeval flood, the order of the creative acts, the Divine admonitions addressed to men after their creation, and the creation by a word are so many points of contact between the Hebrew and the Babylonian cosmogony. But several of these points present a discrepancy rather than a harmony. The critics themselves admit that the parallelism "in the present form of Gen., i, is imperfect"; they admit, too, that the Babylonian record does not mention creation by a word, but they merely suppose that this idea must have been prominent in the full Babylonian epic. It is true that Marduk, being the sun-god, was a god of light, but it is probable that the Babylonian primeval light is represented by Lahmu and Lahamu, the dawn and the twilight; again, Marduk is only a demiurge, a creature, and as such does not resemble the Hebrew God. Moreover, Marduk has no connexion with the primeval waters in the Babylonian account; he is at best the restorer of the order destroyed by Tiamtu. He does not produce heaven, but only reopens the space between heaven and earth. Finally, it would be hard to imagine a greater discrepancy than is found between the Babylonian story of man's creation and the Hebrew account of the event. The source of the Hexaemeron, therefore, is not the Babylonian record of Marduk's work.

(b) The appeal of the critics to Phœnician, Egyptian, and Persian influences is of a rather elusive character. It is hard to see which particular points of these various cosmogonies can be said to have influenced the Hebrew writer. The Phœnicians begin with air moved by a breath of wind, and dark chaos; another account places first time, then desire, then darkness. The union of desire and darkness begets air (representing pure thought) and breath (the prototype of life); from these springs the cosmic egg. Sun, moon, and stars spring from the cosmic egg, and under the influence of light and heat the cosmic development continues, till the present universe is completed. The Egyptian cosmogony does not appear to contain any elements more fit to serve as the source of the Hexaemeron than are the Phœnician

successive evolutions. In the beginning we find the primeval waters called Nun, containing the male and female germs, and informed by the divine proto-soul. The latter felt a desire (personified as the god Thot) for creative activity, the image of the future universe having formed itself in the eyes of Thot. Thot causes a movement in the waters, and the latter differentiate themselves into four pairs of deities, male and female. These cosmogonic gods transform the invisible divine will of Thot into a visible universe. First an egg is formed, out of which arises the god of light, Ra; he is the immediate cause of life in this world. In the subsequent formation of the universe the great Ennead of gods concurs. Variations of this cosmogony are found in the more popular accounts of creation, but they are not such as might be regarded as the source of the Hebrew cosmogony. The Persian cosmogony is really the second phase of the Iranian concept of creation. The great characteristic of Iranian thought is its dualism, which gradually tends towards monism. The early Persian phase dates from the time of the Sassanids, but in its present form is not earlier than the seventh century of the Christian Era. At any rate it seems quite impossible that the well-ordered and clear account of the Hexaemeron should be the outcome of the complicated and obscure presentation of the Avesta and the Pahlavi literature. Generally speaking, the Biblical Hexaemeron cannot be surpassed in grandeur, dignity, and simplicity. To derive it from any of the profane cosmogonies implies a derivation of order from disorder, of beauty from hideousness, of the sublime from the bizarre.

(2) *Primitive Semitic Myth*.—Professor T. K. Cheyne ("Encyclopædia Biblica", art. "Creation", 940) writes: "Either the Hebrew and the Babylonian accounts are independent developments of a primitive Semitic myth, or the Hebrew is borrowed directly or indirectly from the Babylonian." We have already excluded the second alternative. Professor Cheyne himself proves, against Dillmann, that the first alternative is inadmissible. A specifically Hebrew myth ought to be in keeping with the natural surroundings of the people. And, as the human mind naturally pictures to itself the first rise of the world as it still arises every day and every year, a distinctively Hebrew myth of the first rise, or the creation, of the universe should be a picture of the early morning and the springtime in Palestine or the Syro-Arabian desert. The watery chaos of the Hexaemeron, its division into the waters above and the waters below, and its separation between the waters and the dry land, do not agree with the sandy and desert country of the Hebrews. If it could be established that the Babylonian cosmogony is a mere nature myth, the foregoing data would agree with the phenomena of the Babylonian spring and the Babylonian morning. Owing to the heavy rains, the Babylonian plain looks like the sea during the long winter; then the god of the vernal sun, Marduk, brings forth the land anew, dividing the waters of Tiamtu, and sending them partly upwards as clouds, partly downwards to the rivers and canals. Again, the god of the rising sun, Marduk, every day conquers the cosmic sea, Tiamtu, dispelling the chaos of darkness, and dividing the nightly mists and fogs of the plain. A similar origin is quite impossible from a purely Hebrew point of view. While the foregoing considerations are hardly conclusive against those who admit a supernatural element in the formation of the Hebrew cosmogony, they are quite convincing against those who regard the Hebrew views on creation as a mere nature myth.

(3) *Hebrew Folk-Lore*.—Those who regard Hebrew folk-lore as the source of the Hexaemeron point out that each nation has its tradition concerning its early history, or rather concerning men who lived and events which happened before the properly historical age of the nation. Among the Hebrews similar traditions must

have existed, even including views as to the origin of the universe. Combining this fact with the Christian doctrine that the Biblical Hexaemeron is Divinely inspired, we may ask whether its text may not be a snatch of folk-lore, by Divine influence purged of error and of all that is not in keeping with the sacred character of the word of God, and committed to writing in order to teach men that the whole universe is the creature of God, and that the seventh day must be sanctified. In this case, the first chapter of Genesis would not be supernaturally revealed in the strictest sense of the word, but it would be an infallible record of an ancient belief, current among the Hebrews, as to the origin of the world. The sacred writer would have left us an inspired report of a Hebrew tradition just as other inspired writers have left us inspired accounts of certain historical documents. In itself, such a view of Gen., i, does not seem impossible; but, taking the Hexaemeron in the light of Christian tradition, its folk-lore theory of origin seems to be inadmissible. The Fathers, the early ecclesiastical writers, the Scholastics, and the more recent commentators would have been wrong in their endeavours to explain each sentence and even every word of Gen., i, in the same strict way in which they interpret the most sacred passages of Scripture. Their occasional recourse to figure and allegory only shows their conviction that the Hexaemeron contains not only inspired but also strictly revealed truth. A Catholic interpreter can hardly surrender such an uninterrupted Christian tradition in order to make room for a theory which sprang up only towards the end of the nineteenth century. Nor can it be urged that every sentence and every word of the Hebrew tradition concerning the origin of the universe, purified and infallibly preserved to us by inspiration, are equivalent to the strictly revealed passages of Scripture. Such an assumption concerning a profane ancient tradition implies the admission of a greater miracle than is demanded by a supernatural revelation in the strict sense of the word. Besides, the patrons of the folk-lore theory must explain the origin or source of the sublime Hebrew tradition, the existence of which they assume; thus they burden themselves with all the difficulties which are encountered by the critics in their endeavours to explain the natural origin of the creation myths.

Finally, the Biblical Commission in a decree issued 30 June, 1909, denies the existence of any solid foundation for the various exegetical systems devised and defended with a show of science to exclude the literal, historical sense of the first three chapters of Genesis; in particular, it forbids the teaching of the view that the said three chapters of Genesis contain, not accounts of things which have really happened, but either fables derived from mythologies and the cosmogonies of ancient peoples, and by the sacred author expurgated of all error of polytheism and adapted to monotheistic doctrine, or allegories and symbols destitute of any foundation of objective reality and proposed under the form of history to inculcate historical and philosophical truths, or legends partly historical and partly fictitious freely composed for the instruction and edification of minds. The commission bases its prohibition on the character and historical form of the Book of Genesis, the special nexus of the first three chapters with one another and with those that follow, the almost unanimous opinion of the Fathers, and the traditional sense which, transmitted by the people of Israel, the Church has ever held.

(4) *Revelation.*—As no man witnessed the creation and formation of the universe, all human speculations concerning this subject present only conjectures and hypotheses. In this field we obtain certain knowledge only by Divine revelation. Whether God granted this revelation by way of language, or by vision, or by another more intellectual process, we do

not know; all of these methods are possible, and as such they may enter into the exegesis of Gen., i. Again, though very plausible reasons may be advanced for the thesis that God granted such a revelation to the first man, Adam, they are not absolutely convincing; the full instruction as to the origin of the world may have been given at a later period, perhaps only to the inspired writer of the Hexaemeron. If the revelation in question was granted at an earlier time, perhaps immediately after man's creation, its substance may have been preserved by the aid of a special providence among the ancestors of the Hebrews. While the primitive doctrine degenerated among the races into their respective cosmogonies, modified by their various natural surroundings, one race may have kept alive the spark of Divine truth as it had been received from God in the cradle of humanity. Or, if such a purity of doctrine among the Hebrew ancestors appears to be incompatible with the vagaries of other Semitic cosmogonies, it may be assumed that God partially or wholly repeated His primitive revelation, during the time of the Patriarchs, for instance, or of Moses. At any rate, the attitude of Christian tradition towards the Hexaemeron implies its revealed character; hence, whatever theories may be held as to its transmission, its ultimate source is Divine revelation.

III. MEANING OF THE HEXAEMERON.—The genuine meaning of the Hexaemeron is not self-evident. The history of its exegesis shows that even the greatest minds differ in their opinion as to its real meaning. All interpreters begin by feeling the need of an explanation of this passage of the Bible, and all end by differing from all other interpreters. There are hints as to the meaning of Gen., i, in other parts of Scripture. Prov., iii, 19 sq.; viii, 22 sq.; Wisd., ix, 9; Eccles., xxiv, refer to the personal Divine Wisdom what the Hexaemeron attributes to the word of God; Prov., viii, 23 sqq., and Eccles., xxiv, 14, exclude eternal creation. The words of the woman recorded in II Mach., vii, 28, inculcate a production out of nothing. Ps. ciii and Job, xxxviii sq., give a poetical amplification of the Hexaemeron. But these Biblical elucidations cannot claim to be a commentary on Gen., i. Nor has the Church given us any official explanation of the Mosaic account of God's creative work. We must, therefore, rely on the principles of Catholic hermeneutics and the writings of Catholic interpreters for our understanding of the Hexaemeron. It will be found convenient, in our review of the pertinent exegetical work, to distinguish between literal and allegorical explanations.

The legitimate character of this method of proceeding will become clear in the light of the aforesaid decree of 30 June, 1909, issued by the Biblical Commission. After safeguarding the literal, historical sense of the first three chapters of Genesis in as far as they bear on the facts touching the foundations of the Christian religion—e. g., the creation of all things by God at the beginning of time, the special creation of man, the formation of the first woman from the first man, the unity of the human race—the commission lays down several special principles as to the interpretation of the first part of Genesis:—(1) Where the Fathers and Doctors differ in their interpretation, without handing down anything as certain and defined, it is lawful, saving the judgment of the Church and preserving the analogy of faith, for everybody to follow and defend his own prudently adopted opinion. (2) When the expressions themselves manifestly appear to be used improperly, either metaphorically or anthropomorphically, and when either reason prohibits our holding the proper sense, or necessity compels us to set it aside, it is lawful to depart from the proper sense of the words and phrases in the above-mentioned chapters. (3) In the light of the example of the holy Fathers and of the Church herself, pre-

supposing the literal and historical sense, the allegorical and prophetic interpretation of some parts of the said chapters may be wisely and usefully employed. (4) In interpreting the first chapter of Genesis we need not always look for the precision of scientific language, since the sacred writer did not intend to teach in a scientific manner the intimate constitution of visible things and the complete order of creation, but to give his people a proper notion according to the common mode of expression of the time. (5) In the denomination and distinction of the six days mentioned in the first chapter of Genesis the word *yôm* (day) can be taken either in its proper sense, as a natural day, or in an improper sense, for a period of time, and discussion on this point among exegetes is legitimate.

A. *Literal Explanations*.—Literal explanations do not necessarily exclude the admission of any figurative language in the Hexaemeron. The various actions of God, for instance—His commands, His review of His work, His blessings—are expressed in anthropomorphic language. But a literal explanation insists on the literal interpretation of the six days, understanding them as periods corresponding to our spaces of twenty-four hours.

(a) *Non-Concordist Interpretations*.—The author of IV Esdr., vi, 38 sqq., is excessive in the literalness of his interpretation; he also supplements the Biblical account of creation with profane Jewish traditions. Omitting the views of Theophilus of Antioch ("Ad Autol.", II, in P. G., VI, 1069 sqq.), Hippolytus (fragm. in P. G., X, 583 sqq.), Tertullian ("Adv. Hermog.", xix sqq., in P. L., II, 214 sqq.), and Clement of Alexandria ("Strom.", V, xiv, in P. G., IX, 129 sqq.), who have dealt only cursorily with the Hexaemeron problem, we find patrons of the literal interpretation of Gen., i, in such writers as Ephraem (Opp., ed. Rome, 1737, I), Jacob of Edessa (ibid., p. 116), Diodorus of Tarsus (P. G., XXXIII, 1561 sqq.), Theodore of Mopsuestia (P. G., LXVI, 636 sqq.), St. Basil (P. G., XXIX, 17), Gregory of Nyssa ("Hexaemeron" in P. G., XLIV, 68), Philoponus ("De mundi creatione"; ed. Corderius, Vienna, 1630), Gregory the Great ("Mor." in Job, xl, 10, in P. L., LXXXVI, 644 sqq.), the Venerable Bede ("Hexaemeron" in P. L., XCII, 10 sqq.), Rabanus Maurus ("Comm. in Gen." in P. L., CVII, 439), Walafrid ("Glossa ord." in P. L., CXXIII, 67), Hugh of St. Victor ("Annot. in Pentateuch."; "De sacram. fidei" in P. L., CLXXV, 29, and CLXXVI, 173), and other authors of minor importance. During the Scholastic age, too, the literal interpretation of the Hexaemeron was the prevalent one, as may be seen in the great works of Peter Lombard (Sent., II), Bl. Albertus Magnus (Summ. theol., II, tract. XI), and St. Thomas (Summa, I, Q. lxxv sqq.). Most of the subsequent commentators urged the literal sense of the Hexaemeron; this is true even of the early Protestant writers who were always insisting on the primitive text of Scripture. The scientific difficulties implied in the literal interpretation of Gen., i, were explained mainly by recourse to miracle, a method occasionally employed even down to our own day by some theological writers. We call these interpreters *non-Concordist*, not because they do not explain the difficulties in an absolutely possible way, but because they have no regard for the harmony between the inspired record and the laws of nature.

(b) *The Hexaemeron Prior to the Geological Strata*.—In order to avoid any opposition between the Hexaemeron and the data of geology, it has been attempted to place the geological formations after the six days of creation. A. González de Sala (1650), I. Woodward (1659), I. Scheuchzer (1731), and others expressed the opinion that our present geological strata, fossils, etc. are due to the waters of the Deluge. G. Leibniz, A. L. Moro (1740), and others expressed

their belief that the influence of fire and heat had been at least partial causes of the present conformation of the earth's crust and surface. There was a great diversity of opinion as to the real length of time covered by the six days; G. Wiston (1696) maintained that before the rotation of the earth around its axis a day lasted a year; G. L. Buffon (1749) required a hundred thousand years for the Hexaemeron; while I. E. Silberschlag (1780) is content with six natural days. Among more recent writers the following are Diluvialists: C. F. Keil ("Biblicher Commentar", Leipzig, 1866), P. Laurent ("Études géologiques", Paris, 1863), A. Sorignet ("La Cosmogonie de la Bible", etc., Paris, 1854), V. M. Gatti ("Institutiones apologetico-polemice", 1867), I. E. Veith ("Die Anfänge der Menschewelt", Vienna, 1865), A. Bosizio ("Das Hexaemeron und die Geologie", Mainz, 1865; "Die Geologie und die Sündfluth", Mainz, 1877), A. Trissl ("Sündfluth oder Gletscher?" Munich, 1894, and "Das biblische Sechstageswerk", Ratisbon, 1894), G. I. Burg ("Biblische Chronologie", Trier, 1894). But this theory does not fully agree with the Biblical account of the Flood, nor does it satisfy the geologists.

(c) *The Hexaemeron Posterior to the Geological Data*.—Another class of writers, whom we may call Restitutionists, are of the opinion that the Hexaemeron gives the history of the restoration of the earth after it had been so utterly destroyed that its chaos is properly described in Gen., i, 2. The geological data belong, therefore, to the period preceding this destruction of the world. Among the patrons of this theory we may mention: I. G. Rosenmüller ("Antiquissima telluris historia", Ulm, 1776), W. F. Hetzel ("Die Bibel, Altes und Neues Test.", Lemgo, 1780), Th. Chalmers ("Review of Cuvier's Theory of the Earth", Edinburgh, 1814; "Evidence and Authority of the Divine Revelation", Edinburgh, 1814), N. Wiseman ("Twelve Lectures", London, 1849), W. Buckland ("Geology and Mineralogy", London, 1838). The following interpreters identified the primeval destruction of the earth with the catastrophe brought on by the fall of the angels: L. Schmid ("Erklärung der hl. Schriften", etc., Münster, 1834), A. Westermayer ("Das Alte Testament und seine Bedeutung", Schaffhausen, 1861), and I. H. Kurtz ("Bibel und Astronomie", Berlin, 1842). The speculations implied in this theory are hardly upheld by Sacred Scripture.

(d) *The Hexaemeron Within the Geological Formations*.—Father Pianciani has expressed the view that the six days of the Hexaemeron, though natural days, may not be continuous days; they may be picked out from among the long geological periods to which they respectively belong in such a way as to illustrate, as it were, the work going on in the several formative ages. A vast space of time may intervene between every two consecutive days, so as to make the six days cover the whole period of geological formation. But this explanation is hardly in keeping with the Biblical account of the six days. Besides, it can hardly be maintained that long ages intervened between the sixth and seventh day.

(e) *The Hexaemeron is a Vision*.—Father von Hummelauer ("Commentarius in Genesim", Paris, 1895) feels convinced, on the one hand, that the Hexaemeron speaks of six natural days, and that, on the other hand, it does not oppose the certain results of science. He believes that the vision theory will safeguard both these requirements. Instead of revealing the origin of the world in so many words, God showed Adam in a vision the general dependence of everything on His creative power; hence the Biblical Hexaemeron must be explained in the way in which other Scriptural visions are interpreted. The real length of time covered by the six visional days is not determined by Scripture; even the sequence of certain details may be different in nature from that in the vision, so that this theory does not interfere with the data of geology,

while it safeguards the veracity of the inspired record. It is urged that the idea of Adam's learning the history of the origin of the world in a vision was suggested by Chrysostom (P. G., LIII, 27), Severianus Gabalitus ("Or. V", P. G., LVI, 431), and Junilius Africanus ("Instit. regularia", lib. I, iii sq., in P. L., LXVIII, 17), for they taught that Moses learned the cosmogony by means of a prophetic light illuminating past, instead of future, events. Similar views concerning the origin of the Biblical cosmogony are advanced by Basil (P. G., XXIX, 5), Ambrose (P. L., XIV, 131 sqq.), Eustathius (P. L., LIII, 869), Gregory of Nyssa (P. G., XLIV, 65), Procopius (P. G., LXXXVII, 28), and other early writers. In more recent times the vision theory has been explained and partly defended by such writers as I. H. Kurtz ("Bibel und Astronomie", Berlin, 1842), H. Müller ("The Testimony of the Rocks", Edinburgh, 1857), F. W. Schultz ("Die Schöpfungsgeschichte nach Naturwissenschaft und Bibel", Gotha, 1865), H. Reusch ("Bibel und Natur", Freiburg, 1870), F. de Rougemont ("Le surnaturel démontré par les sciences naturelles", Neuchâtel, 1870), B. Schäfer ("Bibel und Wissenschaft", Münster, 1881), Moigno ("Les splendeurs de la foi", Paris, 1877), E. Bougaud ("Le christianisme et les temps présents", Paris, 1878), M. I. Scheeben ("Handbuch der katholischen Dogmatik", Freiburg, 1878), von Hummelauer ("Der biblische Schöpfungsbericht", Freiburg, 1877; "Stimmen aus Maria Laach", XXII, 1882, p. 97), V. Becker ("Studien op godsdienstig, wetenschappelijk en letterkundig gebied", Brussels and Bar-le-Duc, 1879), I. Corluy ("Spicil. dogm.-bibl.", I, 880 sqq., Ghent, 1884; "La science catholique", 15 July, 1889), W. Gray Elmslie ("The First Chapter of Genesis" in "Contemporary Review", 1887), and some anonymous authors ("The Mosaic Record in Harmony with the Geological", London, 1855; the "Katholik", I, 1879, p. 260 sqq.). Still, there are other interpreters who take exception to the vision theory; they urge that in other parts of the Bible the presence of a vision is always indicated, that such a practical precept as the observance of the Sabbath cannot be based on a mere vision, etc.

(f) The Poetic Theory.—We omit here the view that the Hexaemeron is merely an inspired record of a Semitic myth or a profane tradition (cf. F. Lenormant, "Origines", I); this theory has been considered above. In a modified form it has been adopted by those writers who consider the Biblical cosmogony as a poem incorporated by Moses in the Book of Genesis. G. E. Paulus ("Neues Repertorium", Jena, 1790) calls Gen., i, a Sabbath hymn; Rorison ("Replies to Essays and Reviews", 1861), a creation psalm; Huxtable ("The Sacred Record of Creation), a parable intended to teach the keeping of the Sabbath; Bishop Clifford ("Dublin Review", 1881, I, p. 311 sqq.; II, p. 498 sqq.; "The London Tablet", 1881, April to July), a scheme to consecrate each day of the week to a particular creative act of God, so as to do away with the previous consecration of the weekdays to the several heathen gods. But both the setting of the Hexaemeron in the Book of Genesis and the constant tradition concerning its literary character agree in proclaiming its historicity; the poetic theory is at variance with this testimony.

B. *Allegorical Explanations.*—Philo maintained the eternity of matter, identified the light of the first day with the angels, and gave a similar allegorical explanation of the other cosmogonic days. Origen, too ("Hom. in Hex." in P. G., XII, 145 sqq.; "De princ.", lib. IV, n. 16, and "C. Cels.", lib. VI, 60, in P. G., XI, 376 sq., 1380), follows an allegorical explanation—the light of the first day denotes the angels, the abyss is hell, the upper and lower waters are the good and bad angels, the sun and the moon are Christ and His Church, etc. The world was created simultaneously, the various days denote only the diversity of created

objects. Athanasius ("Or. II, c. Arian.", n. 60, in P. G., XXVI, 276) also appears to maintain a simultaneous creation of the world; Procopius ("Comment." in P. G., LXXXVII, 28 sqq.) regards the days of the Hexaemeron as purely ideal, indicating the order of created things. St. Augustine attempted three different times to explain the Hexaemeron in a literal sense, but each time he ended with an allegorical exegesis. In 389 ("De Gen. c. Manich." in P. L., XXXIV, 173) he arrived at the conclusion that the cosmogonic evening and morning denote the completion and the inception of each successive work. In 393 ("De Gen. ad lit. lib. imperf." in P. L., XXXIV, 221) the great African Doctor starts again with a literal explanation of Gen., i, but is soon perplexed by the questions: Did God consume the whole day in creating the various works?—How could there be days before there were heavenly luminaries?—How could there be light before the existence of the sun and the stars?—This leads him to adopt simultaneous creation, to identify the light of the first day with the angels, and to explain the evening and morning by the limitation and the beauty of the various created objects. In 401 Augustine began the third time to explain the Hexaemeron ("De Gen. ad lit. lib. XII" in P. L., XXXIV, 245; cf. "Retract.", II, 24; "Confess.", lib. XII sq., in P. L., XXXII, 825), but published his results only fifteen years later. He admits again a simultaneous formation of the world, so that the six days indicate an order of dignity—angels, the firmament, the earth, etc. Morning and evening he refers now to the knowledge of the angels, assuming that they denote respectively the angelic vision of things in the Word of God, and the vision of the objects themselves. The opinion of Augustine was followed by pseudo-Eucherius ("Comm. in Gen." in P. L., L, 893), Isidore ("Quæst. in Gen.", "Sent.", I, 10, in P. L., LXXXIII, 207, 1153), pseudo-Augustine ("De mirab. script. s." in P. L., XXXV, 2149), another pseudo-Augustine ("Quæst. ex V. et N. T." in P. L., XXXV, 2213), Alcuin ("Interr. et respons. in Gen." in P. L., C, 515), Scotus Eriugena ("De divis. natur." in P. L., CXXII, 439), Rupertus ("De Trinit. et oper. ejus" in P. L., CLXVII, 199), and Abelard ("Expos. in Hex." in P. L., CLXXXVIII, 731). In the sixteenth century, too, Cajetan and Melchior Cano adhered to the view of a simultaneous creation (cf. "Loc. theol.", Salamanca, 1563). In the following centuries this allegorical interpretation developed into two main branches:—

(a) The Concordists.—I. Kant (1755) and P. S. Laplace (1796) suggested that the stars were formed under the influence of the force of gravity by the rotation of the primitive body of matter around its own axis. G. Cuvier ("Discours sur les révolutions du globe", Paris, 1812) divided the ages of geological formation into six periods and separated one from the other by great catastrophes. He was followed in this by M. de Serres (De la cosmogonie de Moïse), J. F. Krüger ("Geschichte der Urwelt", Quedlinburg and Leipzig, 1822), D. A. de Frayssinoux ("Défense du christianisme", Paris, 1825), A. Nicolas ("Etudes philosophiques sur le Christianisme", Paris, 1842), and I. B. Pianciani ("In historiam creationis mosaicam commentatio", Naples, 1851). C. Lyell (1836-38) denied the occurrence of the six great catastrophes, substituting an imperceptibly slow process of geological formation in their place. Still, there remains the general division into the palæozoic, the mesozoic, and the cenozoic strata; the first are characterized by their remains of carboniferous plants; the second by traces of amphibious and fish life; the third show remnants of mammals. These periods correspond, therefore, roughly speaking, to the third, fifth, and sixth days of the Hexaemeron. Similarly, there appear to be astronomical periods which correspond to the first, second, and fourth days of Gen., i. It is not surprising, therefore, that the so-called Concordists have found these

six long periods in the six days of the Hexaemeron, and have endeavoured to establish an identity between the product of each period and the work described in each day of Gen. i. Moreover, these scholars point out that the Hebrew word translated "day" does not necessarily mean a natural day; that, in the absence of the sun, the first three days of the Hexaemeron cannot be natural days, and that therefore the second three days are not necessarily natural days; again, that the seventh day is certainly not a natural day, so that the first six days must be indefinite periods of time rather than natural days. Among the writers who favour this theory we may name: C. G. Hensler ("Bemerkungen über Stellen aus den Psalmen und der Genesis", Kiel, 1791), S. Turner ("Sacred History of the World", 3rd ed., London, 1833), H. Miller ("The Testimony of the Rocks", Edinburgh, 1857), I. Ebrard ("Der Glaube an die heilige Schrift und die Ergebnisse der Naturforschung", Königsberg, 1861), Mgr Meignan ("Le monde et l'homme primitif", Paris, 1869), G. Molloy ("Geology and Revelation", London, 1870), M. Pozzy ("La terre et le récit biblique de la création", Paris, 1874). On the other hand, it has been pointed out that more than 20,000 species of animal life are found in the old palæozoic strata, while the fruit-bearing plants are found only in the mesozoic strata; moreover, that the plants found in the palæozoic strata resemble the plants found in the more recent strata, so that they must have needed the light of the sun, though the sun appeared only in the period succeeding that of the palæozoic strata; finally, that, according to the obvious sense of the text, the work of each day of the Hexaemeron was complete before the next day commenced. Arguments like these are urged by such writers as H. Reusch ("Bibel und Natur", 3rd ed., Freiburg, 1870, pp. 235 sqq.; 4th ed., 1876, pp. 244 sqq.) and C. Güttler ("Naturforschung und Bibel", Freiburg, 1877, pp. 91 sqq.).

(b) The Idealists.—We have seen that St. Augustine and a number of patristic writers maintained the simultaneity of creation, and regarded the division into six days only as a classification of the various things created. The Idealists take their start from the second part of St. Augustine's position, while for the great African Doctor's simultaneous creation they substitute the gradual development of the earth as demanded by the scientists. Among the first to propose this theory was F. Michelis ("Natur und Offenbarung", Münster, 1855). He believes that Moses narrates the creation story as an historian might write the life of Charlemagne by considering him successively as king, as lawgiver, as Christian, as father of a family. Reusch, who had been a Concordist in the first editions of his great work, became an Idealist in the third edition ("Bibel und Natur", Freiburg, 1870). Father Braun ("Ueber Kosmogonie vom Standpunkt christlicher Wissenschaft", Münster, 1889) endeavours to combine Concordism with Idealism. I. B. Baltzer ("Die biblische Schöpfungsgeschichte", Leipzig, 1867), Reusch ("Theol. Literatur-Blatt", Bonn, 1867, p. 232), C. Güttler ("Naturforschung und Bibel", Freiburg, 1877, pp. 101 sqq.), and Schäfer ("Bibel und Wissenschaft", Münster, 1881, pp. 237 sq.) have written against Idealism either as a whole or in its various special forms. The cosmogonic days and their succession, as exhibited in the Hexaemeron, appear to lose all meaning in the Idealists' theory.

Considering the foregoing theories without bias, and in the light of both science and Revelation, a moderate form of Concordism or the theory of vision will be found to serve the Catholic interpreter most effectually both from a scientific and a critical point of view.

A. J. MAAS.

Hexapla, the name given to Origen's edition of the Old Testament in Hebrew and Greek, the most colossal critical production of antiquity. This work was urgently demanded by the confusion which prevailed in Origen's day regarding the true text of Scripture. The Church had adopted the Septuagint for its own; this differed from the Hebrew not only by the addition of several books and passages but also by innumerable variations of text, due partly to the ordinary process of corruption in the transcription of ancient books, partly to the culpable temerity, as Origen called it, of correctors who used not a little freedom in making "corrections", additions, and suppressions, partly to mistakes in translation, and finally in great part to the fact that the original Septuagint had been made from a Hebrew text quite different from that fixed at Jamnia as the one standard by the Jewish Rabbis, under Akiba the founder of Rabbinical Judaism. Aquila, a proselyte from Christianity, gave (c. A. D. 130) a very accurate translation of this text, aiming above all at being literal; still he borrows quite freely from the Septuagint when its rendering is consistent with his own chief aim. Symmachus and Theodotion both flourished towards the end of the second century, but it is uncertain which had priority as translator. Symmachus, who was an Ebionite according to Eusebius and Jerome, a Jewish proselyte from Samaritanism according to Epiphanius, gave a new translation which was to a considerable extent a more idiomatic and elegant rendering of Aquila. It was followed extensively by Jerome in his own work as translator of the Old Testament. Both Aquila and Symmachus produced two editions to which Jerome refers. Theodotion, who was an Ebionite or a Jew, and perhaps had been a Christian, gave a version much closer than the others to the Septuagint.

The circulation of these versions, each so insistent in its claim to superiority, in so many instances differing from the Septuagint and yet so close to it in many others, made a comparison between them and the Septuagint imperative for a knowledge of the true text of Holy Scripture. The Hexapla, the concept of a great genius executed with unexampled patience and industry, is Origen's attempt to show the exact relations of the Septuagint to these versions and especially to the Hebrew text. The work itself has perished; its character, however, has been pretty well known to scholars through statements in early Church writers, through *scholia* on numerous manuscripts of the Bible, and through chance quotations found in the works of certain Fathers. Quite recently (1896 and 1900) fragments of the Hexaplar Psalms were fortunately discovered, which give us our only specimens of connected portions of Origen's work and afford a good idea of its general appearance. Our earliest authorities, Eusebius of Cæsarea, St. Epiphanius, and St. Jerome, agree that Origen made a collection into one work of texts and versions of the entire Old Testament, arranging them in parallel columns according to the following order: First, the Hebrew text in Hebrew characters; second, the Hebrew text transliterated into Greek characters; third, the version of Aquila; fourth, that of Symmachus; fifth, the Septuagint; sixth, the version of Theodotion. The recovered fragments corroborate this testimony, though they lack the first column. Aquila's version was placed next to the Hebrew, most probably because it was the most literal rendering; Symmachus next to Aquila,

because his version was largely a revision of the other; for a similar reason, Theodotion's version came after the Septuagint. To these six columns, according to the same testimony, Origen added, but for certain books only, a seventh and an eighth column containing two more Greek versions, which were called respectively the *Quinta* and the *Sexta*, because they were the fifth and sixth versions in Origen's arrangement. Eusebius and Jerome mention a seventh Greek version, however nothing seems to be known of the character of the *Septima*. It may have been a very fragmentary version, a collection of variant readings which later editors did not consider worth preserving. Concerning the *Quinta* and *Sexta*, St. Jerome tells us that their authors were Jews. Field finds traces of the *Quinta* not only in Psalms, Job, Proverbs, and the Canticle of Canticles, but also in the Pentateuch and IV Kings, though, in regard to IV Kings, Burkitt has advanced good reasons for considering the *Quinta* a collection of variant readings, probably rejected from the Septuagint. The *Sexta* is quoted for Exodus, III Kings, Psalms, Job, Canticle of Canticles, Amos, and Habacuc.

The presence of these two additional versions in the Hexapla has led to a discussion of that term and of others applied to Origen's work. By some the "six-fold" Bible was considered so called because it contained six Greek versions of certain books; but the common opinion has been that the name designates probably the six columns (the two of Hebrew and the four of the chief Greek versions, which constitute the bulk of the work), and came to be extended to the entire work. The terms *Pentapla*, *Heptapla*, *Octapla*, were also used of Origen's work, according as it contained five, seven, or eight columns. Since the six or seven columns, as the case might be, were visible at every opening of the Hexapla, each column must have been quite narrow. The fragments show, in fact, that one or at most two Hebrew words were placed on each line, with the transliteration in the adjoining column and the various renditions in the succeeding columns, all on the same level. This arrangement would naturally necessitate, at times, a shifting of the Greek words from their proper order, although this was not always done. An arrangement so minute and liberal must produce a work of enormous bulk. Swete estimated 3250 leaves, or 6500 pages, but Nestle considers 6000 leaves not far beyond the number. In addition to these columns of texts and versions, Origen copied out on the margins or between the lines other readings which he cited as given by *ὁ Ἑβραῖος, ὁ Σύρος, τὸ Σαμαριτικόν*, the meaning of which is obscure. Field considers "the Hebrew" to be the Hebrew author of a Greek version, otherwise unknown, of certain books; "the Syrian", the author of another Greek version made in Syria; while "the Samaritan" gives Greek readings taken, not from the current Hebrew text, but from the Samaritan Pentateuch (thirty-six out of forty-three readings agree with that text). Loisy's opinion, not to mention many others, is that "the Hebrew" denotes citations from a Targum, "the Syrian", from the Peschito.

Origen's purpose, as regards the Septuagint, was to indicate very clearly its exact relation to the Hebrew text, and incidentally to the other Greek versions. With this in view, he adopted (and placed in the Septuagint column only) the symbols used by Aristarchus in his edition of Homer. "As employed by Origen in the fifth column of the Hexapla, the obelus was prefixed to words or lines which were wanting in the Hebrew, and therefore, from Origen's point of view, of doubtful authority, while the asterisk called attention to words or lines wanting in the Septuagint, but present in the Hebrew. The close of the context to which the obelus or asterisk was intended to apply was marked by another sign known as the metobelus" (Swete). The fifth column, therefore, contained not the mere text of the Septuagint only, but in addition a transla-

tion taken generally from Theodotion (occasionally from Aquila) of these words or lines of the Hebrew which were lacking in the Septuagint. In certain instances, where the Septuagint translation differed widely from the Hebrew meaning, Origen inserted the true rendering (from Theodotion or Aquila) alongside the false; he deleted nothing from the Septuagint text. By this arrangement and these symbols, any reader, even if ignorant of Hebrew, could generally tell at a glance the exact relation of the Septuagint text to the Hebrew.

The principles which guided Origen in his work as textual critic are partly explained by Origen himself. He began by assuming the correctness of the current Hebrew *textus receptus*, and considered the Septuagint as more or less pure according to the degree in which it approximated to the Hebrew. He frequently changed the spelling of proper names to conform with the Hebrew. The symbols were intended not only to indicate a difference between the two texts, but to mark a departure from the Hebrew verity or genuine text. These principles are rightly discredited by modern scholars, who recognize that the Septuagint often bears plain witness to a Hebrew original different from the *textus receptus* and older than it in some parts. Moreover, of two readings, one a free, the other a literal, translation of the Hebrew, the free is more likely to be the original rendering of the Septuagint translator, while the literal is more apt to represent the effort of correctors, who very frequently endeavoured to bring the Greek into greater conformity with the Hebrew. Origen's critical principles were at fault, then, but his use of symbols ought to have guarded others from being led by his work into error. Unfortunately, the symbols were not reproduced in many copies which were taken of the fifth column—the Septuagint together with the readings from Theodotion and Aquila.

After the completion of the Hexapla Origen prepared a minor edition, or extract from it, consisting of the four principal versions, Aquila, Symmachus, the Septuagint, and Theodotion; this is the *Tetrapla*. It has been sometimes maintained, however, that the *Tetrapla* is the earlier work and was expanded into the Hexapla, principally on the ground that the Hexapla, which in a few instances has a superior reading, as at Ps. lxxxvi, 5, presents light missing to Origen when he composed the *Tetrapla*, a very unstable ground, we judge, for the Hexapla did not leave the hand of Origen as a printed work becomes independent of a modern author, but received occasional additions and corrections with the progress of his knowledge. The language of Eusebius implies that the *Tetrapla* was the later work. The dates of the two works, however, cannot be definitely fixed; all we know, says Field, is that the Hexapla or the *Tetrapla* was composed before Origen's letter to Africanus (c. 240).

No copy of the entire Hexapla, on account of the immense labour and expense involved, seems ever to have been made, but the Psalter, minus the first column, was copied, as the two fragments prove. A reading in Isaiah is quoted from the *Pentapla*, which possibly (though very doubtfully) implies the existence of a similar copy. Shortly after the beginning of the fourth century, Pamphilus, the martyr, and Eusebius, Bishop of Cæsarea, gave out an edition of the fifth column of the Hexapla, containing the Septuagint, the insertions from Theodotion and Aquila, and the symbols, together with variant readings on the margin, in the belief that they were bestowing on the Church the purest text. It was through the reproduction of this edition by later scribes, without Origen's critical signs, that arose the Hexaplar text which so greatly increased the confusion of Septuagint manuscripts. However, it hardly circulated outside of Palestine. It was translated into Syriac, "with the Origenic signs scrupulously retained", by Paul,

Bishop of Tella in Mesopotamia, who accomplished the work at Alexandria about 616-17. Several books and large portions of this Syro-Hexaplar text survive, and are the source, in a very great measure, of our knowledge of Origen's work. The Hexaplar text also influenced St. Jerome very strongly in his first two translations of the Psalter into Latin, the *Psalterium Romanum* and (particularly) the *Gallicanum*. Saint Jerome also followed the Hexaplar text, for which he had a very high regard, as the basis of his translations, no longer extant, of other books. The same influence is further seen in the Coptic (Sahidic), the Arabic, and the Armenian versions. If the original Septuagint text be taken as the standard, it is unquestionable that Origen's influence, both upon the Septuagint and its daughter versions, ultimately availed, through the negligence of copyists, to remove them further from the pristine purity of the Biblical text; but by all those who regard the Hexaplar text, by reason of its insertions and corrections from the *textus receptus*, as nearer to the original Hebrew than is the Septuagint, his influence must be judged to have worked, on the whole, for the spread of a truer text. The Hexaplar MS. was kept at Caesarea in Palestine, where it was consulted by Eusebius, Epiphanius, and Jerome; it disappeared from sight shortly after the beginning of the seventh century.

The first attempt to collect its *disiecta membra*, scattered over Biblical manuscripts and patristic writings, was made by Drusius (Driesch) in his work, "In Psalmos Davidis Veterum Interpretum quæ extant Fragmenta", Antwerp, 1581 (so Mercati). Additions were made by Peter Morin in his notes to the Greek Bible authorized by Sixtus V (1587), as also in the posthumous work of Drusius (1622), and the monumental work of Montfaucon (1713). The publication of the Syro-Hexaplar text by Ceriani and others gave back to the world a great part of Origen's work. Frederick Field in his "Origenis Hexaplorum quæ supersunt Fragmenta" (Oxford, 1875) collected into one grand work the results of two centuries of investigation and discovery. Since his day, Pitra's "Analecta Sacra", III (Venice, 1883), Klosterman's "Analecta zur . . . Hexapla" (Leipzig, 1895), and Dom Morin's "Anecdota Maredsolana", III, 1, have given the world further discoveries. Add to these, to complete the history of the Hexapla's recovery, the palimpsest fragments of several of the psalms discovered by Mercati in the Ambrosian Library of Milan (1896), and the palimpsest fragment of Ps. xxii recovered from a *genizah* of Cairo (1900), which reproduce almost the exact form of Origen's work. Though much has been lost, including most of the versions of Aquila, Symmachus, and Theodotion, still, by these patient, untiring labours, vast materials have been gathered for the reconstruction of a purer Sacred Text. (See MANUSCRIPTS OF THE BIBLE; ORIGEN; SEPTUAGINT.—VERSIONS OF THE BIBLE, GREEK.)

Of the above mentioned works FIELD is by far the most important. See also TAYLOR in *Dict. Christ. Biog.*, s. v.; SWETE, *Introduction to the Old Testament in Greek* (Cambridge, 1902); LOISEL, *Histoire Critique du Texte et des Versions de la Bible* (Amiens, 1892); NESTLE in HAST., *Dict. of the Bible*, s. v. *Septuagint*, ERMONI in VIG., *Dict. de la Bible*, s. v. *Hexaples*; HOWARTH, *The Hexapla and Tetrapla of Origen in Proceedings of the Society of Biblical Archaeology* (London, May, 1902); BURKITT, *The So-Called Quanta of IV Kings*, *ibid.* (June, 1902); MERCATI, *Un Palimpsesto Ambrosiano dei Salmi Esapli* (Turin, 1896), extract from *Accademia Reale delle Scienze di Torino* (1895-96); MERCATI, *Psalmorum Hexaplorum Reliquæ e Codice rescripto Ambrosiano* (Rome, 1901)—cf. *Expository Times* (Nov., 1901); DRIVER, *Notes on the Hebrew Text of the Books of Samuel* (Oxford, 1890), pp. 44 sqq. A considerable number of patristic and other references may be found in FIELD and SWETE.

JOHN F. FENLON.

Hexateuch, a name commonly used by the critics to designate the first six books of the Old Testament, i. e. the Pentateuch and Josue. The purpose of the name is to show that the five books of the Pentateuch, together with the book of Josue, form a literary whole.

The name Hexateuch, in the intention of the critics, does not mean that the sources of these books are to be found only in the six books herein included. (See PENTATEUCH and JOSUE.)

WALTER DRUM.

Hexham and Newcastle, DIOCESE OF (HAGULSTADENSIS ET NOVOCASTRENSIS).—Hexham, in Northumberland, England, receives its name from the stream Hextold; its old name, Hagustald, came from another stream, the Halgut, whence the adjective Hagustaldensis used by Bede and medieval writers. It was founded as an abbey by St. Wilfrid of York, in 674, on land given by the Northumbrian queen St. Etheldreda. When the Diocese of York was divided (678) Hexham was made a bishopric for the country between the Rivers Aln and Tees; although, under its first bishop, St. Eata, it remained for a time united to Lindisfarne (founded in 635 by St. Aidan), which diocese extended northwards from the Aln to the Forth. Of the eleven bishops of Hexham who followed St. Eata, six were saints, among them being St. John of Beverley (685-705), St. Wilfrid, who, resigning the See of York, died Bishop of Hexham in 709; and his successor, St. Acca, to whom Venerable Bede dedicated several of his works. The last bishop of this ancient line was Tidfert, who died about 821; no successor was appointed, the condition of the country being too unsettled. A period of disorder followed the Danish devastations, after which Hexham monastery was reconstituted in 1113 as a priory of Austin Canons, which flourished until its dissolution under Henry VIII. Meantime the bishopric had been merged in that of Lindisfarne, which latter see was removed to Chester-le-Street in 883, and thence to Durham in 995.

On the establishment of the present English hierarchy in 1850, the See of Hexham was revived, that of Newcastle (where the cathedral is) being joined to it in 1861. The previous Vicar Apostolic of the Northern District, William Hogarth, became its first bishop under the new regime, being followed by James Chadwick (1866-82), John William Bewick (1882-86), and Henry O'Callaghan (1888-89). Bishop Thomas William Wilkinson, consecrated as auxiliary in 1888, succeeded in 1889, and resided at Ushaw College as its president till his death on 17 April, 1909. The present diocese answers to the two medieval Dioceses of Durham and Carlisle, comprising the Counties of Northumberland, Durham, Cumberland, and Westmoreland. Its Catholic population was estimated in 1908 at 179,021, the secular clergy numbering 182, the regular clergy (Benedictines, Dominicans, Redemptorists) 45, and the public churches and chapels (not counting those of communities), 122. It contains three convents of contemplative nuns and numerous schools and institutions conducted by religious. St. Cuthbert's College, Ushaw, educates some 300 students, clerical and lay; and there is a boys' grammar school at Newcastle. Together with Our Lady Immaculate, the diocese's chief patron is St. Cuthbert, to receive whose incorrupt body Durham's magnificent cathedral was originally built; his ring, now preserved at Ushaw, is worn by the bishop when ordaining. Its long list of native saints includes St. Bede the Venerable, recently proclaimed Doctor of the Church; St. Oswald, king and martyr; St. Godric, hermit; and Blessed Thomas Percy, Earl of Northumberland, with other martyrs of the penal days.

Heynlin of Stein (A LAPIDE), JOHANN, theologian, b. about 1425; d. at Basle, 12 March, 1496. He was apparently of Swabian origin. On the comple-

HEXHAM ABBEY

tion of his academic studies in Germany, presumably at Leipzig and Freiburg, he proceeded to Paris to pursue the study of philosophy and theology. Here he came in contact with the foremost representatives of Realism, who, recognizing his abilities and probable future influence, exerted their powers to the utmost to mould his mind after their own and thus make him like themselves a bitter opponent of Nominalism. Their efforts were successful. In 1464 he went to the University of Basle and applied for admission to the professorial faculty of arts. The old controversy regarding the nature of Universals had not yet subsided and in the university of Basle Nominalism held sway. Hence in view of this and the maintenance of peace within the institution, the admission of Heynlin to the faculty was not accomplished without a most vigorous opposition. Once a member of the faculty he hoped to rid it of all Nominalistic tendencies nor was he disappointed in his expectation. In 1465 he became dean of the faculty of arts and in this capacity he revised the university statutes and thus brought about a firmly established curriculum of studies. In 1466 he returned to Paris, obtained the doctorate in theology, was in 1469 elected rector of the university and became professor of theology at the Sorbonne. His most noteworthy achievement was the establishment, in connexion with Fichet, of the first printing-press in Paris in 1470; Ulrich Gering and his two associates were put in charge of it and Heynlin gave valuable pecuniary aid to their undertakings, especially for the printing of the works of the Fathers. In 1478 he was called to teach theology in the newly founded University of Tübingen, where his learning, eloquence and reputation secured for him the same year the rectorship. The opposition, however, he met from the Nominalists Gabriel Biel, Paul Scriptoris, and others, rendered his service here of short duration. He severed his connexion with the university, proceeded to Baden-Baden and thence to Berne, where he engaged in preaching. Dissatisfied with Berne he returned to Basle, and tired of wandering, he entered in 1487 the Carthusian Monastery of St. Margarethenthal to spend his declining years in prayer and literary work. As a scholar and academic disputant Heynlin manifested an erudition and intellectual acumen of no mean order. Naturally of a peaceful disposition he was often forced by circumstances to play an important part in the theological controversies of his time. At his suggestion Johann Amerbach, the early printer of Basle, undertook the editing of the works of the ancient philosophical writers. Of his theological works the only important one thus far issued is the "Resolutorium dubiorum circa missarum celebrationem".

JOSEPH SCHROEDER.

Heywood, (1) JASPER, poet and translator; b. 1535 in London; d. 1598 at Naples. As a boy he was page of honour to Princess (afterwards Queen) Elizabeth. In 1547 he was sent to Oxford, and took the degree of Bachelor of Arts in 1553, and of Master in 1558. In 1554 he was elected probationary fellow of Merton College where he distinguished himself in public and private disputations, in writing verse translations of Seneca's dramas, and in acting as Lord of Misrule at the Christmas festivities. He and his brother are said by Anthony à Wood to have been "for a time very wild", and he resigned his fellowship to prevent expulsion in 1558. Later on, however, in the same year he was elected fellow of All Souls, but before long had to resign on account of his non-compliance with the new religious order of things under Elizabeth. Having been ordained priest he was admitted to the Society of Jesus at Rome in 1562. After two years at the Roman College he was made professor of moral philosophy and controversy at the Jesuit College of

Dillingen in Bavaria where he stayed for seventeen years. In 1570 he took the full Jesuit vows. In 1581 he came to England as a missionary with Father William Holt, and together they were the means of numerous conversions to the Catholic Faith. Father Heywood was appointed superior of the English Mission in succession to Father Parsons. In the controversy then rife concerning the observance by English Catholics of the severe ancient fasts, Heywood opposed the rigid party. He was considered by the authorities to have erred on the side of laxity, and was therefore recalled from England by his superiors. On this return journey he was arrested as a suspected priest, brought back to London and imprisoned. Several times he was examined by the Privy Council and strongly urged to conform, but neither bribes nor threats moved him, and he was brought up for trial at Westminster with other priests. Before the trial finished, however, he was taken to the Tower and closely imprisoned for seventeen months. Finally, he was exiled with others to the coast of France, and forbidden under pain of death to return. He then went to the Jesuit College at Dôle in Burgundy, and in 1589 was sent to Rome and afterwards to Naples, where, worn out by the sufferings and hardships he had undergone, he died at the age of sixty-three.

His authentic literary work consists of: (1) translations into English verse of three of Seneca's tragedies (the "Troas", "Thyestes", and "Hercules Furens"). He was the first to translate these into English. He takes liberties with the Latin text and occasionally introduces original matter. (2) Four poems in the Elizabethan collection known as the "Paradise of Dainty Devices", three didactic and one upon Easter Day. None is of much poetical value. He is known to have written many other verses not preserved. (3) According to Wood's statement, he also wrote "A Compendium of Hebrew Grammar". No edition of his Senecan translations has been issued since 1591. The "Paradise of Dainty Devices" is reprinted in "Collier's Seven English Miscellanies" (London, 1867).

K. M. WARREN.

(2) JOHN, father of the above, dramatist and epigrammatist; b. probably c. 1497; d. about 1580. The first certain record of him is in 1515 as one of the king's singing men, receiving the wages of eightpence per day. He would seem to have been first a choir boy and afterwards retained as a singer at the Chapel Royal. He was perhaps also engaged to train companies of boy actors for court performances. Tradition says that he was a member of Broadgates Hall, now Pembroke College, Oxford, but nothing further is known of his college life. His wit and his musical gifts seem to have led to his promotion and general prosperity. He received an annuity of ten marks as king's servant in 1521, and in 1526 he was paid a sum as "player of the Virginals", while in 1538 he again received payment for "playing an interlude with his children" before the Princess Mary. It was through Sir Thomas More, whose niece Eliza Rastell he had married, that he was introduced to the princess. It is probable that Heywood became attached to her retinue. He was a sincere Catholic and would seem to have got into trouble in Edward VI's reign for denying the king's spiritual supremacy. Unfortunately there is some proof, though not perhaps quite conclusive, that he publicly recanted this denial.

At the coronation of Queen Mary, however, he delivered a Latin oration and he was undoubtedly "in complete sympathy with her policy in Church and State". There is evidence that he was a favourite with Mary, who could take, as Dr. A. W. Ward says, "an intelligent delight" in his accomplishments and

his wit. He wrote poems in her honour and is said to have been present at her last moments. Anthony à Wood quaintly tells us that "after her decease he left the nation for religion sake, and settled at Mechlin in Brabant, which is a wonder to some who will allow no religion in poets, that this person should above all of his profession be a voluntary exile for it". He probably lived at Mechlin till his death.

Heywood's chief writings consist of: (1) three interludes (i. e. "short comic pieces containing an element of action that entitles them to be called dramatic") of which the most famous is "The Four P's" These pieces form a dramatic link between the morality plays and comedy proper, the personified abstractions of the morality being superseded by personal types; (2) "The Play of the Weather", a kind of mythological morality; (3) "The Play of Love", a disputation between four characters, with slight dramatic action; (4) "The Dialogue of Wit and Folly"; (5) "Proverbs and Epigrams" All the above are comprised in the edition of Heywood's works issued by the Early English Drama Society (2 volumes, London, 1905-6); (6) "An Allegory of the Spider and the Fly", in which the flies are the Catholics and the spiders Protestants, and Queen Mary the maid with a broom sweeping away cobwebs (not reprinted since 1556).

All the works of Heywood show wit and humour with some underlying pathos. His humour has been defined by Dr. Ward as "of a kind peculiarly characteristic of those minds which, while strongly conservative at bottom, claim a wide personal liberty in the expression of opinion, and are radically adverse to all shams". A devout Catholic, Heywood did not hesitate to satirize the folly or vice of unworthy members of the Church. Some of his wit is marked with the coarseness of his age, though less so than that of many other sixteenth-century writers. To judge justly of the literary quality of his work it must be viewed with its own background of the "dull and tedious" dramatic literature of the time. Certain judges have even gone so far as to regard him in wit and satire as a not altogether unworthy follower of Chaucer.

Hezekiah. See EZECHIAS.

Hibernians, ANCIENT ORDER OF (IN AMERICA).—This organization grew up gradually among the Catholics of Ireland owing to the dreadful hardships and persecutions to which they were subjected. It is impossible to give the exact date of the foundation of the order in Ireland. Some authorities contend that the first impulse towards forming such an association was due to the publication of an edict against the Catholic religion by the Earl of Sussex (Thomas Radcliffe), who was made Lord-Lieutenant of Ireland in 1562. He prohibited all monks and Catholic priests from either eating or sleeping in Dublin, and ordered the head of each family to attend Protestant services every Sunday, under the penalty of a fine. Not only did the English begin a bitter persecution of the Catholics, they also confiscated the property of the Irish nobles. The prince Rory O'Moore with his companions took up the cause of religion and the protection of the priesthood as well as the defence of their dominions, and through their assistance the priests said Mass, on the mountains, in the valleys and glens, while "The Defenders", as they were called, acted as faithful sentinels to guard them from danger. The principality ruled over by Rory O'Moore was called Leix; it covered the greater part of Queen's County and part of County Kildare. The O'Moores belonged to the Clan Rory of the Province of Ulster, and were

descended from the celebrated hero, Conall Cearnach, who was the chieftain of the Red Branch Knights at the beginning of the Christian Era. This famous Rory O'Moore was victorious over the English forces in many battles during the reigns of Queens Mary and Elizabeth, and in consequence recovered the principality of Leix, which had been the property of his forefathers and which he governed until his death in 1578.

It is claimed that this Rory Oge O'Moore organized and founded Hibernianism in the year 1565, in the County of Kildare, in the Province of Leinster, and gave to his faithful followers the name of "The Defenders". After the death of Rory, "The Defenders" rallied around the Irish chieftains, and after many glorious battles betook themselves to the mountains and defied the tyranny of England. In the course of time branches sprang up among their descendants in opposition to the Protestant organizations, such as the "Hearts-of-Steel", the "Oak-Boys", the "Peep-O'-Day-Boys", the "Protestant-Boys", the "Wreckers", and finally the "Orangemen". The principal Catholic organizations were the "White-Boys", so called from wearing a white shirt, the "Rapparees", who received this designation on account of a half pike which they carried, and the "Ribbon-Men", so called because their badge was two pieces of green and red ribbon. In due time there arose also the "Terry-Alts" and the "Fenians". The spirit of these organizations gave rise to what is known in Ireland as the Ancient Order of Hibernians. Anyone familiar with the history of Ireland under English and Protestant domination will recognize that it was natural enough for such organizations to be formed among Irish Catholics. When the laws were made against the interests of the great mass of the people, it was necessary to erect a barrier of defence. No doubt, some abuses were occasionally connected with the operation of these societies, but, in the main, they defended the religious and civil liberties of the Irish people.

While we have no authentic information as to when the Ancient Order of Hibernians was formally established under that title in Ireland, we know that, in 1836, certain Irishmen in New York, who desired to establish a branch of the organization in America, communicated with their brethren in Ireland, and received the following reply:—

"Brothers, Greeting: Be it known to you and to all whom it may concern that we send to our few brothers in New York full instructions with our authority to establish branches of our society in America. The qualifications for membership must be as follows: All the members must be Catholics, and Irish or of Irish descent, and of good and moral character, and none of your members shall join any secret societies contrary to the laws of the Catholic Church, and all times and at all places your motto shall be: 'Friendship, Unity, and True Christian Charity' ***."

This letter concluded with the date: "This fourth day of May, in the year of our Lord, 1836", and it is signed by fourteen officers representing the organization in Ireland, Scotland, and England. The association rapidly increased in membership, but, after a few years, factions arose. They vainly attempted to heal the breach by consultation among themselves, and then referred their difficulties to the present writer, who was selected as arbitrator. Mr. P. J. O'Connor, of Savannah, Georgia, was national president of the faction called "The Ancient Order of Hibernians of America", and Rev. E. S. Phillips, of the Diocese of Seranton, national delegate of the other faction, called "The Ancient Order of Hibernians of the Board of Erin". The arbitrator, after several months' deliberation with the principal leaders of both organizations, successfully adjusted all difficulties, and the unified body became henceforth known as "The Ancient Order

of Hibernians in America" This union was ratified at the national convention held at Trenton, New Jersey, from 27 June to 1 July, 1898.

Preamble of constitution revised and adopted at the national convention held at Indianapolis, Ind., 21-26 July, 1908:—

"The members of *The Ancient Order of Hibernians* in America declare that the intent and purpose of the Order is to promote *Friendship, Unity and Christian Charity* among its members by raising or supporting a fund of money for maintaining the aged, sick, blind and infirm members, for the payment of funeral benefits, for the advancement of the principles of Irish nationality, for the legitimate expenses of the Order, and for no other purpose whatsoever.

"The motto of this Order is *Friendship, Unity and Christian Charity*. *Friendship* shall consist of helping one another and in assisting each other to the best of our power. *Unity*, in combining together for mutual support in sickness and distress. *Christian Charity*, in loving one another and doing to all men as we would wish that they should do unto us.

"(1) This Order is to be formed exclusively of practical Catholics. Therefore, each member is expected to comply with all his Christian duties. (2) Should any of the members fail in the above, and instead of giving edification and encouragement, become a stumbling block and a disgrace to the Organization, such a one, after proper charitable admonition, unless there be an amendment in his conduct, shall be expelled from the Order. (3) In order, however, that all may be done with justice, Christian charity and edification, there shall be in each county a Chaplain, appointed by the Ordinary of the Diocese, to be consulted by the Division before determining anything relating to morality or religion. (4) The Chaplain in each county shall see that nothing is done or countenanced within his jurisdiction which is contrary to the laws of the Catholic Church, the decrees of the Plenary Councils of Baltimore, and the Synodical Constitutions of the Diocese. In any difficulty or doubt which he may not be able to solve, he shall consult the Ordinary of the Diocese. (5) All Divisions of this Order shall adopt the foregoing preamble, and their special Constitution and By-Laws shall be in harmony with the Constitution and By-Laws of this Order."

The constitution of 1908 gives full directions regarding the government of the organization and the manner of joining it. Article xxxv, sect. 1, treats of the place of joining the order: "Members of this Order shall join and belong to a Division in the city or town in which they reside if the Order exists therein or in the nearest locality in which a Division is located."

The membership of the A. O. H., according to the annual report for the year ending 31 Dec., 1908, is 127,254, distributed over the United States, including Hawaii, and the Dominion of Canada. The immense good done by the order can be estimated from the amount of funds expended during the past twenty-four years. During that period, about \$8,000,000 have been paid for sick and funeral benefits, and for charitable purposes over \$4,500,000. Among some of the noble works of the order may be mentioned the endowment of a \$50,000 Gaelic chair at the Catholic University of America, Washington, D. C., and a donation of \$40,000 towards their members who suffered in the San Francisco earthquake. The order also made generous gifts to the Gaelic League and established scholarships in colleges and academies to encourage the study of Irish literature and history. It was likewise instrumental in having Congress appropriate \$50,000 towards the erection of a monument at Washington, D. C., to perpetuate the memory of Commodore John Barry, "Father of the American Navy".

THE LADIES AUXILIARY TO THE ANCIENT ORDER OF
VII.—21

HIBERNIANS IN AMERICA is the female branch of the order. It was established in Omaha, Nebraska, in May, 1894, and has the same objects and principles as the male branch. The Ladies Auxiliary remained for some time under the tutelage of the male Ancient Order, but, as it rapidly advanced in numbers, the ladies were permitted in 1906, at the Saratoga National Convention, to elect their own national officers, and to conduct their own affairs generally, although remaining an auxiliary organization. It is now a national body, having a membership of about 56,000 in the United States and the Dominion of Canada. The ladies have followed the generous example of the men and have established a scholarship in Trinity College, Washington, D. C., with an endowment of \$10,000.

JAMES A. McFAUL.

Hickey, ANTONY, O.F.M., theologian, b. in the Barony of Islands, Co. Clare, Ireland, in 1586; d. in Rome, 26 June, 1641. He received his early education in his native place, entered the college of St.

Antony at Louvain, which had just been founded as a refuge for Irish students, and received the Franciscan habit on 1 November, 1607. Among his teachers at Louvain were the celebrated Irish scholars Hugh Mac an Bhaird (Ward) and Hugh Mac Caghwell, later Archbishop of Armagh. After his ordination to the priesthood, Father Antony was appointed lecturer in theology at Louvain, and subsequently

ANTONY HICKEY
From a fresco in the Aula Maxima, St. Isidore's College, Rome

professor in the college of St. Francis at Cologne. In 1619 he was summoned to Rome to collaborate with Father Luke Wadding in preparing for publication the *Annals of the Franciscan Order* and the works of Duns Scotus. He lived for some time at S. Pietro in Montorio on the Janiculum and, from 1624 till his death, in the college of St. Isidore. During the discussions which were held in Rome concerning the doctrine of the Immaculate Conception, Father Hickey won distinction by his learning and acuteness. His treatise on this subject is called by Marracius (*Bibliotheca Mariana*) "opus insigne et absolutum". In his work on the Fourth Book of Sentences, he shows great breadth of view and critical perception; in addition to the scholastic method, he makes use of the historical method and fully recognizes the development of sacramental theology. He took an active part in the labours of the commissions appointed by Urban VIII to revise the Roman Breviary, and to examine into the affairs of the Eastern Church. At the general chapter of the order held in Rome in 1639, he was elected definitor general.

Hickey wrote "Commentarii in Lib. IV Sententiarum" (Lyons, 1639), "Nitela Franciscanae Religionis" (Lyons, 1627), in this book he refutes the aspersions cast on the early history of the Franciscan

Order by Abraham Bzovius; "De Conceptione Immaculata B. Mariæ Virginis"; "De Stigmatibus S. Catharinæ Senensis", written by order of the Sacred Congregation of Rites; "Ad pleraque dubia moralia, et asectica, gravissimæ responsiones" This work, which Wadding calls "opus doctissimum", is still in MS. Among the MSS. preserved in the Franciscan Convent, Dublin, are several letters written to Father Hickey from Ireland on the civil and ecclesiastical affairs of that country. There is also an important letter of his on the Irish language. Many of the Irish bishops consulted him on matters of grave moment. His acquaintance with the history, language, and antiquities of Ireland was extensive, and in co-operation with John Colgan, Hugh Ward, and other Irish scholars, he drew up a plan for a critical history of Ireland in all its branches,—but this idea was not realized.

WADDINGUS-SBARALEA, *Scriptores Ord. S. Francisci* (Rome, 1806); IOANNES A. S. ANTONIO, *Bibliotheca Univ. Franciscana* (Madrid, 1732); VERNULEJUS, *De Academia Lovaniensi*; WARE-HARRIS, *Works* (Dublin, 1764); BRENNAN, *Ecclesiastical History of Ireland* (Dublin, 1840).

GREGORY CLEARY.

Hickey, THOMAS F. See ROCHESTER, DIOCESE OF.

Hierapolis, titular archdiocese, metropolis of the Province of Euphrates, in the Patriarchate of Antioch. The native name, Mabog or Maboug, the Greeks make Βαυβόκη and Selucus Nicator transforms into Hierapolis or Hieropolis, both forms being found on the coins. This appellation of "Holy City" is an allusion to the celebrated temple erected to the Syrian goddess Atargatis or Derceto, who was also venerated at Palmyra, Ascalon, and elsewhere. The dove was sacred to this goddess, who is represented under the form of a woman-fish. The temple of Hierapolis was pillaged by Crassus at the time of his expedition against the Parthians. Lucian of Samosata tells us that numerous pilgrims repaired thither twice a year in order to pour water through the opening of an abyss. Under the Seleucides and the Romans, Hierapolis became a great commercial centre, a halting-place for the caravans going from Seleucia to Babylon. As the capital of the province of Commagene, or Euphrates, it became an important military stronghold where the Roman and Byzantine armies were concentrated, once the Persians had crossed the frontier and taken the first line of the defences. Julian the Apostate stopped here for some days before marching against Sapor. In 540 the city escaped pillage by the troops of Chosroes only by the payment of a heavy fine. Justinian fortified it, reducing the extent of the ramparts, which, with their numerous towers, also built by this emperor, are still standing. It requires about an hour to make the circuit of them. In 1068 the Emperor Romanus Diogenes took the city, thus staying the progress of the Turks.

Lequien (*Or. Christ.*, II, 925-8) names ten bishops of Hierapolis. Among the best-known may be mentioned Alexander, an ardent advocate of the Nestorian heresy, who died in exile in Egypt; Philoxenus or Xenania (d. about 523), a famous Monophysite scholar; Stephen (c. 600), author of a life of St. Gollindouch. Under the Patriarch Anastasius, in the sixth century, the metropolitan See of Maboug had nine suffragan bishoprics (*Echos d'Orient*, 14, 145). Chabot (*Revue de l'orient chrétien*, VI, 200) mentions thirteen Jacobite archbishops from the ninth to the twelfth century. One Latin bishop, Franco, in 1136, is known (Lequien, III, 1193). This see must not be confounded with Hierapolis in Arabia, a large number of whose titulars in the fifteenth century are mentioned by Eubel (II, 181). To-day Membidj is a *caza* of the sanjak and vilayet of Aleppo in a rich plain. The village is situated twenty miles west of the Euphrates, and contains 1500 inhabitants, all Circassians. The ruins of the city of Hierapolis are thirteen miles north, at Kara-Membidj,

where remains of aqueducts and the Byzantine walls of Justinian are still to be seen.

CHESNEY, *Expédition Euphrate*, I, 5, 6; SMITH, *Dictionary of Greek and Roman Geography*, I, 1064; CHABOT, *La frontière de l'Euphrate* (Paris, 1907), 338-340; CUINET, *La Turquie d'Asie*, II (Paris, 1892), 218-20.

S. VAILHÉ.

Hierapolis, a titular see of Phrygia Salutaris, suffragan of Synnada. It is usually called by its inhabitants Hieropolis, no doubt because of its *hieron* (which was an important religious centre), is mentioned by Ptolemy (v, 2, 27), and by Hierocles (*Synecd.*, 676, 9). It appears as a see in the "Notitia Episcopatum" from the sixth to the thirteenth centuries. It has been identified as the modern village of Kotehissar in the vilayet of Smyrna, near which are the ruins of a temple and the hot springs of Iidja. Hierapolis once had the privilege of striking its own coins. We know three of its bishops: Flaccus, present at the Council of Nicæa in 325 and at that of Philippopolis in 347; Avircius, who took part in the Council of Chalcedon, 451; Michael, who assisted at the second Council of Nicæa in 787. St. Abercius, whose feast is kept by the Greek Church on 22 October, is celebrated in tradition as the first Bishop of Hierapolis. He was probably only a priest, and may be identical with Abercius Marcellus, author of a treatise against the Montanists (Eusebius, H. E., V, xvi) about the end of the second century. On the epitaph of Abercius and its imitation by Alexander, another citizen of Hierapolis, see ABERCIUS, INSCRIPTION OF. The town in question must not be confounded with another Hierapolis or Hieropolis, more important still, a see of Phrygia Pacatiana. Lequien in his "Oriens Christianus" makes this error (I, 831 sq.). There is also another Hierapolis, a see of Isauria, suffragan of Seleucia (Lequien, II, 1025).

RAMSAY, *Cities and Bishoprics of Phrygia* (Oxford, 1895-1897); IDEM, *Trois villes phrygiennes in Bulletin de correspondance hellénique*, 1882, VI; DUCHESNE, *Hierapolis, patrie d'Abercius in Revue des questions historiques* (July, 1883).

S. PÉTRIDÈS.

Hierarchy (Gr. *Ἱεραρχία*; from *ἱερός*, sacred; *ἀρχήν*, rule, command). This word has been used to denote the totality of ruling powers in the Church, ever since the time of the Pseudo-Dionysius Areopagita (sixth century), who consecrated the expression in his works, "The Celestial Hierarchy" and "The Ecclesiastical Hierarchy" (P. G., III, 119 and 370). According to this author and his two commentators, Pachymeres (P. G., III, 129) and Maximus (P. G., IV, 30), the word connotes the care and control of holy or sacred things, the *sacer principatus*. The "Hierarchia", it is here explained, is he who has actual care of these things; who, indeed, both obeys and commands, but does not obey those he commands. There is, consequently, a necessary gradation among hierarchs; and this gradation, which exists even among the angels, i. e. in the heavenly hierarchy (on which the ecclesiastical hierarchy is modelled), must *a fortiori* be found in a human assembly subject to sin, and in which this gradation works for peace and harmony ("S. Gregorii Reg. Epist.", V, 54, in P. L., LXXVII, 786; "Decreta Dionysii papæ", in the Hinschius ed. of the Pseudo-Isidorean Decretals, 195-6, Berlin, 1863; "Decretum" of Gratian (Pseudo-Boniface), pt. I, D. 89, c. vii). The hierarchy, therefore, connotes the totality of powers established in the Church for the guiding of man to his eternal salvation, but divided into various orders or grades, in which the inferior are subject to and yield obedience to the higher ones.

I. HIERARCHY OF ORDER AND OF JURISDICTION.—It is usual to distinguish a twofold hierarchy in the Church, that of order and that of jurisdiction, corresponding to the twofold means of sanctification, grace, which comes to us principally through the sacraments,

and good works, which are the fruit of grace. The hierarchy of order exercises its power over the Real Body of Christ in the Eucharist; that of jurisdiction over His Mystical Body, the Church (Catech. Conc. Trid., pt. II, c. vii, n. 6). Christ did not give to all the faithful power to administer His sacraments, except in the case of baptism and matrimony, or to offer public worship. This was reserved to those who, having received the sacrament of order, belong to the hierarchy of order. He entrusted the guidance of the faithful along the paths of duty and in the practice of good works to a religious authority, and for this purpose He established a hierarchy of jurisdiction. Moreover, He established His Church as a visible, external, and perfect society; hence He conferred on its hierarchy the right to legislate for the good of that society. For this double purpose, the sanctification of souls and the good or welfare of religious society, the hierarchy of jurisdiction is endowed with the following rights: (1) the right to frame and sanction laws which it considers useful or necessary, i. e. legislative power; (2) the right to judge how the faithful observe these laws, i. e. judicial power; (3) the right to enforce obedience, and to punish disobedience to its laws, i. e. coercive power; (4) the right to make all due provision for the proper celebration of worship, i. e. administrative power. Furthermore, with the power of jurisdiction there should be connected the right to exercise the power of order. The acts of the power or order are, it is true, always *valid* (except in the sacrament of Penance, which requires in addition a power of jurisdiction). However, in a well-ordered society like the Church, the right to exercise the power of order could never be a mere matter of choice. For its legitimate exercise the Church requires either jurisdiction, or at least permission, even of a general character.

Ordinarily, also, the teaching power (*magisterium*) is connected with the power of jurisdiction. It is possible, of course, to distinguish in the Church a threefold power: the *potestas magisterii*, or the right to teach in matters of faith and morals; the *potestas ministerii*, or the right to administer the sacraments, and the *potestas regiminis*, or the power of jurisdiction. Christ, however, did not establish a special hierarchy for the "potestas magisterii", nor does the teaching power pertain to the power of order, as some have maintained, but rather to the power of jurisdiction. The Vatican Council, indeed, seems to connect the supreme magisterial power of the pope with his primacy of jurisdiction (Constitutio de Ecclesiâ Christi, cap. i and iv). Moreover, the power of jurisdiction implies the right of imposing on the faithful a real obligation to believe what the Church proposes. Finally, in the Church, no one can teach without a *missio canonica*, or authorization from ecclesiastical superiors, which brings us back again to the power of jurisdiction. Nevertheless, as a general rule, the "potestas magisterii" belongs to those only who have also the power of order, i. e. to the pope and the bishops, and cannot be separated from the latter power; the same is equally true of the power of jurisdiction (Schnell, "Die Gliederung der Kirchen-gewalten" in "Theologische Quartalschrift", LXXI 1889, 387 sq.). Jurisdiction is exercised *in foro interno* (*potestas vicaria*), and *in foro externo*. The latter aims directly at the welfare of religious society, indirectly at that of its individual members; the former deals directly with individuals, and only indirectly with the religious society as a whole.

Finally, jurisdiction is either ordinary or delegated; the first is acquired by the acceptance of specified functions to which the law itself attaches this power, that the possessor must exercise in his own name; the second is obtained by virtue of a special delegation from ecclesiastical authority, in whose name it is to be exercised.

A. *Hierarchy of Order*.—The Council of Trent has defined the Divine institution of the first three grades of the hierarchy of order, i. e. the episcopate, priesthood, and diaconate (Sess. XXIII, De sacramento ordinis, cap. iv, can. vi). The other orders, i. e. those of subdeacon, acolyte, exorcist, lector, and porter, are of ecclesiastical institution. There is some controversy about the subdiaconate. The Council of Trent did not decide the question, but only declared that Fathers and councils place the subdiaconate among the major orders (loc. cit., cap. ii). It is now pretty generally held that the subdiaconate is of ecclesiastical institution, chiefly because of the lateness of its appearance in ecclesiastical discipline. Its introduction was due to the unwillingness of certain Churches to have more than seven deacons, conformably to Apostolic practice in the Church of Jerusalem (Acts, vi, 1-6). Furthermore, the ordination rite of subdeacons does not seem sacramental, since it contains neither the imposition of hands nor the words "Receive the Holy Ghost". Finally, in the Eastern Uniat Churches the subdiaconate is reckoned among the minor orders. For this opinion may be quoted Urban II in the Council of Benevento in 1091 (Hardouin, "Acta Conc.", VI, ii, 1696, Paris, 1714), the "Decretum" of Gratian (pars I, dist. xxi, init.), Peter Lombard ("Sent.", Lib. IV, dist. xxiv), and others; see Benedict XIV, "De Synodo Diœcesanâ", VIII, ix, n. 10). This hierarchy of ecclesiastical origin arose at the end of the second and the beginning of the third century, and appears definitely fixed at Rome under Pope Cornelius (251-252), who tells us that in his day the Roman Church counted 46 priests, 7 deacons, 7 subdeacons, 42 acolytes, and 52 clerics of lower grades, exorcists, lectors, and porters (Eusebius, "Hist. Eccl.", VI, 43). In the primitive Church there were also deaconesses, widows, and virgins, but these did not belong to the hierarchy properly so called, nor does Pope Cornelius include them in his list of the Roman clergy. Their principal functions were prayer, the practice of works of charity, and of hospitality; while they performed certain liturgical functions, as in the baptism of women and at the agape, they never took any part, except by unauthorized abuse, in the ministry of the altar strictly speaking (Duchesne, "Christian Worship", London, 1904). Finally, although abbots of monasteries may confer the four minor orders, they do not constitute a special order or grade in the hierarchy. It is not by virtue of the blessing they receive from the bishop that they may confer orders, but by virtue of a privilege which canon law grants to abbots who have received such solemn blessing from a bishop (Gasparri, "Tractatus Canonicus de sacrâ ordinatione", I, iv, Paris, 1893). The Latin Church, therefore, counts eight grades in the hierarchy of order, the episcopate being counted a separate order from that of the priesthood, and ecclesiastical tonsure not being an order.

This latter point, formerly controverted by canonists, is no longer in doubt: the tonsure is, in the present discipline, a simple rite by which a layman becomes an ecclesiastic, a necessary antecedent condition for the lawful reception of orders proper, and not an order itself, except in a very inaccurate way of speaking, since the ceremony conveys no "potestas ordinis". In the Middle Ages Scholastic theologians denied that the episcopate was a distinct order from priesthood, alleging that the former is only the complement and perfection of the latter. In respect of the offering of the Holy Sacrifice the bishop, it is true, has no more power than a priest; on the other hand, it is only a bishop who can ordain a priest; and this difference of power implies a distinction of order. Against this distinction it has been objected that an episcopal ordination would be invalid unless the subject had first of all received sacerdotal ordination. It is true that, according to the modern practice, one

should admit this theory; but formerly, especially in the case of the ordination of the bishops of Rome, the practice of the Church was different. The title *De septem ordinibus*, which we read in the editions of the Council of Trent (Sess. XXIII, *De sacramento ordinis* cap. ii), is an addition of a later period, and the council expressly declares that bishops have a power of order superior to that of priests. The Greek Uniat Church, as a general rule, only counts two grades of ecclesiastical institution: the subdiaconate and the lectorship. Nevertheless, ordination to the subdiaconate implies also the minor orders of acolyte and porter, and ecclesiastical tonsure is given when the bishop confers the lectorship. The order of exorcist is in reality the only one not known to the Greek Church. It considers the power of exorcising as a special gift of Divine goodness, not as something acquired by ordination. By the Constitution "Etsi pastoralis" Benedict XIV derogated from the decision of Innocent IV, and completely approved the discipline of the Greek Church on this matter (Papp-Szilágyi, "Enchiridion juris Ecclesiæ Orientalis catholice", Grosswardein, 1862, 405-7). It is probable that no other minor orders were originally known to the Greek Church. In Christian antiquity, it is true, especially among the Greek Christians, we meet with many subordinate functionaries, e. g. singers ("*cantores*", or "confessores"); "parabolani", who cared for the sick; "copiata" (fossors), or sextons who buried the dead; "defensores", who attended to ecclesiastical trials; notaries and archivists; "hermeneutæ", or interpreters, whose duty it was to translate for the people the Scriptures, also the homilies of the bishop; with these, however, there is not question of orders, but of functions entrusted, without ordination, either to clerics or laymen (Benedict XIV, "De Synodo Diocesana", VIII, ix, n. 8; Gasparri, "op. cit.", I, vii).

B. *Hierarchy of Jurisdiction*.—In the hierarchy of jurisdiction the episcopate and the papacy are of Divine origin; all the other grades are of ecclesiastical institution. According to the Vatican Council the Bishop of Rome, as successor of St. Peter, has been established by Christ as the visible head of the whole Church militant, and possesses a real primacy of jurisdiction, in virtue of which he has supreme power of jurisdiction over the universal Church in matters of faith, morals, discipline, and the government of the Church. This power is ordinary and immediate over all the Churches, and over each one in particular, over all the pastors and faithful, collectively and individually (Const. de Eccl. Christi, cap. i-3). The government of the Church is strictly monarchical. The bishops are the successors of the Apostles, but do not inherit their personal prerogatives, such as universal jurisdiction and infallibility (Cone. Trid., Sess. XXIII, *De sacramento ordinis*, cap. iv). The pope is bound to establish bishops who enjoy genuine ordinary power in the Church (*potestas ordinaria*), and who are not merely his delegates or vicars, as some medieval theologians held. On the other hand, the theory proposed in the fifteenth century at the Councils of Constance and Basle, which made the pope subject to an œcumenical council; the Gallican theory, that would impose limits on his power by the ancient canons received in the Church, and requiring the acceptance or consent of the Church before his decisions could become irreformable; and the theory of Febronius, who maintained that the Holy See had usurped many rights which properly belonged to the bishops and that ought to be restored to them, are all equally false and opposed to the monarchical constitution of the Church (see GALLICANISM; FEBRONIANISM). An œcumenical council does, indeed, possess sovereign authority in the Church, but it cannot be œcumenical without the pope.

It will suffice to mention the now universally re-

jected opinion of Gerson and a few other doctors of the University of Paris in the Middle Ages, who held that parish priests were of Divine institution, being (in this opinion) the successors of the (72) disciples of Christ. This opinion was defended, in more recent times, by certain Jansenists, by Van Espen, and a few other canonists (Houwen, "De parochorum statu", Louvain, 1848, 7 sqq.).

The composition of the hierarchy of jurisdiction in the (Western) Catholic Church is indicated, in summary form, as follows. By virtue of his primacy, supreme authority over the whole Church belongs to the pope, who is at the same time Patriarch of the West, Primate of Italy, metropolitan of the ecclesiastical province of Rome, and bishop of the city of Rome. In the actual discipline of the Church, the cardinals hold second place. They are the pope's advisers in the more important matters concerning the universal Church, and exercise their jurisdiction in the various congregations, tribunals, and offices instituted by the pope for the government of the universal Church. (For the recent reorganization of the Roman Curia and the Roman Congregations, see articles under those headings; and cf. the "Sapienti Consilio" of Pius X, 29 June, 1908.) Next in order come the patriarchs. The Councils of Nicæa (325), of Constantinople (381), of Chalcedon (451) recognized in the Bishop of Rome for the West, in those of Alexandria, Antioch, Jerusalem, and Constantinople for the East, over the territories included within their patriarchates, a jurisdiction higher than that of archbishops. The four Eastern patriarchates, as a consequence of the Mohammedian invasion and the Greek schism, gradually lost communion with Rome, but were re-established in the Latin Rite at the time of the Crusades.

After the Fall of Constantinople (1453) the Holy See contented itself with nominating for these sees four titular patriarchs resident in Rome; however, since 1847, the Latin Patriarch of Jerusalem resides in that city. Besides these ancient or "greater" patriarchs there are, in the Latin Rite, minor patriarchs, whose title is purely honorary. They are: the Patriarch of Venice (formerly Patriarch of Grado); the Patriarch of the West Indies, who resides in Spain; the Patriarch of the East Indies (Archbishop of Goa); and the Patriarch of Lisbon. The Patriarchate of Aquileia was suppressed in 1751.

In the West the dignity of primate corresponds to that of exarch in the East. With the exception of the Primate of Gran (*Strigonensis*) in Hungary, primates have a mere pre-eminence of honour over metropolitans. Among the primates are the Archbishop of Salzburg (Germany), Prague (Bohemia), Gnesen-Posen and Warsaw (Poland), Toledo and Tarragona (Spain), Rouen (France), Armagh (Ireland), Venice (for Dalmatia), Mechlin (Belgium), and Carthage (Africa). Metropolitans, on the other hand, have real rights over the bishops within their ecclesiastical province, and over the province itself. The bishops subject to their jurisdiction are called *episcopi com-provinciales* or *provinciales*, also *suffraganei* or *suffragans*. Since the sixth century metropolitans have been also known as archbishops, which title they share with titular archbishops. By this term are meant archbishops who administer a diocese but have no suffragans, also archbishops merely titular, i. e. who have no jurisdiction, but only the title of some extinct archdiocese. Metropolitans are obliged at stated times to summon provincial synods, to legislate for the whole province.

After the archbishops come the bishops, who of Divine right administer the dioceses entrusted to them by the Holy See, which may determine or in a measure limit their rights. If they are not subject to the authority of an archbishop, they are known as exempt bishops, and are directly subject to the Holy See. Besides the diocesan bishops there are also titular

bishops, formerly called bishops *in partibus infidelium*. These receive episcopal consecration, but have no jurisdiction over the dioceses of which they bear the title. They may be appointed by the pope as auxiliary bishops or coadjutors to diocesan bishops. In the eighth century there are found, in the West, *chorepiscopi*, i. e. auxiliary bishops and substitutes for diocesan bishops *sede vacante*. They had no distinct territory and ceased to exist in the ninth century.

After the bishops in the hierarchy of jurisdiction come the *prælati nullius*; they are more correctly styled *prælati nullius cum territorio separato*, and exercise episcopal authority over a territory not belonging to any diocese; they must be carefully distinguished from the *prælati nullius cum territorio conjuncto*, and from superiors of exempt religious colleges, whether secular or regular. "Prælati nullius cum territorio conjuncto" exercise a quasi-episcopal authority over a territory which forms part of a diocese, whereas superiors of exempt colleges have authority only over the personnel of their own community.

In the government of his diocese the bishop is assisted by various ecclesiastics. Chief among these formerly was the archdeacon, i. e. the principal deacon of the cathedral church. In time dioceses came to be divided into several archdeacons, the titulars of which exercised a right of surveillance over their particular territory and enjoyed extensive judicial power. The Council of Trent (1547-65) limited their powers, after which they gradually disappeared. At present the bishop's chief assistant is known as his vicar-general, an institution dating back to the thirteenth century. The members of the cathedral chapter, or canons, make up the council of the bishop, and in certain matters he may not act without their consent. Where there is no chapter, the *consultores cleri diocesani* take their place, but have only a consultative voice. To the chapter belongs the right of nominating the vicar capitular, charged with administering the diocese during a vacancy. After the ninth century archpriests or deans appear, charged with the supervision of the clergy and laity in their districts; it was their duty to enforce the observance of the canons in the administration of church property.

Finally, at the head of a parish is the pastor (*parochus*), with ordinary jurisdiction. Where parishes have not been canonically erected, his place is taken by a "rector", whose jurisdiction is merely delegated, but whose rights and duties are those of a parish priest (see RECTOR).

A few words are here pertinent concerning the manner in which the pope exercises his immediate jurisdiction in the various parts of the Catholic world. This is done principally through legates, of whom there are three kinds: (1) *legati nati*, or incumbents of certain archdioceses to which was formerly attached the right of representing the Holy See (e. g. Canterbury), such pre-eminence is now purely honorific; (2) *legati a latere*, or cardinals sent by the pope on extraordinary missions or as temporary representatives; (3) *nuntii apostolici*, i. e. ordinary representatives of the pontifical authority in certain countries; they also act as diplomatic representatives with civil governments. When they lack the latter quality they are known as Apostolic delegates. In mission countries, i. e. where the hierarchy is not established, the pope delegates vicars Apostolic, who are, as a rule, titular bishops, and whose rights resemble, in general, those of bishops. Prefects Apostolic govern a mission, whether subject to a vicar Apostolic or not; a final category is known as missionaries Apostolic, who differ from simple missionaries in that they receive their powers directly from the Holy See, and not from a vicar or prefect Apostolic. When the latter has no coadjutor with the right of succession, he is bound to appoint a pro-vicar or pro-prefect.

In the Eastern Uniat Church the hierarchy in gen-

eral resembles that of the West; the variations are few, and may be briefly stated as follows. The Holy See exercises its authority over Churches of the Eastern Rite through a "Congregatio pro negotiis rituum Orientalium", attached to Propaganda, but charged exclusively with questions concerning the Eastern Churches; the Holy See acts also through Apostolic delegates. While the patriarchic organization is preserved, all patriarchs have not equal powers; some of them are even subject to Apostolic delegates. In the Maronite Church we find among the bishop's assistants an archdeacon who is also vicar-general, but has no authority over the priests; an "œconomus", who looks after the property and revenue of the church, subject to the bishop's supervision; a "periodeuta" or bardût, charged with the supervision of the churches and the clergy of the diocese (he has also the right to consecrate baptistries, churches, and altars, and, with the consent of the patriarch, to administer confirmation). The "chorepiscopus" resembles the bardût, but may also give minor orders. The bishop has the right to establish a chorepiscopus wherever there is a numerous clergy; in the cathedral city itself he is known as the *archipresbyter*, or *chûri-episcoupe*. These various functions are conferred by a rite resembling that of ordination (Silbermagl-Schnitzer, "Verfassung und gegenwärtiger Bestand sämtlicher Kirchen des Orients", Ratisbon, 1904, 346 sqq.).

The Hierarchy of the Anglican Church.—The organization of the Anglican closely resembles that of the Catholic Church. In its hierarchy of order it counts three grades of Divine institution, episcopate, priesthood, and diaconate. In its hierarchy of jurisdiction come first the archbishops, some of whom have the title of primate, are at the head of an ecclesiastical province, and may convene a provincial synod or Convocation (see CONVOCATION OF THE ENGLISH CLERGY). The bishop rules his diocese with the aid of a chancellor or vicar-general; in the larger dioceses there are suffragan or auxiliary bishops. Chapters and deans of cathedral churches have survived, but are not active in diocesan administration. The bishop may convene a diocesan synod. The Anglicans have also retained archdeacons, deans, and pastors. At present the Anglican Church counts 15 ecclesiastical provinces, comprising 216 dioceses; there are 33 dioceses belonging to no province, of which 24 acknowledge to some extent the Archbishop of Canterbury, 2 the Archbishop of York, 3 the Primate of Canada, 4 the Primate of Australia. There are also 42 suffragan bishops. At the time of the schism Henry VIII proclaimed himself head of the Anglican Church; but the authority of the sovereign in church matters, even within his own dominion, has greatly lessened. The Archbishop of Canterbury enjoys a sort of pre-eminence of honour. Since 1867 a Lambeth Conference is held every ten years at London, to which all the Anglican bishops of the world are invited. In 1897 it established a "Central Consultative Body", reorganized in 1908, but without judicial authority. In spite of many efforts to unify the Anglican Church this aim has not yet been realized. (Siegmond-Schultze in "Deutsche Zeitschrift für Kirchenrecht", 1909, XLI, 52-63.)

A. VAN HOVE.

Hierarchy of the Early Church.—The word hierarchy is used here to denote the three grades of bishop, priest, and deacon (*ministri*). According to Catholic doctrine (Council of Trent, sess. XXIII, can. vi), this threefold gradation owes its existence to Divine institution. Another name for this hierarchy is *hierarchia ordinis*, because its three grades correspond to the three grades of the Sacrament of Holy Orders. The word hierarchy is, however, also used in a wider sense. A further gradation of dignity is obtained by the inclusion of the Bishop of Rome, the head of the Church and Vicar of Christ, to whom, by reason of the Divine origin of the hierarchy, the three grades just mentioned are subordinated. If however, those features be taken into account which are of merely ecclesiastical origin, the hierarchy will include not only the remaining sacred orders, viz. the subdiaconate and the minor orders, but also all clerics who possess definite faculties not conferred by the orders themselves. Such are cardinals, nuncios, delegates, patriarchs, primates, metropolitans, archbishops, vicars-general, archdeacons, deans, parish priests, and curates. This hierarchy in the wider sense is called *hierarchia jurisdictionis*, because the persons in question have actual power in the Church. There is still a third sense in which the expression hierarchy may be used; in this it includes the whole clergy and laity, inasmuch as they are all members of the Church. No instance of the word *ιεραρχια*, corresponding to the term *ιεραρχης*, can be shown before Dionysius, the Pseudo-Areopagite. It is not to be interpreted as *ιερα αρχη* (sacred office), but as *ιερων αρχη* (office of sacred rites) (Petavius, "De angelis", II, ii, 2). That the expression *ιεραρχια* found general acceptance is due to the authority of the Pseudo-Areopagite. The third sense of the expression may be also traced to Dionysius [cf. J. Stiglmayr in "Zeitschr. für kathol. Theologie", XII (1898), 180 sqq.].

In the present article the expression hierarchy is employed in its narrowest sense. Since, however, the earliest history of this threefold institution—the episcopate, presbyterate, and diaconate—cannot be given without a detailed inquiry into the entire organization and inner constitution of the early Church, it is proposed to survey in full the earliest history of the organization of the Christian Church up to the year 150; and in this survey it is essential that we extend our inquiry to the Apostolic Office, as the root from which sprang the early Christian episcopate. The foundation of the Church by Christ, the history of the Primacy of the Bishop of Rome will not be dealt with here (cf. the articles: BISHOP; CHURCH; COLLEGE, APOSTOLIC; DEACON; PRIEST; PRIMACY; POPE; SUCCESSION, APOSTOLIC). The treatment of the subject will be under these six main heads: (I) The Principles Governing the Grouping of the Original Documents belonging to our question; (II) Enumeration of the Groups of Documents and the Explanation why these Groups have been thus arranged; (III) Discussion and Interpretation of all Texts of Date not later than the Middle of the Second Century (the full wording of the texts will be necessary only in exceptional cases); (IV) Detailed Evidence from Pagan Inscriptions, Papyri, and Ostraka, which throw light on Christian institutions; (V) Historical or Quasi-Historical Testimonies on the Constitution of Primitive Christianity, taken from Irenæus, Clement of Alexandria, Tertullian, Origen, Eusebius, Jerome, Theodore of Mopsuestia, and others; (VI) Short Synopsis of the Principal Results of the Investigation.

I. THE PRINCIPLES GOVERNING THE GROUPING OF THE ORIGINAL DOCUMENTS.—The common division into an Apostolic and a post-Apostolic period cannot be aptly applied to the collection of historical testimony bearing on the constitution of the early Church; such a division is indeed misleading. Because:

A. Our sources for the very earliest times are too scanty and fragmentary to give us anything approaching a clear picture of the institutions; it is therefore plain that the mere omission of certain things in these sources gives us no right to infer their non-existence.

B. Although the development of the primary elements and fundamental principles of the inner constitution of the Church was surprisingly rapid and uniform, at least in the essential features, the variations in different localities were not inconsiderable.

C. Several testimonies taken from the end of the first and the first half of the second century contain valuable historical information directly concerning the organization of the early Church and thus lead us to the border of the earliest epoch.

D. A wealth of formulæ of archæological interest, and many implicit statements of contemporary legal conceptions are found in these testimonies. They contain, as it were, the crystallized institutions of the earliest period.

E. One should not imagine the primitive ecclesiastical structure as a mere aggregate of disjointed fragments, but rather as a living and regularly developed organism, from whose inner construction we can under certain conditions arrive at definite conclusions as to its origin and growth.

The last two points show that it is allowable, and even necessary to determine from later sources the earliest state of the ecclesiastical constitution by cautious and critical method. A scientific investigation will first bulk together all the sources up to the middle of the second century, and then conceive as a whole, the development up to that time. Research will show that many of the institutions are undoubtedly post-Apostolic, while of the greater number of them, it can only be said that they followed one another in a certain order: it is impossible to determine the exact date of their first appearance. The encyclicals of St. Ignatius (about 110) mark the close of a definite period; and there are other sources, the dates of which are exactly known, that enable us to ascertain the first beginnings and some intermediate steps in the development of this period. This makes it possible to sketch more or less accurately the remaining stages without fixing upon the exact date of each document. For instance, it cannot be doubted that certain descriptions in the "Doctrine of the Twelve Apostles" (*Διδαχὴ*) suppose an older phase of corporate development than that which we meet with in the Pastoral Epistles and the Epistle of Clement. This fact however does not decide the question whether the Didache was actually written before the Epistle of Clement and the Pastoral Epistles. As to the latter, it is clear that the system of government depicted therein represents an earlier phase than that given in the Letters of Ignatius.

It is not our intention in this article to undertake a preliminary and cursory review of the sources, which would only establish the most evident facts of chronology. This task has been already sufficiently often undertaken from widely different standpoints, and it has been shown on incontestable evidence that the several grades of the hierarchy did not exist from the beginning in their later finished form, but grew up to it by various processes, partly of development and partly of self-differentiation. Supposing therefore that the process of development has been determined in its most general outlines, we can arrange the sources accordingly. Whether the chronology be treated previously or consequently to such an arrangement, that factor must be considered separately.

The classification will now follow of the whole documentary material up to the second half of the second century. From the entire material we shall first collect those testimonies which evidently exhibit the most advanced stage of development and the closest resemblance to the institutions of this period. These documents will form the fourth group. We then gather all those accounts in which the plenitude of the Apostolic authority is shown in conjunction with a somewhat unfinished and fluctuating system of ecclesiastical government; these form the first group. The remaining documents will be assigned to the second or third group accordingly as they are more nearly related to the first or to the fourth.

II. GROUPS OF DOCUMENTS.—A. Enumeration.—

(1) The First Group includes: (a) the first six chapters of the Acts of the Apostles, and the passages in the Synoptics concerning the special call and unique position of the Twelve, (b) the two Epistles to the Corinthians, the Epistle to the Galatians, the two to the Thessalonians, and the Epistle to the Romans, (c) some texts from the Acts of the Apostles (to be collected later) about the Apostles as witnesses and preachers, about the obedience due to them, and about the fellow-labourers of St. Paul, (d) the account in the Acts about the seven helpers of the Apostles (vi, 10), of the presbyters of Palestine (xi, 30; xv, xvi, 4; xxi, 18), of the presbyters in Asia (xiv, 23), of the prophets (xiii, 1-3; xv, 32; xxi, 8 sq.).

(2) The Second Group includes: (a) the Epistles to the Philippians, Ephesians, Colossians, and to Philemon, (b) the twentieth chapter of the Acts of the Apostles (17 sq.), (c) the First Epistle of Peter, (d) the Didache.

(3) The Third Group includes: (a) the Treatise to the Hebrews, (b) the Epistle of James, (c) the Second Epistle of Peter, (d) the Epistle of Jude, (e) the Three Epistles of John, (f) the Pastoral Epistles, (g) the First Letter of Clement, (h) the Ascension of Isaiah.

(4) The Fourth Group includes: (a) the Apocalypse, (b) the Gospel of St. John, (c) the Seven Encyclicals of Ignatius, and the Letter of Polycarp, (d) the Letter of Barnabas, and the homily known under the title of the Second Letter of Clement, (e) the Pastor of Hermas, (f) Justin, (g) Hegesippus, (h) Abercius, besides (i) a brief dissertation on Gnosticism and Monism.

B. *Explanation of the Groups.*—(1) General Remarks.—The Apologists (Justin excepted), the fragments of the presbyters and of Papias, the Letter to Diognetus (chaps. xi and xii are spurious), the "Acta" and "Passiones" of the martyrs of this period, accepting a passage from the "Passio Polycarpi"; the Apocrypha properly so called, with the exception of the Ascension of Isaiah; all these furnish nothing directly bearing on our matter. The same is true of the Christian papyri, the Ostraka, and the inscriptions. One cannot attach the value of independent testimony to four passages dealing with the special call and vocation of the Twelve, viz. from the Ebionitic Gospel (Epiphanius, "Hær.", xxx, 13), from the Apology of Aristides (Texte und Untersuch., IV, iii, 1893, 9, 10), from the Mission Sermon of Peter (Κήρυγμα Πέτρον; Robinson, "Texts and Studies", 1891, 86 sq., fragm. 1), and from a Coptic papyrus at Strasburg—(cf. Göttingergel. Anz., 1900, 481 sq.). In regard to the oldest Greek Christian papyri, see Wessely "Les plus anciens monuments du christianisme écrits sur Papyrus" ("Patrologia Orientalis", ed. Graffin and Nau, IV, 2). Even without taking into account the lack of a critical text, we must nevertheless abandon any attempt to argue from the Clementines, since even the oldest parts betray themselves more and more as a product of the third century. The writer of the original document may now and then have made use of valid traditions, in questions affecting the con-

stitution of the Church, but he is guilty of arbitrary inventions and changes. All the conclusions regarding primitive conditions which Hilgenfeld's acumen and learning enabled him to draw from the Clementines, must give way under the pressure of careful criticism. Neither does the present writer make use of the so-called "Apostolic Church Ordinance", because of the invalidity of Harnack's hypothesis ("Die Quellen der sog. Apost. Kirchenord.", 1886, 32 sq.), which would base Chaps. 16-21: 22-28 on two ancient sources dating from the middle of the second century. The work belongs to the third century and hardly admits of critically safe conclusions. The same is true of the Syriac Didaskalia.

(2) Remarks on the First Group, Section (a).—According to the restrictions made above, we consider here the Gospel accounts only in so far as their testimony enables us to form an idea of the Church as it existed in the first generation. The accounts about the position, the authority, the activity of the original Twelve in Jerusalem (Acts, i-vi) bear the most evident signs of antiquity and genuineness, and agree with all the other information about the dignity of the Apostles handed down to us from early times.

(3) Remarks on the First Group, Section (d).—It will not suffice, with regard to the presbyters of the Acts of the Apostles, to establish historically the fact that about A. D. 50 there were presbyters in Jerusalem and in other localities in Palestine, and that at the same time, Paul on his first journey appointed presbyters in Asia Minor. There remains another important question to be solved, whether all these presbyters are, in a true sense of the word, the predecessors of that primitive college which we meet, for instance about 115, in the writings of Ignatius of Antioch. There is not the slightest critical reason—we shall prove this later on at full length—why the presbyters of Asia Minor should be understood as different from the superiors mentioned in the First Epistle to the Thessalonians. On the other hand, we regard the presbyter-bishops of Ephesus (Acts, xx) as belonging to the second group of the sources, because they represent an authority that is much more definite.

(4) Remarks on the First Group, Section (b), and on the Second Group.—In the First Epistle to the Thessalonians, the state of the Church as a corporate body does not differ in any essential point from that described in the accounts of the first group. The Apostle Paul appears as the first, nay, the only authority. In the Epistles to the Ephesians, Philippians, and Colossians, the conditions have changed a little. Indeed, the personal rule of the Apostle is still supreme; but some traits point to a gradual passing of power to other superiors. We are reminded of this fact by the title of the Epistle to the Philippians, in which bishops and deacons are mentioned. We are again reminded of it by the mention of Archippus, the minister, in the Epistle to the Colossians. The note to Philemon is likewise connected to some extent with this change. In the second group we place also the Epistle to the Ephesians, since it shows a remarkable decrease in the importance of individuals endowed with the charismata as members of the organized Body of Christ. For similar reasons we insert here the Didache.

(5) Remarks on the Third and Fourth Group.—All the writings enumerated in the third group show the organization of the Church more developed. The fourth group witnesses the preponderance of the monarchic episcopate. It is not easy to find the right place for the Pastor of Hermas. The degree of organic development supposed in that work, the pronounced control of the presbyters, and the presence to all appearances of a leading personality, Clement, all this points to an intermediate stage, the place of which we are much inclined to fix between the First Letter of Clement and the Encyclicals of Ignatius. Only once is Clement mentioned and then

in passing; little therefore can be gathered as to the position assigned him by Hermas. On the other hand, the Church's organization is more stable than it was in Corinth at the time of the first Clement about A. D. 98. Whether Hermas really attempted to carry back his description of the Church to the end of the first century by giving it a tinge of antiquity is as yet an open question; the categorical "No" of recent scholars provokes contradiction. At all events the attempt of Hermas, supposing it to have been made, was rather weak. But, on the other hand, the personal tone is no proof to the contrary. Still, there are strong indications that the prophet wrote about A. D. 150. A monarchic bishop, it is true, is nowhere mentioned, but from this it does not follow that Hermas finished his work before the election of his brother Pius to the Bishopric of Rome. Just because he was the brother of the Head of the Church, he must have thought it more advisable to be silent concerning him and to antedate the abuses which he reprehends.

III. DISCUSSION OF TEXTS OF DATE NOT LATER THAN THE MIDDLE OF THE SECOND CENTURY.—A. *The Texts of the First Group.*—If we judge of the organization of the Churches depicted in the first group of documents simply according to the account given in the texts, without using a definite theory as a basis, nine questions naturally present themselves as to: (1) The Position of the Twelve; (2) The Position of the Seven Ministers of the Table (cf. *διακονεῖν τραπέζαις* Acts, vi, 2) mentioned in the Acts, and of the Presbyters of Palestine; (3) Origin of the Apostolic Authority; (4) Relations between the Apostles and the Christian Communities; (5) The Rights of the Christian Communities; (6) The Position of those Individuals possessing the Charismata; (7) The Origin of Ecclesiastical Authority in General; (8) The Position of the Superiors spoken of in some texts; (9) The Position of the Apostolic Fellow-Labourers.—

(1)—The Position of the Twelve.—In the first six chapters of the Acts the Eleven (Twelve if we include Matthias) appear as a governing body to whom the community of Jerusalem is subject (i, 13, 25, 26; ii, 14, 37, 42, 43; iv, 33, 35, 37; v, 2, 12, 18–42; vi, 2 sq., 6). The chief personality is Simon Peter (i, 15 sq., ii, 14, 37; iv, 8; v, 3 sq., 15, 29). Next to him stands John (iii, 1, 3, 4, 11; iv, 1, 13 sq.). According to these texts the Twelve are heralds of the Word of God and rulers of the community. This conception agrees with the traditions in the Synoptics. These traditions inform us: (a) of the special appointment of the Twelve, (b) of the office entrusted to them, and their future destiny.

(a) Special selection of the Twelve.—*a.* Appointment.—The vocation of individuals, viz. of Peter, Andrew, James and John. They are to be fishers of men (Mark, i, 16–20; Matthew, iv, 18–22). According to Luke, v, 10. Jesus, after the miraculous draught of fishes, says to Simon that henceforth he shall catch men. The calling of Matthew (Mark, ii, 13, 14; Matt., ix, 9; Luke, v, 27, 28). Appointment of the Twelve (Mark, iii, 13–19; Matthew, x, 2–4; Luke, vi, 12–16). Christ "also named them apostles" (Luke, vi, 13). *β.* The Office of the Twelve and their Future Destiny.—They are to be with Him and to be sent to preach (Mark, iii, 14). They are the salt of the earth and the light of the world (Matt., v, 13–16). They also must protect the world against corruption and elevate it by their holy example. What Christ has told them in the dark, they shall speak in the light (Matt., x, 26–27). *γ.* Mission of the Twelve to preach the kingdom and to heal the sick (Mark, vi, 7 sq.; Matt., x, 5 sq.; Luke, ix, 1 sq.). To the Gentiles they are not to go. Mission of the Seventy (Luke, x, 1–16). All are obliged to receive the Twelve and the Seventy, and to hear them; otherwise a severe judgment awaits them (l. c.). *δ.* The power to bind and to loose given to the Twelve (Matt., xviii, 15

sq.); they shall judge the twelve tribes of Israel (Luke, xxii, 30). *ε.* The Mission to the world (Mark, xvi, 14–18; Matt., xxxii, 18–20; Luke, xxiv, 44–49). *ς.* The Apostles will survive their Master and pass through days of sadness (Mark, ii, 19, 20; Matt., ix, 15; Luke, v, 34–35; similarly Mark, viii, 35 sq.; Matt., xvi, 24 sq.; Luke, ix, 22 sq.; Luke, xvii, 20 sq.). They will be dragged before tribunals (Luke, xii, 11, 12; xxi, 12 sq.; Mark, xiii, 9 sq.; Matt., x, 17 sq.).

(b) Special Appointment and Position of Simon Peter.—Peter is the foundation of the Church and the keeper of the keys; he has full power to bind and to loose (Matt., xvi, 18 sq.). Peter is to be like a wise and faithful steward, whom the master setteth over his family (Luke, xii, 41 sq.; cf. Matt., xxiv, 45 sq.). Christ prays for Peter; Peter is to confirm his brethren in the Faith (Luke, xxii, 31–34). No passage in early Christian literature permits our explaining the primitive and marked position of importance enjoyed by the Church of Jerusalem by the importance of this city itself. Only the Twelve are the bearers of this authority, and later James, the "brother of the Lord", and his circle. Nowhere do we hear that brethren gifted with the charismata had any influence in matters of government. The Apostolic authority is represented as the result of the Divine ordinance. This authority included jurisdiction. The Twelve regarded their prerogatives as a moral power conferred by God and Christ, as a right which exacted from others the correlative service of obedience.

(2) The Seven Apostolic Helpers (Acts, vi) and the Presbyters of Palestine.—(a) The Seven Administrators of the Table.—Owing to the complaint of Hellenistic Jewish Christians that their widows were less cared for than those of the "Hebrews", the Twelve provide that seven men, full of the Holy Ghost and wisdom be "looked out" and chosen (cf. *τὸ πλῆθος τῶν μαθητῶν*, Acts, vi, 2, and *ἐνάπιον παντὸς τοῦ πλήθους*, vi, 5) by the whole community (cf. *ἐπισκέψασθε* of vi, 3, and *ἐξελέξαντο* of vi, 5). The Apostles themselves intend to install the persons chosen in their office (vi, 3). This enables the Twelve to devote themselves (henceforth exclusively) to prayer and preaching. The Seven Elect are presented to the Apostles who "praying impose hands upon them" (vi, 5 and 6). No critical doubt can be cast upon any part of the narrative. An official name for the Seven has not come down to us. Their office is described as a ministering to the tables (*διακονεῖν τραπέζαις*, vi, 2), the care of the temporal support of the poor. In reality, however, one of those elected, Stephen, soon devotes himself with ardent zeal to the preaching of the Word of God. Another, Philip, becomes a missionary (viii, 5 sq.) He is called evangelist (xxi, 8).

The sources thus show that these seven men, elected by the people in obedience to the Apostles, were invested by the Apostles in the almoner's office with prayer and imposition of hands. In addition they could act as preachers. Whether this institution existed for any length of time, we do not know. There is no dogmatic tradition strictly speaking, nor any decisive historical reason to suppose that these seven men were deacons in the later sense of the word. The question of their position is usually looked at from a wrong point of view. For from the difference between the original and the later sphere of activity we cannot infer a lack of continuity between the office of the Seven and that of the deacons of the second century. The office of the Seven was no more completely independent than that of the later deacons. One and the same office may in course of time shift the limits of its competence to a very considerable extent; so much so that only a minimum may remain of what it was originally. Yet nobody speaks in this case of an essentially different office. To be convinced of this, we have only to consider the Roman offices of prætor and quæstor. In later times too the

care of the poor and sick was one of the duties of deacons proper. The distribution of the Eucharist was likewise part of their duty. It is not impossible that the last mentioned duty is already included in the expression "ministering to the tables", used in our text; for comparison see chap. ii, 46, "Breaking bread from house to house (κλώντες τε κατ' οἶκον ἄρτον) they took their meat (μετελάμβανον τροφῆς)". The most important point however is this: the Seven were appointed to their office by the Apostles with imposition of hands and prayer. This prayer must have contained, implicitly at least, the petition that the Holy Ghost might empower and strengthen the chosen ones to fulfil their office (of ministering to the tables), thus conferring all that was essentially necessary to make their office the same as the later diaconate. Nor has the Church ever placed the essence of the diaconate in anything else.

(b) The Presbyters of Palestine.—We do not know whether or not there is an historical basis for the legendary tradition that the first twelve Apostles, following the command of their Master, remained twelve years in Jerusalem. At all events only Simon Peter; (James), and John and James the "Brother of the Lord" are met with in Jerusalem between the years 45 and 50. About this time presbyters appeared in addition to the Apostles. We find mention of them for the first time in Acts, xi, 30. They are to be found in several Christian communities of Palestine. In Jerusalem the presbyters hold a middle rank between the Apostles and the rest of the community. Together with the Apostles they write the letter which conveys the decision reached by the Church of Jerusalem as to the proper mode of observing the law (xv, 1-30; cf. xvi, 4). The Acts mention the presbyters in connexion with James only on one other occasion (xxi, 18). It is contrary to the principles of historical research to associate the first appearance of the Palestinian presbyters with the monarchical position held by James of the house of David. It is only at a later time, probably after Peter had left Jerusalem for a long time or for ever, that James appears as the monarchical bishop of the holy city. The presbyters were at first simply assistants of the Twelve outside the capital. Then a substitute for the Apostles was needed in Jerusalem as well, when most of them had left that city. This was not a revolution in the system of church government; it was merely the natural course of events. No one who clearly understands the practice and the ideas of the earliest times will doubt that the installation of these presbyters was effected by means of imposition of hands and prayer. Very probably the presbyterate of the earliest time was only a dignity.

(3) The Origin of the Apostolic Authority.—(a) Paul proves that he is an Apostle sent directly by God and Christ and endowed with full power (Gal., i, 1, 12, 15; ii, 8-9; I Cor., i, 1; iii, 9-11; iv, 1; ix, 1; II Cor., i, 1; iii, 6; x, 4-8; xi, 4-5; the whole of chapters xi and xii; I Thess., i, 4-5; ii, 4, 13; Rom., i, 1-16; xi, 13 sq.; xii, 3; xv, 15-22; xvi, 25-27). (b) Supplementary texts: Gal., i, 8-9 (Paul preaches the absolute truth); Gal., ii, 2 (comparison between his Gospel and that of the original Apostles); Gal., ii, 6 (he did not receive power from other Apostles, whether the word Apostles be taken in the narrower or the wider sense). The thought underlying all these texts is this: Paul conceived his own authority as analogous to the power conferred by God and Christ upon the Twelve, a power which Paul himself acknowledged. (c) These utterances of Paul agree with the following from the Acts of the Apostles: ii, 32; iv, 33; v, 32; viii, 25 (the Apostles are authoritative witnesses of the Resurrection and the deeds of Jesus Christ): ix, 3 sq.; xxii, 14 sq.; xxvi, 15 sq. (vocation of St. Paul); iv, 19, 20; v, 29; x, 42 (the Apostles are bound to make known what they have seen and heard); ix, 27 (Paul

is presented to the Apostles by Barnabas at Jerusalem); xiii, 47 [Paul (and Barnabas?) appointed by Christ to be the light of the Gentiles]; xx, 24, τελειώτω [τελειώσαι] τὴν διακονίαν ἣν ἔλαβον παρὰ τοῦ κυρίου Ἰησοῦ, διαμαρτύρασθαι τὸ εὐαγγέλιον. This text is equivalent to those given above under (a).

(4) Relations of the Apostle to the Communities Founded by him.—(a) *Galatians*.—The Galatians were obliged to believe and obey the preaching of Paul (Gal., i, 6-12; iii, 1-2; iv, 14-19; v, 2, 7-10). Their relations are based upon the following three facts strongly emphasized by Paul: (i) They have received the Holy Ghost ἐξ ἀκοῆς πίστεως ("by the hearing of faith", iii, 2). (ii) Paul preaches the absolute truth, therefore let him be anathema who preaches a Gospel besides that which he has preached (i, 8-9). (iii) To resist the truth when preached, is to disobey (v, 7).

(b) *Corinthians*.—Paul introduces himself as an authoritative teacher: (I Cor., i, 11 sq.; cf. iii, 4-7; ii, 4-5; iv, 3-5, 15, 16, 17, Paul threatens to use severe measures (iv, 19-21); he commands them to expel the incestuous adulterers (v, 1-13); to appoint arbitrators (vi, 1-7); he distinguishes between his permission (συγγνώμη) and his command (ἐπιταγή) (vii, 6); cf. vii, 7, "I would"; 8, "I say"; 10, "I command, not I, but the Lord"; 12, "I speak, not the Lord"; 25, "I give counsel"; 40, he wishes them to follow his counsel. Paul has the right to be maintained by those to whom he preaches, but he has not made use of this right (ix, 1-2; 7-16). He praises them that keep his ordinances (xi, 2); "now this I ordain", 17; "the rest I will set in order, when I come", xi, 33 and 34; cf. also the orders, xiv, 28 sq. and xv, 1 sq.; xvi, 1 sq.: ordinance concerning the collection, which according to the will of the Apostles, was always to be looked upon as a free act of kindness. Cf. II Cor., ix and Rom., xv, 26 sq. In the first Epistle to the Corinthians the Apostle does not attribute to the community any authority whatsoever over himself; he refuses to be the object of any arrogant judgment (iv, 3). In three instances he admits that the community has certain rights which, however, have their origin in his command or his directions (v, 1-13; vi 1-7; xvi, 1 sq.). II Cor., i, 23 sq.: Paul assures them that he avoided coming to Corinth in order to spare them, and he adds: "Not because we exercise dominion over your faith, but we are helpers of your joy." This is the only passage of this kind found in the writings of St. Paul. II Cor., ii, 9: "For this end also did I write, that I may know the experiment of you, whether you be obedient in all things;" iii, 2-3; vii, 8-12; viii, 10 sq. (mild requests); x, 1-18; up to this chapter of the second Epistle to the Corinthians St. Paul lays little stress upon his authority; he does not so much utter injunctions as counsels and requests, without, however, acknowledging any power of the community over himself. Now he speaks of the spiritual weapons given by God "unto the pulling down of fortifications", (4) "bringing into captivity every understanding (νόημα) unto the obedience of Christ", (5) "having in readiness to revenge all disobedience", (6) the Lord has given him power "unto edification" (8; cf. xiii, 10; xi, 4); there is no other Christ, no other Gospel, but that which he has brought (ἀνέχεσθε, not ἀπειχεσθε) (xiii, 2); if he comes again, he will not spare the sinners. From chap. x on Paul again forcibly emphasizes his full authority over the community.

(c) *Romans*.—We must take into account that the Apostle speaks to a community which he himself has not founded (cf. especially chap. xv); consequently he does not give commands; nevertheless he teaches with full authority, as one who has power. He refers (xiii, 3) to the grace granted him in order that he might be enabled to give earnest admonitions; hence it is that the Gentiles owe him obedience (xv, 15-19). The same idea is expressed in chap. xvi, 17-19. The text (x, 14-17) is one of those most helpful in giving

us an insight into the beginnings of Christianity. Belief is impossible if one has not heard a preacher of the Faith, and preaching requires the sending of the preacher.

(d) *Thessalonians*.—In I Thess., ii, 7 (I Cor., ix, 7–16 and II Thess., iii, 7–9); I Thess., iv, 1; II Thess., ii, 12–14 (cf. 2–4), Paul exhorts the Thessalonians to hold the traditions which they have learned, whether by word or by his epistle; cf. also iii, 6. If one of the faithful does not obey Paul's epistle, they shall not keep company with him and shall admonish him (iii, 14 and 15).

(e) Supplementary notes from the Acts of the Apostles.—Acts, ii, 42 (The community perseveres in the doctrine of the Apostles). Acts, xv, 6–31 (The Apostles and the presbyters of Jerusalem issue an authoritative encyclical concerning the observance of the law). Acts, xvi, 4 extends it to Asia Minor.

(5) The rights of the Communities.—The first group of our documents contains fifteen texts from which may be drawn conclusions with regard to certain community rights. These texts may be divided into eight classes. The first contains information on elections of an official character held by the communities; the second, on elections of a private character; the third, on judicial proceedings; the fourth, on private courts of arbitration; the fifth, on the opinions of the faithful with regard to the Apostles; the sixth, on collections taken up in the communities; the seventh, on credentials granted in the name of the community; the eighth, on the acknowledgment of superiors by the community. In order to view the matter in the proper critical light, one must keep in mind that from the very beginning the concept *Ecclesia* expressed not only the local particular Church, but also the universal Church as a whole, in as much as it is superior to the individual communities and operates in them as their vital principle. This is now admitted by Protestant scholars of the first rank. Even when *Ecclesia* was used in the sense of local Church it did not, in the earliest Christian literature, designate the community as opposed to the Apostles or any other superiors, but it meant the organized community. Such is the obvious meaning of the term in all the writings of the New Testament. In only two passages which, moreover, belong to the quite exceptional fifteenth chapter of the Acts, the *Ecclesia* is placed side by side with the Apostles and presbyters: The Apostles of the Gentiles are received by the Church (of Jerusalem) and by the Twelve and the presbyters (xv, 4); the Apostles and presbyters together with the entire Church of Jerusalem elect the envoys for Antioch. Acts, xiv, 22 says Paul appointed presbyters in every Church (*κατ' ἐκκλησίαν*) of Asia Minor.

Elsewhere, however, St. Paul's conception of the Church prevails; the Church, both in its ideal form and in its concrete realization, is always the body of Christ and consequently an organic, articulated whole. It is in the Epistle to the Ephesians that we find for the first time the notion of this ideal Church, i. e., of the universal Church taken as an individual unit (Ephes., i, 22; iii, 10, 21; v, 23, 24, 25, 27, 29, 32; so too Col., i, 18, 24; Hebr., xii, 23 sq.). This is the meaning of Matt., xvi, 18: "I will build my church." Something like a transition to this meaning is found in I Cor., xii, 28: "God indeed hath set some in the church; first apostles, etc." One plainly feels however that behind these words there still lurks the idea that in every individual Church (i. e. community) the various charismata are operative. Something similar may be observed in I Cor., x, 32 with the difference, however, that here the actual particular Church is still more clearly to be seen. On the other hand in the three passages where Paul speaks of himself as the former persecutor of the Church, he may possibly have in mind the community of Jerusalem (Gal. i, 13; I Cor., xv, 9; Phil., iii, 10). In Acts, xi,

26 the word *ἐκκλησία* seems also to have a signification intermediate between that of the particular concrete Church and that of the ideal universal Church. There remain eighty-four texts in which the word *Ecclesia* occurs. In no single one of them does the expression signify the community or the congregation taken in a distinctly democratic sense, by which emphasis would be laid on the self-government of the faithful. It is therefore not admissible to consider the actions of the *Ecclesia* as a mere outcome of democratic rights, thus arbitrarily excluding both the unitary operation of the organism as a whole and the graded activity of the individual members and different organs of administration. St. Paul certainly ascribes all rights and powers to the *Ecclesia* as the ideal whole, through whose vivifying action they are imparted to the local Churches, the proximate sources whence the individual administrative organs derive their vital prerogatives. But all this is possible only because the Church is the body of Christ and thus in vital union with the giver of life, Jesus Christ.

This early Christian view of the Church has nothing in common with the idea of a purely human, democratic authority and supremacy of the community. In our own days as well, it is of course the only correct conception of the Christian Church; it is the Catholic idea of the Church. Even towards the end of the second century the use of terms had already begun to undergo a change. This is perhaps to be regretted. Instead of speaking of the activity, the efficiency, and the sacrificial office of the Church of God, it gradually became customary to lay stress on the acting organs, i. e., to ascribe these functions to the bishop or presbyter. This brought out more clearly the element of jurisdiction and defined more sharply the grades of authority. As long as the Church in general was conceived as the subject of all activity, the functions of the individual organs remained undefined nor could any clear distinction be drawn between their respective attributions. While these were more plainly marked off in the later development, the depth and unity of thought was impaired by the obscuring of the idea that the Church is the mystical body of Christ. St. Paul never derived all the rights and powers of the Churches founded by him from the plenitude of his Apostolic power. He never forgot that the Church of God was primarily a creation of God, and therefore the subject of rights founded in her very nature. But these rights and powers which come from God have nothing in common with community rights. By community rights we understand, of course, only those rights which were proper to actually existing, complete communities. In most of the Protestant works on this subject we find these latter rights confounded with those that belong to the Church as an organism, as the body of Christ. Harnack, in his latest treatise on the inner constitution of the Church (*Realencyklop. für Protest. Theol. und Kirche*, ed. 3, XX, 1908, 508–546; cf. especially 519 sq.) has attempted to remove this confusion, but only with partial success.

In the next series of texts we cannot, of course, insert those in which St. Paul, as for instance in Gal., iv, 17, exhorts the Christians to admonish one another, to warn, to correct the sinners. This is a duty imposed by the Lord's command; and the right to fulfil that duty is included in the right to administer fraternal correction; it is not a community right. The first group of texts deals with electoral proceedings of an official character. (a) The entire assembly of the faithful takes part in the election of Matthias (Acts, i, 23–26), after two candidates had been proposed. Peter opens the proceedings; but no information is given about the right of presentation and the manner of casting the lot. (b) The seven assistants of the Apostles are chosen by the whole community in accordance with the injunction of the Twelve (*πάντες*

πλήθος . . . ἐξελέξαντο); and from the Apostles they receive the imposition of hands with prayer (Acts, vi, 2-6). (c) In Acts, xi, 22 sq., we are told that the "Church that was at Jerusalem" sends Barnabas as an official envoy to Antioch. After the council of the Apostles, envoys are sent out by the Apostles, presbyters, and the whole Church (σύν ὄλη τῇ ἐκκλησίᾳ, Acts xv, 22). A semi-official election is spoken of in only one text (second group of texts). St. Paul is given a companion "by the churches" (II Cor., viii, 19) to accompany him in collecting alms. It is easy to read between the lines that St. Paul desired to have them appointed in order to protect himself against evil tongues. In these electoral acts one must bear in mind all that has been said about the Church as an organism and also take into account the dependence of the voters upon the Apostles, which the texts themselves suggest. Finally the following important methodological rule should constantly be kept in view: if a document simply reports the fact that a community chose its officials or that it had a share in their appointment, this does not warrant the conclusion that the government is based on democratic principles.

A third group of texts contains information about the judicial prerogatives of the community. They include the sentence condemning the incestuous man, which was passed in a plenary session of the community at Corinth (I Cor., v, 3 sq.) and an allusion to a similar event that took place later in the same Church (II Cor., ii, 6-9, and vii, 12). In both cases one finds an ordinance of the Apostle, and this means that the competency of the community depends on St. Paul. The fourth group consists of only one text. It deals with private courts of arbitration to be introduced at Corinth by order of St. Paul (I Cor., vi, 1 sq.). In the fifth group we have three texts which tell of the harsh judgment passed by the faithful on St. Paul (Gal., vi, 1; I Cor., iv, 3) and St. Peter (Acts, xi, 1-4). With regard to their manner of acting, only the text in the Epistle to the Corinthians speaks of a "day" (ἡμέρα) of the community. The points at issue are party differences that had sprung up between the followers of Paul, Cephas, and Apollo. However only a superficial exegesis would draw from the discussions conclusions as to the fundamental elements of the ecclesiastical organization. Indeed St. Paul himself declares his complete indifference to all these judgments. He was, of course, extremely cautious with regard to the collection of alms (II Cor., viii, 18 sq.)—sixth group. He left it to the Christians themselves to keep or to give their mite. It would be absurd to speak here of definable rights. The credentials and letters of recommendation (II Cor., iii, 1)—seventh group—were not a matter of compulsion. No community rights can be inferred from them.

There remains in consequence only the eighth group, consisting of two texts. The question here is, what rights can be deduced from the acknowledgment of superiors by the community (I Cor., xvi, 16; I Thess., v, 12)? No proof has been found hitherto for Weizsacker's assertion (Das apostolische Zeitalter der christlichen Kirche, 3rd ed., 1902, p. 601) that this acknowledgement was "at all times" dependent upon the free choice of the community. The altogether unwarranted conclusions drawn from our texts by Weizsacker (op. cit., 599 sq.) and many scholars after him have been refuted by me in detail in "Zeitschrift für katholische Theol.," XXVII, 1903, pp. 64-74. This article with the help of other documents shows also the further point, that the circumstance of the Epistles being directed to the entire community does not in the least prove the autonomy of the community and the absence of superiors. This serves also as a refutation of Knopf's statements (Das nachapostolische Zeitalter, 1905, p. 148 sq.). Even if the community rights as described in the whole first group of documents were much more extensive than the

texts actually show them to be, we could not yet speak in any way of a democratic reform of the constitution (cf. Dunin Borkowski, "Methodologische Vorfragen zur urchristlichen Verfassungsgeschichte" in "Zeitschr. für Kath. Theol.," XXVIII, 1904, pp. 218-249, and XXIX, 1905, pp. 28-52 and 212-257). Even though the critical analysis of all the texts reduces to their true value the alleged rights of the first Christian communities, we of course do not deny that St. Paul allowed the communities which he founded a larger autonomy on many points, thus making the local Church in various matters independent of himself. We must, however, always understand the Church in the sense in which Paul understands it, namely as an organic body whose several members enjoy distinct activities proportionate to the functional power, with which each of them is endowed by God.

(6) Position of Charismatic Individuals.—The longer Epistles of St. Paul contain information about certain wonderful, mystic manifestations of the religious life in the earliest communities. These are: prophecy, working of miracles in general (ἐνεργήματα or ἐνεργήματα δυνάμεων or δυνάμεις), healing of the sick (χαρίσματα ἰαμάτων), discerning of spirits (διακρίσεις πνευμάτων, διακρίνειν), the gift of tongues (γένη γλωσσῶν, αἱ γλώσσαι, ὁ [πνεύματι] λαλῶν γλώσση or γλώσσαις), the interpretation of these tongues (ἑρμηνεῖα γλωσσῶν, διερμηνεύεσθαι, εἴσημον λόγον δοῦναι, δύναμιν τῆς φωνῆς εἰδέναι, ἑρμηνεῖα), revelation (λαλεῖν ἐν ἀποκαλύψει, ἀποκάλυψιν ἔχειν). In I Cor., xiv, 6, the gift of revelation is distinguished from that of prophecy, while in verses 26 and 29 it is declared to be prophecy. Prophecy reveals not only the future but also, and especially, the secrets of hearts (I Cor., xiv, 23-25). The gift of the discerning of spirits distinguishes between several (probably conflicting) prophetic speeches (I Cor., xiv, 29 sq.). These gifts of the Holy Ghost and only these are to be counted among the mystic, extraordinary manifestations. The Apostle calls them *χαρίσματα, πνεύματα, χαρίσματα πνευματικά, τὰ πνευματικά*. The individuals so endowed are *οἱ πνευματικοί*. According to the Apostle's mode of speaking, charisma is used to mean every activity that in any way originates from the ordinance of God or Christ, and is granted chiefly for the good of the Church. It need not be given to the individual immediately by God; it may have been established by God as an ordinary supernatural function. In other words, every religious activity exercised within the Church as the body of Christ, and in the service of the Church, is considered by the Apostle as a gift of God and in certain cases as a Divinely appointed office.

In the first group of texts the word *charisma* (*charismata*) occurs fourteen times: Rom., i, 11; v, 15, 16; vi, 23; xi, 29; xii, 6; I Cor., i, 7; vii, 7; xii, 4, 9, 28, 30, 31 (chapters xiii and xiv speak throughout of *charismata* without, however, mentioning the word); II Cor., i, 11. There are only three other passages in which the expression occurs, but in these it is used in the exact meaning in which St. Paul uses it: I Tim., iv, 14; II Tim., i, 6; I Pet., iv, 10. With the exception, perhaps, of Rom., v and vi, the meaning given above is quite evident. In the fifth and sixth chapters of the Epistle to the Romans the meaning is even more general. Charity, faith, and hope, exercised in any manner for the service of the Church, are *charismata*. They are even more perfect than the gift of miracles (I Cor., xii, 31, and xiii). As the spreading of the Kingdom of God and the preaching of the Gospel are *charismata* of the Spirit (Rom., xv, 27: *τοὺς πνευματικοῖς* [i. e. *χαρίσμασιν*] . . . ἐκονώσαν—cf. I Cor., ix, 11), so also is that mutual consolation which the common Faith affords. Those Christians are "spiritual" who are governed by the Spirit of Divine meekness (Gal., vi, 1). The word of wisdom (*λόγος σοφίας*), the word of knowledge (*λόγος γνώσεως*), ordinary teaching (*διδαχή, διδασκαλία*) are not, there-

fore, necessarily mystic and miraculous manifestations. The contrary opinion, although widely spread, cannot be proved from the sources. Whether all these charismata are mystic or miraculous (see above) or not depends on their object and their character. The opposition of the "spiritual" individual to the prophet in I Cor., xiv, 37, is only apparent. The η in the sentence *ἐὰν τις δοκεῖ προφήτης εἶναι ἢ πνευματικός* is to be translated by "or in general". Every charismatic individual is spiritual, but not vice versa. It shows lack of exact criticism to suppose extraordinary charismata, or miraculous endowments, in all those cases where there is mention of charismata.

We now proceed to a more detailed examination of these texts. In Rom., xii, 3-8, the diverse charismata are enumerated which determine the dignity of the members of the mystical body of Christ. Among these charismata Paul mentions (v. 6) prophecy "according to the rule of faith" (*κατὰ τὴν ἀναλογίαν τῆς πίστεως*), the ministry and the gift of teaching (v. 7). With regard to the two latter, it cannot be shown that they were charismata in a different sense than any other Christian virtue, or any work undertaken out of love or under the ordinary influence of grace. This is confirmed by the circumstance that immediately afterwards there are mentioned: (v. 8) he that exhorteth (*παρακαλῶν*), he that giveth (*μεταδίδους*), he that ruleth (*προϊστάμενος*), and he that sheweth mercy (*ἐλεῶν*). In I Cor., xii, 4-31, Paul distinguishes (v. 4, 5, 6), charismata (*χαρίσματα*), probably healing of the sick, ministries (*διακονίαι*), and operations (*ἐνεργήματα*). In the Epistle to the Romans he counts ministries among the charismata. However, in the Epistle to the Corinthians he does not adhere strictly to this threefold division. For in verses 8 and 9 he evidently enumerates as charismata the (obscure) word of wisdom (*λόγος σοφίας*), the (interpreting) word of knowledge (*λόγος γνώσεως*), faith (*πίστις*), and the grace of healing (*χαρίσματα ἰαμάτων*). In v. 10 miracles are mentioned in the first place, probably expulsions of demons (*ἐνεργήματα δυνάμεων*), and then follow prophecy, discerning of spirits, the gift of tongues, and the interpretation of speeches. Verse 28 gives another list: apostles, prophets, doctors, miracles (*δυνάμεις*), the graces of healings, helps (*ἀντιλήψεις*), governments (*κυβερνήσεις*), kinds of tongues, interpretations of speeches. The Apostles, prophets, and doctors are introduced by "first", "secondly", and "thirdly". For the Apostles are the first heralds of the Faith; in the prophets the marvellous power of the Holy Ghost is displayed in the first and most necessary manifestations; the doctors explain the new doctrine to the newly converted. In chapters xiii, 1-3, and xiv, 1-5 and 19, Paul again refers incidentally to some of the charismata, in order to warn against overvaluation and misuse. In xiv, 27-33 and 37-38, it is stated that the prophets do not possess the privilege of absolute truth; they have to control one another. Furthermore they, as well as all charismatic members, must be in conformity with the teaching of the Apostle (cf. Rom., xii, 6), and acknowledge that his teaching is the command of God [*Εἰ τις δοκεῖ προφήτης εἶναι ἢ πνευματικός, ἐπιγινώσκτω, ἃ γράφω ὑμῖν, ὅτι κυρίου ἐστὶν ἐντολή. Εἰ δὲ τις ἀγνοεῖ, ἀγνοεῖται* (I Cor., xiv, 37-38—the reading *ἀγνοεῖτω* gives no sense)].

The comforter of the Epistle to the Romans who admonishes and teaches is charismatic in the same sense as Tychicus, whose office it is to console the Ephesians and Colossians (Eph., vi, 21 and 22; Col., iv, 7 and 8), as Timothy in Thessalonica (I Thess., iii, 2). Paul regards every admonition and consolation proceeding from the Faith as a form of activity included in charismata, and Paul, Timothy, and Titus act as *παρακαλοῦντες* when they admonish and instruct (I Thess., ii, 11; I Tim., v, 1; vi, 2; II Tim., iv, 2; Tit., ii, 6, 15). The word *πράξις* in the New Testa-

ment has always the meaning of an explanatory admonition and consolation, or an instruction; so Acts, xiii, 15; xv, 31; II Cor., viii, 17; I Thess., ii, 3; cf. Heb., xiii, 22. Frequently it denotes consolation in the passive sense; so II Cor., i, 3, 4, 5, 6 (*ἴσως*), 7; vii, 4, 7, 13; viii, 4(?); Phil., ii, 1; II Thess., ii, 16; Philem., 7 (cf. Heb., vi, 18; xii, 5; Acts, ix, 31). As denoting a prophetic admonition and consolation we find *πράξις* in I Cor., xiv, 3, and I Tim., iv, 13, where it is found in combination with *διδασκαλία*. It signifies, therefore, consoling exhortation as distinguished from instruction. Nor does *μεταδίδουαι* imply a charisma in the sense of an extraordinary command of the Spirit. It is used not only of material alms (Eph., iv, 28—cf. Luke, iii, 11), but also of a spiritual gift (Rom., i, 11), and of the Gospel (I Thess., ii, 8—*μεταδοῦναι*). *Ἰαροῦς* occurs only in the above-mentioned passage in the Epistle to the Romans (Rom., xii, 8). The *ἐλεῶν* is simply every one who from motives of Faith exercises mercy in the service of the Church. Neither do we know anything of a mystic or miraculous charisma relating to spiritual or material help (*ἀντιλήψεις*) and government (*κυβερνήσεις*), words which do not occur elsewhere in the New Testament; they were simply voluntary or official services. The ruler (*προϊστάμενος*) of the Epistle to the Romans is endowed with just such a spiritual gift. These gifts are charismata in St. Paul's sense (see above). On account of the local colour of the "Didache" we cannot draw from it any general conclusions concerning the Apostles, prophets, and doctors of the oldest times. This triad—Apostles, prophets, doctors—occurs in the New Testament only in I Cor., xii, 28 and 29. In the Epistle to the Ephesians (iv, 11) Apostles, prophets, evangelists, pastors, and doctors are enumerated. In the Acts we find (xiii, 1) only prophets and doctors. Apart from the Gospels, we find doctors (*διδάσκαλοι*) mentioned alone in the following texts: Rom., ii, 20 (some Christians believe themselves to be teachers of infants); Heb., v, 12 (those addressed ought to be masters); I Tim., ii, 7, and II Tim., iv, 3 (in the last reference is to false teachers); James, iii, 1 (there should not be many masters). In none of these places does the word *doctor* or its equivalent imply a mystic or miraculous charisma; at least such cannot be shown from the sources themselves. The same is true of the expressions *didache* and *didaskalia*, which denote simply the doctrine itself and its actual communication. They were charismata just as every gift granted by God for the service of the Church was a charisma. The same is found to be true from a study of the Pastoral Epistles. Neither does the expression *teach* (*διδάσκω*, I teach) signify anything more.

More difficult is the correct valuation of the term *apostle*. Beginning with Lightfoot (St. Paul's Epistle to the Galatians, 1887 and 1902, 92 sqq.) this question has been discussed again and again. The present writer takes the view that in the Acts the word is always used of the Twelve, with the exception however of xiv, 4 and 13. There Barnabas and Paul are called "the apostles" (*οἱ ἀπόστολοι*). From this we cannot at once conclude that Barnabas was an Apostle in the same sense as Paul. For, as it was everywhere known that Paul enjoyed the title of Apostle, it may well be that Barnabas as his companion shared this name. Neither he nor Sylvanus is ever called Apostle by Paul himself, not even in I Cor., ix, 6. Paul does, however, allow Barnabas (and Sylvanus) to share in his Apostolic privileges when they are in his company; so, for instance, in Gal., ii, 9. Paul commonly gives the title of Apostle to none but the Twelve besides himself. In II Cor., xi, 5, and xii, 11, it is plain that those who are "above measure" apostles are ironically so called and are to be looked upon as pseudo-apostles. In II Cor., viii, 23, the *ἀπόστολοι ἐκκλησιῶν* are envoys. The word is used here in its original meaning, not unknown, perhaps, to the Hellenistic Jews. In

II Cor., xi, 13, it is stated that the pseudo-apostles claimed the position of real Apostles (probably, therefore, in the strict sense); they certainly assumed the name of "apostles". From this it does not of course follow that they had a right to that name. The three well known passages, I Cor., xii, 28 and 29; Eph., ii, 20 (iii, 5); and Eph., iv, 11, which speak of the "apostles" together with the prophets as members of Christ and as the foundation of the Church, do not permit us to decide with certainty whether Paul speaks here of apostles in the wider sense or, as in all the other texts, of himself and the Twelve. The latter is the more probable. There remains, therefore, only the remarkable passage in Rom., xvi, 7; here Andronicus and Junias are mentioned as *ἐπίσημοι ἐν τοῖς ἀποστόλοις*. These words evidently intended to designate these two as especially distinguished apostles. This, therefore, would be the only passage in the New Testament where "apostle" occurs in a wider sense, unless it should have to be translated thus: "they did excellent service as messengers of the community", and the word would mean the same as in II Cor., viii, 23. *Ἀποστολή* (office of an apostle) occurs four times in the New Testament. Twice Paul uses it to denote his own vocation (Rom., i, 5; I Cor., ix, 2); once to denote that of Peter (Gal., ii, 8). In the Acts, i, 25, this word (apostleship) together with ministry designates the office of the Twelve. The thirty-six passages in the New Testament, apart from the Gospels, which contain the word *send* (*ἀποστέλλειν*) do not permit of any conclusions being reached on this point.

According to the earliest Christian sources the office of Apostle is a charisma, but not a mystic charisma. The Eleven are Apostles in so far as they are witnesses of the life of Christ and recipients of His Divine injunctions. Paul is an Apostle because he has actually seen the heavenly Christ and received his mission from Him. Matthias is an Apostle because he has known Christ and because at his election the Lord Himself determined on whom the lot was to fall. Nothing certain can be said about the source of the "Apostolate" of Barnabas. At all events he was an Apostle only in the sense that he preached in places where nobody had as yet announced the Gospel, for this was essential in order to merit the title of Apostle. It is certain that the Apostles were frequently moved by a special Divine inspiration to direct their course to some particular locality, but it cannot be proved that this was always the case nor is that at all probable. Other missionaries were most probably called evangelists (cf. Acts, xxi, 8; Eph., iv, 11; II Tim., iv, 5). But the corresponding verb *εὐαγγελίζεσθαι* is also used for the first Apostolic preaching. Even if towards the end of the so-called Apostolic age there existed Apostles in the wider sense of the word, as we rightly conclude from the "Didache", our first group of sources contains nothing definite as to their authority and unquestionably excludes their being placed on the same level with the Twelve and with Paul (and Barnabas?). The rest of Paul's Epistles belonging to the first group contain the following additional data with regard to the charisma. Paul bids the Thessalonians not to despise prophecy (I Thess., v, 20). The admonition in the preceding verse (19) to extinguish not the spirit hardly refers to a mystic charisma. The Second Epistle to the Thessalonians (ii, 2) contains too the noteworthy warning to the Christians not to be easily terrified, nor drawn away from the teachings of the Apostles by any "spirit".

The Acts often speak in general terms of an influence of the Spirit of God and mention in particular the gift of tongues (ii, 4; x, 46; xix, 6) and the charisma of prophecy. The word *prophecy* (*προφητεία*) does not occur. The newly converted Christians at Ephesus, on the occasion of Paul's third journey (Acts, xix, 6), prophesied and at the same time spoke with tongues. Chapter xxi, v. 9, speaks of the daughters of Philip

"who did prophesy." The remaining texts to be considered are the following: xi, 27 sq.; xiii, 1 sq.; xv, 32; xxi, 10 and 11 (cf. xxi, 4, and xx, 23; xix, 21; xvii, 16; xvi, 6, 7). In chapter xv, 32, Judas and Silas are called prophets; in ch. xiii, 1, Barnabas and Saul are mentioned among the "prophets and doctors" of Antioch. These two latter are designated by the Holy Ghost as instruments of God for the spread of the Gospel; the others while praying impose their hands upon them. But there is no trace of any ecclesiastical organization based on the distribution of charismata, of any control exercised over the Churches by the recipients of these gifts, nor of any infallible teaching authority enjoyed by these ecstatic members. While these charismatics were numerous and continued to occupy their position of marked prominence, the local authorities, if not similarly gifted, remained as a matter of course in the background. But this does not prove that there was an institution and an organization of charismatic individuals. When elections were to be held, prophetic doctors frequently pointed out the most suitable candidates. Again some communities were governed by prophets and doctors before the appointment of regular administrators. History, however, forbids us to assert that a regular organization did not come into existence until the ecstatic and miraculous charisma had decreased. But it is true that after the disappearance of this species of charismata the normal administrative functions became more prominent and consequently a stronger organization was needed. The other hypothesis which would represent the subjects of these supernatural gifts as thrust aside by the ordinary governing power of the Church is also wholly untenable. The truth of the matter is that certain officious individuals of that class were put in their proper place by the authorities, and that later on some of them, whose "gifts" had been artificially developed by suggestion, were shown up as charlatans.

(7) Origin of Ecclesiastical Authority in General.—The doctrine of St. Paul about the Church as the body of Christ, which finds expression in the Epistle to the Romans, the First Epistle to the Corinthians, and the Epistle to the Ephesians, is a central feature of his theology. The operation of Christ in the Church and the activity of the various organs of this corporate body, whose members are at the same time members of the mystical body of Christ, find in these epistles their clearest expression. In the Epistle to the Romans (xii, 8) and the First Epistle to the Corinthians (xii, 28) the governing body and the office of governing are depicted as part of the body of Christ and as constituted therein by God and Christ Himself. These two most important and classical passages together with a text of the Epistle to the Ephesians (iv, 11—second group) show us the origin of the primitive Christian governing body in general; it is an institution of God and Christ. They show us furthermore the necessity of those administrative organs, for by their very nature they belong to the body of Christ, the Church. Consequently it is the will of God that besides the Apostolate there should be governing superiors in the local churches as well. For this reason Ignatius speaks of an *ἐντολή θεοῦ*, and his teaching is nothing but the purest doctrine of St. Paul. We can therefore speak in a certain sense of a charismatic organization of the Church, for the administrative function is itself a charisma; only we must take charisma in that correct and broader sense in which Paul uses it. Since therefore some form of governing body is, according to the doctrine of the Apostle, inseparable from the very notion of the Church, there can be nothing more opposed to Paul's ideas than the thought of rights being conferred on superiors by a democratic community. The governing body is in Paul's mind something religious and Divine. Nevertheless the administration need not at once and everywhere appear in its specific form; for the Apostolate is able to

supply all that is wanting. The Divine institution of the threefold hierarchy cannot of course be derived from our texts; in fact it cannot in any way be proved directly from the New Testament; it is Catholic dogma by virtue of dogmatic tradition, i. e. in a later period of ecclesiastical history the general belief in the Divine institution of the episcopate, presbyterate, and diaconate can be verified and thence be followed on through the later centuries. But this dogmatic truth cannot be traced back to Christ Himself by analysis of strictly historical testimony.

(8) Position of the Superiors.—When a person of his own free choice offers himself for an office, it does not immediately follow that his acknowledgment by the community is entirely free; this latter point has to be positively proved. For the offer may simply be the occasion or a necessary condition that enables some one exercising authority over the community to accept this proposal, to appoint the applicant and to communicate to him the necessary faculties. The approbation by the community may be a further condition, or a privilege to be respected or disregarded, or finally it may be altogether wanting. Nor is it true that every "ethical" office based on a free offer and free approbation lacks by its very nature all juridical validity; on the contrary, the offer and the acknowledgment produce of themselves a peculiar legal status. If one wants to assert the contrary—of course, a purely personal authority unsupported by any legal power is possible—he has to prove this theory just as he must prove each of the above-mentioned juridical elements, by a positive argumentation from the sources. After these introductory remarks, we proceed to the examination of all the texts. Acts, xiv, 22, mentions the appointment of presbyters in Lycaonia by Paul and Barnabas. The truth of this statement cannot, of course, be shaken by simply remarking that Paul did not appoint superiors in other places. It is likely that, on his very first Apostolic journey, Paul placed superiors at the head of his newly-founded Churches, who assumed the title then in use among the Jews; to this measure he was probably led by the example of the Jewish communities of the Diaspora or perhaps of the Christian circles in Palestine.

It was looked upon as a natural and obvious step by the inhabitants of Asia Minor who, Jews and Gentiles alike, were accustomed to a religious authority. In some cases unfortunate experiences may have moved St. Paul to desist from this measure. However, the fourteenth chapter of the Acts does not allow any further conclusion than this: Paul at his departure from southern Asia Minor left there for special reasons a governing body of some kind or other, endowed with certain administrative rights over the communities. The two facts that in the early Christian literature the elders (*πρεσβύτεροι*) are frequently contrasted with the younger members (*νεώτεροι*) and that, as late as the third century, Christians who have suffered for the Faith are given the honorary title of presbyter (cf. Duchesne, "Bulletin crit.", 1891, 43 sq.), make it probable that in the earliest times the presbyterate was frequently, though not perhaps exclusively, an honorary title and not the name of an office. The name may have been borrowed from the Jewish presbyters, or perhaps from the Gentile presbyters—officials of Asia Minor. It is of course understood that from this we cannot conclude that their sphere of activity was the same. Such an analogy if made would only suggest new riddles. For the Jewish presbyters in Palestine had a position quite different from those of the Diaspora. Now which of the two was the model for the Christians? Since therefore the name elder (presbyter) is altogether of a general nature, since our sources remain silent, since furthermore conclusions based on what we know of later times are unreliable in this particular case and the analogies drawn from the environment furnish no definite result, we

may say that the Christian presbyters of the earliest period cannot be accurately defined. In some places they were certainly the forerunners of the later presbyters; in others, of the bishops, or of the bishops and deacons; in others still, they formed but a provisional government for the regulation and administration of affairs, or they were the representatives of the community in its external relations. Those who pretend to know more cannot appeal to the sources. Nor is it admissible simply to generalize from the institution in Asia Minor and make it a type, as Ramsay has done ("St. Paul the Traveller and the Roman Citizen," 7th ed., London, 1903, 121 sq.). If, therefore, we take this governing body of the presbyters in the wider sense mentioned above, then there is not the slightest reason to doubt that this appointment of presbyters by Paul about A. D. 50 did actually take place. We do not deny that all these "elders" were presbyters or bishops in the later sense of these words; but from the sources nothing certain can be derived.

The Texts of the Epistles of St. Paul.—I Cor., xvi, 15, 16. Stephanas and his household being the "first-fruits of Achaia" have dedicated themselves (*ἐτάξαν ἑαυρούς*) to the ministry of the community. Paul bids the Corinthians to subject themselves to them (*ὑποτάσσασθε*), as also to everyone who offers his service and co-operation. The whole character of the text depicts mutual relations that are an outcome more of free-will and kindness than of strictly juridical conditions. The Epistle to the Romans (xii, 8) mentions among the prominent members of the body of Christ him that ruleth (*ὁ προϊστάμενος*) and adds furthermore that he ought to rule with carefulness. Of course, the singular is here no criterion; it has the same force as in the two phrases "he that giveth" and "he that sheweth mercy". The text has a meaning only if Paul supposes the existence of one or more rulers in Rome. In chap. v of the First Epistle to the Thessalonians (12, 13), the faithful are asked to know (*εἰδέναι*, acknowledge), to love and to have peace with those who labour among them (*κοπιῶντας ἐν ὑμῖν*), who are over them in the Lord (*προϊστάμενους*), and who admonish them (*νουθετοῦντας*). Here we see that acknowledgment does not create the prerogatives of superiors.

There were therefore at Corinth heads of families who, partly because they had been the first to accept the Gospel, offered themselves for the service of the community. How they were appointed to office we are not told. The *προσταμενοί* at Thessalonica and Rome possess, according to all appearances, a more official character. One must not forget that some of these results are merely negative. They do not justify us in denying that there were other institutions of which nothing is said. The name *προσταμενος* is not an official title: Paul speaks of them as we speak of heads, directors, or superiors. Whether they had an official name from the beginning we do not know. The name presbyter is certainly more definite. As to the question whether all these superiors were inducted into office by imposition of hands with prayer, see the remark made by us concerning the presbyters of Palestine. The prayer accompanying the imposition of hands expressed of course in only the most general terms the kind of activity they were to exercise. The persons thus "consecrated" were according to the Catholic idea *ipso facto* presbyters or bishops in the later sense of the words.

(9) Position of the Apostolic Fellow-Labourers.—In the first group of texts the following persons are mentioned: Andronicus and Junias (the latter is probably also a man, not a woman): Rom., xvi, 7. Apollo coadjutor: I Cor., iii, 4, 9, cf. v. 6 and i, 12 etc.; together with Paul, Apollo is minister of Christ and dispenser of the mysteries of God, I Cor., iv, i (cf. Acts, xviii, 24 sq.; xix, 1). Aquila and Prisca (Priscilla): the Church which is in their house is mentioned, Rom., xvi, 5, and I Cor., xvi, 19 (cf. Acts, xviii, 1-3;

18, 19, 26). Barnabas: Acts, xi, 22; prophet and (?) doctor, Acts, xiii, 1; he preaches together with Paul, Acts, xiii, xiv, xv; I Cor., ix, 6 (cf. Gal., ii, 1), Gal., ii, 9; by the Apostles and presbyters of Jerusalem he (Barnabas) with Judas and Silas is sent to Antioch, Acts, xv, 22 sq. Epenetus: the first fruits of Asia, Rom., xvi, 5. Erastus: Acts, xix, 22 (Rom. xvi, 23?). John Mark: Acts, xii, 25; xiii, 5. Judas and Silas: prophets, Acts, xv, 32; Silas is with Paul, Acts, xv, 40 (cf. xvi, 19 sq.; xvii, 4 sq.; xviii, 5 sq.); II Cor., i, 19; I Thess., i, 1; II Thess., i, 1. Stephanas: with Fortunatus and Achaicus he is counted among the first-fruits of Achaia (I Cor., xvi, 15). Timothy: fellow-labourer of Paul, Acts, xvi, 1 sq. (cf. Acts, xvii, xviii, xix, xx); Rom., xvi, 21; as Paul's envoy he teaches the doctrine of Paul, I Cor., iv, 17; xvi, 10 (cf. II Cor., i, 1; I and II Thess., i, 1); a very important text is I Thess., iii, 1 sq. Titus: fellow-labourer of Paul, II Cor., ii, 12; vii, 5; he teaches Paul's doctrine, II Cor., vii, 13 sq.; sent by Paul he takes charge of the collection of alms, II Cor., viii, 6 sq., 16-24; he walks in the same steps with Paul, II Cor., xii, 17 sq. Trophimus and Tychicus: companions of Paul, Acts, xx, 4 sq.; Trophimus alone, Acts, xxi, 29. Urbanus: helper of Paul, Rom., xvi, 9 (concerning these labourers see H. Brundens, S. J., "Die Verfassung der Kirche", Mainz, 1904, 215-315). The superiors and the numerous Apostolic helpers are considered by Paul as fellow-labourers because, and in so far as, they work in his spirit and agree with his doctrine. If for a time they preach independently, as Barnabas and Mark, Paul always supposes that they preach *his* Gospel. The activity of the women is described by Paul in two places as "labouring in the Lord" (*κοπιᾶν*) Rom., xvi, 12 (*bis*). Instead of this word, the Epistle to the Philippians uses *συναθεῖν*. If we use the word organization in a very general sense, we may say, that the women belonged to the organization of the primitive Church. In the Epistle to the Romans (xvi, 1) a woman is given the title of deacon.

B. *The Texts of the Second Group.*—(1) The Epistles of Paul will be examined together with Acts, xx; (2) the Epistle of Peter; and (3) the Didache. The texts from St. Paul will be classified similarly to those of the first group above.

(1) The Epistles of Paul and Acts, xx.—

(a) The authority of the Apostle over the communities: Eph., iii, 7-12; vi, 19, 20; Phil., iii, 17; Col., i, 23-29; ii, 4-8 (cf. 16 sq.). Also to be compared is Eph., i, 13 (cf. iv, 21): the preaching of Paul is "truth". The authority of the Apostle appears here in the same light as in his earliest letters; there is no question of autonomous communities.

(b) Charismatic prophets together with Apostles are mentioned as the foundation of the Church (Eph., ii, 20): in union with Apostles, evangelists, pastors and doctors, they co-operate in building up the body of Christ; by the grace of God (which here, Eph., iv, 7, is called *χάρις*, not *χάρισμα*) they have been sent for the work of the ministry (*εἰς ἔργον διακονίας*) (Eph., iv, 11-20). The Apostle wishes the Ephesians the spirit of wisdom and of revelation (Eph., i, 17; cf. Col., iii, 16). The mystico-miraculous charismata remain altogether in the background.

(c) *Superiors.*—In the address of the Epistle to the Philippians (i, 1), bishops and deacons are mentioned. There is no reason why we should consider their position and activity to have been different from that of the *proistamenoí* of the First Epistle to the Thessalonians, v, 12, and of the Epistle to the Romans, xii, 8. In the present text, it is true, the names are somewhat more definite. These rulers are the chief workers (*τοὺς κοπιῶντας ἐν ἡμῖν*) (I Thess., v, 12). According to this we have not to consider as distinct from the said superiors those presbyter-bishops of Ephesus (Acts, xx, 17-32) who are appointed by the Holy Ghost (again St. Paul's idea as above, no. 7), and who

rule as pastors. Their work is to instruct, to exhort, to warn against deception and false doctrine. Since, as we have seen, the designation *proistamenoí* had a very general meaning, it would be uncritical to assert that they constituted a governing body of only one grade which was not divided into the grades of bishop and deacon until later times. It is quite possible that the *proistamenoí* already contained several grades within their own class. Whence did the Christians take the title bishop (used at first only in the plural) to designate their rulers? The hypothesis (Heinrici, Hatch, etc.) of their having borrowed it from pagan religious societies has long since been given up. Most scholars agree to-day with the results obtained by Ziebarth: "A special characteristic of the terminology describing Greek associations is its lack of definiteness. *Ἐπισκοποι* as well as *ἐπιμεληταί* designate in a very general way overseers or administrators. It is today an established fact that the title *ἐπισκοποι*, which now and then occurs as an official title in Greek associations, does not furnish an argument for the derivation of the Christian office from pagan religions associations" (Das griechische Vereinswesen, 1896, 131). Nor does the present writer attach any great importance to the circumstance that even before the time of Christ there is mentioned at Phodos an *episkopos* as being in charge of certain matters of worship (cf. Deissmann, "Neue Bibelstudien", 57 sq.). The title *episkopos* is also applied here and there to municipal officers. In the Septuagint Eleazar appears as *episkopos* (Num., iv, 16); generals of the armies are *episkopoi* (Num., xxx, 14; IV Kings, xi, 15, 18); higher officials together with archons (II Esd., xi, 9, 14, 22; Is., lx, 17; I Mach., i, 51; cf. Judges, ix, 28). In Job, xx, 29, God is called *episkopos*. In connection with work of a religious character the word is used II Par., xxxiv, 12, 17. We must recall that in the First Epistle of Peter (ii, 25), Christ is called the shepherd and bishop of our souls. Clement calls God the creator and bishop of all spirits (I Clem., lix, 3). In Christian circles the word seems from the very beginning to have denoted an activity of high rank and excellence. Originally it was not a title or the name of an office. The attempts of recent Protestant scholars (Hatch, Harnack, Dobschütz, etc.) to separate even in the earliest times the functions of the bishops from those of the presbyters are to be considered as unsuccessful. In the New Testament and even with Clement the two expressions are synonymous. It is indeed possible that the presbyters or the *proistamenoí* were called bishops after their sphere of action had been more accurately circumscribed. There remains only one text. At Colossa, Archippus has to fulfil a ministry (*διακονία*) (Col., iv, 17). In the Epistle to Philemon, 2, he is called fellow-soldier (*συστρατιώτης*). Here we perhaps find the trace of a monarchical bishop.

(d) *Fellow-labourers of Paul.*—Epaphras (Col., iv, 12), servant of Jesus Christ (cf. Philem., 23); Luke (Col., iv, 14); Mark (Col., iv, 10, 11), "touching whom you have received commandments" (*ἐντολάς*). He is a fellow-labourer, as are also Aristarchus (cf. Acts, xx, 4; xxvii, 2; Philem., 24), and Jesus Justus. Clement (Phil., iv, 3) and other unknown fellow-labourers, also women; one of these fellow-labourers is addressed as *γνήσιε σύζυγε* (or *Σύζυγε*). Tychicus, a faithful minister (*διάκονος*) and fellow-servant in the Lord (*σύνδουλος*); Eph., vi, 21, he is called faithful minister. Epaphroditus, Phil., ii, 25-30, and iv, 18: brother, and fellow-labourer, and fellow-soldier, your apostle. Philemon also (Philem., 2) is a fellow-labourer.

(2) The First Epistle of Peter.—The evangelical preaching is absolute truth; it is the word of the Lord which endureth forever (i, 25), the fulfilment of the prophecies, and the work of the Holy Ghost (i, 11, 12); consequently it is simply to be obeyed (i, 14; cf. i, 2). Endowed with such authority the writer teaches and exhorts; Peter is the Apostle of Jesus Christ (i, 1), the

συμπρεσβύτερος and witness of the sufferings of Christ (v, 1). Two *charismata* are mentioned, the preaching of the Word of God and the ministry of the community (iv, 11). Whosoever has received a *charisma* should, as a good steward, use it in the service of his neighbour (iv, 10). The phrase "if any man speak" (*εἰ τις λαλεῖ*) certainly does not mean the gift of tongues, but, as is shown by the additional clause *ὡς λόγια θεοῦ*, the preaching of the Word of God. *Λαλεῖν τὸν λόγον τοῦ θεοῦ* soon becomes a standing expression for the preaching of the Gospel to Jews and Gentiles. The preacher has to adhere to the Word of God, i. e. to the common doctrine which is to be considered as the Word of God Himself. The ministry for the community is also looked upon by the writer, as a power granted by God; *εἰ τις διακονεῖ, ὡς ἐξ ἰσχύος, ἧς χορηγεῖ ὁ θεός* (iv, 11); cf. *ἰσχύς* used to denote the power of God (Eph., i, 19; vi, 10; II Thess., i, 9; Apoc., vii, 12). In these texts we see again Paul's idea of government and superiors; they are in his eyes institutions of God. For the rest superiors occur only in chap. v, 1-5; they are called presbyters; their duty is to feed the flock of Christ, to take care of it, without constraint however and without lording it over them (*ἐπισκοποῦντες*—the reading is doubtful); the young men shall be subject to them. This text presents difficulties. On the one hand it would seem that the exhortation is addressed to presbyter-bishops as a governing body, while on the other hand the opposition between the presbyters and the younger men (*νεώτεροι*) points to merely patriarchal relations. It is however most probable that the two expressions—*πρεσβύτεροι*—*νεώτεροι*—passed through a parallel development. After the "ancients" had become superiors in the strict sense, the "younger men" were considered as subjects.

(3) The *Didache*.—The author of the *Didache* considers the teachings of the Faith as truths received from Jesus and announced by his Apostles, which men are obliged to accept (cf. the title and the first eleven chapters). He who teaches otherwise is not to be listened to (xi, 2). If he teaches the truth he is to be received as the Lord himself (loc. cit.). He who announces the Word of God is to be honoured as the Lord Himself (iv, 1). The travelling Apostles, the prophets, and doctors are to be duly respected. Neither prophets nor Apostles nor doctors possess an absolute authority; nay more, the Christians are taught certain signs to enable them to distinguish the true missionaries from the false (xi-xiii). The Apostles (travelling missionaries) are described as of rare occurrence. Somewhat exceptional is the position of the prophets who have settled in a community. The *Didache* calls them high-priests (xiii, 3); as such they can lay claim to the first-fruits (xiii, 3-7). And since in addition to this they have the privilege of reciting eucharistic prayers at their own discretion (x, 7), we look upon them as presiding over the celebration of the breaking of bread. Important information about the constitution of the Church at that time is contained in chap. xv, 1 and 2: "choose bishops and deacons, worthy of the Lord, men of meekness, who are not lovers of money, who are true and well tried. For they fulfil for you the ministry of the prophets and doctors. Do not therefore slight them; for it is they among you that enjoy high esteem with the prophets and doctors." From this text we derive the following items: First: Since the electoral proceedings are not given in detail, we cannot make a definite statement about the authority vested in the community. Second: As substitutes in performing the duties of prophets and doctors we find bishops and deacons; they are therefore shepherds who preach and explain the word of God.

The qualities required of them show that they possessed certain powers of government (*πραεῖς*), and were entrusted with the administration of alms and other positions of responsibility (*ἀφιλαργύρους καὶ*

ἀληθεῖς καὶ δοκιμασμένους). The text in question does not show us how these various occupations were divided between the two classes of officials. During a period of transition from a comparatively incoherent state to a more settled form of government, the several communities would evidently enjoy certain power and prerogatives; but no sober critic would read between the lines of the artless catechetical instruction the description of a generally-adopted system of democratic government. Those measures which every one of the faithful may and should employ as protection against doubtful prophets and false teachers are no juridically-determined prerogatives vested in the community. Nothing is left but a rather undefined participation in the election of superiors. It is just as though the duty of holding these elections was imposed upon the community by some external authority. The literary form of the document shows that in the author's conviction the community is not independent of authority in the principal points of doctrine, discipline, and corporate existence, but is obliged to observe those regulations which the writer authoritatively details. He prescribes even the prayers that are to be recited by the community in the celebration of the Eucharist. The regulations governing prayer, fasting, Eucharistic celebrations and elections of superiors do not emanate from the local Church. On the contrary, certain local Churches are earnestly enjoined by the author to observe exactly the usages which he regards as of Apostolic origin. But from what source does the author, apparently a teacher (*διδάσκαλος*) or prophet, derive his authority? It is evidently an Apostolic tradition known to him in its main outlines. In this sense, Durell's words are true ("The Historic Church", Cambridge, 1906) "The authority of discipline resides in the Church as a whole" (p. 76). But Durell does not distinguish with sufficient clearness between the local community and the one universal Church, which the *Didache* itself represents as a unitary organization.

C. *The Texts of the Third Group*.—(1) Epistle to the Hebrews.—It is important to note how the author (ii, 3, 4) traces the genesis of the authoritative preaching of doctrine. It originates with Christ (*ἀρχὴ λαβοῦσα λαλεῖσθαι διὰ τοῦ κυρίου*). Those who have heard the Lord declare His words to others with authority (*ὑπὸ τῶν ἀκουσάντων εἰς ἡμᾶς ἐβεβαιώθη*), and God bears witness to them by miracles and various manifestations of the Spirit. Faith therefore is a duty. The same doctrine is indicated in iv, 2. In xiii, 7, the faithful are reminded of those superiors (*ἡγούμενοι*) no longer living, who announced the Word of God to them in the past. Contemporary superiors are also called *hegumenoí* (xiii, 17, 24). Nowhere else in the New Testament are Christian superiors called simply *hegumenoí*. In one passage of the Acts (xiv 12), Paul is called "chief speaker" (*ἦν ὁ ἡγούμενος τοῦ λόγου*); in xv, 22, Paul, Barnabas, Judas, and Silas are designated as "chief men", leading personages (*πρωτοὶ . . . ἀνδρας ἡγουμένους ἐν τοῖς ἀδελφοῖς*). The expression may have been modelled on the words of our Lord; "He that is the leader, let him become as he that serveth" (*ὁ ἡγούμενος ὡς ὁ διακονῶν*, Luke, xxii 26). The hypothesis that the *hegumenoí* of the Epistle to the Hebrews were prophets or even recipients of *charismata* in the strict sense of the word is devoid of any historic foundation.

(2) The Epistle of St. James.—The warning that there should not be too many doctors (*μὴ πολλοὶ διδάσκαλοι γίνεσθε*) is explained by the great responsibility attached to this position. It is not clear whether the members of the third class of the threefold division "apostles, prophets, doctors", are here in question probably they are. But the subjects of *charisma* in the strict sense are certainly not meant, since, in their own opinion, they do not set themselves up as teachers, but are entrusted with that office by the

Spirit of God. But the labouring and patient prophets mentioned in v, 10, who spoke in the name of the Lord, are most probably Old Testament seers.

(3) The Second Epistle of St. Peter and the Epistle of St. Jude.—The Christians are exhorted to remember the words of the holy prophets (probably of the Old Testament), and the precepts of their Lord and Saviour made known to them by their Apostles (iii, 2). Most likely, Apostles in the strict sense of the word are meant. These are certainly in the mind of Jude, when in his Epistle (5, 17) he addresses similar words to the recipients of his letter.

(4) The Three Epistles of St. John.—The "ancient" (ὁ Πρεσβύτερος) of the Second and Third Epistle shows his authority by forbidding all intercourse with Christians who will not receive the doctrine of Christ (II John, 9-11). In the Third Epistle Diotrephes is blamed for misuse of the position of pre-eminence which he enjoyed in the community. The presbyter will reprimand him on his arrival (III John, 9, 10). But the expression, "who loveth to have the pre-eminence among them" (ὁ φιλοπρωτεύων αὐτῶν, not used elsewhere), does not warrant the conclusion that Diotrephes had usurped his position of authority. Nor can any solid grounds be found for the conjecture that the brethren, who went out "for his name" and were kindly received by Gaius (III John, 3, 8) were travelling apostles or even charismatic teachers, and were therefore dismissed as suspicious "pneumatikoi" by the "monarchical bishop" Diotrephes.

(5) The Pastoral Epistles.—In these Timothy and Titus appear as delegates and representatives of the Apostle Paul (I Tim., i, 3; cf. II Tim., iv, 11; Tit., i, 5; cf. iii, 12); their authority is derived from the imposition of hands and from the prayer of the Apostle and the presbyterate (I Tim., iv, 14; II Tim., i, 6). Previously to this consecration an approval appears to have been given to the choice of candidates by prophecy (referred to in I Tim., iv, 14, and probably also in i, 18). One may certainly apply all this to Titus as well as to Timothy. Timothy and Titus each bear the title ἐπίσκοπος (I Tim., iii, 2; Tit., i, 7); their office is called ἐπισκοπή (I Tim., iii, 1), and once διακονία (II Tim., iv, 5); Timothy is termed διάκονος (I Tim., iv, 6). They hold a position of monarchical authority, impose hands on those whom they judge to be fit candidates for the priesthood (I Tim., v, 2; Tit., i, 5); they choose their successors in the office of teaching (II Tim., ii, 2); they keep order in the community by their energetic exhortations (I Tim., v, 1-22; II Tim., ii, 25, 26; iv, 2; Tit., i, 5, 11; ii, 1 sqq.; ii, 15); they judge even the presbyters (I Tim., v, 19, 20; cf. Tit., i, 9 sq.); they teach (I Tim., iv, 1-13, 16; vi, 2; II Tim., iii, 16, 17; iv, 2). As teacher Timothy is called "evangelist" (ἔργον ποίησον εὐαγγελιστοῦ, τὴν διακονίαν σου πληροφόρησον, II Tim., iv, 5). The description of the model ἐπίσκοπος (I Tim., iii, 1 sq.; Tit., ii, 7 sq.) represents him also as administering money and practising hospitality. Perhaps a presbyter is meant by the ἐπίσκοπος in Tit., i, 7; verses 5 and 6 immediately preceding speak of presbyters, and verse 7 continues: "For (γάρ) a bishop (ἐπίσκοπος) must be without crime." But it is also possible that there is a sudden transition in the author's thought and a freer use of γάρ. A greater probability is given to this by the exact correspondence between the qualifications of the bishop given here, and those set down in the First Epistle to Timothy (ii). The presbyters are probably united in a college (πρεσβυτέριον, I Tim., iv, 14); and they are subordinate to the bishops (I Tim., v, 17-20; Tit., i, 5). They rule over the community. Some of them are to declare and teach the Word of God (I Tim., v, 17: οἱ κωπιῶντες ἐν λόγῳ καὶ διδασκαλίᾳ). The πρεσβύτερος in I Tim., v, 1, is probably an older member of the community (cf. Tit., ii, 2). Deacons are mentioned in I Tim., iii, 8 and 12 (cf. 13). Timothy and Titus are subordinate to Paul, and must follow

his teaching and precepts (I Tim., i, 8-12; cf. 19, 20; ii, 7; iii, 15; and in general ii, iv, v, vi; II Tim., i, 11-14; iii, 10; iv, 13 sq., 21; Tit. i, 5; all ii; iii, 9). No information is given about community rights.

(6) Epistle of the Roman Church (Clement) to the Corinthians.—The position of superiors of the Christian community is attributed only twice at the utmost to the *hegumenoí* (ἡγουμένοι and προηγούμενοι in i, 3, and xxi, 6). The first citation speaks approval of the obedience shown to them by the faithful; and in the second due respect and reverence are enjoined. But since the term in all other parts of the Epistle—where it is used, either seven or eight times, according as one reads ἀρχηγούς or ἡγουμένους in lxiii, 1—signifies the secular civil or military rulers, it seems more probable that the same meaning should be attached to it in the two passages mentioned. Now if the word stands for the ecclesiastical authorities in the two passages mentioned, how are they to be discriminated from the presbyters, who in both instances are spoken of in company with them: "the faithful in times past have shown due reverence to their presbyters" (i, 3); "the faithful should honour the elders" (xxi, 6)? There are only two probable solutions: either the term ἡγουμένοι (or προηγούμενοι) is used for persons of authority in a broad sense, including deacons and other people of importance; or the word "presbyter" in both cases has the simple meaning of "elder", the reference being to the older and more esteemed members of the community—an explanation which is all the more probable because of the mention in both passages of the "younger members" (νεοί) along with the "elders". Presbyters are expressly mentioned many times in the Epistle—in the two places discussed, and in xlv, 5; xlvii, 6; liv, 2; lvii, 1. Reference is also made to them in lxiii, 1, and in other texts to be cited presently. Jewish presbyters are spoken of in lv, 4. Their office is termed *episkope* (xlv, 4)—a word which Clement uses once (l, 3) for Christ's office as judge at His second advent. The word *episkopos* appears in only one other place (lix, 3), where it is applied to God. Except in chapter lii, nothing is said of deacons. In chapter xl, 5, the services of the levites are called *διακονία*. It is clear from xlii and xlv that Clement identifies bishops and presbyters, unless perhaps in the two texts already referred to, since he speaks here of the rebellion against the presbyters (στάσις, xlvii, 6; xlvii, 7, 9; cf. iii, 2, 3; li, 1; liv, 2; lvii, 1; xlv, 4: ἀμαρτία) as "no small misdeed", for it shows disregard for the express wishes of the Apostles, who instituted bishops (*episkopoi*) in obedience to the ordinance of Christ Himself. It is a mistake to say that the presbyter-bishops are mentioned in the Epistle of St. Clement only as officers of administration and public worship (cf. xlv, 4: ἀμέμπτως καὶ ὁσίως προσεγγιζόντας τὰ δῶρα). Their position as spiritual guides (lxiii, 1) and successors of the Apostles manifests clearly their authoritative office of administering the Word of God.

No indication can be found that Clement supposed the office of declaring the Word of God in Corinth to be entrusted to ecstatic "spiritual" preachers; nor is there any satisfactory basis for the theory that the rebellion against legitimate authority was started by the recipients of charismata. Miraculous charismata are perhaps spoken of in chapter lxviii, 5, but the reference is uncertain, for those Divine gifts which are mentioned in addition to faith and holiness of life, the word of knowledge and the skilful interpretation of others' words are not manifestly mystical or miraculous in their nature. The presbyter-bishops are to be obeyed (lvii, 1); their authority as spiritual guides (lxiii, 1) is to be heeded. The institution of the presbyter-bishops dates from Christ. After examining the first-fruits of the Faith in the light of the Holy Ghost, the Apostles established them as bishops and deacons (xlii, 4). The commission to do this came from Christ (xliii, 1). Christ foretold them that a con-

flict would arise with regard to the episcopal office (*ἐπὶ τοῦ ἀνδρατος τῆς ἐπισκοπῆς*); for which reason they instituted the bishops and deacons just mentioned and enjoined (*ἐπινομήν ἔδωκαν*—a doubtful reading; Lightfoot has *ἐπιμονήν*) that after their death other tried men should succeed to their office. This provision had the approval of the entire Church (xliv, 1, 3).

Some points in Clement's argumentation are undoubtedly pure theory (e. g. the revelation of a future contest regarding the episcopal office), but the central facts cannot be critically controverted. The thought that the governing body in general was an institution of God and of Christ is an inheritance from St. Paul. The whole argumentation used by the Roman community would be completely absurd, if the story of Apostolic institution were a mere fable. It may be observed that Clement looks upon the hierarchy of the Old Testament with its high priest, priests, levites as a type of the Christian hierarchy (xi, 5; xli). He seems to regard the high-priest as a type of Christ, and sees a typical significance in the contest under Moses regarding the priesthood (xlili, 2). The local Church is also called the flock of Christ (*ποιμνιον*, xvi, 1; xlv, 3; liv, 2; lviii, 2), but nowhere is autonomy or even complete authority attributed to it. It is obvious that amid the general disorder and revolt it was not the presbyters threatened with deposition who were able to judge the disturbers of the peace, but only the people as a whole in a kind of plenary council. Hence the remark that the more noble-minded among the party of opposition give in and say, "I do whatever is enjoined unto me by the people" (*τὰ προστασόμενα ὑπὸ τοῦ πλήθους*, liv, 2). To construct a general law out of this particular concrete case without further investigation would argue a strange lack of critical sense.

(7) The Ascension of Isaiah.—If the section, iii, 13–iv, 1, really belongs to the second or even the first century (Fleming, Tisserant), then attention should be called, as very remarkable, to the prophecies of the elders (presbyters) at the end of the world; these love their office although they have no wisdom, and are unjust and violent shepherds of their sheep. Somewhat further on in the same section reference is made to the dissension which shall arise in the last days between the elders and the shepherds. Here the presbyters seem to be old, highly respected members of the Christian community.

D. *The Texts of the Fourth Group.*—(1) The Apocryphic.—Our motive for including in the fourth group of texts the data given in i, 4 and iii, 22, is the possibility that the "Angels" of the Seven Churches are the "monarchical bishops" of these communities. This supposition offers undoubtedly many difficulties, yet it cannot be simply rejected. Toward the communities addressed the author takes the position, and claims the jurisdiction, of an Apostolic and monarchical superior. The only other texts to be touched upon are the following: the twelve foundations of the wall of the holy city bear the names of the "twelve apostles of the Lamb" (xxi, 14); "apostles and prophets" rejoice at the destruction of the city of sin (xviii, 20); and the prophets slain in the city (verse 24) are undoubtedly also Prophets of the New Testament. The existence of any relation between the four-and-twenty ancients (iv, 20) and the constitution of the early Church cannot be ascertained.

(2) The Gospel of St. John.—We need mention only the choice of the Twelve (vi, 71); their vocation, life-course, and union with Christ as portrayed in His final discourse (xiii, 33–xvii incl.), the unique position and special election of Simon Peter (i, 24; vi, 69, 70; xliii, 6 sq.; xx, 2 sq.; xxi, 3 sq.; 15 sq.).

(3) The seven Epistles of St. Ignatius of Antioch (about A. D. 115).—(a) The general topic is the exhortation to obedience towards the bishop, the presbyters, and deacons, and to intimate union with the bishop. The position of the bishop is throughout monarchical.

(i) General admonition to reverence the bishop and remain in agreement with him (ad Eph., i, 3); to love and imitate him (ad Magn., xliii, 12); to be subordinate to him (ad Trall., xii, 2); to comfort him (ad Polyc., vi, 1); to keep to him (ad Philad., ii, 1); to follow him as sheep follow the shepherd (ad Magn., iii, 1); to honour him, even though he be young (ad Eph., vi, 1), all the more if he keeps silence. (ii) Exhortation to be subject to bishops, presbyters, and deacons (ad Philad., vii, 1; ad Magn., xliii, 1; ad Polyc., vi, 1; cf. ad Trall., iii, 1). (iii) Unity with the bishop, the presbyters, and deacons, especially in things which concern Divine service (ad Eph., iv, 1; ad Trall., ii, 2; vii; ad Magn., vi, 2); unity with the bishop and superiors (*τοῖς προκαθημένοις*) (ad Eph., v, 1 sq.); unity in prayer, in the Sacrifice of the altar, and (xx, 1 and 2) in the breaking of bread. Unity in the Eucharistic celebration is also emphasized in ad Smyrn., viii, 2 and ad Philad., iii, 3, and iv, 1; cf. v, 1. Nothing at all is to be done without the bishop (ad Philad., vii, 2; cf. ad Polyc., iv, 1), especially no ecclesiastical functions, such as baptism and agape (ad Smyrn., viii, 1 and 2); marriages are to be contracted subject to the approval of the bishop (Polyc., v, 2). (iv) This obedience is necessary for sanctification and is the commandment of God (ad Eph., ii, 2; v, 3; ad Magn., iv, 1; ad Trall., ii, 1. Cf. vii, 2 and xiii, 2; ad Philad., iii, 2; ad Smyrn., ix, 1). He who submits to the bishop subjects himself to the Father of Jesus, who is the Bishop of all men (ad Magn., iii, 1 and 2).

(b) Origin and Basis of the Hierarchy.—(i) The institution of the single bishop, of the priests and the deacons originates from God, i. e. from Christ (ad Eph., iii, 2). As Christ is the thought (*ἡ γνώμη*) of the Father, so the bishops established unto the ends of the earth are according to the intention of Christ (*ἐν γνώμῃ*) (ibid., vi, 1). He whom the master sends in His stead should be received even as the Sender Himself; in like manner you should look on the bishop as upon the Lord Himself (ad Magn., ii, 1); the deacon Zotion gives joy to St. Ignatius, because he is obediently devoted to the bishop as to a gift of God's grace, and to the presbyters as to a law of Jesus Christ. Bishops and priests are also spoken of as a "commandment of God" in ad Trall., iii, 2; ad Philad. (title); the bishops and the priests are instituted pursuant to the ordinance of Jesus Christ, and, in accordance with His will, they are protected and confirmed by the Holy Ghost (cf. i, 1; ad Smyrn., viii, 1). The deacons also are to be regarded as the commandment of God. (ii) The bishop, priests, and deacons compared with God, with Christ, or with the Apostles. The bishop presides in place of God (ad Magn., vi, 1). The deacons are to be respected as Christ; the bishop as an image of the Father; the presbyters are compared to the Apostles (ad Trall., iii, 1). Other comparisons between the presbyterate and the Apostolic college (ad Magn., vi, 1; ad Trall., ii, 2; ad Philad., vi, 1; ad Smyrn., viii, 1). (iii) The bishops (presbyter and deacons) belong to the essence, the idea of the Church (ad Trall., iii, 1). Separated from the bishops and presbyters no Church can exist. Cf. also ad Smyrn., viii, 2.

(c) Field of activity of the bishop, the presbyters, and the deacons.—(i) The bishop.—Principal texts are in the Epistle to Polycarp. The bishop's duties include: admonition of the whole body and of individuals as well (i, 2, 3, and v, 1), convocation of frequent assemblies (iv, 2), preservation of unity (i, 2), healing of spiritual ailments (i, 2, and ii, 1), firm resistance to teachers of false doctrine (iii, 1), care of widows (iv, 1). Nothing shall be done without his co-operation (iv, 1). The texts quoted above show the same field of activity; in particular, the bishop appears also as the centre of the liturgical celebration and supreme guardian of the Faith. The position of

the bishop is moderately monarchical, i. e., not tyrannical or autocratic. This is to be inferred also from the position of the presbyters. (ii) Presbyters.—According to all texts previously quoted the presbyterate is the bishop's advisory council and his support, and constitutes with him a governing body which has a claim to due reverence and obedience, while itself subordinate to him (ad Trall., xii, 2; ad Eph., iv, 1; cf. Polyc., v, 2). (iii) Deacons.—(Texts already cited). They are subordinate to the bishop and the presbyters, and have a right to honour and esteem (ad Magn., ii, 1). In ad Trall., ii, 3, is the most important passage: "But those, too, who are deacons of the mysteries of Jesus Christ should in every wise be acceptable to all. For they are not deacons of meat and drink, but servants (*ὑπηρέται*) of the Church of God. Therefore they should protect themselves against accusation as they would against fire." The sense is, evidently, that in the Eucharistic celebration they handle as deacons no ordinary food and common drink, but a mystical food.

(d) Rights of the Community.—A community as chief seat of authority not only receives no mention from Ignatius, but such a conception is in direct contradiction to all the principal texts of his Epistles. The community is to be consulted on the question of sending envoys to other Churches (ad Philad., x, 2; ad Smyrn., xi, 2; Polyc., vii, 2). The first passage shows that the bishop or the presbyters could also fill the office of envoys. As the choice was naturally made by the organized community—i. e., with bishop and priests presiding—we can say nothing definite about the part taken by the community, since the sources make no mention of it.

(e) Divine Origin of the Hierarchy.—In spite of the clearly worded passages given above under (b) (i), even Catholics have denied that St. Ignatius was aware of a Divine origin for the hierarchy: "St. Ignatius does not teach the Divine origin of this hierarchy in the sense of its institution by God, or by Christ, in the form of three degrees—and it is intelligible why he does not." (Genouillac, "L'Eglise chrét. au temps de S. Ignace d'Antioche", p. 132.) This is a question of words. Genouillac grants that Ignatius taught very clearly the Divine institution of the spiritual governing power in general: "It would be difficult to express the Divine origin and right of the ecclesiastical powers with greater insistence and clearness than does St. Ignatius in these texts." (Ibid., 135.) If anyone had asked St. Ignatius whether bishops, priests, and deacons, constituted in such a threefold dignity and endowed with such authority over the community, were a commandment of God (*ἐντολὴ τοῦ θεοῦ*), he would have answered "Yes", as anyone who has eyes to read must see from our texts. He does not seem, however, to have entered into further speculations on the matter. But the hierarchy as a "commandment of God" is the very essence of Catholic teaching on this point. Many other additions made by later times to this concept of a Divinely originated hierarchy are to be ascribed to the development of the Church, her discipline, and her canon law. No serious historian would expect to find all that in the writings of Ignatius.

However much he may insist on the Divinely appointed hierarchical gradation, on episcopal authority, and on the obedience that the faithful owe to their ecclesiastical superiors, Ignatius shows throughout that he does not regard this organization as an end in itself, but as a means to the end, to the attainment of perfect unity in faith and religious life. He shows himself in this point an intelligent disciple of the Apostle of the Gentiles, a Christian to the core, an *ἄνθρωπος πνευματικός* in the best sense of the word. It is also evident that the ideal of unity between bishop, priests, deacons, and community was not found everywhere. Ignatius is convinced that the threefold governing power, de-

creed and established by God and Christ, belongs to the idea of the Church.

(4) The Epistle of Polycarp to the Philippians and the "Passio Polycarpi".—Polycarp also exhorts the faithful to be subject to the priests and deacons as to God and Christ (v, 3). The particular functions of each of these two classes of the governing body cannot be inferred from the qualities in which Polycarp desires they should both be conspicuous (v and vi). The letter seems to indicate that at that time there was no bishop in Philippi. In the "Passio Polycarpi" we are interested only in the one passage where there is mention of an Apostolic and prophetic teacher and bishop of the Catholic Church of Smyrna (xvi, 2). It gave great satisfaction when the bishop possessed miraculous charismata and when he, the teacher of the faithful, was a disciple of the Apostles.

(5) The Epistle of St. Barnabas mentions the twelve Apostles as chosen by Christ to preach his Gospel (v; ix; viii, 3). Once (xix, 9) he admonishes us to love the preacher of the Word of the Lord as the apple of our eye. Besides this, there are allusions to a sort of secret doctrine of the Lord, which is understood by the initiated (ix, 9, and x, 12). The writer of the Epistle evidently looks on this higher form of knowledge as an extraordinary gift imparted by the Spirit of God (cf. xvi, 8-10, and xvii). He considers his own exposition of the Scriptures as the effect of the Spirit working within him, even if he twice insists modestly on the point that he is not writing as a teacher (*ὡς διδάσκαλος*) (i, 8, and iv, 9).

(6) Another kind of mysticism is revealed to us in the homily which has come down to us as the Second Epistle of St. Clement. St. Paul's image of the Church as the Body of Christ is developed, not very successfully, in an obscure speculation about a Church which pre-existed with Jesus and was created before sun and moon (xiv, 1-4). The presbyters mentioned in xvii (3, 5) must exhort and declare the Word of God in the presence of those assembled for Divine worship.

(7) The "Pastor" of Hermas.—We must exclude from our positive exposition a number of rather widespread but incorrect views about the hierarchy of the "Pastor" of Hermas. (a) It cannot be ascertained with certainty whether the Apostles mentioned in five places (Vis., iii, 5, 1; Sim., ix, 15, 4; 16, 5; 17, 1; 25, 2) are apostles in the broader sense (Harnack, Zahn), or only the Twelve (Dorsch); the latter is more probable. (b) In either case Hermas regards the Apostolate as a thing of the past. (c) The prophets, to whom Hermas himself belongs, are never spoken of in connexion with the Apostles and teachers; Hermas's silence, however, is not due to modesty, as his display of self-importance in Vis., iii, 1, plainly demonstrates, but to his concept of the prophet's office; for though he looks upon it as a social charisma, he accords it only a private authority, that allows each of the faithful to pass his own judgment on its validity (cf. Dorsch in "Zeitschrift für Kath. Theol.", xxviii, 1904, pp. 276 sq.). (d) Consequently one cannot prove from Hermas that the triad of "Apostles, prophets, and teachers", held the highest place in the community as preachers of the Word of God. (e) There is absolutely no truth in Harnack's assertion ("Analecta zu Hatch", 230 sq., and "Prolegomena zur Lehre der 12 Apostel", pp. 150 sq.) that Hermas never mentions bishops and deacons, where there is question of the community as a system composed of rulers and subjects (cf. Zeitschrift für Kath. Theologie, xxvii, 1903, pp. 198 sq.).

The following certain conclusions can be derived from Hermas: (a) The superiors are called presbyters (Vis., ii, 4, 2; Vis., iii, 1, 7, 8; Vis., iii, 11, 3); bishops and deacons (Vis., iii, 5, 1; Sim., ix, 27, 2, bishops alone; Sim., 26, 2, deacons alone), *προηγούμενοι τῆς ἐκκλησίας* (Vis., ii, 2, 6); together with *πρωτοκαθεδρίται* (Vis., iii, 9, 7); pastors (*pastores*; no Greek text; Sim., ix, 31, 5 and 6). (b) Since Hermas has no exact and fixed termi-

nology, no clear distinction can be discovered in his writings between bishops and presbyters. (c) It is certain that the presbyters are identical with the *προηγούμενοι* and the pastors. (d) They are primarily pastors of souls, whose duty it is to preserve the proper spirit in the community. (e) Hermas says nothing about bishops of the Roman community; they are spoken of in company with the Apostles, teachers, and deacons as stones that go to build up the edifice of the *Ecclesia*; in a subordinate measure their office is to be one of devotion to works of charity and the cares of the poor. Since in Hermas's time the name *ἐπίσκοπος* was extensively used for the monarchical bishop, Hermas seems to have had one in mind. The Clement spoken of by him in *Vis.*, ii, 4, 3 is evidently such an *ἐπίσκοπος* in Rome; Hermas gives him no official title; his duty it is to send to the other Churches the book given to Hermas by the *ecclesia*. The teachers (*διδασκαλοι*, *Vis.*, iii, 5, 1; *Sim.*, ix, 15, 4; 16, 5; 25, 2; *Man.*, iv, 3, 1, *διδασκαλοι ποιητας* *Sim.*, ix, 19, 2) are preachers of the Word of God. (f) A certain strife for precedence between the rulers of the community and prominent Christians, which Hermas seems to refer to, is of course no proof of a contest about the ecclesiastical constitution itself. It is probable that not only the holders of office were entitled to the first places of honour in the common assemblies but the teachers as well, who thus were numbered among the *πρωτοκαθεδρίται*. The assertion is constantly made, but cannot be proved, that Hermas included them among those endowed with mystical or miraculous "spiritual" gifts.

(8) Justin Martyr.—In his first "Apology" Justin Martyr represents the presiding officer (*προεστώς*) at the Divine service as a liturgical agent, by whose prayer in the Eucharistic celebration, the bread and wine are changed into the Body and Blood of Christ (*lxv*, 3-5; *lxvii*, 5). After a lector has read, the same presiding officer addresses words of counsel and encouragement to the assembled brethren (*lxvii*, 4). He also receives the voluntary offerings of those present, and distributes them to the widows and orphans, to the sick, the prisoners, and strangers, in short to all who need help (*lxvii*, 6 and 7). We find therefore in Rome about the year 150 a monarchical presiding officer who acts as liturgical celebrant, teacher, and declarer of the Word of God and as administrator of the sacred funds: an interesting testimony. Justin does not speak of presbyters, but mentions deacons; they distribute the Eucharist to those present and bring it to the homes of those who are absent (*lxv*, 5; *lxvii*, 5).

(9) Hegesippus.—In his "Memorabilia" (the book was probably called *ὑπομνήματα*), he describes the inerrant tradition of the Apostolic teaching. He regards the unbroken succession of bishops as the guarantee of truth (cf. Euseb., "Hist. Eccl.", iv, 22, 1 sq.). On his journey to Rome he found the true doctrine in Corinth, and mentions Bishop Primus in this connexion. In Rome he "examined the series of the bishops of that place" as far as Anicetus (*ἐπισησάμην τὴν διαδοχὴν*) the translation; "I made for myself a list of them in their succession" is hardly credible; Rufinus's conjecture "'mansi', I abode there" (*διατρίβην ἐπισησάμην*) is arbitrary; the Syriac reads literally: "I made there in the derivation of the bishops" (Nestle). I read: *διαδοχὴν ἡρηνησάμην οὐ ἐπισησάμην*.

(10) Abercius.—It seems to me as good as proved that Abercius was Bishop of Hierapolis (not Hieropolis) in Phrygia (Salutaris) in the second half of the second century. The attempt of some scholars, notably Dieterichs (Die Grabschrift des Aberkios, 1896), to deny the Christian character of the epitaph appears to have found a final refutation in Fr. Cumont ["L'inscription d'Abercius et son dernier exégète" in the "Revue de l'instr. publique en Belgique" (1897), 91; cf. also Ramsay, "Cities and Bishoprics of Phrygia", II (Oxford, 1897), 722 sq. and 788 sq. and the excellent article of H. Leclercq in Dom Cabrol's "Dictionnaire

d'Archéologie chrétienne et de Liturgie", I, 1903, 66 sq.]. Here we can only mention his witness to the primacy of the Roman Church (11-18).

(11) Gnosticism and Montanism.—The fantastic speculations of the Gnostics of the second and third centuries, which apotheosized the Apostles as demi-gods and æons, supply, of course, no more material to the historian than those other Gnostic teachings which minimized the authority of the first Apostles in order to raise to prominence the secret doctrine and the personality of the Gnostic teachers. The same is to be said of the Gnostic metaphysical doctrine of the Church. The Epistle of the Gnostic Ptolemæus to Flora deserves special notice (Epiphanius, "Hæres.", XXXIII, c. iii, ed. Oehler II, I, 401 seq.). At the close of c. vii (ib., 413) Flora's attention is called to the Apostolic doctrine, "which we also have received through a line of succession" (*ἦν ἐκ διαδοχῆς καὶ ἡμεῖς παρελήφμεν*). The "also" is worthy of remark. Ptolemæus means that not merely the universal Church, but they also had an Apostolic tradition. The progress of historical investigation disproves more and more the assumption of certain Protestant scholars that the Gnostics were the first to elaborate the theories of Tradition and Apostolic succession, and that afterward the Catholic Church gradually and unconsciously assimilated them. Catholic scholarship has recently established the following two points: (a) The polemical writings of Irenæus and Tertullian offer clear proof that the ideas of Tradition and Apostolic succession, with which these ecclesiastical writers repeatedly assail the Gnostics, were inherited from ancient times, at any rate in their essential character. (b) The most rigidly critical analysis of the Gnostic system has demonstrated that their theories of Tradition and Apostolic succession show unmistakable signs of being the copy and replica of a system already existing.

Marcion and his Church should be mentioned in this connexion, although Marcionism cannot be directly classified as Gnosticism. The same remarks, however, apply to him. His Church is precisely lacking in those elements, which constitute the chief strength of the Catholic Church: unity of Faith, unity and permanence of government. The legend of a well-established organization of the Marcionite communities about the year 160, far surpassing in firmness that of the Roman Church, originated in a misunderstanding. The true statement is this: At the time of the first appearance of Marcion and his doctrines, speculative minds of many Christians were inclined, in consequence of Gnostic theorizing, to reject as a deceiver the God of the Old Testament and to accept instead a God the Father who was superior to Him, and unknown to Him as well. This God enters into relation with the world through a series of intermediary beings. One of these æons unites himself with the man Jesus and operates apparently as a mere human being. These assertions disgusted and repelled many minds, not merely because of the grotesque theory of intermediary existences, but also because of the impossibility of reconciling the Christian Scriptures with this new doctrine and would-be secret tradition. The contradictions were palpable and unavoidable; and the assertions altogether arbitrary and devoid of proof. For this reason Marcion abandoned first his fantastic theory of æons, then his mystical dream of ecstatic and prophetic inspirations, and finally his fraudulent fiction of a secret tradition. Thereupon he tried to solve the contradictions of his system by rejecting the Old Testament, taking as a basis St. Paul, to the exclusion, however, of everything Jewish in the Epistles, retaining only the Gospel of St. Luke, and assuming a more convenient position. Jesus was merely the good God manifesting himself under an apparently human form. Everything centred around the doctrine of the Redemption; he rejected all

dogma and speculation. In that way he hit upon a convenient creed for those Gnostic adepts who had departed from Catholic Christianity and classical Gnosticism. His negations alone formed their bond of fellowship. His scriptural canon and his rule of Faith served to unite his followers, not through any positive belief but by the denial of Catholic (and Gnostic) principles. He seems indeed to have had a talent for organization; the historian, however, has to look on his work not as a new creation, but as a mutilation of that which had long been in existence. Our remarks on Gnosticism apply, *mutatis mutandis*, in a far greater degree to Montanism. The organization of Montanism was not a remnant of early Christianity, but an artificial revival of primitive customs. (cf. D'Alès, "La théologie de Tertullien", 201 sq.; and Batiffol, "L'église naissante et le catholicisme", 317 sq.).

IV. DETAILED EVIDENCE FROM PAGAN INSCRIPTIONS, PAPYRI, AND OSTRAKA.—We intend here merely to point out certain contemporary expressions for profane and sacred offices which may shed some light on the constitution of primitive Christianity. A. In the negative sense it is interesting to note that certain expressions, which were then in very general use for different kinds of governing officials were not adopted by the Christians, such as *epistates* (ἐπιστάτης) and *epimeletes* (ἐπιμελητής). For servants, in the religious sense, *hyperetes* (ὑπερέτης) was used more frequently than *diakonos* (cf. Thieme, "Die Inschriften von Magnesia am Maander und das neue Test." (Borna-Leipzig, 1905), 33).—B. *Positive parallelisms*.—(1) Ἀντιλήψις (= assistance), with a religious implication, is found, besides in I Cor., xii, 28, in the Septuagint and on papyri [cf. Deissmann, "Bibelstudien" (Marburg, 1895), 87; and "Neue Bibelstudien" (1897), 51]. (2) Ἀρχιποιμῶν (= chief shepherd) of I Peter, v, 4, is found on a mummy label [cf. Deissmann, "Licht vom Osten" (Tubingen, 1908), p. 64]. (3) *Diakonos* in a religious sense is found in an inscription, from Magnesia on the Meander, of about 100 B. C. (O. Kern, "Die Inschriften am Mäander", p. 109). The same is found frequently in other places (cf. Thieme, op. cit., 17 sq.), for instance mention is made of a college of deacons with a priest (ἱερεὺς) at their head for the worship of Serapis and Isis (cf. Corpus Inscr. Græc. II, 1800 and 3037). (4) *Episkopos* in a religious sense: cf. remarks above and Daremberg-Saglio, "Dictionnaire des Antiquités" under *episkopos*. This article is unfortunately not satisfactory, whereas the articles *epimeletes* and *epistates* are excellent. (5) Liturgy (λεῖτουργος, λειτουργία, &c.) in a religious sense is found at Magnesia (Kern, ib 98, 17 and 98, 58; Thieme, ibid., 16; Deissmann, "Bibelstudien", 137 sq.). (6) Λογία, that is, collections of a religious character (cf. I Cor., xvi, 1 and 2) on papyri and ostraka (Wilcken, "Griechische Ostraka", I, 253; Deissmann, "Licht vom Osten", 69 sq.; Kern, l. c., 105, 72; Thieme, l. c., 16 sq.). (7) Presbyter, also in a religious sense; for instance the members of a sacerdotal college in Egypt were called thus, in the middle of the second century (cf. the papyri in Deissmann, "Neue Bibelstudien", 60 sq.). (8) Prophets. They formed a class of the superior priesthood in Egypt (cf. Krebs, "Zeitschrift für ägyptische Sprache und Altertumskunde", xxxi, 36). Prophet-priests are also found in Miletus [cf. Thieme, l. c., 19; cf. also R. Cagnat, "Inscriptiones Græcæ", III (Paris, 1906), n. 680 and n. 1105].

V. HISTORICAL OR QUASI-HISTORICAL TESTIMONIES.—Since an exhaustive treatment is impossible, I have tried to collect at least all the typical texts.

A. *Mention of Bishops by Polycrates*.—In a synodal letter written by Polycrates of Ephesus about the year 190 this bishop, sixty-five years of age, speaks of seven of his relatives who had been bishops before him. Besides these he mentions Polycarp and Papius of Smyrna, Thraseas of Eumeneia, Sagaris of Lao-

dicea and Melito of Sardes (Eusebius, "Hist. Eccles.", v, 24, 2 sq.).

B. *Irenæus's View of the Connexion with Apostolic Times*.—The famous texts of Irenæus on Apostolic succession are a testimony to the faith of the second century, rather than an example of ancient historical narrative. Exceptions are (a) the list of the Roman bishops (Hær., iii, 3 sq.); (b) the account of Polycarp's instalment by the Apostles (op. cit., iii, 3, 4, and Euseb., "Hist. eccles.", iv, 14); and especially (c) the passage (Hær., v, 20, 1) pointing out the fact that the Apostles entrusted the Churches to the bishops. On the contrary, historical value cannot be attached to the statement (Hær., iii, 14, 2) that St. Paul summoned to Miletus the bishops and presbyters of Ephesus and the vicinity.

C. *Eusebius's Account of the Earliest Times*.—(1) The accounts that we have of St. James the First as Bishop of Jerusalem, based on the "Hypotyposes" of Clement of Alexandria (Eusebius, "Hist. eccl.", ii, 1) cannot be used as historical data. This applies still more to the story (op. cit., iii, 11) of the choice of Simeon as a successor to James. The bare fact, however, that both filled the highest office in Jerusalem, is well attested (cf. Eusebius, ibid., iv, 5, and iv, 12; and especially Hegesippus, iv, 22). (2) Euseb., iii, 37, has a good historical basis. Eusebius tells us here that the disciples of the Apostle, after distributing their goods, spread the Christian religion in the character of "evangelists".

D. *Colleges of Presbyters*.—The mere fact that the ancient sources speak of colleges of presbyters, without any mention of a monarchical bishop at their head, does not warrant the immediate conclusion that there was no such bishop. This is clearly shown by the following texts. The anonymous Antimontanist in Eusebius (Hist. eccl., v, 16, 1 sq.) speaks of such governing presbyters in Ancyra. Tertullian mentions elders as presidents of the assemblies (Apologet., xxxix).

E. *Charismata*.—(1) Eusebius's anonymous Antimontanist and Miltiades (Hist. eccl., v, 17) testify that the true prophets (of the Old and the New Testament) did not speak in ecstasy (i. e. in unconscious ravings). This looks more like a theological inference than a piece of evidence from first-hand historical sources. (2) In the "Testament of Jesus Christ" (edit. Ephræm Rahmani, I, xlvi) an ordinance is found prohibiting the imposition of hands on those who possess the gift of healing, of knowledge, or of tongues, since the work of God is already made manifest in them. (3) In view of the passages which speak of prophets, it does not seem improbable that the word "prophet", even in early times, signified not merely the possessor of an ecstatic charisma, but was also a substitute for "priest", at a time when men were still afraid to use this expression. Prophet appears here as a synonym for *hypophetes*. This recalls a remarkable passage of the Ambrosiast (in Ep. ad Ephes., iv, 11, 12), where the observation is made that "now" the interpreters of Scripture are called prophets. The "now" may however be due to a hurriedly copied quotation. (4) If Tertullian defines the teachers (*doctores*) as brethren "endowed with the gift of knowledge" (*gratia scientiæ donati*—De Præscript., xiv), a miraculous charisma cannot be immediately inferred, since the idea of grace or endowment (*gratia*) was of very wide application.

F. *Different Orders of the Hierarchy*.—Besides patriarchs, prophets, levites, priests, and archons, Tertullian mentions also Apostles, evangelists, and bishops (De Corona, ix, 2). Only the last three have reference to the New Testament, according to the context. The list given in another passage (Præscr., III), bishop, deacon, widow, virgin, doctor, martyr, is evidently arbitrary and accidental. The same may be said of the seven orders of Hippolytus (Fragm. in Prov., ix, 1) prophets, martyrs, hierarchs, ascetics, saints, just.

G. *Deacons*.—The hypothesis that the deacons were originally on a higher footing than the priests, almost equal to that of the bishops, is supported by a few of the vaguest indications taken from the earliest sources. That such naive texts prove nothing is best shown by the later texts, which allow the deacon remarkable privileges, although his rank was definitively established as no higher than the third order of the hierarchy. (1) At the Council of Elvira (Eliberis) a discussion took place regarding deacons who govern churches (*diacanus regens plebem*, can. lxxvii); that is to say, where there is no bishop and no priest. (2) In the Apostolic Constitutions (lib. II, c. xxvi) the deacons come directly after the bishop, although it was then established that their order held third place.

H. *The Hierarchy as an Ecclesiastical Institution*.—

(1) The utterance of Tertullian (*De exhort. cast. vii*), declaring that the difference between the priests and the laity was due to ecclesiastical institution, and that therefore any layman in the absence of a priest could offer sacrifice, baptize, and act as priest, is based on Montanistic theories and contradicts earlier teachings of Tertullian (e. g., *De baptismo*, xvii). (2) Nor is there any better historical foundation for the statement of Cyprian (*Epist.*, III, 3) that Christ spoke only of bishops and priests, whereas the deacons are of Apostolic institutions. The latter is simply a conclusion drawn from the sixth chapter of Acts; while the preceding expresses a dogmatic judgment and the belief at the time of St. Cyprian.

I. *Supposed Original Equality of Bishops and Priests*.—

(1) Epiphanius (*Panar.*, III, c. iv, hæ. lxxv).—Epiphanius's arguments against Arius, who held this original equality, form an excellent dogmatic thesis; but the description of primitive conditions is an artificial construction, not a real historical account. (2) Jerome, Theodore of Mopsuestia, the Ambrosiast.—Jerome holds that bishops and priests were identical in the earliest times. According to him the monarchical episcopate is an ecclesiastical institution, although it is for the good of the Church and based on Apostolic tradition ("Epist. ad Evangelum", 146 [83], 1; "Epist. ad Oceanum", 69 [83], 3; "Comment. in Tit.": Migne, P. L., XXVI, 562, 563, 694, 695 and 696—"Dialog. advers. Lucifer", 9; Migne, P. L., XXIII, 164 sq.). But since on the other hand Jerome regards the power of ordination as peculiar to the bishop, his theory labours under an insoluble contradiction (cf. *Epist.* 146 [85] and "In Ep. ad Tit.", ib.). Jerome's accounts do not offer any historical testimony, but an artificial and hypothetical construction. He infers far too much from the fact that the titles presbyter and bishop are synonymous in the New Testament, relying chiefly on an ordinance concerning the election of bishops of the Alexandrian Church, which prescribed that, in accordance with an ancient tradition, the college of presbyters should always choose and consecrate one of its own number. The texts of St. Jerome are thoroughly discussed by Michiels, "L'origine de l'épiscopat" (Louvain, 1900), 420 sq., and by Dom Léon Sanders, "Études sur saint Jérôme" (Brussels and Paris, 1903), 298 sq. We shall speak presently about the election of the Alexandrian bishops. From the time of Isidor of Seville until late in the Middle Ages these accounts of St. Jerome were transcribed over and over without any attempt at criticism. For the history of these texts of St. Jerome, cf. Dunin Borkowski in "Histor. Jahrbuch.", XXI (1900), 221 sq.

Jerome and the Ambrosiast deny the original equality of bishops and priests; both maintain that the Churches even in Apostolic times were governed by single superiors, who all possessed the power of ordination and bore the name of Apostle [cf. Ambros., in Eph., iv, 11 and 12; in I Cor., xii, 18; in Philipp., i, 1; in I Tim., iii, etc.: "Opera Ambrosii", ed. Ballerini, III (Milan, 1877), 809 sq., 631, 830, 916; "Theodori Episcopi Mopsuesteni

in epist. B. Pauli commentarii", ed. H. B. Swete, 1882; in I ep. ad Tim., iii, 8; I. c., II, 114 sq.; in ep. ad Tit., i, 7, 239]. The statements of Theodore and of the Ambrosiast have much more value than those of St. Jerome. We find similar utterances in Theodore's Commentary on Philippians, i, 1 (Migne, P. G., LXXXII, 559 [445]) and on I Tim., iii (ib., 803 [632]) and also in John of Dara (in Abrah. Echellensis, "Euty chius Patriarcha Alexandrinus vindicatus" [Rome, 1668], 190 sq.). A similar notion is found in Origen (*Hom. in Num.*, xi, 4, Migne, P. G., XII [Orig. II], 308 col. 649); except that he seems to speak of his own time. He speaks of the possibility of a man coming to a place where there are as yet no Christians, of his teaching the people the Faith and inducing them to accept it, and finally becoming bishop himself.

In the places mentioned, Theodore of Mopsuestia has another peculiar statement. He declares that in the most ancient times those supreme ecclesiastical superiors, who were instituted by the original Twelve and called likewise apostles, ruled over entire provinces, whereas the towns were subject to presbyters. Even in later times not more than three bishops, usually only two were to be found in a province; this condition, he adds, had lasted in the Occident almost up to his own time. Duchesne attached some historical value to these utterances of Theodore [*Fastes épiscopaux de l'ancienne Gaule*, I (1894), 36 sq.]. Harnack has refuted him very thoroughly in a valuable excursus in the second volume of his work, "Die Mission und die Ausbreitung des Christentums in den ersten drei Jahrhunderten", 2nd ed. (1906), 373 sq. Harnack assigns its true value to Theodore's testimony, though in some places he lets himself be influenced by his own extremely hypothetical concept of the primitive Christian constitution. Theodore is correct in saying that originally whole provinces were under one chief ruler known as an "apostle". One cannot, however, accept his conclusion that for a long time the single local communities were without any bishops of their own (cf. Harnack, I. c., 378-395).

(3) The Alexandrian bishops are said to have been placed in office and consecrated by the local priests. History offers widely different accounts of this singular occurrence. Heretical monks complained to the holy monk Poimen about the Alexandrian archbishop, and claimed that he had been consecrated by priests. The event can have taken place between 370 and 460 (P. G., LXXV, 341). Jerome mentions the fact (*Presbyteri . . . unum ex se electum . . . episcopum nominabant*) (*Epist.* 146 ad Evangelum, Migne, P. L., XXII, 1194). Severus of Antioch also speaks of it in a letter written between 518 and 538 [E. W. Brooks, "The ordination of the early Bishops of Alexandria" in "Journal of Theol. Studies", II (1901), 612 sq.]. Finally in the tenth century the story is told at great length by Euty chius, Melchite Patriarch of Alexandria (P. G., CXI, 903-06 and 982). It seems doubtful whether the Ambrosiast (I. c., in Eph., iv, 11, 12) refers to these conditions in Alexandria. Abraham Echellensis, notwithstanding his serious errors in chronology, has shown that Euty chius and his first editor, Selden, caused an irremediable confusion ["Euty chius, Patriarcha Alexandrinus vindicatus" (Rome, 1661), 39 sq., 47 sq., 53 sq., 63 sq., 103 sq.]. On page 227 an important text of George Homaidius is given as a parallel to Euty chius. Cf. also A. von Gutschmid, "Kleine Schriften", II 399 sq.; 379 sq., 486, and Renaudot, "Liturgiarum Oriental. Collectio", I, 365 sq.; 379 sq.]. The remaining three texts, when compared with one another, present serious difficulties. Moreover, they can hardly be reconciled with statements made by Clement of Alexandria and Origen [cf. Ch. Gore, "On the Ordination of the Early Bishops of Alexandria", in "Journal of Theol. Studies" (1902), III, 279 sq.; and Cabrol in "Dictionnaire d'archéologie chrétienne et de liturgie", s. v. "Alexan-

dric']. The outcome of it all is, as Cabrol states, that in the fourth century and later a tradition existed that the Bishops of Alexandria were chosen, or perhaps even consecrated, by the presbyterate.

VI. SHORT SYNOPSIS OF THE PRINCIPAL RESULTS GAINED BY EXAMINATION OF ALL THE TEXTS.—In the earliest times those who first preached the Gospel in a place, usually retained the supreme direction of the communities which they had themselves founded. We say *usually*; for the message of Christianity could be carried to some places by men who were not missionaries by their calling, and thus could claim no personal authority (Rome); or by men who felt sure of their vocation as preachers of the Word of God, but did not wish to organize or govern (Ephesus?). Accordingly, there were cases in which the foundation proper did not coincide with the first preaching of the Gospel; and in such cases the Apostle who was founder became the chief ruler. This position, in which the Apostle Paul and the first Apostles were established, was charismatical in the sense given above, i. e., it originated in a personal commission from Jesus. We know nothing definite about the calling of the apostles in the wider sense. The idea that they always followed a direct intimation of the Spirit is not impossible, but it cannot be proved. The apostolate was not a mystical or miraculous charisma, like the gift of tongues and of prophecy. The founding of the Church included its organization as well. The individual Churches could not have evolved their organization out of their own inner power of jurisdiction, for it was as an organism that each existed from the start, and only as an organism that it put forth its activity. That is the most ancient Christian concept of the body ecclesiastic that we know of. But the conclusion is also established that the Church's power of action was not bestowed on her by the founding Apostles. As a second Christ, as the Body of Christ, both the universal Church and the local Churches possessed certain rights and powers which could not have been conferred by men. The Church was essentially the creation of God and Christ. But these rights and privileges can no more be referred to the autonomous communities than to the founding and governing Apostles; they are the work of God and Christ. Communal autonomy, in the modern sense, which makes the community not merely the subject, but also the creator and ultimate reason of its own juridical powers, is a concept directly opposed to the deepest convictions of the early Christians. Since the Churches were regarded as organisms, these Divinely given powers and privileges did not pertain to the community as distinguished from the governing officials, but to the organized community. Primitive Christian faith represented the organs of the mystical body of Christ, including the local governing powers in general, as a law, an ordinance of God and Christ. It has been mistakenly asserted that the governing organs did not stand above the community. This is true only in the sense that the community, as the organized body of Christ, includes within itself all its organs; but, as soon as the idea is introduced that the superiors received their power from the autonomous community of the faithful, the view is contrary to that of primitive Christianity.

Neither the power of the Apostles nor of the other superiors was tyrannical and autocratic in its nature. All were equally bound by the Word of God. The importance which was attached to charity and humility gave a patriarchal tone to Christian society. But true juridical relations were there none the less. The foremost Protestant scholars reject the paradox proposed by Rudolf Sohm in the first volume of his "Kirchenrecht", that legal right is alien to the concept of the *Ecclesia*. But a great deal of confusion and obscurity is still brought into a naturally clear and simple matter by an improper use of modern legal concepts and certain one-sided peculiarities of the

Roman law. The investigator should bear in mind the juridical conditions of the early Church and the manner of expression peculiar to those times. Did the first Christians accept ecclesiastical authority as a manifestation of the Divine will in the abstract, and quite independently of the question whether the superior offered himself spontaneously, was elected, or was otherwise placed in office? Did they understand their subjection to superiors as an obligation imposed upon subjects of God, and, consequently, the superior's right of government as a moral possession allotted by God? Our texts oblige us to answer both these questions in the affirmative. But this is the very essence of Divine jurisdiction. In other words, the organic disposition of the Church is the will and commandment of God and Christ. A second question is: Did the Apostles and ecclesiastical superiors, in view of their Divinely given mission, ascribe to themselves certain rights of government which, though not determined as to their subject-matter by a direct mandate of Christ, were none the less obligatory on the faithful? To this question, also, the sources give the same distinctly affirmative answer.

Since, likewise, local authority was regularly accepted as an ordinance of Christ, different members and organs, with strictly regulated functions, must have gradually been evolved everywhere. These include also the governing communal organs together with the universal apostolate and the travelling helpers of the Apostles. In many places, of course, men of power, endowed with miraculous gifts, such as prophets, could for a time take the place of the regular governing officials. An organization of the Church based solely on mystical or miraculous charismatical gifts is as fabulous as the alleged democratic organization. The Apostle, who had some sense of order and ability for organizing, took care to establish resident helpers in the newly-founded communities. St. Paul was pleased when the first-fruits of the Faith in any city offered themselves for the service of the community. If they were men of proved character, and were recognized by the Apostle, it became the duty of the Christian to respect and obey them. But in some cities peculiar offices existed from the earliest times. In the midst of the Jewish and heathen society of Asia Minor and Palestine, such personages were given the name of presbyter; but in other regions no special title seems to have been attached to them at the beginning; only superiors and servants (deacons) were spoken of. But the name of *episkopos* (overseer) soon came into use; and the title of *deacon* was restricted more and more to the assistants of the chief local officials. These presbyters, or bishops, formed a sort of college. There is no proof that in the Apostolic times there existed, besides the deacons, two separate corporations, each provided with special powers: a college of presbyters and a college of bishops, who were drawn from the ranks of the presbyters or added to their number.

To explain the Epistles of St. Ignatius, one must assume that the separation of the titles *bishop* and *presbyter* took place in many localities as early as 70-80, and that, even at this time, the monarchical head of the community was frequently called *episkopos*. At an early period these superiors were given the favourite title of shepherd. The name *ηγούμενοι* (leaders) was of somewhat later appearance, and probably later still (Clement and Hermas) the compound word *προηγούμενοι* (Clement and Hermas); the terms *προκαθήμενοι* (presiding officials) and *πρωτοκαθεδρίται* (holders of seats of honour) are undoubtedly of later origin. It seems probable that, side by side with *πρωϊστάμενοι*, the form *προεστῶτες* was used, but this cannot be proved with certainty. In I Tim., v. 17, the word is an adjective (*οἱ καλῶς προεστῶτες πρεσβύτεροι*). The preaching and interpretation of the Word of God was undertaken in the earliest times by the Apostles and their travelling helpers, among whom the "evangelists" were in-

cluded. These were missionaries, prophets, and "doctors," some of whom, had a direct Divine calling and a gift of infused knowledge. Other teachers were distinguished from evangelists by permanent residence in some community. This abundance of preachers of the Word of God (λαλοῦντες τὸν λόγον τοῦ θεοῦ) mentioned only by St. Paul, I Tim., ii, 7; II Tim., i, 11; and I Clem., v, 6) frequently relieved the local superiors of their obligation to preach in person.

With the growth of the communities, the Apostle-founders entrusted part of their office to men worthy of their confidence, who were thus invested with a monarchical authority over several communities, without, however, succeeding to all Apostolic prerogatives. These men soon received the title of *episkopos*; and, as a result, this term became obsolete as a mere synonym for *presbyter*. Such are the historical beginnings of the monarchical episcopate. For a long time, however, the bishops were also called by the simple title of *presbyter*. The greater the number of distinct communities, the more numerous were the monarchical bishops; and in some districts every town soon had a bishop of its own. Those early recipients of the Apostolic confidence were not as yet local superiors in the strict sense, although of course they usually resided in some particular town. The presbyters of their province were subject to them. In this we find the beginning of the system of metropolitan bishops. In some places the presbyterate remained for a considerable time the highest local authority. About the same time, the order of deacons became fully organized. They were the right hand of the bishop.

All the germs of later development were present at the very beginning. The constitution of the Church in its essential structural features is an original product of Christianity. In the light of the laws of history and of Divine Providence, it is easy to understand how from the earliest times the social environment of Christian institutions, the varieties of religious activity and organization, the local and provincial forms of government, were important factors in developing a great multitude of unessential details.

Valuable bibliography is to be found in *Revue d'histoire ecclésiastique* (Louvain, 1900—); bibliography and references in *Theol. Jahresbericht* (Leipzig and New York) and in *Jahresberichten für Geschichtswissenschaft* (Berlin). The literature up to 1900 has been treated in full by BORKOWSKI, *Die neueren Forschungen über die Anfänge des Episcopats* (Friburg, 1900). Still useful are PETAVIUS, *De ecclesiastica hierarchia libri 5* (Paris, 1643); MAMACHI, *Originum et Antiquitatum christianarum, libri 5* (Rome, 1749—55); BINGHAM, *Antiquities of the Christian Church* (new ed., Oxford, 1855). Among the numerous works written in the earlier nineteenth century, the following may still be read with profit. MOHLER, *Die Einheit in der Kirche* (1825 and 1843); ROTHE, *Die Anfänge der christlichen Kirche und ihrer Verfassung*, I (1837); above all, DÖLLINGER, *Christentum und Kirche in der Zeit der Grundlegung* (Ratisbon, 1869); also LIGHTFOOT, *The Christian Ministry*, in his work *St. Paul's Epistle to the Philippians* (2nd ed., 1869), 179—267; reprint in *Dissertations of the Apostolic Age* (1892), 137—246). In order to understand the last specimens of the older Tübingen School, see LÜDEMANN in *Theol. Jahresbericht*; SEUFERT, *Der Ursprung und die Bedeutung des Apostolats* (Leipzig, 1887); and *Ueber den Ursprung und die Bedeutung des Zwölfapostolats* (Karlsruhe, 1903); SEYERLEN in *Zeitschrift für prakt. Theolog.*, IX (1887), 97—143; 201—245; 297—333). At least two of BAUR's numerous writings must be read: *Das Christentum und die christliche Kirche der drei ersten Jahrhunderte* (Tübingen, 1853) and *Ueber den Ursprung des Episcopats* (Tübingen, 1838). Another tendency in Protestant scholarship dates from RITSCHL, *Die Entstehung der altkatholischen Kirche* (2nd ed., Bonn, 1857). The germs of many of the latest hypotheses relating to our subject can be discovered in the following works: LECHLER, *Das apostolische und nachapostolische Zeitalter* (1851); JAKOBY, *Die konstitutiven Faktoren des apostolischen Gottesdienstes in Jahrbücher für deutsche Theol.*, XVIII (1873), 539—583; HACKENSCHMIDT, *Die Anfänge des katholischen Kirchenbegriffs*, I (1874); HOLSTEN, *Das Evangelium des Paulus*, I and II (1880 and 1898); HEINRICH, *Aufsätze über die paulinischen Gemeinden in Zeitschrift für wissenschaftliche Theologie* (1876), 465—516, and (1877), 89—130. Little notice is taken of the influence of these works. The following two works have exercised a great and lasting influence on Protestant scholarship: WEISÄCKER, *Das apostolische Zeitalter* (Tübingen and Leipzig, 1886; 2nd ed., 1896; 3rd ed., 1902); and HOLTZMANN, *Die Pastoralbriefe* (Leipzig, 1880). The following works had a considerable, but only passing, influence: HATCH, *The Organization of the Early Christian Church* (Oxford, 1881; 2nd ed., 1882), translated into German and amplified by HARNACK (1883); WEINGARTEN, *Die Umwandlung der ursprüng-*

lichen christlichen Grundorganisation zur kathol. Kirche, in *Sybilis Histor. Zeitschrift*, XLV (1881), 441—67. All writings on the subject by HARNACK, besides his *Dogmengeschichte*, his large edition of the *Didache* and his *Analekten zu Huth*, an article on the origin of the Christian ministry, in *Expositor*, V, XXIX (1887), 321—43. More recently his work, *Die Mission und Ausbreitung des Christentums in den ersten drei Jahrhunderten*, I (Leipzig, 1906), 267—418; SOHM, *Kirchenrecht*, I (1892), 16—180; RÉVILLE, *Les origines de l'épiscopat*, I (1894).

Among the works, the value of which lies in their criticism of the various hypotheses, without their offering any conclusions of lasting value, are to be numbered: KÜHL, *Die Gemeindeordnung in den Pastoralbriefen* (1885); LÖNING, *Die Gemeindeverfassung des Urchristentums* (1888); LOOPS, *Die urchristliche Gemeindeverfassung in Studien und Kritiken*, LXIII (1890), II, 619—58. Many other works aroused considerable attention at the time of their appearance, but afterwards lost their value: those, for instance, by SCHWEGLER, BUNSEN, SCHAFF, HAYET, RENAN, HAUSRATH, the entire Dutch radical school, PRESENSEY, etc. Eight articles in the *Expositor* for 1887 show an extraordinary confusion in the line of historical research. HORT, *The Christian Ecclesia* (1897) is very unsatisfactory.

Useful collections of material are found in: the notes and excursus in LIGHTFOOT, *Apostolic Fathers*; the liturgical works of PROBST; works by RAMSAY, e. g., *The Church in the Roman Empire* (London, 1893, 7th ed., 1903); *St. Paul the Traveller and the Roman Citizen* (7th ed., London, 1903); *The Cities and Bishoprics of Phrygia* (Oxford, 1897—97); CABROL and LECLERCQ, *Monumenta Ecclesie Liturgica* (Paris, 1900); works of HILGENFELD, as *Die apostolischen Väter* (1853), *Das Urchristentum in den Hauptwendepunkten seines Entwicklungsganges* (1855), and articles in *Zeitschrift für wissenschaftl. Theologie* (1874—97) (1874, 103 sq.; 1886, 1 sq.; 180 sq.; 385 sq.; 456 sq.; 1890, 223 sq.; 303 sq.; 1897, 1 sq.). Few, however, of the positive results can be accepted. Very many of the remaining works are based wholly on the labours of others. MCGIFFERT, *Hist. of Christianity in the Apost. Age* (Edinburgh, 1897) is in close relation with German Protestant historical investigation.

Catholic scholarship has been influenced by the following works among others: DE SMEDT, *L'organisation des églises chrétiennes in Revue des questions historiques*, XLIV (1888), 329—84; JACQUIER, *La doctrine des douze apôtres* (1891), 216—257, also the corresponding sections in SCHANZ, *Apologie*. The subject has also been well treated by LESQUOY, *De régime ecclesiastico juxta patrum apostolicorum doctrinam* (Louvain, 1881); BRÜLL, *Der Hirt des Hermas* (1882) and *Der erste Brief des Clemens von Rom* (1883); GOBET, *De l'origine divine de l'épiscopat* (Fribourg, 1898); SOBKOWSKI, *Episkopat und Presbyterat in den ersten christlichen Jahrhunderten* (Wurzburg, 1893); DOUAI, *Les origines de l'épiscopat, in Mélanges publ. à l'occasion du jubilé de Mgr de Cabrières*, I (Paris, 1899), 1—48.

The Journal of Theological Studies; *American Ecl. Review*; *American Journal of Theology*; *Revue Biblique*; *Revue Bénédictine*; *Revue Thomiste*; *Revue de l'Orient Chrétien*; *Zeitschrift für neutestamentliche Wissenschaft und die Kunde des Christentums*; *Rivista storico-critica delle scienze teologiche*; *Civiltà Cattol.* (e. g., May, 1906, 257—274). Also the important articles in HASTINGS, *Dict. of the Bible*; in *Dictionnaire de théologie*, and the recent new edition of the *Dictionnaire d'Apologétique*.

More important works by Protestant authors that have recently appeared (since 1900): ROPES, *The Apostolic Age in the Light of Modern Criticism* (New York, 1906); MONNIER, *La notion de l'apostolat des origines à l'époque* (Paris, 1903); DURELL, *The Historic Church* (Cambridge, 1906), well worth reading; HEINRICH, *Das Urchristentum* (1902); WERNLE, *Die Anfänge unserer Religion* (1903); DOBSCHÜTZ, *Probleme des apostolischen Zeitalters* (1904); *Die urchristlichen Gemeinden* (1902); KNOPF, *Das nachapostolische Zeitalter* (1905). Many monographs on St. Paul—Harnack in *Realencyclopädie für protest. Theologie und Kirche*, XX (3rd ed., 1908, 508—546), s. v. *Verfassung*, is important and interesting.

Some of the more important Catholic works since 1900: MICHIELS, *Les origines de l'épiscopat* (Louvain, 1900); BATIFFOL, *L'hérarchie primitive in Etudes d'histoire et de théologie positive* (2nd ed., Paris, 1902); and especially *L'Eglise naissante et le Catholicisme* (Paris, 1909); BRUDERS, *Die Verfassung der Kirche* (Mainz, 1904); DUCHESNE, *Histoire ancienne de l'Eglise*, I (Paris, 1906), 89 sq.; LE CAMUS, *L'œuvre des apôtres*, II, III (Paris, 1905); MATHEW, *Ecclesia, the Church of Christ* (London, 1906); CABROL, *Les origines liturgiques* (Paris, 1906); GENOUILLET, *L'Eglise chrétienne au temps de Saint Ignace d'Antioche* (Paris, 1907); PRAT, *La théologie de St. Paul*, I (Paris, 1908), Note J, 488—511. Finally the notable work by MERTENS, *De hierarchie in de eerste eeuw des christendoms* (Amsterdam, 1908).

STANISLAUS DE DUNIN BORKOWSKI.

Hierocæsarea, a titular see of Lydia, suffragan of Sardis. This town is mentioned by Ptolemy (VI, ii, 16). Judging from its coin it worshipped Artemis Persica. The site of Hierocæsarea must have been between the villages of Beyova and Sasova, seven or eight miles south-east of Thyatira, on the left bank of the Koum-Chai, a tributary of the Hermus, and in the vilayet of Smyrna. It is mentioned as an episcopal see in all the "Notitiæ Episcopatum" until the twelfth or thirteenth century, but we know only three of its bishops: Cosinius, at Chalcedon, 451; Zacharias, at Nicæa, 782; Theodore, at Constantinople, 879.

RAMSAY, *Asia Minor*, 128; LEQUIEN, *Or. Christ.*, I, 891; FOUCART in *Bulletin de correspondance hellénique*, XI (1887), 93 sqq.

S. PÉTRIDÈS.

Hieronymites.—In the fourth century, certain Roman ladies, following St. Paula, embraced the religious life in Bethlehem, putting themselves under the direction of St. Jerome, who had founded a monastery in that city. It is not to be inferred from this that he composed any monastic rule or founded an order. Some Hieronymites of the sixteenth and seventeenth centuries, indeed, asserted as much, but their claims rest upon no substantial basis, so that no historical link is to be looked for between St. Jerome and this religious family. The congregation was formed in Spain and Italy, in the fourteenth century, by the amalgamation of several groups of hermits, and the sovereign pontiffs, while granting it their approval, imposed upon it the rule of St. Augustine, though the name of St. Jerome, whom the religious had chosen as their model and patron, was retained.

In Spain the cradle and centre of this congregation was the monastery of San Bartolomé de Lupiana. Its first prior, Fernando Pecha, in conjunction with Peter of Rome, obtained from Pope Gregory XI Bulls confirming their order, 18 October, 1373. The pope received their solemn vows and gave them their habit, which consisted of a white tunic, a brown scapular and mantle. Their constitutions resembled those of the Augustinians of St. Mary of the Sepulchre at Florence. Fernando Pecha received the profession of the other hermits in 1374. Their numbers rapidly increased; in the reigns of Philip II and his successors their prosperity was extraordinary. Charles V held them in high esteem. In 1389 they received the monastery of Our Lady of Guadalupe, in Estramadura, in which is preserved the image of the Blessed Virgin most venerated throughout Spain. In 1415 their houses numbered twenty-five. They were then removed from the jurisdiction of the ordinary and made an exempt order. They were established in Portugal, and the religious of these two countries formed one congregation (1595). Philip II built on a grand scale the monastery of St. Lawrence of the Escorial, in which the kings of Spain are buried. Its library is one of the richest in Spain, and it possesses many works of art. The kings of Portugal are buried in the monastery of Belem, founded by King Manuel in 1497, which was the largest and finest in the kingdom. Emperor Charles V, on his abdication (1555), withdrew to the monastery of St. Jerome of Yuste, where he died. The monasteries of Madrid and Seville must also be mentioned. The Hieronymite nuns founded by María Garcías, who died 10 February, 1426, occupied the monasteries of St. Paula of Toledo, of La Concepción Jerónima of Madrid (1504), of St. Paula of Seville (1473), of St. Martha of Cordova, and St. Paula of Granada. The Hieronymites became celebrated for their generous almsgiving. The authority which they gained from so holy a manner of living allowed of their being employed efficaciously in the reformation of other religious orders, among which were the Premonstratensians, the Trinitarians, the Canons Regular of Coimbra, of St. John the Evangelist, the Knights of the Order of Christ and of St. James of the Sword. It was by their help that St. John of God was enabled to found his first hospital. They co-operated in the evangelization of the New World. The government of the island of San Domingo was at first confided to them. Many of them have been raised to the episcopal dignity.

Lupo de Olmedo introduced into this order a reform which issued in the establishment of the Congregation of the Monk-Hermits of St. Jerome of the Observance (1424). Their manner of life resembled that of the Carthusians. Their constitutions were drawn up with extracts made from the writings of

St. Jerome. The monastery of St. Jerome of l'Acella and others which existed in Spain were incorporated with the Spanish Congregation of the Hieronymites (1595); those which Lupo de Olmedo had founded in Italy retained their independence, and were known as the Hermits of St. Jerome of Lombardy, their general residing at San Pietro del Ospitaletto, in the Diocese of Lodi. They had seventeen houses, notably that of St. Alexis on the Aventine, at Rome.

There were two other congregations at Rome under the patronage of the same Doctor of the Church: the Hermits of St. Jerome [of the Congregation] of Blessed Peter of Pisa, and the Hermits of St. Jerome of Fiesole. The former came into existence at Montebello, in Umbria, about the year 1375; Blessed Peter of Pisa, its founder, died in 1435. Its constitutions were not drawn up until 1444, and St. Pius V gave the congregation its definitive form in 1568. It was augmented by the incorporation of several eremitical groups: that of Blessed Nicola di Furca-Palena, under the generalship of Blessed Bartolommeo Malerba, after 1446; that of Pietro di Malerba (1531); that of the Hermits of Monte Legestro, near Genoa (1579), founded by Blessed Laurence; lastly the Tyrolese and the Bavarian hermits (1695). The forty houses of Italy formed the two Provinces of Ancona and Treviso. At Rome these religious occupied the monastery of Sant' Onofrio on the Janiculum. Their habit was brown and consisted of a tunic, a hood, and a mozetta, with a leathern girdle. Many of the congregation have been beatified—Pietro Qualcerano, Nicola di Furca-Palena, Bartolommeo of Cesena, Filippo di Sant' Agata, and others.

The Hermits of St. Jerome of Fiesole were founded by Blessed Charles of Montegraneli. Cosimo de' Medici defrayed the cost of their first monastery. Innocent VII approved the congregation in 1406, and in 1441 Eugene IV gave it its definitive constitutions. They had as many as forty houses, all in Italy. The church of Sts. Vincent and Anastasius at Rome was served by them. But in time their numbers diminished, and Clement IX suppressed them in 1668. The other Italian Hieronymites disappeared during the troubles which followed the Revolution; those of Spain were suppressed in 1835, and those of Portugal shortly afterwards. The literary activity of this order has been confined to Spain and Portugal. Antonio Nicolás, in his "*Bibliotheca Hispana nova*", vol. II, p. 314, enumerates the works of these religious, of whom some of the best-known names are: Diego de Carceros, moralist and theologian (1638); Diego de Yepes, author of a life of St. Teresa (1643) and a history of the persecution in England (1599); Diego de Zuniga, philosopher and exegete (about 1600); Fernando de Talavera, Bishop of Granada (1507), ascetical writer; Francisco de todos Santos, author of a history of the Escorial (1657); Garcías de Toledo, canonist (about 1560); Hermengildo de San-Pablo, the historian of his congregation (1670); Jerónimo Gazia, moralist (1652); Jerónimo de Guadalupe, a commentator on several books of the Bible (about 1600); Juan of Toledo, theologian (1662).

HERMENGILO DE SAN-PABLO, *Origen y continuación de el instituto y religión Gieronimiana* (Madrid, 1669); SAJANELLO, *Historica monumenta Ord. S. Hieronymi Congr. B. Petri de Pisis* (3 vols., Venice, 1758-62); HÉLYOT, *Histoire des ordres religieux*, III (Paris, 1792), 435-70; IV, 1-26.

J. M. BESSE.

Hierotheus.—All attempts to establish as historical a personality corresponding to the Hierotheus who appears in the writings of Pseudo-Dionysius are rendered abortive by the fact, now definitively proven, that those writings, with intent to mislead, weave into their narrative various fictitious personalities of the Apostolic Era, such as Peter, James, John, Timothy, Carpus, and others. Indeed the author would have betrayed himself had he named and depicted in such

sharp outlines a real Hierotheus who lived in his own time (the end of the fifth century), and with whom he was on intimate terms. As a matter of fact, no trace of any Hierotheus resembling the portrait drawn by Dionysius can be found outside the writings of Dionysius. For want of extraneous sources, therefore, we must turn to three important passages in the work "De divinis nominibus", wherein Dionysius speaks of Hierotheus as his teacher and guide, with expressions of deepest veneration, adding that after St. Paul it is to him he is most indebted. One passage in the "D. div. nom." (iii, 2-3), taken in connexion with ii, 9-10, and iv, 15-17, gives the following descriptive details. Hierotheus is a gifted teacher for people of mature and high intelligence; he possesses a sublime knowledge of Divine things, the result, not merely of his natural keenness and zealous study, but, for the most part, of mystical insight and contemplation. Hence his method of teaching is full of profound meaning, terse, and concise. His hearers hardly dare to meet with their gaze the beams of this intellectual sun. The writings of Hierotheus are almost as authoritative as the inspired books of the Bible. Two of his works bear the title (quite foreign to the Apostolic Era) "Outlines of Theology" (*Θεολογικαὶ στοιχειώσεις*) and "Hymns of Love" (*ἑρωτικοὶ ὕμνοι*). An excerpt of twenty-seven lines from the former work, given in Migne, P. G., III, 648, describes the saving and guiding power of the Logos (*Θεότης Ἰησοῦ*), in strong sympathy with the doctrines of Clement of Alexandria and Origen concerning the Logos. As though to "crown" his own disquisitions on love (*ἔρως*), Dionysius appends three brief quotations from the second work of Hierotheus. They treat of the definition of love and of the gradations of the powers of love (*ἔρωτες*) and their reduction to the one supreme principle of love. Neo-Platonic ideas, taken for instance from Proclus (ed. Cousin, 1864; cf. "Instit. theol.", *passim*: "I Alcib.", p. 325; "Theol. Plat.", p. 132) and others, appear throughout and merge with other thoughts developed by Dionysius himself. There is, therefore, a strong presumption that the aforesaid two works did not exist at all, and that their alleged author, Hierotheus, is identical with Dionysius.

A remarkable episode from the life of Hierotheus, which is related in "De div. nom.", iii, 2, shows us Hierotheus, with the Apostles Peter and James and "many blessed brethren," gathered around the sacred body of the Mother of God, on which occasion he, kindled with supernatural inspiration, delivered a discourse whose ecstatic glow filled all with wonder. Dionysius also pretends to have been present at this "viewing of the God-bearing body" (*Θέα Θεοδόχου σώματος*), which is described on the authority of the apocryphal accounts, "De transitu (dormitione) B. V. Marie". There is not the slightest tangible proof as to whether the author of the Dionysian writings borrowed at least a few characteristics from some member of his circle of friends, nor to what extent he did so: it is not worth while going into the manifold unfounded hypotheses as that, for instance, respecting Stephen Bar-Sudaali. (See DIONYSIUS THE PSEUDO-AREOPAGITE.)

Higden (HYDON, HYGDEN, HIKEDEN), RANULF, Benedictine, chronicler; d. 1364. He was a west-country man, and was professed a monk at the Abbey of St. Werburg, Chester, in 1299. Beyond this nothing is recorded of his personal life and he is known only by his great work, the "Polychronicon", a universal history down to his own times. As it was the most complete history available during the fourteenth cen-

tury, it enjoyed great popularity during that and the following age; though even the contemporary portion, in which Higden wrote the history of his own times down to 1342, is of no remarkable value. It was translated into English by John of Trevisa in 1387, and this translation was printed by Caxton in 1482, and by Wynkyn de Worde in 1495. A later translation, made early in the fifteenth century, has been published in the Rolls Series, in nine volumes. The introductions by the editors contain all available information and describe in detail most of the extant manuscripts, of which more than one hundred are known to exist. It was long believed that Higden, in compiling the "Polychronicon", had used an earlier work, the "Polycratia Tempora" of one Roger of Chester, ending in the year 1314, though with a supplement down to 1339, but the editors of the "Polychronicon" have almost conclusively proved that "Roger of Chester" was in reality Ranulf Higden himself, who was commonly quoted simply as "Cestrensis". The error of a scribe in substituting Roger for Ranulf easily gave rise to the mistake. The following are works written by or attributed to Higden, still remaining in manuscript: "Speculum Curatorum", written in 1340 (Balliol); "Ars Componendi Sermones" (Bodleian); "Pædagogicon" (Sion College); "Distinctiones Theologicæ" (Lambeth); "Abbreviationes Chronicorum", attributed to John Rochefort. Other treatises are assigned to Higden by Bale, some, like the "Expositio super Job", "In Cantica Cantecorum", "Sermones per annum", "Determinaciones super Compendio", and "In litteram calendarii", without much probability; others are merely extracts from the "Polychronicon".

Polychronicon Ranulphi Higden monachi Cestrensis, with the English translations of John of Trevisa and of an unknown writer of the fifteenth century in *Rolls Series* (London, 1865-85), vols. I-II, ed. BABINGTON, III-IX, ed. LUMBY; HARDY, *Descriptive Catalogue* (London, 1862-71); GAIRDNER, *Early Chronicles of England* (London, 1879); KINGSFORD in *Dict. Nat. Biog.*, s. v. EDWIN BURTON.

Higgins, JOSEPH. See BALLARAT, DIOCESE OF.

High Altar (ALTARE SUMMUM OF MAJUS) is so called from the fact that it is the chief altar in a church, and also because it is raised on an elevated plane in the sanctuary, where it may be seen simultaneously by all the faithful in the body of the church. It symbolizes Christ, and it serves at the same time as the banquet table on which He offers Himself through the hands of the priest to the Eternal Father; for Christ is present in our churches not only in a spiritual manner but really, truly, and substantially as the victim of a sacrifice. A sacrifice necessarily supposes a priest and an altar, and the Acts of the Apostles (ii, 42) plainly indicate that the faithful are to participate in the prayers of the sacrifice and to partake of the victim. Naturally the altar and priest were separated from the faithful, who, as St. Athanasius (Quæst. ad Antioch., 37) and Clement of Alexandria (Strom., vii, 7) inform us, were instructed by the Apostles to pray, according to the traditions of the Mosaic Law, facing the East. Hence in the early days of the Church the altar was usually placed in a chapel at the head of the edifice, the back of which, whatever may have been the character of the building, looked directly towards the East, in such a way that it could be seen from any part by the faithful. When it was impossible to erect a church in such a manner the altar was located opposite the chief doorway.

In olden times there was but one altar in a church. The Christian Fathers speak of one altar only, and St. Ignatius (Ep. ad Philadelph., 5) refers to this practice when he says: "One altar, as there is one bishop" (*Unum altare omni Ecclesiæ et unus Episcopus*). This altar was erected in the middle of the sanctuary be-

HIGH ALTAR, THE CATHEDRAL, BURGOS

tween the bishop's throne, which stood in the apse, and the communion-rail, which separated the sanctuary from the body of the church. On it Divine services were celebrated by the bishop only, assisted by the clergy, who received Holy Communion from his hands. Although each church had but one altar, there were oratories erected near or around the church in which Mass was celebrated. This custom is still maintained throughout the East, so that the liturgical or high altar of the solemn sacrifice is isolated from what may be called the altars of devotional sacrifice on which Mass is said privately. Later on, in the time of St. Ambrose (fourth century), we find the custom of having more than one altar in a church; and St. Gregory (sixth century) evidently approves of the same by sending to Palladius, Bishop of Saintes, France, relics for four altars which, of the thirteen erected in his church, had remained unconsecrated for want of relics. After the introduction of private Masses the necessity of several or even many altars in each church arose. They were erected near the principal altar or in side chapels. The altar in the sanctuary or high chapel always remained the principal one of the church, and the pontifical services in cathedrals as well as the solemn functions in other churches invariably took place at the chief altar on Sundays, holidays, and other solemn occasions of the year.

When the custom of erecting the episcopal throne on the gospel side of the sanctuary became prevalent, the high altar was removed nearer to the wall of the apse. The object of this was that sufficient space might be allowed between the lowest step of the altar and the communion-rail (six to twelve feet) for the proper carrying out of the ceremonial, and for the accommodation of the clergy who frequently assisted in large numbers at the solemn celebration of Mass and of the Divine Offices. The high altar was erected on steps, which for symbolical reasons were usually of an uneven number—three or five, including the upper platform (*predella*) and the pavement of the sanctuary, thus placing it on a higher level than the body of the church, a practice which is still maintained in our churches. In parish churches the Most Blessed Sacrament is regularly kept on the high altar, which accordingly should have a tabernacle for the reservation of the Sacred Species (S. R. C., 28 Nov., 1594; 21 Aug., 1863). The prescribed ornaments are a crucifix and six high candlesticks. The high altar in a church that is to be consecrated should be a *fixed* altar (see ALTAR, FORM OR), which according to the prescriptions of the Roman Pontifical (h.l.) is itself to be consecrated simultaneously with the solemn dedication of the church edifice. Hence it must stand free on all sides, allowing ample room for the consecrator to move around it. As its name indicates, the high altar, being the chief place for the enactment of the sacrificial function, is to be prominent not only by its position but also by the richness of its material and ornamentation. Apart from the liturgical part of the Mass, it serves as the repository for the Eucharistic Presence and becomes the centre of all the more solemn parochial functions of the year.

Hilarion, SAINT, founder of anchoritic life in Palestine; b. at Tabatha, south of Gaza, Palestine, about 291; d. in the island of Cyprus about 371. The

chief source of information regarding him is the biography written by St. Jerome (P. L., XXIII, 29-54). In the introduction Jerome mentions a letter from St. Epiphanius, Archbishop of Salamis, in regard to the life of Hilarion whom Epiphanius had known personally during the hermit's later years. The letter is not extant. A newly discovered life has been edited by Papadopoulos-Kerameus (*Ἀνάλεκτα Ἱεροσολυμικῆς Σταχυολογίας*, V, 1898). Some special circumstances regarding Hilarion are related by the ecclesiastical historian, Sozomen, from oral traditions handed down by Hilarion's disciples; among others that Sozomen's grandfather and another relative were converted to Christianity by Hilarion (Hist. Ecl., V, xv).

Hilarion was the son of pagan parents. The date of his birth is ascertained from the statement of Jerome (Vita, c. xxv), that Hilarion, at the death of Anthony (356), was 65 years old. As a boy Hilarion's parents sent him to Alexandria to be educated in its schools. Here he became a Christian, and at the age of fifteen, attracted by the renown of the anchorite, St. Anthony, he retired to the desert. After two months of personal intercourse with the great "Father of Anchorites", Hilarion resolved to devote himself to the ascetic life of a hermit. He returned home, divided his fortune among the poor, and then withdrew to a little hut in the desert of Majuma, near Gaza, where he led a life similar to that of St. Anthony. His clothing consisted of a hair shirt, an upper garment of skins, and a short shepherd's cloak; he fasted rigorously, not partaking of his frugal meal until after sunset, and supported himself by weaving baskets. The greater part of his time was devoted to religious exercises. Miraculous cures and exorcisms of demons which he performed spread his fame in the surrounding country, so that in 329 numerous disciples assembled round him. Many heathens were converted, and people came to seek his help and counsel in such great numbers that he could hardly find time to perform his religious duties. This induced him to bid farewell to his disciples and to return to Egypt about the year 360. Here he visited the places where St. Anthony had lived and the spot where he had died. On the journey thither, he met Dracontius and Philor, two bishops banished by the Emperor Constantius. Hilarion then went to dwell at Bruchium, near Alexandria, but hearing that Julian the Apostate had ordered his arrest, he retired to an oasis in the Libyan desert. Later on he journeyed to Sicily and for a long time lived as a hermit near the promontory of Pachinum. His disciple, Hesyehius, who had long sought him, discovered him here and soon Hilarion saw himself again surrounded by disciples desirous of following his holy example.

Leaving Sicily, he went to Epidaurus in Dalmatia, where, on the occasion of a great earthquake (366), he rendered valuable assistance to the inhabitants. Finally he went to Cyprus and there, in a lonely cave in the interior of the island, he spent his last years. It was during his sojourn in Cyprus that he became acquainted with St. Epiphanius, Archbishop of Salamis. Before his death, which took place at the age of eighty, Hilarion bequeathed his only possession, his poor and scanty clothing, to his faithful disciple, Hesyehius. His body was buried near the town of Paphos, but Hesyehius secretly took it away and carried it to Majuma where the saint had lived so long. Hilarion was greatly honoured as the founder of anchoritic life in Palestine. His feast falls on 21 October. The attempts of Israel and of other historians to relegate Hilarion to the realm of imagination have completely failed; there can be no doubt as to the historical fact of his life and the truth of its chief features.

J. P. KIRSCH.

Hilarius of Sexten (in the world, CHRISTIAN GATTEIERER), moral theologian; b. 1839, in the valley of Sexten in the Tyrol; d. 20 October, 1900. After a course of studies at Brixen, he entered the Capuchin Franciscan Order in 1858 and was ordained priest in 1862. Having laboured in parochial duties for some years, he was appointed to teach moral theology at Meran in 1872. His fame as a moral theologian soon spread beyond his own convent, and both secular and regular clergy consulted him in difficult cases, for he had a special gift in applying theoretical principles to actual facts. In 1882 he was appointed examiner of confessors for the Diocese of Trent. Even while fulfilling the office of lector, he was ever ready to work in the ministry, preaching and hearing confessions. He used to urge his students to bend all their efforts to win men to religion, since, he said, devout women can always find confessors. At the special command of the general of the order, he published his "Compendium Theologiæ Moralis" (Meran, 1889). Later, at the repeated request of the clergy, he published a "Tractatus de Sacramentis", and a "Tractatus de Censuris". His somewhat original treatment of his subjects did not gain universal approval, but his works had a wide sale, especially in Germany and Austria. He also contributed many articles to the "Linzer Quartalschrift". He fulfilled many offices in his order, being at different times lector, guardian, definitor, and minister-provincial. In this last office, which he filled 1889-1892, he accepted for his province of the Tyrol a missionary district in India.

Analecta Ord. F. M. Capucc., XVI (Rome, 1900).

FATHER CUTHBERT.

Hilarus, SAINT, POPE, elected 461; the date of his death is given as 28 Feb., 468. After the death of Leo I, an archdeacon named Hilarus, a native of Sardinia, according to the "Liber Pontificalis", was chosen to succeed him, and in all probability received consecration on 19 November, 461. Together with Julius, Bishop of Puteoli, Hilarus acted as legate of Leo I at the "Robber Synod" of Ephesus in 449. There he fought vigorously for the rights of the Roman See and opposed the condemnation of Flavian of Constantinople (see FLAVIAN, SAINT). He was therefore exposed to the violence of Dioscurus of Alexandria (q. v.), and saved himself by flight. In one of his letters to the Empress Pulcheria, found in a collection of the letters of Leo I ("Leonis I Epistole", num. xlvii., in P. L., LIV, 837 sq.), Hilarus apologizes for not delivering to her the pope's letter after the synod; but owing to Dioscurus, who tried to hinder his going either to Rome or to Constantinople, he had great difficulty in making his escape in order to bring to the pontiff the news of the result of the council. His pontificate was marked by the same vigorous policy as that of his great predecessor. Church affairs in Gaul and Spain claimed his special attention. Owing to political disorganization in both countries, it was important to safeguard the hierarchy by strengthening the church government. Hermes, a former archdeacon of Narbonne, had illegally acquired the bishopric of that town. Two Gallican prelates were dispatched to Rome to lay before the pope this and other matters concerning the Church in Gaul. A Roman synod held on 19 November, 462, passed judgment upon these matters, and Hilarus made known the following decisions in an Encyclical sent to the provincial bishops of Vienne,

Lyons, Narbonne, and the Alps: Hermes was to remain Titular Bishop of Narbonne, but his episcopal faculties were withheld. A synod was to be convened yearly by the Bishop of Arles, for those of the provincial bishops who were able to attend; but all important matters were to be submitted to the Apostolic See. No bishop could leave his diocese without a written permission from the metropolitan; in case such permission be withheld he could appeal to the Bishop of Arles. Respecting the parishes (*paracia*) claimed by Leontius of Arles as belonging to his jurisdiction, the Gallican bishops could decide, after an investigation. Church property could not be alienated until a synod had examined into the cause of sale.

Shortly after this the pope found himself involved in another diocesan quarrel. In 463 Mamertus of Vienne had consecrated a Bishop of Die, although this church, by a decree of Leo I, belonged to the metropolitan Diocese of Arles. When Hilarus heard of it he deputed Leontius of Arles to summon a great synod of the bishops of several provinces to investigate the matter. The synod took place and, on the strength of the report given him by Bishop Antonius, he issued an edict dated 25 February, 464, in which Bishop Veranus was commissioned to warn Mamertus that, if in the future he did not refrain from irregular ordinations, his faculties would be withdrawn. Consequently the consecration of the Bishop of Die must be sanctioned by Leontius of Arles. Thus the primatial privileges of the See of Arles were upheld as Leo I had defined them. At the same time the bishops were admonished not to overstep their boundaries, and to assemble in a yearly synod presided over by the Bishop of Arles. The metropolitan rights of the See of Embrun also over the dioceses of the Maritime Alps were protected against the encroachments of a certain Bishop Auxanius, particularly in connexion with the two Churches of Nice and Cimiez.

In Spain, Silvanus, Bishop of Calahorra, had, by his episcopal ordinations, violated the church laws. Both the Metropolitan Ascanius and the bishops of the Province of Tarragona made complaint of this to the pope and asked for his decision. Before an answer came to their petition, the same bishops had recourse to the Holy See for an entirely different matter. Before his death Nundinarius, Bishop of Barcelona, expressed a wish that Irenæus might be chosen his successor, although he had himself made Irenæus bishop of another see. The request was granted, a Synod of Tarragona confirming the nomination of Irenæus, after which the bishops sought the pope's approval. The Roman synod of 19 Nov., 465, took the matters up and settled them. This is the oldest Roman synod whose original records have been handed down to us. It was held in the basilica of Santa Maria Maggiore. After an address of the pope, and the reading of the Spanish letters, the synod decided that the church laws must not be tampered with. In addition to this Hilarus sent a letter to the bishops of Tarragona, declaring that no consecration was valid without the sanction of the Metropolitan Ascanius; and no bishop was permitted to be transferred from one diocese to another, so that some one else must be chosen for Barcelona in place of Irenæus. The bishops consecrated by Silvanus would be recognized if they had been appointed to vacant sees, and otherwise met the requirements of the Church. The "Liber Pontificalis" mentions an Encyclical that Hilarus sent to the East, to confirm the Ecumenical Councils of Nicaea, Ephesus, and Chalcedon, and the dogmatic letter of Leo I to Flavian, but the sources at our disposal furnish us no further information. In Rome Hilarus worked zealously for the integrity of the Faith. The Emperor Anthemius had a favourite named Philotheus, who was a believer in the Macedonian heresy and attended meetings in Rome for the promulgation of this doctrine, 476. On one of the emperor's

visits to St. Peter's, the pope openly called him to account for his favourite's conduct, exhorting him by the grave of St. Peter to promise that he would do all in his power to check the evil. Hilary erected several churches and other buildings in Rome. Two oratories in the baptistery of the Lateran, one in honour of St. John the Baptist, the other of St. John the Apostle, are due to him. After his flight from the "Robber Synod" of Ephesus, Hilary had hidden himself in the crypt of St. John the Apostle, and he attributed his deliverance to the intercession of the Apostle. Over the ancient doors of the oratory this inscription is still to be seen: "To St. John the Evangelist, the liberator of Bishop Hilary, a Servant of Christ". He also erected a chapel of the Holy Cross in the baptistery, a convent, two public baths, and libraries near the church of St. Laurence Outside the Walls. He built another convent within the city walls. The "Liber Pontificalis" mentions many votive offerings made by Hilary in the different churches. He died after a pontificate of six years, three months, and ten days. He was buried in the church of St. Laurence Outside the Walls. His feast day is celebrated on 17 November.

J. P. KIRSCH.

Hilary of Arles, SAINT, archbishop, b. about 401; d. 5 May, 449. The exact place of his birth is not known. All that may be said is that he belonged to a notable family of Northern Gaul, of which in all probability also came St. Honoratus, his predecessor in the See of Arles. Learned and rich, Hilary had everything calculated to ensure success in the world, but he abandoned honours and riches at the urgent solicitations of Honoratus, accompanied him to the hermitage of Lérins, which the latter had founded, and gave himself up under the saint's direction to the practice of austerities and the study of Holy Scripture. When Honoratus, who had meanwhile become Archbishop of Arles, was at the point of death, Hilary went to his side and assisted at his latest moments. But as he was about to set out on his return to Lérins he was retained by force and proclaimed archbishop in the place of Honoratus. Obligated to yield to this constraint, he resolutely undertook the duties of his heavy charge, and assisted at the various councils held at Riez, Orange, Vaison, and Arles.

Subsequently began between him and Pope St. Leo the famous quarrel which constitutes one of the most curious phases of the history of the Gallican Church. A reunion of bishops, over which he presided in 444 and at which were present St. Eucherius of Lyons and St. Germain of Auxerre, deposed for incapacity provided against by the canons a certain Chelidonius. The latter hastened to Rome, was successful in pleading his cause before the pope, and consequently was reinstated in his see. Hilary then sought St. Leo in order to justify his course of action in the matter, but he was not well received by the sovereign pontiff and was obliged to return precipitately to Gaul. Several priests afterwards sent by him to Rome to explain his conduct met with no better success. Moreover, several persons who were hostile towards him profited by this juncture to bring various accusations against him at the Court of Rome, whereupon the pope excommunicated Hilary, transferred the prerogatives of his see to that of Fréjus, and caused the proclamation by the Emperor Valentinian III of that famous decree which freed the Church of Vienne from all dependence on that of Arles. Nevertheless there is every reason to believe that, the storm once passed, peace was rapidly restored between Hilary and Leo.

We are too far removed from the epoch in which this memorable quarrel occurred, and the documents which might throw any light on it are too few to allow us to form a definitive judgment on its causes and consequences. It evidently arose from the fact that the respective rights of the Court of Rome and of the metropolitan were not sufficiently clearly established at that time, and that the right of appeal to the pope, among others, was not explicitly enough recognized. There exist a number of writings which are ascribed to St. Hilary, but they are far from being all authentic. Père Qucsnel collected them all in an appendix to the work in which he has published the writings of St. Leo.

ALBANEZ AND CHEVALIER, *Gallia Christ. noviss.* (Arles, 1900), 29-36; SEVESTRE, *Dict. patr.* (Paris, 1854), II, 192-201; CELLIER, *Hist. des auteurs eccl.* (Paris, 1747), XIII, 523-538; BARONIUS, *Ann.* (1595), 445, 9-18.

LÉON CLUGNET.

Hilary of Poitiers, SAINT, Bishop, b. in that city at the beginning of the fourth century; d. there 1 November, according to the most accredited opinion, or, according to the Roman Breviary, on 13 January, 368. Belonging to a noble and very probably pagan family, he was instructed in all the branches of profane learning, but, having also taken up the study of Holy Scripture and finding there the truth which he sought so ardently, he renounced idolatry and was baptized. Thenceforth his wide learning and his zeal for the Faith attracted such attention that he was chosen about 350 to govern the body of the faithful which the city had possessed since the third century. We know nothing of the bishops who governed this society in the beginning. Hilary is the first concerning whom we have authentic information, and this is due to the important part he played in opposing heresy. The Church was then greatly disturbed by internal discords, the authority of the popes not being so powerful in practice as either to prevent or to stop them. Arianism had made frightful ravages in various regions and threatened to invade Gaul, where it already had numerous partisans more or less secretly affiliated with it. Saturninus, Bishop of Arles, the most active of the latter, being exposed by Hilary, convened and presided over a council at Béziers in 356 with the intention of justifying himself, or rather of establishing his false doctrine. Here the Bishop of Poitiers courageously presented himself to defend orthodoxy, but the council, composed for the most part of Arians, refused to hear him, and being shortly afterwards denounced to the Emperor Constantius, the protector of Arianism, he was at his command transported to the distant coasts of Phrygia.

But persecution could not subdue the valiant champion. Instead of remaining inactive during his exile he gave himself up to study, completed certain of his works which he had begun, and wrote his treatise on the synods. In this work he analysed the professions of faith uttered by the Oriental bishops in the Councils of Ancyra, Antioch, and Sirmium, and while condemning them, since they were in substance Arian, he sought to show that sometimes the difference between the doctrines of certain heretics and orthodox beliefs was rather in the words than in the ideas, which led to his counselling the bishops of the West to be reserved in their condemnation. He was sharply reproached for his indulgence by certain ardent Catholics, the leader of whom was Lucifer, Bishop of Cagliari. However, in 359, the city of Seleucia witnessed the assembly in synod of a large number of Oriental bishops, nearly all of whom were either Anomœans or Semi-Arians. Hilary, whom everyone wished to see and hear, so great was his reputation for learning and virtue, was invited to be present at this assembly. The governor of the province even furnished him with post horses for the journey. In presence of the Greek fathers he set forth the doctrines

of the Gallic bishops, and easily proved that, contrary to the opinion current in the East, these latter were not Sabellians. Then he took part in the violent discussions which took place between the Semi-Arians, who inclined toward reconciliation with the Catholics, and the Anomœans, who formed as it were the extreme left of Arianism.

After the council, which had no result beyond the wider separation of these brothers in enmity, he left for Constantinople, the stronghold of heresy, to continue his battle against error. But while the Semi-Arians, who were less numerous and less powerful, besought him to become the intermediary in a reconciliation between themselves and the bishops of the West, the Anomœans, who had the immense advantage of being upheld by the emperor, besought the latter to send back to his own country this Gallic bishop, who, they said, sowed discord and troubled the Orient. Constantius acceded to their desire, and the exile was thus enabled to set out on his journey home. In 361 Hilary re-entered Poitiers in triumph and resumed possession of his see. He was welcomed with the liveliest joy by his flock and his brothers in the episcopate, and was visited by Martin, his former disciple and subsequently Bishop of Tours. The success he had achieved in his combat against error was rendered more brilliant shortly afterwards by the deposition of Saturninus, the Arian Bishop of Arles by whom he had been persecuted. However, as in Italy the memory still rankled of the efforts he had made to bring about a reconciliation between the nearly converted Semi-Arians and the Catholics, he went in 364 to the Bishop of Vercelli to endeavour to overcome the intolerance of the partisans of the Bishop Lucifer mentioned above. Almost immediately afterwards, that it might be seen that, if he was full of indulgence for those whom gentleness might finally win from error, he was intractable towards those who were obstinate in their adherence to it, he went to Milan, there to assail openly Auxentius, the bishop of that city, who was a firm defender of the Arian doctrines. But the Emperor Valentinian, who protected the heretic, ordered Hilary to depart immediately from Milan.

He then returned to his city of Poitiers, from which he was not again to absent himself and where he was to die. This learned and energetic bishop had fought against error with the pen as well as in words. The best edition of his numerous and remarkable writings is that published by Dom Constant under the title: "Sancti Hilarii, Pictavorum episcopi opera, ad manuscriptorum codicum gallicanos, romanos, belgicos, necnon ad veteres editiones castigata" (Paris, 1693). The Latin Church celebrates his feast on 14 January, and Pius IX raised him to the rank of Doctor of the Universal Church. The Church of Puy glories in the supposed possession of his relics, but according to one tradition his body was borne to the church of St-Denis near Paris, while according to another it was taken from the church of St-Hilaire at Poitiers and burned by the Protestants in 1572.

Hilaire, évêque de Poitiers, docteur et père de l'Église* (Tours and Paris, 1852).

LÉON CLUGNET.

Hilary of Rome. See AMBROSIASER.

Hilda (or HILD), SAINT, Abbess, b. 614; d. 680. Practically speaking, all our knowledge of St. Hilda is derived from the pages of Bede. She was the daughter of Hereric, the nephew of King Edwin of Northumbria, and she seems like her great-uncle to have become a Christian through the preaching of St. Paulinus about the year 627, when she was thirteen years

old. Moved by the example of her sister Hereswith, who, after marrying Ethelhere of East Anglia, became a nun at Chelles in Gaul, Hilda also journeyed to East Anglia, intending to follow her sister abroad. But St. Aidan recalled her to her own country, and after leading a monastic life for a while on the north bank of the Wear and afterwards at Hertlepool, where she ruled a double monastery of monks and nuns with great success, Hilda eventually undertook to set in order a monastery at Streaneshaleh, a place to which the Danes a century or two later gave the name of Whitby. Under the rule of St. Hilda the monastery at Whitby became very famous. The Sacred Scriptures were specially studied there, and no less than five of the inmates became bishops, St. John, Bishop of Hexham, and still more St. Wilfrid, Bishop of York, rendering untold service to the Anglo-Saxon Church at this critical period of the struggle with paganism. Here, in 664, was held the important synod at which King Oswy, convinced by the arguments of St. Wilfrid, decided the observance of Easter and other moot points. St. Hilda herself later on seems to have sided with Theodore against Wilfrid. The fame of St. Hilda's wisdom was so great that from far and near monks and even royal personages came to consult her. Seven years before her death the saint was stricken down with a grievous fever which never left her till she breathed her last, but, in spite of this, she neglected none of her duties to God or to her subjects. She passed away most peacefully after receiving the Holy Viaticum, and the tolling of the monastery bell was heard miraculously at Hackness thirteen miles away, where also a devout nun named Begu saw the soul of St. Hilda borne to heaven by angels. With St. Hilda is intimately connected the story of Caedmon (q. v.), the sacred bard. When he was brought before St. Hilda she admitted him to take monastic vows in her monastery, where he most piously died. The cultus of St. Hilda from an early period is attested by the inclusion of her name in the calendar of St. Willibrord, written at the beginning of the eighth century. It was alleged at a later date that the remains of St. Hilda were translated to Glastonbury by King Edmund (Malmesbury, "Gesta Pont.", 198); but this is only part of the "great Glastonbury myth" (see Stubbs, "Memorials of St. Dunstan", p. cxvi). Another story states that St. Edmund brought her relics to Gloucester. St. Hilda's feast seems to have been kept on 17 November. There are a dozen or more old English churches dedicated to St. Hilda on the north-east coast and South Shields is probably a corruption of St. Hilda.

The editions of BEDE'S *Ecclesiastical History* by PLUMMER (Oxford, 1896) and MAYOR and LUMBY (Cambridge, 1879) contain in the notes nearly all that is known of St. Hilda from other sources. Biog.*; VENABLES in *Dict. Nat. Biog.*

HERBERT THURSTON.

Hildebert of Lavardin, Bishop of Le Mans, Archbishop of Tours, and celebrated medieval poet; b. about 1056, at the Castle of Lavardin near Montoir on the Loire; d. 8 December, 1133 or 1134. Nothing is known of him until the year 1085, when Hoel, Bishop of Le Mans, made him *scholasticus* at his cathedral school. Appointed archdeacon in 1091, he became five years later Bishop of Le Mans. Some of his enemies, among them Duke Elias of Le Mans, in their efforts to prevent his election, did not scruple to blacken his character. The relations between Hildebert and the duke became more friendly later. After the taking of Le Mans by William II of England in 1099, Hildebert was summoned to England by the king who suspected him of aiding the Duke of Le Mans in opposing the English rule. In 1100 he was permitted to return to his see. A year later he went to Rome, having authorized Henry of Lausanne to preach in the

cathedral of Le Mans. Henry made use of this opportunity to spread heretical and revolutionary doctrines so that Hildebert on his return thought it necessary to banish him from the diocese. When new hostilities broke out between England and France in 1111, Hildebert was made prisoner at Nogent and held in custody, until the end of the war in 1113. He was present at the Synod of Reims in 1119, at the First Lateran Council in 1123, and probably also at the Lateran Synod of 1116. He rebuilt the cathedral of Le Mans which was consecrated in 1120. In 1125 he was appointed Archbishop of Tours. In this capacity he strenuously defended the rights of the Church against the encroachments of Louis VI of France, who arrogated to himself the right to appoint an archdeacon and a dean for the Church of Tours. He also came in conflict with Bishop Balderic of Dol concerning the jurisdiction over some Breton dioceses. In October, 1127, he presided at the provincial Synod of Nantes, the decrees of which were ratified by Pope Honorius II on 20 May, 1128, at the request of Hildebert. At this synod legislation was passed against incestuous marriages, the conferring of Holy orders upon sons of ecclesiastics, and the obtaining of ecclesiastical benefices by inheritance (see Mansi, XXI, 351-4). When the schism occurred after the death of Honorius II, Hildebert temporarily adhered to the antipope, Anacletus II. Through the efforts of St. Bernard he was convinced of his error and became a supporter of Innocent II. Hildebert was learned and pious and always had the well-being of the Church at heart. Some writers call him venerable, and St. Bernard styles him a great pillar of the Church, *tanta ecclesie columna* (Mabillon, "S. Bernardi opera omnia", Epistola cxxiv).

Besides being one of the greatest hymnologists of the Middle Ages, Hildebert is the author of numerous works in prose. His writings were edited by the Maurist Beaugendre: "Venerabilis Hildeberti opera tam edita quam inedita", Paris, 1708, and with some additions by Bourassé in Migne, P. L., CLXXI, 1-1453. But both of these editions are uncritical and contain many works that were not written by Hildebert. The following prose works of Hildebert have been proved to be genuine: most of the epistles (P. L., CLXXI, 141-312); the life of Queen Radegundis (ibid., 967-88; and Acta SS., Aug., III, 83-92); the life of St. Hugh of Cluny (P. L., CLIX, 857-94; and Acta SS., April, III, 634-48); the ascetical treatise "De querimonia et conflictu carnis et spiritus" (P. L., CLXXI, 989-1004); and four sermons. Of the poetical works at least the following are genuine: "Versus de mysterio missæ" (P. L., CLXXI, 1177-96); "De operibus sex dierum" (ibid., 1213-18); "Inscriptionum christianarum libellus" (ibid., 1281-88); "Vita Beatæ Mariæ Ægyptiacæ" (ibid., 1321-40); likewise nos. 40, 43, 50-54, 58, 63, 64, 71, 75, 79, 106, 110, 112, 127, 130, 140 of "Carmina miscellanea" (ibid., 1381-1442); and nos. 2, 4, and 14 of "Carmina indifferentia" (ibid., 1442-48); probably also "Historia de Mahomete" (ibid., 1345-66), and numerous other poems and prose writings, the genuineness of which has not yet been sufficiently established.

MICHAEL OTT.

Hildebrand See GREGORY VII, SAINT, POPE.

Hildegard, SAINT, b. at Böckelheim on the Nahe, 1098; d. on the Rupertsberg near Bingen, 1179; feast 17 Sept. The family name is unknown of this great seeress and prophetess, called the Sibyl of the Rhine. The early biographers give the first names of her parents as Hildebert and Mechtildis (or Mathilda), speak of their nobility and riches, but give no particu-

lars of their lives. Later writers call the saint Hildegard of Böckelheim, of Rupertsberg, or of Bingen. Legends would make her a Countess of Spanheim. J. May (Katholik, XXXVII, 143) shows from letters and other documents that she probably belonged to the illustrious family of Stein, whose descendants are the present Princes of Salm. Her father was a soldier in the service of Meginhard, Count of Spanheim. Hildegard was a weak and sickly child, and in consequence received but little education at home. Her parents, though much engaged in worldly pursuits, had a religious disposition and had promised the child to the service of God. At the age of eight she was placed under the care of Jutta, sister of Count Meginhard, who lived as a recluse on the Disenberg (or Disibodenberg, Mount of St. Disibod) in the Diocese of Speyer. Here also Hildegard was given but little instruction, since she was much afflicted with sickness, being frequently scarcely able to walk and often deprived even of the use of her eyes. She was taught to read and sing the Latin psalms, sufficient for the chanting of the Divine Office, but never learned to write. Eventually she was invested with the habit of St. Benedict and made her religious profession. Jutta died in 1136, and Hildegard was appointed superior. Numbers of aspirants

COMB OF ST. HILDEGARD
(VI Century)

flocked to the community and she decided to go to another locality, impelled also, as she says, by a Divine command. She chose Rupertsberg near Bingen on the left bank of the Rhine, about fifteen miles from Disenberg. After overcoming many difficulties and obtaining the permission of the lord of the place, Count Bernard of Hildesheim, she settled in her new home with eighteen sisters in 1147 or 1148 (1149 or 1150 according to Delehaye). Probably in 1165 she founded another convent at Eibingen on the right side of the Rhine, where a community had already been established in 1148, which, however, had no success.

The life of Hildegard as child, religious, and superior was throughout an extraordinary one. Left much to herself on account of her ill health, she led an interior life, trying to make use of everything for her own sanctification. From her earliest years she was favoured with visions. She says of herself: "Up to my fifteenth year I saw much, and related some of the things seen to others, who would inquire with astonishment, whence such things might come. I also wondered and during my sickness I asked one of my nurses whether she also saw similar things. When she answered no, a great fear befell me. Frequently, in my conversation, I would relate future things, which I saw as if present, but, noting the amazement of my listeners, I became more reticent." This condition continued to the end of her life. Jutta had noticed her gifts and made them known to a monk of the neighbouring abbey, but, it seems, nothing was done at the time. When about forty years of age Hildegard received a command to publish to the world what she saw and heard. She hesitated, dreading what people might think or say, though she herself

was fully convinced of the Divine character of the revelations. But, continually urged, rebuked, and threatened by the inner voice, she manifested all to her spiritual director, and through him to the abbot under whose jurisdiction her community was placed. Then a monk was ordered to put in writing whatever she related; some of her nuns also frequently assisted her. The writings were submitted to the bishop (Henry, 1142-53) and clergy of Mainz, who pronounced them as coming from God. The matter was also brought to the notice of Eugene II (1145-53) who was at Trier in 1147. Albero of Chiny, Bishop of Verdun, was commissioned to investigate and made a favourable report. Hildegard continued her writings. Crowds of people flocked to her from the neighbourhood and from all parts of Germany and Gaul, to hear words of wisdom from her lips, and to receive advice and help in corporal and spiritual ailments. These were not only from the common people, but men and women of note in Church and State were drawn by the report of her wisdom and sanctity. Thus we read that Archbishop Heinrich of Mainz, Archbishop Eberhard of Salzburg, and Abbot Ludwig of St. Eucharius at Trier, paid her visits. St. Elizabeth of Schönau was an intimate friend and frequent visitor. Trithemius in his "Chronicle" speaks of a visit of St. Bernard of Clairvaux, but this probably was not correct. Not only at home did she give counsel, but also abroad. Many persons of all stations of life wrote to her and received answers, so that her correspondence is quite extensive. Her great love for the Church and its interests caused her to make many journeys; she visited at intervals the houses of Disenberg and Eibingen; on invitation she came to Ingelheim to see Emperor Frederick; she travelled to Würzburg, Bamberg, and the vicinity of Ulm, Cologne, Werden, Trier, and Metz. It is not true, however, that she saw Paris or the grave of St. Martin at Tours.

In the last year of her life Hildegard had to undergo a very severe trial. In the cemetery adjoining her convent a young man was buried who had once been under excommunication. The ecclesiastical authorities of Mainz demanded that she have the body removed. She did not consider herself bound to obey, since the young man had received the last sacraments and was therefore supposed to have been reconciled to the Church. Sentence of interdict was placed on her convent by the chapter of Mainz, and the sentence was confirmed by the bishop, Christian (V) Buch, then in Italy. After much worry and correspondence she succeeded in having the interdict removed. She died a holy death and was buried in the church of Rupertsberg. Hildegard was greatly venerated in life and after death. Her biographer, Theodoric, calls her saint, and many miracles are said to have been wrought through her intercession. Gregory IX (1227-41) and Innocent IV (1243-54) ordered a process of information which was repeated by Clement V (1305-14) and John XXII (1316-34). No formal canonization has ever taken place, but her name is in the Roman Martyrology and her feast is celebrated in the Dioceses of Speyer, Mainz, Trier, and Limburg, also in the Abbey of Solesmes, where a proper office is said (Brev. Monast. Tornac., 18 Sept.). When the convent on the Rupertsberg was destroyed in 1632 the relics of the saint were brought to Cologne and then to Eibingen. At the secularization of this convent they were placed in the parish church of the place. In 1857 an official recognition was made by the Bishop of Limburg and the relics were placed on an altar specially built. At this occasion the town of Eibingen chose her as patron. On 2 July, 1900, the cornerstone was here laid for a new convent of St. Hildegard. The work was begun and completed through the munificence of Prince Karl of Löwenstein and Benedictine nuns from St. Gabriel's at Prague entered the new home (17 Sept., 1904).

All the manuscripts found in the convent at Eibingen were in 1814 transferred to the state library at Wiesbaden. Of this collection the first and greatest work of St. Hildegard is called "Scivias" (*Scire* or *vias Domini*, or *vias lucis*), parts of which had been shown to the Archbishop of Mainz. She began it in 1141 and worked at it for ten years. It is an extraordinary production and hard to understand, prophetic throughout and admonitory after the manner of Ezechiel and the Apocalypse. In the introduction she speaks of herself and describes the nature of her visions. Then follow three books, the first containing six visions, the second giving seven visions, and about double the size of the first; the third, equal in size to both the others, has thirteen visions. The "Scivias" represents God on His Holy Mountain with mankind at its base; tells of the original condition of man, his fall and redemption, the human soul and its struggles, the Holy Sacrifice of the Mass, the times to come, the son of perdition and the end of the world. The visions are interspersed with salutary admonitions to live in the fear of the Lord. Manuscripts of the "Scivias" are also at Cues and Oxford. It was printed for the first time at Paris (1513) in a book which contains also the writings of several other persons. It was again printed at Cologne in 1628, and reproduced in Migne, P. L., CXCVII. The "Liber vitæ meritum", written between 1158 and 1163, is a picturesque description of a Christian's life of virtue and its opposite. It was printed for the first time in Pitra, "Analecta Sacra", VIII (Monte Cassino, 1882). The "Liber divinum operum" (1163-70) is a contemplation of all nature in the light of faith. Sun, moon, and stars, the planets, the winds, animals, and man, are in her visions expressive of something supernatural and spiritual, and as they come from God should lead back to Him (Migne, loc. cit.). Mansi, in "Baluzii Miscell." (Lucca, 1761), II, 337, gives it from a manuscript lost since then. Her "Letter to the Prelates of Mainz" in regard to the interdict placed upon her convent is placed here among her works by the Wiesbaden manuscript; in others it is bound among her letters. To it the Wiesbaden manuscript annexes nine small essays: on the Creation and fall of man; God's treatment of the renegade; on the priesthood and the Holy Eucharist; on the covenant between Christ and the Church; on the Creation and Redemption; on the duties of secular judges; on the praises of God with intermingled prayers. "Liber Epistolarum et Orationum"; the Wiesbaden manuscript contains letters to and from Eugene III, Anastasius IV, Adrian IV, and Alexander III, King Conrad III, Emperor Frederick, St. Bernard, ten archbishops, nine bishops, forty-nine abbots and provosts of monasteries or chapters, twenty-three abbesses, many priests, teachers, monks, nuns, and religious communities (P. L., loc. cit.). Pitra has many additions. L. Clarus edited them in a German translation (Ratisbon, 1854). "Vita S. Disibodi" and "Vita S. Rupertii": these "Vitæ", which Hildegard claims also to be revelations, were probably made up from local traditions and, especially for St. Rupert, the sources being very meagre, have only legendary value. "Expositio Evangeliorum", fifty homilies in allegory (Pitra, loc. cit.). "Lingua Ignota"; the manuscript, in eleven folios, gives a list of nine hundred words of an unknown language, mostly nouns and only a few adjectives, a Latin, and in a few cases a German, explanation, together with an unknown alphabet of twenty-three letters, printed in Pitra. A collection of seventy hymns and their melodies. A manuscript of this is also at Afflighem, printed in Roth (Wiesbaden, 1880) and in Pitra. Not only in this work, but elsewhere Hildegard exhibits high poetical gifts, transfigured by her intimate persuasion of a Divine mission. "Liber Simplicis Medicinæ" and "Liber Compositæ Medicinæ"; the first was edited in 1533 by

Schott at Strasburg as "Physica S. Hildegardis", Dr. Jessen (1858) found a manuscript of it in the library of Wolfenbüttel. It consists of nine books treating of plants, elements, trees, stones, fishes, birds, quadrupeds, reptiles, metals, printed in Migne as "Subtilitatum Diversarum Naturarum Libri Novem". In 1859 Jessen succeeded in obtaining from Copenhagen a manuscript entitled "Hildegardis Curæ et Causæ", and on examination felt satisfied that it was the second medical work of the saint. It is in five books and treats of the general divisions of created things, of the human body and its ailments, of the causes, symptoms, and treatment of diseases. "38 Solutiones Quæstionum" are answers to questions proposed by the monks of Villars through Guibert of Gembloux on several texts of Scripture (P. L., loc. cit.). "Explanatio Regulæ S. Benedicti", also called a revelation, exhibits the rule as understood and applied in those days by an intelligent and mild superior. "Explanatio Symboli S. Athanasii", an exhortation addressed to her sisters in religion. The "Revelatio Hildegardis de Fratribus Quatuor Ordinum Mendicantium", and the other prophecies against the Mendicants, etc., are forgeries. The "Speculum futurorum temporum" is a free adaptation of texts culled from her writings by Gebeno, prior of Eberbach (Pentachronicon, 1220). Some would impugn the genuineness of all her writings, among others Preger in his "Gesch. der deutschen Mystik", 1874, but without sufficient reason. (See Hauck in "Kirchengesch. Deutschl.", IV, 398 sqq.) Her correspondence is to be read with caution; three letters from popes have been proved spurious by Von Winterfeld in "Neue Archiv", XXVII, 297.

The first biography of St. Hildegard was written by the contemporary monks GOTTFRID and THEODORIC. GUIBERT OF GEMBLoux commenced another.

Acta SS., Sept., V, 679; Anal. Boll., I, 597; II, 119; Allg. deutsche Biog. (Leipzig, 1880); LINDE, Die Handschriften der Kgl. Landesbibliothek in Baden (Wiesbaden, 1884); SCHMELZIS, Leben u. Wirken der hl. Hildegard (Freiburg, 1879); ROTH, Lieder und unbekannte Sprache der hl. Hildegard (1880); KAISER, Die naturwissenschaftliche Schriften der hl. Hildegard (Baden, 1901). For a brief characterization of her importance in the history of medicine, and the natural sciences in medieval Germany, see HERWEGEN in Kirchl. Handlexikon (1908), I, 1970. He adds that a final judgment on the remarkable personality of Hildegard is possible only after a profound study of all her works, a preliminary requisite for which is a new critical edition of them.

FRANCIS MERSHMAN.

Hildesheim, DIOCESE OF (HILDESHEIMENSIS), an exempt see, comprising the Prussian province of Hanover east of the Weser, besides the Duchy of Brunswick. It owed its foundation to Emperor Louis the Pious. His father had originally selected for an episcopal see the village of Elze (Aulica), but we are told by the legend that Louis was influenced by a miracle to choose the present cathedral site. He erected on this spot the first chapel in Germany dedicated to the Mother of God. The precise year in which this see was founded is not known; the date varies according to different accounts from 814 to 822. The first bishop was Gunthar (about 815-834). The surrounding dioceses were, on the north, Verden, on the east, Halberstadt, on the west, Minden and Paderborn, and, on the south, Mainz, of which it was suffragan. Rich donations were made to Hildesheim, some of them by the German kings themselves. Immunities and the prerogatives of independent jurisdiction, together with feudal sovereignty, soon brought it a large measure of prosperity and power. The period covered by the administrations of Bishops St. Bernward (993-1022), St. Godehard (1022-1038), and Hezilo (1054-1079) was one of special lustre. To Bernward's artistic tastes are due the famous bronze doors of the cathedral, the Christus-column, the Bernward cross, also the beautiful church of St. Michael, still preserved, the western crypt of which contains the tomb of Bernward. The Abbey of Gandersheim, renowned as the home of Hroswitha, the famous Latin poetess, was the occasion of a dispute between Hildesheim and Mainz which lasted

VII.—23

many years, but was finally settled in favour of the former. Hildesheim obtained its political independence by the severe feud with Henry the Lion.

In 1221 Bishop Conrad II, one of the strongest personalities in thirteenth-century Germany, was invested with princely authority, and in 1235 his authority as territorial lord was recognized at Mainz. But he found the exercise of his ecclesiastical and territorial sovereignty restricted by the corporate independence of the town of Hildesheim, which endured until the middle of the thirteenth century (earliest municipal constitution, 1249), and of the cathedral chapter; the latter, thanks to the "Great Privilege" of Bishop Adelog, maintained since 1179 a far-reaching right of participation in the government; the year 1216 saw the first "Wahlkapitulation"; while in 1221 all participation in the selection of a bishop was finally taken away from the great officers, or *Ministeriales*, of the see. The close combination of spiritual and temporal authority meant for the bishop countless sources of disorder and of violent conflict with domestic and foreign adversaries, chief among whom were the Guelphs. The victory of Gerhard over Duke Magnus of Brunswick and his ally at Dinklar in 1367 is well known. These incessant wars and agitations paralysed religious growth. Bishop Magnus (1424-52) having determined to restore domestic concord, entered into various treaties with neighbouring principalities and towns for the safeguarding of peace, and took up energetically the reform of internal religious life, which popes and councils had so long advocated. Johannes Busch, Provost of the Augustinians, laboured efficiently for monastic reforms; and about this time the Benedictines of Bursfeld began their reformatory work in the diocese. Cardinal Nicholas of Cusa arrived at Hildesheim in 1451. But the reforms were not lasting. The old troubles of the see, war and internal feuds, broke out anew and with greater violence than before, until at length the once flourishing see fell a victim to what is known as the "great diocesan war" (*grosse Stiftsfehde*). Of its eleven districts, with twenty-seven counties and twenty-one castles, only the three districts of Peine, Steuerwald, and Marienburg, the so-called "small diocese", were left to the See of Hildesheim by the compact of Quedlinburg, in 1523; the "large diocese" fell into the hands of the victorious Guelphs and the once great power of the Bishops of Hildesheim passed away. Internal conflicts prepared the way for the Reformation.

Bishop Valentine strove to strengthen the ancient Faith among his people by calling a diocesan synod in 1539, at which he promulgated a number of decrees; but in vain. In 1542 the city of Hildesheim adopted the new doctrines, and the Protestant Dukes of Brunswick introduced the Reformation into the "large diocese". Catholicism was vigorously defended by the auxiliary bishop, Balthasar, from the pulpit of the cathedral, but the city government had recourse to measures of violence. Amid these disturbances an old man of ninety was erecting in the cathedral one of the handsomest monuments of the early German Renaissance. This was Canon Arnold Fridag, who put up the magnificent lectern (*Lettner*) with its rich pictorial ornament. Meanwhile the see entered on the most critical period of its history, when a Lutheran prince, Duke Friedrich of Holstein, ascended the episcopal throne in 1551. His premature death saved the see from total disaster. Thanks to his truly Catholic successor, Burchard, the ancient Faith and the few remaining properties of the Church were preserved. The cathedral chapter, after his death, resorted to the only expedient available for ensuring the stability of the see and of the Catholic religion therein, by entrusting the small diocese to a powerful ecclesiastical prince. From 1573 to 1761, with but a short interruption, the bishops were chosen from the

ducal House of Bavaria, which, in order more efficiently to combat the spread of Protestantism, kept other sees constantly under its control, among them Cologne itself. They also brought the Jesuits to Hildesheim at an early date.

By this time the Thirty Years War had brought manifold burdens and afflictions on the see. Even the cathedral was for a short time, in 1634, given over to the Lutheran worship by victorious enemies. The see continued to exist, however, though surrounded by Protestant territory. In 1643 the "large diocese", which had been lost in 1523, was regained, though all attempt to win back the population to the Catholic Faith was frustrated by the "Normal Year" article of the Treaty of Westphalia, i. e. what had been Protestant down to 1624 was in the future to remain so. The "large diocese" remained united to Hildesheim until, in 1803, "secularization" severed the prince's crown from the bishop's mitre, and suppressed the Catholic chapter and numerous monasteries and convents. In 1803 the see was given to Prussia as a secular principality. In 1807 it became part of the Kingdom of Westphalia under Jerome Bonaparte, and in 1813 it was incorporated with the Kingdom of Hanover. In 1824 the Bull "Impensa Romanorum Pontificum" gave its present form to this diocese, henceforth deprived of all temporal power, and brought within its jurisdiction all the scattered Catholics of the Kingdom of Hanover east of the Weser. In 1834 the Duchy of Brunswick was added. The new see has an area of about 540 square miles. The true restorer of the see was Bishop Edward Jacob, who by his apostolic zeal and self-sacrifice accomplished great results. He was aided by the personal goodwill of King George V of Hanover, as well as by the general upward movement of the Catholic Faith in Germany. He introduced the Franciscans and the Augustinians into the diocese, also the Sisters of Charity of St. Vincent de Paul, whom he summoned from Paderborn. The present bishop (since 1906) is Dr. Adolf Bertram. The diocese numbers (1908) 201,914 Catholics (without counting soldiers or the inmates of prisons). It is divided into 15 deaneries and contains 109 parishes, 25 *Kuraten*, 174 churches and chapels; the clergy number 233 secular priests, and 4 Augustinian, and 8 Franciscan monks. There are Ursuline nuns at Duderstadt, with 37 professed and 18 lay nuns, besides 8 novices; also Sisters of Charity of St. Vincent de Paul at Hildesheim (mother-house), with 35 establishments, numbering 308 professed nuns and 33 novices.

JOH. MARING.

Hilduin, Abbot of St-Denis, d. 22 November, 840. He was a scion of a prominent Frankish family, but the time and place of his nativity are unknown. He was educated in the school of Alcuin, acquired much erudition, and corresponded with Rabanus Maurus. Hincmar of Reims, his pupil, speaks of him with great respect. In 815 he obtained the Abbey of St-Denis near Paris; to which were added later the Abbeys of St-Germain des Prés, St-Médard in Soissons, and St-Ouen. Emperor Louis the Pious appointed him his archchaplain in 819, or, more probably, not until 822. He accompanied Louis's son, Lothair, on his expedition to Rome in 824, on which occasion the latter took part in the conflict over the election of Eugene II.

Hilduin brought back with him from Rome some relics of St. Sebastian and bestowed them on the Abbey of St-Médard. In the war between Emperor Louis and his sons (830) Hilduin took the side of the latter. Thereby he lost his abbeys and was banished, first to Paderborn and then to the Abbey of Corvey (near Höxter on the Weser). Abbot Warin of that monastery received him kindly, in return for which Hilduin presented him with the relics of St. Vitus, which thereafter were profoundly venerated in Corvey. No later than 831, however, Hilduin regained Louis's favour. He was reinstated in the Abbey of St-Denis, whereupon he successfully undertook a reform of that monastery. A few years later (835) Emperor Louis commissioned him to write a biography of St. Dionysius of Paris, the emperor's particular patron saint. Hilduin executed this commission, with the aid of the pseudo-Dionysius's writings, a copy of which had been sent to the Frankish court by the Byzantine Emperor Michael II, and of other authorities (Galenus, "Areopagitica", Cologne, 1653; P. L., CIV, 1326-28; CVI, 23-50). In his "Vita" Hilduin identified Dionysius of Paris with the Areopagite Dionysius, a view not generally accepted at that time, but which Hilduin's biography popularized for several centuries, until Sismondi and others dispelled this error. Hilduin also helped to complete the Carolingian "Reichsannalen", or imperial annals.

Hill, RICHARD, VENERABLE, English Martyr, executed at Durham, 27 May, 1590. Very little is known of him and his fellow-martyrs, John Hogg and Richard Holiday, except that they were Yorkshiremen who arrived at the English College at Reims, Holiday on 6 September, 1584, Hill on 15 May, 1587, and Hogg on 15 October, 1587; that all three were ordained subdeacons at Soissons, 18 March, 1589, by Monsignor Jerome Hennequin, deacons 27 May and priests 23 September at Laon by Monsignor Valentine Douglas, O. S. B.; that they with their fellow martyr Edmund Duke were sent on the English mission on the following 22 March and were arrested in the north of England soon after landing; that they were arraigned, condemned and executed at Durham under the statute 27 Eliz. c. 2. With them suffered four felons who protested that they died in the same faith.

"Divers beholders, when these martyrs were offered their pardons if they would go to church, said boldly that they would rather die themselves than any of them should relent, one saying (he had seven children) 'I would to God they might all go the same way in making such confession'. When their heads were cut off and holden up, as the manner is, not one would say, 'God save the Queen', except the catch-polls themselves and a minister or two." Two Protestant spectators, Robert Maire and his wife Grace, were converted. The place at which they were executed was called Dryburn, and afterwards a legend sprung up that it was so called because the well out of which the water was drawn to boil their quarters suddenly dried up. The place however had this name before their deaths.

only source of information concerning him is the Talmud, from which the following account of Hillel's career can be gathered. He was born in Babylonia, and was a descendant of the family of David. Although he lived in poor circumstances, his zeal for God's Law prompted him to devote himself to its study while yet in Babylon. Out of the same zeal, he went, at the age of forty it is said, to Jerusalem, where Shemaiah and Abtalion were at the time the leading teachers. In the Holy City he hired himself as a day-labourer to earn his own living and that of his family, and also to meet the expenses of receiving instruction. He thus spent the next forty years of his life, with the result that he understood, we are told, all languages, including those of the inanimate and of the brute creation, and of the demons themselves. Some time after the death of Shemaiah and Abtalion, Hillel was recognized as the best jurist of the day, and was so regarded during the last forty years of his life. He is also represented as the head of the Sanhedrin with the title of *Nasi* (prince), as the founder of a lenient school, in usual opposition to the stricter school of Shammai, as the author of seven hermeneutic rules, as the framer of certain decrees which happily accommodated some points of the Law to the changed circumstances of his age, as the ancestor of the patriarchs who stood at the head of Palestinian Judaism till about the fifth century of our era. Hillel was surnamed "the Great", and also "the Elder", and over his tomb were uttered the words "Oh the gentle! Oh the pious! Oh the disciple of Esdras!" Several anecdotes illustrating his zeal for the Law and his wonderful patience are embodied in the Talmud. Among the sayings ascribed to him, the following are particularly worthy of notice: "Whatever is hateful to thee, do not unto thy fellow man: this is the whole Law; the rest is mere commentary"; "Be of the disciples of Aaron; loving peace and pursuing peace; loving mankind and bringing them near to the Torah." It is certain that a good deal of what is contained in the Talmudic account of Hillel's career is unhistorical; for example, the division of his life into three periods of forty years each; his presidency of the Sanhedrin; his understanding of all languages, etc. When all this has been duly deducted, however, one cannot help feeling that he finds himself in presence of a strong personality, of a character stamped with unusual sweetness and elevation. Again, when all Hillel's good deeds and wise sayings are closely examined, one can readily see that he was in truth simply a rabbi, perhaps the cleverest and best of the rabbis of his day; a Jewish casuist rather than a deep moralist; a man who, for personal character and spiritual insight and permanent influence, cannot in any way compare with, much less equal or surpass, as some have affirmed of late, Christ, the Light, and Saviour of the World. It has been ably argued that the *Pollion* referred to a few times by Josephus is Hillel under a Greek name.

FRANCIS E. GIGOT.

Hilton, WALTER, Augustinian mystic, d. 24 March, 1396. Little is known of his life, save that he was the head of a house of Augustinian Canons at Thurgarton, near Newark, in Nottinghamshire. He was closely in touch with the Carthusians, though not a member of that order. A man of great sanctity, his spiritual writings were widely influential during the fifteenth century in England. The most famous of these is the "Scala Perfectionis", or "Ladder of Perfection", in

two books, first printed by Wynkyn de Worde in 1494. This work may be described as a guide-book for the journey to the spiritual Jerusalem, which is "contemplation in perfect love of God". The soul is reformed to the image and likeness of God, first in faith only, and then in faith and in feeling. Spurred by humility and love, it passes through the mystical dark night, which "is nought else but a forbearing and a withdrawing of the thought and of the soul from earthly things by great desire and yearning for to love and see and feel Jesus and spiritual things". By the gift of love all the vices are destroyed, and the soul at length becomes a perfect lover of Jesus, "fully united to Him with softness of love". His presence is the life of the soul, even as the soul is the life of the body. Purified to know His secret voice, its spiritual eyes are opened to see His workings in all things and to behold His blessed nature. Hilton's mystical system is, in the main, a simplification of that of Richard of St. Victor, and, like Richard, he humbly disclaims any personal experience of the Divine familiarity which he describes, declaring that he has not the grace of contemplation himself "in feeling and in working, as I have it in talking". The book is distinguished by beauty of thought and simplicity of expression; it is illustrated by homely, but effective imagery, and in spite of its high spirituality it is full of practical guidance. "A soul", it concludes "that is pure, stirred up by grace to use this working, may see more of such spiritual matter in an hour than can be writ in a great book." It was translated into Latin, as "Speculum Contemplationis", or "Bacculum Contemplationis", by Thomas Fyrlawe, a Carmelite.

Two other treatises by Hilton were printed in 1506 and 1521, by Pynson and Henry Pepwell, respectively: "To a Devout Man in Temporal Estate", and "The Song of Angels". The former contains spiritual counsel for the guidance of a religious man of wealth and social position in the world, one of those to whom the mixed life, that is both active and contemplative, pertains; it shows how the external works that such a one has to perform may be made acceptable to God, and a means to inflame the desire to Him and to the sight of spiritual things. The latter is more purely mystical, dealing with the Divine visitations and spiritual consolations vouchsafed to a contemplative soul on earth that is in perfect charity and purified by the fire of love. A number of other works, attributed with more or less probability to Hilton, remain still unpublished. A curious tradition, dating from manuscripts of the fifteenth century, attributes to him a treatise both in Latin and in English, entitled "Musica Ecclesiastica", which is identical with the first three books of the "De Imitatione Christi". For this reason, the latter work, now almost universally assigned to Thomas à Kempis, has been frequently ascribed to Hilton. The probable explanation is that the "De Imitatione" reached England anonymously, and when translated into English was naturally attributed to the one mystical writer whose name was universally known throughout the land.

WYNKYN DE WORDE, *The volume of WALTER Hilton namyd in Latin Scala Perfectionis englished the Ladder of Perfection* (London, 1494); *The Scala or Ladder of Perfection written by Walter Hilton*, ed. The last-named volume includes a reprint of the treatises published by PEPWELL, the *Letter to a Devout Man* accompanies all later editions of the *Scala Perfectionis*.

EDMUND G. GARDNER.

Himeria, a titular see in the province of Osroene, suffragan of Edessa. The "Notitia" of Anastasius, in the sixth century, still mentions this see as being in that province and in the Patriarchate of Antioch

("Echos d'Orient", Paris, 1907, 145). Procopius ("De Edificiis", II, 9) says that Justinian rebuilt its walls. At least seven bishops are known from the fourth to the sixth century, the first of whom, Eustathius, was in correspondence with St Basil (Lequien, "Oriens Christ.", II, 983-86). The city, which was destroyed, has not been rediscovered; but it is thought to have been located near the Euphrates and Europos or Djerabis.

S. VAILHÉ.

Himerius (called also **EUMERIUS** and **COMERIUS**), Archbishop of Tarragona in Spain, 385. He is the first archbishop of this province subsequent to St. Fructuosus, who died a martyr, 21 Jan., 259, whose name has come down to us. Nothing is known about the acts of this bishop, not even the beginning or end of his reign. He is not mentioned among those who took an active part in the Priscillian controversy of that time, nor is his name in the list of bishops who assembled (380) at Saragossa in the Province of Tarragona. Because Pope Siricius in his letter uses the phrase *pro antiquitate sacerdotii tui*, it might be inferred that Himerius was bishop long before 385; still the words may refer to his dignity as archbishop. Himerius had sent several questions to Pope Damasus, who died before their arrival. His successor, Siricius, took up the matter, and sent an answer dated 10 Feb., 385.

This answer, which is the first known papal decretal, gives solutions to the questions proposed, and orders Himerius to make known the enactments to the other churches. It forbids the rebaptizing of converts from Arianism and orders that they be received by the simple imposition of the bishop's hand. It forbids the conferring of solemn baptism except at Easter and Pentecost; demands that petition for baptism be made forty days previous to its reception, and that it be preceded by prayers and fasting; but enjoins the duty of giving baptism as quickly as possible to infants and others in danger of death. No one is allowed to marry a woman betrothed to another; apostates, if repentant, are to be subjected to penance for the rest of their lives, but at the hour of death they are to be reconciled. Rules are laid down for the treatment of all penitents, especially of such as had relapsed. It determines the age of thirty-five for those to be ordained priests, requiring the reception of baptism before the age of puberty and the receiving of minor orders. It permits the acolyte and subdeacon to marry once, and then with a virgin, but requires celibacy of the deacon and priest; inflicts severe penalties on the incontinent and condemns to perpetual incarceration monks and nuns unfaithful to their vows. The pope also expresses his earnest wish that monks known for their prudence and sanctity of life be admitted to the clergy.

FRANCIS MERSHMAN.

Hincmar, Archbishop of Reims; b. in 806; d. at Epernay on 21 December, 882. Descended from a distinguished family of the West Franks, he received an excellent education at the Abbey of St-Denis, under the direction of the Abbot Hilduin. When the latter came to the court of the Emperor Louis the Pious in 822 as court chaplain, Hincmar accompanied him thither, and by actual experience became acquainted with the political as well as the ecclesiastical administration of the empire, in all its ramifications. He also followed Hilduin into banishment at Corvey, and returned with him later to St-Denis. Hincmar used his influence with the emperor on behalf of the banished abbot, and not without success: for

he stood in high favour with Louis the Pious, having always been a faithful adherent of his, and his loyal champion through all his vicissitudes. After his return from Corvey, Hincmar resided for a time in St-Denis, where he pursued his studies with great zeal and success, and afterwards at the imperial court, where he was active in political as well as spiritual affairs. In the year 840 King Charles the Bald called Hincmar into his service permanently; and from that time he was the monarch's skilful and efficient counsellor in all matters. A few years later (845) he was raised to the Archiepiscopal See of Reims at the Synod of Beauvais. Ebbo, the occupant of this important see, was deposed at a Synod of Diedenhofen (Thioville) in 835; it is true that he had returned to Reims on the death of Louis the Pious in 840, and had again undertaken the administration of the diocese, performing many ecclesiastical functions; but in May, 841, he was again expelled, and afterwards (844), at the instance of Pope Sergius II, was admitted to lay communion only. Accordingly, on 18 April, 845, Hincmar was chosen as his successor and was consecrated at Reims on 3 May. The Emperor Lothair I, being hostile to Hincmar, induced Pope Sergius II to order a new investigation into the case of Ebbo; however the new archbishop came out of the inquiry triumphantly, and Pope Leo IV conferred the pallium on him.

Henceforward for nearly forty years Hincmar remained at the very centre of government, both ecclesiastical and political, in the West-Frankish Empire; he was a decisive factor in all the more important transactions, and the numerous disputes spoken of in the church history of the Franks in the second half of the ninth century for the most part centre around the person of the Metropolitan of Reims. Although Hincmar was generally recognized as archbishop, owing to his investiture with the pallium by Leo IV, his opponents, especially the Emperor Lothair and his courtiers, still made use of the affair of Ebbo in order to ruin Hincmar. Hincmar looked upon the restoration of Ebbo in 840 as null and void, and on that account even forbade the clergy, who had been ordained by Ebbo at that period, to exercise any spiritual functions. These clerics, however, brought their case before the Synod of Soissons, in 853. Here again the much-vexed question of Ebbo's deposition and Hincmar's consecration was investigated; and the synod declared that the ordinations by Ebbo after his alleged restoration were null; nevertheless, at the request of King Charles, the priests in question were again admitted to communion. Hincmar wished to receive the pope's confirmation of this decision; but Leo IV refused this favour; and it was not until 855 that his successor, Benedict III, confirmed the decree. Nicholas I renewed it in 863, adding the clause: "provided that Hincmar was in no wise disobedient to the mandates of the Apostolic See".

Shortly afterwards, the pope received from various quarters reports of injustice which had been done to the above-mentioned clerics; and Charles the Bald interested himself on behalf of one of them, named Wulfad. At this time Pope Nicholas I wrote to Hincmar and to the other archbishops of France, calling upon them to arrange for a new synod, in order to examine the case once more. Soon afterwards, King Charles conferred the vacant Archiepiscopal See of Bourges upon Wulfad. The new synod was opened at Soissons, 16 August, 866. It was very mild in its treatment of the deposed clerics of Reims, and acting on its advice the pope restored Wulfad and his companions, enjoining them, however, to show deference and obedience to Hincmar. In his letter of 6 December, 866, the pope had spoken his mind pretty forcibly to Hincmar about his woken conduct; the latter replied in a humble letter (867) and informed the pope that he had immediately restored the clerics in ques-

tion. Another matter in which Hincmar took a leading part was the controversy about the teachings of Gottschalk (see GOTTSCHALK OF ORBAIS) concerning predestination. After being condemned at Mainz in 848, Gottschalk was sent to Hincmar, who kept him in custody, under his own eyes at Reims. In 849 a synod took place at Quierzy, at which Gottschalk was once more condemned. Hincmar wrote a treatise on the question of predestination, and at the new Synod of Quierzy, in 853, he laid before the bishops his celebrated four chapters on the doctrine of predestination, which, however, were attacked by Prudentius of Troyes as well as by Remigius of Lyons. The Synod of Valence in 855 also published canons in opposition to Hincmar's views; whereupon the latter wrote his first book, "De Prædestinatione" (857-8), which, however, has not come down to us.

After the great Synod of Savonières near Toul (859), which was also attended by Hincmar, he wrote his second diffuse and prolix work on predestination. His four theses, which he also advocated before the Synod of Toucy in 860, are as follows: (1) God wills the salvation of all men; (2) The will remains free after the fall of man, but must be liberated and sanctified by God's grace; (3) Divine Predestination foreordains that, out of the *massa perditionis*, a few shall be brought to eternal life, out of mercy; (4) Christ died for us all. After the Synod of Toucy, the predestination conflict between Hincmar and the other bishops quieted down. Still another controversy arose out of this dispute; Hincmar disapproved of the phrase *Trina Deitas*, which occurred in a hymn in the office of several martyrs, and forbade these words to be sung in his diocese. Gottschalk attacked him on this account and accused him of Sabellianism. Hincmar answered with his essay, "De una et non trina deitate". Gottschalk did not seek reconciliation with the Church; but it is not clear whether the charge of cruelty which was brought against Hincmar by Pope Nicholas I, referred to his treatment of Gottschalk or not.

On account of the rude assertion of his metropolitan rights, Hincmar got into a quarrel with two of his suffragans, as well as with Pope Nicholas I. The Archbishop of Reims had many reasons for being dissatisfied with his suffragan Rothadius of Soissons; and the latter in return made charges against Hincmar. Rothadius had deposed a priest for grave reasons; whereon Hincmar had reinstated the priest and had his successor excommunicated and imprisoned. The matter came up for discussion at the Synod of Pistres, in the Diocese of Rouen, in 862, and Rothadius was deposed. He appealed to the pope, and at the same time asked his advocates at the synod to defend him. From this Hincmar concluded that the deposed bishop had abandoned his appeal to Rome and the synod (which was continued at Soissons) deposed him again. Thereupon, Nicholas I took energetic action against Hincmar, because he had slighted the appeal to the Holy See, and also because the deposition of a bishop as a *causa major* was a matter which must be brought before the pope himself. When Rothadius at length reached Rome, after having had every imaginable difficulty placed in his way, he was restored to his episcopal office by the pope in 865. Similarly Hincmar quarrelled with his nephew, Hincmar the Younger, Bishop of Laon. The Pseudo-Isidorian decretals play a large part in the letters and essays, which were written in France in connexion with these disputes.

In politics, Hincmar was a strong supporter of Charles the Bald. His zeal for the defence of the rights of the Church and the furtherance of her influence led him persistently to work for a close alliance between the episcopate and the royal power in order thereby to secure the support of the king against the nobles. In the quarrels between Charles the Bald and Lothair, he used all his influence on behalf of the

former. When Louis the German made his victorious march into the West Frankish kingdom in 858, Hincmar boldly opposed Louis, organized and directed the opposition of the bishops and clergy against him, and took a prominent part in the peace negotiations at Coblenz in 860. In this crisis Hincmar saved Charles's crown. When King Lothair II repudiated his wife Theutberga and married Waldrade, Hincmar attacked him in an admirable polemical letter "De divortio Lotharii". After the death of this king in 869 Hincmar took a prominent part in making Charles the Bald the successor of Lothair, and he himself crowned Charles king in Metz, in spite of the objections of Pope Adrian II in favour of Emperor Louis II. Hincmar on this occasion violently opposed the wishes of the pope. Afterwards differences arose between Hincmar and Charles, because the former disapproved of Charles's journey to Rome, and the crowning of Charles the Bald as emperor.

After his coronation in 875 the emperor summoned a great synod at Ponthion, which met in June, 876, and at which the papal Brief was read, appointing Ansegis, Archbishop of Sens, Vicar Apostolic of Gaul and Germany. Hincmar, the recognized chief metropolitan of the West Frankish kingdom, and nearly all the Frankish bishops made an energetic protest against this, and refused to recognize the vicar, so that the latter could not exercise the rights which had been conferred upon him. In defence of his rights as metropolitan, Hincmar wrote his treatise "De jure metropolitanorum". After the death of Charles the Bald, 877, Hincmar still exercised his far-reaching influence under the succeeding Carolingian monarchs of the West Franks. He sought to prevent the decay of the kingdom. At the Synods of Troyes (878) and Fismes (881) he took a prominent part, and endeavoured to strengthen the political and religious life of the empire by several writings. Owing to an invasion of the Northmen in 882, he was obliged to retire to Eprenay, where he died. Though ambitious and stern he was an energetic, learned, and able prelate. His writings (to those already mentioned must be added his "Annales" of the years 861-82) are to be found in Migne, P. L., CXXV-CXXVI.

J. P. KIRSCH.

Hincmar, Bishop of Laon, d. 879. In the beginning of 858 the younger Hincmar, a nephew on the mother's side of the famous Hincmar of Reims, was elevated by his uncle's favour to the See of Laon, a suffragan of Reims. He received in addition an abbey and an office at the Court of Charles the Bald. His ambitious, overbearing, and violent disposition soon brought him into conflict not only with the king, but with his uncle and metropolitan. To free himself from the authority of the latter he invoked the decretals of the Pseudo-Isidore. Charles the Bald took from the younger Hincmar his abbey and his court office, and sequestered the revenues of the diocese, but the latter measure aroused the protest of the elder Hincmar himself. A reconciliation took place at the Diet of Pistres in 869. A new quarrel broke out at the Synod of Verberie and resulted in the imprisonment of Hincmar. He placed his diocese under

interdict, but this was set aside by his uncle. He appealed to Adrian II and laid before that pope severe accusations against his metropolitan and his king, based on a false statement of facts. This appeal, however, was not pursued with vigour. The complete estrangement between the two Hincmars was evident at the Diets of Gondreville and Attigny, in 870. Each of them now appealed to various canons, in order to justify his position. In spite of his renewed appeal to the pope, Hincmar of Laon was deposed at the Synod of Douci, in 871, in punishment of his conduct towards the king and the metropolitan. But Adrian II did not sanction this step, and refrained from appointing a successor. It was only in 875, when Charles the Bald was crowned emperor, that John VIII confirmed the removal of Hincmar, and that Hadenulf was consecrated Bishop of Laon. In the meantime Charles succeeded in preventing Hincmar from going to Rome, and even confined him for a while in prison, where he was deprived of his sight by a brother-in-law of the king.

When, in 878, John VIII presided in person over the Synod of Troyes, the younger Hincmar presented to him in writing a complaint against his uncle of Reims. The pope then mitigated his condition by allowing him to celebrate again the Holy Sacrifice and by granting him a portion of the revenues yielded by the See of Laon. The writings of Hincmar of Laon are in P. L., CXXIV, 101-26, 1027-70.

J. P. KIRSCH.

Hinderer, ROMAN (Chinese Te), a German missionary in China, b. at Reiningen, near Mulhausen, in Alsace, 21 Sept., 1668; d. 24 Aug., 1744, at Shang-ho, in Kiang-nan. On 6 September, 1688 he joined the Society of Jesus and became a member of the German province, whence he went to China in 1707. Here Emperor K'ang-hi invited him by personal request to collaborate in the great map and chart work in which the Jesuits, acting under imperial instructions, were then engaged. He laboured with de Mailla and Régis on the mapping of the provinces of Ho-nan, Kiang-nan, Che-kiang, and Fu-kien (cf. Du Halde, "Description de la Chine", The Hague, 1736, I, pref., xliii; and Richthofen, "China," Berlin, 1877, I, 682). Hinderer, however, was not only a man of science, but also a missionary who for forty years laboured as an apostle and by his zeal and efficiency achieved substantial results. He was twice placed at the head of the mission as visitor. He deserves special recognition for his introduction and ardent fostering among the neophytes of the devotion to the Sacred Heart (cf. Nilles, "De ratione festorum SS. Cordis", 5th ed., I, 323; Letierze, "Etude sur le Sacré Cœur", Paris, 1891, II, 104).

A. HÜNDER.

Hinduism, in its narrower sense, is the conglomeration of religious beliefs and practices existing in India that have grown out of ancient Brahminism, (q. v.), and which stand in sharp contrast to orthodox, traditional Brahminism to-day. Hinduism is the popular, distorted, corrupted side of Brahminism. In its broad sense, it comprises those phases of re-

ligious, social, and intellectual life that are generally recognized in India to-day as the legitimate outgrowth of ancient Brahmin institutions, and hence are tolerated by the Brahmin priests as compatible with Brahmin traditions. Far from being a uniform system of worship, Hinduism, in this large sense, comprises, besides orthodox Brahminism, the numerous sectarian developments of cult in honour of Vishnu, Siva, and their associates, in which for centuries the great mass of the people have found satisfaction for their religious cravings. In Hinduism, as distinguished from the heretical sects of India, it is of minor importance what sort of worship is adopted, provided one recognizes the supremacy of the Brahmins and the sacredness of Brahmin customs and traditions. In the pantheistic all-god Brahma, the whole world of deities, spirits, and other objects of worship is contained, so that Hinduism adapts itself to every form of religion, from the lofty monotheism of the cultivated Brahmin to the degraded nature-worship of the ignorant, half savage peasant. Hinduism, to quote Monier Williams, "has something to offer which is suited to all minds. Its very strength lies in its infinite adaptability to the infinite diversity of human characters and human tendencies. It has its highly spiritual and abstract side suited to the metaphysical philosopher—its practical and concrete side suited to the man of affairs and the man of the world—its esthetic and ceremonial side suited to the man of poetic feeling and imagination—its quiescent and contemplative side suited to the man of peace and lover of seclusion. Nay, it holds out the right hand of brotherhood to nature-worshippers, demon-worshippers, animal-worshippers, tree-worshippers, fetish-worshippers. It does not scruple to permit the most grotesque forms of idolatry, and the most degrading varieties of superstition. And it is to this latter fact that yet another remarkable peculiarity of Hinduism is mainly due—namely, that in no other system in the world is the chasm more vast which separates the religion of the higher, cultured, and thoughtful classes from that of the lower, uncultured, and unthinking masses" (Brahmanism and Hinduism, 1891, p. 11). Hinduism is thus a national, not a world religion. It has never made any serious effort to proselytize in countries outside of India. The occasional visits of Brahmins to countries of Europe and America, and their lectures on religious metaphysics are not to be mistaken for genuine missionary enterprises. Not to speak of its grosser phases, Hinduism, even in its highest form known as Brahminism, could not take root and flourish in countries where the caste system and the intricate network of social and domestic customs it implies do not prevail. Nor has Hinduism exercised any notable influence on European thought and culture. The pessimism of Schopenhauer and his school is indeed very like the pessimism of Buddhism and of the Vedanta system of philosophy, and seems to have been derived from one of these sources. But apart from this unimportant line of modern speculation, and from the abortive theosophic movement of more recent times, one finds no trace of Hindu influence on Western civilization. We have nothing to learn from India that makes for higher culture. On the other hand, India has much of value to learn from Christian civilization.

According to the census of 1901, the total population of India is a little more than 294,000,000 souls, of which 207,000,000 are adherents of Hinduism. The provinces in which they are most numerous are Assam, Bengal, Bombay, Berrar, Madras, Agra, and Oudh, and the Central Provinces. Of foreign religions, Mohammedanism has, by dint of long domination, made the deepest impression on the natives, numbering in India to-day nearly 62,500,000 adherents. Christianity, considering the length of time it has been operative in India, has converted but an

insignificant fraction of the people from Hinduism. The Christians of all sects, foreign officials included, number but 2,664,000, nearly one-half being Catholics.

It was not till towards the end of the eighteenth century that Europeans—excepting Father de Nobili and a few other early missionaries—acquired any knowledge of Sanskrit and allied tongues in which the sacred literature of India was preserved. The extensive commerce which the English developed in Bombay and other parts of India gave occasion to English scholars to make extensive studies in this new field of Oriental research. Sir William Jones was one of the first European scholars to master Sanskrit and to give translations of Sanskrit texts. He translated in 1789 one of Kalidasa's classic dramas, the "Sakuntalā", and in 1794 published a translation of the "Ordinances of Manu". He founded, in 1784, the Royal Asiatic Society, destined to prove a powerful means of diffusing the knowledge of Indian literature and institutions. An able, but less famous, contemporary was the Portuguese missionary, Father Paulinus a Sancto Bartholomeo, to whom belongs the honour of composing the first European grammar of the Sanskrit tongue, published at Rome in 1790. The first important study of Indian literature and rites was made by Henry T. Colebrooke. His "Miscellaneous Essays on the Sacred Writings and Religion of the Hindus", first published in 1805, became a classic in this new field of research. The collection was re-edited in 1873 by Professor E. B. Cowell, and is still a work of great value to the student of Hinduism. Other distinguished scholars of England who contributed to the knowledge of Brahminism and Hinduism were Horace H. Wilson, author of a Sanskrit dictionary and of a translation of the Vishnu Purana (1840) and other Hindu texts; John Muir, author of the great work "Original Sanskrit Texts on the Origin and History of the People of India, their Religions and Institutions" (5 vols., London, 1858-70), and Sir Monier Williams, whose work "Brahmanism and Hinduism, Religious Thought and Life in India" (4th ed., London, 1891), is a masterly exposition of Hinduism. With these may be associated Professor Max Müller, through whose exertions the most important sacred texts of India as well as of other Oriental lands have been made accessible to English readers in the well-known collection, "The Sacred Books of the East". In America Professor William D. Whitney made valuable contributions to the understanding of the Atharva Veda and other Brahmin texts. His labours have been ably supplemented by the studies of Professors C. R. Lanman, M. Bloomfield, and E. W. Hopkins. The contributions of Continental scholars to the knowledge of the literature and religions of India are of the very greatest importance. The distinguished Orientalist Eugène Burnouf, in the midst of his studies on Buddhism and Zoroastrianism, found time to translate in part the "Bhagavata Purana" (Paris, 1840). R. Roth and F. Kuhn made valuable studies on the early Vedic texts, while Chr. Lassen produced his "Indische Alterthumskunde" in four volumes (Bonn, 1844-61), a monument of erudition. A. Weber, among other works in this field, published a "History of Indian Literature" (English translation, London, 1892). Eminent modern Indianists are A. Barth, author of the excellent "Religions of India" (London, 1882), H. Oldenberg, and G. Bühler, whose valuable translations of sacred texts may be found in the "Sacred Books of the East". Among those who have made valuable contributions to the study of Hinduism are a number of Catholic priests. Besides Father Paulinus, already mentioned, are the Abbé Roussel, who was chosen to assist in completing the translation of the voluminous "Bhagavata Purana", begun by Burnouf, and who has besides published interesting studies on Hinduism; the Abbé Dubois,

who published a masterly exposition of Modern Hinduism under the title "Hindu Manners, Customs and Ceremonies" (Oxford, 1897); and Father J. Dahlmann, S.J. Finally, it is but fair to note that considerable excellent work is being done by native Hindu scholars in translating and interpreting sacred Hindu texts. One of the most diligent is Nath Dutt, author of the following works: "The Mahabharata, Translated Literally from the Sanskrit Text", Parts I-XI (Calcutta, 1895-99); "The Bhagavadgita" (Calcutta, 1893); "The Vishnu Purana Translated into English Prose" (Calcutta, 1896). F. E. Pargiter has translated into English the "Markandeya Purana", Fasc. i-vi (Calcutta, 1888-99), and E. P. C. Roy, besides giving an English translation of the Mahabharata (Calcutta, 1883-96), has published the "Sree Krishna" (Calcutta, 1901). M. Battacharya has published an interesting work entitled "Hindu Castes and Sects" (Calcutta, 1896).

CHARLES F. AIKEN.

Hingston, SIR WILLIAM HALES, Canadian physician and surgeon, b. at Hinchinbrook near Huntingdon, Quebec, June 29, 1829; d. at Montreal, 19 February, 1907. His father, a native of Ireland, was lieutenant-colonel in the Royal 100th Regiment (The Dublins) and died when his son was only eighteen months old, leaving the family in debt on an estate granted to him for military service. Young Hingston was brought up in poverty, but his mother succeeded in solving her difficulties so well as to be able to send him to the Sulpician College at Montreal. Although he had carried off a prize in every subject in his first year he had to become a drug clerk in order to earn his living. His pocket-money was spent for lessons in the classics. Then he took up the study of medicine, still continuing his occupation, and graduated at McGill University in 1851. He had nearly £100 saved, so he at once sailed on a small vessel to Edinburgh, then famous for its teaching of surgery. He became a favourite of both Simpson and Syme, and Sir James Y. Simpson wanted to retain him as his assistant. Before his return at the end of two years young Hingston had with the expenditure of a very small amount of money visited every important medical centre in Europe, attracting attention everywhere by his talent and industry.

He soon acquired a large practice in Montreal, to which his self-sacrifice during the cholera epidemic greatly contributed. In 1860 he became surgeon to the Hôtel-Dieu. He was the first surgeon in America to perform a resection of a diseased elbow and several other important operations. In 1882 he became professor of clinical surgery at Victoria University, Montreal. After its union with Victoria, he occupied this chair in Laval University. In 1875 he became Mayor of Montreal and was re-elected by acclamation, but declined a third term. For the wise discharge of his duties he received the thanks of Governor-General Dufferin. He became an acknowledged leader of American surgery and delivered the address on surgery in America before the British Medical Association in 1892. In 1895 he was knighted by Queen Victoria; in 1896 he was called to the Senate of Canada. Pius IX made him a Knight Commander of the Order of St. Gregory the Great, Leo XIII conferred on him the Cross "Pro Ecclesia et Pontifice", and he received honorary degrees

from four universities. In 1885 he published "The Climate of Canada and its Relation to Health".

The Montreal Medical Journal (March, 1907); *The Canadian Messenger* (April, 1907).

JAMES J. WALSH.

Hippo Diarrhytus (or **HIPPO ZARRHYTUS**), a titular see of Northern Africa, now called Bizerta, originally a Tyrian colony. The surname, Diarrhytus, probably came from the canal that traversed the city. It was captured, fortified, and a new harbour opened by Agathocles (310-307 B. C.); later it supported the mercenaries against Carthage, and became a Roman colony in the early days of the Empire. In 1535 of the Christian era it submitted to the protectorate of Spain, but soon cast this off; it was bombarded by the French in 1770, and by the Venetians in 1785. Since its occupation by the French (1882) Bizerta (in Arabic Ben-Zert, a corruption of Hippo Zarrhytus) has been the chief town of an administrative district. Of its 18,000 inhabitants, 2600 are French, and 6000 Italians. Bizerta has important fortifications, possesses a good trade, and its fisheries are famous. The canal is wide enough to allow men-of-war to enter the lake (the Sisara Lacus of the ancients). St. Restituta, a martyr under Diocletian, was born there; her feast is kept on 17 May. St. Augustine often preached at Hippo Diarrhytus in the Florentia, Margarita, and St. Quadratus basilicas. The names of six of its bishops, between 255 and 646, are known; the first of them, Petrus, is, in some documents, styled a martyr.

SMITH, *Dict. of Gr. and Rom. Geog.*, s. v.; GAMS, *Series Episcoporum* (Ratisbon, 1875); TOULOTTE, *Géographie de l'Afrique chrétienne proconsulaire* (Rennes, 1892).

S. PÉTRIDÈS.

Hippo Regius, a titular see of Numidia, now a part of the residential see of Constantine (q. v.). Hippo was a Tyrian colony on the west coast of the bay to which it gave its name (Hipponensis Sinus); the surname Regius was bestowed on it as one of the places where the Numidian kings resided. Later it became a Roman *colonia* and prospered until A. D. 430, when it was taken by the Vandals. The Arabs rebuilt the town in the seventh century. It contains some ancient ruins, a hospital built by the Little Sisters of the Poor, and a fine basilica dedicated to St. Augustine. About two miles distant the Arabs in the eleventh century established the town of Beleb-el-Anab, which the Spaniards occupied for some years in the sixteenth century, as the French did later, in the reign of Louis XIV. France took this town again in 1832. It is now called Bone or Bona, and is one of the government centres for the department of Constantine in Algeria. It has 37,000 inhabitants, of whom 15,700 are French, 10,500 foreigners, mostly Italians, 9,400 Mussulmans, and 1400 naturalized Jews. The situation of the town is very pleasing, the climate agreeable in winter, but humid in summer. Its trade is good, and the harbour serves as an export station for all the rich inland country. We know seven bishops of Hippo, among them Sts. Theogenes and Fidentius, martyrs, St. Leontius Valerius, who ordained St. Augustine, and the great "Doctor of Grace", Augustine himself (395-28 August, 430). Under St. Augustine there were at least three monasteries in the diocese besides the episcopal monastery. Three councils were held at Hippo (393, 395, 426).

SMITH, *Dict. of Greek and Roman Geog.*, s. v.; GAMS, *Series Episcoporum* (Ratisbon, 1873).

S. PÉTRIDÈS.

Hippolytus, SAINTS, MARTYRS.—I. HIPPOLYTUS OF ROME, presbyter and antipope, date of birth unknown; d. about 236. Until the publication in 1851 of the recently discovered "Philosophumena", it was impossible to obtain any definite authentic facts

concerning Hippolytus of Rome and his life from the conflicting statements about him, as follows: (1) Eusebius says that he was bishop of a church somewhere and enumerates several of his writings (*Hist. eccl.*, VI, xx, 22). (2) St. Jerome likewise describes him as the bishop of an unknown see, gives a longer list of his writings, and says of one of his homilies that he delivered it in the presence of Origen, to whom he made direct reference (*De viris illustribus*, cap. lxi). (3) The Chronography of 354, in the list of popes, mentions Bishop Pontianus and the presbyter Hippolytus as being banished to the island of Sardinia in the year 235; the Roman Calendar in the same collection records under 13 August the feast of Hippolytus on the Via Tiburtina and Pontianus in the catacomb of Callistus (ed. Mommsen in "*Mon. Germ. Hist., auctores antiquissimi*", IX, 72, 74). (4) According to the inscription over the grave of Hippolytus composed by Pope Damasus, he was a follower of the Novatian schism while a presbyter, but before his death exhorted his followers to become reconciled with the Catholic Church (Ihm, "*Damasi epigrammata*", Leipzig, 1895, 42, n. 37). (5) Prudentius wrote a hymn on the martyr Hippolytus ("Peristephanon", hymn XI, in P. L., LX, 530 sqq.), in which he places the scene of the martyrdom at Ostia or Porto, and describes Hippolytus as being torn to pieces by wild horses, evidently a reminiscence of the ancient Hippolytus, son of Theseus. (6) Later Greek authors (e. g. Georgius Syncellus, ed. Bonn, 1820, 674 sqq.; Nicphorus Callistus, "*Hist. eccl.*", IV, xxxi) do not give much more information than Eusebius and Jerome; some of them call him Bishop of Rome, others Bishop of Porto. According to Photius (*Bibliotheca*, codex 121), he was a disciple of St. Irenæus. Oriental writers, as well as Pope Gelasius, place the See of Hippolytus at Bostra, the chief city of the Arabs. (7) Several later legends of martyrs speak of Hippolytus in various connexions. That of St. Laurence refers to him as the officer appointed to guard the blessed deacon, who was converted, together with his entire household, and killed by wild horses (*Acta SS.*, August, III, 13-14; Surius, "*De probatis Sanctorum historiis*", IV, Cologne, 1573, 581 sqq.). A legend of Porto identifies him with the martyr Nonnus and gives an account of his martyrdom with others of the same city (*Acta SS.*, August, IV, 506; P. G., X, 545-48). (8) A monument of importance is the large fragment of a marble statue of the saint discovered in 1551 which underwent restoration (the upper part of the body and the head being new), and is now preserved in the Lateran museum; the paschal cycle computed by Hippolytus and a list of his writings are engraved on the sides of the chair on which the figure of Hippolytus is seated; the monument dates from the third century (Kraus, "*Realencyklopädie der christlichen Altertümer*", I, 661 sqq.). (9) The topographies of the graves of the Roman martyrs place the grave of Hippolytus in the cemetery on the Via Tiburtina named after him, mention the basilica erected there, and give some legendary details concerning him. (De Rossi, "*Roma sotterranea*", I, 178-79); the burial vault of the sainted confessor was unearthed by De Rossi (*Bullettino di archeologia cristiana*, 1882, 9-76). The discovery of the "Philosophumena" has now made it possible to clear up the most important period of the life of St. Hippolytus through his own evidence, and at the same time to test and correct the conflicting accounts contained in the old authorities. We proceed on the assumption that Hippolytus was really the author of the aforesaid work, an hypothesis almost universally accepted by investigators to-day.

Hippolytus was a presbyter of the Church of Rome at the beginning of the third century. There is no difficulty in admitting that he could have been a disciple of St. Irenæus either in Rome or Lyons. It is

equally possible that Origen heard a homily by Hippolytus when he went to Rome about the year 212. In the reign of Pope Zephyrinus (198-217) he came into conflict with that pontiff and with the majority of the Church of Rome, primarily on account of the christological opinions which for some time had been causing controversies in Rome. Hippolytus had combated the heresy of Theodotus and the Alogi; in like fashion he opposed the false doctrines of Noetus, of Epigonus, of Cleomenes, and of Sabellius, who emphasized the unity of God too one-sidedly (Monarchians) and saw in the concepts of the Father and the Son merely manifestations (*modi*) of the Divine Nature (Modalism, Sabellianism). Hippolytus, on the contrary, stood uncompromisingly for a real difference between the Son (*Logos*) and the Father, but so as to represent the Former as a Divine Person almost completely separate from God (Ditheism) and at the same time altogether subordinate to the Father (Subordinationism). As the heresy in the doctrine of the Modalists was not at first clearly apparent, Pope Zephyrinus declined to give a decision. For this Hippolytus gravely censured him, representing him as an incompetent man, unworthy to rule the Church of Rome, and as a tool in the hands of the ambitious and intriguing deacon Callistus, whose early life is maliciously depicted (*Philosophumena*, IX, xi-xii). Consequently when Callistus was elected pope (217 or 218) on the death of Zephyrinus, Hippolytus immediately left the communion of the Roman Church and had himself elected antipope by his small band of followers. These he calls the Catholic Church and himself successor to the Apostles, terming the great majority of Roman Christians the School of Callistus. He accuses Callistus of having fallen first into the heresy of Theodotus, then into that of Sabellius; also of having through avarice degraded ecclesiastical, and especially the penitential, discipline to a disgraceful laxity. These reproaches were altogether unjustified. Hippolytus himself advocated an excessive rigorism. He continued in opposition as antipope throughout the reigns of the two immediate successors of Callistus, Urban (222 or 223 to 230) and Pontius (230-35), and during this period, probably during the pontificate of Pontianus, he wrote the "*Philosophumena*". He was banished to the unhealthy island (*insula nociva*) of Sardinia at the same time as Pontianus; and shortly before this, or soon afterward, he became reconciled with the legitimate bishop and the Church of Rome. For, after both exiles had died on the island of Sardinia, their mortal remains were brought back to Rome on the same day, 13 August (either 236 or one of the following years), and solemnly interred, Pontianus in the papal vault in the catacomb of Callistus and Hippolytus in a spot on the Via Tiburtina. Both were equally revered as martyrs by the Roman Church: certain proof that Hippolytus had made his peace with that Church before his death. With his death the schism must have come to a speedy end, which accounts for its identification with the Novatian schism at the end of the fourth century, as we learn from the inscription by Damasus.

The fact that Hippolytus was a schismatic Bishop of Rome and yet was held in high honour afterwards both as martyr and theologian, explains why as early as the fourth century nothing was known as to his see, for he was not on the list of the Roman bishops. The theory championed by Lightfoot (see below), that he was actually Bishop of Porto but with his official residence in Rome, is untenable.

This statement, made by a few authorities, results from a confusion with a martyr of Porto, due perhaps to a legendary account of his martyrdom. Moreover De Rossi's hypothesis, based on the inscription by Damasus, that Hippolytus returned from exile, and subsequently became an adherent of Novatian, his

reconciliation with the Roman Church not being effected until just before his martyrdom under the Emperor Valerian (253-60), is incompatible with the supposition that he is the author of the "*Philosophumena*." The feast of St. Hippolytus is kept on 13 August, a date assigned in accordance with the legend of St. Laurence; that of Hippolytus of Porto is celebrated on 22 August.

Hippolytus was the most important theologian and the most prolific religious writer of the Roman Church in the pre-Constantinian era. Nevertheless the fate of his copious literary remains has been unfortunate. Most of his works have been lost or are known only through scattered fragments, while much has survived only in old translations into Oriental and Slavic languages; other writings are freely interpolated. The fact that the author wrote in Greek made it inevitable that later, when that language was no longer understood in Rome, the Romans lost interest in his writings, while in the East they were read long after and made the author famous. His works deal with several branches of theology, as appears from the aforementioned list on the statue, from Eusebius, St. Jerome, and from Oriental authors. His exegetical treatises were numerous: he wrote commentaries on several books of the Old and New Testaments. Most of these are extant only in fragments. The commentary on the Canticle of Canticles, however, has probably been preserved in its entirety ("*Werke des Hippolytus*", ed. Bonwetsch, 1897, 343 sqq.); likewise the fullest extant commentary on the Book of Daniel in 4 books (*ibid.*, 2 sqq.). Eight of his works, known by their titles, dealt with dogmatic and apologetic subjects, but only one has come down entire in the original Greek. This is the work on Christ and Antichrist ("*De Antichristo*", ed. Achelis, op. cit., I, II, 1 sqq.); fragments of a few others have been preserved. Of his polemics against heretics the most important is the "*Philosophumena*", the original title of which is *κατὰ πασῶν αἰρέσεων ἐλεγχος* (A Refutation of All Heresies). The first book had long been known; books IV to X, which had been discovered a short time previously, were published in 1851. But the first chapters of the fourth and the whole of the second and third books are still missing. The first four books treat of the Hellenic philosophers; books V to IX are taken up with the exposition and refutation of Christian heresies, and the last book contains a recapitulation. The work is one of the most important sources for the history of the heresies which disturbed the early Church. Origen is cited in some manuscripts as the author of the first book. Photius attributes it to the Roman author Caius (q. v.), while by others it has been ascribed also to Tertullian and Novatian. But most modern scholars hold for weighty reasons that Hippolytus is undoubtedly its author. A shorter treatise against heresies (*Syntagma*), and written by Hippolytus at an earlier date, may be restored in outline from later adaptations (*Libellus adversus omnes hæreses*; Epiphanius, "*Panarion*"; Philastrius, "*De hæresibus*"). He wrote a third anti-heretical work which was universal in character, called the "*Small Labyrinth*". Besides these Hippolytus wrote special monographs against Marcion, the Montanists, the Alogi, and Caius. Of these writings only a few fragments are extant. Hippolytus also produced an Easter cycle, as well as a chronicle of the world which was made use of by later chroniclers. And finally St. Jerome mentions a work by him on Church laws. Three treatises on canon law have been preserved under the name of Hippolytus: the "*Constitutiones per Hippolytum*" (which are parallel with the eighth book of the Apostolic Constitutions), the Egyptian Church Ordinance, in Coptic, and the "*Canones Hippolyti*". Of these works the first two are spurious beyond doubt, and the last, the authenticity of which was upheld even by Achelis

(Die *Canones Hippolyti*, Leipzig, 1891), belongs in all probability to the fifth or sixth century.

The works of Hippolytus have been edited by Fabricius, "S. Hippolyti episcopi et mart. opera" (2 vols., Hamburg, 1716-18); by Gallandi in "Bibliotheca veterum patrum", II, 1766; in Migne, P. G., X; by Lagarde (Leipzig and London, 1858); and by Bonwetsch and Achelis, "Hippolytus" I, pts. I and II (Leipzig, 1897), in "Die gr. chr. Schriftsteller", a series published by the Berlin Academy. The "Philosophumena" was edited by Miller, as the work of Origen (Oxford, 1851); by Duncker and Schneidewin as the work of Hippolytus (Göttingen, 1859), and in P. G., XVI. The "Canones Hippolyti" were edited by Haneberg (Munich, 1870); by Achelis, "Die ältesten Quellen des orientalischen Kirchenrechts", I, in "Texte und Untersuchungen", VI (Leipzig, 1891), 4.

II. Besides the presbyter, Hippolytus of Rome, others of the name are mentioned in the old martyrologies and legends of martyrs as having shed their blood for the Faith. Some of these, however, are to be identified with him. In the Acts of St. Laurence we find an officer Hippolytus who, with his nurse Concordia and nineteen others of his household, was put to death for the Faith. The same statement also appears in the Roman Martyrology under the date of 13 August. But this Hippolytus is without doubt identical with the presbyter and martyr who has been connected by legend with St. Laurence, whose grave is situated near the cemetery of Hippolytus.—Hippolytus was also commemorated at a later date in common with St. Cassian, with whom he had no connexion whatsoever. According to the hymn of Prudentius on Cassian (Peristephanon, hymn IX), the latter was a teacher at Imola (Forum Corneli) and was surrendered to the fury of his pupils, who tortured him to death with their iron styles. He is without doubt an historical martyr, who probably suffered in the persecution of Diocletian.—Another Hippolytus is likewise found among a group of martyrs described as "Greek martyrs" (*martyres graeci*), whose burial-place was venerated in the catacomb of Callistus. This Hippolytus is certainly distinct from the Roman presbyter (De Rossi, "Roma sotterranea", III, 201-208). The feast of these saints is celebrated on 2 December.—Furthermore the bishop and martyr Hippolytus of Porto is commemorated on 22 August in the Roman Martyrology. This statement, which occurs even in ancient martyrologies, is connected with the confusion regarding the Roman presbyter, resulting from the Acts of the Martyrs of Porto. It has not been ascertained whether the memory of the latter was localized at Porto merely in connexion with the legend in Prudentius, without further foundation, or whether a person named Hippolytus was really martyred at Porto, and afterwards confounded in legend with Hippolytus of Rome.

J. P. KIRSCH.

Hippus (Ἴππος, HIPPOS) a titular see of Palestina Secunda, suffragan of Scythopolis. It was a town of the Decapolis, 30 stadia from Gadara, and the same distance from Tiberias. The district of Hippina, in which it was situated, touched the boundaries of the districts of these two towns. The Talmud refers to it under the Semitic form *Susitha*, which means a horse, just as the Greek word does. Josephus mentions it (Antiq., XIV, viii; XVII, xiii, etc.) and speaks of it (Bella Jud., II) as one of the eastern frontier towns of Galilee. Eusebius says that it was near Aphec, the modern name of which is Fik. It is also mentioned by Hierocles in the sixth century, and by George of Cyprus in the seventh century. Conquered by the Machabean prince Alexander Jannæus (106-79 B.C.), according to the chronicle of Georgius Syncellus, the town was taken from the Jews by Pompey. Augustus gave it to Herod the Great (Josephus, Antiq., XIV, viii), after whose death it became part of the province of Syria.

In the time of Christ it was a semi-pagan town. At the beginning of the war with Rome the Jews sacked it, and in revenge the inhabitants expelled all Jews. It opened its gates to Vespasian, and prospered under the Roman and Byzantine Emperors. Its coins form a series dating from Nero to Commodus. Greek learning was honoured there, as is testified by an inscription discovered by Clermont-Ganneau (*Études d'archéologie orientale*, I, 142). Lequien (*Oriens Christ.*, III, 709-12) and Gams (*Series Episcoporum*, 454) mention three bishops of Hippos between the fourth and sixth centuries: Peter, present at the Councils of Antioch (358) and of Seleucia (359); Conon, who in 518 subscribed to the synodal letters sent by John of Jerusalem to John of Constantinople concerning Severus of Antioch; Theodore, present at the Council of Jerusalem (536). Eubel (*Hierarchia Catholica*, I, 288) mentions six Latin bishops of Hippos at the end of the fourteenth and beginning of the fifteenth centuries. The most probable opinion identifies Hippos with the modern Kal'at el-Huşn, which realizes all the known topographical data. It is situated on the side of the Wadi-Fik, on one of the eastern hills that run along the lake and the Jordan, opposite Tiberias. Many ruins are found there; one broad central street seems to have been lined with columns, and there are ruins of a pagan temple, a Christian basilica, and broken pieces of columns and capitals. The neighbouring village Susieh seems to retain under an Arabic form the old Semitic name *Susitha*.

S. SALAVILLE.

Hirena, a titular see of southern Tunis. Nothing is known of the city, the name of which may have been Hirina, Hiren, or Iren. Three bishops are known: Tertullian, present at the conference of Carthage in 311; Satorus, exiled in 484 by Huneric with many other bishops; Theodore, who in 641 signed the letter from the Council of Byzantium to Constantine, son of Heraclius, against Monothelitism.

MORCELLI, *Africa christiana*, I (Brescia, 1816), 85.

S. PÉTRIDÈS.

Hirschau, ABBEY OF, a celebrated Benedictine monastery in Würtemberg, Diocese of Spire, about twenty-two miles west of Stuttgart. It was founded in 830 by Erlafried, Count of Calw, at the suggestion of his son, Noting, Bishop of Vercelli, who wished to enrich his native country with the relics of St. Aurelius, an Armenian bishop, and for that purpose brought them from Italy to Calw. They were first placed in the oratory of St. Nazarius at Calw, while the monastery of Hirschau was being built. When it was ready sixteen monks came from Fulda to form the new community, one of them, named Lutpert, being made first abbot. Count Erlafried endowed the monastery with lands and other gifts, and made a solemn donation of the whole into the hands of Lutpert, on condition that the Benedictine Rule should be observed there. The abbey church, dedicated to St. Peter, was not completed until 838, in which year it was consecrated by Othgar, Archbishop of Mainz, who at the same time solemnly translated the body of St. Aurelius from its temporary resting-place to the new church. Abbot Lutpert died in 853, having brought about a substantial increase both in the possessions of the abbey and in the number of the monks under his rule. Regular observance flourished under him and his successors and a successful monastic school was established. In 988 a severe plague devastated the neighbourhood and carried off sixty of the monks including the abbot, Hartfried. Only a dozen were left to elect a successor, and they divided into two parties. The more fervent chose one Conrad, whose election was confirmed by the Bishop of Spire, but some of the others, who favoured a more relaxed rule, elected an opposition abbot in the person of Eberhard, the cellarer. For some time the dispute ran high between the rival superiors and their respective followers. The Count of Calw supported the claims of Eberhard, but neither party would give way to the other and in the end the count brought in an armed force to settle the quarrel. The result was that the abbey was pillaged, the monks dispersed, and the valuable library destroyed. The count became master of the property and the abbey remained empty for over sixty years, during which time the buildings fell into a ruinous state. In 1049 Leo IX, brother (or, as some say, uncle) of Count Adalbert, and grandson of the spoliator, came to Calw, and required Adalbert to restore the abbey. This he did, but so slowly that it was not ready for occupation until 1065, when it was peopled anew by a dozen monks who came from the celebrated Swiss Abbey of Einsiedeln, with Abbot Frederick at their head. It was, however, his successor who revived and even surpassed the former renown and prosperity of the abbey. This was the famous William of Hirschau, a monk of St. Emmeram's at Ratisbon, who was called to the abbacy in 1069. When he came the condition of the monastery was far from satisfactory. The buildings were still incomplete, Count Adalbert still retained possession of some of the monastic property, together with a certain amount of harmful influence over the community, and regular discipline was very much relaxed. Abbot William's zeal and prudence by degrees remedied this evil state of affairs and inaugurated a period of great prosperity, both spiritual and temporal. He secured the independence of the abbey and placed its finances in a satisfactory condition; he completed the buildings already begun and afterwards greatly added to them, as the needs of the increasing community required; and he refounded the monastic school for which the abbey had formerly been famous throughout Germany. But his greatest work, perhaps, and that for which his name is best remembered, was the reformation that he effected within the community itself. Cluny was then at the height of its renown and thither Abbot William sent some of his monks to learn the customs and rule of that celebrated house,

and on their return the Cluniac discipline was introduced at Hirschau.

The abbot then wrote his well-known "Consuetudines Hirsaugienses" (P. L., CL, and Herrgott, "Vetus Disciplina Monastica"), which for several centuries remained the standard of monastic observance. From Hirschau monks were sent out to reform other German monasteries on the same lines, and from it seven new monasteries were founded by Abbot William. The numbers of the community increased to 150 under his rule, manual labour and the copying of manuscripts forming an important part of their occupations. Numerous exemptions and other privileges were obtained from time to time from emperors and popes. In the twelfth century the autocratic rule of Abbot Manegold caused for a time some internal dissensions, loss of fraternal charity, and consequent decline of strict discipline, but the vigorous efforts of several worthy abbots checked the decadence, and temporarily re-established the stricter observance. In the fifteenth century, however, the famous "Customs" had gradually become almost a dead letter, and Wolfram, the thirty-eighth abbot (1428-1460), introduced a reform modelled upon that of the Austrian Abbey of Melk. This lasted only for a few years for, soon after, Hirschau adopted the Constitutions of Bursfeld and was united to that congregation. Abbot Wolfram's successor, Bernhard, carried on the good work, freed the abbey from its debts, restored the monastic buildings, and also reformed several other monasteries. In the days of Abbot John III (1514-56) Hirschau fell on evil times; the Protestant Reformation began to make its influence felt, and after a brief period of struggle, the abbey, through the connivance of Duke Ulrich of Würtemberg, passed into Lutheran hands, though still maintaining its monastic character. In 1630 it became Catholic again for a short time, but after the Peace of Westphalia (1648) it once more came under the control of the Dukes of Würtemberg and another series of Lutheran abbots presided over it. The community eventually came to an end and the once famous Abbey of Hirschau was finally destroyed by the French under Melac in 1692. Only a few ruins now remain to mark its site. The history of Hirschau up to the year 1503 is fully related by Trithemius, the celebrated Abbot of Spanheim, who had access to its archives before they were dispersed. Besides the "Customs" already referred to, William of Hirschau left a treatise "De Musica et Tonis" (printed by Gerbert, "Script. Eccles.," and also by Migne, P. L., CL).

G. CYPRIAN ALSTON.

Hirscher, JOHANN BAPTIST VON, b. 20 January, 1788, at Alt-Ergarten, Ravensburg; d. 4 September, 1865. He studied at Weissenau monastery school, the lyceum of Constance, and the University of Freiburg. Ordained priest in 1810, he was for two years curate at Röhlingen; in 1812 he became a tutor in the theological faculty of Ellwangen; and in 1814 assistant professor of philosophy at the Ellwangen lyceum. In 1817 he was elected to the chair of moral and pastoral theology in Tübingen University, where he remained twenty years. In 1837 he became professor of moral theology and catechetics at the University of Freiburg in the Breisgau, where, for a quarter of a century, he exerted a very great influence. He was made a canon in 1839, and dean of the chapter in 1850; after 1847 he was often sent as delegate of the university to the First Chamber of the Grand Duchy of Baden. His advanced age forced him to cease teaching in the summer of 1863.

Hirscher exerted a great influence in the domain of moral theology, homiletics, and catechetics. His book on Christian morality, published in 1835, ran through five editions. He defined Christian morality as the scientific doctrine of the effective return of man to the Divine filiation, through the merits of Christ. In the earlier editions some of the expressions and opinions of Hirscher, owing to the influence of the day, were deserving of censure; he corrected them by degrees and Kleutgen admits that the last editions are perfectly orthodox. The book marked a reaction against rationalistic morality. Hirscher, always eager to dwell on religious truth, closely traced the moral act to a religious origin and a religious end, and he detested virtue that did not proceed from faith. Though not satisfactory from the point of view of confessors, Hirscher's work, as his apologist Hettinger says, had a salutary effect, and Hettinger himself made use of it to bring an unbeliever to the light of faith.

In homiletics, also, Hirscher's books marked a reaction against the half-rationalistic books of meditation written by the Swiss Zschokke, which were then widely read. Hirscher drew a distinction between false *Aufklärung*, which is purely negative and confined to combating superstition, and true *Aufklärung*, which is based on the Gospel. He published commentaries on the Gospels of Lent (1829), on the Gospels of each Sunday (1837), and on the Epistles of each Sunday. To this field of Hirscher's activity belong his "Geschichte Jesu Christi, des Sohnes Gottes und Weltheilandes" (1839); his "Erörterungen über die grossen religiösen Fragen der Gegenwart" (1846), which led to the development of Hettinger's vocation as an apologist; his "Leben der seligsten Jungfrau und Gottesmutter Maria" (1854); his "Hauptstücke des christlichen Glaubens" (1857).

His work on catechetics, published in 1840, was followed, in 1842, by a catechism, which was introduced into the Diocese of Freiburg and gave rise to lively discussions. To defend his catechism, Hirscher published "Zur Verständigung über den von mir bearbeiteten und demnächst erscheinenden Katechismus der christkatholischen Religion" (1842), and "Nachträge zur Verständigung" (1843). When eighty years of age, he published a brochure entitled "Besorgnisse hinsichtlich der Zweckmässigkeit unseres Religionsunterrichtes" (1863). He regarded the catechism as the history of the Kingdom of God. The first two books treat of God, the Creation, and the Redemption; the next three, of the individualization of the Kingdom of God in souls and of its coming within and without us, that is to say, of justification, sanctification, and the Church; the sixth book treats of the Kingdom of God in the other life. Kleutgen criticized Hirscher for insisting too exclusively on the work of education that God works within us, and neglecting to emphasize the gratuitous creation of the new man by grace. However, such as it was, Hirscher's catechetical work, with Alban Stolz's commentaries on it, helped to advance the teaching of religion in Germany.

Hirscher's ideas on the reform of the Church were more complex and open to suspicion. As a young man he had written a work on the Mass entitled "De genuina missæ notione", in which the idea of the sacrifice was relegated to the background, and which was put on the Index. Later he was blamed for never having formally retracted the book; he answered that at least he had held quite orthodox theories concerning the Mass in his later writings. Nevertheless a number of Catholics were not reassured, and when in 1842 and the following years there was question of appointing Hirscher coadjutor of Freiburg, the historian Hurter and his friend, Baron de Rinck, raised a cry of alarm. The "Schweizerische Kirchenzeitung" and the "Revue Sion" accused Hirscher of being an enemy of Rome and everything

Roman, of dreaming of a German national Church, of opposing celibacy, the Breviary, and ecclesiastical discipline with regard to mixed marriages, of preventing the Freiburg theological review from attacking his benefactor Wessenberg, of being the friend of the Baden Liberals. Hirscher replied in the "Revue Sion" (30 November, 1842), and Schleyer, dean of the University of Freiburg, defended him in his book "Hirscher und seine Ankläger". But Rinck continued to write to the effect that if Hirscher were accepted as bishop there would be a worse schism than that of Ronge, and when the Government of Württemberg wanted to have Hirscher appointed coadjutor to the aged Bishop Keller, Rome refused. These suspicions were confirmed by the pamphlets Hirscher published in 1849, on the social condition of the present day and the Church, "Die socialen Zustände der Gegenwart", and on the present state of religion, "Die kirchlichen Zustände der Gegenwart". These brochures created a profound sensation, for in them Hirscher showed himself hostile to the Catholic Associations' movement, which gave birth to the first general Congress of the German Catholics at Mainz, in 1848; he feared that the movement might lead to imprudent demonstrations by the Catholics. He preferred lay associations to be undenominational, and favoured a synodal organization in which the laity would be represented, and which should be periodically convened by the bishops and presided over by them.

Finally he showed himself opposed to the preaching of missions in villages. Several of the bishops were aroused, and attention was drawn to the opinions in Hirscher's pamphlets that had been condemned already by Pius VI in his Constitution "Auctorem fidei". The canonist Phillips, the future Bishop Fessler, and Fathers Amberger of Ratisbon and Heinrich of Mainz, refuted Hirscher. He was condemned by the Congregation of the Index, and submitted with sincerity, for which Hettinger praises him; but he defended himself against his adversaries in another brochure. In 1854 Hirscher was hostile to the definition of the Immaculate Conception, though he was not opposed to the dogma itself; in 1862 after collaborating with Döllinger in drawing up the programme of the famous congress of Catholic scientists to be held at Munich, the following year, he quietly withdrew, judging that the time was not ripe for such a meeting. In the First Chamber of the Baden Diet Hirscher fought vigorously for the liberties of the Church. In 1848 he proposed a motion that the grand duke should be asked to employ "every means to preserve genuine Christianity, active and living, among all classes of society, especially among the young". In 1850 he asked that the grand duke should attend to the wants of the Church, and that he should grant without delay the establishment of three or four *petits séminaires*, where future clerics should be trained during the time of their gymnasium studies. In November, 1853, he drew up the address by which the chapter of Freiburg allied itself with Archbishop Vicari in his struggle against the bureaucracy of the State, and defended Vicari in his brochure, "Zur Orientirung über den derzeitigen Kirchenstreit" (1854).

Hirscher was an excellent priest whom many of his contemporaries, according to the testimony of Canon Lennig, venerated as a patriarch, and for whom Mgr. Orbin, who died Archbishop of Freiburg, had a real devotion. He aroused some to enthusiasm: the celebrated publicist, Alban Stolz, who did so much towards the Catholic revival in Germany, collaborated with Hirscher, with whom he spent an evening each week, and on one occasion wrote a vehement letter to a bishop who had forbidden his theologians to study at Freiburg, for fear of their falling under the influence of Hirscher: he asserted even that at first he had placed the writings of Hirscher above those of the

Fathers. Hirscher's misfortune was to have known too little of Christian antiquity and especially of the Middle Ages. What he criticized under the name of Scholasticism in his pamphlet of 1823, on the relations of the Gospels with Scholastic theology, were formulæ of a handbook more impregnated with the philosophy of Wolf than with that of St. Thomas. Finally, the sometimes too bitter attacks of which he was the object prevented the diffusion of certain of his ideas which would have been dangerous; but, on the other hand, his zeal as a catechist, his exalted piety, his personal influence, the purity of his intentions, the ardour he displayed in his defence of Vicari, the part he played in the religious awakening in Baden, recognized by the "Historisch-politische Blätter" in 1854, won for Hirscher the gratitude of German Catholics.

GEORGES GOYAU.

History, ECCLESIASTICAL.—I. NATURE AND OFFICE.—Ecclesiastical history is the scientific investigation and the methodical description of the temporal development of the Church considered as an institution founded by Jesus Christ and guided by the Holy Ghost for the salvation of mankind.

In a general way the subject matter of history is everything that suffers change owing to its existence in time and space; more particularly, however, it is the genetical or natural development of facts, events, situations, that history contemplates. The principal subject of history is man, since the external changes in his life affect closely his intellectual interests. Objectively speaking, history is the genetical development of the human mind and of human life itself in its various aspects, as it comes before us in series of facts, whether these pertain to individuals, or to the whole human race, or to any of its various groups. Viewed subjectively, history is the apperception and description of this development, and, in the scientific sense, the comprehension of the same set forth in a methodical and systematic manner. The history of mankind may have as many divisions as human life has aspects or sides. Its noblest form is the history of religion, as it developed in the past among the different groups of the human race. Reason shows that there can be only one true religion, based on the true knowledge and the proper worship of the one God. Thanks to the light of revelation we know that this one true religion is the Christian religion, and, since there are different forms of the Christian religion, that the true religion is in particular the one known as Catholic, concrete and visible in the Catholic Church. The history of Christianity, therefore, or more properly the history of the Catholic Church, is the most important and edifying part of the history of religion. Furthermore, the history of religion is necessarily a history of religious associations, since the specifically human, that is, moral—and therefore religious—life, is necessarily social in character. Every religion, therefore, aims naturally at some form of social organization, Christianity all the more so, since it is the highest and most perfect religion. There are three stages in the formation of religious associations:

(1) The religious associations of pagans, i. e. of those who had or have no clear knowledge of the one true God. Among them every people has its own gods, religion coincides with nationality and lives no independent life, while the religious association is closely

connected or rather wholly bound up with the civil order, and is, like the latter, essentially particularistic.

(2) The religious community of the Jews. Although this also was closely connected with the theocratic government of the Jewish people, and hence particularistic and confined to one nation, it was still the custodian of Divine revelation.

(3) Christianity, which contains the fullness or perfection of Divine revelation, made known to mankind by the Son of God Himself. In it are realized all the prototypes that appear in Judaism. By its very nature it is universal, destined for all men and all ages. It differs profoundly from all other organizations, lives its own independent life, possesses in its fullness all religious truth, and, in opposition to the Jewish religion, recognizes the spirit of love as its highest principle, and penetrates and comprehends the whole spiritual life of man. Its cult is at once the sublimest and purest form of Divine worship. It is in every sense without a peer among human associations. The annals of Christianity in its widest sense are occasionally dated from the creation of man, seeing that a Divine revelation was made to him from the beginning. However, since Christ is the founder of the perfect religion which derives from Him its name, and which He established as a free and independent association and a sublime common possession of the whole human race, the history of Christianity may be more naturally taken to begin with the earthly life of the Son of God. The historian, however, must deal with the ages preceding this momentous period, in so far as they prepared mankind for the coming of Christ, and are a necessary elucidation of those factors which influenced the historical development of Christianity. (See LAW, NATURAL, MORAL, DIVINE; GOD.)

The external historical form of Christianity, viewed as the religious association of all the faithful who believe in Christ, is the Church. As the institution which the Son of God founded for the realization on earth of the Kingdom of God and for the sanctification of man, the Church has a double element, the Divine and the human. The Divine element comprises all the truths of Faith which her Founder entrusted to her—His legislation and the fundamental principles of her organization as an institute destined for the guidance of the faithful, the practice of Divine worship, and the guardianship of all the means by which man receives and sustains his supernatural life (see SACRAMENTS; GRACE). The human element in the Church appears in the manner in which the Divine element manifests itself with the co-operation of the human free will and under the influence of earthly factors. The Divine element is unchangeable, and, strictly speaking, does not fall within the scope of history; the human element on the other hand is subject to change and development, and it is owing to it that the Church has a history. Change appears first of all by reason of the extension of the Church throughout the world since its foundation. During this expansion various influences revealed themselves, partly from within the Church, partly from without, in consequence of which the expansion of Christianity was either hindered or advanced. The inner life of the Christian religion is influenced by various factors: moral earnestness, for example, and a serious realization of the aims of the Church on the part of Christians promote the attainment of her interests; on the other hand, when a worldly spirit and a low standard of morality infect many of her members, the Church's action is gravely impeded. Consequently although the teaching of the Church is in itself, as to its material content, unchangeable considered as supernatural revelation, there is still room for a formal development of our scientific apprehension and explanation of it by means of our natural faculties. The development of the ecclesiastical hierarchy and constitution, of the worship of the Church, of the legislation and

discipline which regulate the relations between the members of the Church and maintain order, offers not a few changes which are a proper subject for historical investigation.

We are now in a position to grasp the scope of ecclesiastical history. It consists in the scientific investigation and methodical treatment of the life of the Church in all its manifestations from the beginning of its existence to our own day among the various divisions of mankind hitherto reached by Christianity. While the Church remains essentially the same despite the changes which she undergoes in time, these changes help to exhibit more fully her internal and external life. As to the latter, ecclesiastical history makes known in detail the local and temporal expansion or restriction of the Church in the various countries, and indicates the factors influencing the same (History of Missions, in the widest sense), also the attitude which individual states or political bodies and other religious associations assume towards her (History of Ecclesiastical Polity, of Heresies and their Refutation, and of the Relations of the Church with Non-Catholic Religious Associations). If we turn to the internal life of the Church, ecclesiastical history treats of the development of ecclesiastical teaching, based on the original supernatural deposit of faith (History of Dogma, of Ecclesiastical Theology, and Ecclesiastical Sciences in general), of the development of ecclesiastical worship in its various forms (History of Liturgy), of the utilization of the arts in the service of the Church, especially in connexion with worship (History of Ecclesiastical Art), of the forms of ecclesiastical government and the exercise of ecclesiastical functions (History of the Hierarchy, of the Constitution and Law of the Church), of the different ways of cultivating the perfect religious life (History of Religious Orders), of the manifestations of religious life and sentiment among the people, and of the disciplinary rules whereby Christian morality is cultivated and preserved and the faithful are sanctified (History of Discipline, Religious Life, Christian Civilization.)

II. METHOD AND CHARACTERISTICS.—The ecclesiastical historian must apply the principles and general rules of the historical method exactly and in their entirety, and must accept at their proper value all facts which have been proved to be certain. The cornerstone of all historical science is the careful establishment of facts. The ecclesiastical historian will accomplish this by a full knowledge and critical treatment of the sources. An objective, reasonable, and unbiased interpretation of the sources, based on the laws of criticism, is the first principle of the true method of ecclesiastical history. Systematic instruction in this field is obtained through the historical sciences usually known as auxiliary or introductory, i. e. palæography, diplomatics, and criticism.

Secondly, in discussing the facts, ecclesiastical history must ascertain and explain the relation of cause and effect in the events. It is not sufficient merely to establish a certain series of events in their objective appearance; the historian is also bound to lay bare their causes and effects. Nor does it suffice to consider only those factors which lie on the surface and are suggested by the events themselves, as it were: the internal, deeper, and real causes must be brought to light. As in the physical world there is no effect without an adequate cause, so too in the spiritual and moral world every phenomenon has its particular cause, and is in turn the cause of other phenomena. In the ethical and religious world the facts are the concrete realization or outcome of definite spiritual ideas and forces, not only in the life of the individual, but also in that of groups and associations. Individuals and groups without exception are members of the one human race created for a sublime destiny beyond this mortal life. Thus, the action of the individual exercises its influence on the development of the whole

human race, and this is true in a special manner of the religious life. Ecclesiastical history must therefore give us an insight into this moral and religious life, and lay clearly before us the development of the ideas active therein, as they appear both in the individual and in the groups of the human race. Moreover, to discover fully the really decisive causes of a given event, the historian must take into account all the forces that concur in producing it. This is particularly true of the free will of man, a consideration of great importance in forming a judgment about ethical phenomena. It follows that the influence of given individuals on the development of the whole body must be properly appreciated. Moreover, the ideas once current in religious, social, and political spheres, and which often survive in the masses of the people, must be justly appreciated, for they help, though as a rule imperceptibly, to determine the voluntary acts of individuals, and thereby to prepare the way for the work of especially prominent persons, and thus make possible the influence of individuals upon the whole race. Scientific church history must therefore take into consideration both the individual and the general factors in its investigation of the genetic connexion of the outward phenomena, at the same time never losing sight of the freedom of man's will. The ecclesiastical historian, moreover, can by no means exclude the possibility of supernatural factors. That God cannot intervene in the course of nature, and that miracles are therefore impossible is an assumption which has not been and cannot be proved, and which makes a correct appreciation of facts in their objective reality impossible. Herein appears the difference between the standpoint of the believing Christian historian, who bears in mind not only the existence of God but also the relations of creatures to Him, and that of the rationalistic and infidel historian, who rejects even the possibility of Divine intervention in the course of natural law.

The same difference of principle appears in the teleological appreciation of the several phenomena and their causal connexion. The believing ecclesiastical historian is not satisfied with establishing the facts and ascertaining the internal relation of cause and effect; he also estimates the value and importance of the events in their relation to the object of the Church, whose sole Christ-given aim is to realize the Divine economy of salvation for the individual as well as for the whole race and its particular groups. This ideal, however, was not pursued with equal intensity at all times. External causes often exercised great influence. In his judgment on such events, the Christian historian keeps in view the fact that the founder of the Church is the Son of God, and that the Church was instituted by Him in order to communicate to the whole human race, with the assistance of the Holy Spirit, its salvation through Christ. It is from this standpoint that the Christian historian estimates all particular events in their relation to the end or purpose of the Church. The unbelieving historian on the other hand, recognizing only natural forces both at the origin and throughout the development of Christianity, and rejecting the possibility of any supernatural intervention is incapable of appreciating the work of the Church in as far as it is the agent of Divine design.

The foregoing considerations enable us also to understand in what sense ecclesiastical history should be pragmatical. The ecclesiastical historian applies first that philosophical pragmatism which traces the genesis of events from a natural standpoint and in the light of the philosophy of history, and tries to discover the ideas which underlie or are embodied in them. But to this must be added theological pragmatism, which takes its stand on supernatural revealed truth, and strives to recognize the agency of God and His providence, and thus to trace (as far as it is possible for the created mind) the eternal purpose of God as it manifests itself in time. The Catholic historian in-

sists on the supernatural character of the Church, its doctrines, institutions, and standards of life, in so far as they rest on Divine revelation, and acknowledge the continual guidance of the Church by the Holy Ghost. All this is for him objective reality, certain truth, and the only foundation for the true, scientific pragmatism of ecclesiastical history. This view does not hinder or weaken, but rather guides and confirms the natural historical understanding of events, as well as their true critical investigation and treatment. It also includes full recognition and use of the scientific historical method. As a matter of fact, the history of the Church exhibits most clearly a special guidance and providence of God.

A final characteristic, which ecclesiastical history has in common with every other species of history, is impartiality. This consists in freedom from every unfounded and personal prejudice against persons or facts, in an honest willingness to acknowledge the truth as conscientious investigation has revealed it, and to describe the facts or events as they were in reality; in the words of Cicero, to assert no falsehood and to hide no truth (*ne quid falsi dicere audeat, ne quid veri dicere non audeat*, "De Oratore", II, ix, 15). It by no means consists in setting aside those supernatural truths we have come to know, or in stripping off all religious convictions. To demand from the ecclesiastical historian an absence of all antecedent views (*Voraussetzungslosigkeit*) is not only entirely unreasonable, but an offence against historical objectivity. It could be maintained only on the hypothesis "*ignoramus et ignorabimus*", that is that the end of scientific investigation is not the discovery of truth, but merely the seeking after truth without ever finding it. Such a hypothesis, however, it is quite impossible to defend, for the assertion of sceptics and rationalists that supernatural truth, or even plain objective truth of any kind, is beyond our reach, is itself an antecedent hypothesis upon which the unbelieving historian bases his investigations. It is therefore only a simulated impartiality, which the rationalistic historian displays when he prescind entirely from religion and the supernatural character of the Church.

III. DIVISION.—The rich and abundant material for scientific investigation that the long life of the Church offers us, has been variously treated by historians. We must first mention the great exhaustive works of a universal nature, in which the entire temporal development of the Church is taken into account (Universal Ecclesiastical History); alongside of these works we find numerous researches on individuals and particular institutions of the Church (Special Ecclesiastical History). These particular expositions treat either of the internal or external life of the Church, as has been explained at length above, and thus lead to a distinction between internal and external history. There are, however, many works which must consider both phases of religious life: to this class belong not only works on church history in general, but also many whose scope is confined to definite spheres (e. g. Histories of the Popes). Special ecclesiastical history falls naturally into three main classes. First we meet with accounts of the lives and activity of individuals (Biographies), who were during their lifetime of special importance for the life of the Church. Moreover special ecclesiastical history treats of particular parts and divisions of the Church in such a manner that either the whole history of a given part is discussed or only selected features of the same. Thus we have historical descriptions of single countries or parts of them, e. g. dioceses, parishes, monasteries, churches. To it also belongs the history of missions, a subject of far-reaching importance. Finally, after a selection of special subjects from the entire mass of material (especially of the internal history of the Church), these are separately investigated and treated. Thus we have the history of the popes, of cardinals, of

councils, collections of the lives and legends of the saints, the history of orders and congregations; also of patrology, dogma, liturgy, worship, the law, constitution, and social institutions of the Church.

IV. UNIVERSAL HISTORY OF THE CHURCH.—The office of universal ecclesiastical history is, as its name implies, to exhibit a well-balanced description of all phases of ecclesiastical life. The investigation and treatment of the various phenomena in the life of the Church furnish the material of which universal church history is built. It must first treat of the one true Church which from the time of the Apostles, by its uninterrupted existence and its unique attributes, has proved itself that Christian association which is alone in full possession of revealed truth: the Catholic Church. It must, moreover, deal with those other religious associations which claim to be the Church of Christ, but in reality originated through separation from the true Church. The Catholic historian does not admit that the various forms of the Christian religion may be taken, roughly speaking, as a connected whole, nor does he consider them one and all as so many imperfect attempts to adapt the teachings and institutions of Christ to the changing needs of the times, nor as progressive steps towards a future higher unity wherein alone we must seek the perfect ideal of Christianity. There is but one Divine revelation given us by Christ, but one ecclesiastical tradition based on it; hence one only Church can be the true one, i. e. the Church in which the aforesaid revelation is found in its entirety, and whose institutions have developed on the basis of this revelation and under the guidance of the Holy Spirit. To assume equality among the various forms of the Christian religions would be equivalent to a denial of the Divine origin and supernatural character of the Church.

While, however, the Catholic Church is the central subject of universal ecclesiastical history, all other forms of the Christian religion must also be considered by it, for they originated by secession from the true Church, and their founders, in so far as each form can be traced back to a founder, were externally members of the Church. Some of these separated bodies still retain among their institutions certain ecclesiastical forms which were in common use at the time of their separation from the Church, wherefore a knowledge of such institutions is of no little use to students of ecclesiastical conditions previous to the separation. This is true in a special manner of the Oriental Christian communities, their liturgy and discipline (see EASTERN CHURCHES). Moreover, such schismatic bodies became, as a rule, the bitterest enemies of the Church; they harassed and persecuted its faithful adherents and endeavoured in every way to induce them also to secede. New doctrinal discussions arose as a result of these secessions, ending usually in fuller and more exact statements of Christian teaching, and new methods had to be adopted to nullify the attacks made by apostates on the Catholic Faith. In this way non-Catholic communities have often indirectly influenced the development of the interior life of the Church and the growth of new institutions.

The vast material which, from these points of view, a universal history of the Church must treat, calls of course for methodical arrangement. Ecclesiastical history has generally been divided into three chief periods, each of which is subdivided into shorter epochs characterized by changes of a less universal nature.

First Period: The foundation of the Church and the development of fixed standards of ecclesiastical life within the limits of Græco-Roman civilization.—In this period the geographical extent of the Church is practically confined to the Mediterranean lands of the Roman empire. Only in a few places, especially in the Orient, did she overstep its boundaries. The uniform and universal Græco-Roman civilization there

prevailing was a propitious soil for the growth of the new ecclesiastical life, which displays three main phases.

(1) The foundation of the Church by the Apostles, those few but all-important years in which the messengers of God's Kingdom, chosen by Christ Himself, laid out the ground-plan for all subsequent development of the Church (Apostolic Epoch).

(2) The expansion and interior formation of the Church amid more or less violent but ever persistent attacks on the part of the Roman government (Epoch of Persecutions). In the different provinces of the Roman Empire, and in the East even beyond its confines, Christian communities sprang into life guided originally by men who had been appointed by the Apostles and who continued their work. Insignificant at first, these communities increased steadily in membership despite the equally steady opposition of the Roman government and its sanguinary attempts at repression. It was then that the ecclesiastical hierarchy, worship, the religious life assumed fixed forms that conditioned all later development.

(3) The third epoch is characterized by a close union between Church and State, by the consequent privileged position of the clergy and the complete conversion of the Roman state (The Christian Empire). Heresies regarding the person of the Incarnate Son of God bring to the front important dogmatical questions. The first great councils belong to this epoch, as well as the rich ecclesiastico-theological literature of Christian antiquity. Meanwhile the ecclesiastical hierarchy and administration are developed more fully, the primacy of Rome standing out conspicuously as in the preceding epoch. Monasticism introduces a new and important factor into the life of the Church. The fine arts place themselves at the service of the Church. In the eastern half of the empire, later known as the Byzantine empire, this development went on quite undisturbed; in the West the barbarian invasion changed radically the political conditions, and imposed on the Church the urgent and important task of converting and educating new Western nations, a task which she executed with great success. This brought a new element into the life of the Church, so important that it marks the beginning of a new period.

Second Period: The Church as mistress and guide of the new Romanic, German, and Slavic states of Europe, the secession of Oriental Christendom from ecclesiastical unity and the final overthrow of the Byzantine empire.—In this period occurred events which for a considerable time greatly affected ecclesiastical life. Three main epochs suggest themselves.

(1) The first centuries of this epoch are characterized by the development of a close union between the papacy and the new Western society and by the falling away of the Orient from the centre of ecclesiastical unity at Rome. The Church carried out the great work of civilizing the barbarian nations of Europe. Her activity was consequently very many-sided, and she gained a far-reaching influence not only on religious, but also on political and social life. In this respect the creation of the Western Empire and its relations with the pope as the head of the Church were characteristic of the position of the medieval Church. A deep decline, it is true, followed this alliance of the popes with the Carolingians. This decline was manifest not only at Rome, the centre of the Church, where the factious Roman aristocracy used the popes as political tools, but also in different parts of the West. Through the intervention of the German emperor the popes resumed their proper position, but at the same time the influence of the secular power on the government of the Church grew dangerous and insupportable. The action of Photius, the Patriarch of Constantinople, led to a rupture with Rome, which was destined to become final.

(2) A second part of this period shows how the Christian West grew into the great fellowship of the peoples under the supreme guidance of a common religious authority. Popular life everywhere reflects this Christian universalism. In the conflict with the secular power, the popes succeeded in carrying through ecclesiastical reforms, and at the same time set afoot in the West the great movement of the Crusades. All public interests centered in the ecclesiastical life. Nobles and commonalty, filled with the spirit of faith, furthered vigorously through powerful associations the aims of the Church. The papacy rose to the zenith of its power, not only in the religious, but also in the temporal domain. New orders, particularly the mendicant, fostered a genuine religious life in every rank of society. The universities became the centres of a notable intellectual activity, devoted for the most part to the development of theology. The building of magnificent churches was undertaken in the cities and was an evidence at once of the religious zeal and the vigorous self-confidence of the inhabitants. This powerful position of the Church and her representatives entailed, nevertheless, many dangers, arising on the one hand from the increasing worldliness of the hierarchy, and on the other from the opposition to an excessive centralization of ecclesiastical government in the papal curia, and the antagonism of princes and nations to the political power of the ecclesiastical superiors, particularly the popes.

(3) In consequence a third epoch of this period is filled with reaction against the evils of the preceding time, and with the evil results of wide-spread worldliness in the Church and the decline of sincerely religious life. It is true that the papacy won a famous victory in its conflict with the German Hohenstaufen, but it soon fell under the influence of the French kings, suffered a grievous loss of authority through the Western Schism and had difficulty at the time of the reform councils (Constance, Pisa, Basle) in stemming a strong anti-papal tide. Furthermore, the civil authority grew more fully conscious of itself, more secular in temper, and frequently hostile to the Church; civil encroachments on the ecclesiastical domain multiplied. In general, the spheres of spiritual and secular authority, the rights of the Church and those of the State, were not definitely outlined until after many conflicts, for the most part detrimental to the Church. The Renaissance introduced a new and secular element into intellectual life; it dethroned from their supremacy the long dominant ecclesiastical studies, disseminated widely pagan and materialistic ideas, and opposed its own methods to those of scholasticism, which had in many ways degenerated. The new heresies took on a more general character. The call for "reform of head and members", so loudly voiced in the councils of those days, seemed to justify the growing opposition to ecclesiastical authority. In the councils themselves a false constitutionalism contended for the supreme administration of the Church with the immemorial papal primacy. So many painful phenomena suggest the presence of great abuses in the religious life of the West. Simultaneously, the Byzantine Empire was completely overthrown by the Turks, Islam gained a strong foothold in south-eastern Europe and threatened the entire Christian West.

Third Period: The collapse of religious unity among the two western nations and the reformation from within of the ecclesiastical life accomplished during the conflict against the latest of the great heresies.—Immense geographical expansion of the Church owing to the zealous activity of her missionaries through whom South America, part of North America and numerous adherents in Asia and Africa, were gained for the Catholic Faith. In this period, also, which reaches to our own time, we rightly discern several shorter epochs during which ecclesiastical life is characterized by peculiar and distinctive traits and phenomena.

(1) The civil life of the various Western peoples was no longer regarded as identified with the life and aims of the Universal Church. Protestantism cut off whole nations, especially in Central and Northern Europe, from ecclesiastical unity and entered on a conflict with the Church which has not yet terminated. On the other hand, the faithful adherents of the Church were more closely united, while the great Ecumenical Council of Trent laid a firm foundation for a thorough reformation in the inner or domestic life of the Church, which was soon realized through the activity of new orders (especially the Jesuits) and through an extraordinary series of great saints. The popes again devoted themselves exclusively to their religious mission and took up the Catholic reforms with great energy. The newly discovered countries of the West, and the changed relations between Europe and the Eastern nations aroused in many missionaries a very active zeal for the conversion of the pagan world. The efforts of these messengers of the Faith were crowned with such success that the Church was in some measure compensated for the defection in Europe.

(2) The subsequent epoch shows again a decline of ecclesiastical influence and religious life. Since the middle of the seventeenth century, there exist three great religious associations: the true Catholic Church; the Greek schismatical church, which found a powerful protector in Russia, together with the smaller schismatical churches of the East; Protestantism, which, however, never constituted a united religious association, but split up constantly into numerous sects, accepted the direct supremacy of the secular power, and was by the latter organized in each land as a national church. The growing absolutism of states and princes was in this way strongly furthered. In Catholic countries also the princes tried to use the Church as an "instrumentum regni", and to weaken as much as possible the influence of the papacy. Public life lost steadily its former salutary contact with a universal and powerful religion. Moreover, a thoroughly infidel philosophy now levelled its attacks against Christian revelation in general. Protestantism rapidly begot a race of unbelievers and shallow free-thinkers who spread on all sides a superficial scepticism. The political issue of so many fatal influences was the French Revolution, which in turn inflicted the severest injuries on ecclesiastical life.

(3) With the nineteenth century appeared the modern constitutional state based on principles of the broadest political liberty. Although in the first decades of the nineteenth century the Church was often hampered in her work by the downfall of the old political system, she nevertheless secured liberty under the new national popular government, fully developed her own religious energies, and in most countries was able to exhibit an upward movement in every sphere of religious life. Great popes guided this advance with a strong hand despite the loss of their secular power. The Ecumenical Council of the Vatican, by defining papal infallibility, supported with firmness ecclesiastical authority against a false subjectivism. The defection of the Old Catholics was relatively unimportant. While Protestantism is the daily prey of infidelity and loses steadily all claim to be considered a religion based on Divine revelation, the Catholic Church appears in its compact unity as the true guardian of the unadulterated deposit of faith, which its Divine Founder originally entrusted to it. The conflict is ever more active between the Church, as the champion of supernatural revelation, and infidelity, which aims at supremacy in public life, politics, the sciences, literature, and art. The non-European countries begin to play an important role in the world, and point to new fields of ecclesiastical activity. The Catholic faithful have increased so rapidly during the last century, and the importance of several non-European countries on ecclesiastical life has taken on such proportions, that

the universal history of the Church is becoming more and more a religious history of the world.

The great turning-points in the historical development of the Church do not appear suddenly or without due cause. As a rule divers important events occurring within the shorter epochs bring about eventually a change of universal import for the life of the Church, and compel us to recognize the arrival of a new period. Naturally, between these prominent turning-points there are shorter or longer intervals of transition, so that the exact limits of the chief periods are variously set down by different ecclesiastical historians, according to the importance which they severally attach to one or the other of the aforesaid momentous events or situations. The division between the first and second periods has its justification in the fact that, owing to the downfall of the Western Roman Empire and to the relations between the Church and the new Western nations, essentially new forms of life were called into being, while in the East Byzantine culture had become firmly established. The turning-point between the old and the new state of things did not, however, immediately follow the conversion of the Teutonic tribes; a considerable time elapsed before Western life was moving easily in all its new forms. Some (Neander, Jacobi, Baur, etc.) consider the pontificate of Gregory the Great in 590, or (Moeller, Müller), more generally, the end of the sixth and the middle of the seventh century as the close of the first period; others (Döllinger, Kurtz) take the Sixth General Council in 680, or (Alzog, Hergenröther, von Funk, Knöpfler) the Trullan synod of 692, or the end of the seventh century; others again close the first period with St. Boniface (Ritter, Niedner), or with the Iconoclasts (Gieseler, Moehler), or with Charlemagne (Hefele, Hase, Weingarten). For the West Kraus regards the beginning of the seventh century as the close of the first period; for the East, the end of the same century. Speaking generally, however, it seems more reasonable to accept the end of the seventh century as the close of the first period. Similarly, along the line of division between the second and the third periods are crowded events of great importance to ecclesiastical life: the Renaissance with its influence upon all intellectual life, the conquest of Constantinople by the Turks, the discovery of America and the new problems which the Church had to solve in consequence, the appearance of Luther and the heresy of Protestantism, the Council of Trent with its decisive influence on the evolution of the interior life of the Church. Protestant historians regard the appearance of Luther as the beginning of the third period. A few Catholic authors (e. g. Kraus) close the second period with the middle of the fifteenth century; it is to be noted, however, that the new historical factors in the life of the Church which condition the third period become prominent only after the Council of Trent, itself an important result of Protestantism. It seems, therefore, advisable to regard the beginning of the sixteenth century as the commencement of the third period.

Nor do authors perfectly agree on the turning-points which are to be inserted within the chief periods. It is true that the conversion of Constantine the Great affected the life of the Church so profoundly that the reign of this first Christian emperor is generally accepted as marking a sub-division in the first period. In the second period, especially prominent personalities usually mark the limits of the several sub-divisions, e. g. Charlemagne, Gregory VII, Boniface VIII, though this leads to the undervaluation of other important factors e. g. the Greek Schism, the Crusades. Recent writers, therefore, assume other boundary lines which emphasize the forces active in the life of the Church rather than prominent personalities. In subdividing the third period the same difficulty presents itself. Many historians consider the French Revolution at the end of the eighteenth century as an event

of sufficient importance to demand a new epoch; others, more reasonably perhaps, see a distinct epochal line in the Treaty of Westphalia (1648), with which the formation of great Protestant territories came to an end. From the above considerations we deduce the following chronological arrangement of general ecclesiastical history:

First Period: Origin and Development of the Church in the ancient Græco-Roman world (from the birth of Christ to the close of the seventh century). (a) First Epoch: Foundation, expansion and formation of the Church despite the oppression of the pagan-Roman state (from Christ to the Edict of Milan, 313). (b) Second Epoch: The Church in close connexion with the Christian-Roman Empire (from the Edict of Milan to the Trullan Synod, 692).

Second Period: The Church as the guide of the Western nations (from the close of the seventh century to the beginning of the sixteenth). (a) First Epoch: The popes in alliance with the Carolingians, decadence of religious life in the West, isolation of the Byzantine Church and its final rupture with Rome (Trullan Synod to Leo IX, 1054). (b) Second Epoch: Interior reformation of ecclesiastical life through the popes, the Crusades, flourishing of the religious life and sciences, acme of the ecclesiastical and political power of the papacy (from 1054 to Boniface VIII, 1303). (c) Third Epoch: Decline of the ecclesiastical and political power of the papacy; decay of religious life and outcry for reforms (from 1303 to Leo X, 1521).

Third Period: The Church after the collapse of the religious unity in the West, struggle against heresy and infidelity, expansion in non-European countries (from beginning of sixteenth century to our own age). (a) First Epoch: Origin and expansion of Protestantism; conflict with that heresy and reformation of ecclesiastical life (from 1521 to Treaty of Westphalia, 1648). (b) Second Epoch: Oppression of the Church by state-absolutism, weakening of religious life through the influence of a false intellectual emancipation (from 1648 to the French Revolution, 1789). (c) Third Epoch: Oppression of the Church by the Revolution; renewal of ecclesiastical life struggling against infidelity; progress of missionary activity (from 1789).

As regards the methodical treatment of the subject-matter within the principal divisions, most writers endeavour to treat the main phases of the internal and external history of the Church in such a manner as to secure a logical arrangement throughout each period. Deviations from this method are only exceptional, as when Darraz treats each pontificate separately. This latter method is, however, somewhat too mechanical and superficial, and in the case of lengthy periods it becomes difficult to retain a clear grasp of the facts and to appreciate their interconnexion. Recent writers, therefore, aim at such a division of the matter within the different periods as will lay more stress on the important forms and expressions of ecclesiastical life (Moeller, Muller, Kirsch in his revision of Hergenröther). The larger periods are divided into a number of shorter epochs, in each of which the most important event or situation in the history of the Church stands out with distinctness, other phases of ecclesiastical life—including the ecclesiastical history of the individual countries—being treated in connexion with this central subject. The subject-matter of each period thus receives a treatment at once chronological and logical, and most in keeping with the historical development of the events portrayed. The narrative gains in lucidity and artistic finish, within the shorter periods the historical material is more easily grasped, while the active forces in all great movements appear in bolder relief. It is true that this method involves a certain inequality in the treatment of the various phases of ecclesiastical life, but the same inequality already existed in the historical situation described.

V. SOURCES OF ECCLESIASTICAL HISTORY.—Histori-

cal sources are those human products which were either originally intended, or which—on account of their existence, origin, and other conditions—are pre-eminently fitted, to furnish knowledge and evidence of historical facts. The sources of ecclesiastical history are therefore whatever things, either because of their object or of other circumstances, can throw light on the facts that make up the ecclesiastical life of the past. These sources fall naturally into two classes: (A) Remains (*reliquiæ*, *Ueberreste*) or immediate sources, i. e. such as prove a fact directly, being themselves part or remnant of the fact. To this class belong remains in the narrower sense of the word, e. g. liturgical customs, ecclesiastical institutions, acts of the popes and councils, art-products etc.; also monuments set up to commemorate events, e. g. inscriptions. (B) Tradition or mediate sources, i. e. such as rest upon the statements of witnesses who communicate an event to others. Tradition may be oral (narrative and legends), written (writings of particular authors), or pictorial (pictures, statues). The critical treatment of the two kinds of sources differs. It is usually sufficient to prove the authenticity and integrity of "remains" in order to establish the validity of their evidence. In dealing with tradition, on the other hand, it must be proved that the author of the source in question deserves credit, also that it was possible for him to know the fact. The sources are further divided: (a) according to their origin, into *divine* (the canonical sacred writings) and *human* (all other sources); (b) according to the position of the author, into *public* (such as originated from an official person or magistrate, e. g. papal writings, decrees of councils, pastoral letters of bishops, rules of orders etc.) and *private* (such as come from a person holding no public office, or from an official in his private capacity, e. g. biographies, works of ecclesiastical writers, private letters etc.); (c) according to the religion of the author, into *domestic* (of Christian origin) and *foreign* (i. e. written by non-Christians); (d) according to the manner of transmission, into *written* (inscriptions, public acts, writings of all kinds) and *unwritten* (monuments, art-products, stories, legends etc.).

The aforesaid historical sources have in modern times been fully and critically investigated by numerous scholars and are now easily accessible to all in good editions. A very general outline of these sources will suffice here (see special articles in this Encyclopedia).

(A) *Remains*.—The remains of the Church's past, which give direct evidence of historical facts, are the following: (1) Inscriptions, i. e. texts written on durable material, which were either meant to perpetuate the knowledge of certain acts, or which describe the character and purpose of a particular object. The Christian inscriptions of different epochs and countries are now accessible in numerous collections. (2) Monuments erected for Christian purposes, especially tombs, sacred edifices, monasteries, hospitals for the sick and pilgrims; objects used in the liturgy or private devotions. (3) Liturgies, rituals, particularly liturgical books of various kinds, which were once used in Divine service. (4) Necrologies and confraternity-books used at the prayers and public services for the living and the dead. (5) Papal acts, Bulls and Briefs to a great extent edited in the papal "Bullaria", "Regesta", and special ecclesiastico-national collections. (6) Acts and decrees of general councils and of particular synods. (7) Collections of official decrees of Roman congregations, bishops, and other ecclesiastical authorities. (8) Rules of faith (*Symbola fidei*) drawn up for the public use of the Church, various collections of which have been made. (9) Official collections of ecclesiastical laws juridically obligatory for the whole Church. (10) Rules and constitutions of orders and congregations. (11) Concordats between the ecclesiastical and the secular power. (12) Civil

laws, since they often contain matters bearing on religion or of ecclesiastical interest.

(B) *Tradition*.—We speak here of those sources which rest on mere tradition, and which, unlike the remains, are themselves no part of the fact. They are: (1) Collections of acts of the martyrs, of legends and lives of the saints. (2) Collections of lives of the popes (*Liber Pontificalis*) and of bishops of particular Churches. (3) Works of ecclesiastical writers, which contain information about historical events; to some extent all ecclesiastical literature belongs to this category. (4) Ecclesiastico-historical works, which take on more or less the character of sources, especially for the time in which their authors lived. (5) Pictorial representations (paintings, sculptures, etc.). The foregoing are accessible in various collections, partly in editions of the works of particular authors (Fathers of the Church, theologians, historians), partly in historical collections which contain writings of different authors correlated in content, or all the traditional written sources for a given land.

VI. AUXILIARY SCIENCES.—The basis of all historical science is the proper treatment and use of the sources. The ecclesiastical historian must therefore master the sources in their entirety, examine them as to their trustworthiness, understand them correctly, and use methodically the information gleaned from them. Systematic guidance in all these matters is afforded by certain sciences, known as the "auxiliary historical sciences." Since ecclesiastical history is so closely related to theology on the one hand, and on the other to the historical sciences, a knowledge of all is generally speaking a prerequisite for the scientific study of church history. How to treat the sources critically is best learned from a good manual of scientific introduction to the study of history (Bernheim); special auxiliary sciences (e. g. epigraphy, palæography, numismatics) deal with certain particular kinds of the above-mentioned sources. Of these helps we may mention:

(1) *The study of the languages of the sources*, which necessitates the use of lexicons, either general or special (i. e. for the language of particular authors). Among the general lexicons or glossaries are: Du Fresnoy, "Glossarium ad scriptores mediæ et infimæ græcitatæ" (2 vols., Lyons, 1688); Idem, "Glossarium ad scriptores mediæ et infimæ latinitatæ"; Forcellini, "Lexicon totius latinitatæ" (Padua, 1771, often reprinted). "Thesaurus linguæ latinæ" (begun at Leipzig, 1900).

(2) *Palæography*, a methodical introduction to the reading and dating of all kinds of manuscript sources. It was first scientifically investigated and formulated by Mabillon, "De re diplomatica" (Paris, 1681); the literature on this subject is to be found in the manuals of de Wailly, "Éléments de Paléographie" (2 vols., Paris, 1838); Wattenbach, "Latein. Paläog." (4th ed., Leipzig, 1886) and "Schriftwesen im Mittelalter" (3rd ed., Leipzig, 1896); E. M. Thompson, "Handbook of Greek and Latin Palæography" (2nd ed., London, 1894); Prou, "Manuel de Paléographie latine et française" (Paris, 1904); Chassant, "Paléographie des chartes et des manuscrits" (8th ed., Paris, 1885); Reusens, "Éléments de paléogr." (Louvain, 1899); Paoli, "Paleografia" (3 vols., Florence, 1888-1900). Charts for practice in reading medieval manuscripts were edited by: Wattenbach, "Script. græc. specimina" (3rd ed., Leipzig, 1897); Sickel, "Monograph. mediæ ævi" (10 series, 1858-82); Bond, Thompson, and Warner, "Facsimiles" (5 series, London, 1873-1903); Delisle, "Album paléogr." (Paris, 1887); Arndt and Tangl, "Schrifttafeln" (3 vols., 1904-6); Chroust, "Mon. palæogr." (25 series, Munich, 1899-); Steffens, "Latein. Paläogr." (2nd ed., 3 parts, Trier, 1907-); Zangemeister and Wattenbach, "Exempla cod. latin." (1876-9); Sickel and Sybel, "Kaiserurkunden in Abbildungen (1880-91); Pflugk-

Hartung, "Chartarum pont. Rom. specimina" (3 parts, 1881-6); Denifle, "Specimina palæographica ab Inn. III ad Urban. V" (Rome, 1888). A very useful work is Capelli, "Dizionario di abbreviature latine ed italiane" (Milan, 1899).

(3) *Diplomatics*, which teaches how to examine critically the form and content of historical documents (e. g. charters, privileges), to pronounce on their genuineness, to understand them correctly, and to use them methodically. It is usually combined with paleography. The literature may be found in recent manuals, e. g. Bresslau, "Handbuch der Urkundenlehre für Deutschland und Italien", I (Leipzig, 1889); Giry, "Manuel de diplomatique" (Paris, 1894). See also "Nouveau traité de diplomatique" (Paris, 1750-65).

(4) *Historical Methodology*, which enables the student to treat in a correct and critical way all the sources known to him and to combine the results of his researches in a methodical narrative. See Fr. Blass, "Hermeneutik und Kritik" in Iwan Müller's "Handbuch der klassischen Altertumswissenschaft", I (2nd ed., Munich, 1893); Bernheim, "Lehrbuch der historischen Methode" (3rd ed., Leipzig, 1903); Idem, "Das akademische Studium der Geschichtswissenschaft" (2nd ed., Greifswald, 1907); Idem, "Einleitung in die Geschichtswissenschaft" in "Sammlung Goschen" (Leipzig, 1906); Zurbonsen, "Anleitung zum wissenschaftlichen Studium der Geschichte nebst Materialien" (Berlin, 1906); "Grundriss der Geschichtswissenschaft", edited by Al. Meister, I (Leipzig, 1906); Langlois and Saignobos, "Introduction aux études historiques" (Paris, 1905); Battaini, "Manuale di metodologia storica" (Florence, 1904).

(5) *Bibliography*, a practical science which enables the student to find quickly all the literature bearing on a given ecclesiastico-historical subject. The most important literature is to be found in recent ecclesiastico-historical manuals at the end of the various subjects treated, and is given with especial fulness in the fourth edition of Hergenröther's "Kirchengeschichte" by J. P. Kirsch (Freiburg, 1902-9). Among the bibliographical works of special importance for ecclesiastical history may be named "Bibliotheca hagiographica latina antiquæ et mediæ ætatis", edited by the Bollandists (2 vols., Brussels, 1898-1901); Potthast, "Bibliotheca historica mediæ ævi" (2nd ed., 2 vols., Berlin, 1896); Bratke, "Wegweiser zu den Quellen und der Literatur der Kirchengeschichte" (Gotha, 1890); Chevalier, "Répertoire des sources historiques du moyen-âge: I. Bio-Bibliographie" (Paris, 1877-88, 2nd ed., 2 vols., *ibid.*, 1905); "II. Topo-Bibliographie historique" (2 parts, Paris, 1901-4); Stein, "Manuel de bibliographie générale" (Paris, 1898); de Smedt, "Introductio generalis ad historiam ecclesiasticam criticè tractandam" (Ghent, 1876); Hurter, "Nomenclator literarius recentioris theologiæ catholicæ" (2nd ed., 3 vols., Innsbruck, 1890-4; vol. 4: "Theologia catholica mediæ ævi", *ibid.*, 1899). A third edition comprises the whole of ecclesiastical history, *ibid.*, 1903-). For the history of the several nations see: Wattenbach, "Deutschlands Geschichtsquellen im Mittelalter bis zur Mitte des 13. Jahrh." (6th ed., Berlin, 1894, 7th ed. by Dümmler, I, *ibid.*, 1904); Lorenz, "Deutschlands Geschichtsquellen im Mittelalter seit der Mitte des 13. Jahrh." (3rd ed., *ibid.*, 1886); Dahlmann and Waitz, "Quellenkunde der deutschen Geschichte" (6th ed. by Steindorff, Göttingen, 1894); Monod, "Bibliographie de l'histoire de France" (Paris, 1888); Molinier, "Les sources de l'histoire de France" (6 vols., Paris, 1902); Gross, "The Sources and Literature of English History from the earliest times to about 1485" (London, 1900). Among the bibliographical periodicals that treat the history of the Church see: "Theologischer Jahresbericht" (since 1880), in the section "Kirchengeschichte"; "Jahresberichte der Geschichtswissenschaft" (since 1878) in the section "Kirchengeschichte";

schielte"; "Bibliographie der kirchengeschichtlichen Literatur", in the "Zeitschrift für Kirchengeschichte". The most complete bibliography of church history is now to be found in "Revue d'histoire ecclésiastique" (Louvain, since 1900).

(6) *Chronology*, which instructs the student how to recognize and fix with accuracy the dates found in the sources. The first important chronological investigations were undertaken by Scaliger ("De emendatione temporum," Jena, 1629—), Petavius ("Rationarium temporum," Leyden, 1624; "De doctrinâ temporum," Antwerp, 1703), and the authors of "Art de vérifier les dates des faits historiques" (Paris, 1750—). The most important recent works are: Ideler, "Handbuch der mathem. u. techn. Chronologie" (Berlin, 1825; 2nd ed., 1833); De Mas-Latrie, "Trésor de chronologie, d'histoire et de géographie pour l'étude et l'emploi des documents du moyen-âge" (Paris, 1889); Brinkmeier, "Praktisches Handbuch der historischen Chronologie aller Zeiten und Völker" (2nd ed., Berlin, 1882); Rühl, "Chronologie des Mittelalters und der Neuzeit" (Berlin, 1897); Lersch, "Einleitung in die Chronologie" (Freiburg, 1899); Grotefend, "Zeitrechnung des deutschen Mittelalters und der Neuzeit" (Hanover, 1891—8); Cappelli, "Cronologia e calendario perpetuo" (Milan, 1906); Ginzel, "Handbuch der mathemat. und technischen Chronologie. Das Zeitrechnungswesen der Völker", I (Leipzig, 1906).

(7) *Ecclesiastical Geography and Statistics*, the first teaches us to recognize the places in which historical events took place, the other represents the development of the Church and the actual condition of her institutions exhibited synoptically, in tables with corresponding figures, etc. Important works of this kind are: Le Quien, "Oriens christianus" (3 vols., Paris, 1740); Morcelli, "Africa christiana" (2 vols., Brescia, 1816); Toulotte, "Géographie de l'Afrique chrétienne" (Paris, 1824—); Ughelli, "Italia sacra" (2nd ed., 10 vols., Venice, 1717—22); "Gallia Christiana" by Claude Robert (Paris, 1626), by Denis de Sainte-Marthe and others (new editions, 16 vols., Paris, 1715—); Böttcher, "Germania sacra" (2 vols., Leipzig, 1874); Neher, "Kirchliche Geographie und Statistik" (3 vols., Ratisbon, 1864—8); Idem, "Conspectus hierarchie catholice" (Ibid., 1895); Silbernagl, "Verfassung und gegenwärtiger Bestand sämtlicher Kirchen des Orients" (2nd ed., Munich, 1904); Baumgarten, "Die katholische Kirche unserer Zeit und ihre Diener", III (Munich, 1902, 2nd ed., vol. II, *ibid.*, 1907); Gams, "Series episcoporum ecclesie catholice" (Ratisbon, 1873; Supplem., 1879 and 1886), continued by Eubel, "Hierarchia catholica medii ævi", I-II (Münster, 1898—1901); Spruner and Menke, "Historischer Handatlas" (3rd ed., Gotha, 1880); Werner, "Katholischer Kirchenatlas" (Freiburg im Br., 1888); Idem, "Katholischer Missionsatlas" (2nd ed., *ibid.*, 1885); McClure, "Ecclesiastical Atlas" (London, 1883); Heussi and Mulert, "Atlas zur Kirchengeschichte" (Tübingen, 1905); see also the annual Catholic directories of various nations (England, Ireland, Scotland, Australia, etc.) and the new "Dictionnaire d'Hist. et de Géog. ecclés.", edited by Baudrillart, Vogt, and Rouziès (Paris, 1909—).

(8) *Epigraphy*, a guide for the reading and methodical use of the Christian inscriptions on monuments. Works on this science are: Larfeld, "Griechische Epigraphik" and Hübner, "Römische Epigraphik", both in Iwan Müller's "Handbuch der klassischen Altertumskunde", I (2nd ed., Munich, 1892); Reinach, "Traité d'épigraphie grecque" (Paris, 1886); Cagnat, "Cours d'épigraphie latine" (3rd ed., Paris, 1898); De Rossi, "Inscriptiones christianæ urbis Romæ", I and II, "Introductio" (Rome, 1861—88); Le Blant, "L'épigraphie chrétienne en Gaule et dans l'Afrique romaine" (Paris, 1890); Idem, "Paléographie des inscriptions latines de la fin du III au VII siècle" (Paris, 1898); Grisar, "Le iscrizioni cristiane

di Roma negli inizi del medio evo" in "Analecta Romana" (Rome, 1899).

(9) *Christian Archaeology and History of the Fine Arts*, from which the student learns how to study scientifically and to use the monuments which owe their origin to Christian influences. See CHRISTIAN ARCHAEOLOGY and ECCLESIASTICAL ART.

(10) *Numismatics*, the science of the coins of various countries and ages. Since not only the popes but also the numerous bishops, who once possessed secular power, exercised the right of coinage, numismatics belongs, at least for certain epochs, to the auxiliary sciences of church history. See Bonanni, "Numismata Pontificum Romanorum" (3 vols., Rome, 1699); "Numismata Pontificum Romanorum et aliarum ecclesiarum" (Cologne, 1704); Vignolius, "Antiqui denarii Romanorum Pontificum a Benedicto XI ad Paulum III" (2 vols., Rome, 1709; new ed. by B. Floravanti, 2 vols., Rome, 1734—8); Scilla, "Breve notizia delle monete pontificie antiche e moderne" (Rome, 1715); Venuti, "Numismata pontificum Romanorum præstantiora a Martino V ad Benedictum XIV" (Rome, 1744); Garampi, "De nummo argenteo Benedicti III dissertatio" (Rome, 1749). For further bibliography see von Ebengreuth, "Allgemeine Münzkunde und Geldgeschichte des Mittelalters und der neueren Zeit" (Munich, 1904) and in Engel and Serrure, "Traité de numism. du moyen-âge"

(11) *Sphragistics*, or the science of seals (Gk. σφραγίς, a seal). Its object is the study of the various seals and stamps used in sealing letters and documents as a guarantee of their authenticity. Besides the works mentioned above under *Diplomatics*, see Pflugk and Hartung, "Specimina selecta chartarum Pontificum Romanorum", part III, "Bullæ" (Stuttgart, 1887); Idem, "Bullen der Päpste bis zum Ende des XII Jahrh." (Gotha, 1901); Baumgarten, "Aus Kanzlei und Kammer: Bullatores, Taxatores domorum, Cursores" (Freiburg, 1907); Heineccius, "De veteribus Germanorum aliarumque nationum sigillis" (Frankfurt, 1719); Grotefend, "Ueber Sphragistik" (Breslau, 1875); Fürst zu Hohenlohe-Waldenburg, "Sphragistische Aphorismen" (Heilbronn, 1882); Ilgen in Meister, "Grundriss der Geschichtswissenschaft", I (Leipzig, 1906).

(12) *Heraldry*, which teaches the student how to read accurately the coats of arms etc., used by ecclesiastical and secular lords. It frequently throws light on the family of historical personages, the time or character of particular events, the history of religious monuments. The literature of this science is very extensive. See Brend, "Die Hauptstücke der Wappenkunde" (2 vols., Bonn, 1841—9); Idem, "Allgemeine Schriftenkunde der gesammten Wappenkunde"; Seiler, "Geschichte der Heraldik" (Nuremberg, 1884); E. von Sacken, "Katechismus der Heraldik" (5th ed., Leipzig, 1893); Burke, "Encyclopedia of Heraldry" (London, 1878); Davies, "Encyclopedia of Armory" (London, 1904); Pasini-Frassoni, "Essai d'armorial des papes d'après les manuscrits du Vatican et les monuments publics" (Rome, 1906).

VII. LITERATURE OF ECCLESIASTICAL HISTORY.—The peoples among which Christianity first spread, possessed a highly developed civilization and a literature rich in works of history. They possessed the historical sense, and though in early Christian times there was little occasion for extended ecclesiastical historical works, nevertheless historical records were not wholly wanting. The New Testament was itself largely historical, the Gospels being literally narratives of the life and death of Christ. Soon we meet the accounts of the conflict with the Roman state (Acts of the Apostles) and traditions of widespread Christian suffering (Acts of the Martyrs). The (lost) anti-Gnostic work of Hegesippus also contained historical information. Chronicles were compiled in the third

century by Julius Africanus and by Hippolytus, some fragments of which are yet extant. It is only during the fourth century that ecclesiastical history, properly so called, makes its appearance. Any synopsis of its vast materials falls into three periods corresponding to the three main periods of church history.

(A) *Church Historians during the First Period.*—Eusebius, Bishop of Cæsarea in Palestine (d. 340), is rightly styled the "Father of Church History." We are indebted to him for a "Chronicle" (P. G., XIX) and a "Church History" (ibid., XX; latest scientific edition by Schwartz and Mommsen, 2 vols. in "Die griechischen christlichen Schriftsteller der drei ersten Jahrhunderte", Berlin, 1903-8). The "Church History" was an outgrowth of the "Chronicle", and was the first work to merit fully the name it bore. It first appeared in nine books and covered the time from the death of Christ to the victories of Constantine and Licinius (312 and 313). Eusebius afterwards added a tenth book, which carried the narrative to the victory of Constantine over Licinius (323). He made use of many ecclesiastical monuments and documents, acts of the martyrs, letters, extracts from earlier Christian writings, lists of bishops, and similar sources, often quoting the originals at great length so that his work contains very precious materials not elsewhere preserved. It is therefore of great value, though it pretends neither to completeness nor to the observance of due proportion in the treatment of the subject-matter. Nor does it present in a connected and systematic way the history of the early Christian Church. It is to no small extent a vindication of the Christian religion, though the author did not primarily intend it as such; it is impossible, however, for any true history of the Church not to exhibit at once the Divine origin of the latter and its invincible power. Eusebius has been often accused of intentional falsification of the truth, but quite unjustly; it may be admitted, however, that in judging persons or facts he is not entirely unbiased. On the other hand, he has been rightly censured for his partiality towards Constantine the Great and his palliation of the latter's faults ("Vita Constantini" in P. G., XX, 905 sqq.; latest scientific ed. Heikel, "Eusebius' Werke", I, Leipzig, 1902, in "Die griech. christl. Schriftsteller der ersten drei Jahrhunderte"). In his biography of the great emperor, Eusebius, it must be remembered, sought to set forth in the most favourable light the Christian sentiments of the imperial convert and his great services to the Christian Church. A brief historical treatise of Eusebius, "On the Martyrs of Palestine", has also been preserved.

This great Christian historian found several imitators in the first half of the fifth century; it is to be regretted, however, that the first two general narratives of ecclesiastical history after Eusebius have been lost—i. e. the "Christian History" of the presbyter Philip of Side in Pamphylia (Philippus Sidetes), and the "Church History" of the Arian Philostorgius. Three other early ecclesiastical histories written about this period are also lost (the presbyter Hesychius of Jerusalem (d. 433), the Apollinarian, Timotheus of Berytus, and Sabinus of Heraclea). About the middle of the fifth century the "Church History" of Eusebius was continued simultaneously by three writers—an evidence of the esteem in which this work of the "Father of Church History" was held among scholarly ecclesiastics. All three continuations have reached us. The first was written by Socrates, an advocate (*scholasticus*) of Constantinople, who, in his "Church History" (P. G., LXVII, 29-842; ed. Hussey, Oxford, 1853), which he expressly (I, 1) calls a continuation of the work of Eusebius, describes in seven books the period from 305 (Abdication of Diocletian) to 439. It is a work of great value. The author is honest, exhibits critical acumen in the use of his sources, and has a clear and simple style. After him, and frequently making use of his history, comes Hermias

Sozomenus (or Sozomen), also an advocate in Constantinople, whose "Church History" in nine books comprises the period from 324 to 425 (P. G., LXVII, 834-1630; ed. Hussey, Oxford, 1860), but is inferior to that of Socrates. Both these writers are surpassed by the learned Theodoret, Bishop of Cyrus (d. about 458), who, in his "Church History" (P. G., LXXXII, 881-1280; ed. Gaisford, Oxford, 1854), a continuation of the work of Eusebius, describes in five books the period from the beginning of Arianism (320) to the beginning of the Nestorian troubles (428). In addition to the writings of his predecessors, Socrates and Sozomen, he also used those of the Latin scholar Rufinus, and wove many documents into his clear well-written narrative. Theodoret wrote also a "History of the Monks" (P. G., LXXXII, 1283-1496), in which he sets forth the lives of thirty famous ascetics of the Orient. Like the famous "History of the Holy Fathers" ("Historia Lausiaca", so called from one Lausus to whom the book was dedicated by Palladius, written about 420; Migne, P. G., XXXIV, 995-1278; Butler, "The Lausiaca History of Palladius", Cambridge, 1898), this work of Theodoret is one of the principal sources for the history of Oriental monasticism. Theodoret also published a "Compendium of Heretical Falsehoods", i. e. a short history of heresies with a refutation of each (P. G., LXXXIII, 335-556). Together with the similar "Panarion" of St. Epiphanius (P. G., XLI-XLII), it offers important material to the student of the earliest heresies.

During the sixth century these historians found other continuators. Theodorus Lector compiled a brief compendium (yet unedited) from the works of the above-mentioned three continuators of Eusebius: Socrates, Sozomen, and Theodoret. He then wrote in two books an independent continuation of this summary as far as the reign of Emperor Justin I (518-27); only fragments of this work have reached us (P. G., LXXXVI, I, 165-228). Zacharias Rhetor, at first an advocate at Berytus in Phœnicia and then (at least from 536) Bishop of Mitylene in the Island of Lesbos, composed, while yet a layman, an ecclesiastical history, which describes the period from 450 to 491, but is mostly taken up with personal experiences of the author in Egypt and Palestine. A Syriac version of this work is extant as books III-VI of a Syriac universal history, while there are also extant some chapters in a Latin version (Laud, "Anecdota Syriaca", Leyden, 1870; P. G., LXXV, 1145-78; Ahrens and Krüger, "Die sogenannte Kirchengeschichte des Zacharias Rhetor", Leipzig, 1899). Apart from this history, his inclination towards Monophysitism is also apparent from his biography of the Monophysite patriarch, Severus of Antioch, and from his biography of the monk Isaias, two works extant in a Syriac version (Laud, op. cit., 346-56, edited the "Life of Isaias", and Spanuth, Göttingen, 1893, the "Life of Severus"; cf. Nau in "Revue de l'orient chrétien", 1901, pp. 26-88). More important still is the "Church History" of Evagrius of Antioch, who died about the end of the sixth century. His work is a continuation of Socrates, Sozomen, and Theodoret, and treats in six books the period from 431 to 594. It is based on good sources, and borrows from profane historians, but occasionally Evagrius is too credulous. For Nestorianism and Monophysitism, however, his work deserves careful attention (P. G., LXXXVI, I, 2415-886; edd. Bidez and Parmentier in "Byzantine Texts" by J. B. Bury, London, 1899). Among the chronicles that belong to the close of Græco-Roman antiquity, special mention is due to the Chronicon Paschale, so called because the Paschal or Easter canon forms the basis of its Christian chronology (P. G., XCII). About the year 700 the Monophysite bishop, John of Nikiu (Egypt) compiled a universal chronicle; its *notitiæ* are of great value for the seventh century. This chronicle has been preserved in an Ethiopic

version ("Chronique de Jean, évêque de Nikiou", publ. par. H. Zotenberg, Paris, 1883). Zotenberg believes that the work was originally written in Greek and then translated; Nöldeke ("Göttinger gelehrte Anzeigen", 1881, 587 sqq.) thinks it more probable that the original was Coptic. To the Alexandrian Cosmas, known as the "Indian Voyager" we owe a Christian "Topography" of great value for ecclesiastical geography (ed. Montfaucon, "Collectio nova Patrum et Scriptor. græc.", II, Paris, 1706; translated into English by McCrindle, London, 1897). Of great value also for ecclesiastical geography are the "Notitiæ episcopatuū" (Τακτικά), or lists of the patriarchal, metropolitan, and episcopal sees of the Greek Church ("Hieroclis Synecdemus et Notitiæ græcæ episcopatuū", ed. Parthey, Berlin, 1866; "Georgii Cyprii Descriptio orbis Romani", ed. Gelzer, Leipzig, 1890). The most important collection of the early Greek historians of the Church is that of Henri de Valois in three folio volumes (Paris, 1659-73; improved by W. Reading, Cambridge, 1720); it contains Eusebius, Socrates, Sozomen, Theodoret, Evagrius, and the fragments of Philostorgius and Theodorus Lector.

The ancient Syriac writings of ecclesiastico-historical interest are chiefly Acts of martyrs and hymns to the saints ("Acta martyrum et sanctorum", ed. Bedjan, Paris, 1890—). The "Chronicle of Edessa", based on ancient sources, was written in the sixth century (ed. Assemani, "Bibliotheca orientalis", I, 394). In the same century the Monophysite bishop, John of Ephesus, wrote a history of the Church, but only its third part (571 to 586) is preserved (ed. Cureton, Oxford, 1853; tr., Oxford, 1860). Lengthy extracts from the second part are found in the annals of Dionysius of Telmera. His work covers the years 583-843 (fragments in Assemani, "Bibliotheca orientalis", II, 72 sqq.). Among the Armenians we meet with versions of Greek and Syriac works. The most important native Armenian chronicle of an ecclesiastico-historical character is ascribed to Moses of Chorene, an historical personage of the fifth century. The author of the "History of Greater Armenia" calls himself Moses of Chorene, and claims to have lived in the fifth century and to have been a disciple of the famous St. Mesrop (q. v.). The self-testimony of the compiler must be rejected, since the work makes use of sources of the sixth and seventh centuries, and there is no trace of it to be found in Armenian literature before the ninth century. Probably, therefore, it originated about the eighth century. In the known manuscripts the work contains three parts: the "Genealogy of Greater Armenia" extends to the dynasty of the Arsacides, the "Middle Period of our Ancestry" to the death of St. Gregory the Illuminator, and the "End of the History of our Country" to the downfall of the Armenian Arsacides (ed. Amsterdam, 1695; Venice, 1881; French translation in Langlois, "Collection des historiens anciens et modernes de l'Arménie", 2 vols., Paris, 1867-9). In the Middle Ages there was still extant a fourth part. The work seems to be on the whole reliable. The ancient history, down to the second or third century after Christ, is based on popular legends. Another Armenian historian is St. Elishé (q. v.).

Comprehensive ecclesiastico-historical works appear in the Latin West later than in the Greek East. The first beginnings of historical science are confined to translations with additions. Thus St. Jerome translated the "Chronicle" of Eusebius and continued it down to 378. At the same time he opened up a special field, the history of Christian literature, in his "De viris illustribus"; ("Chronicon", ed. Schoene, 2 vols., Berlin, 1866-75; "De vir. ill.", ed. Richardson, Leipzig, 1896). About 400 the "Church History" of Eusebius was translated by Rufinus who added the history of the Church from 318 to 395 in two new books (X and XI). Rufinus's continuation was itself soon translated into Greek. The latest edition is in

the Berlin collection of Greek Christian writings mentioned above in connexion with Eusebius. St. Jerome's Latin recension of the "Chronicle" of Eusebius was followed later by many other chronicles, among which may be mentioned the works of Prosper, Idacius, Marcellinus, Victor of Tununum, Marius of Avenches, Isidore of Seville, and Venerable Bede. In the West, the first independent history of revelation and of the Church was written by Sulpicius Severus, who published in 403 his "Historia (Chronica) Sacra" in two books; it reaches from the beginning of the world to about 400 (P. L., XX; ed. Halm, Vienna, 1866). It is a short treatise and contains little historical information. A little later, Orosius wrote his "Historia adversus paganos" in seven books—a universal history from the standpoint of the Christian apologist. It begins with the deluge and comes down to 416. The purpose of Orosius was to refute the pagan charge that the great misfortunes of the Roman Empire were due to the victory of Christianity (P. L., XXXI; ed. Zangemeister, Vienna, 1882). With the same end in view, but with a far grander and loftier conception, St. Augustine wrote his famous "De civitate Dei", composed between 413 and 428, and issued in sections. It is an apologetic philosophy of history from the standpoint of Divine revelation. The work is important for church history on account of its numerous historical and archaeological digressions (ed. Dombart, 2nd ed., Leipzig, 1877). About the middle of the sixth century, Cassiodorus caused the works of Socrates, Sozomen, and Theodoret to be translated into Latin, and then amalgamated this version into one complete narrative under the title "Historia tripartita" (P. L., LXIX-LXX). Together with the works of Rufinus and Orosius, it was one of the principal sources from which through the Middle Ages the Western peoples drew their knowledge of early church history. Rich material for ecclesiastical history is also contained in the national histories of some Western peoples. Of the "History of the Goths", written by Cassiodorus, we possess only an extract in Jordanis, "De origine actibusque Getarum" (ed. Mommsen in "Mon. Germ. Hist: Auct. antiquissimi", V., Berlin, 1882). Especially important is the "History of the Franks" in ten books by Gregory of Tours, which reaches to 591 (ed. Arndt, "Mon. Germ. Hist: Scriptores rerum Meroving.", I, Hanover, 1884-5). Gregory wrote also a "Liber de vitâ Patrum", a work entitled "In gloriâ martyrum", and the book "De virtutibus (i. e. miracles) S. Juliani" and "De virtutibus S. Martini" (ed. cit., pt. II, ed. Krusch). In the beginning of the seventh century St. Isidore of Seville composed a "Chronicle of the West Goths" ("Historia de regibus Gothorum, Vandalorum, Suevorum", ed. Mommsen, "Chronica Minora", II, 241-303). Several other similar chronicles, from the fourth to the seventh century, were edited by Mommsen in the "Monumenta Germaniæ Historica: Auctores Antiquissimi" under the title of "Chronica Minora".

(B) *The Church Historians of the Second Period.*—The second period of church history, it is true, produced a copious historical literature, although it belongs rather to special than to general church history. Its works deal more often with particular nations, dioceses, and abbeys; general histories are rare. Moreover, owing to the dominant position of the Church among the Western peoples, ecclesiastical and profane history are in this epoch closely interwoven.

In the East church history is almost completely identified with the history of the imperial court owing to the close relations of State and Church. For the same reason the Byzantine chronicles from Justinian the Great to the destruction of the empire in the middle of the fifteenth century contain much valuable information about the history of the Greek Church. The most important of them are: the "Chronography of Theophanes Isaacius" (ed. de Boor, 2 vols., Leipzig, 1885);

the "Chronicles" of Georgius Syncellus, George Hamartolus, Nicephorus, Patriarch of Constantinople, Constantine Porphyrogenitus, John Malalas, Procopius, Paulus Silentiarius, the works of Leo Diaconus, Anna Comnena, Zonaras, Georgius Cedrenus, to which we may add Nicetas Choniates, Georgius Pachymeres, Nicephorus Gregoras, and John Cantacuzenus. These Byzantine historical works were first published in a large collection at Paris (1645-1711) under the title, "Byzantinæ historiæ Scriptores." A new edition, better and more complete, was executed by Niebuhr, Becker, Dindorf, and other collaborators in forty volumes (Bonn, 1828-78) under the title, "Corpus Scriptorum historiæ Byzantinæ." Most of these writings are also to be found in the *Patrologia Græca* of Migne. The only true church historian of the Byzantine period worthy of the name is Nicephorus Callistus, who flourished in the beginning of the fourteenth century. (See NICEPHORUS CALLISTUS.)

In Syriac we possess the aforesaid chronicle of Dionysius of Telmera. Towards the end of the twelfth century Michael Kandis, Patriarch of the Jacobites (d. 1199), wrote a chronicle from the creation to 1196. It is an important source for the history of the Syriac Church after the sixth century, particularly for the history of the Crusades. This work has reached us in a thirteenth century Armenian version; a French translation was published by Langlois, "Chronique de Michel le Grand" (Venice, 1868). Another patriarch of the Jacobites, Gregory Abulpharagius or Bar-Hebræus (q. v.), Maphrian (i. e. primate) of the Syro-Jacobite Church (1266-86), also wrote a universal chronicle in three parts. We must also mention the "Bibliotheca" (Myriobiblon) of Photius (d. 891), in which about 280 authors are described and passages quoted from them (ed. Becker, Berlin, 1834), and the work "On Heresies" of St. John Damascene.

Throughout this period the West was furnishing abundant material for ecclesiastical history, but few genuinely historical works. Public life moved in narrow circles; a speculative tendency ruled in the centres of intellectual activity; consequently, ecclesiastico-historical works of a general character accorded ill with the spirit of the age, and during the whole period from the eighth to the fifteenth century the West offers only a few works of this class. In the ninth century, Haymo, Bishop of Halberstadt (d. 853), undertook to write an ecclesiastical history of the first four centuries, taking Rufinus as his principal authority ("De christianarum rerum memoriâ", ed. Boxhorn, Leyden, 1650; P. L., CXVI). Subsequently with the aid of Latin versions of Georgius Syncellus, Nicephorus, and especially of Theophanes, to which he added his own material, the Roman Abbot Anastasius Bibliothecarius (the Librarian) wrote a "Church History" to the time of Leo the Armenian, who died in 829 (Migne, P. G., CVIII). About the middle of the twelfth century, Ordericus Vitalis, Abbot of St. Evroul in Normandy, wrote an "Historia ecclesiastica" in thirteen books; it reaches to 1142, and is of especial value for the history of Normandy, England, and the Crusades (ed. A. Le Prevost, 5 vols., Paris, 1838-55). The Dominican Bartholomew of Lucea, called also Ptolemæus de Fiadonibus (d. 1327), covered a longer period. His work in twenty-four books reaches to 1313, and was continued to 1361 by Henry of Diessenhofen (ed. Muratori, "Scriptores Rerum Italicarum", XI). The "Flores chronicorum seu Catalogus Pontificum Romanorum" of Bernard Guidonis, Bishop of Lodève (d. 1331), may be counted among the works on the general history of the Church (partially edited by Mai, "Spicilegium Romanum", VI; Muratori, op. cit., III; Bouquet, "Script. rer. gall.", XXI). The most extensive, and relatively the best, historical work during this period is the "Summa Historialis" of St. Antoninus. It deals with profane and ecclesiastical history from the creation to 1457.

The national histories which appeared towards the end of the last period (of Cassiodorus, Jordanis, Gregory of Tours), were followed by similar works giving the history of other peoples. Venerable Bede wrote his admirable "Historia ecclesiastica gentis Anglorum", which describes in five books the history of England from the Roman conquest to 731, though treating principally of events after St. Augustine's mission in 596 (ed. Stevenson, London, 1838; ed. Hussey, Oxford, 1846). Paulus Warnefrid (Diaconus) wrote the history of his fellow-Lombards (*Historia Langobardorum*) from 568 to 733; it still remains the principal source for the history of his people. An unknown writer continued it to 774, and in the ninth century the monk Erchembert added the history of the Lombards of Beneventum to 889 (ed. Waitz in "Mon. Germ. Hist. Script. rer. Langob. et Ital.", Hanover, 1877). Paulus wrote also a history of the bishops of Metz ("Gesta episcoporum Mettensium", ed. in "Mon. Germ. Hist. Script.", II) and other historical works. The Scandinavian North found its ecclesiastical historian in Adam of Bremen; he covers the period between 788 and 1072, and his work is of special importance for the history of the Diocese of Hamburg-Bremen ("Gesta Hamburgensis ecclesiæ Pontificum", ed. Lappenberg in "Mon. Germ. Hist. Script.", VII, 276 sqq.). Flodoard (d. 966) wrote the history of the Archdiocese of Reims (*Historia ecclesiæ Remensis*) to 948, a very important source for the history of the Church of France to that time ("Mon. Germ. Hist. Script.", XIII, 412 sqq.). The ecclesiastical history of Northern Germany was described by Albert Crantz, a canon of Hamburg (d. 1517), in his "Metropolis" or "Historia de ecclesiis sub Carolo Magno in Saxoniâ instauratis" (i. e. from 780 to 1504; Frankfurt, 1576, and often reprinted). Among the special historical works of this period of the Western Church we must mention the "Liber Pontificalis", an important collection of papal biographies that take on larger proportions after the fourth century, are occasionally very lengthy in the eighth and ninth centuries, and through various continuations reach to the death of Martin V in 1431 (ed. Duchesne, 2 vols., Paris, 1886-92; ed. Mommsen, I, extending to 715, Berlin 1898). The German, Italian, French, and English chronicles, annals, and biographies of this epoch are very numerous. The more important authors of chronicles are: Regino of Prüm, Hermannus Contractus, Lambert of Hersfeld, Otto of Freising, William of Tyre, Sigebert of Gemblours. The most important modern collections, in which the reader can find the chronicles and annals of the various Christian countries, are the following: for England: "Rerum Britannicarum mediæ ævi Scriptores, or Chronicles and Memorials of Great Britain", I sqq. (London, 1858-); for Belgium: "Collection de Chroniques belges", I sqq. (Brussels, 1836-); "Collection des chroniqueurs et trouvères belges publ. par l'Académie belge", I sqq. (Brussels, 1863-); "Recueil de chroniques publié par la Société d'émulation de Bruges" (56 vols., Bruges, 1839-64); for France: Bouquet, "Recueil des historiens des Gaules et de la France" (Paris, 1738-; new ed. by L. Delisle, Paris, 1869-); for Germany: "Monumenta Germ. historica: Scriptores", I sqq. (Hanover and Berlin, 1826-); for Italy: Muratori, "Rerum Italicarum Scriptores præcipui" (25 vols., Milan, 1723-51); Idem, "Antiquitates Italicæ mediæ ævi" (6 vols., Milan, 1738-42); for Spain: Flórez, "España sagrada" (51 vols., Madrid, 1747-1886); for Austria: "Fontes rerum Austriacarum: Scriptores" (8 vols., Vienna, 1855-75); for Poland: Bielowski, "Monumenta Poloniæ historica" (2 vols., Lemberg, 1864-72; continued by the Academy of Cracow, III sqq., Cracow, 1878-); "Scriptores rerum polonicarum" (ibid., 1873-); for Denmark and Sweden: Langebek, "Scriptores rerum Daniicarum mediæ ævi" (9 vols., Copenhagen, 1772-8);

Fant, "Scriptores rerum Suecicarum medii ævi" (3 vols., Upsala, 1818-76); Rietz, "Scriptores Suecici medii ævi" (3 vols., Lund, 1842). Other important collections are: L. d'Achéry, "Spicilegium veterum aliquot scriptorum" (13 vols., Paris, 1655); Mabillon, "Acta Sanctorum ordinis S. Benedicti" (9 vols., Paris, 1668); "Acta Sanctorum Bollandistarum" (see BOLLANDISTS). The best guide to the sources of medieval history is Potthast, "Bib. hist. medii ævi: Wegweiser durch die Geschichtswerke des europäischen Mittelalters bis 1500" (Berlin, 1896).

(C) *The Church Historians of the Third Period.*—With the sixteenth century a new epoch dawned for ecclesiastical history. Under fresh and vigorous impulses it perfected its methods of investigation and narration, and assumed a daily more important place in the intellectual life of the educated classes. Historical criticism went hand in hand with the growth of humanist education. Henceforth, before their testimony was accepted, the sources of historical events were examined as to their authenticity. Increasing intimacy with the authors of Græco-Roman antiquity, also of the primitive Christian ages, developed the historical sense. The religious controversies that followed the rise of Protestantism were also an incentive to historical study. Printing made possible a rapid distribution of all kinds of writings, so that the sources of church history soon became known and studied in the widest circles, and new works on church history could be circulated in all directions. In this period also the development of church history may be considered in three divisions.

(1) *From the Middle of the Sixteenth to the Middle of the Seventeenth Century.*—The first large work on church history which appeared in this period was composed in the interests of Lutheranism. Mathias Flacius, called *Illyricus* (a native of Illyria), united with five other Lutherans (John Wigand, Mathias Judex, Basilius Faber, Andreas Corvinus, and Thomas Holzschuher), to produce an extensive work, that should exhibit the history of the Church as a convincing apology for strict Lutheranism. (See CENTURATORS OF MAGDEBURG.) In the "Centuriæ", the institutions of the Roman Church appear as works of Satan and darkness; naturally, therefore, we cannot expect from such writers any true objective estimate of the Church and her development. The work called forth many refutations, the most able of which was written by Card. Caesar Baronius. Urged by St. Philip Neri, he undertook in 1568 the task of producing an ecclesiastical history, which with astounding diligence he brought down to the end of the twelfth century and published under the title, "Annales ecclesiastici" (12 vols., Rome, 1588-1607). Numerous editions and continuations of it have appeared. (See BARONIUS.)

(2) *From the Middle of the Seventeenth to the End of the Eighteenth Century.*—(a) *Catholic Church Historians.*—From the middle of the seventeenth century French writers were active in ecclesiastical-historical research. The writings of the Fathers of the Church and other ancient sources were published in excellent editions, the auxiliary sciences of history were well cultivated. We are indebted to Antoine Godeau, Bishop of Vence, for a "Histoire de l'église" reaching to the ninth century (5 vols., Paris, 1655-78; several other editions have appeared and the work was translated into Italian and German), and to the Oratorian Cabassut for "Historia ecclesiastica" (Lyons, 1685). Although the Jesuit Louis Maimbourg did not write a continuous ecclesiastical history, he published numerous treatises (Paris, 1673-83) on various important phases in the life of the Church (Arianism, Iconoclasm, Greek Schism, struggle between the popes and the emperors, Western Schism, Lutheranism, and Calvinism). Among the great ecclesiastical historians of this period, whose works have a permanent value, three names stand out prominently.

The first is Noël Alexandre (Natalis Alexander), a Dominican (q. v.). The second is Claude Fleury, who, in the interest especially of educated readers, wrote a "Histoire ecclésiastique" in 20 volumes, reaching to 1414 (Paris, 1691-1720). He adopts throughout an attitude of moderate Gallicanism (see FLEURY). The third, one of the greatest church historians of France, is Louis Sebastian le Nain de Tillemont (q. v.). To these must be added the great Bossuet, who, in his "Discours sur l'histoire universelle" (Paris, 1681), treated in masterly fashion the history of the Church as far as Charlemagne. The Christian philosophy of history found in him an exponent of sublime genius. His "Histoire des variations des églises protestantes" (2 vols., Paris, 1688) describes the changes which the Waldenses, Albigenses, Wyclifites, and Hussites, as well as Luther and Calvin, made in the fundamental doctrines of the Church. These French church historians of the seventeenth century are far superior to their successors in the eighteenth. Several French writers, it is true, produced elegant narratives, if we consider only external form, but they do compare unfavourably with their predecessors in criticism of their sources and in scientific accuracy. The following are noteworthy: François Timoléon de Choisy, "Histoire de l'Eglise" (11 vols., Paris, 1706-23); Bonaventure Racine (Jansenist), "Abrégé de l'histoire ecclésiastique" (13 vols., Cologne, properly Paris, 1762-7); Gabriel Ducreux, "Les siècles chrétiens" (9 vols., Paris, 1775; 2nd ed. in 10 vols., Paris, 1783). The widest circulation was attained by the "Histoire de l'Eglise" of Bérault-Bercastel (q. v.).

Next to France, Italy during this period produced the greatest number of excellent church historians, chiefly, however, in Christian archaeology and special departments of history. The well-known names of Cardinals Noris, Bona, and Pallavicini, Archbishop Mansi of Lucca, the Vatican librarian Zacagni, the learned Ughelli, Roncaglia, Bianchini, Muratori, the brothers Pietro and Girolamo Ballerini, Gallandi, and Zaccaria, are enough to indicate the character and extent of historical research carried on in the Italian peninsula during the eighteenth century. Among the general histories of the Church, we may mention the "Storia Ecclesiastica" of the Dominican Giuseppe Agostino Orsi (q. v.). A church history of similarly vast proportions was undertaken by the Oratorian Sacarelli. A third work, of an even more comprehensive nature and reaching to the beginning of the eighteenth century, was written by the French Dominican, Hyacinthe Graveson, resident in Italy, "Historia ecclesiastica variis colloquiis digesta" (12 vols., Rome, 1717—). Mansi continued it in two volumes to 1760. Compendia of general church history, widely read even outside Italy, were written by the Augustinian Lorenzo Berti ("Breviarium historiae ecclesiasticæ", Pisa and Turin, 1761-8), to whom we are also indebted for three volumes of "Dissertationes historice" (Florence, 1753-6); Carlo Sigonio, who treated the first three centuries (2 vols., Milan, 1758), and Giuseppe Zola, who treats the same period in his "Compendiarium de rebus ecclesiasticis" (3 vols., Pavia, 1780—), and who also wrote "Prolegomena comment. de rebus eccl." (ibid., 1779).

In Spain, general church history found no representatives among the ecclesiastical writers of the eighteenth century. On the other hand, the Augustinian Enrique Flórez began at this period a monumental work on the ecclesiastical history of Spain, the famous "España sagrada", which at the death of the author in 1773 had reached its twenty-ninth volume. Manuel Risco continued it to the forty-second volume, and, since his death, it has been carried still nearer to completion, the fifty-first volume appearing in 1886. The other countries of Europe also failed to produce original works on the general history of the Church. The conditions of Catholics about this time were too

unfavourable to permit the undertaking of extensive scientific histories. Some masterly special works appeared in Germany, monographs of particular dioceses and monasteries, but general church history was not cultivated until Joseph II had executed his reform of theological studies. Even then there appeared only small works, mostly excerpted from the great French ecclesiastical histories, superficial, Josephinistic in temper, and hostile to Rome. Among them are Lumper's "Institutiones historiae ecclesiasticae" (Vienna, 1790); the "Institutiones historiae eccl." of Dannemeyer (2 vols., Vienna, 1788), relatively the best; the "Synopsis histor. relig. et eccl. christ." of Royko (Prague, 1785); the "Epitome hist. eccl." of Gmeiner (2 vols., Gratz, 1787-1803), and similar works by Wolf, Schmalzfuss, Stöger, Becker, all of them now utterly valueless. The Netherlands also produced only compendia, e. g. those of Mutsaerts (2 vols., Antwerp, 1822), Rosweyde (2 vols., Antwerp, 1622), M. Chefneux ("Ecl. Cathol. speculum chronographicum", 3 vols., Liège, 1666-70). Needless to add, in Great Britain and Ireland the sad condition of Catholics made scientific work impossible.

(b) Protestant Church Historians.—It was long after the publication of the "Magdeburg Centuries" (see above) before Protestant scholars again undertook extensive independent work in the province of church history. Their momentous division into Reformed and Lutherans on the one hand, and the domestic feuds among the Lutherans on the other, engrossed the minds of the Protestants. When Protestant scholarship again busied itself with ecclesiastico-historical research, the Reformed Churches took the lead and retained it into the eighteenth century. This was true not only in the domain of special history, in which they issued important publications (e. g. Bingham's "Antiquitates ecclesiasticae", 1722; the works of Grabe, Beveridge, Blondel, Daillé, Saumaise, Usher, Pearson, Dodwell, etc.), but also in that of general church history. Among their writers on this subject we must mention Hottinger, whose "Historia ecclesiastica Novi Test." (9 vols., Hanover, 1655-67) is filled with bitter hatred against the Catholic Church; Jacques Basnage, the opponent of Bossuet ("Histoire de l'Eglise depuis Jésus-Christ jusqu'à présent", Rotterdam, 1699); Samuel Basnage, the opponent of Baronius ("Annales politico-eccl.", 3 vols., Rotterdam, 1706), and Spanheim ("Introductio ad hist. et antiquit. sac.", Leyden, 1687; "Historia ecclesiastica", *ibid.*, 1701). The Reformed Churches produced moreover a number of manuals of church history, e. g. Turretini, "Hist. eccl. compendium" (Halle, 1750); Venema, "Institut. histor. eccl." (5 vols., Leyden, 1777); Jablonski, "Institut. hist. eccl." (2 vols., Frankfurt, 1753). Similar Protestant manuals appeared in England, e. g. Milner, "History of the Church of Christ" (4 vols., London, 1794); Murray, "History of Religion" (4 vols., London, 1794), and Priestley, "History of the Christian Church".

During the seventeenth century, the Lutherans produced little of value in the field of church history, other than a much used "Compendium histor. eccl." by Seckendorf and Bockler (Gotha, 1670-6). But a new era in Lutheran ecclesiastical historiography dates from Arnold's "Unparteiische Kirchen- und Ketzerhistorie" (2 vols., Frankfurt am M., 1699). This pietist author is friendly to all the sects, but bitterly inimical to the Catholic Church and to orthodox Lutheranism. His standard is neither dogma nor Scripture, but subjective "interior light". Calmer judgment is found in Eberhard Weissmann's "Introductio in memorabilia ecclesiastica historiae sacrae Novi Test." (2 vols., Tübingen, 1718). Superior to the works of all preceding Lutheran writers, both because of their thoroughness and their dignified diction, are the Latin historical writings of Joh. Lor. Mosheim, particularly his "De rebus christ. ante

Constantinum Magnum" (Helmstadt, 1753), and "Institutiones histor. eccl. antiquioris et recentioris" (*ibid.*, 1755). They betray, however, a tendency towards a rationalistic concept of the Church, which appears throughout as an institution of secular origin. His "Institutiones" were translated into German and continued by two of his pupils, J. von Einem and Rud. Schlegel (Leipzig, 1769-; Heilbronn, 1770-). Further progress was made in the works of Pfaff, chancellor of Tübingen ("Institutiones histor. eccl.", Tübingen, 1721), of Baumgarten ("Auszug der Kirchengeschichte", 3 vols., Halle, 1743-), Pertsch ("Versuch einer Kirchengeschichte", 5 vols., Leipzig, 1736-), Cotta ("Versuch einer ausführlichen Kirchenhistorie des neuen Testaments", 3 vols., Tübingen, 1768-73). Special works, excellent for their time, were written by the two Walchs—Joh. Georg Walch issuing "Eine Geschichte der Religionsstreitigkeiten innerhalb und ausserhalb der evangelisch-lutherischen Kirche" in two parts, each comprising five volumes (Jena, 1733-9), while his son Christian Wilhelm published a lengthy "Ketzergeschichte", whose eleventh volume reaches to the Iconoclasts (Leipzig, 1762-85). The latter also wrote a "Religiongeschichte der neuesten Zeit", beginning with Clement XIV (to which Planck added three volumes) also a "Historie der Kirchenversammlungen" (Leipzig, 1759), and a "Historie der röm. Päpste" (Göttingen, 1758). The most important Lutheran work on general church history is that of J. Mathias Schröckh, a pupil of Mosheim and a professor at Wittenberg; "Christliche Kirchengeschichte bis zur Reformation" in thirty-five volumes (Leipzig, 1768-1803), continued as "Kirchengeschichte seit der Reformation" in eight volumes (Leipzig, 1803-8), to which Tzschirmer added two others (1810-12). The whole work, scholarly but too diffuse and laying excessive emphasis on the biographical element, includes forty-five volumes and closes with the beginning of the nineteenth century. Meanwhile the shallow rationalism of the eighteenth century had spread widely, and soon affected many works on church history. The works of Joh. Salomon Semler, an unbelieving hypercritic, in this respect hold an undesirable pre-eminence, his "Historia eccl. selecta capita" (3 vols., Halle, 1767-), "Versuch eines fruchtbaren Auszuges der Kirchengeschichte" (3 parts, *ibid.*, 1778), and "Versuch christlicher Jahrbücher" (2 parts, Halle, 1782). Most of his contemporaries were more or less openly rationalistic, and church history became a chronicle of scandals (Scandalchronik). Everywhere the writers saw only superstition, fanaticism, and human passion, while the greatest and holiest characters of ecclesiastical history were shamefully caricatured. This spirit is particularly characteristic of Spittler, "Grundriss der Gesch. der christl. Kirche" and Henke "Allgem. Geschichte der chr. K."

(3) The Nineteenth Century.—Ecclesiastico-historical studies have fared better in the nineteenth century. The horrors of the French Revolution led to a vigorous reaction and gave birth to a more ideal spirit in literature. Patriotism and religious zeal revived and exerted a favourable influence on all intellectual life. Romanticism led to a juster appreciation of the Catholic medieval world, while in all departments of learning there appeared an earnest desire to be objective in judgment. Finally, the sources of ecclesiastical history were studied and used in a new spirit, the outgrowth of an ever more definite and penetrating historical criticism. The general result was favourable to the science of history.

(a) Catholic Ecclesiastical Historians.—It was in Catholic Germany that these changes were first noticeable, more particularly in the work of the famous convert, Count Leopold von Stolberg (q. v.). His "Geschichte der Religion Jesu Christi" was issued in fifteen volumes, the first four of which contain the history of the Old Testament and reach to 430. Similarly, the

less important "Geschichte der christlichen Kirche" (9 vols., Ravensburg, 1824-34) by Locherer, rather uncritical and exhibiting the influence of Schrockh, remained unfinished, and reaches only to 1073. The excellent "Geschichte der christlichen Kirche" by J. Othmar von Rauschen is also incomplete. A useful compendium, serious and scientific in character, was begun by Hottig, professor at Landshut, the "Handbuch der christlichen Kirchengeschichte". He completed two volumes (Landshut, 1821-), and reached the Reformation; a third volume, that brought the work down to the French revolution, was added by his successor Döllinger (q. v.). This scholar, who unhappily later on abandoned the Catholic attitude and principles of his earlier days, excelled all previous writers of this century. Johann Adam Möhler wrote several special historical works and dissertations of exceptional merit. His lectures on general church history were published after his death by his pupil, the Benedictine Pius Gams ("Kirchengeschichte", 3 vols., Ratisbon, 1867). To these larger and epoch-making works must be added several compendia, some of which like Klein ("Historia ecclesiastica", Graz, 1827), Ruttentock ("Institutiones hist. eccl.", 3 vols., Vienna, 1832-4), Cherrier ("Inst. hist. eccl.", 4 vols., Pestini, 1840-), were bare summaries of facts; others, like Ritter ("Handbuch der Kirchengeschichte", 3 vols., Bonn, 1830; 6th ed. by Ennen, 1861), and Alzog ("Universalgeschichte der christlichen Kirche", Mainz, 1840; 10th ed. by F. X. Kraus, 1882), are lengthy narratives, critical and thorough. Particular periods or epochs of ecclesiastical history soon found careful cultivation, e. g. by Riffel, "Kirchengeschichte der neuen und neuesten Zeit, vom Anfang der Glaubensspaltung im 16. Jahrhundert" (3 vols., Mainz, 1841-6); Damberger, "Synchronistische Geschichte der Kirche und der Welt im Mittelalter" (in 15 volumes, Ratisbon, 1850-63; the last volume edited by Rattinger), which reaches to 1378. With Döllinger and Möhler we must rank Karl Joseph Hefele, the third of the great German Catholic historians, whose valuable "Konziliengeschichte" is really a comprehensive work on general church history; the first seven volumes of the work (Freiburg, 1855-74) reach to 1448. A new edition was begun by the author (*ibid.*, 1873-); it was carried on by Knöpfler (vols. V-VII), while Hergenröther (later cardinal) undertook to continue the work and published two more volumes (VIII-IX, 1887-90), which carry the history of the Councils to the opening of the Council of Trent. Hergenröther is the fourth great church historian of Catholic Germany. His "Handbuch der allgemeinen Kirchengeschichte" (3 vols., Freiburg im B., 1876-80; 3rd ed., 1884-6; 4th ed., revised by J. P. Kirsch, 1902 sqq.) exhibits vast erudition and won recognition, even from Protestants as the most independent and instructive Catholic Church history. In recent years smaller, but scholarly compendia have been written by Brück, Kraus, Funk, Knöpfler, Marx, and Weiss. Numerous periodicals of a scientific nature bear evidence to the vigorous activity at present displayed in the field of ecclesiastical history, e. g. the "Kirchengeschichtliche Studien" (Munster), the "Quellen und Forschungen aus dem Gebiet der Geschichte" (Paderborn), the "Forschungen zur christlichen Literatur- und Dogmengeschichte" (Mainz and Paderborn), the "Veröffentlichungen aus dem kirchenhistorischen Seminar München".

France.—In France the study of church history was long in attaining the high standard it reached in the seventeenth century. Two extensive narratives of general church history appeared. That of Rohrbacher is the better, "Histoire universelle de l'Eglise catholique" (Nancy, 1842-9). It exhibits little independent research, but is a diligently executed work, and the author made a generous and skilful use of the

best and most recent literature (new ed. with continuation by Guillaume, Paris, 1877). The second work is by Darras (q. v.). In recent years the science of ecclesiastical history has made great progress in France, both as to genuine criticism and thorough scholarly narrative. The critical tendency, aroused and sustained principally by Louis Duchesne, continues to flourish and inspires very important works, particularly in special ecclesiastical history. Among the writings of Duchesne the "Histoire ancienne de l'Eglise" (2 vols., already issued, Paris, 1906-) deserves particular mention. Another important publication is the "Bibliothèque de l'enseignement de l'histoire ecclésiastique" a series of monographs by different authors, of which fourteen volumes have so far appeared (Paris, 1896-), and some have gone through several editions. A very useful manual is Marion's "Histoire de l'Eglise" (Paris, 1906).

Belgium.—Belgium, the home of the Bollandists and seat of the great work of the "Acta Sanctorum", deserves particular credit for the truly scientific spirit in which that noble work is conducted. The Bollandist de Smedt wrote an excellent "Introductio generalis in Historiam ecclesiasticam critice tractandam" (Louvain, 1876). A manual of church history was published by Wouters ("Compendium hist. eccl.", 3 vols., Louvain, 1874), who also wrote "Dissertationes in selecta capita hist. eccl." (6 vols., Louvain, 1868-72). Jungmann dealt with general church history to the end of the eighteenth century in his "Dissertationes selectæ in historiam ecclesiasticam". The serious character of ecclesiastico-historical studies at Louvain is best seen in the "Revue d'histoire ecclésiastique" edited by Cauchie and Ladeuze.

Italy.—Some good manuals have appeared in Italy which evidence a beginning of serious studies in church history, e. g. Dessignore, "Institutiones histor. eccles.", edited by Tissani (4 vols., Rome, 1837-46); Palma, "Prælectiones hist. eccl." (4 vols., Rome, 1838-46); Prezziner, "Storia della Chiesa" (9 vols., Florence, 1822-); Ign. Mozzoni, "Prolegomena alla storia universale della chiesa" (Florence, 1861), and "Tavole cronologiche critiche della storia universale della chiesa" (Venice, 1856-). Balan published as a continuation of Rohrbacher's universal ecclesiastical history the "Storia della chiesa dall'anno 1846 sino ai giorni nostri" (3 vols., Turin, 1886). Special works of great value were produced in various departments, above all by Giovanni Battista de Rossi in Christian archæology. However, certain recent works on general church history—e. g. Amelli, "Storia della chiesa" (2 vols., Milan, 1877); Tagliatela, "Lezioni di storia eccles. e di archeologia cristiana" (4 vols., Naples, 1897); Pighi, "Inst. hist. eccl.", I (Verona, 1901)—do not come up to the present standard, at any rate, from the standpoint of methodical and critical treatment.

Spain.—The ecclesiastical history of Spain inspired two great works, one by Villanueva ("Viage literario a las iglesias de España", Madrid, 1803-21; 1850-2), the other by de la Fuente ("Historia ecclesiastica de España", 2nd ed., 2 vols., Madrid, 1873-5). In the field of general history, only Amat's "Historia eclesiastica o tratado de la Iglesia de Jesu Christo" (12 vols., Madrid, 1793-1803, 2nd ed. 1807) appeared—not a very thorough work. Juan Manuel de Berriozobal wrote "Historia de la Iglesia en sus primos siglos" (4 vols., Madrid, 1867). The Dominican Francisco Rivaz y Madrazo published a manual ("Curso de historia ecclesiastica", 3 vols., 3rd ed., Madrid, 1905).

Holland.—The first scientific Catholic manual of church history in Dutch was recently written by Albers ("Handboek der algemeene Kerkgeschiedenis", 2 vols., Nijmegen, 1905-7; 2nd ed., 1908).

England.—In English-speaking lands general church history has hitherto been but little cultivated; special

ecclesiastical history, on the other hand, can point to a multitude of works. Among Catholic productions may be noted Lingard's "History of England" and his "History and Antiquities of the Anglo-Saxon Church", which are reliable works of reference for early and medieval English ecclesiastical history; Butler's "Historical Memoirs of English, Irish and Scottish Catholics since the Reformation" (London, 1819; with Milner's "Supplementary Memoirs", *ibid.*, 1820); Flanagan's "History of the Church of England" (2 vols., London, 1850); Reeve's "Short View of the History of the Church". The post-Reformation period is treated in Dodd, "Church History of England, 1500-1688" (ed. Tierney, 5 vols., London, 1839). Other useful works are Gillow's "Bibliographical Dictionary of English Catholics since the Reformation", Allies' "The Formation of Christendom" (q. v.), Digby's "Mores Catholici, or Ages of Faith" (q. v.).

Scotland.—A brief Catholic general account of the history of the Church in Scotland is that of T. Walsh, "History of the Catholic Church in Scotland" (1876). An excellent history is that of Canon Bellesheim, with a very full bibliography, translated into English by Dom Hunter-Blair, "History of the Catholic Church in Scotland" (4 vols., London, 1887, *sqq.*). The ablest non-Catholic work is Calderwood's "History of the Kirk" (8 vols., Edinburgh, 1842).

Ireland.—The numerous civil histories of Ireland abound in materials for its church history. The first serious Catholic work on the general ecclesiastical history of Ireland was that of Lanigan, "Ecclesiastical History of Ireland" (4 vols., 2nd ed., Dublin, 1829), reaching only to the beginning of the thirteenth century. A single volume work is that of the Franciscan Brennan, "Ecclesiastical History of Ireland" (Dublin, 1864). Important works dealing with particular epochs and aspects of Irish history: Haddan and Stubbs, "Councils and Eccl. Documents relating to Great Britain and Ireland" (non-Catholic, London, 1873); W. Mazière-Brady, "The Episcopal Succession in England, Scotland and Ireland, 1400-1873" (Rome, 1876); Ware and Harris, "History of the Bishops, Antiquities, and Writers of Ireland" (non-Catholic, 3 vols., Dublin, 1739-1845); Malone, "Church History of Ireland from the Anglo-Norman Invasion to the Reformation" (Dublin, 1882); O'Hanlon's "Lives of the Irish Saints"; Killen, "Ecclesiastical History of Ireland" (Presbyterian, London, 1875). Good Catholic accounts of the early Irish Church are those of Greith (Freiburg, 1867), Moran (Dublin, 1864), Gargan (*ibid.*, 1864), Salmon (*ibid.*, 1900). Protestant views were set forth by Stokes, "Ireland and the Celtic Church to 1172" (London, 1886), Loofs (1882), and Zimmer (1907). For a good bibliography of Irish ecclesiastical history see Bellesheim, "Gesch. der kath. Kirche in Irland" (3 vols., Mainz, 1890—).

United States.—No satisfactory general history of the Church in the United States has yet appeared. A very learned documentary work is that of John Gilmary Shea, "History of the Catholic Church in the United States" (4 vols., New York, 1886). O'Gorman's, "A History of the Roman Catholic Church in the United States" (New York, 1895), contains a useful bibliography.

For Australia see Cardinal Moran's "History of the Catholic Church in Australasia" (Sydney, 1896).

(b) Protestant Church Historians.—Among Protestants, Church history was cultivated chiefly by German Lutherans; their works came to be authoritative among non-Catholics. Planck, the first important Protestant ecclesiastical historian of the nineteenth century, exhibits the influence of the rationalism of the preceding age, but exhibits also more solidity and more Christian sentiment both in his special works on the history of Protestant theology, and in his important "Geschichte der christlichkirchlichen Gesellschaftsverfassung" (5 vols., Hanover, 1803-9). Ne-

ander is superior to him in talents and erudition, and moreover retains belief in the supernatural. His "Allgemeine Geschichte der christlichen Religion und Kirche" (5 vols., Hamburg, 1825-45) reaches to the end of the thirteenth century; after his death a sixth volume (to the Council of Basle) was added (1852). He also wrote a history of the Apostolic epoch, "Geschichte der Pflanzung und Leitung der christlichen Kirche durch die Apostel" (2 vols., Hamburg, 1832—). To his school belong Guericke ("Handbuch der Kirchengeschichte", Halle, 1833; 9th ed., Leipzig, 1865—), Jacobi ("Lehrbuch der Kirchengeschichte", Berlin, 1850), Schaff ("Geschichte der alten Kirche", Leipzig, 1867), Niedner ("Gesch. der christl. Kirche", Leipzig, 1846). They are stricter Lutherans however. A different method is followed by Danté ("Lehrbuch der Kirchengeschichte", 2 vols., Jena, 1818-26); the text is brief and condensed, but is fortified by lengthy excerpts from the sources. A similar plan is followed by Gieseler ("Lehrbuch der Kirchengeschichte", 5 vols., Bonn, 1824-57; a sixth volume was added by Redepening from the author's manuscript). Other manuals were written by Engelhardt (3 vols., Erlangen, 1832, with a volume of sources, 1834) and Kurtz ("Lehrbuch der Kirchengeschichte", Mitau, 1849). Lindner's "Lehrbuch der Kirchengeschichte" (3 vols., Leipzig, 1848-54) is strictly Lutheran; less biased are Hasse ("Kirchengeschichte", 3 parts, Leipzig, 1864) and Herzog ("Abriss der gesammten Kirchengeschichte", 3 vols., Erlangen, 1876, *sq.*). Hasse's "Lehrbuch der Kirchengeschichte" and "Kirchengeschichte" are moderate in views, though frankly anti-Catholic. His diction is elegant, and his character-sketches finely drawn.

Another Protestant school is more in sympathy with Semler's rationalistic views. These writers are Hegelian in temper and spirit and seek to strip Christianity of its supernatural character. Its first leaders were the so-called "Neo-Tübingen School" under Johann Christian Baur, whose ecclesiastico-historical writings are directly anti-Christian: "Das Christentum und die Kirche der drei ersten Jahrhunderte" (Tübingen, 1853); "Die christliche Kirche vom 4. bis zum 6. Jahrhundert" (*ibid.*, 1859); "Die christliche Kirche des Mittelalters" (*ibid.*, 1860); "Die neuere Zeit" (*ibid.*, 1861-3); "Das neunzehnte Jahrhundert" (*ibid.*, 1863-73). Baur himself and his rationalistic adherents, Schwegler, Ritschl, Rothe, wrote also special works on the origins of the Church. The "Allgemeine Kirchengeschichte" of Gfrörer (7 parts, Stuttgart, 1841), written prior to his conversion, is a product of this spirit. Though constantly attacked, this school, whose chief living representative is Adolf Harnack, predominates in German Protestantism. Moeller, in his able "Lehrbuch der Kirchengeschichte" writes with moderation; similarly Müller in his yet unfinished "Kirchengeschichte" (Tübingen, 1892, *sqq.*).

In the nineteenth century also the Reformed (see above) produced less in the province of general church history than the Lutherans. Among the German authors must be named: Thym, "Historische Entwicklung der Schicksäle der Kirche Christi" (2 vols., Berlin, 1800—); Munscher, "Lehrbuch der christl. Kirchengeschichte" (Marburg, 1801); Ebrard, "Handbuch der Kirchen- und Dogmengeschichte" (4 vols., Erlangen, 1865—); the most important of the Reformed Church historians is Hagenbach, "Kirchengeschichte" who is temperate in his criticism of the Catholic Middle Ages. Among the Reformed Church historians of France must be mentioned: Matter, "Histoire du christianisme et de la société chrétienne" (4 vols., Strasburg, 1829); Potter, "Histoire du christianisme" (8 vols., Paris, 1856); Et. Chastel, "Histoire du christianisme depuis son origine jusqu'à nos jours" (5 vols., Paris, 1881-3); Pressensé, "Histoire des trois premiers siècles"; d'Aubigné, "Histoire de la réformation du 16^{me} siècle" (Paris, 1831—).

Holland produced: Hofstede de Groot, "Institutiones hist. eccles." (Groningen, 1835); Royaards, "Compendium hist. ecl. christ." (Utrecht, 1841-45).

In the past, England, Scotland, and North America have cultivated for the most part special fields, especially the early Christian period and the ecclesiastical history of particular nations. The most important general ecclesiastical history of England hitherto produced by Anglican scholars is that edited by W. Stephens and W. Hunt—"A History of the English Church" by various writers (Hunt, Stephens, Capes, Gairdner, Hutton, Overton), of which ten volumes have already (1910) appeared. An exhaustive history of the period since the Reformation is that of Dixon, "History of the Church of England since 1529" (5 vols., 1878-1902). In his "Lollardy and the Reformation in England" (2 vols., London, 1908), Dr. James Gairdner gives an able and impartial account of the genesis of the Reformation in England. A very useful work is the "Dictionary of Christian Biography, Literature, Sects and Doctrines during the first eight centuries", edited by William Smith and H. Wace (4 vols., London, 1879—). We might also mention the "History of the Christian Church" by Canon James Robertson of Canterbury, reaching to 1517; C. Wordsworth's "Church History" (4 vols., London, 1885), and the "History of the Christian Church" by Schaff (6 vols., New York, 1882-1909). Other Protestant histories are: Archdeacon Hardwick's "History of the Christian Church, Middle Age" (3rd ed. by Stubbs, London, 1872), and "Reformation" (3rd ed. by Stubbs, London, 1873); French's "Lectures on Mediæval Church History" (London, 1877); Milman's "History of Latin Christianity to Nicholas V, 1455" (revised ed., London, 1866); Philip Smith's "History of the Christian Church to the end of the Middle Ages" (New York, 1885); George P. Fisher's "History of the Christian Church" (New York, 1887). Fair and impartial in many ways is Wakeman's "Introduction to the Church History of England" (3rd ed., London, 1907). To these may be added James Murdock's translation of Mosheim's "Institutes" (New York, 1854), and Henry B. Smith's translation of Gieseler's "History of the Church" (New York, 1857-80). For the sources of English Church history in general see Gross, "The Sources of English History to 1489" (New York, 1900), and Gardiner and Mullinger, "Introduction to the Study of English History" (latest ed., London, 1903).

c) Greek Orthodox Writers.—In recent time Greek Orthodox writers have produced two works which indicate a growing interest in general Church history: the *Ἱστορία Ἐκκλησιαστικῆ* by Diomedes Kyriakus (2 vols., Athens, 1882), and the *Ἐκκλησιαστικὴ ἱστορία ἀπὸ Ἰησοῦ Χριστοῦ μέχρι τῶν καθ' ἡμᾶς χρόνων* by Philaretus Bapheides (Constantinople, 1884—).

In conclusion it may be added that the biographies of most of the Catholic authors mentioned above will be found in THE CATHOLIC ENCYCLOPEDIA.

FREEMAN, *The Methods of Historical Study* (London, 1886); BERNHEIM, *Lehrbuch der historischen Methode* (3rd ed., Leipzig, 1903); MEISTER in *Grundriss der Geschichtswissenschaft*, vol. I, pt. I (Leipzig, 1906); DE SMEDT, *Principes de la critique historique* (Lüttich, 1883); LANGLOIS and SEIGNOBOS, *Introduction aux études historiques* (3rd ed., Paris, 1905); KNÖPFER, *Wert und Bedeutung des Studium der Kirchengeschichte* (Munich, 1894; cf. also SCHRÖRS, *Hist. Jahrb.*, 1894, pp. 133-145); EHRHARD, *Stellung und Aufgabe der Kirchengeschichte in der Gegenwart* (Stuttgart, 1898); DE SMEDT, *Introductio generalis ad historiam ecclesiasticam criticè tractandam* (Ghent, 1876); NIRSCHL, *Propädeutik der Kirchengeschichte* (Mainz, 1888); KIHN, *Enzyklopädie und Methodologie der Theologie* (Freiburg, im Br., 1892); HAGENBACH, *Enzyklopädie und Methodologie der theologischen Wissenschaften* (12th ed., Leipzig, 1889); HURTER, *Nomenclator literarius theologiae catholicae* (3rd ed., Innsbruck, 1903—); HERGENRÖTHER, *Handbuch der allgemeinen Kirchengeschichte*, I (4th ed. by KIRSCH, Freiburg im Br., 1902), Introduction; DELEHAYE, *Les légendes hagiographiques* (2nd ed., Paris, 1906); FONCK, *Wissenschaftliches Arbeiten. Beiträge zur Methodik des akademischen Studiums* (Innsbruck, 1908).

J. P. KIRSCH.

Hittites. See HETHITES.

Hittorp, MELCHIOR, theologian and liturgical writer, b. about 1525, at Cologne; d. there in 1584. On the completion of his studies he obtained the degree of Licentiate of Theology, and was appointed canon at S. Maria ad Gradus. In 1593 he was elected dean of the collegiate church of St. Cunibert. At the request of Jacob Pamelius, then canon of Bruges and later Bishop of St-Omer, Hittorp published in 1568 "Vetustorum ecclesiarum patrum libri varii de divinis catholice ecclesie officiiis", a work containing various writings of Isidore of Seville, Alcuin, Rhabanus Maurus, Strabo, Berno, and others. An enlarged edition by Ferrari (1591) was reproduced in the "Magn. Bibl. vet. PP.", X (Paris, 1644).

FRANCIS MERSHMAN.

Hladnik, FRANZ VON PAULA, botanist and schoolmaster, b. 29 March, 1773, at Idria, Carniola, Austria; d. 25 November, 1844, at Laibach, Carniola. He was the son of a mining official; he studied philosophy and theology and became a priest in 1796. His weak health prevented his undertaking parish duties, and in 1796 he occupied the post of *Skriptor* in the library of the Laibach Lyceum, but soon gave this up, and for forty years devoted himself to teaching in the different schools of Laibach. In 1803 he was already director of the Normal School and in 1807 prefect of the gymnasium, which post he held till his sight failed. In his last years he was blind. Hladnik was a true teacher, who brought the gymnasium of Laibach to a flourishing condition, for which he was honourably distinguished by the Emperor Francis. During the French occupation, Hladnik was appointed professor of botany and natural history in the Central School of Laibach, and presented with a piece of land to be laid out for the cultivation of the flora of Carniola. It soon contained 600 kinds of local plants.

Whilst occupied with his botanical garden, he was also delivering lectures on botany and spent his holidays for thirty years in making researches in the crownland of Carniola. These researches form his most important contributions to science. He bequeathed his rich botanical collection to the Rudolfinum Public Museum, founded in Laibach in 1831. The museum owes him much and contains his portrait, painted by A. von Hermannsthal. Among Hladnik's pupils was Skofitz, the founder of the "Oesterr. Bot. Zeitschrift", now in its sixtieth year of publication. Hladnik discovered several new kinds of plants and certain genera have been named after him. He did not publish any scientific works; his manuscripts now in possession of the Carniola Historical Society are written in Latin, German, French, and Slavonian, proving the learning and industry of the author. They treat of ascetic theology, history, botany, and mineralogy.

JOS. H. ROMPEL.

Hoban, MICHAEL JOHN. See SCRANTON, DIOCESE OF.

Hobart, ARCHDIOCESE OF (HOBARTENSIS), comprises Tasmania, Bruny Island, and the Cape Barren, Flinders, King, and other islands in Bass Straits. Tasmania was originally under the jurisdiction of the vicar Apostolic of Capetown, Mauritius and New Holland, and afterwards under that of New Holland, when it was made a separate vicariate. Hobart was made a diocese in 1842. On the establishment of the Australian hierarchy the Bishop of Hobart was suffragan of the Archbishop of Sydney. When in 1874 Melbourne became the archdiocese of the new

province of Melbourne, Hobart was named one of its suffragan sees. It remained part of the province of Melbourne until 1888, when Hobart was made an archdiocese and Tasmania became an independent ecclesiastical province. Though Tasmania was discovered in 1642 by the Dutch, no attempt at settlement seems to have been made by them. Towards the end of the eighteenth century, the presence of French exploring expeditions aroused the suspicions of the British, who had already established a colony in New South Wales, and led to the permanent occupation of Tasmania by Britain. The first settlement was made in 1803 at Risdon, but in 1804 it was removed to Sullivan's Cove, the site of the present city of Hobart. The population of Tasmania was about 183,000 on 31 December, 1908 (Catholics, 32,000). The circumstances of the early settlement of the island did not tend to religious progress. It was made the dumping-ground for the refractory prisoners of Botany Bay.

There was no Catholic chaplain to administer to the prison population and the first few free settlers until 1821, when Rev. Philip Connolly was appointed; he was vicar-general to the Vicar Apostolic of Mauritius for Van Diemen's Land and New Holland. His first church, a small wooden structure, was named after St. Virgilius; in 1835 Father Cotham, O.S.B., was appointed to help him. Connolly died in 1839, and Bishop Polding appointed Father Therry as his vicar-general in Tasmania. The account of his struggles in those early days, when as in other British colonies an attempt was made to make the settlement as Protestant as possible, is very interesting. Therry and his colleagues did wonders among their flock. They had a parish of 26,215 square miles, with a number of scattered settlements, without roads to make passage easy, and with hostile blacks to endanger their lives. When in 1842 Bishop Willson took possession of the See of Hobart, he found a land well prepared for his labours.

It was mainly through his efforts in directing attention to the inhumanity of the prison system that the penal settlement at Norfolk Island, then under his jurisdiction, was broken up, the lot of the prisoners in Tasmania made much more tolerable, and the system itself finally abandoned. His successor, Most Rev. Daniel Murphy, who arrived in 1866, had laboured in India previously. He died on 27 Dec., 1907. While Dr. Willson's episcopate was chiefly noted for his labours in the cause of humanity, Dr. Murphy laboured for the training of the young. The Sisters of Charity had long worked in Hobart under Bishop Willson. Under Bishop Murphy their work was extended, and the Presentation Sisters, the Sisters of St. Joseph, the Sisters of Mercy, and the Sisters of the Sacred Heart all opened schools. Dr. Murphy's last work was the erection of the College of St. Virgilius for the young boys of his flock. The present archbishop, Most Rev. Patrick Delany, has arranged with the Irish Christian Brothers to take charge of St. Virgilius's College. At the request of the archbishop, the Catholic schools of the island are subject to inspection and examination by the State School inspectors, but they receive nothing from the public funds. The State schools have Scripture lessons in their curriculum. The teacher, whether a believer or an unbeliever, is bound to give them. If Catholic parents object, their children are exempt from attendance at these lessons. The Catholics strongly protest against the injustice of being forced to contribute to a system which teaches a kind of mild Protestantism to the children.

The State offers a number of scholarships to be competed for by the pupils of all schools, whether public or "private". But as both schools and teachers have now by law to be registered and licensed by the School Registration Board, there is, strictly speaking, no longer any "private" school in the State. Education

is now free in the public primary schools. There is a Tasmanian university, on the board of which a Catholic priest has a place, just as a priest holds a seat on the school registration board. The personal influence and example of the Bishops and Archbishops of Hobart and of the pioneer priests succeeded in removing almost altogether the religious acerbities by which other British dependencies are often troubled. There are at present in the archdiocese, the archbishop, 26 priests, 135 nuns, 4 superior day schools, 25 primary schools, 1 orphanage, 1 Magdalen home (under the Good Shepherd nuns), and 3280 children in Catholic schools. Like every Australian province, Tasmania has its Catholic paper, the "Monitor". During the early days the clergy were paid by the State as chaplains to the prison population. The endowment continued after the State had received the right of representative government. In 1869 State endowments to religion were withdrawn, but certain sums of money were voted, according to the number of their adherents, to the hitherto endowed churches. The sum granted to the Catholics is held in State bonds and returns to the archdiocese about £700 a year. The aborigines are extinct, having been "civilized" out of existence. The last survivor died in 1876. There are some half-castes who are forced by the Government to reside on the islands in Bass Straits. They, too, are dying out.

JOHN O'MAHONEY.

Hodgson, SYDNEY, layman and martyr; date and place of birth unknown; d. at Tyburn, 10 Dec., 1591. He was a convert to the Church. In 1591, while Father Edmund Jennings was saying Mass at the house of Mr. Swithin Wells in London, the pursuivant Topcliffe and his assistants broke into the house just at the moment of consecration. On this account alone, their entrance into the room was obstructed by some of the male members of the congregation, including Sydney Hodgson, until the conclusion of the Mass; these gentlemen then surrendered themselves. Hodgson and the others were brought to trial on 4 Dec., the charge against him being merely that of receiving and relieving priests, and of being reconciled to the Church of Rome. He was offered his life if he would give some sort of a promise of occasional conformity to the Established Church, but as he preferred to die for his religion, he was condemned and executed.

C. F. WEMYSS BROWN.

Hofbauer, CLEMENT. See CLEMENT MARY HOFBAUER, SAINT.

Hofer, ANDREAS, patriot and soldier, b. at St. Leonhard in Passeyrthale, Tyrol, 22 Nov., 1767; executed at Mantua, 20 Feb., 1810. His father was known as the "Sandwirth" (i. e., landlord of the inn on the sandy spit of land formed by the Passeyr. The inn had been in the family for over one hundred years). Hofer's education was very limited. As a youth, he was engaged in the wine and horse trade, but he went farther afield, learned to know men of every class, and even acquired a knowledge of Italian that stood him in good stead later. After his marriage with Anna Ladurner, he took over his father's business, which, however, did not flourish in his hands. Gifted, though not a genius, a dashing but upright young man, loyal to his God and his sovereign, he made many friends by his straightforward character; his stately figure and flowing beard contributing in no small degree to his attractiveness. When the Tyrol was handed over to Bavaria at the Peace of Presburg, the "Sandwirth" was among the delegates who

escorted the departing Archduke John. Thenceforth he attended quietly to his own affairs until, in 1806, he was called to Vienna with others, and was informed of the proposed uprising in the Tyrol. At the outset of the rebellion he was by no means its chief, but acquired fame as a leader mainly by his capture of a Bavarian detachment in the marsh of Sterzing. Hofer was not engaged in the first capture of Innsbruck, being then an officer on the southern frontier with the title of "Imperial Royal Commandant". When the French broke victoriously into the Tyrol and occupied Innsbruck, he issued a general summons to the people, which roused many patriots and drew them to his standard. The fact that the enemy, underestimating the strength of the popular party, left only a small garrison of troops, favoured their cause. After various skirmishes Hofer's men broke

ANDREAS HOFER.

into Innsbruck on 30 May. The real battle came off at Berg Isel. The "Sandwirth" took no part in the conflict; nevertheless he directed it with skill and success. The Tyrol was now free from invasion for two months; indeed, a few bands of insurgents ventured into Bavarian and Italian territory. Under these conditions Hofer thought he could return to his home and leave the government in the hands of the Intendant Hormayr, who had been sent from Vienna. But when, in spite of positive assurances from the emperor, the Tyrol was abandoned at the armistice of Znaim, and Marshal Lefebvre advanced to subdue the country, the people determined to risk their lives for faith and freedom. Again the written order of the "Sandwirth" flew round the valleys. Haspinger and Speckbacher organized the people, and on 13 and 14 August occurred the second battle of Berg Isel. Haspinger decided the result of the day; but Hofer stood for some time in the very heat of the battle, and by his energetic efforts induced the already weakening ranks to renew their efforts. Henceforth, the Intendant having fled, Hofer took the government into his own hands, moved into the Hofburg, and ruled his admiring countrymen in a patriarchal manner. Francis II bestowed on him a golden medal, but this proved fatal to Hofer, who was thereby strengthened in his delusion that the emperor would never abandon his faithful Tyrolese. Thus it happened that he even disregarded a letter from the Archduke John, as though it were a Bavarian or French proclamation, and on 1 November lost the third battle of Berg Isel against a superior force of the enemy.

The renewed success of the French general and the Bavarian crown prince (afterwards Ludwig I) now determined Hofer to surrender; trusting, however, to his friends and to false rumours, he changed his mind and decided to fight to the last. The mighty columns of the allies soon crushed all resistance, and the leaders of the peasant army saw that nothing remained but flight; Hofer alone remained and went into hiding. A covetous countryman, greedy for the reward offered for his capture, betrayed him. He was surprised in his hiding place, dragged to

Mantua amid insults and outrages, and haled before a court. Without awaiting its sentence a peremptory order from Napoleon ordered him to be shot forthwith. He took his death-sentence with Christian calmness, and died with the courage of a hero. The prophecy he uttered in the presence of his confessor shortly before he died: "The Tyrol will be Austrian again" was fulfilled three years later. His remains were disinterred in 1823 and laid to rest in the court chapel at Innsbruck, where his life-size statue now stands. The emperor ennobled the Hofer family. The youth of Germany has been inspired by his heroic figure, and German poets like Mosen, Schenkendorf, Immermann, etc. have sung of his deeds and sufferings. Even the French pay a wondering homage to his sincere piety, his self-sacrificing patriotism, and his noble sense of honour (Denis in "Hist. gén."; Corréard in "Précis d'histoire moderne": a text-book for the pupils of the military school of St. Cyr).

PIUS WITTMAN.

Höfler, KONSTANTIN VON, historian; b. at Memmingen, Bavaria, 26 March, 1811; d. at Prague, 29 December, 1898. After finishing his studies in the gymnasia at Munich and Landshut, he studied first jurisprudence and then history at the University of Munich under Görres, Döllinger, and especially Schelling, and received his degree in 1831 on presenting the dissertation "Ueber die Anfänge der griechischen Geschichte". Aided by a pension from the government, he studied two more years at Göttingen, where he published a "Geschichte der englischen Civilisten". He then went to Italy, residing chiefly at Florence and Rome, and worked there industriously in the examination of original sources. Returning to Munich he accepted the editorship of the official "Münchener Zeitung" in order to earn a subsistence, but while thus engaged he had by 1838 qualified himself as *Privatdozent* in history at the university. The following year he became extraordinary, in 1841 ordinary, professor of history; in 1842 he became a member of the Academy of Sciences. In 1839 he published "Die deutschen Päpste" in two volumes. After this he devoted himself to his duties as professor until 1846, when he fell into disfavour with King Ludwig I on account of the position he took, along with several other professors, in the popular agitation against the relations of the king with the dancer Lola Montez. He expressed his views on the subject in "Concordat und Constitutionseid der Katholiken in Bayern", and for this was removed from his university position, 26 March, 1847. Although the king after some months took Höfler again into the government service, he was, nevertheless, transferred to Bamberg (Upper Franconia), as keeper of the district archives. With his accustomed zeal he began the study of Franconian history and published in 1849-52 as the fruit of his investigations: "Quellensammlung für fränkische Geschichte", in four volumes, and in 1852-53 "Fränkische Studien", parts I-V. During the same period he issued "Bayern, sein Recht und seine Geschichte" (1850), also in the last mentioned year "Ueber die politische Reformbewegung in Deutschland im Mittelalter und den Anteil Bayerns an derselben" (1850). Further, in the midst of these labours, he began the preparation of his "Lehrbuch der Geschichte" which appeared in 1856.

In 1851 when the Austrian school-system was reorganized, Count Thun called Höfler as professor of history to Prague, where he taught with great success until he retired on a pension in 1882. In 1865 he be-

came a member of the Bohemian Diet, in 1872 a life member of the Austrian House of Lords. In this latter year he was raised to the hereditary nobility and received the order of the Iron Crown. In politics he was one of the leaders of the German-Bohemian party, a branch of the constitutional party of that period, and was one of the chief opponents of the Czechs. From 1872, however, he almost practically retired from politics, partly from the increasing opposition which grew up in the German parties in Austria against "Catholicism", partly because the clerical party was drawing closer to the Slavs. Conflicts were unavoidable; on the one hand he was a thorough German, absolutely convinced of the great mission of the Germans in Austria, on the other he was one of the most faithful sons of the Catholic Church. Consequently he gradually withdrew from party politics, without losing, however, his strong interest in the struggles of the mostly anticlerical German-Bohemians against the Czechs, and devoted himself entirely to the cultivation of German sentiment and intellectual life. By his activity, both as teacher and author, he became the founder of the modern school of German-Bohemian historical research, which received enthusiastic support from the Society founded by him, in 1862, for the study of the history of the German element in Bohemia, and in consequence ranks as one of the most deservedly respected historians of Austria.

Höfler gave special attention to the history of the Hussite movement and reached the conclusion that it was directed less against the papacy than against the German power in Bohemia and against the cities. He characterized the movement as "an unsympathetic historical phenomenon, a movement foredoomed to failure, which soon became a burden to itself". He saw in Hus only an antagonist of Germanism, the destroyer of the University of Prague and of the sciences. His works on Hussitism are: "Geschichtsschreiber der husitischen Bewegung" (1856-66), in three volumes; "Magister Johannes Hus und der Abzug der deutschen Professoren und Studenten aus Prag 1409" (1864); "Concilia Pragensia, 1353-1413" (1862). These historical investigations involved Höfler in a violent literary feud with František Palacký, the official historiographer of Bohemia, an enthusiastic representative of Czech interests, and the indefatigable champion of Slavic supremacy in Bohemia. But as the scientific proofs produced by Höfler were indisputable he was victorious in this controversy and broke down Palacký's hitherto unquestioned authority as a historian. These exhaustive studies in Bohemian history led Höfler to deeper research into the history of the Slavic races. In his "Abhandlungen aus dem Gebiete der slawischen Geschichte" (1879-82), five volumes, he showed how the Slavic element had always warred against the German element; in the same work he emphasized strongly the importance of the German element in the development of Bohemia.

In other works Höfler treated the ecclesiastical reform movements among the Romanic peoples. The most important of this class of his writings is: "Die romanische Welt und ihr Verhältnis zu den Reformideen des Mittelalters" (1878). Others are: "Der Aufstand der kastilianischen Städte gegen Karl V" (1876); "Zur Kritik und Quellenkunde der ersten Regierungsjahre Kaiser Karls V" (1876-83), in three parts; "Der deutsche Kaiser und der letzte deutsche Papst, Karl V und Adrian VI" (1876); "Papst Adrian VI" (1880) in which he proves that this pope was the author of Catholic reform in the sixteenth century. We are also indebted to him for the two volumes of "Monumenta Hispanica" (1881-82). Höfler's contributions to the history of the Hohenzollern family are to be found in: "Denkwürdigkeiten des Ritters Ludwig von Eyb" (1849), and in the monograph "Barbara, Markgräfin von Brandenburg"

(1867). Other works worthy of notice are: two volumes of "Abhandlungen zur Geschichte Oesterreichs" (1871-72); "Kritische Untersuchungen über die Quellen der Geschichte König Philipps des Schönen" (1883); "Bonifatius, der Apostel der Deutschen, und die Slavenapostel Konstantinos (Cyrillus) und Methodius" (1887). He also published many papers in the "Denkschriften der k.k. Akademie der Wissenschaften", in the "Fontes rerum Austriacarum", and in the "Zeitschrift des Vereins für die Gesch. der Deutschen in Böhmen".

Höfler also wrote a number of historical dramas in verse, as well as elegant and thoughtful epigrams; his poetical works, however, met with but moderate success. Höfler was an eminent man. Endowed with a keen mind, and profound observation, as well as with many physical advantages, strong health and manly beauty, he succeeded, by hard work and "indefatigable self-discipline" says his successor Bachmann, "in surmounting many initial difficulties and later obstacles and in reaching the high position of a generally respected savant and teacher: he attained the broad views and experience of a statesman, and the sure and harmonious bearing of a sage. Himself the embodiment of kindness and goodness, to such a degree that he strove to lend assistance where assistance was neither possible nor timely, he anxiously sought to respect the individuality of others and to be a model of courtesy and fairness, not merely to appear such".

Mitteilungen des Vereins für die Geschichte der Deutschen in Böhmen, XXXVI (1898), 381-411; *Biographisches Jahrbuch*, II, 209-11; *Allgemeine deutsche Biographie* (1905), L, 428-33.

PATRICIUS SCHLAGER.

Hogan, JOHN BAPTIST, better known, on account of his long sojourn in France, as Abbé Hogan, b. near Ennis in County Clare, Ireland, 24 June, 1829; d. at Saint-Sulpice, Paris, 29 September, 1901.

His earlier years were spent in Ireland, but an uncle, who was a priest in the Diocese of Périgueux in France, brought him to that country at the age of fifteen and placed him in the preparatory seminary of Bordeaux. To his early training in this institution, where he soon evinced a more than ordinary talent and power of adaptation, was due the thorough mastery which he acquired of the French language, as also his perfect assimilation of the French spirit and ways, albeit without prejudice to his command of English, or to the qualities characteristic of a thoroughly Irish temperament.

Having completed his classical studies, he entered the theological seminary of Bordeaux, and, as at the end of his course he was too young to receive orders, he went, in 1849, to the Seminary of Saint-Sulpice in Paris, where he followed a post-graduate course of the theology for two years. Then, feeling called to the work of clerical education, he entered the "Solitude" or novitiate of the Sulpicians at Issy, and was ordained to the priesthood, 5 June, 1852. The following September, not having yet completed his twenty-third year, he was appointed to the chair of dogmatic theology in the Seminary of Saint-Sulpice, where from the outset he gave evidence of those rare qualities which constitute the teaching faculty, and made him so eminent as an instructor. During the ensuing

ABBÉ HOGAN

years he was called, through force of circumstances, to teach successively various other branches of ecclesiastical science, but from 1863 to 1884 he occupied without interruption the chair of moral theology, adding thereto, during a period of thirteen years, the course of sacred liturgy.

After thirty-two years spent in teaching in Saint-Sulpice, he was sent in 1884 to the United States, having been appointed the first president of the newly erected theological seminary of Boston. After fulfilling the duties of this post for five years, he was transferred to the presidency of the graduate theological seminary connected with the Catholic University in Washington. This dignity he also held for five years, his teaching being confined almost exclusively to lectures on ascetic theology. He was then recalled (1894) to St. John's Seminary, Boston, and passed there the seven remaining years of his life as its president. At the end of the school year 1901 he was compelled, on account of rapidly declining health, to interrupt his labours for needed rest. Arrangements were made for him to spend the following winter at Hyères in the south of France, but he died suddenly on his way thither, at the age of seventy-two.

Dr. Hogan, while hardly to be called a specialist in any branch, was a scholar of great erudition. He took a lively interest in all topics, whether pertaining to ecclesiastical or to secular science, and was conversant with the best literature bearing on subjects in these fields. He was endowed with that rare ability for imparting information to different mentalities which makes the ideal teacher, and as such his influence was widely felt and much appreciated, especially in France, where for so many years those who were to achieve the highest distinction among the secular clergy received the benefit of his intellectual guidance. His was a keen, versatile, analytic mind, characterized by breadth of view as well as penetration, and thoroughly alive to the difficulties connected with all theological and philosophical problems. His method was chiefly Socratic, free from dogmatism of tone, and he possessed in a rare degree the gift of being able to render interesting, at least to the more intelligent students, the discussion of even the driest and most abstruse questions. One who had known him intimately for many years paid due tribute to his merits in an article in the "Homiletic Monthly", Dec., 1901, on Abbé Hogan's "Clerical Studies".

Though a scholar greatly gifted in the art of expounding, Dr. Hogan gave little attention to writing and publication. Except occasional articles contributed to periodicals, his only published works are "Clerical Studies", which first appeared in the "Ecclesiastical Review" (Philadelphia, 1891-95), and "Daily Thoughts". Both of these have been translated into French. In the former, which merits a place among the best clerical manuals, he covers the entire field of ecclesiastical science, treating each subject in his own original, suggestive manner, from the practical as well as the theoretical standpoint. The latter is a book of short meditations for the use of priests and seminarians.

Hohenbaum van der Meer, MORITZ, a Benedictine historian; b. at Spörl near Belgrade, 25 June, 1718; d. at the monastery of Rheinau, near Schaffhausen in Switzerland, 18 December, 1795. He entered Rheinau as student in 1730, made vows there in 1734, was ordained priest in 1741, became professor in 1744, was prior of the monastery from 1755 to 1774,

keeper of the monastic archives from 1759 till his death, and secretary of the Swiss Benedictine Congregation during the last nineteen years of his life. The episcopal See of Lausanne which was offered him by the pope he refused to accept. His numerous writings (seventy-six separate treatises) are for the most part historical studies on his own and other monasteries. He also wrote a history of the Swiss Benedictine Congregation (1602-1785), a life of St. Fintan, and some ascetical treatises. Though his historical works give evidence of careful researches and of a rare critical acumen, only a few of them have found their way into print. They are nearly all written in Latin and fill fifty-nine folio and twenty-three quarto volumes. Most of these works, together with fifty-two volumes of epistolary correspondence are at present in the cantonal library of Zurich.

Hohenburg (ODILIENBERG; ALTITONA), a suppressed nunnery, situated on the Odilienberg, the most famous of the Vosges mountains in Alsace. It was founded about 690 by St. Odilia, who also was its first abbess. On the eastern slope of the Odilienberg she built a hospice, called Niedermünster or Nieder-Hohenburg, which afterwards became a convent for ladies of nobility and was destroyed by lightning in 1572. Originally Hohenburg seems to have been occupied by Benedictine nuns who were replaced by canonesses in the eleventh century. In the first half of the twelfth century it began to decline, but its discipline was restored by Abbess Relindis of Bergen near Neuburg on the Danube, who became Abbess of Hohenburg about 1140. During her rule Hohenburg became famous for its strict discipline as well as the great learning of its nuns. She was succeeded in 1167 by Herrad von Landsperg under whose rule the fame of Hohenburg continued to increase. She built the Premonstratensian monastery of St. Gorgon on the slope of the mountain in 1178, and the Augustinian monastery of Truttenhausen at its foot. Herrad is the author of "Hortus deliciarum", a collection of short treatises on theology, astronomy, philosophy, and other branches of learning. It also contained some original Latin poems with musical accompaniment, and some beautiful drawings. The work was destroyed at the conflagration of the Strasburg library in 1870. When Hohenburg perished by fire in 1546 some of the nuns returned to their parents, others became Protestants and married. In 1661 Hohenburg was rebuilt and occupied by Premonstratensians. During the French Revolution it was confiscated by the Government and sold as national property in 1791. Mgr. Räss, Bishop of Strasburg, purchased the buildings in 1853 for his diocese.

MICHAEL OTT.

Hohenlohe-Waldenburg-Schillingsfürst, ALEXANDER LEOPOLD, titular Bishop of Sardica, famous for his many supposedly miraculous cures, b. 17 August, 1794, at Kupferzell in Würtemberg; d. 14 November, 1849, at Vöslau near Vienna. He studied the humanities at the Theresianum in Vienna, 1804-8, and at Berne, 1808-10; philosophy at Vienna, 1810-12; theology at Tynau in Hungary, 1812-14, and at Ellwangen, 1814-15. On 16 September, 1815, he was ordained priest and at once devoted himself to the care of souls first at Stuttgart, then at Munich. In October, 1816, he went to Rome where he had little difficulty in justifying himself against the accusations of having administered the sacraments in the German language and of belonging to the Bible

THE PRESENTATION OF THE VIRGIN IN THE TEMPLE

THE NATIVITY

HOLBEIN THE ELDER, PINAKOTHEK, MUNICH

Society. On his return he made a pilgrimage to Loreto, and again arrived at Munich on 23 March, 1817. On 8 June of the same year he was made ecclesiastical councillor, and, in 1821, canon of Bamberg. About this time began the numerous miraculous cures which are alleged to have been effected through the prayers of Hohenlohe. On 1 February, 1821, he was suddenly cured at Hassfurt of a severe pain in the throat in consequence of the prayers of a devout peasant named Martin Michel. His belief in the efficacy of prayer was greatly strengthened by this cure, and on 21 June, 1821, he succeeded in curing the Princess Mathilda von Schwarzenberg, who had been a paralytic for eight years, by his prayers which he joined with those of Martin Michel. Having asked the pope whether he was permitted to attempt similar cures in the future, he was told not to attempt any more public cures, but he continued them in private. He would specify a time during which he would pray for those that applied to him, and in this manner he effected numerous cures not only on the Continent, but also in England, Ireland, and the United States. Worthy of mention is the case of Mrs. Ann Mattingly of Washington, D. C., who was said to have been cured of a tumour through his prayers on 10 March, 1824. Rome did not pass judgment on these supposed miracles and Catholics were divided in their opinion. In 1824 Hohenlohe became canon, in 1829 provost, and later Vicar-General and Administrator of Grosswardein. In 1844 he was made *chorepiscopus* and titular Bishop of Sardica. He is the author of four volumes of sermons and ascetical treatises most of which were collected and published by S. Brunner (Ratisbon, 1851). His method of curing the sick was continued after his death by his friend and disciple Joseph Forster, pastor of Hüttenheim, who died in 1875.

MICHAEL OTT.

Holbein, HANS (THE ELDER HOLBEIN), a German painter; b. at Augsburg about 1460; d. at Isenheim, Alsace, in 1524. Except that he was born in the Bavarian centre of art, culture, and commerce, and that his father, Michael, was a well-to-do leather-worker, little is known of his early life. He may have studied in the studio of the great Schongauer, and some authorities state that he married the daughter of the engraver and painter Brickmaer (von Stetten). He is registered among the citizens of Ulm in 1499; he was established in Frankfort in 1501 and subsequently lived and painted at Basle and in Alsace. These wanderings may have been occasioned by financial embarrassments, for he was poor and in debt all his life.

Holbein's early work shows that he followed van der Weyden and Memling. Then the van Eycks and the Cologne school influenced him for more than a decade. In this, his "dry" period of painting, his subjects were chiefly from the Passion, and, although they exhibit crude grouping and colour, and a naïve technique, they nevertheless evince a profound sentiment of sincerity and devotion. He was one of the first painters, if not the first, in Germany to avoid angles, lines, and sharp folds in his elaborate draperies. Augsburg was on the high road between Germany and Italy, and Holbein, drinking deeply of Italian culture substituted the softer Southern elements for the precise and archaic German methods. He was one of the first to paint a Renaissance type of background, and to use architectural decoration in his pictures; and in this he became a master. This emancipation of painting (1512-22), begun by the elder Holbein, was to be completed by his son Hans. Thus the elder Holbein was a pioneer and leader in the transformation of German art. The majority of the great critics incline to this opinion, while others aver that his poverty and debts were due to his long and notorious resistance to

Italian influence. He was a spirited and robust, if sometimes vulgar, painter, a man of imagination and power, possessing a splendid capacity for depicting character. His merits have long been overshadowed by the fame of his son.

The earliest important work of the elder Holbein is a "Madonna and Child" (1492) now in the Moritz Kapelle, Nuremberg. In 1493 he became well known by his altar-piece in Weingarten Abbey; but the most famous of his works is the altar of the basilica of St. Paul (now in the Augsburg Gallery), for it contains a portrait of himself and his two sons, Ambrose and Hans; and the father is pointing with pride to young Hans as if predicting the latter's future greatness. At Frankfort, in 1501, Holbein painted a large and important altar-piece for the Dominicans and for some time after seems to have won pecuniary success. Forged documents and false inscriptions for a long time ascribed works to the son which modern authorities ascribe to the father. To-day the elder Holbein enters into his own. The beautiful "Conception", painted in 1512 (Augsburg Gallery), and the altar-piece of St. Sebastian (Munich), a triptych with the "Annunciation" and Sts. Elizabeth and Barbara occupying its wings, are two notable pictures recently proved to be by the elder, and not the younger, Holbein. The St. Sebastian altar-piece is generally regarded as his greatest work. His "Madonna Enthroned" is preserved in the Germanic Museum, at Nuremberg, while two portraits by him (probably a man and wife) are in the Hampton Court collection. The sketch books of this prolific artist, preserved at Berlin and Copenhagen, are filled with portraits, chiefly in silver-point, the noteworthy faces therein being the Emperor Maximilian, his fool, Kunz von der Rosen, the Fuggers, and other men conspicuous in commerce and at Court. He and his brother Sigmund painted together—how long, and on what pictures, cannot be discovered; but Hans always signed the work. He gave young Hans his first lessons, and endowed him with his virile force and immense capacity for characterization. About 1520 Holbein was in Alsace and sought refuge with the monks of Isenheim. After his death it is recorded that his son claimed his brushes, paints, and sketch books from the monastery.

LEIGH HUNT.

Holden, HENRY, English priest; b. 1596; d. March, 1662. Henry Holden was the second son of Richard Holden, of Chaigley, Lancashire, and Eleanor, his wife. He entered the English College at Douai under the name of Johnson, 18 Sept., 1618, where he studied till 15 July, 1623, when he proceeded to Paris, took his degree as Doctor of Divinity, and was made a professor at the Sorbonne. He also became penitentiary at Saint-Nicolas du Chardonnet and one of the grand vicars of the Archbishop of Paris. When Bishop Richard Smith fled from England in 1631 and there arose a difference of opinion between the Jesuits and the other orders, who thought the presence of a bishop in England was not advisable at the time, and the secular clergy, who took the opposite view, Dr. Holden was sent to Rome to represent the seculars and to avert the dissolution of the chapter. In 1655, on the death of Bishop Smith, the question again arose, and Holden's friend and brother-priest, Thomas White, alias Blackloe, wrote a book, "The Grounds of Obedience and Government", which gave offence to his opponents, and led to some of his other works being censured by the Holy See. Holden, who thought Blackloe had been hardly treated, undertook his defence, and thus the "Blackloist Controversy" was begun. Holden, however, did not approve of all Blackloe's opinions and persuaded him to submit and

retract the teaching which had been condemned. Blackloe did this, though without satisfying his adversaries, who were also very unsparing in their denunciations of Holden, whom they described as an unlearned and rash man. This charge is sufficiently disproved by his position, not to mention his works.

In the later years of his life he took a keen interest in the famous community known as the "Blue Nuns" at Paris. The sisters were originally Franciscans, but when Cardinal de Retz, Archbishop of Paris, refused to allow Franciscans to dwell in his diocese, they obtained leave from the Holy See to change their rule to that of the Immaculate Conception of our Lady, and Dr. Holden was appointed their superior in 1661. Dr. Holden's high reputation for learning and orthodoxy, as instanced in the works of Dodd, Berington, and Charles Butler, is above dispute, though in the heat of controversy his opponents accused him of Jansenism as well as of Blackloism. But his own statement survives that he condemned the five propositions from the first, and that "in the same sense in which they were condemned by him" (the pope). He also signed the Sorbonne's censure of Arnauld's letter to the Duke of Liancourt.

His principal works are as follows: "Divinæ Fidei Analysis, cum Appendice de Schismate" (Paris, 1652; English translation by W. G. [William Graunt], Paris, 1658). This work led to a long controversy between Holden and Serjeant on the Catholic side against the Anglicans Bramhall and Hammond; "Tractatus de Usura", published in second edition of the above (1655); "Letters to Arnauld and Feret", also published in later editions of the "Analysis"; "Answer to Dr. Laney's Queries concerning certain Points of Controversy"; "Dr. Holden's Letter to a Friend of his, upon the occasion of Mr. Blacklow (or rather T. White's) submitting his Writings to the See of Rome" (Paris, 1657); "Novum Testamentum brevibus annotationibus illustratum" (Paris, 1660); "Henrici Holden Epistola ad D.D.N.N. Anglum in qua de 22 propositionibus ex libris Thomæ Angli ex Albiis excerptis et a facultate theologica Duacena damnatis, sententiam suam dicit" (Paris, 1661); "A Letter to Mr. Graunt concerning Mr. White's Treatise de Medio Animarum Statu" (Paris, 1661); "A Check; or enquiry into the late act of the Roman Inquisition, busily and pressingly dispersed over all England by the Jesuits" (Paris, 1662); several letters were printed in Pugh, "Blackloe's Cabal" (1680).

Holiday, RICHARD. See HILL, RICHARD.

Holiness (A. S. *hal*, perfect, or whole). *Sanctitas* in the Vulgate of the New Testament is the rendering of two distinct words, ἁγιασμένη (I Thess., iii, 13) and ἁγιότης (Luke, i, 75; Eph., iv, 24). These two Greek words express respectively the two ideas connoted by "holiness" viz.: that of *separation* as seen in ἅγιος from ἅγιος, which denotes "any matter of religious awe" (the Latin *sacer*); and that of *sanctioned* (*sancitus*), that which is *δεδωκεν*, has received God's seal. Considerable confusion is caused by the Reims version which renders ἁγιασμένη by "holiness" in Heb., xii, 14, but more correctly elsewhere by "sanctification", while ἁγιότης, which is only once rendered correctly "holiness", is twice translated "sanctification".

St. Thomas (I-II, Q. lxxxii, art. 8) insists on the two aspects of holiness mentioned above, viz., *separation* and *firmness*, though he arrives at these meanings by dint of the etymologies of Origen and St. Isidore.

Sanctity, says the Angelic Doctor, is the term used for all that is dedicated to the Divine service, whether persons or things. Such must be pure or separated from the world, for the mind must needs be withdrawn from the contemplation of inferior things if it is to be set upon the Supreme Truth—and this, too, with firmness or stability, since it is a question of attachment to that which is our ultimate end and primary principle, viz., God Himself—"I am sure that neither death, nor life, nor angels . . . nor any other creature shall be able to separate us from the love of God" (Rom., viii, 38-39). Hence St. Thomas defines holiness as that virtue by which a man's mind applies itself and all its acts to God; he ranks it among the infused moral virtues, and identifies it with the virtue of religion, but with this difference that, whereas religion is the virtue whereby we offer God due service in the things which pertain to the Divine service, holiness is the virtue by which we make *all* our acts subservient to God. Thus holiness or sanctity is the outcome of sanctification, that Divine act by which God freely justifies us, and by which He has claimed us for His own; by our resulting sanctity, in act as well as in habit, we claim Him as our Beginning and as the End towards which we daily unflinchingly tend. Thus in the moral order sanctity is the assertion of the paramount rights of God; its concrete manifestation is the keeping of the Commandments, hence St. Paul: "Follow peace with all men, and holiness [*sanctimoniam, ἁγιασμένην*]: without which no man shall see God" (Heb., xii, 14). The Greek word should be noted; it is generally rendered "sanctification", but it is noteworthy that it is the word chosen by the Greek translators of the Old Testament to render the Hebrew word *קדש*, which properly means strength or stability, a meaning which as we have seen is contained in the word holiness. Thus to keep the Commandments faithfully involves a very real though hidden separation from this world, as it also demands a great strength of character or stability in the service of God.

It is manifest, however, that there are degrees in this separation from the world and in this stability in God's service. All who would serve God truly must live up to the principles of moral theology, and only so can men save their souls. But others yearn for something higher; they ask for a greater degree of separation from earthly things and a more intense application to the things of God. In St. Thomas's own words: "All who worship God may be called 'religious', but they are specially called so who dedicate their whole lives to the Divine worship, and withdraw themselves from worldly concerns, just as those are not termed 'contemplatives' who merely contemplate, but those who devote their whole lives to contemplation". The saint adds: "And such men subject themselves to other men not for man's sake but for God's sake", words which afford us the keynote of religious life strictly so-called (II-II, Q. lxxxii, a. 7, ad 5^{um}).

HUGH POPE.

Holiness (PAPAL TITLE). See POPE.

Holland.—The conventional designation of the country (more properly called THE NETHERLANDS), occupying an area of 12,648 square miles on the shores of the North Sea and the Zuyder Zee, about the mouths of the Rhine and Meuse. This country is contiguous to Belgium, on the south, and to Hanover, Westphalia, and Rhenish Prussia, on the east. The name, *Holland*, was originally applied only to a countship which occupied the territory now covered by two provinces (North and South Holland) of the

modern Kingdom of the Netherlands. The history and actual conditions of Holland will be treated under these heads: I. The Republic; II. The French Period; III. The Kingdom; IV. Statistics.

I. THE REPUBLIC.—Almost all of the region comprising what we now call Holland belonged in the Middle Ages to the Counts of Holland, the Bishops of Utrecht, and the Dukes of Brabant and Gelderland. Between 1433 and 1543 all these territories came successively under the dominion of Burgundy and the House of Austria, which through hereditary succession also acquired Spain. Consequently, Holland belonged to Spain and was governed by Charles V and, after 1555, by Philip II. In 1566 occurred the revolt which resulted in the secession not only of the northern, but also of the southern, provinces. Alessandro Farnese, Duke of Parma, succeeded, by the treaties of Utrecht (6 January and 17 May, 1579), in restoring some of the southern districts to the Spanish monarchy. Thus Belgium was preserved in the Faith. William of Orange, to bring about a closer union among the northern districts, concluded the Union of Utrecht (23 January, 1579), signed by Gelderland, Holland, Zeeland, Utrecht, Groningen, and the neighbouring states, also by a number of Belgian cities which had been subject to Parma, and he induced the States-General to confer the sovereignty upon the Duke of Anjou.

Before Anjou could be recognized as sovereign, it was first necessary to renounce the legitimate prince. This was done at Bois-le-Duc 24 July, 1581, though the majority of the inhabitants disapproved of the act. Anjou took possession 12 February, 1582. He was solely occupied with increasing his power (French Fury, 1583) and was forced to flee the indignation of the populace (1584). Orange was killed on 10 July, 1584, by Balthasar Gerards. The States-General requested that Robert Dudley, Earl of Leicester, friend and confidant of Queen Elizabeth, should act as governor. Unequal to the task laid upon him, he was not the man to succeed William of Orange. When it became known that he had been charged with the mission of bringing about peace with Spain, his power was at an end.

The States themselves now took in hand the direction of affairs. The States-General, consisting of delegates from seven provinces—Gelderland, Holland, Zeeland, Utrecht, Overijssel, Groningen, and Friesland—undertook the government of the Republic. Neither Drenthe nor the conquered provinces over which the States-General now held suzerainty—namely, Brabant, Flanders, Limburg, Upper Gelderland, and Westerwolde—had any vote in that body. The delegates had an imperative commission and for each district one vote. The executive power was vested in the Council of State, consisting of twelve members. By degrees, however, the States-General themselves assumed the conduct of most of the affairs of government, which was disastrous to the prosperity of the republic.

Freedom of worship was out of the question in the republic. An article in the Union of Utrecht recognized freedom of worship outside of Holland and Zeeland, but this was not effective. The political supremacy of Orange carried with it the political supremacy of Calvinism. Wherever the revolutionary party was in the ascendancy, the Catholics were persecuted. Not only the States of Holland and Zeeland, but the cities as well set the example in this respect which was followed by all the districts; and on 2 December, 1581, William of Orange issued an edict in which the Catholic cult was forbidden. In Gelderland this order was put in force with great severity by John of Nassau, William's brother, and by his cousin, Louis of Nassau, in Groningen, in the surrounding country, and in Drenthe. Although only a small portion of the population adhered to the

heresy, all the churches were turned over to the Calvinists. Continued oppression, violation of religious peace, renewed iconoclasm and plundering under Hohenlohe and Sonoy, as well as under the two leaders mentioned above, drove the Catholic population to a desperate resistance, which, however, was violently suppressed. The situation of the Catholics became more and more precarious as Calvinism came to be the only lawful form of worship. Lutheranism was also driven into obscurity. Zwinglians, Anabaptists, and other sects were forbidden to hold public worship, while the Calvinists triumphed. Nor was this progress surprising, for their preachers had been subsidized since 1573 with the revenues of the old Church, confiscated by the State that year.

In 1574 the University of Leyden was founded for the purpose of "forming learned and worthy pastors" With a similar end in view, Louis of Nassau established a high school at Franeker in Friesland, where, in 1580, Calvinism had gained the upper hand. For the Synod of Dort, held in 1618, see ARMINIANISM. Henceforth, by means of persecution and force, the Reformation made steady, though slow, progress. While rigorous Calvinism acted as if it alone possessed the right of existence in the Netherlands, Catholicism kept its hold upon two-thirds of the population until far into the seventeenth century. The causes of its gradual decline were various. At the beginning of the Reformation, the condition of the clergy, and consequently of the people, was a very sad one. As a means of improvement, the erection of the following new episcopal sees was considered: Middelburg, Haarlem, Deventer, Leeuwaarden, Groningen, Bois-le-Duc, and Roermond (1559). The first five were occupied for only a short time. The choice of the first bishops was, in general, not happy. On this account the unfortunate state of the clergy continued, so much so that their corrupt morals led them even to abandon their faith and go over to the heretics, carrying with them whole parishes. Lukewarmness was also rife among the laity. In Holland, as elsewhere, especially in the cities, the irreligious spirit of the Renaissance had weakened the simple faith of many. The principal reason for all this was the continued oppression under which Catholicism suffered. William of Orange proposed to secure victory for the Calvinists by the persecution of the Catholic Church. His son Maurice thought it intolerable that Papists should enjoy the same rights as the Reformed, and opined that they could be held to the Union only by force. The Catholics were persecuted even when all classes took their stand against the Spaniards, and although, at the time of the Pacification of Ghent, all parties, Catholics and Reformed, agreed to cooperate against the common foe. Later on, when Catholics, driven to despair by cruel treatment, showed any disposition to resist, this was at once met by an edict. Divine service was forbidden by the States. The priest who celebrated Divine worship, as well as any one who lent his house for the purpose, was heavily fined. Higher ecclesiastics and foreign regulars were not tolerated in the country.

No Catholic educational institution nor any Catholic book-printing establishment was allowed to exist in the republic. Sending Catholic children to foreign Catholic schools was severely punished. The Catholic was considered inferior, and was excluded from all government service. The manner of procedure in the various provinces and cities was very similar, differing only in the greater or less severity with which the laws were executed. Oftentimes the Catholics were permitted to hold Divine service by paying for the privilege. From the clergy a recognition was required. These concessions on the part of the officials became very expensive for the faithful. The devout were strengthened, but the tepid fell away. Labourers in the Lord's vineyard were want-

ing. Monasteries and abbeys, formerly so numerous, no longer existed. The last congregation of women at Utrecht went out of existence in 1613. In 1608 the French ambassador, Jeannin, wrote that the States confidently believed "that in the present generation Catholicism among them would die of itself" In 1602, however, the vicar Apostolic, Sasbout Vosmeer, submitted to Rome a very remarkable report. He expressed the positive hope of a "final restoration of Divine worship in this country" In 1580 the last Archbishop of Utrecht, Frederik Schenck van Toutenburg, had died. He had not been able to render much assistance. Johannes van Bruhesen was chosen vicar-general. The King of Spain named Herman van Renneberg for the archbishopric, but he died in 1585, before his installation. Johannes van Bruhesen was then designated, but he died in 1600, also before his installation. Sasbout Vosmeer became prominent as vicar-general as early as 1583, and showed much zeal in gathering together the dispersed flock. In 1592 the Apostolic nuncio at Cologne received extended jurisdiction over the Dutch Catholics, and before the end of the same year he named Sasbout Vosmeer vicar Apostolic with jurisdiction over "Holland, Zeeland, and the remaining parts of Lower Germany which, following the inspiration of Satan, had abandoned the Catholic Faith and obedience to their lawful king". In 1596 Brussels received its own nuncio, to whom was turned over the jurisdiction of the whole of the Netherlands.

In spite of many obstacles, the vicar Apostolic, Sasbout Vosmeer, was consecrated at Rome, in 1602, as titular Archbishop of Philippi. He remained at Cologne, whence he governed his extensive diocese. This state of things continued until his death in 1614. Philippus Rovenius succeeded him and was able to report, in 1616-17, that "priests were, almost without exception, pure in their doctrine, without reproach in their conduct, self-sacrificing and full of zeal for the welfare of the Church and the propagation of the Faith". The vicars Apostolic received great support in their labours from members of the religious orders, who travelled from place to place as missionaries, encouraging the Catholics, and here and there took up their permanent residence.

The training and education of the regular missionaries took place, of course, outside of the country, for the most part in the southern Netherlands, whither also the feeble and superannuated returned. The secular clergy likewise strove to prepare their young recruits in special institutions. In Amsterdam they succeeded, under Vosmeer, in establishing a kind of preparatory seminary which soon had sixty pupils, but was later transferred to Cologne. Another Dutch seminary was founded by Vosmeer in Bierbeek near Louvain, but it did not thrive. After taking up his residence at Cologne, he enlarged the school which had been transplanted thither and made a seminary of it. But this Cologne establishment was not satisfactory to all and especially not to the Haarlem clergy, most of whom had studied at Louvain.

As a result of this feeling a seminary was founded at Louvain after the death of Vosmeer. Although this last institution gave to Holland many priests, it was, without doubt, a source of great harm to the Church during the prevalence of Jansenism. Most of the priests were animated by the spirit of Baius and Jansenius. In 1701, about three hundred priests declared for Pieter Codde, the first instigator of the Dutch schism. It is true that most of them later came to their senses, but the harm was done. The division between regular and secular priests was fostered to a considerable degree by this Jansenistic spirit. In 1616 there were active as missionaries two hundred secular priests and sixteen Jesuits; by 1700 there were 271 seculars and 108 regular priests. In 1651 Jacobus de la Torre became vicar Apostolic.

He was succeeded in 1655 by Zacharias de Mets and the latter, in 1665, by Balduinus Kats; in 1668 Johannes van Neerkassel, a friend of the Jansenists Arnould and Quesnel, became the incumbent of the office. About 1700, under the leadership of Pieter Codde, the Jansenistic split began. Theodore de Cock was banished; in 1705, Gerard Potkamp died; Adam Doemen was not permitted to exercise his functions, and in 1717 Joannes van Bijleveld was exiled. After this the mission came directly under the control of the papal nuncio at Brussels (1721), who was assisted by the archpriests.

During this period there was great activity. Zeal revived among the Catholics. The garrets and hiding-places which served as churches were always full to their capacity; the catechism was thoroughly taught. In this field the so-called "Klopjes", a sort of sisterhood that did not live in community, effected a great deal of good. They grew so numerous that the Calvinistic synods, with considerable exaggeration, declared their membership to amount to twenty thousand. Thus the Faith was preserved.

The material progress of the republic was wonderful. No sooner had it torn itself free from Spain than commerce and industry, and consequent wealth, increased from day to day. The chief cause, however, was the military exploits by which independence was established and maintained. Prince Maurice was the first to take the offensive, and he inflicted heavy losses on Spain (1590-1601). In 1596 an alliance was formed with France and England which yielded but little advantage. On the sea the Hollanders covered themselves with glory. A truce extending over twelve years (1609-21) brought rest to both parties. Frederik Hendrik (1625-1647) permanently established Holland's prestige. The grand pensionary, Jan de Wit, even planned, in concurrence with France, the subjugation of a great part of the southern Netherlands, which would have been unfortunate for the Catholics of Belgium. For a moment the hopes of Holland's oppressed Catholics revived, when the French army occupied a large part of the provinces and established headquarters at the camp of Zeist near Utrecht. When he invaded the republic, Louis XIV had counted on the general support of the Catholics, but the Catholics conducted themselves as true patriots (Blok). Catholic worship was re-established in those parts conquered by France. Processions were held as of old. The vicar Apostolic, Neerkassel, enjoyed complete freedom of movement as a Catholic bishop. But with the reconquest of these districts by the Hollanders, all this was changed again. The churches were confiscated and despoiled, and the Catholics were reminded of the edicts against them. However, their liberty was greater than it had been.

Another cause of this improvement was the formation, in 1602, of the East India Company. It received from the States-General a grant of all lands east of the Cape of Good Hope and west of the Straits of Magellan. The conquests of the Company were very numerous and soon formed extensive Dutch possessions. In these possessions, unhappily, the Hollanders destroyed many a flourishing mission, especially in Molucca and Ceylon. In Timor and the Sulu archipelago alone, the Faith resisted their influence. Even at the present day the missionaries come upon the ruins of missions which flourished in those times.

The Holland of those days was one of the first nations of the world. Amsterdam had, in 1658, about 150,000 inhabitants. Its harbours, churches, arsenals, warehouses, and city hall were unequalled. Leyden flourished by means of its cloth trade and its university. Haarlem was the seat of the linen industry. Rotterdam, one of the largest cities in the land, became great through her trade with England. Dordrecht (Dort) was the centre of the river traffic,

especially in foreign wines. To these commercial centres may be added some thirty smaller cities and four hundred very prosperous villages. Thus Holland properly so called, comprised about one million inhabitants of the republic. Here, above all, was the heart of its commerce. The herring fisheries brought enormous riches. The Rhine traffic was estimated at a hundred millions annually. Besides this the commerce on the Mediterranean overshadowed that of all other nations.

Agriculture also advanced. A great deal of territory was gained by drainage. The Dutch painters, wood-carvers, and scholars of that period are famous. Holland had five universities: Leyden (1575), Franeker (1585), Harderwijk (1600), Groningen (1614), and Utrecht (1636). Besides there were famous schools in Amsterdam, Middleburg, Breda, and Deventer. But many among the lower classes were illiterate. On the other hand piety did not increase; the simplicity of former times gave place to luxury, and this produced indifference in matters of religion among the Protestants, while among the Catholics there were throughout the seventeenth and eighteenth centuries many defections. In the year 1623 the vicar Apostolic estimated the number of Catholics at four hundred thousand; Codde (1700) held the number to be 333,000, while the census of 1810 showed 374,856.

Thus far there has been question of the mission of the north only. In the southern provinces, Brabant and Limburg, the administration of the Church was subject to many vicissitudes. The bishops of Roermond succeeded one another regularly from 1562 to 1801, when Bishop Van Velde van Melroy resigned his bishopric, the jurisdiction of which covered French territory and was joined ecclesiastically to Liège. After 1713 the territory of the Diocese of Roermond belonged partly to Austria and partly to Prussia. Not long after, the Dutch Republic received Venlo and Stevensweert, with the understanding that Catholic worship should remain free, which agreement was adhered to. Brabant did not fare so well. After the capture of Bois-le-Duc (1629), the celebration of the Mass was forbidden, and the churches were turned over to the Reformed. Although the Government became somewhat more lenient, the inimical laws remained on the statute-books until the revolution put an end to the tyranny. By all this Brabant had not only been impoverished, but its morals and culture had dropped to a very low level.

II. THE FRENCH PERIOD.—French ideas of liberty penetrated into Holland, and, in 1795, a revolution took place as a result of which the "Batavian Republic" came into existence (1795-1806), and restored to the oppressed Catholics liberty of worship, equal civil and state rights with the Protestants. The latter were disposed to be tolerant, and the more thoughtful among them were of the opinion that "for dominant Churches to enjoy civil rights beyond any others is in violation of the equality of all." Neither was the orthodox party unfavourably disposed, cherishing the glad expectation that the revolution would end "with the overthrow of the already violently shaken Roman Church". The Constitution of the Batavian Republic was not yet proclaimed when the Catholics took the first step towards securing from the Government their rights to re-establish the ecclesiastical hierarchy. In the name of all the clergy, H. F. ten Hulscher, Archpriest of Holland, addressed a petition to the provisional representatives of Holland requesting permission to elect a bishop. The reasons advanced for the request were that the States-General, while oppressing the Church, had, nevertheless, tolerated a vicar Apostolic; that the Jansenists had their bishops, and that Catholics were deprived of the Sacrament of Confirmation except under extraordinary circumstances, as when, in 1792 and 1794, the papal nuncio, Brancadoro, had received permission to administer

it. The delegates decided favourably, and, after an interval of two long centuries, the Catholics were once more at liberty to have their hierarchy.

Unfortunately, the unrest of the times did not permit the Catholics to make use of their recovered right. For the time being, the question of bishops remained undecided. In the meantime freedom of worship was more and more firmly established. The Government of the Batavian Republic, on 8 April, 1800, decreed that "the State, from now on, would no longer meddle with the organization of the Church". Complete freedom had at last arrived. But the pope, under the pressure of Napoleon, was unable to provide for the needs which had accumulated in two centuries. For the time, matters remained *in statu quo*. In 1806 the Batavian Republic ceased to exist, and Louis Napoleon, the brother of the mighty emperor, became King of Holland. In the same year the Constitution was promulgated. In relation to the Church, article six was of special importance. It read: "The king and the law extend protection to all forms of worship which are practised in the state; by their authority will be determined everything which may be judged necessary for the organization, protection, and exercise of all cults." However much the Catholics might long for a regular administration of the Church, they had a well-founded fear of state interference; all the more because of certain rumours concerning plans entertained by some counsellors of the Crown. The organization commission which was appointed did not meet with the approval of the higher clergy; nevertheless, the commission, as well as King Louis, seemed well disposed. But the report of the commission did not please the minister of worship. He considered that there were too many bishoprics, and he opposed separate preparatory seminaries for Catholics. In addition, there was the plan of the commission on studies to abandon the theological seminaries of Halder, Warmond, 's Heerenberg, and Grootte Ypelaar, and to establish in their stead a Catholic academy at one of the universities.

All this was state interference and met, therefore, with disapproval and opposition from the Catholics. It was not put into execution. As has already been stated, popular education was not in a flourishing condition. The Batavian Republic, in 1801 and 1803, had passed school laws which brought about some improvement. Somewhat more was accomplished by the law of 1806, but the good features it contained were almost nullified by the odious restrictions on the erection of separate schools and the use of school books. Under the administration of King Louis a number of churches were restored to the Catholics. They almost forgot the former oppression in their happiness at having a prince who professed their own religion. The King of Holland was unable to satisfy the demands of his brother, who first, on 6 March, 1810, annexed Brabant, the southern part of Gelderland, and Zeeland, and, on 9 July, after Louis Napoleon had left, the whole country. After the Netherlands had been divided into ten departments the Emperor Napoleon began to rule the Church in Holland with nothing less than tyranny. The Vicar Apostolic of Bois-le-Duc, who forbade public prayers for the excommunicated emperor, was imprisoned at Vincennes. The despotic decree of 26 April, 1810, prescribed the division of the dioceses; one of 10 May, 1810, ordered that the whole ecclesiastical administration be controlled by a commissioner and by the prefects. The supervision of the seven Dutch departments was discussed in a somewhat milder tone in a regulation of 18 October, 1810, which simply declared: "Article two hundred.—The organization of the Catholic and the Protestant clergy will be continued as it exists at present. Article two hundred and seven.—Our minister of worship will report to us as to the needs of churches and their ministers, so

that, in case of insufficient support, they may be provided for." On 6 January, 1811, it was finally determined that the French laws and regulations should be in force in the Dutch departments in so far as they were compatible with the existing church organization. In consequence, former regulations in the main continued.

In 1810 Napoleon himself visited Holland. With the utmost shamelessness he thundered against the clergy at Antwerp, Breda, and elsewhere. The high schools of Franeker and Harderwijk were abandoned permanently, the burying of the dead in churches was forbidden, civil and political rights were defined, and the judiciary was organized. In 1810 Napoleon ordered a census to be taken. Exclusive of a very large part of the present province of Limburg, the population amounted to 1,727,918. Of these 374,856 were Catholics; 1,128,804 were Reformed; the remainder consisted of Lutherans, Baptists, and Jews. There were 408 priests, who received from the State, as salary, 14,280 francs, and for the expenses of public worship, 476,069 francs. Besides this they had a revenue of their own amounting to 193,321 francs. After the defeat of Napoleon at Leipzig on 16 November, 1813, the population of Amsterdam and The Hague revolted against French rule, the French general, Molitor, left the country, and Napoleon was abjured.

III. THE KINGDOM.—On 30 November, 1813, William, son of the last stadtholder, William V, landed at Scheveningen and, as King William I, assumed sovereign authority on the condition that a Constitution would immediately be formulated. This Constitution of 1814 was formulated in great haste. Freedom of worship was granted, but unfortunately there was a fatal condition attached, namely, "the right of inspection and control over those institutions which enjoy assistance or a subsidy from the State" (Article CXXXIX). The Catholics did not agree to this right of control and of inspection, and refused to accept any subsidy from the State "under such conditions". Even after the Government had, on 16 May, 1814, given out a reassuring declaration, and after Pope Pius VII's pacifying intervention, there remained a suspicion in the minds of most Catholics. In 1815 Belgium was, in an evil hour, united with Holland under the dominion of William I. Two of the conditions set forth by the Congress of Vienna were that the United Kingdom was to be governed in conformity with the constitution already in existence in Holland, which was to be modified (Article I), according to circumstances, as follows: "No innovation shall be made in the articles of this constitution which assure equal protection and favour to all religions, and [which] guarantee to all citizens, of whatever religious belief, admission to public employments and offices" (Article II). This article was afterwards violated by the Government.

The modified constitution was submitted to the delegates and, in Holland, unanimously approved. This was not the case in Belgium, however. It soon became apparent that the Government was not favourably disposed towards Catholics. Although Belgium suffered most as the result of this attitude, Holland also felt its consequences. That country had, in 1818, about 2,000,000 inhabitants of whom almost 400,000 were Catholics. This was the period of concordats. In Holland, as well as elsewhere, negotiations with the Holy See were very desirable; but every move in this direction failed, owing to the ill-will and unfriendly attitude of the Government, which was controlled chiefly by the ministers van Maanen, van Gobbelschroy, and Baron Goubau, who, in 1815, became chief of the Department of Public Worship. In 1823 Monsignor Ignatius, Count Nassalli, came to The Hague and conferred with the authorities for almost two years, but he failed to bring

about an understanding. The blame for this failure was laid upon the Holy Father, who, it was said, should have been more forbearing. The distrust increased on both sides. A system of espionage was inaugurated in regard to the regular clergy. The Jesuits and the school brothers were no longer tolerated. Minister van Maanen worked with great haste on an "organization of the Roman Catholic Communion" which was to be put into operation without the intervention of Rome. The plan proposed four bishoprics: Utrecht, Bois-le-Duc, Haarlem, and Groningen, each to have a chapter. The Church in the Netherlands was to be independent of Rome and under the sole dominion of the bishops, with the Metropolitan of Utrecht in control in Holland. The plan did not materialize, because a prominent Protestant warned the king against the danger of schism. On 14 June, 1825, appeared the fatal decrees which have caused so much evil. The first declared that all Latin schools and colleges which were not in accordance with the law should be closed by 1 September, and that the preparatory seminaries were to be replaced by boarding schools in connexion with the institutions of learning where the seminarians attended lectures. The second announced the founding of the Collegium Philosophicum.

In consequence of the first decree the three preparatory seminaries in Holland were abandoned. The inauguration of the Collegium Philosophicum, which was to serve as preparatory school to the seminary, took place on 17 October. This college, with a capacity for twelve hundred students, was attended by only 551 students during the whole of its five years existence, of which the northern provinces sent only 15, which was a sure sign that the college was held in detestation. Dissatisfaction among the Catholics increased constantly. On 2 September, 1826, Count de Visseher de Celles was made ambassador extraordinary to the papal court. The pope, on 12 December, named Cardinal Capellari and Monsignor Capaccini to represent the Holy See. The negotiations lasted from 2 January to 18 June, 1827. In spite of thousands of obstacles, the concordat was completed, and was signed on the latter date. Of great importance for the North was the decision that bishoprics were to be established at Amsterdam and at Bois-le-Duc, and that each was to have its own seminary and chapter.

Cardinal Capaccini came to Holland to assist with his counsel in putting the concordat into operation. He had to conciliate such powerful enemies as van Maanen, van Ghert, and van Gobbelschroy. Nevertheless, he obtained almost everything—even the abolition of the Collegium Philosophicum. The last details had not yet been agreed upon, when there broke out at Brussels the uprising by means of which Belgium threw off the yoke of Holland (1830). While in Belgium all the bishops had already been appointed, the king had delayed providing for Holland, so that nothing was done. Bois-le-Duc had to wait a long time for its bishop. Amsterdam was destined never to receive one. But the concordat remained in force. After the separation of Holland and Belgium, the religious conditions in Zeeland, Dutch Limburg, and Brabant were the first to be settled. Parishes belonging to the two Dutch provinces were not permitted to form part of the Diocese of Liège, which belonged to Belgium. At first there was thought of joining Dutch Limburg to the Vicariate Apostolic of Bois-le-Duc. The Limburgers petitioned not only Rome, but The Hague as well, and Pope Gregory XVI, 2 June, 1840, established the Vicariate Apostolic of Limburg. The vicar Apostolic took up his residence at Roermond. At the same time the vicariate, comprising Grave, Ravenstein, and Meegen, was joined to that of Bois-le-Duc. Finally, on 19 March, 1841, Gregory XVI issued a Brief embodying in the Vicariate of

THE MAURITSHUIS, THE HAGUE
THIS BUILDING CONTAINS THE ROYAL PICTURE-GALLERY

Breda those parishes in Zeeland which had belonged to the Diocese of Ghent.

On 7 October, 1840, William I abdicated and married the Catholic Belgian Countess Henriette d'Oultremont. William II succeeded him. On 28 November, 1840, the king signed two decrees in favour of religious communities. Again the intolerance and opposition of the Protestants were manifested so intensely that not alone the Catholics, but the king as well became uneasy. On 19 May, 1841, Monsignor Capaccini went to The Hague to confer about the concordat. At that time the southern provinces (Dutch Limburg and North Brabant) had about 700,000 Catholics, and the northern provinces 400,000, so that the total number of Catholics in the whole kingdom amounted to 1,100,000. It was realized that the concordat could not be made operative at that time and must remain in suspense. Holland remained under the supervision of the archpriests over whom stood the vice-superior, or internuncio, of The Hague. Limburg already had a vicariate. Two new ones were established, at Bois-le-Duc, and at Breda.

For the time being, the king could do no more. In order to put the Jansenists on the same footing as the Catholics, their bishops were, from now until 1853, no longer recognized as such by the Government. No changes had been made in the law governing elementary education since 3 April, 1806. This had proved disastrous for the Catholics. William II promised something better, but he could not do much as yet. A royal decree concerning elementary instruction appeared on 2 January, 1842. The greatest benefit to the Catholics resulted from Article X, by which the public and private schools were obliged to furnish the clergymen of the different denominations "in their city or municipality in response to their written application for the same, a list of the books, songs, and writings in use in their instruction and schools." From this period dates the actual emancipation of the Catholics; since 1795 it had existed in theory only. This is particularly noticeable in the Catholic literature. For a long time past efforts had been made at establishing periodicals. The "Godsdienstvriend" (1818) and the "Catholyke Nederl. Stemmen", founded by the convert Le Sage ten Broek, alone survived. Those who tried to follow his example did not succeed. In 1841 "De Katholiek" was founded; it exists still, and has accomplished untold good for Catholicism in Holland. The first Catholic daily paper was "De Noord-Brabander" (1829), then followed "De Tijd" (1845) at first published in Bois-le-Duc, but, in 1846, transferred to Amsterdam, where it was to surpass greatly its predecessor. During the struggle for emancipation "De Katholiek" and "De Tijd" rendered the greatest service of any periodicals in Holland.

Another sign of emancipation was the formation of the Catholic Committee (1848), which in its first year consisted of eighteen prominent Catholics. The committee fostered the project of a general Catholic association, a general Catholic electoral association, a Catholic daily paper in French to be published at The Hague, and the restoration of the Catholic hierarchy. All except the first of these objects were attained. In 1847 the *placet* was removed from the penal code, principally through the intervention of the king, in spite of the strong Protestant opposition. When the Constitution was amended in 1848, Catholics made known their wants and obtained more than they could have hoped for. Article X favoured the monastic state; Article CLXIV concerning freedom of worship was better formulated. Article CLXVIII accorded salaries to the Catholic clergy, but treated the Protestants more liberally. Through Article CLXX the *placet* became a thing of the past.

Unfortunately, William II died on 17 March, 1849. His successor was William III. After the revision of

the Constitution under the Liberal Thorbecke ministry, the Catholics were more than ever before hopeful as to the restoration of the ecclesiastical hierarchy. The initiative was taken by prominent laymen, who, even before the revision of the Constitution, had presented a petition. After 1848 different petitions from laymen and from Catholic members of Parliament followed one another. At first the higher clergy feared too much interference on the part of the laity; but the higher clergy were soon carried along with the general movement, and, in 1851, sent a petition to the pope requesting the re-establishment of the hierarchy. After Rome and the Dutch Government had agreed that on the restoration of the hierarchy the Concordat of 1827 and the agreement of 1841 should cease to exist, the minister of foreign affairs, van Sonsbeek, and the internuncio, Belgrado, continued the negotiations. On 16 October, 1852, the last document was signed by the minister of foreign affairs.

Rome was now free to proceed to the erection of the hierarchy. The Dutch Ministry denied that the preliminary notification promised by Cardinal Antonelli, the papal secretary of state, had been duly transmitted by the internuncio, and a dispute thereupon arose between the Holy See and the Netherlands Government. But while this dispute went on, the curial officials were busy in Rome preparing the Brief, signed 4 March, 1853, which provided for the restoration of the hierarchy. An archbishopric was to be established at Utrecht, and four bishoprics at Haarlem, Bois-le-Duc, Roermond, and Breda respectively.

When the appointment of bishops was announced the so-called "Aprilbeweging" (April Movement) broke forth, during which, in a few days' time, hundreds of pamphlets and circulars gave vent to the spite of intolerant Protestants against Rome, against the Catholics, and against the Government. The king dissolved the Thorbecke cabinet in order to appease the anger of the Protestants. The law of 10 September, 1853, in which Catholic worship and the Catholics were slightly favoured, was greeted in the same manner. The bishops were officially recognized on 23 September, 1853, and on the same day they received the franking privilege for all correspondence relating to their office. On 24 September, the king signed a decree allowing the bishops the same salary which had been paid the vicars Apostolic, namely, 2500 florins (about \$1000). The secretaries received 400 florins and administration expenses to the amount of 6 florins for every parish within their jurisdiction. On 7 November, 1853, the Archbishop of Utrecht received the pallium. In October, 1856, the division of parishes was approved and, shortly afterwards, enforced. On 23 July, 1858, appeared the constitution for the erection of chapters, each one of which was to have eight canons, these, however, not to receive any pay from the State.

At the time of the restoration of the hierarchy, the number of Catholics and Catholic parishes was as follows: the mission of Utrecht and Haarlem, 542,590 Catholics in 435 parishes; Bois-le-Duc, 340,000 Catholics in 222 parishes; Breda, 125,181 Catholics in 77 parishes, Roermond, 196,152 Catholics in 184 parishes; total, 1,203,923 Catholics in 918 parishes. These were ministered to by 1552 ecclesiastics—918 pastors and 634 assistants. The Church in Holland was to experience a great revival after the restoration of the hierarchy. The last provincial synod had been held in 1565 by the Archbishop of Utrecht, Frederik Schenck van Toutenburg. Exactly three centuries later, 24 September, 1865, the First Provincial Synod of Utrecht assembled in St. John's church at Bois-le-Duc. It furnished the basis for those of the diocesan synods which were to take place in all the diocesan seminaries in 1867. In lieu of synods, Rome, on 16 July, 1866, ordered that, "once every year the pastors shall meet under the presidency of the dean

of the district; in the same manner shall the deans meet once a year with their bishops. Every year the bishop shall call a meeting of his chapter, some professors of the diocesan seminary, and some pastors. This meeting shall take the place of the diocesan synod and shall therefore be called a pro-synodal meeting. The bishops shall meet at least once a year. This meeting shall replace the provincial synod."

Strong proof of the flourishing condition of the Church in the Netherlands is offered by the struggle for Catholic education. After 1857 every state school was neutral and without religious instruction. There were but few private schools. The danger was great. The bishops issued the famous joint pastoral letter of 22 July, 1868, on education, which forbade parents to send their children to neutral schools wherever there was a Catholic school. This caused the establishment of a large number of private schools. Another great blessing was the closer relations with Rome. This was shown not only by the increased Peter's-pence, but also by the thousands of Zouaves who left Holland for Rome to fight for the pope. It was further manifested by the Park Meeting of 4000 Catholics at Amsterdam on 21 June, 1871, and the meetings of 17 December, 1888, at Utrecht and 22 September, 1895, at Bois-le-Duc. The St. Vincent de Paul Society was flourishing by 1845.

Moreover, since 1853, fully one hundred and fifty churches have been restored and enlarged and about five hundred new ones have been erected at an expense of at least 50,000,000 florins. Besides, many magnificent monasteries, seminaries, and colleges have been established. To ensure these ecclesiastical buildings the St. Donatus Ecclesiastical Insurance Society was founded in 1832. For the promotion of religion and learning societies of "Faith and Science" have been formed. There is a central organization with twelve branches. The "Peter Canisius Apologetic Association" proclaims its object by its title. So also the association for the study of science among Catholics of the Netherlands, with sections for jurisprudence, medicine, the natural sciences, and literature, which has in all three hundred and thirty members. With the object of founding a Catholic high school the "St. Radboud-Stichting" was organized a few years ago. In the meantime, great efforts have been made since 1880 to diffuse Catholic knowledge and promote Catholic life among Catholic students. Among themselves they have formed associations of "Faith and Science" in the cities of Amsterdam, Leyden, Groningen, and Delft. Since 1901 the Catholic students have published a year-book.

Catholic social action has been flourishing now for ten years. There is a Catholic "People's Union"; every diocese has a union of different workingmen's societies which, in turn, are formed into federations. There are branches wherever a number of workingmen are to be found. In addition, there are twelve or thirteen professional associations with a membership extending over all the country. Their meetings are productive of good by their useful resolutions. The middle classes of the citizens have also organized and in each diocese number many associations under the old name of "Hanse". But it is the protectories, with a central board of direction in every diocese and an establishment in every city and in many villages, which have prospered the most. The association "Sobrietas" is a federation of Catholic societies for the promotion of Christian temperance. Associated with this are the Society of the Cross, for men, the Society of Mary, for women, and the St. Ann's Society for parents who bring up their children without the use of alcohol. Associations for the moral welfare of soldiers exist in twenty-four cities, kept alive and fostered by diocesan congresses which take place frequently—in the Diocese of Roermond annually.

The Catholic parliamentary party has continued

its alliance with the Liberals, who have assisted it even after the restoration of the hierarchy, until about 1869-70. For a time, the attitude of the members of the chambers was wavering; but it became gradually apparent that the Catholics and believing Protestants had the same interests. The baleful educational law of 1879 confirmed the Catholics in this position. In 1883, Schaepman substituted the draft of his programme, which led to the union between the Catholics and the Christian National Party. The credit for the formation of this alliance is due to Dr. Schaepman, the celebrated priest, statesman, and poet, and to Dr. Kurper, the leader of the anti-Revolutionists. The Catholic Party and, later, the united parties have obtained many rights. The law of 1861 provided that clergymen and theological students should be exempt from active military service. A law of 1869 accorded to parish authorities the right to establish their own burial-places. The law of 1809, vesting in the civil authorities the right of interference in Church government, was repealed in 1876. But they could not prevent the abolition, after 1870, of the ambassadorship to the papal court. A law enacted in 1889 provides for a subsidy from the State for private elementary schools. In 1901 education was made compulsory. In 1905 the private intermediate schools were subsidized. The University of Amsterdam maintains two professors, who are priests, especially for Catholics. In general, however, Catholic professors are excluded from the universities; hence there are only three or four in all at the four state institutions. They are also ignored in the Royal Academy and in the examining commissions.

IV. STATISTICS.—The population of Holland at the beginning of 1908, according to calculations, amounted to 5,747,269 souls, which number is greatly on the increase. Of these fully 2,000,000 are Catholics, 104,500 Jews, and almost all the rest Protestants. The Catholics have fallen from 38.99 per cent in 1839, to 35 per cent in 1909. The relative decrease is attributed principally to the less favourable economic conditions in the southern (Catholic) provinces, which conditions cause a very large infant mortality. The number of Catholic parishes in the five dioceses has reached almost 1030, grouped in 76 deaneries; each diocese has its seminary and preparatory seminary, with a total of about 130 professors and 1500 students. There are in Holland about 2400 secular priests, and 140 religious houses of men and 510 of women. Of the former a goodly proportion, and a still greater number of the latter devote themselves to the education of youth. There are nearly 730 private schools and 125,000 pupils. Besides the seminaries there are 21 colleges and high schools, almost all of which are under the control of regulars. Then there are 28 mission houses where religious, both men and women, receive their training as missionaries. Not fewer than 13 missions in Borneo, Brazil, the Dutch West Indies, Porto Rico, the Dutch East Indies, and the Philippines are maintained by Dutch missionaries. The number of hospitals is about 160, while the hospices, orphanages, reformatories, and poorhouses are very numerous. Of the 105 Catholic journals and periodicals, the following are the most important: "De Katholiek", "Studiën", "Van Onzen Tijd", "Katholieke Nederlandsche Stemmen", "De Tyd", "De Maasbode", "Het Centrum", "De Residentiebode", "De Voorhoede", "De Limburger Koerier", "Het Huisgezin", and the "Geldlander". A majority, both of the Upper and the Lower Chamber, is Christian. Out of 50 members of the Upper House 16 are Catholics, while 25 of the 100 members composing the Lower House are of the Faith. Three of the nine cabinet ministers are Catholics. Except in certain processions, no religious service or religious garb, is permitted outside of church buildings or enclosed grounds. Civil marriage must precede the religious

ceremony. This, however, very seldom causes practical difficulties. In accordance with Article CLXXI of the Constitution, the Catholic clergy, as well as that of every other denomination, receives not only salaries from the State, but pensions also. The collective amount paid to the Catholics in 1898, when they formed 35 per cent of the population, was 565,000 florins, while the Reformed and other sects received 1,304,800 florins.

Holland, THOMAS, VENERABLE, English martyr, b. 1600, at Sutton, Lancashire; martyred at Tyburn, 12 December, 1642. He was probably son of Richard Holland, gentleman, was educated at St. Omer's and subsequently in August, 1621, went to Valladolid, where he took the missionary oath 29 December, 1633. When the abortive negotiations for the Spanish match were taking place in 1623, Holland was sent to Madrid to assure Prince Charles of the loyalty of the seminarists of Valladolid, which he did in a Latin oration. In 1624 he entered the novitiate of the Society of Jesus at Watten in Flanders and not long after was ordained priest at Liège. After serving as minister at Ghent and prefect at St. Omer's he was made a spiritual coadjutor at Ghent (28 May, 1634) and sent on the English mission the following year. He was an adept in disguising himself, and could speak French, Spanish, and Flemish to perfection, but was eventually arrested on suspicion in a London street 4 Oct., 1642, and committed to the New Prison. He was afterwards transferred to Newgate, and arraigned at the Old Bailey, 7 December, for being a priest. There was no conclusive evidence as to this; but as he refused to swear he was not, the jury found him guilty, to the indignation of the Lord Mayor, Sir Isaac Pennington, and another member of the bench named Garroway. On Saturday, 10 December, Sergeant Peter Phesant, presumably acting for the recorder, reluctantly passed sentence on him. On his return to prison great multitudes resorted to him, and he heard many confessions. On Sunday and Monday he was able to say Mass in prison, and soon after his last Mass was taken off to execution. There he was allowed to make a considerable speech and to say many prayers, and, when the cart was turned away, he was left to hang till he was dead. His brethren called him *bibliotheca pietatis*.

J. B. WAINWRIGHT.

Hollanders in the United States.—The Hollanders played by no means an insignificant part in the early history of the United States. They first appeared in this country at the beginning of the seventeenth century. Holland has the distinction of being one of the smallest of independent European countries (12,648 square miles). Though it was in an almost continual conflict with Spain from which it sought complete freedom, and though the scene of constant religious dissensions, it enjoyed at the same time a world-wide reputation as a maritime power,

whose commercial enterprise, especially in its colonies was everywhere acknowledged. In June, 1609, Henry Hudson, an Englishman in the service of the Dutch East India Company, sailed in his ship "De Halve Maan" (The Half Moon) to the new continent and was the first to ascend, as far as the site of Albany, the river which now bears his name. Hudson, however, was not the discoverer of this grand river, for, eighty-five years earlier, the Florentine, Giovanni da Verrazano sailed on what is now called New York Bay, and in 1525 another Catholic mariner, Estevan Gómez, explored part of the same beautiful river, which he called Río San Antonio, under which name it appears on the Ribera map designed in 1529.

The reports of Hudson stimulated the commercial activity of the Dutch, who laid claim to the territory along the river. In 1614, a number of Hollanders, most of whom were agents of the trading company, established themselves on Manhattan Island. Other Dutch settlers, realizing what great resources were at stake, erected several trading posts, beginning at Albany (Fort Nassau; Fort Orange) and extending as far south as Philadelphia. The territory between these two points was called "Nieuw-Nederland" (New Netherlands). Through the influence of William Usselinck, a Holland West India Company obtained from the States-General a charter granting them a commercial monopoly in America and a part of Africa for the term of twenty-four years. The members of the company collected a fund of 7,200,000 florins (\$2,880,000) which they divided into 1200 *acties* (shares). The entire government of the colony was in the hands of the company, with this restriction, that the States-General delegated the nineteenth member to the general convention, and that it was to sanction the appointment of the governor. From 1624 to 1664 the colony was ruled by four governors: Peter Minuit (1624-33); Wouter van Twiller (1633-38); William Kieft (1638-47); Peter Stuyvesant (1647-64). Peter Minuit purchased Manhattan Island from the Indians for the sum of twenty-four dollars (which was paid in merchandise) and there laid the foundation of the city of Nieuw Amsterdam, which extended as far north as Wall Street in what is now New York City.

In order to encourage emigration, the West India Company (1629) issued its charter of "privileges and exemptions" by virtue of which any member of the company who within four years should plant a colony in New Netherlands of not less than fifty persons of over fifteen years of age, should obtain absolute title to a tract of land extending sixteen miles along the navigable river, or eight miles if on both shores, and so far into the country as the situation of the occupants would permit. These proprietors, called *patroons*, held great political power as well as judicial power over the settlers. Other grants were given to colonists in 1640 and at later periods. These grants gave to the New Netherlands the characteristic features of a feudal colony, and gave rise to a landed aristocracy the exercise of whose power was not always beneficial to the colonists. A mandate promulgated in 1640, which suppressed the external practice of any religion other than the Dutch Reformed, was revoked the next year. But although no laws existed by which the religious convictions of the immigrants were restricted, the Dutch population was nevertheless predominantly Protestant and belonged chiefly to the Reformed Calvinistic Church. In 1628 Joannis Michaelius organized the first Dutch congregation in New Amsterdam, and by the year 1664 thirteen other Protestant missions had been formed. As only a very small percentage of the Dutch immigrants were Catholics, history does not take notice of them, nor does it record the establishment of any Dutch Catholic parish or institution in that community. The French Jesuit, Father Isaac Jogues (mar-

tyred 18 Oct., 1646), was the first Catholic missionary to the New Netherlands, and exercised his ministry principally among the Indian tribes.

The actual number of inhabitants in New Amsterdam in 1664, just before the English took possession of it, was nearly 1200; that of the entire colony about 10,000, divided among English, French, Bohemians, and Dutch, with the Dutch predominant. On 4 September, 1664, the English, unjustly disputing Holland's claim to the New Netherlands, appeared with a fleet before New Amsterdam, and the Dutch, realizing their powerlessness to offer any effective resistance, reluctantly surrendered. Again taken by the Dutch under Cornelius Evertsen in July, 1673, during a war between Holland, on the one side, and France and England, on the other, it was restored to England under the treaty of 1674. Thus the rule of Holland in America came to an end; Nieuw Nederland became an English possession, and Nieuw Amsterdam received its present name of New York, in honour of the Duke of York, afterwards James II. Very few of the Dutch returned to their native country. The majority stayed and for many years carried on a bitter struggle with the English Government for the independence of their Church. This was guaranteed to them by charter in 1696. In 1698 they had forty congregations.

Although many of the Dutch intermarried with other races, yet there were a goodly number who remained faithful to their nationality, so that at present the element of Dutch extraction in the Eastern States is considerable. Some of the descendants of the old Dutch settlers who gained renown in political and economic activities were: Van Cortland, from whom Van Cortland Park, in New York, derives its name; General Stephan Van Rensselaar, the New York statesman; Martin Van Buren, the eighth president of the U. S. From the end of the seventeenth till the beginning of the nineteenth century the emigration from the Netherlands was small. That of the nineteenth century had two principal causes, the first of which was the religious strife among Protestant denominations in Holland during the reign of William I. Dutch Protestants professing the Calvinistic creed established large colonies in Iowa and Michigan. The other cause of emigration was the unfavourable economical conditions in their native country. These conditions were brought about by the defects of social legislation and by the limited opportunities for business enterprise in a country so densely populated as Holland is. This is particularly true of the southern provinces, where the inhabitants are almost exclusively Catholic, where the soil is less fertile, and where a large portion of the productive land is in possession of the wealthier class. Of late, however, Catholic social organizations have ameliorated conditions somewhat; hence emigration from these provinces is decreasing.

Distribution.—According to the twelfth census, that of 1900, there are 105,000 foreign-born Hollanders in the United States (one per cent of the entire foreign-born population). These are distributed over the different states as follows:—

California	1,015
Illinois	21,916
Indiana	1,678
Kansas	875
Massachusetts	993
Michigan	30,406
New Jersey	10,261
New York	9,414
Ohio	1,719
Pennsylvania	637
South Dakota	1,327
Utah	523
Washington	632
Wisconsin	6,496

The number of Hollanders in the States not mentioned above is very small. It will be noticed that in the North Central Division alone, there are 79,000; this being over seventy-five per cent of all foreign-born Hollanders. Of the larger cities, New York had a Dutch population of 2600; Chicago, 18,500; Milwaukee, 600; Cleveland, 800; Paterson, 5000; Rochester, 1000; Grand Rapids, Mich., 13,000; Philadelphia, 300; St. Louis, 400. These statistics do not include the Hollanders born on American soil from foreign parentage. The Census Bureau gives no account of them. Of late the immigration from the Netherlands is between five and six thousand persons every year; of these nearly two-thirds are men, and one-third women; while of the entire number almost four per cent are illiterate.

Catholic colonization began in 1848, when Father Th. van den Broek, a Dutch Dominican, after a missionary career of seventeen years among the Indian tribes in the Middle West, returned to the Netherlands, where he published a booklet on conditions in America. This booklet explained what bright prospects were in store for Catholic colonists. The result of his efforts was that, in March, 1848, he set out from Rotterdam with three shiploads of Catholic Hollanders. The vessels bore the names "Maria Madgalena", "America", and "Libera". All who accompanied him settled in the Fox River Valley, a fertile and beautiful, but at that time an uncultivated and uncivilized, part of Wisconsin, between Lake Winnebago and Green Bay. This region, at one time (1630-75) the missionary field of Fathers Marquette, Ménard, Allouez, André, and Silvery, became the territory of these settlers. Many Catholic Dutch colonists followed those of 1848, and they have, after years of privation and thrift, established several prosperous settlements. The Fox River Valley, called the "heart of the state", still remains the centre of Dutch Catholic colonization in the United States.

Organizations.—There exists in the United States a national non-sectarian society, "De Nederlandsche Bond", which has its head-quarters in Chicago, and forms a branch of the same organization in other continents, and which has in view the promotion of national feeling amongst its members. As the number of Dutch Catholics in America is relatively small (25,000), and as they are scattered throughout nearly every state of the Union, there exists as yet no Catholic national society. In the Fox River Valley, however, they have local societies for religious and social purposes in every one of their settlements. In June, 1907, a league of Holland and Belgian priests was organized in Chicago for the two-fold purpose of providing for the spiritual needs of neglected Dutch and Belgian Catholics in such a manner as circumstances might suggest, and of protecting and directing their countrymen on their arrival in America. This society known as "Association of Belgian and Holland Priests" has been affiliated with the "Church Extension Society" under the name of "Holland and Belgian Section of the Extension". It is still under the separate management of its own officers. As the non-Catholic Hollanders are less scattered, it has been an easier task to foster organizations among them. There are "Dutch Societies" at Grand Rapids and Holland, Michigan, at Chicago, and at Orange City, Iowa. In New York, the "St. Nicolas Society" and the "Netherland Club" are composed of men descended from the early Dutch colonists of the seventeenth century.

Schools.—The parochial system is vigorous in all the Holland Catholic settlements. In the Fox River Valley, for instance, their parish schools are attended by some 1764 children, who are taught by forty-three religious teachers. Their schools have always maintained a high standard. The Dutch language is not taught in any of them. It is a common opinion that

Hollanders are, of all non-English speaking peoples, the most apt at learning the language and adopting the customs of the United States. The fact that in these schools, established by Dutch immigrants, the rich language of the Netherlands is entirely eliminated, would seem to confirm this opinion. It may be said that the Dutch Catholics, both at home and abroad, have shown themselves strong advocates of Catholic education. Hence it is that, in parishes where their number is insufficient to form a congregation of their own, they pledge their material and moral support to parochial institutions irrespective of nationality, and they manifest appreciation as well as fidelity in regard to the faith which their forefathers kept and cherished through centuries of governmental oppression and other forms of adversity. In 1902, the Premonstratensian Fathers from Heeswijk, Holland, founded St. Norbert's College at Depere, Wisconsin. This college was erected primarily for the education of young men aspiring to the priesthood, secular or regular; but a business course was introduced later. Although opened only seven years ago, it is now in a flourishing condition, numbering ninety students, fifty of whom are preparing themselves for the priesthood. The Dutch Sisters of Mercy, at Baltic, Connecticut, conduct an academy for young women, and have an enrolment of ninety pupils. Of Dutch non-Catholic educational institutions may be mentioned Hope College (1866) and the theological seminary (1866), both at Holland, Michigan; and academies at Orange City, Iowa; at Cedar Grove, Wisconsin; and at Harrison, S. Dakota; all belonging to the Dutch Reformed Church, which at present is divided into two sects, the "Christian Reformed" and the "Reformed Church", while the Rev. Mr. Hugenholtz started a Liberal (Unitarian) Holland Church, at present quite insignificant, in Michigan.

Journalism.—There are sixteen Dutch periodicals in the United States: one in Chicago; four in the State of Iowa (one at Orange City, two at Pella, one at Liona Centre); seven in Michigan (three at Grand Rapids, three at Holland, and one at Kalamazoo); two at Paterson, New Jersey; one at Rochester, New York; and one at Depere, Wisconsin. These journals are all weeklies. Their subscribers, taken collectively, number about 70,000. The "Volkstem" (Voice of the People) published at Depere is at present the only Catholic publication in the Dutch language. The "Holland Amerikaan", issued weekly at Rochester, New York, though non-sectarian, strongly promotes Catholic interests; the other newspapers—of which "De Hoope" and "De Gronwet", published at Holland, Michigan, and "De Volksvriend", at Orange City, Iowa, are of main importance—espouse the cause of the Dutch Reformed Church.

Communities and Churches.—There are two Dutch religious orders in the United States, one of men, the other of women. The Premonstratensian Fathers, more commonly known as Norbertines, from their founder, St. Norbert, came to America in November, 1893, from their abbey at Heeswijk, in North Brabant, Holland. They came at the request of Bishop S. G. Messmer, of Green Bay (now Archbishop of Milwaukee), Wisconsin, to take charge of the Belgian missions in his diocese. In 1898, they canonically erected a convent at Depere, Wisconsin. In 1901 a novitiate of the order was also established with papal approbation. These fathers, faithful to the motto of their founder *Ad omne opus bonum parati* (Ready for every good work) have charge of six Belgian congregations and seven missions in the Diocese of Green Bay. They are, furthermore, engaged in parish work in the Dioceses of Marquette and Grand Rapids and in the Archdiocese of Chicago. They also conduct St. Norbert's College, mentioned above. The order in America numbers twenty-one priests, three scholastics, five novices, and four lay

brothers. The Sisters of Our Lady, Mother of Mercy, came to America in 1874 from their mother-house at Tilburg, North Brabant, Holland. They began their first mission at Baltic, Connecticut, in the Diocese of Hartford, which is at present their headquarters. They also opened two schools and a city hospital at Willimantic, Connecticut, and one school at Taftsville, Connecticut. Since these sisters have taken charge of missions in the Dutch East Indies, they have declined to open any more houses in the United States. The order in America has seventy-six professed sisters, eleven novices, and four aspirants, while 1900 pupils receive a Catholic education through their devoted efforts. There are in the United States seventeen Catholic Dutch congregations and a few smaller missions, some of which have been more or less mixed with other nationalities, especially with the Flemish. The Dutch are, moreover, well represented in several other parishes, especially in the States of Michigan, South Dakota, and Montana. The Dutch priests, secular and regular, number 137—a significant indication of the strong missionary spirit of the small Catholic population (2,000,000) of the Netherlands.

Distinguished Dutch Americans.—Among the foremost of these was the Most Rev. Francis Janssen, for whom see NEW ORLEANS, ARCHDIOCESE OF. The Rev. Th. van den Broek, O.P., was born at Amsterdam in 1803, and was ordained priest after entering the Order of Preachers. In 1832 he entered upon his missionary career in Kentucky, Michigan, and Wisconsin. In Wisconsin, he was one of the pioneers in the present Diocese of Green Bay, where also he began his first Catholic colony of Hollanders at Little Chute (1848). This afterwards developed into seven others. He was a man of extraordinary activity in the missionary field and of deep piety. On All Saints' Day, 1851, while speaking to his flock of the glory and happiness of the saints, he was attacked by apoplexy and died 5 November, 1851. He was buried in the church at Little Chute, Wisconsin, where the Dutch have erected a magnificent monument to his memory. The Reverend Arn. Damen, S.J., was born at De Leur, Holland (N. Br.) 20 March, 1815. He entered the Society of Jesus and set out for America with several others under the guidance of Father De Smet, S.J., was made a professor in St. Louis University, and soon after became pastor of the college church at St. Louis. In 1857, he inaugurated a church and school in Chicago on the spot where now stands the Church of the Holy Family Church and the College of St. Ignatius. Though Father Damen accomplished meritorious work in the line of Catholic education, still his main achievements were the missions which he gave in nearly every important city in the United States. He died at Creighton College, Omaha, Nebraska, 1 January, 1890.—For the Rt. Rev. Cornelius Van den Ven, see NATCHITOCHESE, DIOCESE OF.

Thrift, economy, cleanliness and other domestic qualities make the Dutch desirable citizens of our Republic. Religious indifference is, generally speaking, unknown to them, but with an undying fidelity, they cling to their respective beliefs. The Catholics are noted for their faithfulness in attending services on Sundays. It is especially in rural districts that the Hollanders have obtained the best success in their material undertakings. Coming from a land which is famed as a dairy country, and accustomed to labour, they have proved themselves fit to stand the unavoidable hardships of pioneer life. Many of them have attained a remarkable degree of prosperity.

FISKE, *The Dutch and the Quaker Colonies in America* (Boston and New York, 1899); GRIFFIS, *The Story of New Netherlands* (New York, 1909); SISTER M. Holmes, JOHN, Catholic educator and priest; b. at Windsor, Vermont, in 1799; d. at Lorette, near Quebec, Canada, in 1852. After a few years' schooling at Dartmouth College, he left home for Canada, bent on prosecuting his studies and converting Catholics. His own eyes were opened to the true Faith, which he embraced at Yamachiche, Province of Quebec, in 1817, where the pastor, Abbé Lecuyer, had housed and instructed him. He studied philosophy at Montreal Seminary, and theology at Nicolet College. Shortly after his ordination in 1823 he was appointed pastor of Drummondville, the centre during the four years of his ministry of a field of labour extending over a district now comprising fifteen or twenty parishes. He then went as professor to Quebec Seminary, which was to reap such benefit from his talents and devotedness. Abbé Holmes, a born pedagogue, infused new life into the antiquated curriculum, introducing Greek, English, and all the branches of experimental science. His inventive genius and winning style lent a charm to all his teaching, especially that of geography. His "Traité de Géographie", first published in 1832, many times re-edited and even translated into English and German, is a model text-book. He first conceived the plan of a Catholic University, since realized in Laval, the charter of which was signed shortly after his death. His zeal for education was not limited to the seminary. In 1836, when the Legislature of Lower Canada voted grants for the first normal schools, the task of organizing and equipping these institutions was entrusted to Abbé Holmes. No patriot was more devoted to the country of his adoption. His experience in the eastern townships inspired him to promote colonization in that direction, so as to stem the tide of French Canadian emigration beyond the border-line. He also foresaw the possibility of a commercial union of all the British provinces in North America, a plan afterwards more completely realized by the confederation in 1867. Abbé Holmes was an orator in the full sense of the word. His deep and varied knowledge, expressive mien and gesture, sonorous voice, and perfect mastery of the French tongue all combined to charm and convince the audiences that crowded the vast cathedral to overflowing, and produced on his hearers a life-long impression. His "Conférences de Notre-Dame" were first published in 1850. His friendly relations with his family soon reconciled them to his conversion. A brother and all his six sisters followed him into the Church.

LIONEL LINDSAY.

Holocaust.—As suggested by its Greek origin (*ὅλος* "whole", and *καυτός* "burnt") the word designates an offering entirely consumed by fire, in use among the Jews and some pagan nations of antiquity. As employed in the Vulgate, it corresponds to two Hebrew terms: (1) to *'olah*, literally: "that which goes up", either to the altar to be sacrificed, or to heaven in the sacrificial flame; (2) *Kā'il*, literally: "entire", "perfect", which, as a sacrificial term, is usually a descriptive synonym of *'olah*, and denotes an offering consumed *wholly* on the altar. At whatever time and by whomsoever offered, holocausts were naturally regarded as the highest, because the most complete, outward expression of man's reverence to God. It is, indeed, true that certain passages of the prophets of Israel have been construed by modern critics into an utter rejection of the offering of sacrifices, the holocausts included; but this position is the outcome of a partial view of the evidence, of the misconception of an attack on abuses as an attack on the institution

which they had infected. For details concerning this point, and for a discussion of the place which the same scholars assign to the *'olah* (holocaust) in their theory of the development of the sacrificial system among the Hebrews, see SACRIFICE. The following is a concise statement of the Mosaic Law as contained chiefly in what critics commonly call the Priests' Code, concerning whole burnt-offerings.

I. *Victims for Holocausts.*—Only animals could be offered in holocaust; for human victims, which were sacrificed by the Chanaanites and by other peoples, were positively excluded from the legitimate worship of Yahweh (cf. Lev., xviii, 21; xx, 2-5; Deut., xii, 31; etc.). In general, the victims had to be taken either from the herd (young bullocks) or from the flock (sheep or goats); and, to be acceptable, the animal was required to be a male, as the more valuable, and without blemish, as only then worthy of God (Lev., i, 2, 3, 5, 10; xxii, 17 sqq.). In certain cases, however, birds (only turtle-doves or young pigeons) were offered in holocaust (Lev., i, 14; etc.); these birds were usually allowed to the poor as a substitute for the larger and more expensive animals (Lev., v, 7; xii, 8; xiv, 22), and were even directly prescribed in some cases of ceremonial uncleanness (Lev., xv, 14, 15, 29, 30). Game and fishes, which were sacrificed in some pagan worship of Western Asia, were not objects of sacrifice in the Mosaic Law.

II. *Ritual of Holocausts.*—The principal rites to be carried out in the offering of holocausts, were (1) on the part of the offerer, that he should bring the animal to the door of the tabernacle, impose his hands on its head, slay it to the north of the altar, flay and cut up its carcass, and wash its entrails and legs; (2) on the part of the priest, that he should receive the blood of the victim, sprinkle it about the altar, and burn the offering. In the case of an offering of birds, it was the priest who killed the victims and flung aside as unsuitable their crop and feathers (Lev., i). In public sacrifices, it was also the priest's duty to slay the victims, being assisted on occasions by the Levites. The inspection of the entrails, which played a most important part in the sacrifices of several ancient peoples, notably of the Phœnicians, had no place in the Mosaic ritual.

III. *Classes of Holocausts.*—Among the Hebrews, holocausts were of two general kinds, according as their offering was prescribed by the Law or the result of private vow or devotion. The obligatory holocausts were (1) the *daily* burnt-offering of a lamb; this holocaust was made twice a day (at the third and ninth hour), and accompanied by a cereal oblation and a libation of wine (Ex., xxix, 38-42; Num., xxviii, 3-8); (2) the *sabbath* burnt-offering, which included the double amount of all the elements of the ordinary daily holocaust (Num., xxviii, 9, 10); (3) the *festal* burnt-offering, celebrated at the New Moon, the Pasch, on the Feast of Trumpets, the day of Atonement, and the Feast of Tabernacles, on which occasions the number of the victims and the quantity of the other offerings were considerably increased; (4) the holocausts prescribed for the consecration of a priest (Ex., xxix, 15 sqq.; Lev., viii, 18; ix, 12), at the purification of women (Lev., xii, 6-8), at the cleansing of lepers (Lev., xiv, 19, 20), at the purgation of ceremonial uncleanness (Lev., xv, 15, 30), and finally in connection with the Nazarite vow (Num., vi, 11, 16). In the voluntary burnt-offerings the number of the victims was left to the liberality or to the wealth of the offerer (cf. III Kings, iii, 4; I Par., xxix, 21, etc., for very large voluntary holocausts), and the victims might be supplied by the Gentiles, a permission of which Augustus actually availed himself, according to Philo (Legatio ad Caium, xl).

IV. *Chief purposes of Holocausts.*—The following are the principal purposes of the whole burnt-offerings prescribed by the Mosaic Law: (1) By the total sur-

render and destruction of victims valuable, pure, innocent, and most nearly connected with man, holocausts vividly recalled to the Hebrews of old the supreme dominion of God over His creatures, and suggested to them the sentiments of inner purity and entire self-surrender to the Divine Majesty, without which even those most excellent sacrifices could not be of any account before the Almighty Beholder of the secrets of the heart. (2) In offering holocausts with the proper dispositions worshippers could feel assured of acceptance with God, Who then looked upon the victims as a means of atonement for their sins (Lev. [A. V.], i, 4), as a well-pleasing sacrifice on their behalf (Lev., i, 3, 9), and as a cleansing from whatever defilement might have prevented them from appearing worthily before Him (Lev., xiv, 20). (3) The holocausts of the Old Law foreshadowed the great and perfect sacrifice which Jesus, the High Priest of the New Law and the true Lamb of God, was to offer in fulfilment of all the bloody sacrifices of the first covenant (Heb., ix, 12, sqq.; x, 1, sqq.; etc.).

Holstenius (HOLSTE), LUCAS, German philologist, b. at Hamburg, 1596; d. at Rome, 2 February, 1661. He studied at the gymnasium of Hamburg, and later at Leyden, where Vossius, Heinsius, Meursius, and Scriverius then taught. In 1618 Cluver induced him to accompany him on a journey to Italy and Sicily, thus giving him a taste for the study of geography. He returned for a short time to Leyden, failed to be accepted as professor in the gymnasium of Hamburg, and went to England in 1622, where he gathered materials for his "Geographi Minores". At Paris in 1624, he became librarian to the president de Mesmes, the friend of the scholarly brothers Dupuy, and the correspondent of Peiresc. At this time he was converted to Catholicism. The liking he had always displayed for Platonic philosophy impelled him to read eagerly the Greek and Latin Fathers, especially those who treated of contemplative and mystical theology. This led him quite naturally to the Catholic Church. In 1627 he went to Rome, and through the influence of Peiresc was admitted to the household of Cardinal Barberini, becoming his librarian in 1636. Finally, under Innocent X, he was placed over the Vatican Library. The popes sent him on various honorable missions, such as bearing the cardinal's hat to the nuncio at Warsaw (1629), receiving the abjuration of Queen Christina at Innsbruck, acting as intermediary in the conversion of the Landgrave of Darmstadt and of Ranzau, a Danish nobleman. Mostly, however, he was occupied with his studies. He had formed great projects; he desired to correct Cluver's errors and complete his work; to edit, translate and comment the works of the Neoplatonists; to form a collection of the unedited homilies of the Greek Fathers; to collect inscriptions; to write a critical commentary on the Greek text of the Bible; to form a collection of all the monuments and acts of the history of the popes. These diverse undertakings consumed his energies and filled his notebooks, but without profit to scholarship. His notes and collations have been used by various editors. His principal works are an edition and a life of Porphyry (1630), the "Thoughts" of Democritus, Demophilus and Secundus, little mythological works (1638), an edition of Arrian's treatise on the Chase (1644), and the "Codex regularum monasticarum", a much used

collection of monastic rules (1661; edited anew by Brockie, Ratisbon, 1759). He also edited for the first time the "Liber Diurnus", a collection of the ancient chancery formulæ used in the administration of the Roman Church (1660); this edition, however, was immediately suppressed by Alexander VII (see LIBER DIURNUS). After his death there were published from his papers collections of synods and ecclesiastical monuments, the "Collectio romana bipartita" (1662), also the acts of the martyrs Perpetua and Felicitas, Boniface, Tarachus, Probus and Andronicus (1663). His observations on the geography of Italy appeared in 1666, in the form of notes on the previously published works of Charles de Saint-Paul, Cluver and Ortelius. The notes on Stephen of Byzantium were published at Leyden in 1684 by Rycke. Lambecius was the nephew of Holstenius, but they quarrelled towards the end of his life.

Holtei, KARL VON, German novelist, poet, and dramatist; b. at Breslau, 24 January, 1798; d. in that city, 12 February, 1880. He abandoned first agriculture and then law for the stage for which he early exhibited a great fondness. Having married Louise Rogée, an actress playing in Breslau, he became connected with the theatre of that city, but changed this residence for Berlin when his wife obtained an engagement there at the court theatre. After her death (1825) he led the life of a wandering rhapsodist, giving dramatic readings at Paris and various other cities. In 1829 he married a second time, his wife being Julie Holzbecher, an actress. He appeared on the stage in different towns, until he accepted the directorship of the newly established German theatre at Riga in 1837. But the next year, his wife having died, he resumed his wandering life as dramatic reader until he settled down in Graz, residing in the house of one of his daughters, who was married there. Here he remained until 1870, when he returned to his native city, where he enjoyed extraordinary popularity. Failing health induced him to take up his abode in the convent of the Brothers of Mercy, where he died.

Holtei's writings are very numerous and include dramas, lyrics and novels. He introduced the vaudeville into Germany. Of his plays, forty-six in number, the best known are "Der alte Feldherr" (1829), "Lenore" (1829), "Ein Trauerspiel in Berlin" (1838), and "Lorbeerbaum und Bettelstab" (1840). Of his novels, the first to appear was "Die Vagabunden" (1852); among those that followed the best are "Christian Lammfell" (1853) and "Der letzte Komödiant" (1863). Of his lyric poems the most popular are the collection entitled "Schlesische Gedichte" (Berlin, 1830, 20th ed., 1893), written in Silesian dialect. Holtei also wrote an autobiography "Vierzig Jahre" (Berlin and Breslau, 1843-50), with a supplement "Noch ein Jahr in Schlesien" (Breslau, 1864). A complete collection of his dramas was published at Breslau, 1845 (final edition, 6 vols., Breslau, 1867). The novels and stories were collected and published under the title "Erzählungen" (Breslau, 39 vols., 1861-66).

Consult the autobiography; see also KURNICK, *K. v. H., ein Lebensbild* (Breslau, 1880); LANDAU, *Karl von Holteis Romane* (Leipzig, 1904); WEHL, *Zeit und Menschen* (Altona, 1889).

ARTHUR F. J. REMY.

Holy Agony, ARCHCONFRATERNITY OF, an association for giving special honour to the mental sufferings of Christ during His Agony in the Garden of Gethsemani. Its object is to obtain through the

merits of these sufferings: (1) peace for the Church, preservation of the Faith, and the cessation of scourges; (2) the grace of a happy death for hardened sinners who are about to die, and in general spiritual aid for those in their death agony. It was founded as a confraternity in 1862, at Vallfeury, France, by Antoine Nicolle (1817-90), a priest of the Congregation of the Mission (Lazarist). At its beginning, Pius IX enriched it with indulgences. In 1865 it was authorized to affiliate other confraternities in the Diocese of Lyons. In 1873 it was made an archconfraternity for all France, and its head-quarters installed at the mother-house of the Lazarists, 95 Rue de Sèvres, Paris. After twice adding to its indulgences, Pope Leo XIII, in 1894, permitted its extension through the world. To join the confraternity all that is required is to have one's name inscribed upon the register, which may be done by applying to the promoters of this devotion, or to the director. The practices are the daily recitation of a short prayer found on the certificate of admission usually given to members, or the recitation of an Our Father and Hail Mary instead, for the intentions of the association. Members are also recommended to offer their actions each Friday, or some other day of the week, to hear Mass once a week, and to offer a Holy Communion once a year for the intentions of the society. None of these practices is obligatory. The members should be especially zealous in seeing that those in danger of death have the assistance of a priest and other aids to die well.

The head of the archconfraternity is the superior general of the Congregation of the Mission, who puts the details of the work in the hands of a sub-director of the same congregation. The medal of the archconfraternity bears on one side a representation of the Agony of Christ in the Garden of Gethsemani, on the reverse, Our Lady of the Seven Dolours. The chief festival is that of the Prayer of Christ, which occurs on Tuesday of Septuagesima week. The society has spread all over the world and has been erected, chiefly but not exclusively, in the churches and chapels of the Lazarists and the Daughters of Charity. While the chapel of the mother-house of the Lazarists in Paris is the seat of the archconfraternity, and the monthly meetings and the novena preparatory for the feast of the Prayer of Christ are held there, in another part of Paris a chapel of the Holy Agony has been built in gratitude for the favours received by the association, and as a testimonial of reparation and love at the end of the nineteenth century. The "Bulletin of the Holy Agony" is published every other month in Paris; a quarterly edition in English appears at Emmitsburg, Md. All the details of the association can be found in the "Manual of the Archconfraternity" published at Paris, 95 Rue de Sèvres. The director for England and Scotland resides at St. Vincent's, Mill Hill, London; for Ireland at St. Peter's, Dublin; and for the United States at St. Vincent's House, Emmitsburg, Maryland.

LARIGALDIE, *Antoine Nicolle* (Paris, 1909).

B. RANDOLPH.

Holy Alliance.—The Emperor Francis I of Austria, King Frederick William III of Prussia, and the Tsar Alexander I of Russia, signed a treaty on 26 September, 1815, by which they united in a "Holy Alliance". Although a political act, the treaty in its wording is a statement purely religious in character. Having in mind the great events of the fall of Napoleon, and in gratitude to God for the blessings shown to their people, the three monarchs declared their fixed resolution to take as the only rule of their future administration, both in internal and foreign affairs, the principles of the Christian religion—justice, love and peace. They declared that, far from being of value only in individual life, Christian morality is also

the best guide in public life. Accordingly the rulers declared their fraternal feeling towards one another, in virtue of which they would not only give support to, but abstain from war with, one another, and would guide their subjects and their armies in a fatherly manner. They declared that they would administer their office as representatives of God who were called to guide three great branches of the Christian family of nations; the rightful Lord of the nations, however, remains the One to whom belongs all power, our Divine Saviour, Jesus Christ. They also recommended their subjects with the most tender solicitude to strengthen themselves daily in the principles and practice of the duties which the Saviour taught, because this was the only way to attain the enduring enjoyment of that peace which arises from a good conscience, and which is lasting. In conclusion they called upon all the Powers to become members of the alliance. In point of fact, Louis XVIII of France joined it on 19 November and even the Prince Regent of England did likewise.

The world had long learned not to expect from statesmen official documents in which so religious a tone prevailed. When the wording of the agreement became known early in 1816, men saw in the alliance the consequence of the closest union of politics and religion. To a certain extent the world suspected that it veiled a league of the rulers and the churches, especially of the rulers and the papacy, against the nations and their freedom. For, besides the success of the Revolution and of Napoleon and the sudden revulsion, nothing occupied and surprised public opinion so much as the universal revival of faith in men's souls, of Christian thought, and of the Catholic Church. Men watched with suspicion this unexpected turn of affairs which was contrary to all the prejudices developed by the rationalism of the eighteenth century. It was also considered possible that the conquerors of Napoleon had in the Holy Alliance bound themselves to the Church, which was regaining its old power, in order by its aid to oppose, for the benefit of royal and papal absolutism, the "liberal" development of States and civilization. The judgment of public opinion, which is always superficial, held a few external signs as evidence of the facts which it suspected behind the alliance. Among these indications taken as proofs were, perhaps, the restoration of the States of the Church by the Powers, or the casual and confused information that the public gradually inferred from the mighty ideas of Joseph de Maistre, or from the more circumscribed views of Bonald, Haller, and others. In reality, the Church, that is to say, its head, the papal councillors, and the bishops, regarded with coldness this alliance, which took under its wings schism, heresy, and orthodoxy alike, while Catholicism, that is, the total of Catholic individuals and masses taking part in the public life of the nations and states, was even averse or hostile to the alliance. Individual exceptions, in the opinion of the present writer, do not amount to a proof of the contrary.

In this case, as so often in the history of the world, words of seemingly great significance excited notions the more extravagant, the less substance and influence the matter indicated by the statement possessed. The testimony of Prince Metternich, the person most familiar with the subject and the one who, next to the tsar, had the most to do with the founding of the alliance, is: "The Holy Alliance, even in the prejudiced eyes of its originator [the tsar], had no other aim than that of a moral manifesto, while in the eyes of the other signers of the document it lacked even this value, and consequently justified none of the interpretations which in the end party spirit gave to it. The most unanswerable proof of the correctness of this fact is probably the circumstance, that in all the following period, no mention was made or even could have been made of the Holy Alliance in the corre-

spondence of the cabinets with one another. The Holy Alliance was not an institution for the suppression of the rights of the nations, for the promotion of absolutism, or for any kind of tyranny. It was solely an emanation of the pietistic feelings of the Emperor Alexander, and the application of the principles of Christianity to politics." This quotation gives the true statement in regard to the facts of the case, as well as in regard to the personal factor in the founding of the alliance, which was the transitory pietistic feeling of the tsar at that time. The vigorous reawakening of the religious sense had called forth, especially in connexion with the revival of Christian thinking, many confused and obscure manifestations of a mystical and spiritualistic kind that were reactionary in tendency. From June, 1815, the tsar had come under the sway of one of these mystical and reactionary tendencies, through the influence of the Baroness von Krüdener, a lady of German-Russian descent who was a religious visionary. Without striving to exert political power, she seems, nevertheless, to have imbued Alexander with the idea that princes must once more rule according to the dictates of religion and under religious form. While the lady was intent wholly on arousing religious ideals, Alexander at once gave a political cast to the suggestion when he endeavoured to formulate it and, with this end in view, drew up the treaty on which the Holy Alliance is based. His demand was not welcome to statesmen of practical mind like Metternich and the Prussians, but they did not consider it necessary to decline the proposal. They struck out merely what was most objectionable to them, and by degrees Metternich quietly replaced the entire alliance by the purely political alliance of 20 November, 1815, between Austria, Prussia, Russia and England, by the Treaty of Aachen of 18 October, 1818, and the agreements made at the Congresses of Troppau (1820), Laibach (1821), and Verona (1822).

Nevertheless the expression "Period of the Holy Alliance" for European politics of the years 1815-23, that is, for the era when Metternich's influence was at its height, has some justification. A brief general review of events will prove this. But the term should not be taken too literally; moreover, it must be admitted that history, in characterizing a period, is more apt to adopt an easily-found and striking expression than an exact one. During the years 1814-15, a number of treaties were concluded between the various countries of Europe. In this series of compacts the Holy Alliance forms merely one link and in a practical sense the most unimportant one; it was also the only treaty which was religious in character. All these treaties have, however, one trait in common. They revive the conception of a centralized Europe, in which the rights of the individual states seem to be limited by the duties which each state has in regard to the whole body of states. The signatories announced the end of the war that had been carried on since the era of the Thirty Years War by those grasping powers and interests, which took only into consideration the *ratio status*. They further asserted that all just political demands were satisfied, that the great Powers were "saturated", and on the strength of this, they introduced into international law the conception of a common European responsibility, the application of which was to be secured by agreement of the great Powers as cases arose. This common responsibility was to be used for the liberal promotion of all economic, intellectual, and social life, but political liberalism was to be suppressed or held in check in order to reserve the administration of public affairs to the governments as specially ordained thereto. The renewal of the common responsibility of the European states, and of the scheme of administration involved therein, may be regarded as the most characteristic work of Metternich.

The desire for this joint responsibility had grad-

ually developed from the ideas of the Austrian policy of the eighteenth century, and had been already expressed in the instructive papers of Kaunitz written in his old age. It was now formulated and made a reality by Austria's greatest statesman. Between the eras of Kaunitz and Metternich, however, had appeared the revival of religious feeling in Europe. The minds of men turned once more to Christianity and the Church. Involuntarily the course of European thought, even that of the most cool-headed statesmen, became again subordinate to the categories of Christian thinking. Little as Metternich was personally inclined to base his political views on religion, he did not fail to observe that his idea of a common responsibility of the nations and his inclination to peace bore a resemblance to the loftiest medieval ideals of the Christian unity of nations and of a common civilization. He had even an exaggerated idea of this resemblance, as had many of his contemporaries. In consequence of this over-estimation, however (for in truth his ideas were rooted in rationalism), he allowed these views to appear, if only for a moment, in the words of the Holy Alliance as the proper "application of the principles of Christianity to politics". From his non-resistance to the tsar, his contemporaries inferred that the alliance proclaimed a return to the times in which the papacy and the Church claimed and exercised the right of guiding the *respublica christiana*. It is in this way that historical events are twisted and confused by the imagination, both of the individual and of the multitude. The Holy Alliance became a bugbear representing reaction, while in reality, like everything that even distantly harmonized with Christianity, it was of advantage to Europe, and assured to it peace for a generation, and an extraordinary development of civilization.

MARTIN SPAHN.

Holy Childhood, ASSOCIATION OF THE, a children's association for the benefit of foreign missions. Twenty years after the foundation of the Society for the Propagation of the Faith (1843) Charles de Forbin-Janson, Bishop of Nancy, France, established the Society of the Holy Childhood (*Association de la Sainte Enfance*). Its end is twofold: first, to rally around the Infant Jesus our little Christian children from their tender years, so that with increasing age and strength, and in imitation of Jesus their Master, they may practise true Christian charity with a view to their own perfection; second, that by the practice of charity and enduring liberality those same little Christian children may co-operate in saving from death and sin the many thousands of children that in pagan countries like China are neglected by their parents and cast away to die unbaptized. The further object of the association is to procure baptism for those abandoned little ones, and, should they live, to make of them craftsmen, teachers, doctors, or priests, who in turn will spread the blessings of the Christian religion amongst their countrymen.

Children may become members of the association immediately after baptism, and may continue in membership for the remainder of their lives, but at the age of twenty-one, in order to still share in the indulgences, it is necessary to become also a member of the Lyons Association for the Propagation of the Faith.

In order to be a member of the Association of the Holy Childhood, it is necessary to give a monthly contribution of one cent, or a yearly contribution of twelve cents, and to recite daily a "Hail Mary" with the addition, "Holy Virgin Mary, pray for us and for

the poor pagan children". Until the children are able to do this themselves their relatives should do it for them.

The parish priest is the regular director of the work from the time he introduces the association, and, when there are at least twelve associates, he has a share in the privileges granted to the directors by the Holy See, provided that for the exercise of these privileges the requisite permission of the ordinary has been granted in general or has been specially asked for. The same holds good for the assistant priests of the parish, when the pastor has entrusted to one of them the care of matters relating to the association.

Four popes and hundreds of other ecclesiastical dignitaries have approved the association and recommended it to the faithful. Pius IX, by a Brief of 18 July, 1856, raised it to the rank of a canonical institution, gave it a cardinal protector, and requested all bishops to introduce it in their dioceses. Leo XIII, in an Encyclical letter, "Sancta Dei Civitas" (3 December, 1890), blessed it and recommended it again to the bishops. "It is my earnest wish," he said in 1882, "that all the children of the Catholic world should become members of this beautiful association." Pius X emphasized its international character, comparing it to a great army the component parts of which are the various national branches.

The affairs of the association are managed by an international council at Paris, France, consisting of fifteen priests and as many laymen. The general director of the association is the presiding officer. This general council has exclusively the right of general direction and of the distribution of the society's funds. To them various national branches send in their yearly report with the contributions received. It is to be noted that none of the officers receive any compensation for their services. It is estimated that at the present time there are enrolled in the Association of the Holy Childhood about seven millions of Catholic children. Fully thirty-two millions of dollars are the result of their generosity, and about eighteen millions of pagan children have thus been saved to the Church. The receipts for 1907-08 were over \$700,000. From this fund 236 missions in the various heathen countries were supported. An annual grant is made by the general council in favour of Catholic Indian Schools in the Western States and territories. 1,171 orphanages, 7,372 schools, and 2,480 workshops, etc., share in the yearly alms received from all the Catholic countries. The "Annals of the Holy Childhood", published bi-monthly, is issued in seven languages. Six countries contributed 90 per cent. of last year's fund of \$700,000, viz.: Germany, \$278,355; France, \$169,935; Belgium, \$92,255; Italy, \$50,650; Holland, \$31,540; Austria, \$30,995. Sum total from these six countries, \$655,690. Ireland's contribution for 1907 amounted to \$5,440 and England's to \$1,595, these two English-speaking countries being represented in the total amount with 1 per cent.

The association was probably established in the United States by Bishop Forbin-Janson himself. Several agencies in the East and West managed its affairs for about fifty years. On 1 January, 1893, the work was concentrated into one central agency and confided to the Fathers of the Holy Ghost, with headquarters in Pittsburg, Pa. Very Rev. A. Zielenbach, C. S. Sp., was its first central director for about four years. Since then Rev. John Willms, C. S. Sp., is general manager, assisted by thirty-two priests as diocesan directors who volunteer their services for this noble cause without any compensation. The total receipts in the United States from 1893 to 31 October, 1908, were \$319,012.76. About 18,000 copies of the "Annals" in English, German, Polish, and French are sent from the central office to the different local branches six times each year.

J. WILLMS.

Holy Child Jesus, SOCIETY OF THE, was founded in England in 1846 by Mrs. Cornelia Connelly, née Peacock, a native of Philadelphia, U. S. A., who had become a convert to the Catholic Faith in 1835. The society was approved in 1887 by Leo XIII, and the rules and constitutions were confirmed and ratified by the same pontiff in 1893. The constitutions are founded on those of St. Ignatius. The principal object of the society is the education and instruction of females of all classes, whether in day-schools, boarding-schools, orphanages, or colleges for higher education. The religious undertake the instruction of converts, and visiting of the sick and poor, when these works do not interfere with the primary duty of teaching; ladies may be received into houses of the society as boarders, or for the purpose of making retreats. The society is governed by a superior general whose ordinary residence is at the mother-house, Mayfield, England, and who is assisted by a provincial or provincials. America is at present the only province. The superior general is elected by a chapter consisting of representatives of the whole order, and her term of office lasts six years.

The first house of the society was founded at Derby, England, in 1846, but the community was shortly afterwards transferred to St. Leonards-on-Sea, Sussex, at the advice of Cardinal Wiseman. Here the religious have since built a fine church and schools. The ruins of "The Old Palace", Mayfield, Sussex, with the farm adjacent were given to the Society in 1863 by Louise, Dowager Duchess of Leeds, née Caton, one of the granddaughters of Charles Carroll of Carrollton. She also made over to Mrs. Connelly a farm in Towanda, Penn., and two thousand acres of land in Lycoming Co., on condition that a branch of the society should be established in America. Accordingly five sisters came over in 1862 and opened a school at Towanda. This undertaking proved unsuccessful, and the community was removed to Philadelphia, and settled in Spring Garden Street. Here they were put in charge of the academy and parochial schools in connection with the Church of the Assumption, whose rector, the Rev. C. Carter, befriended the society in America in every possible way. In 1864 he made over to the religious the house and farm of the old Quaker establishment at Sharon Hill, seven miles from the city of Philadelphia; and this became the seat of the novitiate and of a flourishing boarding-school. The society now numbers in England nine houses and many schools for all classes, and more than four thousand children are taught by the sisters in the city of Preston alone, in which city there is also a centre for the education of pupil-teachers. A college for the training of teachers of secondary schools was opened in Cavendish Square, London, in 1896 by invitation and under the special patronage of Cardinal Vaughan. A house has also been founded at Oxford. A convent of the order at Neuilly, Paris, shared the common fate of all religious houses in France, and was closed by order of the French Government in 1904. In America the society possesses houses in Pennsylvania, New York, Massachusetts, Illinois, Nebraska, and Wyoming.

MOTHER MARY ST. PETER.

Holy Coat (OF TRIER AND ARGENTEUIL). The possession of the seamless garment of Christ (Gr. *χιτὼν ἀρραφός*; Lat. *tunica inconsutilis*, John, xix, 23), for which the soldiers cast lots at the Crucifixion, is claimed by the cathedral of Trier and by the parish church of Argenteuil. The Trier tradition affirms that this relic was sent to that city by the Empress St. Helena. For some time the holders of this opinion based their claim on a document in the ancient archives of the city, the "Sylvester Diploma", sent by Pope Sylvester to the Church of Trier, but this cannot, at least in its present form, be considered genuine.

It has, however, been conclusively proved by incontestable documents, that since about the year 1100 the people of Trier were fully convinced that they possessed the seamless garment of Christ and that it had come to them from St. Helena. The life of St. Agritius, Bishop of Trier, written in the eleventh century (before 1072), mentions the relics sent to Trier by St. Helena during the lifetime of Agritius, and relates from the "reliable tradition of the forefathers" that at one time a pious bishop of Trier wished to have opened the relic shrine kept in the treasury of the cathedral, containing among other relics a garment of the Lord, of which some said that it was the seamless coat, and others that it was the purple garment with which He was clothed at the time of His Passion (Monumenta Germ. Hist., Script., VIII, 211). The "Gesta Trevirorum", written in 1105, bears witness to the existence of the *Tunica Domini* and to the tradition regarding the manner of its being brought to Trier (Mon. Germ. Hist., Script., VIII, 152). An ancient witness to the tradition of the sending of relics to Trier by St. Helena (no special mention, however, being made of the Holy Coat) is the panegyric of St. Helena composed by Almannus of Hautvilliers about 880 (Acta Sanctorum, Aug., Vol. III, p. 952). A still more ancient witness is an ivory tablet preserved in the cathedral treasury of Trier, dating from as early as the fifth or sixth century according to some, and according to others from a later period. It is explained to be a representation of a translation of relics to Trier with the co-operation of St. Helena. While this testimony may not furnish actual proof of the authenticity of the relic, it goes far to confirm the probability of the same.

The arguments of the opponents of the relic are merely their own opinions; these writers furnish no substantial proof of their contention. The relic itself offers no reason to doubt its genuineness. Archaeological investigations (1890 and 1891) have proved that "the material of the plain brownish coloured fabric is to all appearances linen or cotton". It has been impossible to discover any traces of original seams on the relic, which is covered on both sides by protecting veils. The investigation therefore furnished no reason to doubt the ancient tradition at Trier. In 1196 the Holy Coat was solemnly transferred by Archbishop Johann I from the St. Nicholas chapel of the cathedral to the high altar at that time consecrated by him (Continuation of the "Gesta Trevirorum", Mon. Germ. Hist., Script., XXIV, 396). Here the relic seems to have remained unseen and untouched until 1512. In that year, in accordance with the wish of the Emperor Maximilian I, on the occasion of the holding of a Diet at Trier, it was taken from its resting-place in the altar on 14 April by the archbishop, Richard von Greifenklau, and on 3 May, and for many days after, solemnly shown to the assembled princes and people. In the years following, up to 1517, an exposition of the Holy Coat took place annually. The auxiliary bishop, Johann Enen, composed a Mass "de Tunica inconsutili," found in the Trier Missals printed at Speyer (1516) and at Coblenz (1547). At the solicitation of the archbishop, Leo X, by a Bull of 26 January, 1515, granted a plenary indulgence to all pilgrims who should visit the cathedral of Trier at the time of the exposition of the Holy Coat, which henceforth was to take place every seven years, and always in the same year as the Aachen pilgrimage. This order for an exposition of the Holy Coat every seven years was observed from 1517, in which year the next Aachen pilgrimage took place, to 1545. Then the regular succession ceased, and the next expositions occurred only in the years 1585 and 1594, and then not again until 1655 after the close of the Thirty Years War.

In the warlike times that followed, the relic was repeatedly taken to the fortress of Ehrenbreitstein,

and from there brought back again to the cathedral at Trier. When the French invaded the principality of Trier in 1794, the relic was carried for safety into the interior of Germany, to Bamberg and then to Augsburg, whither the last Elector of Trier, Clemens Wenceslaus, also Bishop of Augsburg, had withdrawn. It was not until 1810 that, through the repeated efforts of Bishop Manny, it was returned to Trier, on which occasion the bishop organized a solemn exposition of the Holy Coat, from 9 to 27 September of that year, it being the first since 1655. It was very largely attended by the Catholics of the surrounding country. Of still greater importance were the two following expositions, which took place in the nineteenth century. The first was organized by Bishop Arnoldi from 18 August to 6 October, 1844. Large and enthusiastic crowds of pilgrims, over a million, it is said, flocked from all quarters to Trier. Apart from the influence which the Trier pilgrimage of that year exercised on religion, a number of wonderful cures were accomplished. On the other hand, this exposition was the occasion of much fanaticism. On 15 October, 1844, the suspended priest Johann Ronge published his open letter to Bishop Arnoldi, the result of which was the so-called "Deutsch-katholisch" or "German Catholic" movement. Among other hostile writings which appeared at that time, that of the Bonn professors, J. Gildemeister and H. von Sybel, purporting to stand on scientific grounds, made the most stir. An exposition rivaling that of 1844 was the last one, ordered by Bishop Korum from 20 August to 4 October, 1891. On this occasion the pilgrims numbered 1,925,130. To encourage this exposition, Leo XIII gave his approval to the Office "de Tunica inconsutili", and granted by a Brief of 11 July, 1891, an indulgence to the pilgrims. An account of the miracles and manifestations of Divine favour which occurred was published in 1894 by Bishop Korum himself.

The Argenteuil tradition claims that the garment venerated in that city as the Holy Coat was brought there by Charlemagne. The oldest document relating to the existence of this relic dates from 1156. This is the "Charta Hugonis", in which Archbishop Hugh of Rouen testifies that in the treasury of the church of the Benedictines at Argenteuil is preserved the *Cappa pueri Jesu* (garment of the Child Jesus) *a temporibus antiquis* (from ancient times); that he himself, in company with other bishops and abbots, had examined it and found it genuine, and that it was then exposed in the presence of King Louis VII, and afterwards publicly for the veneration of the faithful; he proclaimed at the same time an indulgence for pilgrims who should come to honour it (the "Charta" is printed by Jacquemot, p. 233 sqq., also in P. L., CXCII, 1136-38). The words *Cappa pueri Jesu* were interpreted by the later advocates of the tradition of Argenteuil to mean the *Tunica inconsutilis* worn by the Saviour during His Passion. The medieval chronicles, from the twelfth to the fourteenth century, which speak of the relic and of its exposition in 1156, make it clear how this change in the tradition was effected; it was brought about by the intermingling of the details of the two legends, accounted for by the belief that the garment woven by the Blessed Virgin for the Child Jesus grew with Him, and was thus worn by Him during His entire life on earth. The modern advocates of the Argenteuil tradition now designate the relic honoured there simply as the seamless garment of Christ; they deny to the Church of Trier the right to call their relic by this name, conceding however that the Trier relic is genuine, but that it is not the *Tunica inconsutilis*, but the outer garment of Christ.

Those who believe the Trier tradition claim on the contrary that the relic of Argenteuil, which is woven of fine wool and is of a reddish brown colour, is not a

tunic, but a mantle. By this they do not seek to dispute the authenticity of the Argenteuil relic, but to assert that it is the *Cappa pueri Jesu* and not the *Tunica inconsutilis*. The history of the veneration of the relic of Argenteuil may be traced from 1136. The Revolution menaced its safety. After the despoiling of the Benedictine convent it was first transferred, in 1791, from the convent church to that of the parish. In 1793 the parish priest of that year, who feared that it would be taken away and dishonoured, cut it into pieces which he concealed in various places. In 1795 those portions that could be found were brought back to the church; of these there are four, one large piece and three smaller ones. The translation to the new church of Argenteuil took place in 1865, and the last expositions in 1894 and 1900. A Mass and a Sequence in honour of the Holy Coat of Argenteuil are to be found in Paris and Chartres Missals printed in the sixteenth century.

FRIEDRICH LAUCHERT.

Holy Communion.—By Communion is meant the actual reception of the Sacrament of the Eucharist. Ascetic writers speak (a) of a purely *sacramental* reception; that is, when the Eucharist is received by a person capable indeed of the fruits but wanting in some disposition so that the effects are not produced; (b) of a *spiritual* reception, that is, by a desire accompanied with sentiments of charity; and (c) of a *sacramental* and *spiritual* reception, that is, by those who are in a state of grace and have the necessary dispositions. It is of this kind there is question here. For real reception of the Blessed Eucharist it is required that the sacred species be received into the stomach. For this alone is the *eating* referred to by our Lord (John, vi, 58). Under the moral aspect will be considered, in reference to Holy Communion: necessity; subject; dispositions. The liturgical aspect will

embrace: minister of the sacrament; method of administration.

I. MORAL ASPECT.—A.—*Necessity.*—The doctrine of the Church is that Holy Communion is morally necessary for salvation, that is to say, without the graces of this sacrament it would be very difficult to resist grave temptations and avoid grievous sin. Moreover, there is according to theologians a Divine precept by which all are bound to receive Communion at least some times during life. How often this precept urges outside the danger of death it is not easy to say, but many hold that the Church has practically determined the Divine precept by the law of the Fourth Council of Lateran (c. xxi) confirmed by Trent, which obliges the faithful to receive Communion once each year within Paschal Time. B.—*Subject.*—The subject of Holy Communion is everyone in this life capable of the effects of the Sacrament, that is, all who are baptized and who, if adults, have the requisite intention (see COMMUNION OF CHILDREN). C.—*Dispositions.*—That Holy Communion may be received not only validly, but also fruitfully, certain dispositions both of body and of soul are required. For the former, a person must be fasting from the previous midnight from everything in the nature of food or drink. The general exception to this rule is the Viaticum, and, within certain limits, communion of the sick. In addition to the fast it is recommended, with a view to greater worthiness, to observe bodily continence and exterior modesty in dress and appearance. The principal disposition of soul required is freedom from at least mortal sin and ecclesiastical censure. For those in a state of grievous sin confession is necessary. This is the *proving* oneself referred to by St. Paul (I Cor., xi, 28). The only case in which one in grievous sin might dispense with confession and rest content with perfect contrition, or perfect charity, is where on one hand confession here and now is morally speaking impossible and where, on the other, a real necessity of communicating exists.

II. LITURGICAL.—A.—*Minister.*—The ordinary minister of Holy Communion is one who has received at least priestly orders. Deacons were often deputed for this office in the early Church. Priests can now by general custom administer Communion to everyone assisting at their Masses in public churches and oratories. For the Viaticum permission of the parish priest is ordinarily required. Communion should be administered to all those who ask it reasonably, excluding, at least until they make sufficient reparation, public sinners and such as lead openly scandalous lives. So, too, it is not to be given to those likely to treat it with irreverence, or to the mentally deranged or those suffering from certain forms of illness.

B.—*Method of Administration.*—As to the administration, the circumstances of time, place, and manner, and the ceremonies only will be referred to here, other details, as reservation, effects, etc., being considered elsewhere. (See EUCHARIST.) The ordinary time for administering Communion is during Mass, but any reasonable cause justifies its administration outside Mass, provided it is within the time within which the celebration of Mass is permitted. There are some exceptions: Viaticum can be given at any hour; it is lawful in cases of illness and of special indulgence. It may not be given except as Viaticum, from the conclusion of the exposition on Holy Thursday till Holy Saturday. Communion may be given in all churches and public, or semi-public, oratories that are not under interdict, and, according to a recent edict of the Congregation of Rites (8 May, 1907), even in domestic oratories to all present. The faithful receive Communion under one kind, fermented bread being used in the Eastern, and unfermented in the Western Church, but priests, who communicate themselves, receive under both kinds. Each one should receive according to the Rite to which he belongs. When administering

Holy Communion outside Mass a priest should always wear a surplice and stole, and there should be two lights burning on the altar. Communion may now be given at Masses said in black vestments.

Roman Ritual; CATALANI, *Rituale Romanum de Communionem* (Rome, 1850); BARUFFALDO, *Rituale Romanum Commentatum*, XXIII, XXIV (Florence, 1847); LEHMKEUHL, *Theologia Moralís II, De Eucharistíæ Sumptione* (Freiburg, 1900); GIER, *L'Eucharistíæ Sacramento* (Rome, 1900); GASPARRI, *Tractatus Canonícus de Eucharistíæ Sacramento* (Rome, 1900); DE HERDT, *Praxis Liturgiæ Sacræ*, III, *De Eucharistíæ Administratione* (Freiburg im Br., 1904); DALGAIRNS, *Holy Communion* (Dublin, 1892); HEDLEY, *The Holy Eucharist* (London, 1907); MOUREAU AND DUBLANCHY in VACANT, *Dictionnaire de théologie catholique*, s. v. *Communion Eucharistique*.

PATRICK MORRISROE.

Holy Cross, CONGREGATION OF, a body of priests and lay brothers constituted in the religious state by the simple vows of poverty, chastity, and obedience, and bearing the common name of Religious of Holy Cross. The essential purpose of the congregation is threefold: the perfection of individual members by the practice of the evangelical counsels; the sanctification of their fellow-men by preaching the Divine word, especially in country places and foreign missions; and the instruction and Christian education of youth. This religious body was in its inception a by-product of the great French Revolution, or, rather, of the reaction from the frenzied hatred of religion and religious education that marked the decade from the meeting of the States General in 1789 to the end of the Directory in 1799. As at present constituted, the congregation is the result of Rome's officially uniting two distinct French societies, the Brothers of St. Joseph, founded at Ruillé in 1820, and the Auxiliary Priests of Le Mans, established in 1835. An excellent summary of the purposes and original activities of the amalgamated associations is given in the following letter, dated 4 May, 1840, and addressed to Pope Gregory XVI by Mgr. Bouvier, Bishop of Le Mans: "Basile-Antoine Moreau, honorary canon, and former professor of theology and holy scripture in our diocesan seminary, has, with the consent of the present bishop, established a house near the city of Le Mans, and has there assembled certain priests burning with love for souls and enamoured of poverty and obedience, who follow the community life under his direction, and are always ready to announce the word of God, to hear confessions, to conduct retreats for communities, etc. They are called Auxiliary Priests and are already fifteen in number. They live on voluntary offerings and on the profits accruing from the board and tuition of a hundred pupils. As the Brothers of the Christian Doctrine do not take charge of establishments unless they can live at least three together and annually receive sufficient support amounting to \$120 each they cannot be procured for schools in the country parishes and the small towns. A pious pastor of Ruillé, Jacques-François Dujarié, about the year 1820, gathered into his presbytery a number of virtuous young men, and prepared them to become primary teachers for the parishes in which the services of the Christian Brothers were unattainable. Thus were founded the Brothers of St. Joseph. The present Bishop of Le Mans, seeing that the novitiate of these Brothers could not be suitably maintained in the country district, took measures to transfer them to the episcopal city. With the consent of the founder who was still alive, he gave to the congregation as superior the aforementioned Father Moreau. The latter assumed the heavy burden and united the novitiate to the Auxiliary Priests. This new institute already numbers eighty professed and forty-five novices."

Father Moreau became the first superior general of the congregation, a position which he held until 1866, seven years prior to his death. In addition to his beneficent labours as head of his own community, he had founded, in 1841, the Congregation of the Sisters of Holy Cross, a religious body destined to

accomplish much for the glory of God. Father Dujarié, also, was the founder of the Sisters of Providence, a society of religious women whose activities are well known on both sides of the Atlantic. His name is perpetuated in Dujarié Institute, Notre Dame (Indiana), a house for the formation of young men aspiring to the Brotherhood of Holy Cross. The name of the Congregation sprang naturally from that of the commune in which the home of the Auxiliary Priests was situated, it being called after the old church of Holy Cross, erected in the sixth century by St. Bertrand, Bishop of Le Mans. In the early years of the Congregation, the priests and professed clerics were called Salvatorists, and the professed brothers, Josephites; but these appellatives were discarded by the general chapter of 1872, since which date the two branches of the congregation have been styled simply Fathers and Brothers of Holy Cross. The letters C.S.C., following their individual names, are abbreviations of *Congregatio Sanctæ Crucis*.

The new institute responded so well to the needs of the period and grew so rapidly in numbers that, seventeen years after the date of Mgr. Bouvier's letter to Gregory XVI, it received the formal endorsement of the Apostolic See. The constitution and rules of the congregation were solemnly approved by Rome on 13 May, 1857. According to this constitution, of which subsequent modifications by decrees of general chapters have been authorized by the Holy See, the congregation is governed by a superior general, always a priest, who is elected for life by the general chapter, and who is aided by four assistant-generals, two of them priests, and two brothers. These assistants are elected by the general chapter for a term of six years. The Superior General is represented in Rome by a resident procurator general. This functionary, like the assistant-generals, is elected by the general chapter for a six years' term, as are also the provincials or superiors of the different provinces into which the congregation is territorially divided. The general chapter, which convenes every six years, is composed of the officials already mentioned, and of delegates, both priests and brothers, from each province, the number of delegates being proportioned to the numerical strength of the religious whom they represent. Each separate province is governed by a provincial and his council, consisting of two priests and two brothers. The provincial chapter, held annually, and composed of the provincial, his council, and representatives from each house under their jurisdiction, legislates for the affairs of the province in much the same way as the general chapter does for the whole congregation. Finally, in each house of the congregation there is a local council, consisting of the superior and of members varying in number according to the muster-roll of the religious resident therein.

In the more restricted sphere of the individual life, the Fathers and Brothers of Holy Cross assist in common every day at meditation, holy Mass, particular examen, beads, spiritual reading, and night prayer. The daily visit to the Blessed Sacrament, as well as the recitation of the Divine Office by the fathers, the Little Office of the Blessed Virgin by the teaching brothers, and the saying thrice daily of the seven Our Fathers and Hail Marys by the brothers engaged in manual labour, is left as to time to the convenience of the individual religious. The weekly exercises of piety include the chapter of accusation (the avowing to the community of one's exterior infractions of the rules), the Way of the Cross, and an hour of adoration before the Blessed Sacrament. Previous to the promulgation, in 1905, by Pius X, of the decree "Sacra Tridentina Synodus", relative to frequent and daily Communion, the religious of Holy Cross were obliged by their rule to go to Confession every week and to receive Holy Communion at least once a week. Since the publication of the decree in question, its pre-

scriptions have been adopted by the authorities of the congregation and form the normal practice of its members. Once a month, there is a retreat of one day with spiritual direction; and, once a year, a retreat of a week's duration.

In the earlier decade of the congregation's history, its members were recruited principally from the ranks of the students attending the colleges and schools conducted by the fathers and brothers, with occasional vocations discovered in the course of missions, triduums, and retreats preached by members of the congregation. Later on, each province was supplied with a "little seminary", or house of preparatory studies, specifically designed for the education of boys or young men manifesting an inclination for the religious life. Holy Cross Seminary and Dujarié Institute at Notre Dame, Indiana, are examples of such establishments for the preliminary training of prospective fathers and brothers. The novitiate lasts two years. In so far as ecclesiastical recruits are concerned, they enter upon their novitiate only on the completion of their collegiate course and their attainment of the baccalaureate degree. Their secular studies are then intermitted until they have made their religious profession, when they begin a four years' course in theology and the other branches of ecclesiastical science proper to a regular seminary. Save by exception, becoming more and more rare, they do no professorial work until after their ordination to the priesthood. Similar precautions are taken with the formation of the novice brothers prior to entrusting them with the function of teaching.

Mention must be made of the mission in Algeria, which was one of the Congregation's earliest establishments. The work to be accomplished for the Church in the French possessions of Northern Africa, about the middle of the nineteenth century, included the humble but essential task of furnishing primary education to the young. During a third of a century, the brothers of the congregation devoted themselves to this work in different portions of Algeria with an ardour and success that won for them the affection and esteem of the people, and the generous praise of their ecclesiastical superiors. These latter desired the permanent residence of one of the fathers in each of the houses confided to the congregation, but the home government repeatedly refused to sanction such a proceeding, alleging that "the Algerian budget did not provide for the additional expense". The brothers were obliged to leave the African mission, shortly after the close of the Franco-Prussian war, in consequence of the policy, even then inaugurated in some of France's colonies, of laicizing the schools. Regrettable as this abandonment of their colonial mission was felt to be, it was of minor importance when compared with the trial to which the congregation was subjected a quarter of a century later in the home country, France itself. The activities of Holy Cross in the land of its birth had, in the course of half a dozen decades, become practically restricted to educational work, primary and secondary. When the Law of Associations was passed in 1901, the fathers and brothers were conducting a number of flourishing colleges, academies, and schools in different departments of France. The College of Notre Dame de Ste Croix, at Neuilly-sur-Seine, alone had an average attendance of from six to eight hundred students, and the excellence of its courses was attested by the uniform success of its graduates in passing the governmental examinations for degrees. On the passage of the law in question, application was at once made to the French government for the "authorization" of the congregation; but, as had been feared and foreseen, the application was unsuccessful. Schools and colleges were closed, the buildings and properties were "liquidated", liquidation in this case meaning confiscation; and, in 1903, the French province of Holy

Cross had been reduced to a handful of aged and toil-worn brothers leading, with one of the fathers as their chaplain, a precarious existence at Angers. Fortunately the Religious of Holy Cross, when expelled from France, had other provinces of their order in which they could lead, though in exile, the community life denied them at home. Accordingly, numbers of them went cheerfully to Bengal, Canada, and the United States. The Province of Eastern Bengal, co-extensive with the Diocese of Dacca, is the special field of foreign missions confided by the Holy See to the Congregation of Holy Cross. The field is a large one, the area of the diocese being more than 50,000 square miles, with a population of 17,000,000, the overwhelming majority of the people being Hindus and Mussulmans. The connection of Holy Cross with this portion of the missionary field dates back to 1852, some forty years before Dacca was made an episcopal see. In 1909, Bengal received its fourth bishop from the ranks of the congregation. In the city of Dacca the fathers are devoting part of their time to the work of secondary education; in the country districts, the usual routine of foreign missionary life is followed: travelling from point to point, catechizing, baptizing, preaching, instructing converts, building modest chapels, and serving on occasion as medical doctor, judge, and peacemaker. The establishment by the congregation, in Rome, of an Apostolic college specially designed for the needs of the mission gave, in 1909, bright promise for its future prosperity.

The Canadian province of the congregation owes its origin to the reiterated requests made to Father Moreau by the saintly Bishop Bourget, of Montreal, in 1841 and the several years following. The first band of fathers and brothers reached St. Laurent, near Montreal, in 1847. The early years in Canada were marked by sacrifice and hardship, but the growth of the congregation was encouragingly steady. In the latter half of the nineteenth century, and the first decade of the twentieth, St. Laurent College was habitually attended by from two to four hundred students, many of them from the New England States and New York. Of these American students very many entered the priesthood. In addition to the college, the parish, and the parochial schools at St. Laurent, the congregation has, in the geographical province of Quebec, colleges at Côte des Neiges, Farnham, St. Césaire, Sorel, and St. Aimé; large schools at Hochelaga, Côte des Neiges, Ste. Geneviève, and Pointe Claire; a novitiate at Ste. Geneviève; and a house of studies for professed ecclesiastics attending Laval University in Quebec city. The most notably effective work of Holy Cross in Canada, however, has been accomplished in New Brunswick, where St. Joseph's College, established at Memramcook in 1864, by Father Camille Lefebvre, has been the principal agency in raising the French Acadians from the condition of "hewers of wood and drawers of water" to one of professional, industrial, and social equality with their fellow-citizens of other nationalities. English-speaking Catholics in New Brunswick are scarcely less indebted to St. Joseph's.

The oldest, most extensive, and most important existing province of the congregation is the United States. Its story is largely that of Notre Dame, Indiana, of which the other establishments of Holy Cross throughout the province are offshoots. Such establishments are colleges in Oregon, Wisconsin, Ohio, Louisiana, and Texas; schools, high and primary, in Fort Wayne (Indiana), Chicago (Illinois), and Austin (Texas), parishes in Chicago, Portland (Oregon), Watertown (Wisconsin), New Orleans (Louisiana), Austin (Texas), and South Bend (Indiana); and Holy Cross College, Washington, D. C., the house of studies for the young clerics of the congregation attending the Catholic University. As for Notre Dame, Indiana, widely known as the home of the "Ave Maria", Notre

Dame University, and the Lætare Medal, its history dates back to 1842, synchronizing during its first half-century with the life-story of Father Edward Sorin, its founder. A brief word should perhaps be said of two institutions which serve as splendid memorials of Notre Dame's founder and of the spirit animating the Congregation of Holy Cross as a whole. The first is the "Ave Maria", a weekly magazine devoted to the honour of the Blessed Virgin. Established in 1865, and steadily growing in importance and prestige, it has attained a circulation practically coextensive with the English-speaking world. The second is the Lætare Medal. An adaptation of the papal custom of conferring the Golden Rose, this gold medal is annually presented by the University of Notre Dame, on the mid-Lenten Sunday, to an American lay Catholic distinguished in literature, science, art, commerce, philanthropy, sociology, or other field of beneficent activity. The first recipient of the Lætare Medal (1883) was John Gilmory Shea; the latest (1909) was Frances Christine Fisher Tiernan, the novelist who has achieved notable distinction as Christian Reid. Notre Dame has been tried by cholera, fire, financial stringency, and multifarious other hardships, but the spirit of its founder was perpetuated in his successors, and its growth has been uniformly progressive. In 1842, Notre Dame du Lac was a virgin wilderness whose only note of civilization was a log chapel built by the proto-priest of the United States, Father Stephen Badin; in 1909, the name Notre Dame denotes a magnificent group of more than a score of handsome edifices: collegiate church, central administration building of the university, half a dozen residence halls, institutes of science, technology, and electrical and mechanical engineering, theatre, gymnasium, seminary, novitiate, provincial residence, community house, printing and publishing offices, and other accessory structures. It is, moreover, the site of the mother-house of the Congregation of Holy Cross, the residence of Father Sorin's successor as superior general.

ARTHUR BARRY O'NEILL.

Holy Cross, SISTERS MARIANITES OF.—The congregation of the Sisters Marianites of Holy Cross was founded in 1841, in the parish of Holy Cross, near Le Mans, Sarthe, France, by a priest of the same city, Basile-Antoine Moreau, b. at Laigné-en-Belin, Sarthe, France, 11 February, 1799; d. at Le Mans, 20 January, 1873. He was aided in this work by Léocadie Gascoin, who was born at Montenay, Mayenne, France, 1 March, 1818; and died at Le Mans, 29 January, 1900. The Rev. B. A. Moreau sent her with three other young ladies to the superioress of the Good Shepherd house in Le Mans to prepare for the religious life. After a year's instruction he had them assist in the educational establishment founded at Holy Cross, and permitted them to engage themselves to God by the triple vows of poverty, chastity, and obedience, pronounced 4 August, 1841. Thus was formed the nucleus of a religious family of which Miss Gascoin became the first superior, under the name of Sister Mary of the Seven Dolours, in honour of the august patroness of the congregation, 15 September, 1844. Mgr. Fornari, papal nuncio at Paris, being informed of the projects of Rev. B. A. Moreau, approved them.

The congregation, of which the rules were approved for ten years on trial, 19 February, 1867, by the Congregation of the Propaganda, received its final approbation on 28 October, 1885. It comprises two provinces: that of Louisiana, numbering 13 houses, and that of France, 10 houses; the missions of New York

are attached to the French province. There are two novitiates, one in New Orleans, and the other in Tottenville, Staten Island. This congregation, the members of which take only simple vows, is governed by a general superioress and six councillors, elected every six years by the general chapter. The mother-house is in Le Mans, France. The founder in grouping these souls of goodwill listened to their desire to consecrate themselves to the care of the sick, the education of youth, and the charge of orphans. Mgr de la Hailandière, Bishop of Vincennes, Indiana, begged Rev. B. A. Moreau to send him Sisters. This request was granted, and the mission known as Notre Dame du Lac was founded in 1843. Mgr Bourget, Bishop of Montreal, Canada, in 1846, asked Rev. B. A. Moreau, whom he had visited at Holy Cross, to send him Sisters whom he might establish in his diocese. Four religious were sent in 1847 and founded their first house in the village of Saint Lawrence, near Montreal. These two foundations, with their numerous affiliations, declared themselves independent: Indiana in 1867, Canada in 1883. The third foundation was established in New Orleans in 1851. In the same year, by direction of the cardinal prefect of the Propaganda, a foundation was made at Dacca, Bengal, India; owing to the climate, however, this mission was abandoned. In 1861 the Sisters opened in New York City an establishment, now known as the Asylum of St. Vincent de Paul, where 221 orphans are cared for. At present (1909) in the same city the Sisters are in charge of an academy, a parochial school, a day nursery; they serve in the French Hospital, and have also the care of an academy in Tottenville, Staten Island.

SISTER MARY OF ST. MATTHEW.

Holy Cross, SISTERS OF THE (Mother House, St. Mary's of the Immaculate Conception, Notre Dame, Indiana). As an offset to the ravages of the French Revolution in the fields of religion and education, the Very Rev. Basil Moreau, professor of divinity in the Grand Séminaire and canon of the cathedral at Le Mans, France, formed a society of auxiliary priests in 1834. The following year his bishop, Mgr. Bouvier, named him superior of the Brothers of St. Joseph, who had been founded for school work in 1820 by the Rev. Jacques-François Dujarié. "The Association of the Holy Cross" was the outgrowth of these two distinct communities banded together under Abbé Moreau for educational purposes in the Commune of the Holy Cross near Le Mans, where they started Holy Cross College in 1836. Several young women offering their assistance a little later, Father Moreau founded a sisterhood "to co-operate with the other branches in their pious labours, and to labour themselves in a particular manner for the benefit of the youth of their own sex". The first candidates received the habit of the Congregation of the Seven Dolours (as it was then called) from Father Moreau on 29 September, 1841, in the convent of the Good Shepherd. Under the direction of its saintly superior, Mother Dorothea, they made their novitiate, and, at the end of a year, were admitted to the religious profession with the title, "Sisters of the Holy Cross". They were consecrated by their founder "to the heart of Mary pierced with the sword of grief". This has ever been the especial devotion of the sisters, and the image of Our Lady of Sorrows is a distinctive mark of their dress. They wear also in her honour a blue cincture and the chaplet of the Seven Dolours, which is recited in common every day.

In 1842 the sisters with Mother Seven Dolours took possession of their new convent at Holy Cross. About this time, the Rev. Edward Sorin and five brothers left the mother-house for the Indiana Missions at the request of the Bishop of Vincennes. It is evident from Father Sorin's letters that he expected the sis-

ters to join him later in his work. He writes that they should come prepared for teaching, establishing an academy, and for the Indian missions. Four sisters left France with Father Cointet on 6 June, 1843. A second story had been added to the log chapel at Notre Dame for their convent. Upon their arrival, they took charge of the sacristy, infirmary, clothes room, etc. Before long the need of an American novitiate was apparent as it was out of the question to send candidates to Le Mans from Indiana. Father Sorin asked the ordinary's permission to establish one, but the bishop refused because he thought his diocese could not support two educational institutions, and the Sisters of Providence were already there by his invitation. Finally, in 1844 the novitiate was opened with the sanction of the Bishop of Detroit at Bertrand, Michigan, six miles from Notre Dame. This mission was attended by the Holy Cross priests. The first American postulants received the habit from Father Sorin on 8 September, 1844. The sisters taught the children of the neighbourhood, and cared for several orphans. In 1845 the inhabitants gave them a large tract of land; and this with five thousand francs from the Society of the Propagation of the Faith made it possible for the sisters to extend their work. The French sisters had already mastered the English tongue, while their American companions were studying the dialect of the Pottawatomies. Those destined for music and painting attended Loretta Convent, Kentucky; others went to France to specialize in the instruction of deaf-mutes.

The first school for Indians was opened at Pokagon, Michigan, in 1845. This was followed by other foundations at St. John's, Mackinac, Louisville, Lowell (Indiana), Laporte, Michigan City, and Mishawaka. In 1847 four sisters with some companions from the mother-house in France opened a convent at St. Laurent, Canada, which formed the nucleus of the subsequently erected province. In 1849 four sisters took charge of the boys' orphan asylum in New Orleans, and from there a house was opened in New York with the sanction of Father Moreau (1854). Sisters were sent to this establishment from Notre Dame, Canada, and New Orleans. Misunderstandings due to orders issued from France and Notre Dame led to the withdrawal of the American sisters from the new foundations, the houses of New Orleans and New York remaining subject to France. The year 1856 saw the sisters well-established in Chicago and Philadelphia. They had charge of the cathedral parochial school, St. Joseph's German school, and an industrial school in Chicago, and were installed in St. Paul's and St. Augustine's schools in Philadelphia. Later they opened a select school for boarders and day-pupils in West Philadelphia. These foundations all promised success, but the strained relations between the mother-house at Le Mans under Father Moreau and the Provincial House at Notre Dame under Father Sorin led to the recall of the sisters. Meanwhile the work at St. Mary's, Bertrand, was recognized by the state authorities who granted its charter in 1851. New buildings were added to accommodate their fifty boarders. In 1853, Eliza Gillespie received the habit from Father Sorin, and sailed for France to make her novitiate as Sister Angela. After profession, she returned to Bertrand and took charge of the academy, 1854. From that time until her death (1887), Mother Angela laboured indefatigably to develop the highest intellectual and religious qualities in both teachers and students, and must be regarded as the virtual founder of the order in the United States.

On 15 August, 1855, the convent and academy were moved from Bertrand to the present site on the banks of the St. Joseph. This institution, "St. Mary's of the Immaculate Conception", was incorporated under the laws of Indiana. In the early days of the community, property was held in common by the three branches of

the Holy Cross. When Father Moreau visited the provinces of Canada, Louisiana, and Notre Dame in 1857, he promulgated the Decree of Separation of the sisters from the priests and brothers. In 1862 the property was divided. Difficulties again arising with the mother-house, Bishop Luers of Fort Wayne sent a petition to Rome asking the approval of the American province, and in 1869 the Sisters of the Holy Cross in the United States were recognized as a distinct Congregation. Father Sorin, who had on the resignation of Father Moreau become superior general, was named their ecclesiastical superior, which office he held until the community was placed directly under the Propaganda. The new constitutions were approved, and Father Sorin was appointed to write the rules. Twenty years later, the apostolic approbation of the rules was given for seven years, at the end of which time the final approbation was received (1896).

While the work of the Holy Cross Sisters is principally educational, they also devote themselves to the care of orphanages and hospitals for the sick. During the Civil War Mother Angela with seventy sisters took charge of hospitals in Mound City and Cairo; the military hospitals at Paducah and Louisville; the naval hospital and "The Overton" at Memphis; and St. Aloysius at Washington.

The community is governed by the mother general and her four assistants who form the council at the mother-house. All the missions are dependent upon the mother-house for their subjects, as there is only one novitiate, and the novices return there from all parts of the country to make their final vows after five years' probation. There are one thousand sisters working in the archdioceses of Baltimore, Chicago, New York, and San Francisco, and in the various dioceses. They conduct over 60 institutions, including 1 college, 2 normal schools, 16 boarding schools, 40 academies and parish schools, 6 hospitals, and 4 orphan asylums.

SISTER M. ANTOINE.

Holy Cross Abbey.—The picturesque ruins of this monastery are situated on the right bank of the River Suir, about three miles south-west of the cathedral town of Thurles, Co. Tipperary. While not one of the largest Irish Cistercian houses, it was the most beautiful in point of architectural details, as may be realized from the fine proportions and delicacy of treatment in the stone-carving, peculiar to the main portions of the building. This abbey was founded in the year 1169 by Donald O'Brien, King of Thomond, and in the order of dates was the eleventh of the forty-two houses established in Ireland previous to the Reformation by the disciples of St. Bernard, the monks of the Reformed Order of Cîteaux. As its designation indicates, the fame of the establishment was mainly due to the fact that the church was enriched with a shrine of the Holy Cross, the relic being one of the most considerable in Christendom, and for over three and a half centuries the abbey was one of the most frequented pilgrimage places in Ireland. The church of the Holy Cross is cruciform in plan, consisting of chancel, nave, and transepts, with double side-chapels. Between two of the latter in the north transept the pillared shrine, wherein the relic was wont to be exposed for public veneration, still stands. This is a fine specimen of thirteenth-century carving and style, showing decided traces of French influence in its beautiful Gothic details. Among the more remark-

able features of the monastic church are the east window, the groined roofing of the chancel and side-chapels, and the ribbed vaulting beneath the tower. All the windows are of different design, and are remarkable for the beautiful flamboyant treatment they illustrate. In the chancel at the Epistle side of the high altar is a structure not less interesting than the shrine in the north transept. While it apparently might have served the purpose of sedilia—having three divisions, composed of slender-pillared arches, surmounted with a canopy of elaborate tabernacle work—it is always styled the “tomb of the good woman’s son”. The frieze is further adorned with foliated tracery through which are displayed the cross of St. George, the royal arms of England quartered with those of France, and other heraldic emblems of historic interest.

The relic of the Holy Rood, so long the object of the pilgrim’s veneration, is said to have been bestowed on this monastery by one of the Plantagenet queens of England in gratitude for the kind services of the abbot of the time in having the remains of her son (who met his death in the neighbourhood of the abbey, while on a visit to Ireland) interred in the church. The erection of the tomb is ascribed to her, as also is the rebuilding of the abbey church, which surpassed anything of the kind in Ireland in its architectural splendour. Circumstances point to the fact that the young prince—“the good woman’s son”—was no other than “Pierce the Fair”, son of Isabella of Angoulême (widow of King John) by her second husband, Le Brun, Count of La Marche. He would therefore have been half-brother of Henry III of England. His death is recorded by the “Four Masters” as having occurred in Ireland, 1233. The Abbey of Holy Cross, as one of the greater monasteries, was suppressed under the fiat of Henry VIII in 1536. The abbot of the time, William O’Dwyer, surrendered on condition that he would enjoy the revenues for his lifetime. Eventually, Holy Cross with its appurtenances was conferred by Elizabeth on Thomas, Earl of Ormonde. However, we find as late as 1633 the Divine ministrations were still exercised in the church. The year 1632 was apparently the last during which the relic of the True Cross was exposed for public veneration. Subsequently, the community withdrew to Kilkenny city, where a private house was rented by the abbot, Right Rev. Luke Archer. Here they decided to await the coming of better times, but the hoped-for day of return to their monastery never came. The preservation of the abbey ruins is now the charge of the Board of Works (Ireland).

J. B. CULLEN.

Holy Cross and Passion, CONGREGATIONS OF THE MOST. See PASSION, CONGREGATIONS OF THE MOST HOLY CROSS AND.

Holy Days. See FEASTS, ECCLESIASTICAL.

Holy Faith, SISTERS OF THE, founded at Dublin, in 1857, by Margaret Aylward, under the direction of Rev. John Gowan, C.M., for the care of Catholic orphans. The foundress was called a confessor of the Faith by Pius IX, because of the imprisonment of six months she endured on account of her efforts to save some Catholic orphans from the hands of proselytizers. The congregation is especially active in the Archdiocese of Dublin, the residence of the superior general being at Glasnevin, where the sisters conduct a boarding-school for young ladies. In the original foundation, St. Brigid’s Orphanage, Dublin, nearly three thousand orphans have been trained and placed in trades and situations. The members of the con-

gregation also conduct primary schools, private day schools, infants’ schools, and junior boys’ schools. In their Coombe and Strand Street (Dublin) houses, which have an attendance of 1200 and 800 respectively, the poor receive their breakfast daily, and are also provided with clothing. Altogether the sisters in the fourteen convents of the archdiocese have charge of about seven thousand children. In the Diocese of Ossory a community of eight sisters conducts two primary schools and a private day school, with an attendance of 160.

Irish Directory (1909).

F. M. RUDGE.

Holy Family, ARCHCONFRATERNITY OF THE.—This archconfraternity owes its origin to Henri Belletable, an officer in the Engineers’ Corps, Liège, Belgium. His intercourse with workmen inspired him to labour for their amelioration, which he saw could only be effected through religion. Therefore, he resolved to establish a society, which he would divide into companies of twelve in military fashion. The first reunion was held on the evening of Whit-Monday, 1844, in the room of a carpenter. When their numbers outgrew the room, the Redemptorists placed an oratory at their disposal, and Father Victor Dechamps (q. v.), Belletable’s director, took up the work and became its soul. He brought it to the notice of Bishop von Bommel, who gave it his formal approval on 13 February, 1845, erected it into a confraternity with the title of Holy Family, 7 April following, and remained its lifelong promoter. The statutes then drawn up were later presented to Pius IX, who approved them by Briefs dated 20 and 23 April, 1847, raised the society to the rank of an archconfraternity, enriched it with indulgences, and made the rector of the Redemptorists’ Church of Our Lady of the Immaculate Conception, Liège, its director.

The confraternity spread rapidly and at its golden jubilee, in 1894, it had been established in over 1300 churches, and numbered more than 400,000 members. The development spread from Belgium to Holland, and finally throughout the Church. It has been more than sixty years in existence and has lost none of its fervour. Besides divisions for men and boys, there are also branches for women. Pius IX considered this confraternity a providential work for our times, as did also Leo XIII, who, when he established his own association of the Holy Family and suppressed all other associations of the same title, wished this archconfraternity to continue its good work.

Henri-Hubert Belletable, its founder, was b. at Venlo in Holland, 8 April, 1813; d. 1854. After 1830 he became a soldier in Belgium, where he quickly rose from the ranks. In his last illness he insisted on receiving the Viaticum on his knees, but was so weak that two fellow-officers had to support him. After his Holy Communion he prayed fervently for his wife and children, and then died. He did not live long enough to see the development of his work, but his memory is sacred to all members of the archconfraternity. In Holland the members erected a splendid monument to him at Venlo, and those of Holland and Belgium placed a bust in Carrara marble over his tomb at Huy.

J. MAGNIER.

Holy Family, CONGREGATIONS OF THE.—I. ASSOCIATION OF THE HOLY FAMILY, founded in 1820 by the Abbé Pierre Bienvenue Noailles (d. 1861), to fill in some measure the immense gap left by the ravages wrought in religious life by the French Revolution. The institute began with three young ladies, who formed a community under the direction of the Abbé

Noailles, under the name of Sisters of Loreto. It now consists of seven congregations, each with distinctive work, garb, and particular rules, but all under common constitutions, and directed by the Superior General of the Oblates of Mary Immaculate, aided by another priest of the same congregation, as well as by a directress general and her assistants. The association has received papal approbation many times, beginning with 1831, even as recently as 1904. (1) *The Sisters of the Holy Family* proper, or *Solitary Sisters*, lead a contemplative life, devoting themselves to perpetual adoration and intercession for the success of the active members of the institute. (2) *The Sisters of St. Joseph* are occupied with the care of orphans, whom they instruct in various trades. (3) *The Sisters of Loreto* conduct private day schools and boarding schools for girls of the higher classes in France and Spain. (4) *The Sisters of the Immaculate Conception* are in charge of day schools, boarding schools, and kindergartens; they devote particular attention to the poor, care for the sick, and look after the sodalities in the parishes to which they are attached. In England they are engaged in the national or government schools. (5) *The Sisters of Hope* nurse the sick in their own homes, and conduct hospitals, infirmaries, and institutions of a like nature. (6) *The Field Sisters (Sœurs Agricoles)* have agricultural orphanages, where their charges are trained in all agricultural pursuits. (7) *The Sisters of St. Martha*, or lay sisters, attend to all the domestic work connected with the various institutions of the Holy Family.

Owing to the pressure of new social conditions the number of congregations and their respective duties have undergone a gradual change. The institute has extended its activities to Ceylon (1862), South Africa (1864), and India (1865), where the sisters have hospitals, schools, and orphanages. At present (1909) there are about 240 houses with 3400 sisters, in charge of 25,000 children and 16,000 poor and sick.

II. BROTHERS OF THE HOLY FAMILY, founded in 1824, in the Diocese of Saint-Claude by Gabriel Taborin who gathered about him five young men, for the work of teaching and the service of the cathedral as chanters and sacristans. The school proved most successful, but on various pretexts his companions deserted him, and Brother Gabriel was forced to give up the work temporarily. After labouring for some time in other parishes of the diocese, he entered the Diocese of Belley, where in 1827 he made a second and successful attempt to found his congregation at Hauteville, establishing a novitiate, first at Belmont, in 1829, and that house proving inadequate, at Belley in 1840. In 1841 the institute and its constitutions received the approbation of Gregory XVI, and in the following year government authorization and exemption from military service in the Sardinian States. The members are teachers and lay brothers, under the direction of a superior general elected for life, assisted by a vice-superior, the council of the mother-house, and the general chapter. The only priests admitted as members are those needed to fulfil the sacred offices.

III. LITTLE SISTERS OF THE HOLY FAMILY, founded at Monramcook, New Brunswick, 15 October, 1874, for the temporal care of colleges, seminaries, and episcopal residences. In 1895 the mother-house was removed to Sherbrooke, Quebec. The sisters, who are engaged in many dioceses of Canada, and in the Archdioceses of Baltimore, Boston, San Francisco, and the Diocese of Portland, in the United States, number about 500, in charge of 35 missions. Their pupils are employed as cooks, seamstresses, infirmarians, laundresses, etc.

IV. SISTERS OF THE HOLY FAMILY, formerly known as DAUGHTERS OF THE HOLY FAMILY, and later as MIRAMONES. In 1636 Françoise de Blosset (d. 1642), a zealous collaborator of St. Vincent de Paul, founded

in Paris a religious community known as Daughters of St. Geneviève, for the care of the poor and infirm, the gratuitous instruction of young girls, and the training of teachers for country schools. The statutes were approved in 1658 by Cardinal de Gondi, Archbishop of Paris, and recognized by royal letters patent. Mme de Miramion (b. 1629; d. 1696), having devoted the sixteen years of her widowhood and her immense fortune to works of charity, in 1661, gathered about her a number of young women to lead a community life, under the patronage of the Holy Family, their aims coinciding almost exactly with those of the Daughters of St. Geneviève. In 1665 a union of the two congregations was effected with the consent of the Archbishop of Paris and the new institute approved in 1668 by Cardinal Vendôme, *legatus a latere* to France. Mme de Miramion was elected superior, and in 1674 purchased a mother-house, defraying all expenses herself until the community became self-supporting. New constitutions were drawn up and submitted, for both ecclesiastical and government authorization. In time, several other communities also requested and obtained union with the Daughters of the Holy Family, known after Mme de Miramion's death as Miramiones. Under the direction of their superior, the sisters distinguished themselves by their devotion to the sick, especially in time of epidemic. It was she also who, emulating the example of the Jesuit Fathers at Paris, established a house of retreat for women. Lay sisters performed all domestic labour, and provision was made for those who, not being able to follow the community exercises, wished to live under the same roof and co-operate with the sisters in their good works. After a year of probation, these were received as associates, having no voice in the government of the community. In 1806 the Miramiones, who had not survived the Revolution, were re-established at Besançon, by a pious widow, Jeanne-Claude Jacoulet, and were soon in charge of day-schools, boarding-schools, asylums, and schools of domestic economy.

V. SISTERS OF THE HOLY FAMILY, founded at San Francisco, California, in 1872, by Elizabeth Arner, under the direction of Very Rev. J. J. Prendergast, for the instruction of neglected children for the sacraments, the organization of sodalities and sewing classes, and chiefly the daily care of the young children of working-women. In San Francisco are 90 sisters with 4 day homes, attended by 700 children. They have also a house at San José.

VI. SISTERS OF THE HOLY FAMILY, a congregation of coloured sisters founded for work among their own race, 21 November, 1842, at New Orleans, Louisiana, by Josephine Charles and Harriet Delisle, of New Orleans, Juliette Gaudin of Cuba, and Mlle Alcot, a young French lady, under the direction of Father Etienne Rousselon, Vicar-General of the Diocese of New Orleans. They began by teaching the catechism and preparing children and adults for first Communion and Confirmation, a work which was gradually extended in scope, so that at the present time (1909) the 105 sisters of the congregation have charge of an academy and many parochial schools, attended by about 1300 pupils, an asylum for coloured girls, a home for the aged, orphanages for coloured boys and girls, and industrial schools in the Archdiocese of New Orleans and the Dioceses of Galveston, Little Rock, and Honduras. They follow the Rule of St. Augustine.

VII. SISTERS OF THE HOLY FAMILY OF NAZARETH, founded by Frances Siedliska, a noble Polish lady, in 1874, under the auspices of Pius IX. In 1885 they began work in the Archdiocese of Chicago, and were soon in demand for many Polish parishes throughout the country. In the United States alone there are 450 sisters, in charge of 1 academy, 31 parochial schools, with an attendance of 12,000 pupils, an orphanage, a hospital, and a home for working-girls. The mother-house is in Rome.

F. M. RUDGE.

Holy Ghost.—I. SYNOPSIS OF THE DOGMA.—The doctrine of the Catholic Church concerning the Holy Ghost forms an integral part of her teaching on the mystery of the Holy Trinity, of which St. Augustine (*De Trin.*, I, iii, 5), speaking with diffidence, says: "In no other subject is the danger of erring so great, or the progress so difficult, or the fruit of a careful study so appreciable." The essential points of the dogma may be resumed in the following propositions: The Holy Ghost is the Third Person of the Blessed Trinity. Though really distinct, as a Person, from the Father and the Son, He is consubstantial with Them; being God like Them, He possesses with Them one and the same Divine Essence or Nature. He proceeds, not by way of generation, but by way of spiration, from the Father and the Son together, as from a single principle. Such is the belief the Catholic faith demands.

II. CHIEF ERRORS.—All the theories and all the Christian sects that have contradicted or impugned, in any way, the dogma of the Trinity, have, as a logical consequence, threatened likewise the faith in the Holy Ghost. Among these, history mentions the following: (1) In the second and third centuries, the dynamic or modalistic Monarchians (certain Ebionites, it is said, Theodotus of Byzantium, Paul of Samosata, Praxeas, Noëtus, Sabellius, and the Patripassians generally) held that the same Divine Person, according to His different operations or manifestations, is in turn called the Father, the Son, and the Holy Ghost; so they recognized a purely nominal Trinity. (2) In the fourth century and later, the Arians and their numerous heretical offspring: Anomœans or Eunomians, Semi-Arians, Acacians, etc., while admitting the triple personality, denied the consubstantiality. Arianism had been preceded by the Subordination theory of some ante-Nicene writers, who affirmed a difference and a gradation between the Divine Persons other than those that arise from their relations in point of origin. (3) In the sixteenth century, the Socinians explicitly rejected, in the name of reason, along with all the mysteries of Christianity, the doctrine of Three Persons in One God. (4) Mention may also be made of the teachings of Johannes Philoponus (sixth century), Roscellinus, Gilbert de la Porrée, Joachim of Flora (eleventh and twelfth centuries), and, in modern times, Günther, who, by denying or obscuring the doctrine of the numerical unity of the Divine Nature, in reality set up a triple deity.

In addition to these systems and these writers, who came in conflict with the true doctrine about the Holy Ghost only indirectly and as a logical result of previous errors, there were others who attacked the truth directly: (1) Towards the middle of the fourth century, Macedonius, Bishop of Constantinople, and, after him, a number of Semi-Arians, while apparently admitting the Divinity of the Word, denied that of the Holy Ghost. They placed Him among the spirits, inferior ministers of God, but higher than the angels. They were, under the name of Pneumatomachians, condemned by the Council of Constantinople, in 381 (*Mansi*, III, col. 560). (2) Since the days of Photius, the schismatic Greeks maintain that the Holy Ghost, true God like the Father and the Son, proceeds from the former alone.

III. THE THIRD PERSON OF THE BLESSED TRINITY.—This heading implies two truths: (1) The Holy Ghost is a Person really distinct as such from the Father and the Son; (2) He is God and consubstantial with the Father and the Son. The first statement is directly opposed to Monarchianism and to Socinianism; the second to Subordinationism, to the different forms of Arianism, and to Macedonianism in particular. The same arguments drawn from Scripture

and Tradition may be used generally to prove either assertion. We will, therefore, bring forward the proofs of the two truths together, but first call particular attention to some passages that demonstrate more explicitly the distinction of personality.

A. In the New Testament the word *spirit* and, perhaps, even the expression *spirit of God* signify at times the soul or man himself, inasmuch as he is under the influence of God and aspires to things above; more frequently, especially in St. Paul, they signify God acting in man; but they are used, besides, to designate not only a working of God in general, but a Divine Person, Who is neither the Father nor the Son, Who is named together with the Father, or the Son, or with Both, without the context allowing them to be identified. A few instances are given here. We read in John, xiv, 16, 17: "And I will ask the Father, and he shall give you another Paraclete, that he may abide with you for ever. The spirit of truth, whom the world cannot receive"; and in John, xv, 26: "But when the Paraclete cometh, whom I will send you from the Father, the Spirit of truth, who proceedeth from the Father, he shall give testimony of me." St. Peter addresses his first epistle, i, 1-2, "to the strangers dispersed . . . elect, according to the foreknowledge of God the Father, unto the sanctification of the Spirit, unto obedience and sprinkling of the blood of Jesus Christ". The Spirit of consolation and of truth is also clearly distinguished in John, xvi, 7, 13-15, from the Son, from Whom He receives all He is to teach the Apostles, and from the Father, who has nothing that the Son also does not possess. Both send Him, but He is not separated from Them, for the Father and the Son come with Him when He descends into our souls (John, xiv, 23).

Many other texts declare quite as clearly that the Holy Ghost is a Person, a Person distinct from the Father and the Son, and yet One God with Them. In several places St. Paul speaks of Him as if speaking of God. In Acts, xxviii, 25, he says to the Jews: "Well did the Holy Ghost speak to our fathers by Isaias the prophet"; now the prophecy contained in the next two verses is taken from Isaias, vi, 9, 10, where it is put in the mouth of the "King the Lord of hosts". In other places he uses the words *God* and *Holy Ghost* as plainly synonymous. Thus he writes, I Cor., iii, 16: "Know you not, that you are the temple of God, and that the Spirit of God dwelleth in you?" and in vi, 19: "Or know you not, that your members are the temple of the Holy Ghost, who is in you . . . ?" St. Peter asserts the same identity when he thus remonstrates with Ananias (Acts, v, 3-4): "Why hath Satan tempted thy heart, that thou shouldst lie to the Holy Ghost . . . ? Thou hast not lied to men, but to God." The sacred writers attribute to the Holy Ghost all the works characteristic of Divine power. It is in His name, as in the name of the Father and of the Son, that baptism is to be given (*Matt.*, xxviii, 19). It is by His operation that the greatest of Divine mysteries, the Incarnation of the Word, is accomplished (*Matt.*, i, 18, 20; *Luke*, i, 35). It is also in His name and by His power that sins are forgiven and souls sanctified: "Receive ye the Holy Ghost. Whose sins you shall forgive, they are forgiven them" (*John*, xx, 22, 23); "But you are washed, but you are sanctified, but you are justified in the name of our Lord Jesus Christ, and the Spirit of our God" (*I Cor.*, vi, 11); "The charity of God is poured forth in our hearts, by the Holy Ghost, who is given to us" (*Rom.*, v, 5). He is essentially the Spirit of truth (*John*, xiv, 16-17; xv, 26), Whose office it is to strengthen faith (*Acts*, vi, 5), to bestow wisdom (*Acts*, vi, 3), to give testimony of Christ, that is to say, to confirm His teaching inwardly (*John*, xv, 26), and to teach the Apostles the full meaning of it (*John*, xiv, 26; xvi, 13). With these Apostles He will abide for ever (*John*, xiv, 16). Having descended on them at Pentecost, He

will guide them in their work (Acts, viii, 29), for He will inspire the new prophets (Acts, xi, 28; xiii, 9), as He inspired the Prophets of the Old Law (Acts, vii, 51). He is the source of graces and gifts (I Cor., xii, 3-11); He, in particular, grants the gift of tongues (Acts, ii, 4; x, 44-47). And as he dwells in our bodies and sanctifies them (I Cor., iii, 16; vi, 19), so will he raise them again, one day, from the dead (Rom., viii, 11). But he operates especially in the soul, giving it a new life (Rom., viii, 9 sq.), being the pledge that God has given us that we are His children (Rom., viii, 14-16; II Cor., i, 22; v, 5; Gal., iv, 6). He is the Spirit of God, and at the same time the Spirit of Christ (Rom., viii, 9); because He is in God, He knows the deepest mysteries of God (I Cor., ii, 10-11), and He possesses all knowledge. St. Paul ends his Second Epistle to the Corinthians (xiii, 13) with this formula of benediction, which might be called a blessing of the Trinity: "The grace of our Lord Jesus Christ, and the charity of God, and the communication of the Holy Ghost be with you all."—Cf. Tixeront, "Hist. des dogmes", Paris, 1905, I, 80, 89, 90, 100, 101.

B. While corroborating and explaining the testimony of Scripture, Tradition brings more clearly before us the various stages of the evolution of this doctrine. As early as the first century, St. Clement of Rome gives us important teaching about the Holy Ghost. His "Epistle to the Corinthians" not only tells us that the Spirit inspired and guided the holy writers (viii, 1; xlv, 2); that He is the voice of Jesus Christ speaking to us in the Old Testament (xxii, 1 sq.); but it contains further, two very explicit statements about the Trinity. In c. xlvi, 6 (Funk, "Patres apostolicus", 2nd ed., I, 158), we read that "we have only one God, one Christ, one only Spirit of grace within us, one same vocation in Christ". In lviii, 2 (Funk, *ibid.*, 172), the author makes this solemn affirmation: *ζη γάρ ο θεός, και ζη ο κύριος Ἰησοῦς Χριστός και τὸ πνεῦμα τὸ ἅγιον, ἢ τε πῆστις και ἢ ἐλπίς τῶν ἐκλεκτῶν, οἷ . . .* which we may compare with the formula so frequently met with in the Old Testament: *ζη κύριος*. From this it follows that, in Clement's view, *κύριος* was equally applicable to *ο θεός* (the Father), *ο κύριος Ἰησοῦς Χριστός*, and *τὸ πνεῦμα τὸ ἅγιον*; and that we have three witnesses of equal authority, whose Trinity, moreover, is the foundation of Christian faith and hope. The same doctrine is declared, in the second and third centuries, by the lips of the martyrs, and is found in the writings of the Fathers. St. Polycarp (d. 155), in his torments, thus professed his faith in the Three Adorable Persons ("Martyrium sancti Polycarpi" in Funk, *op. cit.*, I, 330): "Lord God Almighty, Father of Thy blessed and well beloved Son, Jesus Christ . . . in everything I praise Thee, I bless Thee, I glorify Thee by the eternal and celestial pontiff Jesus Christ, Thy well beloved Son, by whom, to Thee, with Him and with the Holy Ghost, glory now and for ever!" St. Epipodius spoke more distinctly still (Ruinart, "Acta mart.", Verona edition, p. 65): "I confess that Christ is God with the Father and the Holy Ghost, and it is fitting that I should give back my soul to Him Who is my Creator and my Redeemer."

Among the apologists, Athenagoras mentions the Holy Ghost along with, and on the same plane as, the Father and the Son. "Who would not be astonished", says he (Legat. pro christian., n. 10, in P. G., VI, col. 909), "to hear us called atheists, us who confess God the Father, God the Son and the Holy Ghost, and hold them one in power and distinct in order [. . . τὴν ἐν τῇ ἐνώσει δύναμιν, και τὴν ἐν τῇ τάξει διαίρεσιν]?" Theophilus of Antioch, who sometimes gives to the Holy Ghost, as to the Son, the name of *Wisdom* (*σοφία*), mentions besides (Ad Autol., lib. I, n. 7, and II, n. 18, in P. G., VI, col. 1035, 1081) the three terms *θεός*, *λόγος*, *σοφία*, and, being the first to apply the characteristic word that was afterwards

adopted, says expressly (*ibid.*, II, 15) that they form a *trinity* (*τριάς*). Irenæus looks upon the Holy Ghost as eternal (Adv. Hær., V, xii, n. 2, in P. G., VII, 1153), existing in God *ante omnem constitutionem*, and produced by Him at the beginning of His ways (*ibid.*, IV, xx, 3). Considered with regard to the Father, the Holy Ghost is His wisdom (IV, xx, 3); the Son and He are the "two hands" by which God created man (IV, præf., n. 4; IV, xx, 20; V, vi, 1). Considered with regard to the Church, the same Spirit is truth, grace, a pledge of immortality, a principle of union with God; intimately united to the Church, He gives the sacraments their efficacy and virtue (III, xvii, 2, xxiv, 1; IV, xxxiii, 7; V, viii, 1). St. Hippolytus, though he does not speak at all clearly of the Holy Ghost regarded as a distinct person, supposes Him, however, to be God, as well as the Father and the Son (Contra Noët., viii, xii, in P. G., X, 816, 820). Tertullian is one of the writers of this age whose tendency to Subordinationism is most apparent, and that in spite of his being the author of the definitive formula: "Three persons, one substance" And yet his teaching on the Holy Ghost is in every way remarkable. He seems to have been the first among the Fathers to affirm His Divinity in a clear and absolutely precise manner. In his work "Adversus Praxean" he dwells at length on the greatness of the Paraclete. The Holy Ghost, he says, is God (c. xiii in P. L., II, 193); of the substance of the Father (iii, iv in P. L., II, 181-2); one and the same God with the Father and the Son (ii in P. L., II, 180); proceeding from the Father through the Son (iv, viii in P. L., II, 182, 187); teaching all truth (ii in P. L., II, 179). St. Gregory Thaumaturgus, or at least the "Ἐκθεσις τῆς πίστεως, which is commonly attributed to him, and which dates from the period 260-270, gives us this remarkable passage (P. G., X, 933 sq.): "One is God, Father of the living Word, of the subsisting Wisdom. . . . One the Lord, one of one, God of God, invisible of invisible. . . . One the Holy Ghost, having His subsistence from God. Perfect Trinity, which in eternity, glory, and power, is neither divided, nor separated. . . . Unchanging and immutable Trinity." In 304, the martyr St. Vincent said (Ruinart, *op. cit.*, 325): "I confess the Lord Jesus Christ, Son of the Father most High, one of one: I recognize Him as one God with the Father and the Holy Ghost."

But we must come down towards the year 360 to find the doctrine on the Holy Ghost explained both fully and clearly. It is St. Athanasius who does so in his "Letters to Serapion" (P. G., XXVI, col. 525 sq.). He had been informed that certain Christians held that the Third Person of the Blessed Trinity was a creature. To refute them he questions the Scriptures, and they furnish him with arguments as solid as they are numerous. They tell him, in particular, that the Holy Ghost is united to the Son by relations just like those existing between the Son and the Father; that He is sent by the Son; that He is His mouth-piece and glorifies Him; that, unlike creatures, He has not been made out of nothing, but comes forth from God; that He performs a sanctifying work among men, of which no creature is capable; that in possessing Him we possess God; that the Father created everything by Him; that, in fine, He is immutable, has the attributes of immensity, oneness, and has a right to all the appellations that are used to express the dignity of the Son. Most of these conclusions he supports by means of Scriptural texts, a few from amongst which are given above. But the writer lays special stress on what is read in Matt., xxviii, 19. "The Lord", he writes (Ad Serap., III, n. 6, in P. G., XXVI, 633 sq.), "founded the Faith of the Church on the Trinity, when He said to His Apostles: 'Going therefore, teach ye all nations; baptizing them in the name of the Father, and of the Son, and of the Holy Ghost.' If the Holy Ghost were a creature, Christ would not

have associated Him with the Father; He would have avoided making a heterogeneous Trinity, composed of unlike elements. What did God stand in need of? Did He need to join to Himself a being of different nature? No, the Trinity is not composed of the Creator and the creature." A little later, St. Basil, Didymus of Alexandria, St. Epiphanius, St. Gregory of Nazianzus, St. Ambrose, and St. Gregory of Nyssa took up the same thesis *ex professo*, supporting it for the most part with the same proofs. All these writings had prepared the way for the Council of Constantinople which, in 381, condemned the Pneumatomachians and solemnly proclaimed the true doctrine. This teaching forms part of the Creed of Constantinople, as it is called, where the symbol refers to the Holy Ghost, "Who is also our Lord and Who gives life; Who proceeds from the Father, Who is adored and glorified together with the Father and the Son; Who spoke by the prophets" Was this creed, with these particular words, approved by the council of 381? Formerly that was the common opinion, and even in recent times it has been held by authorities like Hefele, Hergenröther, and Funk; other historians, amongst whom are Harnack and Duchesne, are of the contrary opinion; but all agree in admitting that the creed of which we are speaking was received and approved by the Council of Chalcedon, in 451, and that, at least from that time, it became the official formula of Catholic orthodoxy.

IV. PROCESSION OF THE HOLY GHOST.—We need not dwell at length on the precise meaning of the *Procession* in God. (See TRINITY.) It will suffice here to remark that by this word we mean the relation of origin that exists between one Divine Person and another, or between one and the two others as its principle of origin. The Son proceeds from the Father; the Holy Ghost proceeds from the Father and the Son. The latter truth will be specially treated here.

A. That the Holy Ghost proceeds from the Father has always been admitted by all Christians; the truth is expressly stated in John, xv, 26. But the Greeks, after Photius, deny that He proceeds from the Son. And yet such is manifestly the teaching of Holy Scripture and the Fathers.

(1) In the New Testament.—(a) The Holy Ghost is called the Spirit of Christ (Rom., viii, 9), the Spirit of the Son (Gal., iv, 6), the Spirit of Jesus (Acts, xvi, 7). These terms imply a relation of the Spirit to the Son, which can only be a relation of origin. This conclusion is so much the more indisputable as all admit the similar argument to explain why the Holy Ghost is called the Spirit of the Father. Thus St. Augustine argues (In Joan., tr. xcix, 6, 7 in P. L., XXXV, 1888): "You hear the Lord himself declare: 'It is not you that speak, but the Spirit of your Father that speaketh in you'. Likewise you hear the Apostle declare: 'God hath sent the Spirit of his Son into your hearts'. Could there then be two spirits, one the spirit of the Father, the other the spirit of the Son? Certainly not. Just as there is only one Father, just as there is only one Lord or one Son, so there is only one Spirit, Who is, consequently, the Spirit of both. . . Why then should you refuse to believe that He proceeds also from the Son, since He is also the Spirit of the Son? If He did not proceed from Him, Jesus, when He appeared to His disciples after His Resurrection, would not have breathed on them, saying: 'Receive ye the Holy Ghost'. What, indeed, does this breathing signify, but that the Spirit proceeds also from Him?" St. Athanasius had argued in exactly the same way (De Trinit. et Spir. S., n. 19, in P. G., XXVI, 1212), and concluded: "We say that the Son of God is also the source of the Spirit."

(b) The Holy Ghost *receives* from the Son, according to John, xvi, 13-15: "When he, the Spirit of truth, is come, he will teach you all truth. For he shall not

speak of himself; but what things soever he shall hear, he shall speak; and the things that are to come, he shall shew you. He shall glorify me; because he shall receive of mine, and shall shew *it* to you. All things whatsoever the Father hath, are mine. Therefore I said, that he shall receive of mine, and shew *it* to you." Now, one Divine Person can receive from another only by Procession, being related to that other as to a principle. What the Paraclete will receive from the Son is immanent knowledge, which He will afterwards manifest exteriorly. But this immanent knowledge is the very essence of the Holy Ghost. The latter, therefore, has His origin in the Son, the Holy Ghost proceeds from the Son. "He shall not speak of Himself", says St. Augustine (In Joan., tr. xcix, 4, in P. L., XXXV, 1887), "because He is not from Himself, but He shall tell you all He shall have heard. He shall hear from Him from whom He proceeds. In His case, to hear is to know, and to know is to be. He derives His knowledge from Him from Whom He derives His essence." St. Cyril of Alexandria remarks that the words: "He shall receive of mine" signify "the nature" which the Holy Ghost has from the Son, as the Son has His from the Father (De Trinit., dialog. vi, in P. G., LXXV, 1011). Besides, Jesus gives this reason of His assertion: "He shall receive of mine": "All things whatsoever the Father hath, are mine". Now, since the Father has with regard to the Holy Ghost the relation we term Active Spiration, the Son has it also; and in the Holy Ghost there exists, consequently, with regard to both, Passive Spiration or Procession.

(2) The same truth has been constantly held by the Fathers.—This fact is undisputed as far as the Western Fathers are concerned; but the Greeks deny it in the case of the Easterns. We will cite, therefore, a few witnesses from among the latter. The testimony of St. Athanasius has been quoted above, to the effect that "the Son is the source of the Spirit", and the statement of Cyril of Alexandria that the Holy Ghost has His "nature" from the Son. The latter saint further asserts (Thesaur., assert. xxxiv in P. G., LXXV, 585); "When the Holy Ghost comes into our hearts, He makes us like to God, because He proceeds from the Father and the Son"; and again (Epist., xvii, Ad Nestorium, De excommunicatione in P. G., LXXVII, 117): "The Holy Ghost is not unconnected with the Son, for He is called the Spirit of Truth, and Christ is the Truth; so He proceeds from Him as well as from God the Father." St. Basil (De Spirit. S., xviii, in P. G., XXXII, 147) wishes us not to depart from the traditional order in mentioning the Three Divine Persons, because "as the Son is to the Father, so is the Spirit to the Son, in accordance with the ancient order of the names in the formula of baptism". St. Epiphanius writes (Ancor., viii, in P. G., XLIII, 29, 30) that the Paraclete "is not to be considered as unconnected with the Father and the Son, for he is with Them one in substance and divinity", and states that "He is from the Father and the Son"; a little further, he adds (op. cit., xi, in P. G., XLIII, 35): "No one knows the Spirit, besides the Father, except the Son, from Whom He proceeds and of Whom He receives." Lastly, a council held at Seleucia in 410 proclaims its faith "in the Holy Living Spirit, the Holy Living Paraclete, Who proceeds from the Father and the Son" (Lamy, "Concilium Seleuciæ", Louvain, 1868).

However, when we compare the Latin writers, as a body, with the Eastern writers, we notice a difference in language: while the former almost unanimously affirm that the Holy Ghost proceeds from the Father and from the Son, the latter generally say that He proceeds from the Father *through* the Son. In reality the thought expressed by both Greeks and Latins is one and the same, only the manner of expressing it is slightly different: the Greek formula $\epsilon\kappa\ \tau\omicron\upsilon\ \pi\alpha\tau\rho\varsigma$

διὰ τοῦ υἱοῦ expresses directly the order according to which the Father and the Son are the principle of the Holy Ghost, and implies their equality as principle; the Latin formula expresses directly this equality, and implies the order. As the Son Himself proceeds from the Father, it is from the Father that He receives, with everything else, the virtue that makes Him the principle of the Holy Ghost. Thus, the Father alone is *principium absque principio, aīra ἄναρχος προκαταρκτική*, and, comparatively, the Son is an intermediate principle. The distinct use of the two prepositions, *ἐκ* (from) and *διὰ* (through), implies nothing else. In the thirteenth and fourteenth centuries, the Greek theologians Blemmidus, Beccus, Calecas, and Bessarion called attention to this, explaining that the two particles have the same signification, but that *from* is better suited to the First Person, Who is the source of the others, and *through* to the Second Person, Who comes from the Father. Long before their time St. Basil had written (*De Spir. S.*, viii, 21, in P. G., XXXII, 106): "The expression *δι' οὗ* expresses acknowledgment of the primordial principle [*τῆς προκαταρκτικῆς αἰτίας*];" and St. Chrysostom (*Hom. v in Joan.*, n. 2, in P. G., LIX, 56): "If it be said *through Him*, it is said solely in order that no one may imagine that the Son is not generated." It may be added that the terminology used by the Eastern and Western writers, respectively, to express the idea is far from being invariable. Just as Cyril, Epiphanius, and other Greeks affirm the Procession *ex utroque*, so several Latin writers did not consider they were departing from the teaching of their Church in expressing themselves like the Greeks. Thus Tertullian (*Contra Prax.*, iv, in P. L., II, 182): "Spiritum non aliunde puto quam a Patre per Filium"; and St. Hilary (*De Trinit.*, lib. XII, n. 57, in P. L., X, 472), addressing himself to the Father, protests that he wishes to adore, with Him and the Son, "Thy Holy Spirit, Who comes from Thee through Thy only Son". And yet the same writer had said, a little higher (*op. cit.*, lib. II, 29, in P. L., X, 69), "that we must confess the Holy Ghost coming from the Father and the Son", a clear proof that the two formulæ were regarded as substantially equivalent.

B. Proceeding both from the Father and the Son, the Holy Ghost, nevertheless, proceeds from Them as from a single principle. This truth is, at the very least, insinuated in the passage of John, xvi, 15 (cited above), where Christ establishes a necessary connexion between His own sharing in all the Father has and the Procession of the Holy Ghost. Hence it follows, indeed, that the Holy Ghost proceeds from the two other Persons, not in so far as They are distinct, but inasmuch as Their Divine perfection is numerically one. Besides, such is the explicit teaching of ecclesiastical tradition, which is concisely put by St. Augustine (*De Trin.*, lib. V, c. xiv, in P. L., XLII, 921): "As the Father and the Son are only one God and, relatively to the creature, only one Creator and one Lord, so, relatively to the Holy Ghost, They are only one principle." This doctrine was defined in the following words by the Second Œcumenical Council of Lyons [Denzinger, "Enchiridion" (1908), n. 460]: "We confess that the Holy Ghost proceeds eternally from the Father and the Son, not as from two principles, but as from one principle, not by two spirations, but by one single spiration." The teaching was again laid down by the Council of Florence (*ibid.*, n. 691), and by Eugene IV in his Bull "Cantate Domino" (*ibid.*, n. 703 sq.).

C. It is likewise an article of faith that the Holy Ghost does not proceed, like the Second Person of the Trinity, by way of generation. Not only is the Second Person alone called *Son* in the Scriptures, not only is He alone said to be *begotten*, but He is also called the *only Son of God*: the ancient symbol that bears the name of Saint Athanasius states expressly that

"the Holy Ghost comes from the Father and from the Son, not made, not created, not generated, but proceeding". As we are utterly incapable of otherwise fixing the meaning of the mysterious mode affecting this relation of origin, we apply to it the name *spiration*, the signification of which is principally negative and by way of contrast, in the sense that it affirms a Procession peculiar to the Holy Ghost and exclusive of filiation. But though we distinguish absolutely and essentially between generation and spiration, it is a very delicate and difficult task to say what the difference is. St. Thomas (I, Q. xxvii), following St. Augustine (*De Trin.*, XV, xxvii), finds the explanation and, as it were, the epitome, of the doctrine in the principle that, in God, the Son proceeds through the Intellect and the Holy Ghost through the Will. The Son is, in the language of Scripture, the *image* of the Invisible God, His *Word*, His uncreated *wisdom*. God contemplates Himself and knows Himself from all eternity, and, knowing Himself, He forms within Himself a substantial idea of Himself, and this substantial thought is His Word. Now every act of knowledge is accomplished by the production in the intellect of a representation of the object known; from this head, then, the process offers a certain analogy with generation, which is the production by a living being of a being partaking of the same nature; and the analogy is only so much the more striking when there is question of this act of Divine knowledge, the eternal term of which is a substantial being, consubstantial with the knowing subject. As to the Holy Ghost, according to the common doctrine of theologians, He proceeds through the will. The Holy Spirit, as His name indicates, is Holy in virtue of His origin, His *spiration*; He comes therefore from a holy principle; now holiness resides in the will, as wisdom is in the intellect. That is also the reason why He is so often called *par excellence*, in the writings of the Fathers, *Love* and *Charity*. The Father and the Son love one another, from all eternity, with a perfect, ineffable love; the term of this infinitely fruitful mutual love is Their Spirit, Who is co-eternal and consubstantial with Them. Only, the Holy Ghost is not indebted to the manner of His Procession precisely for this perfect resemblance to His principle, in other words for His consubstantiality; for to will or love an object does not formally imply the production of its immanent image in the soul that loves, but rather a tendency, a movement of the will towards the thing loved, to be united to it and enjoy it. So, making every allowance for the feebleness of our intellects in knowing, and the unsuitability of our words for expressing the mysteries of the Divine life, if we can grasp how the word *generation*, freed from all imperfections of the material order, may be applied by analogy to the Procession of the Word, so we may see that the term can in no way be fittingly applied to the Procession of the Holy Ghost.

V. THE FILIOQUE.—Having treated of the part taken by the Son in the Procession of the Holy Ghost, we come next to consider the introduction of the expression *Filioque* into the Creed of Constantinople. The author of the addition is unknown, but the first trace of it is found in Spain. The *Filioque* was successively introduced into the Symbol of the Council of Toledo in 447, then, in pursuance of an order of another synod held in the same place (589), it was inserted in the Niceno-Constantinopolitan Creed. Admitted likewise into the Symbol *Quicumque*, it began to appear in France in the eighth century. It was chanted in 767, in Charlemagne's chapel at Gentilly, where it was heard by ambassadors from Constantine Copronymus. The Greeks were astonished and protested, explanations were given by the Latins, and many discussions followed. The Archbishop of Aquileia, Paulinus, defended the addition at the Council of Friuli, in 796. It was afterwards accepted by a

council held at Aachen, in 809. However, as it proved a stumbling-block to the Greeks, Pope Leo III disapproved of it; and, though he entirely agreed with the Franks on the question of the doctrine, he advised them to omit the new word. He himself caused two large silver tablets, on which the creed with the disputed expression omitted was engraved, to be erected in St. Peter's. His advice was unheeded by the Franks; and, as the conduct and schism of Photius seemed to justify the Westerns in paying no more regard to the feelings of the Greeks, the addition of the words was accepted by the Roman Church under Benedict VIII (cf. Funk, "Kirchengeschichte", Paderborn, 1902, p. 243).

The Greeks have always blamed the Latins for making the addition. They considered that, quite apart from the question of doctrine involved by the expression, the insertion was made in violation of a decree of the Council of Ephesus, forbidding anyone "to produce, write, or compose a confession of faith other than the one defined by the Fathers of Nicæa". Such a reason will not bear examination. Supposing the truth of the dogma (established above), it is inadmissible that the Church could or would have deprived herself of the right to mention it in the symbol. If the opinion be adhered to, and it has strong arguments to support it, which considers that the developments of the Creed in what concerns the Holy Ghost were approved by the Council of Constantinople (381), at once it might be laid down that the bishops at Ephesus (431) certainly did not think of condemning or blaming those of Constantinople. But, from the fact that the disputed expression was authorized by the Council of Chalcedon, in 451, we conclude that the prohibition of the Council of Ephesus was never understood, and ought not to be understood, in an absolute sense. It may be considered either as a doctrinal, or as a merely disciplinary pronouncement. In the first case it would exclude any addition or modification opposed to, or at variance with, the deposit of Revelation; and such seems to be its historic import, for it was proposed and accepted by the Fathers to oppose a formula tainted with Nestorianism. In the second case, considered as a disciplinary measure, it can bind only those who are not the depositaries of the supreme power in the Church. The latter, as it is their duty to teach the revealed truth and to preserve it from error, possess, by Divine authority, the power and right to draw up and propose to the faithful such confessions of faith as circumstances may demand. This right is as unconfineable as it is inalienable.

VI. GIFTS OF THE HOLY GHOST.—This title and the theory connected with it, like the theory of the fruits of the Holy Ghost and that of the sins against the Holy Ghost, imply what theologians call *appropriation*. By this term is meant attributing especially to one Divine Person perfections and exterior works which seem to us more clearly or more immediately to be connected with Him, when we consider His personal characteristics, but which in reality are common to the Three Persons. It is in this sense that we attribute to the Father the perfection of omnipotence, with its most striking manifestations, e. g. the Creation, because He is the principle of the two other Persons; to the Son we attribute wisdom and the works of wisdom, because He proceeds from the Father by the Intellect; to the Holy Ghost we attribute the operations of grace and the sanctification of souls, and in particular spiritual *gifts* and *fruits*, because He proceeds from the Father and the Son as Their mutual love and is called in Holy Writ the goodness and the charity of God.

The gifts of the Holy Ghost are of two kinds: the first are specially intended for the sanctification of the person who receives them; the second, more properly called *charismata*, are extraordinary favours granted for the help of another, favours, too, which do not

sanctify by themselves, and may even be separated from sanctifying grace. Those of the first class are accounted seven in number, as enumerated by Isaiah (xi, 2, 3), where the prophet sees and describes them in the Messias. They are the gifts of wisdom, understanding, counsel, fortitude, knowledge, piety (godliness), and fear of the Lord. The gift of wisdom, by detaching us from the world, makes us relish and love only the things of heaven. The gift of understanding helps us to grasp the truths of religion as far as is necessary. The gift of counsel springs from supernatural prudence, and enables us to see and choose correctly what will help most to the glory of God and our own salvation. By the gift of fortitude we receive courage to overcome the obstacles and difficulties that arise in the practice of our religious duties. The gift of knowledge points out to us the path to follow and the dangers to avoid in order to reach heaven. The gift of piety, by inspiring us with a tender and filial confidence in God, makes us joyfully embrace all that pertains to His service. Lastly, the gift of fear fills us with a sovereign respect for God, and makes us dread, above all things, to offend Him. As to the inner nature of these gifts, theologians consider them to be supernatural and permanent qualities, which make us attentive to the voice of God, which render us susceptible to the workings of actual grace, which make us love the things of God, and, consequently, render us more obedient and docile to the inspirations of the Holy Ghost. But how do they differ from the virtues? Some writers think they are not really distinct from them, that they are the virtues inasmuch as the latter are free gifts of God, and that they are identified essentially with grace, charity, and the virtues. That opinion has the particular merit of avoiding a multiplication of the entities infused into the soul. Other writers look upon the gifts as perfections of a higher order than the virtues; the latter, they say, dispose us to follow the impulse and guidance of reason; the former are functionally intended to render the will obedient and docile to the inspirations of the Holy Ghost. For the former opinion, see Bellevüe, "L'œuvre du Saint-Esprit" (Paris, 1902), 99 sq.; and for the latter, see St. Thomas, I-II, Q. lxxviii, a. 1, and Froget, "De l'habitation du Saint-Esprit dans les âmes justes" (Paris, 1900), 378 sq.

The gifts of the second class, or *charismata*, are known to us partly from St. Paul, and partly from the history of the primitive Church, in the bosom of which God plentifully bestowed them. Of these "manifestations of the Spirit", "all these things [that] one and the same Spirit worketh, dividing to every one according as he will", the Apostle speaks to us, particularly in I Cor., xii, 6-11; I Cor., xii, 28-31; and Rom., xii, 6-8. In the first of these three passages we find nine *charismata* mentioned: the gift of speaking with wisdom, the gift of speaking with knowledge, faith, the grace of healing, the gift of miracles, the gift of prophecy, the gift of discerning spirits, the gift of tongues, the gift of interpreting speeches. To this list we must at least add, as being found in the other two passages indicated, the gift of government, the gift of helps, and perhaps what Paul calls *distributio* and *misericordia*. However, exegeses are not all agreed as to the number of the *charismata*, or the nature of each one of them; long ago, St. Chrysostom and St. Augustine had pointed out the obscurity of the question. Adhering to the most probable views on the subject, we may at once classify the *charismata* and explain the meaning of most of them as follows. They form four natural groups: (1) Two *charismata* which regard the teaching of Divine things: *sermo sapientiæ*, *sermo scientiæ*, the former relating to the exposition of the higher mysteries, the latter to the body of Christian truths. (2) Three *charismata* that lend support to this teaching: *fides*, *gratia sanitatum*, *operatio virtutum*. The faith here spoken of is

faith in the sense used by Matt., xvii, 19: that which works wonders; so it is, as it were, a condition and a part of the two gifts mentioned with it. (3) Four charismata that served to edify, exhort, and encourage the faithful, and to confound the unbelievers: *propheta, discretio spirituum, genera linguarum, interpretatio sermonum*. These four seem to fall logically into two groups; for prophecy, which is essentially an inspired pronouncement on different religious subjects, the declaration of the future being only of secondary import, finds its complement and, as it were, its check in the gift of discerning spirits; and what, as a rule, would be the use of *glossolalia*—the gift of speaking with tongues—if the gift of interpreting them were wanting? (4) Lastly there remain the charismata that seem to have as object the administration of temporal affairs, and works of charity: *gubernationes, opulationes, distributiones*. Judging by the context, these gifts, though conferred and useful for the direction and comfort of one's neighbour, were in no way necessarily found in all ecclesiastical superiors.

The charismata, being extraordinary favours and not requisite for the sanctification of the individual, were not bestowed indiscriminately on all Christians. However, in the Apostolic Age, they were comparatively common, especially in the communities of Jerusalem, Rome, and Corinth. The reason of this is apparent: in the infant Churches the charismata were extremely useful, and even morally necessary, to strengthen the faith of believers, to confound the infidels, to make them reflect, and to counterbalance the false miracles with which they sometimes prevailed. St. Paul was careful (I Cor., xii, xiii, xiv) to restrict authoritatively the use of these charismata within the ends for which they were bestowed, and thus insist upon their subordination to the power of the hierarchy. Cf. Batifol, "L'Eglise naissante et le catholicisme" (Paris, 1909), 36. (See CHARISMATA.)

VII. FRUITS OF THE HOLY GHOST.—Some writers extend this term to all the supernatural virtues, or rather to the acts of all these virtues, inasmuch as they are the results of the mysterious workings of the Holy Ghost in our souls by means of His grace. But, with St. Thomas, I-II, Q. lxx, a. 2, the word is ordinarily restricted to mean only those supernatural works that are done joyfully and with peace of soul. This is the sense in which most authorities apply the term to the list mentioned by St. Paul (Gal., v, 22, 23): "But the fruit of the Spirit is, charity, joy, peace, patience, benignity, goodness, longanimity, mildness, faith, modesty, continency, chastity." Moreover, there is no doubt that this list of twelve—three of the twelve are omitted in several Greek and Latin manuscripts—is not to be taken in a strictly limited sense, but, according to the rules of Scriptural language, as capable of being extended to include all acts of a similar character. That is why the Angelic Doctor says: "Every virtuous act which man performs with pleasure is a fruit." The fruits of the Holy Ghost are not habits, permanent qualities, but acts. They cannot, therefore, be confounded with the virtues and the gifts, from which they are distinguished as the effect is from its cause, or the stream from its source. The charity, patience, mildness, etc., of which the Apostle speaks in this passage, are not then the virtues themselves, but rather their acts or operations; for, however perfect the virtues may be, they cannot be considered as the ultimate effects of grace, being themselves intended, inasmuch as they are active principles, to produce something else, i. e. their acts. Further, in order that these acts may fully justify their metaphorical name of *fruits*, they must belong to that class which are performed with ease and pleasure: in other words, the difficulty involved in performing them must disappear in presence of the delight and satisfaction resulting from the good accomplished.

VIII. SINS AGAINST THE HOLY GHOST.—The sin or

blasphemy against the Holy Ghost is mentioned in Matt., xii, 22-32; Mark, iii, 22-30; Luke, xii, 10—cf. xi, 14-23; and Christ everywhere declares that it shall not be pardoned. In what does it consist? If we examine all the passages alluded to, there can be little doubt as to the reply. Let us take, for instance, the account given by St. Matthew, which is more complete than that of the other Synoptics. There had been brought to Christ "one possessed with a devil, blind and dumb: and he healed him, so that he spoke and saw". While the crowd is wondering, and asking: "Is not this the Son of David?", the Pharisees, yielding to their wonted jealousy, and shutting their eyes to the light of evidence, say: "This man casteth not out devils but by Beelzebub the prince of the devils." Jesus then proves to them the absurdity, and, consequently, the malice of their explanation; He shows them that it is by "the Spirit of God" that He casts out devils, and then He concludes: "Therefore I say to you: Every sin and blasphemy shall be forgiven men, but the blasphemy of the Spirit shall not be forgiven. And whosoever shall speak a word against the Son of man, it shall be forgiven him: but he that shall speak against the Holy Ghost, it shall not be forgiven him, neither in this world, nor in the world to come." So, to sin against the Holy Ghost is to confound Him with the spirit of evil, it is to deny, from pure malice, the Divine character of works manifestly Divine. This is the sense in which St. Mark also defines the sin in question; for, after reciting the words of the Master: "But he that shall blaspheme against the Holy Ghost shall never have forgiveness", he adds at once: "Because they said: He hath an unclean spirit." With this sin of pure downright malice, Jesus contrasts the sin "against the Son of man", that is the sin committed against Himself as man, the wrong done to His humanity in judging Him by His humble and lowly appearance. This fault, unlike the former, might be excused as the result of man's ignorance and misunderstanding.

But the Fathers of the Church, commenting on the Gospel texts we are treating of, did not confine themselves to the meaning given above. Whether it be that they wished to group together all objectively analogous cases, or whether they hesitated and wavered when confronted with this point of doctrine, which St. Augustine declares (Serm. ii de verbis Domini, c. v) one of the most difficult in Scripture, they have proposed different interpretations or explanations. St. Thomas, whom we may safely follow, gives a very good summary of opinions in II-II, Q. xiv. He says that blasphemy against the Holy Ghost was and may be explained in three ways. Sometimes, and in its most literal signification, it has been taken to mean the uttering of an insult against the Divine Spirit, applying the appellation either to the Holy Ghost alone or to all Three Divine Persons. This was the sin of the Pharisees, who spoke at first against "the Son of man", criticizing the works and human ways of Jesus, accusing Him of loving good cheer and wine, of associating with the publicans, and who, later on, with undoubted bad faith, traduced His Divine works, the miracles which He wrought by virtue of His own Divinity. On the other hand, St. Augustine frequently explains blasphemy against the Holy Ghost to be final impenitence, perseverance till death in mortal sin. This impenitence is against the Holy Ghost, in the sense that it frustrates and is absolutely opposed to the remission of sins, and this remission is appropriated to the Holy Ghost, the mutual love of the Father and the Son. In this view, Jesus, in Matt., xii, and Mark, iii, did not really accuse the Pharisees of blaspheming the Holy Ghost, He only warned them against the danger they were in of doing so. Finally, several Fathers, and, after them, many scholastic theologians, apply the expression to all sins directly opposed to

that quality which is, by appropriation, the characteristic quality of the Third Divine Person. Charity and goodness are especially attributed to the Holy Ghost, as power is to the Father and wisdom to the Son. Just, then, as they termed sins against the Father those that resulted from frailty, and sins against the Son those that sprang from ignorance, so the sins against the Holy Ghost are those that are committed from downright malice, either by despising or rejecting the inspirations and impulses which, having been stirred in man's soul by the Holy Ghost, would turn him away or deliver him from evil. It is easy to see how this wide explanation suits all the circumstances of the case where Christ addresses the words to the Pharisees. These sins are commonly reckoned six: despair, presumption, impenitence or a fixed determination not to repent, obstinacy, resisting the known truth, and envy of another's spiritual welfare.

The sins against the Holy Ghost are said to be unpardonable, but the meaning of this assertion will vary very much according to which of the three explanations given above is accepted. As to final impenitence, it is absolute; and this is easily understood, for even God cannot pardon where there is no repentance, and the moment of death is the fatal instant after which no mortal sin is remitted. It was because St. Augustine considered Christ's words to imply absolute unpardonableness that he held the sin against the Holy Ghost to be solely final impenitence. In the two other explanations, according to St. Thomas, the sin against the Holy Ghost is irremissible, not absolutely and always, but inasmuch as, considered in itself, it has not the claims and extenuating circumstances, inclining towards a pardon, that might be alleged in the case of sins of weakness or ignorance. He who, from pure and deliberate malice, refuses to recognize the manifest work of God, or rejects the necessary means of salvation, acts exactly like a sick man who not only refuses all medicine and all food, but who does all in his power to increase his illness, and whose malady becomes incurable, due to his own action. It is true that, in either case, God could, by a miracle, overcome the evil; He could, by His omnipotent intervention, either nullify the natural causes of bodily death, or radically change the stubborn will of the sinner; but such intervention is not in accordance with His ordinary providence; and if He allows the secondary causes to act, if He offers the free human will only the help of ordinary but sufficient grace, who shall seek cause of complaint? In a word, the irremissibility of the sins against the Holy Ghost is exclusively on the part of the sinner, on account of the sinner's act.

On the dogma see: ST. THOMAS, *Summa Theol.*, I, Q. xxxviii; FRANZELIN, *De Deo Trino* (Rome, 1831); C. PESCH, *Prælectiones dogmaticæ*, II (Freiburg im Br., 1895); POHLE, *Lehrbuch der Dogmatik*, I (Paderborn, 1902); TANQUERAY, *Synop. theol. dogm. spec.*, I, II (Rome, 1907-8). Concerning the Scriptural arguments for the dogma: WINSTANLEY, *Spirit in the New Testament* (Cambridge, 1903); LEMONNIER, *Épîtres de S. Paul*, I (Paris, 1905). J. FORGET.

Holy Ghost, ORDER OF THE.—The Hospital of the Holy Ghost at Rome was the cradle of an order, which, beginning in the thirteenth century, spread throughout all the countries of Christendom, and whose incalculable services have been recognized by every historian of medicine. Speaking of the hospital itself, La Porte du Theil calls it "a useful establishment, the most beautiful, the largest, and the best-ordered perhaps that exists at present, I say not in this queen of cities, I say in any civilized society of Europe". The famous Virchow of Berlin, an unbeliever, says, in speaking of the order: "It is just to recognize that it was reserved for the Roman Church, above all for

Innocent III, not merely to tap this source of charity and Christian mercy in its plenitude, but to diffuse its beneficent flood in a methodical manner to every sphere of social life." Not that the idea of gathering together the sick in order that they might be assured of the care of a community of infirmarians was new in the Church. Nevertheless, a mistake must not be made on this point. The *hospitium*, the *domus hospitalis*, the *xenodochium*, which are mentioned before the thirteenth century, were in general only a refuge for alien (*hospites*, *ξένοι*) travellers, poor wanderers, and pilgrims so numerous in the Middle Ages. The sick were treated at their homes in accordance with the words of Jesus Christ: "Infirmus (eram) et visitastis me" (I was sick, and you visited me.—Matt., xxv, 36). The first hospitals in the modern sense of the word found their origin in the monasteries under the name of *infirmatoria*. During the Frankish period,

FAÇADE, CHURCH OF SANTO SPIRITO IN SASSIA, ROME, BELONGING TO THE ORDER OF THE HOLY GHOST. The façade shown here was added in 1587, by Sixtus V, to the church as rebuilt by Paul III in 1540

in the absence of a school of medicine, medical science found a refuge in the monasteries. The care of the sick formed part of the duties of charity imposed upon the monks. Hence there were two sorts of infirmaries, the *infirmitorium fratrum* within the *clausura*, and the *infirmitorium pauperum* or *seculi* without.

From the time of the crusades the *hospitia* of the Holy Land, those of the Hospitallers of St. John and the Teutonic Order (q. v.), were of a mixed character; founded for the reception of pilgrims to the Holy Places, they also served as hospitals for the sick. They became at the same time, as is well known, military in character, and to this circumstance may be credited the repeated attempts to give a military character to the Hospitallers of the Holy Ghost, although they have never carried arms nor had occasion to use them. Two circumstances led to the creation of the Hospitallers of the Holy Ghost by Innocent III: the example given in Provence by Guy de Montpellier, who established in his native town a lay community for the care of the sick under the patronage of the Holy Ghost (it is not known what caused him to choose this patronage; perhaps the Holy Ghost was chosen as the *Spiritus amoris*); the second cause was a

foundation of Anglo-Saxon origin already existing on the banks of the Tiber. This was a simple *hospitium* founded in 715 by King Ina for his countrymen and known by the name of Hospitale S. Mariæ in Sassa, around which was formed a quarter called the *Schola Saxonum*. In the course of centuries the buildings had fallen to ruin, but the endowments were still available and were appropriated by the pope to the new institute. A first hospital building was erected in the same quarter, and Guy de Montpellier was called to Rome to organize the service of the sick.

In the beginning the institution was in the hands of laymen, Innocent III confining himself to attaching to it four clerics for spiritual duties, responsible only to the pope or his delegate. In return he endowed the institution with the most extensive privileges, hitherto reserved to the great monastic orders; exemption from all spiritual and temporal jurisdiction save his own, the right to build churches, to nominate chaplains, and to have their own cemeteries. The signal was given; everywhere there arose filial houses modelled after the mother-house, while houses already in existence hastened to seek affiliation in order to enjoy these great privileges; the filial houses swarmed in turn, and thus formed a network of colonies dependent immediately or mediately on the Holy Ghost at Rome, and enjoying the same privileges on condition of adopting the same rule, of submitting to periodical visitation, and of paying a light contribution to their metropolitan. At the end of the thirteenth century the order numbered in France more than 180 houses, and a century later nearly 400. In Germany the list drawn up by Virchow counts about 130 houses at the end of the fourteenth century. Another historian reaches a figure of 900 houses at the same period for the whole of Christendom, but he does not call it complete. The central authority, residing at Rome, was vested in a master-general, later called *commander*, a general chapter held each year at Pentecost, and the visitors delegated by the chapter.

An outburst of generosity responded to this display of Christian mercy; donations of every sort, in lands and revenues, poured in, which enriched the order and gave rise to a temporal administration modelled on that of the military orders. Thus their possessions were grouped into commanderies, which were soon invaded by laymen (many of them married), and thus arose the self-styled "Militia of the Holy Ghost". These lay knights assumed the revenues of these commanderies on condition of furnishing to the order an annual contribution analogous to the *responsions* of the military orders. This was an abuse to which Pius II put an end by appropriating these prebends of the Holy Ghost to a new order founded by him in 1459 under the name of Our Lady of Bethlehem. In 1476 Pope Sixtus IV decreed further that the commanderies should be given only to religious. As to the magisterial commandery at Rome, it was nearly always reserved for a prelate of the Roman Court. Under Guy de Montpellier and his early successors the two houses of Montpellier and Rome remained under the obedience of a common master general. When, later, two separate masters came to be appointed, it was decreed that the arch-hospital of Rome should collect the revenues of Italy, Sicily, England, and Hungary, and that the hospital of Montpellier should have jurisdiction over the houses of France and the other countries of Christendom.

Subsequent to this division of the order, confirmed in 1619 by Pope Paul V, Oliver of Terrada, invested with the dignity of general of the order in France, abused it to renew the Militia of the Holy Ghost. He proceeded to distribute brevets of knighthood to men of all classes, to laymen, often married, which gave rise to protests on the part of the religious of the order. Louis XIV first abolished this knighthood by an edict of 1672, which gave the goods of the Order of the Holy

Ghost to the Order of Notre Dame de Mont-Carmel, founded to procure pensions for gentlemen who had served in his armies. The Knights of the Holy Ghost opposed the execution of this edict, the withdrawal of which they secured, in 1692, by means of a compromise according to which they pledged themselves to recruit and equip a regiment for the service of the king. However, the religious of the Order of the Holy Ghost opposed this edict in their turn, and in 1700, after lengthy proceedings, they finally secured victory in an edict which declared that the Order of the Holy Ghost was purely regular and in no way military. The buildings of the Arcispedale di Santo Spirito of Rome, which dated from the days of Sixtus IV (1471-84) are being reconstructed; they included a central hall, capable of containing 1000 beds, and decorated with frescoes, and special wards for contagious and for dangerous insane cases. A cloister was reserved for the physicians, surgeons, and infirmarians, who numbered more than a hundred. The church and the commander's palace date from the time of Paul III (1534-49). The annual revenue was estimated at 500,000 livres. Under the government of the popes the Arcispedale was a catholic institution, that is to say a universal institution open to all Catholics, irrespective of country, fortune, or condition. To-day (1909) it is merely a municipal institution, reserved for the inhabitants of Rome.

A distinction must be drawn between this order and the Royal Order of the Holy Spirit founded in France by King Henry III, in 1578, to supersede the Order of St. Michael of Louis XI, which had fallen into discredit, and to commemorate his accession to the throne on Pentecost Sunday. This was a purely secular order of the court.

Holy Ghost, RELIGIOUS CONGREGATIONS OF THE.—
I. THE CONGREGATION OF THE HOLY GHOST AND OF THE IMMACULATE HEART OF MARY was founded on Whit Sunday, 1703, for the purpose of preparing missionaries for the most abandoned souls, whether in Christian or pagan countries. Its founder was a young, holy ecclesiastic of noble Breton birth and of brilliant talents, Claude-François Poullart des Places, who, three years previously, in the twenty-first year of his age, had given up the bright prospects of a parliamentary lawyer to embrace the ecclesiastical state. From the very beginning of his ecclesiastical studies he manifested a particular attraction for lowly and neglected works of charity. He became especially interested in poor, deserving students, on whom he freely spent all his own private means and as much as he could collect from his friends. It was with a dozen of these gathered round him that he opened the Seminary of the Holy Ghost, which afterwards developed into a religious society. The work grew rapidly; but the labours and anxieties connected with the foundation proved too much for the frail health of the founder. He died on 2 October, 1709, in the thirty-first year of his age, and in only the third of his priesthood. The portraits which remain of Father Poullart des Places depict a distinguished and intelligent countenance, combining energy with sweetness.

After the founder's death, the Congregation of the Holy Ghost continued to progress; it became fully organized, and received the approbation of the civil and ecclesiastical authorities. It sent missionaries to the French colonies, and to India and China, but suffered much from the French Revolution, and, when that scourge had passed away, only one member, Father Berout, remained. He had survived miracu-

lously, as it were, all manner of vicissitudes—shipwreck on the way to his destined mission in French Guiana, enslavement by the Moors, a sojourn in Senegal, where he had been sold to the English, who then ruled there. On his return to France, after peace was restored to the Church, he re-established the congregation, and continued its work. But it was found impossible to recover adequately from the disastrous effects of the dispersion caused by the Revolution, and the restored society was threatened with extinction. It was at this juncture that there came to its relief Father Libermann, and his fellow-missionaries of the Society of the Immaculate Heart of Mary, which he had founded in 1842. Since the object of both societies was the same, the Holy See requested the founder of the new society to engraft it on the older Congregation of the Holy Ghost. This was done in 1848. Ven. Francis Mary Libermann was made first superior general of the united societies, and the whole body became so impregnated with his spirit and that of his first followers that he is rightly regarded as the chief father and founder of the Congregation of the Holy Ghost and of the Immaculate Heart of Mary, such as it exists to-day.

The first care of the new superior general was to organize on a solid basis the religious service of the old French colonies, by securing the establishment of bishoprics and making provisions for the supply of clergy through the Seminary of the Holy Ghost, which was continued on the lines of its original purpose—to serve as a colonial seminary for the French colonies. But the new superior general set himself to cultivate still wider fields of missionary enterprise. There had already been opened to him the vast domain of Africa, which he was, practically, the first to enter, and which was to be henceforth the chief field of labour of his disciples. It is a fact to be noted that the taking-up of the African missions by Ven. Francis Mary Libermann was due to the initiative of two American prelates, under the encouragement of the first Council of Baltimore. Already, in 1833, Dr. England, Bishop of Charleston, had drawn the attention of the Propaganda to the activity of heretics on the West Coast of Africa, and had urged the sending of missionaries to those benighted regions. This appeal was renewed at the Council of Baltimore, and the Fathers there assembled commissioned the Rev. Dr. Barron, who was then Vicar-General of Philadelphia, to undertake the work at Cape Palmas. That zealous priest went over the ground carefully for a few years, and then repaired to Rome to give an account of the work, and to receive further instructions. He was consecrated bishop and appointed Vicar-Apostolic of the Two Guineas. But, as he had only one priest and a catechist at his disposal, he repaired to France to search for missionaries. Ven. Francis Mary Libermann supplied him at once with seven priests and three coadjutor brothers. The deadly climate played havoc with the inexperienced zeal of the first missionaries. All but one perished in the course of a few months, and Dr. Barron returned in despair to America, where he devoted himself to missionary work. He died from the effects of his zeal during the yellow-fever epidemic in Savannah, in 1853, in the fifty-third year of his age. Father Libermann and his disciples retained the African mission; new missionaries volunteered to go out and take the places of those who had perished; and gradually there began to be built up the series of Christian communities in darkest Africa which form the distinctive work of the Congregation of the Holy Ghost. It has proved a work of continued sacrifice. Nearly 700 missionaries have laid down their lives in Africa during the past sixty years. Still, the spiritual results have compensated for it all. Where there was not a single Christian among the thirty millions of people who inhabit the districts confided to the Holy Ghost Fathers, there are to-day some hundred thou-

sand solid, well-instructed Catholics. These Christians are spread over the Diocese of Angola and the eight Vicariates of Senegambia, Sierra Leone, Gaboon, Ubangi (or French Upper Congo), Loango (or French Lower Congo), on the West Coast; and Northern Madagascar, Zanzibar, Bagamoyo, on the East Coast. There are, moreover, the Prefectures of Lower Nigeria, French Guinea, Lower Congo (Landana), and missions at Bata, in Spanish West Africa, and at Kindou, in the Congo Independent State.

Besides the missions in Africa, the Congregation of the Holy Ghost has missions in Mauritius, Réunion, the Rodriguez Islands, Trinidad, Martinique, Guadeloupe, Haiti, and Amazonia. Moreover, the congregation conducts some very important educational institutions, such as the French seminary at Rome, the colonial seminary at Paris, the colleges of Blackrock, Rockwell, and Rathmines in Ireland, St. Mary's College in Trinidad, the Holy Ghost College of Pittsburg, Pennsylvania, and the three colleges of Braga, Oporto, and Lisbon in Portugal. The congregation is organized into the following provinces: France, Ireland, Portugal, United States, and Germany. These several provinces, as well as all the foreign missions, are under the central control of a superior general, who resides in Paris, and who is aided by two assistants and four consultors—all chosen by the general chapter of the congregation. The whole society is under the jurisdiction of the Cardinal Prefect of the Propaganda. Recently, houses have been opened in England, Canada, Belgium, and Holland, and it is hoped that they will develop into distinct provinces at no distant date, so as to supply the colonies of these respective countries with an increase of missionaries. The province of the United States was founded in the year 1873. It comprises to-day 74 professed fathers, 19 professed scholastics, 30 professed coadjutor brothers. It is equipped with a novitiate and senior scholasticate, at Ferndale, in the Diocese of Hartford, an apostolic college at Cornwells, near Philadelphia. The main object of these institutions is to train missionaries for the most abandoned souls, especially for the coloured people. The province has already established two missions for the coloured race, one in Philadelphia, the other at Rock Castle, near Richmond. Others will be established as quickly as missionaries are formed. Moreover, missions for various nationalities have been established in the following dioceses, at the urgent request of the respective bishops: Little Rock, Pittsburg, Detroit, Grand Rapids, La Crosse, Philadelphia, Providence, and Harrisburg. In all there are twenty-three houses.

The latest statistics for the entire congregation, published in April, 1908, give 195 communities, 722 fathers, 210 professed scholastics, 655 professed brothers, 230 novices, 595 aspirants. About half the professed members are engaged in the African missions. The congregation is slowly but steadily forming a native clergy and sisterhood in Africa. A dozen negro priests and about one hundred negro sisters are at present working in the several missions.

II. CONGREGATION OF THE DAUGHTERS OF THE HOLY GHOST.—This congregation was founded in Brittany, in the year 1706, by two pious ladies, Renée Burel and Marie Balavenne, under the direction of a zealous missionary, Father Leuduger. Its principal object is the education of children; but it also undertakes all kinds of charitable work. The congregation developed rapidly, and the "White Sisters", as its members were called, from the colour of their habit, became very numerous all over the north-west of France. It suffered the fate of all religious societies at the Revolution; but it quickly recovered, and increased a hundredfold during the course of the nineteenth century. The iniquitous French anti-congregation legislation of 1902 has caused the congregation to disperse. While still in possession at its mother-

house at Saint-Brieuc, in Brittany, and in several other of its houses in France, in the face of bitter persecution, several hundreds of the Sisters of the Holy Ghost have gone to England, Belgium, and the United States. The late Bishop Tierney invited them to his Diocese of Hartford in 1902, and from there they have already spread to Springfield, Providence, Fall River, Burlington, and Ogdensburg. There are 22 houses at present in these several dioceses, and over 200 sisters. The provincial house is at Hartford.

III. SISTERS OF THE HOLY GHOST (Dubuque).—This congregation was founded in 1890, by the late Most Rev. John Hennessey, Archbishop of Dubuque. Its object is twofold, the cultivation of devotion to God the Holy Ghost, and the education of youth. The mother-house is in St. Anthony's parish, West Dubuque, Iowa.

IV. SISTER-SERVANTS OF THE HOLY GHOST.—This congregation was founded at Steyl, Holland, in 1889, by the late Very Rev. Father Janssen, as auxiliary to his other foundation, the Society of the Divine Word. It was introduced into the United States in 1901, and has a convent at Techny, Illinois, and a school for negro children at Vicksburg, Mississippi.

V. SISTERS OF THE HOLY GHOST (for coloured people).—This congregation was first established in 1886 at San Antonio, Texas. So far, it has only two houses, one at San Antonio, and the other at Victoria, Texas.

Holy Humility of Mary, INSTITUTE OF SISTERS OF THE, founded at Dommartin-sous-Amance, France, in 1855, by John Joseph Begel (b. 5 April, 1817; d. 23 Jan., 1884), pastor of the two villages of Laitre and Dommartin. In 1854 three pious women, Mlle Poirier, the foundress, known in religion as Mother Mary Magdalen, Marie Tabourat, later Mother Mary Anna, and Sister Mary Joseph, having offered their services for the work of teaching poor children, Father Begel conceived the idea of establishing a religious community. The following year he drew up a rule which was adopted by the sisters and approved by the Bishop of Nancy, 29 Aug., 1858. The object of the new congregation was the education of youth in country districts and small towns, the training of orphans, the care of the sick, and incidentally the decoration of altars in parish churches. The association increased in numbers. Soon, however, Father Begel's open condemnation of the policy of Napoleon III towards the Church and especially towards religious orders, brought him into disfavour with the civil authorities, and the sisters of the community were refused diplomas and prevented from opening schools.

In 1863 Father Louis Hoffer of Louisville, Ohio, U. S. A., applied for four sisters to teach in his school. Bishop Rappe of Cleveland not only gave his approval, but invited the whole community to settle in his diocese. The sisters, accompanied by Father Begel, set sail 30 May, 1864, and on their arrival took possession of a farm of 250 acres near New Bedford, Pennsylvania, which had just been vacated by the Sisters of Charity of St. Augustine, and to which they gave the name Villa Maria. It was far from a railroad, and the land was uncultivated, undrained, overgrown with brush, and dotted with sloughs, the buildings

being surrounded by a marsh. Moreover, the community was destitute of resources and burdened with debt. Notwithstanding this the sisters immediately undertook the care of orphans and the work to which they had pledged themselves, and were soon able to enlarge the buildings (1869 and 1878). In 1879 a hospital was built, and shortly afterwards a chapel. The year 1884 was marked by the death of Father Begel, the venerable founder. In 1899 ground was purchased at Cleveland, Ohio, for an academy, which was chartered a few years later under the title of Our Lady of Lourdes, and empowered to confer degrees. In 1897 it was removed to a more suitable location.

Owing to the remoteness of Villa Maria from railroad facilities, a tract of sixty-three acres between Canton and Massillon, Ohio, was purchased in 1904 for the purpose of erecting a new mother-house, to be known as Mount Maria, and a college, which was opened in 1908 under the title of College of the Immaculate Conception.

The sisters wear a blue woollen habit, for headdress a gimp and bandeau, a black veil being worn by the professed, and a white one by novices. A silver medal is suspended from the neck on a blue band, and a rosary from the girdle, which is also of blue. The novitiate lasts from two and a half to three years, and perpetual vows are made at the end of nine years. The superior, her two assistants, and four consultors are elected triennially.

The congregation numbers (1909) about 200 members, including postulants and novices, in charge of 15 parochial schools attended by 6400 children, 2 academies, and an orphan asylum at Villa Maria.

Holy Infancy, BROTHERS OF THE, founded in 1853 by the Right Rev. John Timon, the first Bishop of Buffalo. The special aim of this congregation is the sanctification of its members and the care of destitute and wayward boys. Bishop Timon, upon taking possession of his see, gave his first care to the orphans and neglected of his flock. He purchased a tract of land in West Seneca, now the city of Lackawanna, and established St. Joseph's Male Orphan Asylum and, a little later, St. John's Protectory for wayward and destitute boys. Rev. Thomas Hines was appointed superintendent. These institutions struggled on under a heavy debt until 1882, when the Right Rev. Nelson H. Baker, V.G., LL.D., was placed in charge. Monsignor Baker at once placed the work under the patronage of Our Blessed Lady of Victory and founded the Society of Our Lady of Victory to care for destitute Catholic children. From this time the work prospered. At present (1909), under the general title of Our Lady of Victory Home, the following buildings are grouped: St. John's Protectory, with 700 boys; St. Joseph's Orphan Asylum, with 250 boys; Working Boys' Home, with 75 boys; Our Lady of Victory Infant Asylum, caring for about 150. The brothers give special attention to the trade school of the protectory; printing, press-feeding, book-binding, baking, shoe-making, tailoring, plumbing, gas-fitting, and other trades are taught with excellent results. The brothers at present number twenty-three. Young men are received from the age of sixteen to thirty-five. After a probation of six months the candidate receives the habit. Two years are passed in the novitiate, after which the novice takes the vows of poverty, chastity, and obedience. The brothers maintain a juniorate in which boys are received from twelve to fifteen years of age and trained to the work carried on by the community. They are governed by the bishop, who appoints a priest to superintend the institution and act as superior. Next in authority are the brother superior and his assistants, who are elected every three years.

BROTHER STANISLAUS.

Holy Innocents, the children mentioned in St. Matthew, ii, 16-18: "Herod perceiving that he was decuded by the wise men, was exceeding angry; and sending killed all the men children that were in Bethlehem, and in all the borders thereof, from two years old and under, according to the time which he had diligently inquired of the wise men. Then was fulfilled that which was spoken by Jeremias the prophet, saying: A voice in Rama was heard, lamentation and great mourning; Rachel bewailing her children, and would not be comforted, because they are not." The Greek Liturgy asserts that Herod killed 14,000 boys (τῶν ἀγίων ἰδ' ἑλιόδων Νηπιῶν), the Syrians speak of 64,000, many medieval authors of 144,000, according to Apoc., xiv, 3. Modern writers reduce the number considerably, since Bethlehem was a rather small town. Knabenbauer brings it down to fifteen or twenty (Evang. S. Matt., I, 104), Bisping to ten or twelve (Evang. S. Matt.), Kellner to about six (Christus und seine Apostel, Freiburg, 1908); cf. "Anzeiger kath. Geistlichk. Deutschl.", 15 Febr., 1909, p. 32. This cruel deed of Herod is not mentioned by the Jewish historian Flavius Josephus, although he relates quite a number of atrocities committed by the king during the last years of his reign. The number of these children was so small that this crime appeared insignificant amongst the other misdeeds of Herod. Macrobius (Saturn., IV, xiv, de Augusto et jocis ejus) relates that when Augustus heard that amongst the boys of two years and under Herod's own son also had been massacred, he said: "It is better to be Herod's hog [ὄς], than his son [ἄσ],]" alluding to the Jewish law of not eating, and consequently not killing, swine. The Middle Ages gave faith to this story; Abelard inserted it in his hymn for the feast of Holy Innocents:—

Ad mandatum regis datum generale
nec ipsius infans tutus est a cæde.
Ad Augustum hoc delatum risum movit,
et rex mitis de immitti digne lusit:
malum, inquit, est Herodis esse natum.
prodest magis talis regis esse porcum.

(Dreves, "Petri Abælardi Hymnarius Paracletensis", Paris, 1891, pp. 224, 274.) But this "infant" mentioned by Macrobius, is Antipater, the adult son of Herod, who, by command of the dying king was decapitated for having conspired against the life of his father.

It is impossible to determine the day or the year of the death of the Holy Innocents, since the chronology of the birth of Christ and the subsequent Biblical events is most uncertain. All we know is that the infants were slaughtered within two years following the apparition of the star to the Wise Men (Belsler, in the Tübingen "Quartalschrift", 1890, p. 361). The Church venerates these children as martyrs (*flores martyrum*); they are the first buds of the Church killed by the frost of persecution; they died not only for Christ, but in his stead (St. Aug., "Sermo 10^{us} de sanctis"). In connexion with them the Apostle recalls the words of the Prophet Jeremias (xxxii, 15) speaking of the lamentation of Rachel. At Rama is the tomb of Rachel, representative of the ancestresses of Israel. There the remnants of the nation were gathered to be led into captivity. As Rachel, after the fall of Jerusalem, from her tomb wept for the sons of Ephraim, so she now weeps again for the men children of Bethlehem. The ruin of her people, led away to Babylon, is only a type of the ruin which menaces her children now, when the Messiah is to be murdered and is compelled to flee from the midst of His own nation to escape from the sword of the apparitor. The lamentation of Rachel after the fall of Jerusalem receives its eminent completion at the sight of the downfall of her people, ushered in by the slaughter of her children and the banishment of the Messiah.

The Latin Church instituted the feast of the Holy Innocents at a date now unknown, not before the end of the fourth and not later than the end of the

fifth century. It is, with the feasts of St. Stephen and St. John, first found in the Leonine Sacramentary, dating from about 485. To the Philocalian Calendar of 354 it is unknown. The Latins keep it on 28 December, the Greeks on 29 December, the Syrians and Chaldeans on 27 December. These dates have nothing to do with the chronological order of the event; the feast is kept within the octave of Christmas because the Holy Innocents gave their life for the newborn Saviour. Stephen the first martyr (martyr by will, love, and blood), John, the Disciple of Love (martyr by will and love), and these first flowers of the Church (martyrs by blood alone) accompany the Holy Child Jesus entering this world on Christmas day. Only the Church of Rome applies the word *Innocentes* to these children; in other Latin countries they are called simply *Infantes* and the feast had the title "Allisio infantium" (Brev. Goth.), "Natale infantum", or "Necatio infantum". The Armenians keep it on Monday after the Second Sunday after Pentecost (Armen. Menology, 11 May), because they believe the Holy Innocents were killed fifteen weeks after the birth of Christ.

In the Roman Breviary the feast was only a semi-double (in other breviaries a minor double) up to the time of Pius V, who, in his new Breviary (1568), raised it to a double of the second class with an octave (G. Schober, "Expl. rit. brev. rom.", 1891, p. 38). He also introduced the two hymns "Salvete flores martyrum" and "Audit tyrannus anxius", which are fragments of the Epiphany hymn of Prudentius. Before Pius V the Church of Rome sang the Christmas hymns on the feast of the Holy Innocents. The proper preface of the Gelasian Sacramentary for this feast is still found in honour of the Holy Innocents from the pen of the Venerable Bede, "Hymnum canentes martyrum" (Dreves, "Analecta hymnica") and a sequence composed by Notker, "Laud tibi Christe", but most Churches at Mass used the "Celsa pueri concrepant melodia" (Kehrein, "Sequenzen", 1873, p. 348). At Bethlehem the feast is a Holy Day of obligation. The liturgical colour of the Roman Church is purple, not red, because these children were martyred at a time when they could not attain the beatific vision. But of compassion, as it were, towards the weeping mothers of Bethlehem, the Church omits at Mass both the Gloria and Alleluia; this custom, however, was unknown in the Churches of France and Germany. On the octave day, and also when the feast falls on a Sunday, the Roman Liturgy, prescribes the red colour, the Gloria, and the Alleluia. In England the feast was called "Childermas".

The Roman Station of 28 December is at St. Paul's Outside the Walls, because that church is believed to possess the bodies of several of the Holy Innocents. A portion of these relics was transferred by Sixtus V to Santa Maria Maggiore (feast on 5 May; it is a semi-double). The church of St. Justina at Padua, the cathedrals of Lisbon and Milan, and other churches also preserve bodies which they claim to be those of some of the Holy Innocents. In many churches in England, Germany, and France on the feast of St. Nicholas (6 December) a boy-bishop (q. v.) was elected, who officiated on the feast of St. Nicholas and of the Holy Innocents. He wore a mitre and other pontifical insignia, sang the collect, preached, and gave the blessing. He sat in the bishop's chair whilst the choir-boys sang in the stalls of the canons. They directed the choir on these two days and had their solemn procession (Schmidt, "Thesaurus jur. eccl.", III, 67 sqq.; Kirchenlex., IV, 1400; P. L., CXLVII, 135).

FREDERICK G. HOLWECK.

Holy Name, FEAST OF THE, is celebrated on the second Sunday after Epiphany (double of the second class). It is the central feast of all the mysteries of Christ the Redeemer; it unites all the other feasts of the Lord, as a burning glass focusses the rays of the sun in one point, to show what Jesus is to us, what He has done, is doing, and will do for mankind. It originated towards the end of the fifteenth century, and was instituted by the private authority of some bishops in Germany, Scotland, England, Spain, and Belgium. The Office and the Mass composed by Bernardine dei Busti (d. 1500) were approved by Sixtus IV. The feast was officially granted to the Franciscans 25 February, 1530, and spread over a great part of the Church. The Franciscans, Carmelites, and Augustinians kept it on 14 Jan.; the Dominicans 15 Jan. At Salisbury, York, and Durham in England, and at Aberdeen in Scotland it was celebrated 7 Aug., at Liège, 31 Jan., at Compostela and Cambrai, 8 Jan. (Grotefend, "Zeitrechnung", II, 2, 89). The Carthusians obtained it for the second Sunday after Epiphany about 1643; for that Sunday it was also extended to Spain, and later, 20 Dec., 1721, to the Universal Church. The Office used at present is nearly identical with the Office of Bernardine dei Busti. The hymns "Jesu dulcis memoria", "Jesu Rex admirabilis", "Jesu decus angelicum", usually ascribed to St. Bernard, are fragments of a very extensive "jubilus" or "cursus de æterna sapientia" of some unknown author in the thirteenth century. For the beautiful sequence "Dulcis Jesus Nazarenus" (Morel, "Hymnen des Mittelalters", 67) of Bernardine dei Busti the Franciscans substituted a prose sequence of modern origin: "Lauda Sion Salvatoris"; they still celebrate the feast on 14 Jan.

FREDERICK G. HOLWECK.

Holy Name, SOCIETY OF THE (CONFRATERNITY OF THE MOST HOLY NAME OF GOD AND JESUS), an indulgenced confraternity in the Catholic Church. The primary object of the society is to beget due love and reverence for the Holy Name of God and Jesus Christ. The secondary object is to suppress blasphemy, perjury, oaths of any character that are forbidden, profanity, unlawful swearing, improper language, and, as far as the members can, to prevent those vices in others (Pius IV, 13 April, 1564). It had its origin in the Council of Lyons, 1274, which prescribed that the faithful should have a special devotion to the Holy Name of Jesus, that reparation might be made for insults offered to it by Albigenses and other blasphemers. The Friars Preachers were preaching everywhere with the zeal of St. Dominic; it was natural, then, that Gregory X selected the Dominicans to preach the devotion, which he did by a letter to Blessed John of Vercelli, master general of the order, 20 September, 1274 (Constit. "Nuper in"). The master general immediately wrote to all the provincials of the order, expressing the pope's wish, and enjoining upon all the duty of labouring for its fulfilment (Litteræ Encyclicæ Mag. Gen. Ord. Præd., Reichert, 1900). The brethren gave their best energies in executing the command, preaching everywhere the power and glory of the Holy Name of Jesus; and, to give permanency to the devotion excited in the hearts of the people, it was ordained that in every Dominican church an altar of the Holy Name should be erected, and that societies or confraternities under the title and invocation of the Holy Name of Jesus should be established. St. Peter, Martyr (d. 1252); John of Vercelli, a contemporary of St. Dominic; Blessed Ambrose of Siena (d. 1286) are said to have been great propagators of the devotion. In the fourteenth cen-

tury Blessed Henry Suso (d. 1365) is the most notable apostle of devotion to the Holy Name.

The history of the society in the fourteenth and the fifteenth centuries is somewhat obscure, but that it continued to exist is certain from papal Bulls addressed to the Order of St. Dominic. Boniface IX in his Constitution "Hodie", 31 October, 1401, granted indulgences to those visiting the altar of the confraternity in the Dominican monastery at Schusen, Diocese of Werden, Saxony. In 1432 at Lisbon the devotion preached by a retired Dominican bishop, Andrea Diaz, was the means of stopping the ravages of a plague which was then afflicting that city. In gratitude for their deliverance, the people of all classes in Lisbon held, on 1 Jan., 1433, what was probably the first procession in honour of the Holy Name of Jesus. At this period St. Bernardine of Siena, an Italian Franciscan, gained great renown as a promoter of the devotion in Italy. In the sixteenth century Emperor Charles V and King Philip II, moved by the prevalence of blasphemy and sacrilege, exhorted and encouraged the Dominicans to spread the devotion and to establish the society throughout their dominions. Among the preachers engaged in this apostolate, the most celebrated was the Spanish Dominican, Didacus of Victoria (d. 1450), who may be properly called the great preacher of the devotion of the Holy Name of God. He founded a confraternity known as the Society of the Holy Name of God, of which the special object was to suppress the horrible profanation of the Divine Name by blasphemers, perjurers, and by men in their ordinary conversation, and to this end he drew up a rule and constitution for its government.

His confraternity was approved by Pope Pius IV 13 April, 1564, who richly endowed it with indulgences, commanded all ecclesiastical authorities to favour it with all their power, and, in a special letter, recommended it to the laity (Bullarium Ord. Præd., tom. I, v). Later, this confraternity was merged into the Society of the Holy Name of Jesus. Thereafter the society was called by both titles. It also bore the title of "Confraternity against Oaths". Following the example of Pius IV, the popes of the sixteenth and seventeenth centuries, notably Innocent XI, made the society an object of special solicitude, encouraging its promotion, granting indulgences, and regulating its organization. St. Pius V, in the Motu Proprio "Decret Romanum", 21 June, 1571, absolutely restricted the canonical erection of the society to the Dominican order. Letters patent from the master general of the Dominicans are required for the canonical establishment of the society (for the United States these letters are issued through the bureau of the Holy Name Society, New York). In missionary countries special provision is made for the establishment of the society.

The acts of the general chapters of the order held since 1571 contain numerous regulations and admonitions insisting upon zeal in propagating the confraternity. Great encouragement to the development of the society was given at the close of the nineteenth century by Pope Leo XIII, who decreed through the Congregation of Indulgences, 20 May, 1896, that the bishops may dispense from the Clementine decree "Quæcumque", requiring that there should be only one confraternity in a town or city. Before this the society had existed in many churches of various cities of the United States, by virtue of dispensations obtained from Rome. Since then branches of the society have multiplied very rapidly and in several dioceses; following the example set in the Archdiocese of New York, 21 May, 1882, they have been formed into diocesan unions under a director general appointed by the ordinary. Being thus united, the men of the society in the United States (they number about 500,000) are able to accomplish great good by public yearly processions of many thousands profess-

ing reverence for the Name of Jesus Christ, and abhorrence of blasphemy, profanity, and immorality. They are required to receive Holy Communion in a body at least once every three months; in most places the rule prescribes Communion on the second Sunday of every month, when they may gain plenary and partial indulgences granted by Gregory XIII. A complete list of indulgences, all of which may be applied to the souls in purgatory, is contained in the "Pocket Manual of the Holy Name Society" (new edition, New York, 1909), by the Dominican, Father McKenna, who for many years has been recognized as the apostle of the Holy Name in the United States. In 1907 the monthly publication of "The Holy Name Journal" (New York) was begun by the Dominican Fathers. *Bullarium Romanum; Bullarium Ordinis Prædicatorum; FONTANA, Constitutiones Ord. Præd.* (Rome, 1862, 1886); *DRANE, The Spirit of the Order of St. Dominic* (London, 1896); *Année Dominicaine* (January, 1883); *Analecta Ord. Præd.* (Sept., 1896); *Litteræ Encyclicæ Mag. Ord. CLEMENT M. THUENTE.

Holy Name of Jesus.—We give honour to the Name of Jesus, not because we believe that there is any intrinsic power hidden in the letters composing it, but because the Name of Jesus reminds us of all the blessings we receive through our Holy Redeemer. To give thanks for these blessings we revere the Holy Name, as we honour the Passion of Christ by honouring His Cross (Colvenerius, "De festo SS. Nominis", ix). At the Holy Name of Jesus we uncover our heads, and we bend our knees; it is at the head of all our undertakings, as the Emperor Justinian says in his law-book: "In the Name of Our Lord Jesus we begin all our consultations". The Name of Jesus invoked with confidence (1) brings help in bodily needs, according to the promise of Christ: "In my name They shall take up serpents; and if they shall drink any deadly thing, it shall not hurt them: they shall lay their hands upon the sick, and they shall recover". (Mark, xvi, 17, 18.) In the Name of Jesus the Apostles gave strength to the lame (Acts, iii, 6; ix, 34) and life to the dead (Acts, ix, 40). (2) It gives consolation in spiritual trials. The Name of Jesus reminds the sinner of the prodigal son's father and of the Good Samaritan; it recalls to the just the suffering and death of the innocent Lamb of God. (3) It protects us against Satan and his wiles, for the Devil fears the Name of Jesus, who has conquered him on the Cross. (4) In the Name of Jesus we obtain every blessing and grace for time and eternity, for Christ has said: "If you ask the Father any thing in my name, he will give it you." (John, xvi, 23.) Therefore the Church concludes all her prayers by the words: "Through Our Lord Jesus Christ", etc. So the word of St. Paul is fulfilled: "That in the name of Jesus every knee should bow, of those that are in heaven, on earth, and under the earth" (Phil., ii, 10).

A special lover of the Holy Name was St. Bernard, who speaks of it in most glowing terms in many of his sermons. But the greatest promoters of this devotion were St. Bernardine of Siena and St. John Capistran. They carried with them on their missions in the turbulent cities of Italy a copy of the monogram of the Holy Name, surrounded by rays, painted on a wooden tablet, wherewith they blessed the sick and wrought great miracles. At the close of their sermons they exhibited this emblem to the faithful and asked them to prostrate themselves, to adore the Redeemer of mankind. They recommended their hearers to have the monogram of Jesus placed over the gates of their cities and above the doors of their dwellings (cf. Seeberger, "Key to the Spiritual Treasures", 1897, 102). Because the manner in which St. Bernardine preached this devotion was new, he was accused by his enemies, and brought before the tribunal of Pope Martin V. But St. John Capistran

defended his master so successfully that the pope not only permitted the worship of the Holy Name, but also assisted at a procession in which the holy monogram was carried. The tablet used by St. Bernardine is venerated at Santa Maria in Ara Cœli at Rome.

The emblem or monogram representing the Holy Name of Jesus consists of the three letters: IHS. In the Middle Ages the Name of Jesus was written: IHESUS; the monogram contains the first and the last letter of the Holy Name. It is first found on a gold coin of the eighth century: DN IHS CHS REX REGNANTUM (The Lord Jesus Christ, King of Kings). Some erroneously say that the three letters are the initials of "Jesus Hominum Salvator" (Jesus Saviour of Men). The Jesuits made this monogram the emblem of their Society, adding a cross over the H and three nails under it. Consequently a new explanation of the emblem was invented, pretending that the nails originally were a "V", and that the monogram stands for "In Hoc Signo Vinces" (In This Sign you shall Conquer), the words which, according to a legendary account, Constantine saw in the heavens under the Sign of the Cross before the battle at the Milvian bridge (312).

Urban IV and John XXII are said to have granted an indulgence of thirty days to those who would add the name of Jesus to the Hail Mary or would bend their knees, or at least bow their heads when hearing the Name of Jesus (Alanus, "Psal. Christi et Mariæ", i, 13, and iv, 25, 33; Michael ab Insulis, "Quodlibet", v; Colvenerius, "De festo SS. Nominis", x). This statement may be true; yet it was only by the efforts of St. Bernardine that the custom of adding the Name of Jesus to the Ave Maria was spread in Italy, and from there to the Universal Church. But up to the sixteenth century it was still unknown in Belgium (Colven., op. cit., x), whilst in Bavaria and Austria the faithful still affix to the Ave Maria the words: "Jesus Christus" (ventris tui, Jesus Christus). Sixtus V (2 July, 1587) granted an indulgence of fifty days to the ejaculation: "Praise be to Jesus Christ!" with the answer: "For evermore", or "Amen". In the South of Germany the peasants salute each other with this pious formula. Sixtus V and Benedict XIII granted an indulgence of fifty days to all as often as they pronounce the Name of Jesus reverently, and a plenary indulgence in the hour of death. These two indulgences were confirmed by Clement XIII, 5 Sept., 1759. As often as we invoke the Name of Jesus and Mary ("Jesu!", "Maria!") we may gain an indulgence of 300 days, by decree of Pius X, 10 Oct., 1904. It is also necessary, to gain the papal indulgence in the hour of death, to pronounce at least in mind the Name of Jesus.

Holy Oils (OLEA SACRA).—*Liturgical Benediction.*—Oil is a product of great utility the symbolic signification of which harmonizes with its natural uses. It serves to sweeten, to strengthen, to render supple; and the Church employs it for these purposes in its rites. The liturgical blessing of oil is very ancient. It is met with in the fourth century in the "Prayer Book of Serapion", and in the Apostolic Constitutions, also in a Syriac document of the fifth or sixth century entitled "Testamentum Domini Nostri Jesu Christi". The aforesaid book of Bishop Serapion (d. c. 362) contains the formula for the blessing of the oil and chrism for those who had just received baptism, which was in those days followed by confirmation in such a manner that the administration of both sacraments constituted a single ceremony. In the same book is found a separate form of blessing for the oil of the sick, for water, and for bread. It is

an invocation to Christ to give His creatures power to cure the sick, to purify the soul, to drive away impure spirits, and to wipe out sins. In the Old Testament oil was used for the consecration of priests and kings, also in all great liturgical functions, e. g., sacrifices, legal purifications, and the consecration of altars (Exod., xxx, 23, 33; xxxix, 27, 29; xl, 9, 15; Levit., vi, 15 sq.).

In the primitive Church the oils to be used in the initiation of catechumens were consecrated on Holy Thursday in the *Missa Chrismalis*. Two different ampullæ were used, one containing pure oil, the other oil mixed with balsam. This mixture was made by the pope himself before the Mass, in the sacristy. During the Mass two clerics of lesser rank stood before the altar holding the ampullæ. Towards the end of the Canon the faithful offered for benediction small ampullæ of oil; these contained oil of the sick which the faithful were allowed to make use of themselves (Tertull., "Ad Scap.", iv), but the same oil also served for extreme unction. The vessels holding it were placed on the railing surrounding the space reserved for the clergy. The deacons brought some of these vessels to the altar to receive that blessing of the pope which we read to-day in the Gelasian and Gregorian Sacramentaries. The pope continued the Mass while the deacons returned the ampullæ to the place whence they had brought them, and a certain number of bishops and priests repeated over those which had not been brought to the altar the formula pronounced by the pope. The consecration of the large ampullæ took place immediately after the Communion of the pope, before the Communion of the clergy and the faithful. The deacons covered the chalice and paten, while the subdeacons carried the ampullæ to the archdeacon and one of his assistants. The archdeacon presented to the pope the ampulla of perfumed oil, the pontiff breathed on it three times, made the sign of the cross, and recited a prayer which bears a certain resemblance to the Preface of the Mass. The ampulla of pure oil was next presented to the pope, and was consecrated with less solemnity. The consecration and benediction of the holy oils now take place on Holy Thursday at a very solemn ceremony reserved for the bishop. He blesses the oil which is to serve at the anointing of catechumens previous to baptism, next the oil with which the sick are anointed in the Sacrament of Extreme Unction, finally the chrism, which is a mixture of oil and balsam, and which is used in the administration of the Sacrament of Confirmation.

The Oil of the Sick.—The use of oil in Christian antiquity was not, as has been maintained, a medical prescription adopted by the Church. In Apostolic times St. James directed the priests or ancients of the community to pray for the sick man and to anoint him with oil in the name of Jesus (James, v, 14). And shortly afterwards, probably in the second century, a gold leaf found at Beyrout, in Syria, contains an exorcism "pronounced in the dwelling of him whom I anointed". This is, after the text of St. James, the earliest evidence of the use of oil accompanied by a formula in the administration of a sacrament [see Theophilus of Antioch (d. 181), "Ad. Autolyc.", I, xii, in P. G., VI, 1042]. The oil of the sick might be blessed not only by priests, but also by laymen of high repute for virtue, and even by women. In the sixth century St. Monegundus on his death-bed blessed oil and salt which were afterwards used for the sick ("Vita S. Monegundi", ix, in "Acta SS. Ord. S. Bened.", I, 204; Gregory of Tours, "Vita Patr.", xix, 4). A similar instance is met with in the life of St. Radegund (Vita Radeg., I, xxxv). In the West, however, the tendency was early manifested to confine the blessing of the oil of the sick to bishops only; about 730 St. Boniface ordered all priests to have recourse to the bishop (Statut., xxix). In 744 the

tendency was not so pronounced in France, but the Council of Châlons (813) imposed on priests the obligation of anointing the sick with oil blessed by the bishop (can. xlviij). In the East the priests retained the right to consecrate the oil. The custom even became established, and has lasted to the present time, of having the oil blessed in the house of the sick person, or in the church, by a priest, or, if possible, by seven priests.

Oil of Catechumens.—During the time of the catechumenate those who were about to become Christians received one or more anointings with holy oil. The oil used on this occasion was that which had received the blessing mentioned in the Apostolic Constitutions (VII, xlii). This anointing of the catechumens is explained by the fact that they were regarded to a certain extent as being possessed by the devil until Christ should enter into them through baptism. The oil of catechumens is also used in the ordination of priests and the coronation of kings and queens.

Oil of Chrism.—This is used in the West immediately after baptism; both in the East and West it was used very early for the Sacrament of Confirmation (see CHRISM).

Oil in the Agnus Dei.—The "Ordo Romanus" (c. 730) shows that in Rome, on Holy Thursday, the archdeacon went very early to St. John Lateran, where he mixed wax and oil in a large vase, this mixture being used to make the Agnus Deis (Mabilon, "Mus. Ital.", II, 31). The same document shows that in the suburban churches wax was used while Pseudo-Alcuin (Divin. Offic., xix) says that both wax and oil were used.

Oil in the Eucharistic Bread.—In the Liturgy of the Nestorians and the Syrian Jacobites, the elements presented at the Eucharistic Consecration have been prepared with oil. Among the Nestorians a special rubric prescribes the use of flour, salt, olive oil, and water ("Officium Renovationis fermenti"; Martène, "De antiquis Eccles. ritib.", I, iii, 7; Badger, "Nestorians", II, 162; Lebrun, "Explic. des prières de la messe", dissert. xi, 9).

Oil in the Font.—From the second century the custom was established of administering baptism with water specially blessed for this purpose. Nevertheless, the sacrament was valid if ordinary water was used. We are not well informed as to the nature of this consecration of this baptismal water, but it must be said that the most ancient indications and descriptions say nothing of the use of oil in this consecration. The first witness, Pseudo-Dionysius, does not go beyond the first half of the sixth century; he tells us that the bishop pours oil on the water of the fonts in the form of a cross (De hierarch. eccles., IV, x; cf. II, vii). There is no doubt that this rite was introduced at a comparatively late period.

Oil in Church Lamps.—The maintenance of more or less numerous lamps in the churches was a source of expense which the faithful in their generosity hastened to meet by establishing a fund to purchase oil. The Council of Braga (572) decided that a third of the offerings made to the Church should be used for purchasing oil for the light. The quantity of oil thus consumed was greater when the lamp burned before a famous tomb or shrine, in which case it was daily distributed to pilgrims, who venerated it as a relic (Kraus, "Real-Encykl.", II, 522). (See LIGHTS.)

H. LECLERCQ.

Holy Oils, VESSELS FOR.—In Christian antiquity there existed an important category of vessels used as receptacles for holy oil. These were the *ampullæ* or *pittacia*, which varied greatly in material as well as

HOLYROOD PALACE AS REBUILT BY CHARLES II ABOUT 1670, WITH RUINS OF THE ABBEY CHURCH

shape, being of wood, metal, ivory, and even more frequently of earthenware. Sometimes the vessel was flat-shaped, resembling the *bullæ*, or again it took the form of a thimble or little flagon. Those most numerous at present are the "ampullæ of St. Menas". There was scarcely a place of pilgrimage that did not have its beneficial or miraculous oil, which would be carried great distances to satisfy the pious or to relieve the sick. On this point there is abundant ancient testimony. To the oil was attributed a participation in the virtues of the saints with whom it had in some way been in contact. Hence, not alone the oil from lamps that had burned before their tombs but that also which was supposed to have issued from the tombs themselves or from the images of the saints was prized. The most celebrated document on this subject is the "Index oleorum" or "List of the holy oils", sent to Queen Theodelinde by Gregory the Great. This list was accompanied by ampullæ, a certain number of which have been preserved in the treasury of the Basilica of Monza.

Towards the close of the sixth century the custom of reserving to the bishop the blessing of the holy oils on Holy Thursday had been established and gradually propagated, and the priests of each diocese were obliged to provide themselves with oil sufficient for their needs throughout the year. If, at the time of receiving the new oil, any of the old was still unused, it had to be destroyed, that is, either burned or thrown into the piscina of the church. Each church, therefore, had but a limited number of vessels destined to hold the oils. The councils of the ninth and succeeding centuries frequently warned the priests and bishops to take precautions against the stealing of the holy oils. Indeed, in those days malefactors entertained the superstitious belief that they would not be discovered if they would but rub their bodies with the holy oils. In order to prevent such desecration, the holy oils were kept in some secure place, either in a closet or in the sacristy.

The material of the vessels has varied greatly. In the fourth century St. Optatus of Mileve relates that the Donatist heretics seized and profaned a glass vessel filled with holy chrism (Migne, P. L., vol. XI, col. 972). In the Middle Ages crystal, gold, silver, and less precious metals were used. A thirteenth-century rock crystal vase from the Abbey of Saint-Evroult (Orne) is three and one-half inches in height and is surmounted by a lid of silver gilt encrusted with coloured stones (de Caumont, "Abécédaire d'arch. religieuse", p. 567); an inventory of Old St. Paul's, London, mentions three silver ampullæ containing oil and chrism (Dugdale, "Monast. anglie.", III, 310) and an inventory of the Laon cathedral, in 1523, mentions three large phial-shaped silver vessels used for keeping the holy chrism, holy oil, and oil for the sick. In the interior of each receptacle was a long silver rod that served as a spoon. Inventories of Jumièges and Rouen, York and Lincoln speak of vessels of gold and of silver gilt enclosed in a small cabinet and furnished with spoons for the extraction of the liquid. These vases are designated as flagons, ampullæ, *estuy*, and *phialæ*, and the cabinet containing them is known as the *chrismatorium*, *chrismate*, *cremeau*, and *coresmier*. St. Charles Borromeo drew up minute instructions concerning the vessels for the holy oils. He declared that each individual church should have two, either of silver or pewter, for each kind of oil, each vessel bearing the name of the oil contained therein. Almost the same rules are observed to-day. The vessels are usually cylindrical in form and fitted with screw tops marked with the letters: *S. C.* (*sanctum chrisma*); *O. S.* (*oleum sanctum*, oil of catechumens); *O. I.* (*oleum infirmorum*).

Holyrood Abbey, Edinburgh, Scotland, founded in 1128 by King David I for the Canons Regular of St. Augustine, probably brought from St. Andrews. The foundation is said to have been an act of thanksgiving for the king's miraculous escape from the horns of a hart, whilst hunting near Edinburgh on Holy Cross day. In the church was preserved, in a golden reliquary, the fragment of the True Cross brought by David's mother, St. Margaret, from Waltham Abbey, and known thereafter as the Black Rod of Scotland. At the battle of Neville's Cross, in 1346, this precious relic fell into the hands of the English, and was placed in Durham Cathedral, whence it disappeared at the Reformation. The first Abbot of Holyrood was Alwyn, the king's confessor, who resigned the abbacy about 1150. A seal of his, dated 1141, and representing a cruciform church, is preserved among the Newbottle Charters. The twenty-ninth and last Catholic abbot was Robert, a natural son of James V, who turned Protestant in 1559, married, and exchanged his abbacy with Adam, Bishop of Orkney, for the temporalities of that diocese. Adam resigned the abbacy in 1581 to his son John (afterwards created Lord Holyroodhouse), the last who bore the title of abbot. Among the chief benefactors of Holyrood during the four centuries of its existence as a religious house were Kings David I and II; Robert, Bishop of St. Andrews; and Fergus, Lord of Galloway. Twice during the fourteenth century the abbey suffered from the invasion of English kings: the army of Edward II plundered it in 1322, and it was burnt in 1385 by Richard II, but soon restored.

King James I's twin sons, of whom the younger succeeded his father as James II, were born within the abbey in 1430, and Mary of Gueldres, queen of James II, was crowned in the abbey church in 1449. Twenty years later James III was married there to Margaret of Denmark. From the middle of the fifteenth century the abbey was the usual residence of the Scottish kings, and James V spent considerable sums on its repair and enlargement. In 1547 the conventual buildings, as well as the choir, lady chapel, and transepts of the church were destroyed by the commissioners of the English Protector Somerset, and twenty years later Knox's "rascal multitude" sacked the interior of the church. Queen Mary's second and third marriages took place at Holyrood, as well as other tragic events of her reign. From the Reformation to the Restoration little was done to Holyrood, but about 1670 the adjoining palace was practically rebuilt by Charles II. His Catholic successor, James II, ordered the nave of the church to be restored for Catholic worship, and as a chapel for the Knights of the Thistle; but he had to abandon his kingdom a year later. The nave roof was vaulted in stone in 1758, but fell in shortly afterwards, and all that remains of the once famous abbey church is now the ruined and roofless nave, of the purest Early English architecture, with some remains of the earlier Norman work.

Scotorum*, tr. BELLENDEN (Edinburgh, 1536), bk. XII, c. xvi.

D. O. HUNTER-BLAIR.

Holy Saturday.—In the primitive Church Holy Saturday was known as Great, or Grand, Saturday, Holy Saturday, the Angelic Night, the Vigil of Easter, etc. It is no longer, like Maundy Thursday, a day of joy, but one of joy and sadness intermingled; it is the close of the season of Lent and penance, and the beginning of paschal time, which is one of rejoicing. By a noteworthy exception, in the early Church this was the only Saturday on which fasting was permitted (Constit. Apost., VII, 23), and the fast was one of special severity. Dating from the time of St. Irenæus, an absolute fast from every kind of food was observed for the forty hours preceding the feast of Easter, and although the moment assigned for breaking the fast at dawn on Sunday varied according to time and country, the abstinence from food on Holy Saturday was general. The night of the vigil of Easter has undergone a strange displacement. During the first six or seven centuries, ceremonies were in progress throughout the entire night, so that the Alleluia coincided with the day and moment of the Resurrection. In the eighth century these same ceremonies were held on Saturday afternoon and, by a singular anachronism, were later on conducted on Saturday morning, thus the time for carrying out the solemnity was advanced almost a whole day. Thanks to this change, special services were now assigned to Holy Saturday whereas, beforehand, it had had none until the late hour of the vigil.

This vigil opened with the blessing of the new fire, the lighting of lamps and candles and of the paschal candle, ceremonies that have lost much of their symbolism by being anticipated and advanced from twilight to broad daylight. St. Cyril of Jerusalem spoke of this night that was as bright as day, and Constantine the Great added unprecedented splendour to its brilliancy by a profusion of lamps and enormous torches, so that not only basilicas, but private houses, streets, and public squares were resplendent with the light that was symbolic of the Risen Christ. The assembled faithful gave themselves up to common prayer, the singing of psalms and hymns, and the reading of the Scriptures commented by the bishop or priests. The vigil of Easter was especially devoted to the baptism of catechumens who, in the more important churches, were very numerous. On the Holy Saturday following the deposition of St. John Chrysostom from the See of Constantinople, there were 3000 catechumens in this church alone. Such numbers were, of course, only encountered in large cities; nevertheless, as Holy Saturday and the vigil of Pentecost were the only days on which baptism was administered, even in smaller churches there was always a goodly number of catechumens. This meeting of people in the darkness of the night often occasioned abuses which the clergy felt powerless to prevent by active supervision unless by so anticipating the ceremonies that all of them could take place in daylight. Rabanus Maurus, an ecclesiastical writer of the ninth century (De cleric., II, 28), gives a detailed account of the ceremony of Holy Saturday. The congregation remained silent in the church awaiting the dawn of the Resurrection, joining at intervals in the psalmody and chant and listening to the reading of the lessons. These rites were identical with those in the primitive Church and were solemnized at the same hour, as the faithful throughout the world had not yet consented to anticipate the Easter vigil and it was only during the Middle Ages that uniformity on this point was established.

H. LECLERCQ.

Holy See (Lat. *Sancta Sedes*, Holy Chair), a term derived from the enthronement-ceremony of the bishops of Rome. The seat or chair in question must not be confounded with the ancient *sedes gestatoria* in the centre of the apse of St. Peter's, and immemorially venerated as the *cathedra Petri*, or Chair of Peter; the

term means, in a general sense, the actual seat (i. e. residence) of the supreme pastor of the Church, together with the various ecclesiastical authorities who constitute the central administration. In this canonical and diplomatic sense, the term is synonymous with "Apostolic See", "Holy Apostolic See", "Roman Church", "Roman Curia". The origin of these terms can only be approximately ascertained. The word *sedes*, "chair", is an old technical term applicable to all episcopal sees. It was first used to designate the Churches founded by the Apostles; later the word was applied to the principal Christian Churches. These *ecclesie dictæ majores* were understood to be the five great patriarchal sees of Christian antiquity: Rome, Alexandria, Antioch, Jerusalem, and Constantinople. To these the word *sedes* was applied: "quod in iis episcopi sederent in thronis", and of Rome it was expressly said: "Romana quidem erat prima sedes propria dicta." Thus, Gelasius I (492-496) at a Roman council: "Est ergo prima Petri apostoli sedes." In the earliest Christian writings, also, we often find references to the see or chair of Peter: "Sedet in cathedra Petri". Throughout the early Middle Ages the term was constantly in official use. Thus, in the "Liber Pontificalis" (ed. Duchesne, II, Paris, 1892, 7), under Leo III (795-816): "Nos sedem apostolicam, quæ est caput omnium Dei ecclesiarum, judicare non audeamus." (We dare not judge the Apostolic See, which is the head of all the Churches of God.) We can thus readily understand how *Holy See* came to be the technical term for the pope, the central ecclesiastical government, and the actual abode of the same.

The papal reservations of benefices, customary in the Middle Ages, made necessary a more exact knowledge of the location of the "Holy See", e. g. when the incumbent of a benefice happened to die "apud sanctam sedem". Where was the "Holy See", when the pope lived apart from the ordinary central administration? From the thirteenth to the fifteenth century we find no satisfactory solution of this question, and can only observe the decisions of the Curia in individual cases. Thus, it was not deemed necessary that the pope should reside in Rome: "Ubi Papa, ibi Curia", i. e., it was taken for granted that the Curia or machinery of administration always followed the pope. This is clearly shown by an interesting case under Nicholas III, who lived at Soriano from 8 June, 1280, till his death on 22 August of the same year. There were with him only his personal attendants, and the officials in charge of the papal seal (*bullatores*). The Curia, properly speaking, was at Viterbo, whither the pope frequently went to transact affairs, and where he also gave audiences: "Audientiam suam fecit." Nevertheless, he ordered Bulls to be dated from Soriano, which was done (Baumgarten, "Aus K. und Kammer", Freiburg, 1907, 279). More than a century later, as appears from the official rules drawn up under Benedict XIII (Pedro de Luna; rules 148, 151, 158) and John XXIII (rule 68), this important point was still undecided. The aforesaid rules of Benedict XIII and John XXIII appeared on 28 November, 1404, and 5 June, 1413, respectively (Von Otenthal, "Die päpstlichen Kanzleiregeln von Johann XXII bis Nikolaus V", Innsbruck, 1888, pp. 148, 151, 152, and 185). During the journey of Martin V (1417-1431) from Constance to Rome it frequently occurred that the pope and ecclesiastical authorities were separated from each other; even at this late date the official location of the "Holy See", in as far as this was legally important, was not yet authoritatively fixed. This uncertainty, says Bangen, caused Clement VIII to draw up the Constitution: "Cum ob nonnullas", in which it is laid down that, if the pope and the pontifical administration should not reside in the same place, the utterances of both are authoritative, provided they are in agreement with each other. Covar-

ruvias and Gonzalez agree that: "Curia Romana ibi censetur esse, ubi est papa cum cancellaria et tribunaliibus et officialibus suis, quos ad regimen ecclesiae adhibet" (the Roman Curia is considered to be where the pope is, with the chancery, tribunals, and officials whom he employs in the Government of the Church). (Bangen, "Die römische Kurie", Münster, 1854, I, i, 5). Hinschius (System des katholischen Kirchenrechts, III, Berlin, 1883, 135, remark 6) follows the medieval opinion: "Ubi Papa, ibi Curia"; but this seems no longer tenable.

PAUL MARIA BAUMGARTEN.

Holy Sepulchre, the tomb in which the Body of Jesus Christ was laid after His death upon the Cross. The Evangelists tell us that it was Joseph of Arimathea's own new monument, which he had hewn out of a rock, and that it was closed by a great stone rolled to the door (Matt., xxvii, 60; Mark, xv, 46; Luke, xxiii, 53). It was in a garden in the place of the Crucifixion, and was nigh to the Cross (John, xix, 41, 42) which was erected outside the walls of Jerusalem, in the place called Calvary (Matt., xxvii, 32; Mark, xv, 20; John, xix, 17; cf. Heb., xiii, 12), but close to the city (John, xix, 20) and by a street (Matt., xxvii, 39; Mark, xv, 29). That it was outside the city is confirmed by the well-known fact that the Jews did not permit burial inside the city except in the case of their kings. No further mention of the place of the Holy Sepulchre is found until the beginning of the fourth century. But nearly all scholars maintain that the knowledge of the place was handed down by oral tradition, and that the correctness of this knowledge was proved by the investigations caused to be made in 326 by the Emperor Constantine, who then marked the site for future ages by erecting over the Tomb of Christ a basilica, in the place of which, according to an unbroken written tradition, now stands the church of the Holy Sepulchre.

These scholars contend that the original members of the nascent Christian Church in Jerusalem visited the Holy Sepulchre soon, if not immediately, after the Resurrection of the Saviour. Following the custom of their people, those who were converts from Judaism venerated, and taught their children to venerate, the Tomb in which had lain the Foundation of their new faith, from which had risen the Source of their eternal hope; and which was therefore more sacred and of greater significance to them than had been the tombs of Abraham, Isaac, Jacob, and David, which they had hitherto venerated, as their forefathers had for centuries. Nor would Gentile converts have failed to unite with them in this practice, which was by no means foreign to their own former customs. The Christians who were in Jerusalem when Titus laid siege to the city in the year 70 fled, it is true, across the Jordan to Pella; but, as the city was not totally destroyed, and as there was no law prohibiting their return, it was possible for them to take up their abode there again in the year 73, about which time, according to Dr. Sanday (Sacred Sites of the Gospels, Oxford, 1903), they really did re-establish themselves. But, granting that the return was not fully made until 122, one of the latest dates proposed, there can be no doubt that in the restored community there were many who knew the location of the Tomb, and who led to it their children, who would point it out during the next fifty years. The Roman prohibition which kept Jews from Jerusalem for about two hundred years, after Hadrian had suppressed the revolt of the Jews under Barcochebas (132-35), may have included Jewish converts to Christianity; but it is possible that it did not. It certainly did not include Gentile converts. The list of Bishops of Jerusalem given by Eusebius in the fourth century shows that there was a continuity of episcopal succession, and that in 135 a Jewish line was followed by a Gentile.

The tradition of the local community was undoubtedly strengthened from the beginning by strangers who, having heard from the Apostles and their followers, or read in the Gospels, the story of Christ's Burial and Resurrection, visited Jerusalem and asked about the Tomb that He had rendered glorious. It is recorded that Melito of Sardis visited the place where "these things [of the Old Testament] were formerly announced and carried out". As he died in 180, his visit was made at a time when he could receive the tradition from the children of those who had returned from Pella. After this it is related that Alexander of Jerusalem (d. 251) went to Jerusalem "for the sake of prayer and the investigation of the places", and that Origen (d. 253) "visited the places for the investigation of the footsteps of Jesus and of His disciples". By the beginning of the fourth century the custom of visiting Jerusalem for the sake of information and devotion had become so frequent that Eusebius wrote, that Christians "flocked together from all parts of the earth".

It is at this period that history begins to present written records of the location of the Holy Sepulchre. The earliest authorities are the Greek Fathers, Eusebius (c. 260-340), Socrates (b. 379), Sozomen (375-450), the monk Alexander (sixth century), and the Latin Fathers, Rufinus (375-410), St. Jerome (346-420), Paulinus of Nola (353-431), and Sulpitius Severus (363-420). Of these the most explicit and of the greatest importance is Eusebius, who writes of the Tomb as an eyewitness, or as one having received his information from eyewitnesses. The testimonies of all having been compared and analysed may be presented briefly as follows: Helena, the mother of the Emperor Constantine, conceived the design of securing the Cross of Christ, the sign of which had led her son to victory. Constantine himself, having long had at heart a desire to honour "the place of the Lord's Resurrection", "to erect a church at Jerusalem near the place that is called Calvary", encouraged her design, and giving her imperial authority, sent her with letters and money to Macarius, the Bishop of Jerusalem. Helena and Macarius, having made fruitless inquiries as to the existence of the Cross, turned their attention to the place of the Passion and Resurrection, which was known to be occupied by a temple of Venus erected by the Romans in the time of Hadrian, or later. The temple was torn down, the ruins were removed to a distance, the earth beneath, as having been contaminated, was dug up and borne far away. Then, "beyond the hopes of all, the most holy monument of Our Lord's Resurrection shone forth" (Eusebius, "Life of Constantine", III, xxviii). Near it were found three crosses, a few nails, and an inscription such as Pilate ordered to be placed on the Cross of Christ.

The accounts of the finding of the Holy Sepulchre thus summarized have been rejected by some on the ground that they have an air of improbability, especially in the attribution of the discovery to "an inspiration of the Saviour", to "Divine admonitions and counsels", and in the assertions that, although the Tomb had been covered by a temple of Venus for upwards of two centuries, its place was yet known. To the first objection, it is replied that whilst the historians piously attributed the discovery to God, they also showed the human secondary agents to have acted with careful prudence. Paulinus is quoted as saying that "Helena was guided by Divine counsel, as the result of her investigations show". As to the second objection, it is claimed that a pagan temple erected over the Holy Sepulchre with the evident purpose of destroying the worship paid there to the Founder of Christianity, or of diverting the worship to pagan gods and goddesses, would tend to preserve the knowledge of the place rather than to destroy it. What appears to be a more serious difficulty is offered by writers who describe the location of the basilica

erected by Constantine, and consequently the place of the Sepulchre over which it was built. The so-called Pilgrim of Bordeaux who visited Jerusalem in 333, while the basilica was building, writes that it was on the left hand of the way to the Neapolitan—now Damascus—gate (Geyer, "Itinera Hier.," pp. 22, 23). Eucherius, writing 427-40, says that it was outside of Sion, on the north (op. cit., 126); Theodosius, about 530, "that it was in the city, two hundred paces from Holy Sion" (op. cit., 141); an anonymous author, that it was "in the midst of the city towards the north, not far from the gate of David", by which is meant the Jaffa Gate (op. cit., 107). These descriptions are borne out by the mosaic chart belonging to the fifth century that was discovered at Medeba in 1897 (see "Revue Biblique", 1897, pp. 165 sqq. and 341). The writers must have known that the New Testament places the Crucifixion and the Tomb outside the city, yet they tell us that the Constantinian basilica enclosing both was inside. They neither show surprise at this contradiction, nor make any attempt to explain it. Nor does anyone at all, at this period, raise a doubt as to the authenticity of the Sepulchre. Was it not possible to trace an old city wall belonging to the time of Christ outside of which was the Sepulchre, although it was inside of the existing wall that had been built later? As the difficulty was seriously urged in the last century, it will be fully considered and answered at the close of this article.

The edifice built over the Holy Sepulchre by Constantine was dedicated in 336. The Holy Sepulchre, separated by excavation from the mass of rock, and surmounted by a gilded dome, was in the centre of a rotunda 65 feet in diameter. The basilica, extending eastward from this to a distance of 250 feet, embraced Calvary in its south aisle. An atrium and a propyleum gave a total length of 475 feet. The magnificent monument was destroyed by fire in 614, during the Persian invasion under Chosroes II. Two hundred years later new buildings were begun by the Abbot Modestus and finished, in 626, with the aid of the Patriarch of Alexandria, who had sent money and one thousand workmen to Jerusalem. These buildings were destroyed by the Mohammedans in 1010. Smaller churches were erected in 1048, and stood intact until the crusaders partly removed them and partly incorporated them in a magnificent basilica that was completed in 1168. As in the basilica of Constantine, so also in that of the crusaders, a rotunda at the western end rose over the Holy Sepulchre. This basilica was partially destroyed by fire in 1808, when the rotunda fell in upon the Sepulchre. A new church designed by the Greek architect, Commenes, and built at the expense of Greeks and Armenians, was dedicated in 1810. The dome of its rotunda was rebuilt in 1868, France, Russia, and Turkey defraying the expenses. In the middle of this rotunda is the Tomb of Christ, enclosed by the monument built in 1810 to replace the one destroyed then.

This monument, an inartistic Greek edifice, cased with Palestine breccia—a red and yellow stone somewhat resembling marble—is 26 feet long by 18 feet wide. It is ornamented with small columns and pilasters, and surmounted at the west end by a small dome, the remainder of the upper part being a flat terrace. Against the west end, which is pentagonal in form, there is a small chapel used by the Copts. In each of the side walls at the east end is an oval opening used on Holy Saturday by the Greeks for the distribution of the "Holy Fire". The upper part of the façade is ornamented with three pictures, the one in the centre belonging to the Latins, the one on the right to the Greeks, and the one on the left to the Armenians. On great solemnities, these communities adorn the entire front with gold and silver lamps, and flowers. The only entrance is at the east end, where there is a low doorway conducting to a small chamber

called the Chapel of the Angel. In the middle of the marble pavement there is a small pedestal, which is said to mark the place where the angel sat after rolling the stone away from the door of Christ's Tomb. Immediately beneath the pavement is solid rock, which Pierotti was able to see and touch while repairs were being made ("Jerusalem Explored", tr. from the French, London, 1864). Through the staircases, of which there is one at each side of the entrance, he was also able to see that slabs of breccia concealed walls of masonry. Opposite to the entrance is a smaller door, through which, by stooping low, one may enter into a quadrangular chamber, about 6 feet wide, 7 feet long and 7½ feet high, brilliantly lighted by forty-three lamps of gold and silver that are kept burning by the Latins, Greeks, Armenians, and Copts. This is the Holy Sepulchre. On the north side, about two feet from the floor, and extending the full length, is a marble slab covering the sepulchral couch. Floor, walls, and ceiling have also been covered with marble slabs in order to adorn the interior area and to protect the rock from pilgrims who would break and carry it away. Pierotti declares that when he made his studies of the Sepulchre he succeeded in seeing the native rock in two places. Breydenbach tells us that in the fifteenth century it was still exposed ("Itinerarium Hier.," ed. 1486, p. 40). And Arculph, who saw it in the seventh century, describes it as red and veined with white, still bearing the marks of tools. Over the sepulchral couch there had been an arch such as is seen in so many of the ancient Hebrew tombs about Jerusalem. The walls that supported the arch still remain. The door closely corresponds with that of the Tomb of the Kings, where a great elliptical stone beside the entrance suggests the manner in which the Holy Sepulchre was closed by a stone rolled before it.

It was not until the eighteenth century that the authenticity of this tomb was seriously doubted. The tradition in its favour was first formally rejected by Korte in his "Reise nach dem gelobten Lande" (Altona, 1741). In the nineteenth century he had many followers, some of whom were content with simply denying that it is the Holy Sepulchre, because it lies within the city walls, while others went further and proposed sites outside the walls. No one, however, has pointed out any other tomb that has a shred of tradition in its favour. The most popularly accepted tomb among those proposed is one near Gordon's Calvary (see CALVARY, *Modern Calvaries*). But this has been found to be one of a series of tombs extending for some distance, and did not, therefore, stand in a garden, as did Christ's Tomb. Moreover, the approach to this tomb is over made ground, the removal of which would leave the entrance very high, whereas the door of the Holy Sepulchre was very low. It has been suggested above, that when Constantine built his basilica, and for long afterwards, there may have been evident traces of an old city wall that had excluded the Holy Sepulchre from the city when Christ was buried. From Josephus, we know of three walls that at different times enclosed Jerusalem on the north. The third of these is the present wall, which was built about ten years after the death of Christ, and is far beyond the traditional Holy Sepulchre. Josephus describes the second wall as extending from the gate Gennath, which was in the first wall, to the tower Antonia. A wall running in a direct line between these two points would have included the Sepulchre. But it could have followed an irregular line and thus have left the Sepulchre outside. No researches have ever yielded any indication of a wall following a straight line from the Gennath gate to the Antonia. That, on the contrary, the wall took an irregular course, excluding the Sepulchre, seems to have been sufficiently proved by the discoveries, in recent years, of masses of masonry

CHURCH OF THE HOLY SEPULCHRE, JERUSALEM

to the east and southeast of the church. So convincing is the evidence afforded by these discoveries that such competent authorities as Drs. Schick and Gauthé at once admitted the authenticity of the traditional Tomb. Since then, this view has been generally adopted by close students of the question. (see JERUSALEM).

Holy Sepulchre, CANONESSES REGULAR OF THE.—Concerning the foundation there is only a tradition connecting it with St. James the Apostle and representing St. Helena as invested with the habit by St. Macarius, Bishop of Jerusalem. The earliest date on record is 1276, the year in which the Saragossa convent was established. The foundation of a house at Charleville in 1622, by Claudia Mouy, widow of the Marquis de Chaligny, was the signal for a great revival in the west, and constitutions, drawn up by a Jesuit Father and approved by Urban VIII, in 1631, bound the canonessees to the recitation of the Divine office, rigorous fasts, the use of the discipline, and a strict interpretation of the rule of poverty; twelve was the number of professed religious assigned as necessary for the canonical election of a prioress. Susan Hawley, foundress of the English canonessees (b. at New Brentford, Middlesex, 1622; d. at Liège, 1706), having been professed at Tongres, in 1642, went with four others to Liège to establish a community there, and in 1652, there being a sufficient number of professed, was elected prioress, in which capacity she ruled with rare prudence until her resignation in 1697. The school, opened under Mary Christina Dennett, who was prioress from 1770 to 1781, proved so successful that on the outbreak of the Revolution the canonessees had great difficulty in securing permission to leave the city. After three months at Maastricht, they went to England (August, 1794), where they were sheltered by Lord Stourton in Holme Hall (Yorks), moved thence to Dean House (Wilts), and finally took possession of New Hall, near Chelmsford (Essex), rich in historic interest, the property of several sovereigns, and a royal residence under Henry VIII. Here they opened a free school for the poor children of the neighbourhood, and they still conduct a boarding school for young ladies. Communities of canonessees still exist in Bavaria, Belgium, France, and Spain. The habit is black, and the choir sisters wear a white linen surplice, without sleeves, on the left side of which is embroidered a double red cross. A black veil is worn by the professed, and a white one by novices and lay sisters.

Holy Sepulchre, FATHERS (GUARDIANS) OF THE, the six or seven Franciscan Fathers, who with as many lay brothers keep watch over the Holy Sepulchre and the sanctuaries of the basilica. To the right of the Sacred Tomb in the Basilica of the Holy Sepulchre is the chapel of St. Mary Magdalen, which opens into the tenth-century church of the Apparition of Christ to His Blessed Mother, served by the Franciscan Fathers and containing their choir. Just off this

chapel is the small damp monastery which since the thirteenth century has been the abode of the Fathers of the Holy Sepulchre, the band chosen every three months from the community of St. Saviour, to lead the difficult confined life which, however, always finds eager volunteers. The convent being accessible only from the basilica, which is in charge of Mohammedan guards, the keys which lock the basilica shut the friars off from the outer world, their only means of communication being the aperture in the main portal, through which they receive provisions from St. Saviour's. Emperor Francis Joseph, in 1869, on his way to the opening of the Suez Canal visited the holy places, and besides conferring numerous benefactions on St. Saviour's, induced the Turks to remove the stable which obstructed the light and air of the little monastery of the Holy Sepulchre, and to permit the erection of a bell-tower, from which on 25 September, 1875, the bells pealed forth, for the first time in seven hundred years summoning the faithful to worship in the church of the Holy Sepulchre. Every afternoon the Fathers conduct a pilgrimage to the sanctuaries of the basilica, and at midnight, while chanting their Office, they go in procession to the tomb of the Saviour, where they intone the Benedictus. The superiors must be alternately Italian, French, and Spanish. The rest of the community of St. Saviour's, which generally numbers about twenty-five Fathers and fifty-five lay brothers, are engaged in the various activities of the convent, which has within the monastic enclosure, besides the church of St. Saviour (the Latin parish church of Jerusalem), an orphanage, a parish school for boys, a printing office, carpenter's and ironmonger's shops, a mill run by steam, and the largest library in Palestine.

F. M. RUDGE.

Holy Sepulchre, KNIGHTS OF THE.—Neither the name of a founder nor a date of foundation can be assigned to the so-called Order of the Holy Sepulchre if we reject the legendary traditions which trace its origin back to the time of Godfrey of Bouillon, or Charlemagne, or indeed even to the days of St. James the Apostle, first Bishop of Jerusalem. It is in reality a secular confraternity which gradually grew up around the most august of the Holy Places. It was for the deliverance of the Holy Sepulchre that the crusades were organized; it was for its defence that military orders were instituted. During the Middle Ages this memorable relic of Christ's life on earth was looked upon as the mystical sovereign of the new Latin state. Godfrey of Bouillon desired no other title than that of Defender of the Holy Sepulchre, and different Latin princes, Bohemond of Antioch, and Tancred, acknowledged themselves its vassals. It was natural that the Holy Sepulchre also had its special knights. In the broad acceptation of the word, every crusader who had taken the sword in its defence might assume the title from the very moment of being dubbed a knight. Those who were not knighted had the ambition of being decorated knights, preferably in this sanctuary, and of being thus enabled to style themselves Knights of the Holy Sepulchre *par excellence*. The fall of the Kingdom of Jerusalem did not suspend pilgrimages to the Tomb of Christ, or the custom of receiving knighthood there, and, when the custody of the Holy Land was entrusted to the Franciscans, they continued this pious custom and gave the order its first grand masters.

The official arrival of the Friars Minor in Syria dates from the Bull addressed by Pope Gregory IX to the clergy of Palestine in 1230, charging them to welcome the Friars Minor, and to allow them to preach to the faithful and hold oratories and ceme-

teries of their own. Thanks to the ten years' truce concluded during the preceding year between Frederick II of Sicily and the sultan, the Franciscans were enabled to enter Jerusalem, but they were also the first victims of the violent invasion of the Khorasians in 1244, thus opening the long Franciscan martyrology of the Holy Land. Nevertheless, the Franciscan province of Syria continued to exist with Acco as its seat. The monks quickly resumed possession of their convent of Mount Sion at Jerusalem, to which they have demonstrated their claim with the blood of their martyrs and where they have obstinately retained their foothold in spite of numberless molestations and outrages for five hundred years. The Turks, notwithstanding their fierce fanaticism, tolerated the veneration paid to the Tomb of Christ, because of the revenue they derived from the taxes levied upon pilgrims. In 1342, in his Bull "Gratiam agimus", Pope Clement VI officially committed the care of the Holy Land to the Franciscans, who fulfilled this trust until the restoration of the Latin Patriarchate of Jerusalem by Pius IX. Consequently, after 1342, to be enrolled among the Knights of the Holy Sepulchre, it was necessary to apply to the Franciscans, and from this period the itineraries of pilgrims mention frequent receptions into this confraternity—improperly called an order, since it had no monastic rule, regular organization, or community of goods. Where mention is made of the possessions of the Holy Sepulchre, the allusion is to the Canons of the Holy Sepulchre, who had convents in various lands, and not to the knights, as some writers believe.

Pilgrims were received into this lay confraternity with all the external ceremonial of ancient chivalry, although the fundamental rules of the institution were not always observed. It was objected that many on whom knighthood was conferred were not of the nobility. The formal question, "if he were of noble birth", was always put to the applicant, but in event of his being a merchant or a plebeian he was not obliged to answer. In point of fact all classes were represented in these pilgrimages, and it is easy to understand why those who had accomplished this trying devotion, then so fraught with danger, should desire to carry away from Jerusalem some such lasting souvenir as the insignia of knighthood, and that refusal was difficult, especially since the sanctuary was practically dependent on the offerings of these merchants, and consequently these contributions were far more deserving of recognition than the platonic vow to exert oneself as far as possible in the defence of the Holy Land. In the ceremonial of reception, the rôle of the clergy was limited to the *benedictio militis*, the final act of dubbing with the sword being reserved to a professional knight. It has been ascertained that, in the fifteenth century from 1480 to 1495, there was in Jerusalem a German, John of Prussia, who acted as steward for the convent and who, in his character of gentleman and layman, regularly discharged this act reserved to knighthood. It was also of frequent occurrence that a foreign knight, present among the crowds of pilgrims, would assist at this ceremony. However, in default of other assistance, it was the superior who had to act instead of a knight, although such a course was esteemed irregular, since the carrying of the sword was incompatible with the sacerdotal character. It was since then also that the superior of the convent assumed the title of grand master, a title which has been acknowledged by various pontifical diplomas, and finally by a Bull of Benedict XIV dated 1746. When Pius IX re-established the Latin Patriarchate of Jerusalem in 1847, he transferred to it the office of grand master of the order. At the same time he drew up and in 1868 published the new statutes of the order, which created the three ranks—that of the grand cross, that of

commander, and that of simple knight—ordained that the costume be a "white cloak with the cross of Jerusalem in red enamel", and regulated the chancellor's fees. By his Bull of 30 May, 1907, Pius X effected the latest change by reserving to himself the grand-mastership of the order, but delegating his powers to the present Latin patriarch.

Holy Synod, in its full form MOST HOLY DIRECTING SYNOD, the name of the council by which the Church of Russia and, following its example, many other Orthodox Churches are governed.

I. HISTORY OF THE HOLY SYNOD.—The principle of summoning a synod or council of ecclesiastical persons to discuss some grave question affecting the Church goes back, of course, to the very beginning of her history. Since the day when the Apostles met at Jerusalem to settle whether Gentile converts were to keep the Old Law (Acts, xv, 6-29), it had been the custom to call together such gatherings as occasion required. Bishops summoned synods of their clergy, metropolitans and patriarchs summoned their suffragans, and then since 325 there was a succession of those greatest synods, representing the whole Catholic world, that are known as general councils. But all these synods met only on certain occasions, for a short time, to discuss some one, or at most a few, of the burning questions. We shall find the predecessors of present Orthodox Holy Synods rather in permanent councils at the courts of certain chief bishops. Such councils formed themselves naturally, without any detriment to the monarchical principle. The bishop was always autocrat in his own diocese, the patriarch in his patriarchate. Nevertheless, when he had a number of wise and learned persons, clergy of his city, suffragan and titular bishops in his palace or near at hand, it was very natural that he should consult them continually, hear their advice, and then follow it or not as he thought best. Two examples of such advisory committees established permanently under their bishops are famous. The pope had at hand his suburban bishops, the Roman parish priests, and regionary deacons. Without going through the formality of summoning a diocesan or provincial synod he could always profit by their collected wisdom. He did so continually. From the fact that it was normally just these three bodies who joined to elect a new pope when the see was vacant they had additional importance, and their views gained additional weight. The assembly of these persons around the pope as a permanent institution was the *Concilium apostolicæ sedis* to which papal letters from the fifth to the eighth or ninth centuries often refer. The same name was, however, also used for specially summoned Roman provincial synods, which were quite a different thing. The *Concilium apostolicæ sedis* in the first sense evolved into the college of cardinals, who still form a kind of permanent synod for the pope to consult. But there has never been any idea of so radical a revolution as the government of the Roman Church by a synod. Once the pope was lawfully elected he was absolutely master. He could consult his cardinals if he thought fit, but after they had given their opinions he was still entirely free to do as he chose.

A nearer example for the Orthodox was a similar institution at Constantinople. As the œcumenical patriarchs gradually grew in importance, as they spread the boundaries of their jurisdiction and were able more and more plainly to assert a kind of authority over all Eastern Christendom, so was their palace filled with a growing crowd of suffragans, auxiliary

and titular bishops, chorepiscopi, and archimandrites. Bishops from outlying provinces always had business at the patriarchal city. The presence of the imperial court naturally helped to attract ecclesiastical persons, as well as others, to Constantinople. The Arab and Turkish conquests in Egypt, Syria, and Asia Minor added further to the number of idle bishops at court. Refugees, having now nothing to do in their own sees, kept their title and rank, but came to swell the dependence of the œcumenical patriarch. So from the fifth century there was always a number of suffragans and titular bishops who established themselves permanently at Constantinople. Again, it was natural that these people should justify their presence and spend their time by helping the patriarch to administer his vast province and by forming a consulting synod always at hand to advise him. So at Constantinople, as at Rome, there was a kind of permanent synod, at first informal, then gradually recognized in principle. This was the "present synod", "synod of inhabitants" (*σύνσδος ἐδημοῦσα*), that became for many centuries an important element in the government of the Orthodox Church. As far back as the Council of Chalcedon (451) its existence and rights had been discussed. At that council Photius, Bishop of Tyre, asked the question: "Is it right to call the assembly of dwellers in the imperial city a synod?" Tryphon of Chios answered: "It is called a synod and is assembled as such." The Patriarch Anatolius said: "The assembly" (he avoids calling it a synod) "fortifies from on high the most holy bishops who dwell in the mighty city when occasion summons them to discuss certain ecclesiastical affairs, to meet and examine each, to find suitable answers to questions. So no novelty has been introduced by me, nor have the most holy bishops introduced any new principle by assembling according to custom" (Mansi, VII, 91 sqq.). The council then proceeded with the business in hand without expressing either approval or dislike of the permanent synod at Constantinople (Kattenbusch, "Konfessionskunde", I, 86). Such was very much the attitude of the Church generally as long as the *Endemusa* Synod lasted. It in no way affected the legal position of the Patriarch of Constantinople, nor was it in any sense a government of his patriarchate by synod. In this case too, as at Rome, the consulting synod had no rights. The patriarch governed his subjects as autocrat, had the same responsibilities as other patriarchs. If he chose to discuss matters beforehand with "the most holy bishops who dwell in the mighty city" that proceeding concerned no one else. So the *Endemusa* Synod continued to meet regularly and became eventually a recognized body. So little did the patriarchs fear a lessening of their authority from it that it was to them rather an additional weapon of aggrandizement. There was a certain splendour about it. The œcumenical patriarch could contemplate the college of cardinals marshalled around the Western throne with greater complacency when he remembered his *ἀγιώτατοι ἐδημοῦντες ἐπίσκοποι*. Much more important was the fact that his orders and wishes could be constantly announced to so many obedient retainers. And bishops from outlying parts of the patriarchate who spent a short time at Constantinople, approached their chief through the synod; they too were invited or commanded to attend its sessions as long as they were in the city. So they heard the patriarch's addresses, received his commands, and carried back to their distant homes a great reverence for the lord of so many retainers. Kattenbusch considers the *Endemusa* Synod an important element in the patriarch's advancement. "He conceived the brilliant idea of organizing these bishops into a Synod so that with their help he could interfere in almost any circumstances of all dioceses and eparchies with a certain appearance of authority" (loc. cit., 86). The *Endemusa* Synod was abolished only in quite recent

times as part of the general reorganization of the patriarch's ecclesiastical and civil jurisdiction since the *hatti-humayun* of 1856.

This permanent synod then may be considered as a kind of predecessor of the modern Orthodox Holy Synods. It had accustomed people to the idea of such assemblies of bishops and made the acceptance of the new synods among so conservative a folk as the Orthodox possible. But the present Holy Synods are in no sense continuations of the *Endemusa*. In spite of a general likeness there is this fundamental difference between the old synods and the new ones: the *Endemusa* had no sort of jurisdiction; it was simply a consulting body, itself entirely subject to the monarchical patriarch. The modern Holy Synods, on the other hand, are the supreme lawgiving authorities over their Churches; they have absolute authority over every metropolitan and bishop. Laws in Churches that have such synods are made, not by the will of an autocrat, but by a majority of votes in synod. It is in short—what the older Church never dreamed of—government by Parliament.

The beginning of Holy Directing Synods was made by Peter the Great for the Church of Russia. The Russian Synod is the oldest, and the example was followed long afterwards by other Orthodox Churches. Peter the Great (1689–1725), as part of his great reform of the empire, set about reforming the national Church too. This reform was openly, frankly, in the direction of subjecting the Church to the State, that is to himself. His modern and liberal ideas never went to the length of modifying his own absolute authority. His idea was rather that of a paternal tyranny: he meant to use his rights as autocrat in order to force German and Western principles and improvements on an unwilling people, for their own good. So the rigidly conservative Russian found himself in the difficult position (not the only case in history) of being bitterly opposed to the autocrat's liberalism while basing his opposition on the principle of autocracy. The clergy—always conservative, especially in the Orthodox Churches—had already long led this opposition to the rationalist "German tsar". Then the tsar set to work to crush their power by reforming the Church and making it a department of the State.

The Church of Russia in the first period (988–1589) had formed part of the Byzantine Patriarchate. By the sixteenth century Russia had become a great empire, whereas Constantinople was now in the hands of the Turks. So the Russians, especially their tsar, thought that such a dependence no longer suited the changed conditions. Feodor Ivanovitch (1584–1598) wrote to Jeremias II, Patriarch of Constantinople (1572–1579, 1580–1584, 1586–1595), demanding recognition of the independence of the Russian Church. Jeremias, though unwilling to lose so great a province, understood that he had no chance of resisting the tsar's demand, made the best of a bad business, and comforted himself by accepting a heavy bribe. It was the first of a long series of dismemberments of the Byzantine Patriarchate. Jeremias's successors have often had to submit to such losses; in modern times they have not even had the comfort of a bribe. So in 1589 the metropolitan See of Moscow became an independent patriarchate. The Orthodox rejoiced; the new patriarchate was admitted everywhere as fifth, after Jerusalem, leaving the first place to Constantinople; they explained that now the sacred pentarchy, the (not really very) ancient order of five patriarchs, was restored; Moscow had arisen to atone for the fall of Rome. The restored pentarchy was not destined to last very long. From 1589 to 1700 the Russian Church was ruled by the Patriarch of Moscow. In 1700 Adrian, the last patriarch, died. Peter the Great had already conceived the idea of his Holy Synod, so, instead of allowing a successor to be appointed, he

named various temporary administrators till his scheme should be ready. First the Metropolitan of Sary, then the Metropolitan of Ryazan administered the patriarchate during this period of twenty-one years. Peter did not allow either of them to make any new laws or take any steps of importance. Meanwhile he himself reorganized the Church, like his army and his government, on a German model. He abolished many monasteries, brought the control of all ecclesiastical property under the State, modified the administration of dioceses, appointed, deposed, and transferred bishops as he liked. At last on 25 Jan., 1721, the ukase appeared, abolishing the patriarchate and establishing a *Most Holy Directing Synod* in its place. The idea of this synod (obviously a quite different thing from the traditional synods that met at intervals to examine some special question), like most of Peter's reforms, came from Germany. Luther had proposed commissions of pastors and laymen to be sent by the head of the State (the Elector of Saxony in the first instance, 1527) to hold visitations of districts in the interest of the sect. Out of these commissions grew the *Consistories*. They are meant to take the place of bishops and to have episcopal authority, as far as such a thing is possible in Lutheranism. They judge "all cases which belonged to ecclesiastical jurisdiction of old" (Richter, "Gesch. der evangel. Kirchenverfassung", p. 82), can excommunicate, and could in the eighteenth century punish by torture, fines, and prison. They are appointed by the secular government, have a state official, the "Kommissarius" or procurator, at their head, with a notary, and consist of superintendents, pastors, theologians, and lawyers, all appointed by the Government. The Russian Holy Synod is an exact copy of this. Its object was to bring the Church into absolute dependence on the State. Under this synod the Russian Church is certainly the most Erastian religious body in the world. As soon as he had established the synod, Peter wrote to Jeremias III of Constantinople announcing its erection, demanding his recognition of it, and that it should be recognized equally by the other patriarchs. Jeremias made no difficulty. In 1723 he published an encyclical declaring that the Russian Synod "is and is named our brother in Christ, a holy and sacred Council. It has authority to examine and determine questions equally with the four apostolic holy Patriarchs. We remind and exhort it to respect and follow the laws and customs of the seven holy General Councils and all other things that the Eastern Church observes" (Silbernagl, p. 102). So the principle of a Holy Directing Synod was accepted by the Orthodox Church. It was to take the place of a patriarch and to have patriarchal authority. Such was not, however, the tsar's idea. When the Russian bishops petitioned him to restore the Patriarchate of Moscow he struck his breast and exclaimed: "Here is your Patriarch" (Kattenbusch, p. 190, note). Nor has any Holy Synod in Russia ever been allowed any sort of independent authority over the Church. The synod is always the agent of the State's power.

II. THE RUSSIAN HOLY SYNOD.—This is the model of the others. The ukase of 1721 is still the law determining its rights and duties. An examination of this will show how radically Erastian the whole arrangement is. The ukase begins by explaining what the synod is and giving the reasons for its establishment. The government of many is better than that of one; moreover, if the Church has one head it is difficult for the State to control it. Countless abuses in the Russian Church have made this reform not only desirable but absolutely necessary. The second part of the ukase describes what causes are subject to the jurisdiction of the synod. The general ones are that it has to see that all things in Russia take place according to the law of Christ, to put down whatever is contrary to that law, and to watch over the education of

the people. The special categories subject to the synod are five: (1) bishops; (2) priests, deacons, and all the clergy; (3) monasteries and convents; (4) schools, masters, students, and also all preachers; (5) the laity inasmuch as they are affected by church law (questions of marriage, etc.). The third part of the document describes the duties, rights, and methods of the synod (Gondal, "L'Eglise russe", p. 42; Kattenbusch, p. 191). The synod meets at Petersburg. Its members are partly ecclesiastical persons, partly laymen. All are appointed by the tsar. Originally there were to be twelve ecclesiastical members; but this number has been constantly changed at the tsar's pleasure. A ukase of 1763 determined that there should be at least six ecclesiastical members. The Metropolitans of St. Petersburg, Moscow, Kiev, and the Exarch of Georgia are always members (these persons, as all bishops, are appointed by the Government); one or two other archbishops, a titular metropolitan, the tsar's confessor, the head chaplain of the army and navy, and some other bishops make up the number. Bishops who have dioceses may only attend the meetings of the synod for half the year. During the other half they must return to their sees. The lay members consist of the procurator (*Oberprocurator*) and a number of commissioners. The eldest metropolitan present is chairman but has no more authority than any other bishop. In spite of the protests of Russian theologians it is evident that the real head of the synod is the procurator. He is always a layman, generally an officer in the army. He sits as representing the Government, and must be present at all meetings. The procurator has to prepare and examine beforehand all questions to be discussed; he can quash any proceedings at once, can forbid any law to be passed till he has consulted his—and the synod's—imperial master about it. He is assisted in his work by a chief secretary, an "executor", two secretaries, and other officials, all of course laymen like himself. So obvious is it that the procurator is really the head of the synod that Russians themselves (except the theologians who write to defend their Church from the charge of Erastianism) are quite conscious of it. When Mr. Palmer was in Russia it was a common joke to point to the procurator in his officer's uniform and say: "That is our patriarch" (Palmer, "Visit to the Russian Church", 1895, pp. 48, 73, 221). Every member of the Holy Synod before taking his place in it has to swear this oath: "I swear by the Almighty and by His holy Gospel that I will do my duty in all assemblies, decisions and discussions of the Spiritual law-giving Synod, that I will seek only truth and justice, that I will act according to my conscience without respect of persons, according to the laws of the Synod approved by his Imperial Majesty. I swear by the living God that I will undertake all business of the law-giving Synod with zeal and care. I promise as servant and subject fidelity and obedience to my true and natural master the Tsar and Emperor of all Russia and his illustrious successors, and to those whom he may appoint by virtue of his undoubted right in this matter. I acknowledge him as supreme judge in this spiritual assembly. I swear by the all-knowing God that I understand this oath according to the full force and meaning which the words have to all who read or hear them" (Silbernagl, op. cit., pp. 104-105).

Of the Erastian nature of the Russian Holy Synod, then, it would seem that there can be no doubt; and since the whole Church of Russia, every bishop, monastery, and school, is submitted absolutely and without appeal to the synod, it is not unjust to describe it as the most Erastian religious body in the world. This statement, however, much offends many modern Russian theologians. A century or so ago they accepted the tyranny of the tsar over Church as well as over State as a matter of course; nor did they seem to be much distressed by it. Now, contact with Western

theology, the spread of better ideas among them, and study of the Fathers have evoked in Russia too the ideal of the Church as a perfect society, a city of God on earth, too sacred to be placed under the secular government. The result is that some Russians, candidly admitting the hopeless Erastianism of Peter the Great's arrangement, demand its abolition and the restoration of the Patriarchate of Moscow. Agreeing with Peter the Great that if the Church has one head it is difficult for the State to control it, they demand one head for that very reason. One hears constantly of this movement in favour of a restored patriarchate in Russia (see, for instance, the "Echos d'Orient" for 1901, pp. 187, 232; for 1905, pp. 176, etc.; and Palmieri, "La Chiesa Russa", chap. ii). But there is another class of Russians whose loyalty to their Church leads them to defend her under any circumstances, even those of Peter the Great's tyrannical arrangement. To them everything is satisfactory, the Holy Synod a free ecclesiastical tribunal, the relations between Church and State in Russia the ideal ones for a Christian and Orthodox land. Erastianism, they protest indignantly, is a libellous misrepresentation by Catholic controversialists (most Protestants make the same accusation, by the way). Of these apologist is Dr. Alexis von Maltzew, Provost of the Russian Church at Berlin, certainly one of the most learned and sympathetic of modern Orthodox theologians. Provost Maltzew constantly returns to the question of this alleged Erastianism (*Césaropapismus* is the German term used by him). His defence is summarized especially in his "Antwort auf die Schrift des hochw. Herrn Domcapitulars Röhm" (Berlin, 1896), §3 (Die Synode) and §4 (Staat und Kirche). The chief points upon which he insists are that only members of the hierarchy can vote in the synod, that the Oberprocurator has no power to compel the bishops, that the synod can even (if the tsar is absent) arrest and try the Oberprocurator, that the synod has no independent authority in dogmatic questions—as successor of the Patriarch of Moscow it inherits neither more nor less than his rights in matters of canon law; where dogma is concerned the other patriarchs must be consulted too—that Peter the Great sought and obtained the consent of the patriarchs for his synod, and finally that: "Only he who knows the strict order, the admirable discipline, the stable organism that distinguish the Orthodox Church of Russia, can properly appreciate the beneficent work done by the Holy Synod under the exalted protection of the Orthodox Emperor" (op. cit., p. 19). With every sympathy for the provost's loyalty to his Church, one would answer this by saying that a synod of which all members are appointed by the State, whose members take such an oath as the one quoted above, whose acts can at any moment be quashed by the government agent, is not an independent authority. Certainly Peter's idea in founding the Holy Synod was to put an end to the old *Imperium in imperio* of the free Church, and to the patriarch who had become almost a rival of the tsar. Peter meant to unite all authority in himself, over Church as well as State; and the Russian Government has continued his policy ever since. Never has the Church been allowed the shadow of independent action. Through his Oberprocurator and synod the tsar rules his Church as absolutely as he rules his army and navy through their respective ministries. That most members of the synod are bishops is as natural as that most members of the ministry of war are generals—the tsar appoints both in any case. It must be admitted that in a country so exclusively committed to one religion as is Russia there are advantages in Erastianism. It is quite true that the synod (except by such small ways as the canonization of saints) does not touch dogma; to do so would be to provoke a schism with the patriarchs and the other Orthodox Churches. Russia has the same faith of the seven holy councils as Constanti-

nople, Greece, Bulgaria, etc. And in questions of canon law it is a great advantage to have the strong arm of the State to carry out decrees. There can be no opposition, no persecution by the Government, of a Church whose laws are countersigned by the Oberprocurator. On the contrary the State—should one not perhaps say: the other departments of the State?—is at hand if it is wanted. Provost Maltzew is right. The Russian Church is extraordinarily orderly, well-organized, uniform. The synod deposes bishops, silences preachers, sends people to monasteries, excommunicates; and if there is trouble the minister of police steps in.

The jurisdiction of the Holy Synod extends over every kind of ecclesiastical question and over some that are partly secular. All bishops, priests, clerks, monks, and nuns have to obey the synod absolutely under pain of deposition, suspension, excommunication, or maybe even imprisonment. The synod's chief duties are to watch over the preservation of the Orthodox faith, the instruction of the people, the celebration of feasts, and all questions of Church order and ritual. It has to suppress heresies, examine alleged miracles and relics, forbid superstitious practices. All Orthodox theological works are subject to its censorship. The synod further administers all church property, controls the expenditure, is responsible for the fabric of churches and monasteries. It presents candidates for episcopal sees, prelates, and the office of archimandrite, to the tsar for nomination, and can examine such candidates as to their fitness. It is the last court of appeal against bishops or other ecclesiastical superiors, can advise, warn, and threaten any bishop, and grant all manner of dispensations and indulgences. But to make new laws, even in church matters, it needs the tsar's assent. All processes for heresy, blasphemy, superstition, adultery, divorce, and all matrimonial causes are brought to the synod. Questions of testaments, inheritance, and education are settled by the synod in agreement with the Senate and are controlled further by the tsar's consent. To administer all these matters the synod has various subcommittees. It has an economic college for questions of church property and a committee of control that re-examines the matter. These committees consist of lawyers, chancellors, secretaries, treasurers, architects (for the buildings), etc. They are, of course, entirely subject to the synod. Since 1909 bishops have to send all money for stipends (selling candles, prayers for the dead, free offerings, collections, alms-boxes) to the synod to be redistributed. Expenses and profits of ecclesiastical schools are also controlled by a committee of the synod. It pays for printing service-books and many spiritual works (prayer books and so on), also for all imperial ukases that affect the Church. It has special commissions for Moscow, Georgia, and Lithuania. There are two synodal presses, at Petersburg and Moscow, where all Orthodox religious books must be printed, after they have passed the censor. The profits of these presses go to assist poor churches. For the censorship, finally, there are offices at Petersburg, Moscow, and Kiev. Throughout Russia the synod is named in the liturgy instead of a patriarch.

It will be seen then that the submission of the Russian Church to the synod is so complete that the synod's relation to the State involves that of the whole Church.

III. THE GREEK HOLY SYNOD.—The first other Orthodox Church to imitate the Russian Government by synod was that of Greece. The national assemblies of free Greece in 1822 and 1827 began the process of making their Church independent of the Patriarch of Constantinople. In 1833 the Greek Parliament formally rejected the patriarch's authority and set up a Holy Directing Synod in exact imitation of Russia. After much dispute the patriarch gave in and ac-

knowledge of the Greek synod, in 1850. Since then the Church of Greece is governed by a Holy Synod exactly as is the Church of Russia. A law in 1852 regulated its rights and duties. It meets at Athens under the presidency of the metropolitan of that city. Four other bishops are appointed by the Government as members for a year by vote. The members take an oath of fidelity to the king and government. Their deliberations are controlled by a royal commissioner, who is a layman chosen by government, just like the Russian oberprocurator. No act is valid without the commissioner's assent. There are also secretaries, writers, and a servant, all appointed by the State. The Holy Synod is the highest authority in the Greek Church and has the same rights and duties as its Russian model. It is named in the liturgy instead of a patriarch. Professor Diomedes Kyriakos (Έκκλ. Ἱστορία, III, 155 sqq.) has tried to deny his Church from the charge of Erastianism with even less success (and certainly with less reasonableness and moderation) than Provost Maltzew. (See GREECE.)

IV. OTHER HOLY SYNODS.—All the independent Orthodox Churches formed during the nineteenth century have set up Holy Synods. The Churches in the Austro-Hungarian Monarchy (Karlowitz since 1765, Hermannstadt, 1864, Czernowitz, 1873) form synods of their bishops to regulate affairs; but, as in this case there is no interference of the Government, the situation is different. These synods are merely free conferences in which all the bishops of each Church take part. The arrangement of the Bulgarian Church (since 1870) is also different, inasmuch as its exarch has a certain amount of individual authority—approaching the position of a patriarch—and there are two governing assemblies. The Holy Synod, under the presidency of the exarch, has four other members, all bishops elected by their fellows for periods of four years. They meet regularly once a year, and exceptionally on other occasions. This synod has absolute authority over the Bulgarian Church in these matters: election of bishops, questions of faith, morals, and rite, ecclesiastical discipline, education of the clergy, censorship of books, marriage questions, and disputes among the clergy. The other body, the Exarch's Council, also under his presidency, has six lay members elected by the people and clergy, confirmed by the Government for four years. The council determines questions of education, building and maintenance of churches, and church finance. Neither body may publish any order without consent of the Government; but their composition, the appointment of members, and authority of the exarch show that the Bulgarian Church is less Erastian than her sisters of Russia and Greece. The Church of Servia (since 1879) has five bishops, of whom the Metropolitan of Belgrade is primate. All meet in the Holy Synod under his presidency once a year. The synod appoints bishops and regulates all other ecclesiastical questions. The Rumanian Church (since 1885) has the same arrangement. The president of the synod is the Metropolitan of Wallachia, the other primate (Metropolitan of Moldavia) and all the six remaining bishops are members. Its decisions must have the consent of the Government. The minister of religion attends the sessions, but only as a consultant. Lastly, the four bishops of Herzegovina and Bosnia (independent since 1880) meet in a kind of synod, called consistory, under the presidency of the Metropolitan of Sarajevo. In this case the (Austrian) Government does not interfere at all.

Although the synods of Bulgaria, Servia, and Rumania have a certain dependence on the State (whose sanction is necessary for the promulgation of their edicts), there is not in their case anything like the shameless Erastianism of Russia and Greece. Between these two the only question is whether it be more advantageous for the Church to be ruled by an

irresponsible tyrant or a Balkan Parliament. Lastly, it may be noticed, the church government by synod is a principle destined to flourish among the Orthodox. The secular governments of Orthodox countries encourage it and approve of it, for obvious reasons. It makes all the complicated questions of church establishment and endowment in the new Balkan States comparatively easy to solve; it has a fine air of democracy, constitutionalism, parliamentary government, that appeals enormously to people just escaped from the Turk and full of such notions. It seems then that the old patriarchal idea will linger on at Constantinople, Alexandria, Antioch, Jerusalem (though even here, in its original homes, it is getting modified in a constitutional direction), but that all new movement in the Orthodox Church will be more and more towards the principles borrowed by Peter the Great from Lutheranism. The vital argument against Holy Directing Synods is their opposition to the old tradition, to the strictly monarchic system of the Church of the Fathers. Strange that this argument should be ignored by people who boast so confidently of their unswerving fidelity to antiquity. "Our Church knows no developments", they told Mr. Palmer triumphantly in Russia. One could easily make a considerable list of Orthodox developments in answer. And one of the most obvious examples would be the system of Holy Synods. What, one might ask, would their Fathers have said of national Churches governed by committees of bishops chosen by the State and controlled by Government officials?

Holy Thursday. See HOLY WEEK; MAUNDY THURSDAY.

Holy Water.—The use of holy water in the earliest days of the Christian Era is attested by documents of only comparatively late date. The "Apostolic Constitutions", the redaction of which goes back to about the year 400, attribute to the Apostle St. Matthew the precept of using holy water. The letter written under the name of Pope Alexander I, who lived in the second century, is apocryphal and of more recent times; hence the first historical testimony does not go back beyond the fifth century. However, it is permissible to suppose for the sake of argument that, in the earliest Christian times, water was used for expiatory and purificatory purposes, in a way analogous to its employment under the Jewish Law. As, in many cases, the water used for the Sacrament of Baptism was flowing water, sea or river water, it could not receive the same blessing as that contained in the baptisteries. On this particular point the early liturgy is obscure, but two recent discoveries are of very decided interest. The Pontifical of Serapion of Thmuis, a fourth-century bishop, and likewise the "Testamentum Domini", a Syriac composition dating from the fifth to the sixth century, contain a blessing of oil and water during Mass. The formula in Serapion's Pontifical is as follows: "We bless these creatures in the Name of Jesus Christ, Thy only Son; we invoke upon this water and this oil the Name of Him Who suffered, Who was crucified, Who arose from the dead, and Who sits at the right of the Uncreated. Grant unto these creatures the power to heal; may all fevers, every evil spirit, and all maladies be put to flight by him who either drinks these beverages or is anointed with them, and may they be a remedy in the Name of Jesus Christ, Thy only Son."

As early as the fourth century various writings, the authenticity of which is free from suspicion, mention the use of water sanctified either by the liturgical blessing just referred to, or by the individual blessing of some holy person. St. Epiphanius (*Contra hæres.*, lib. I, hæc. xxx) records that at Tiberias a man named Joseph poured water on a madman, having first made the sign of the cross and pronounced these words over the water: "In the Name of Jesus Christ of Nazareth, crucified, depart from this unhappy one, thou infernal spirit, and let him be healed!" Joseph was converted and subsequently used the same proceeding to overcome witchcraft; yet, he was neither a bishop nor a cleric. Theodoret (*Hist. eccl.*, V, xxi) relates that Marcellus, Bishop of Apamea, sanctified water by the sign of the cross and that Aphraates cured one of the emperor's horses by making it drink water blessed by the sign of the cross ("Hist. relig.", c. viii, in P. G., LXXXII, col. 1244, 1375). In the West similar attestations are made. Gregory of Tours (*De gloria confess.*, c. lxxxii) tells of a recluse named Eusitius who lived in the sixth century and possessed the power of curing quartan fever by giving its victims to drink of water that he had blessed; we might mention many other instances treasured up by this same Gregory ("De Miraculis S. Martini", II, xxxix; "Mirac. S. Juliani", II, iii, xxv, xxvi; "Liber de Passione S. Juliani"; "Vitæ Patrum", c. iv, n. 3). It is known that some of the faithful believed that holy water possessed curative properties for certain diseases, and that this was true in a special manner of baptismal water. In some places it was carefully preserved throughout the year and, by reason of its having been used in baptism, was considered free from all corruption. This belief spread from East to West; and scarcely had baptism been administered, when the people would crowd around with all sorts of vessels and take away the water, some keeping it carefully in their homes whilst others watered their fields, vineyards, and gardens with it ("Ordo rom. I", 42, in "Mus. ital.", II, 26).

However, baptismal water was not the only holy water. Some was permanently retained at the entrance to Christian churches where a clerk sprinkled the faithful as they came in and, for this reason, was called *ὑδροκωμήτης* or "introducer by water", an appellation that appears in the superscription of a letter of Synesius in which allusion is made to "lustral water placed in the vestibule of the temple" This water was perhaps blessed in proportion as it was needed, and the custom of the Church may have varied on this point. Balsamon tells us that, in the Greek Church, they "made" holy water at the beginning of each lunar month. It is quite possible that, according to canon lxxv of the Council of Constantinople held in 691, this rite was established for the purpose of definitively supplanting the pagan feast of the new moon and causing it to pass into oblivion. In the West Dom Martène declares that nothing was found prior to the ninth century concerning the blessing and aspersion of water that takes place every Sunday at Mass. At that time Pope Leo IV ordained that each priest bless water every Sunday in his own church and sprinkle the people with it: "Omni die Dominico, ante missam, aquam benedictam facite, unde populus et loca fidelium aspergantur" (P. L., CXV, col. 679). Hinemar of Reims gave directions as follows: "Every Sunday, before the celebration of Mass, the priest shall bless water in his church, and, for this holy purpose, he shall use a clean and suitable vessel. The people, when entering the church, are to be sprinkled with this water, and those who so desire may carry some away in clean vessels so as to sprinkle their houses, fields, vineyards, and cattle, and the provender with which these last are fed, as also to throw over their own food" ("Capitula synodalia", cap. v, in P. L., CXXV, col. 774). The rule of

having water blessed for the aspersion at Mass on Sunday was thenceforth generally followed, but the exact time set by Leo IV and Hinemar was not everywhere observed. At Tours, the blessing took place on Saturday before Vespers; at Cambrai and at Arras, it was to be given without ceremony in the sacristy before the recitation of the hour of Prime; at Albi, in the fifteenth century, the ceremony was conducted in the sacristy before Terce; and at Soissons, on the highest of the sanctuary steps, before Terce; whereas at Laon and Senlis, in the fourteenth century, it took place in the choir before the hour of Terce. There are two Sundays on which water is not and seems never to have been blessed: these are Easter Sunday and Pentecost. The reason is because on the eve of these two feasts water for the baptismal fonts is blessed and consecrated and, before its mixture with the holy chrism, the faithful are allowed to take some of it to their homes, and keep it for use in time of need.

BARRAUD, *De l'eau bénite et des vases destinés à la contenir* in the *Bulletin monumental*, 4th series, vol. VI (1870), p. 393-467; PFANNENSCHMIDT, *Weihwasser im heidnischen und christlichen Cultus* (Hanover, 1869).

H. LECLERCQ.

Holy Water Fonts.—Vessels intended for the use of holy water are of very ancient origin, and archaeological testimony compensates, to a certain extent, for the silence which historical and liturgical documents maintain in their regard. Holy water fonts may be divided into three categories: stationary fonts, placed at the entrance to churches; portable fonts, used for aspersions and sacramental rites; and private fonts, in which holy water is kept in private houses.

The holy water font was originally the fountain for ablutions, *cantharus*, or *phiale*, placed in the centre of the atrium of the basilica and still found in the East, especially at Mount Athos, at Djebeil in Syria, and at Haïa-Napa in the Island of Cyprus. These fountains were used by the faithful who, before entering the church, washed their hands and feet in accordance with a rite probably derived from Judaism and even yet observed in Mussulman countries. When the atrium of the Christian basilica was reduced to the proportions of a narrow court or a simple porch, the cantharus gave way to a less pretentious structure. It is now only exceptionally that the cantharus is found doing service as a holy water font, mainly at Mount Athos, where the phiale of the monastery of Laura stands near the *catholicon* in front of the entrance and is covered by a dome resting on eight pillars. It takes the place of the ablution fountains which were indispensable in the ancient basilicas; but at present the water is missing and gushes forth only on days when it is to be blessed. The blessing of the water takes place on the eve of the Epiphany after Mass and Vespers, and is called the "grand blessing" (*μέγας ἀγιασμός*), so as to distinguish it from the "little blessing" (*μικρός ἀγιασμός*), which is conducted with less ceremony on the first of each month, except January (on the 5th) and September (on the 14th).

In the sixth century Paulus Silentarius, when describing the wonders of St. Sophia, about A. D. 590, mentions the presence of a phiale from which "water gushes noisily into the air, issuing from a bronze pipe with a force that banishes all evils, when in the month of golden tunics [January], during the night of the Divine initiation, the people draw in vessels an incorruptible water, as no pollution reaches it, even when, having been several years removed from its source, it is enclosed in the hollow of a pitcher and kept in their houses." At Laura the holy water does not banish evils, it enlightens souls; the faithful do not draw it for the purpose of carrying it away, but they are sanctified by the rite. In the fourth century the blessing of water was mentioned in Sera-

pion's Ritual (see HOLY WATER). In the Byzantine Ritual the prayer used for this blessing, similar to that of the Eucharistic Epiklesis, invokes the Holy Spirit upon the waters. Like the species of bread and wine, holy water is called *ἁγίασμα*. In the Barberini Euchologion of the eighth or ninth century, the title of a prayer shows us that holy water renewed the effects of baptism.

The few Greek inscriptions found on vessels intended for holy water in no wise indicate that these were destined for so high a dignity. The holy water font of Carthage and various marble urns preserved in museums or described by antiquarians merely have copies of a formula taken from Holy Scripture: "Take water joyfully for the voice of the Lord is upon the waters"; or "Offer thy prayer after washing thyself"; or, finally, "Wash not only thy face but thy iniquities." We have no information whatever concerning the vessels in which the faithful kept the incorruptible holy water in their homes. However, on this subject, we can always refer to a vase font found at Carthage, and preserved in the Lavigerie Museum, measuring 10 inches in height and decorated with a cross and two fishes. These details once given, we can enter more fully into the history of holy water fonts in the West.

Stationary holy water fonts, usually made of bronze, marble, granite, or any other solid stone, and also of terra-cotta, consist of a small tub or basin sometimes detached or resting on a base or pedicle, sometimes imbedded in the wall or in one of the pillars of the church. Occasionally these are under the porch. In the West there were scarcely any stationary fonts prior to the eleventh century. However, it must be observed that, up to this time, churches were few and that most of their number had been repeatedly plundered, dismantled, redecorated, and, indeed, altered in every way; therefore, in view of this fact, it is possible to admit that certain stone basins, hemispherical in form and imbedded in the piers of the doors of very old churches, were so placed when the church was built. Some fonts are antique objects, urns or hollowed-out capitals, made to serve a purpose other than that for which they were first intended. When the stone is porous it is lined with lead or tin, so as to prevent absorption, the same course being followed with copper fonts to guard against oxidation.

Some fonts are exterior, being fastened to the piers or jambs of the portal. They vary greatly in size, at times being as large as baptismal fonts; however, it is chiefly in Brittany that they attain such proportions. Usually they are not very large. Cavedoni announced that in a third- or fourth-century cemetery at Chiusi there was a small column which he thought must have supported a holy water font. Boldetti, who is always very cautious, claims to have found different fonts in the catacombs, some made of marble, others of terra-cotta, and still others of glass. A sort of tufa basin, which may have served the same purpose, was also found. In the cemetery of Callistus there is a truncated column which, according to J.-B. de Rossi, must have held the same kind of a vessel as those containing holy water in our churches. We could enumerate other probable examples, especially in the catacomb of St. Saturninus, in the crypt of St. Cornelius, and in the basilica of St. Alexander on the Via Nomentana.

The further we withdraw from the time of their origin the more numerous the monuments appear. A magnificent vase in black marble preserved in the Kircher museum and decorated with bas-reliefs, two broken urns from Cuicul (Djemila) in Algeria, and a large marble table, the upper side of which is slightly hollowed, belong to the fourth century. A stone basin found in the vicinity of the cathedral of Bath, England, measures 7.9 inches in height, the diameter of its upper part being 1.4 inches. Stationary fonts

sometimes rest on a corbel-table or a small column and, although such is rarely the case, two fonts may be communicating, one being on the outside of the church and one on the inside. Many fonts are dated or else bear the name of the sculptor or donor.

There seems to have been no rule governing the shape of the receiver and the basin. The baptisteries usually represented a cross or a circle, but here fancy is freer, and in the Roman era we find a circular basin hollowed out of a square block with the four corners carved sometimes with a trefoil, a quatrefoil, or a star, or perhaps with flutes converging towards a common centre and representing a sea-shell. Viollette-Duc, after alluding to the stone tables placed within the porch of the primitive churches of the Order of Cluny and serving as supports for the portable holy water fonts, mentions a twelfth-century font at Moutier-Saint-Jean, the basin part of which rests on a Corinthian column. In the beginning of the thirteenth century fonts were cut from stone and assumed interiorly the form of a hemisphere and exteriorly that of a polygonal prism. But from this time forward, and during a part of the Gothic period, architects, although still continuing to place the reservoirs of fonts against pillars or clusters of columns, increased their importance and surmounted them with a carved canopy, such as is seen at Villeneuve-sur-Yonne (Yonne); in like manner the little fonts dug out of tombstones, chiefly in the cemeteries of France and the West. Many fonts are set in a niche in the wall.

It occasions no little surprise to find in the Middle Ages fonts reserved for the exclusive use of a certain class of the faithful. This is proved by the inscription on a font preserved in the museum of Angers, reading to the effect that none save clerics and nobles had the privilege of dipping their fingers therein, the bourgeoisie, the labouring classes and the poor having vessels set apart for them alone:—

Clericus et miles; pergant ad cetera viles
Nam locus hic primus; decet illos vilis et imus.

In the churches of the Pyrenees are still to be seen fonts which, of old, were reserved for the use of the despised race of Cagots, while the general horror which lepers inspired, and the care with which all contact with them was avoided, sufficiently explains the existence of a special font for them at Saint-Savin (Hautes-Pyrénées) and at Milhac de Noutron (Dordogne).

In England, during the Middle Ages, fonts called "stoups", or "holy water stones", consisted of a small niche somewhat resembling a piscina and containing a stone basin partly sunk in the wall, the niche being either under the porch or inside, but always near the entrance to the church. During the fifteenth and sixteenth centuries fonts again became movable and generally consisted of a tub placed upon an elevated socle, the medium height being about forty inches. The decoration of these small monuments underwent a complete modification. Italy and Spain have preserved admirable sculptured fonts dating from the Renaissance; most of these are of marble, and their bulk sometimes causes them to be mistaken for baptismal fonts, from which they are mainly distinguishable because of having no lids. In Italy this style is found in the cathedral of Florence, where the font or *pila d'aqua santa* is ascribed to Giotto; and in the cathedral of Siena it is in the form of a beautiful tub ornamented with angels' heads, between which are strung rich garlands, and resting on a circular socle decorated with nude figures in chains, this, in its turn being placed on a lower socle, likewise embellished with angels' heads. Later on, in the seventeenth century and down to the present day, the valves of a shell known as the *tridacna gigas*, a mollusc indigenous to Oceania, did service as fonts. Some shells of this species are very large and weigh as much as 500

pounds. Valves of the *tridacna gigas* are used as holy water stoups in the church of Saint-Sulpice at Paris, the Republic of Venice having presented them to Francis I.

The most ancient portable fonts are in the form of pails and shaped like truncated cones. Those most prized for their antiquity are of lead or bronze, sometimes even of wood covered with a sheet of wrought metal. However, if there ever existed silver or silver-gilt fonts, it is evident that they have not come down to us. The leaden pail found at Carthage, on which the raised designs seem to have been aimlessly selected, nevertheless presents a remarkable peculiarity, in that it bears a Greek inscription in which one can readily grasp the allusion to holy water: "Take water joyfully for the voice of the Lord is upon the waters." The second part of this epigraph is to be seen on a bronze holy water pail preserved in the Gaddi Museum at Florence: "The voice of the Lord is upon the waters; the God of majesty hath spoken." These quotations are from the twenty-eighth psalm, third verse. The Vatican Museum has a bronze pail equipped with a handle and ornamented with carved sketches of the Saviour and the Twelve Apostles, each figure being designated by the name in Greek letters. A Merovingian sarcophagus, found near Abbeville, contained the ruins of a small wooden pail covered with a thin plate of bronze; and in the Dublin Museum is an Anglo-Saxon pail with a wooden surface and furnished with a handle. In our opinion, both of these pails did service as fonts.

Pails of this style remained a long time in use; they were often made of precious metals embossed, or even cut out of hard stone or from a piece of ivory. The crystal vase in the treasury of Venice is an antique vessel used for liturgical purposes, perhaps in the tenth century. But still more remarkable is the eleventh-century font preserved in the treasury of the cathedral of Milan. Slender in form and slightly funnel-shaped, it is ornamented with five arcades serving as frames for the Blessed Virgin and the Four Evangelists. On the archivolt of the arcades are five verses designating the different personages and still higher runs a frieze of foliage bearing an inscription. This ivory pail measures about 8 inches in height by 4.7 in diameter on the upper rim and 3.5 at the base. The treasury of the Lyons cathedral also has an ivory font which is the product of Italian art. But the most ancient of these pails is found in the treasury of Aachen, and it is believed to date from the ninth century. At St. Mark's, Venice, there is an antique font hewn out of a garnet.

We could not attempt to enumerate many of the metal fonts, although, in most of them, the shape and workmanship are of decided interest. The pail seems to have always prevailed but to have been varied according to fancy. Thus, in the fourteenth century, it was the custom for the donors to apply their coat-of-arms to these gifts, the product of the goldsmith's art. In the fifteenth century the fashion became even more marked and the goldsmith sought everywhere pretexts for the exercise of his ingenuity.

In the Middle Ages holy water was held in such respect that it was not even taken from the font unless by means of an aspersorium or holy water sprinkler, attached by a small chain. Thenceforth the aspersorium was the inseparable accompaniment of the font. For their aspersions the ancients used laurel branches or sometimes tufts on the end of a turned handle. The oldest representations of the Christian aspersorium show a branch that was dipped into the font. For this purpose branches of hyssop, palm, and boxwood, and wisps of straw were employed, and finally the tail of the fox was pressed into service, its long silky hair making it singularly adaptable. In Old French the fox was called *goupil*, hence the word *goupillon*, one of the expressions for holy water

sprinkler. It would seem that about the thirteenth century the aspersorium assumed the modern form of a stick surmounted by a rose covered with bristles; at least such is what we infer from miniatures. Little by little the handles of the sprinklers came to be very richly ornamented. The inventory of the Duke of Anjou mentions a "square aspergillus with three knops", and the inventory of Philip the Good, "an old silver aspergillus".

In the rules prescribed by St. Charles Borromeo for the construction of fonts in the Diocese of Milan, we read the following: "Heretofore we have treated of the sacristy and several other things, let us now speak of the vessel intended for holy water. It shall be of marble or of solid stone, neither porous nor with cracks. It shall rest upon a handsomely wrought column and shall not be placed outside of the church but within it and, in so far as possible, to the right of those who enter. There shall be one at the door by which the men enter and one at the women's door. They shall not be fastened to the wall but removed from it as far as convenient. A column or a base will support them and it must represent nothing profane. A sprinkler shall be attached by a chain to the basin, the latter to be of brass, ivory, or some other suitable material artistically wrought."

Private fonts are generally smaller than the portable ones used in churches. There were very rich ones in gold and silver ornamented with pearls and enamel. In later times they have preferably been given the shape of a small round basin suspended from a plate fastened to the wall; hence they are "applied fonts". They are made of all materials, ivory, copper, porcelain, faience, and glazed sandstone.

H. LECLERCQ.

Holy Week is the week which precedes the great festival of the Resurrection on Easter Sunday, and which consequently is used to commemorate the Passion of Christ and the events which immediately led up to it. In Latin it is called *hebdomada major*, or, less commonly, *hebdomada sancta*, while the Greeks combine both epithets, styling it *ἡ ἀγία καὶ μεγάλη ἐβδομάς*. Similarly, in most modern languages (except for the German word *Charwoche*, which seems to mean "the week of lamentation") the interval between Palm Sunday and Easter Day is known *par excellence* as Holy Week.

Antiquity of the Celebration of Holy Week.—From an attentive study of the Gospels, and particularly that of St. John, it might easily be inferred that already in Apostolic times a certain emphasis was laid upon the memory of the last week of Jesus Christ's mortal life. The supper at Bethania must have taken place on the Saturday, "six days before the pasch" (John, xii, 1, 2), and the triumphant entry into Jerusalem was made from there next morning. Of Christ's words and deeds between this and His Crucifixion we have a relatively full record. But whether this feeling of the sanctity belonging to these days was primitive or not, it in any case existed in Jerusalem at the close of the fourth century, for the Pilgrimage of Ætheria contains a detailed account of the whole week, beginning with the service in the "Lazarium" at Bethania on the Saturday, in the course of which was read the narrative of the anointing of Christ's feet. Moreover, on the next day, which, as Ætheria says, "began the week of the Pasch, which they call here the 'Great Week'", a special reminder was addressed to the people by the archdeacon in these terms: "Throughout the whole week, beginning from to-morrow, let us all assemble in the Martyrium, that is the great church, at the ninth

hour." The commemoration of Christ's triumphal entry into the city took place the same afternoon. Great crowds, including even children too young to walk, assembled on the Mount of Olives and after suitable hymns, and antiphons, and readings, they returned in procession to Jerusalem, escorting the bishop, and bearing palms and branches of olives before him. Special services in addition to the usual daily Office are also mentioned on each of the following days. On the Thursday the Liturgy was celebrated in the late afternoon, and all Communicated, after which the people went to the Mount of Olives to commemorate with appropriate readings and hymns the agony of Christ in the garden and His arrest, only returning to the city as day began to dawn on the Friday. On the Friday again there were many services, and in particular before midday there took place the veneration of the great relic of the True Cross, as also of the title which had been fastened to it; while for three hours after midday another crowded service was held in commemoration of the Passion of Christ, at which, Ætheria tells us, the sobs and lamentations of the people exceeded all description. Exhausted as they must have been, a vigil was again maintained by the younger and stronger of the clergy and by some of the laity. On the Saturday, besides the usual offices during the day, there took place the great paschal vigil in the evening, with the baptism of children and catechumens. But this, as Ætheria implies, was already familiar to her in the West. The account just summarized belongs probably to the year 388, and it is of the highest value as coming from a pilgrim and an eyewitness who had evidently followed the services with close attention. Still the observance of Holy Week as a specially sacred commemoration must be considerably older. In the first of his festal letters, written in 329, St. Athanasius of Alexandria speaks of the severe fast maintained during "those six holy and great days [preceding Easter Sunday] which are the symbol of the creation of the world". He refers, seemingly, to some ancient symbolism which strangely reappears in the Anglo-Saxon martyrologium of King Alfred's time. Further he writes, in 331: "We begin the holy week of the great pasch on the tenth of Pharmuthi in which we should observe more prolonged prayers and fastings and watchings, that we may be enabled to anoint our lintels with the precious blood and so escape the destroyer." From these and other references, e. g., in St. Chrysostom, the Apostolic Constitutions, and other sources, including a somewhat doubtfully authentic edict of Constantine proclaiming that the public business should be suspended in Holy Week, it seems probable that throughout the Christian world some sort of observance of these six days by fasting and prayer had been adopted almost everywhere by Christians before the end of the fourth century. Indeed it is quite possible that the fast of special severity is considerably older, for Dionysius of Alexandria (c. A. D. 260) speaks of some who went without food for the whole six days (see further under LENT). The week was also known as the week of the dry fast (*ξηροφαγία*), while some of its observances were very possibly influenced by an erroneous etymology of the word *Pasch*, which was current among the Greeks. *Pasch* really comes from a Hebrew word meaning "passage" (of the destroying angel), but the Greeks took it to be identical with *πάσχειν*, to suffer.

Special Observances of Holy Week.—We may now touch upon some of the liturgical features which are distinctive of Holy Week at the present time. Palm Sunday comes first in order, and although no memory now remains in our Roman Missal of the supper at Bethany and the visit to the "Lazarium", we find from certain early Gallican books that the preceding day was once known as "Lazarus Saturday", while Palm Sunday itself is still sometimes called by the Greeks *κυριακή τοῦ Λαζάρου* (the Sunday of Lazarus).

The central feature of the service proper to this day, as it was in the time of Ætheria, is the procession of palms. Perhaps the earliest clear evidence of this procession in the West is to be found in the Spanish "Liber Ordinum" (see Férotin, "Monumenta Liturgica", V, 179), but traces of such a celebration are to be met with in Aldhelm and Bede as well as in the Bobbio Missal and the Gregorian Sacramentary. All the older rituals seem to suppose that the palms are blessed in a place apart (e. g. some eminence or some other church of the town) and are then borne in procession to the principal church, where an entry is made with a certain amount of ceremony, after which a solemn Mass is celebrated. It seems highly probable, as Canon Callewaert has pointed out (Collationes Brugenses, 1907, 200-212), that this ceremonial embodies a still living memory of the practice described by Ætheria at Jerusalem. By degrees, however, in the Middle Ages a custom came in of making a station, not at any great distance, but at the churchyard cross, which was often decorated with box or evergreens (*crux buxata*), and from here the procession advanced to the church. Many details varying with the locality marked the ceremonial of this procession. An almost constant feature was, however, the singing of the "Gloria laus", a hymn probably composed for some such occasion by Theodulphus of Orléans (c. A. D. 810). Less uniformly prevalent was the practice of carrying the Blessed Sacrament in a portable shrine. The earliest mention of this usage seems to be in the customs compiled by Archbishop Lanfranc for the monks of Christ Church, Canterbury. In Germany, and elsewhere on the Continent, the manner of the entry of Christ was sometimes depicted by dragging along a wooden figure of an ass on wheels (the *Palmesel*), and in other places the celebrant himself rode upon an ass. In England and in many parts of France the veneration paid to the churchyard cross or to the rood cross in the sanctuary by genuflections and prostrations became almost a central feature in the service. Another custom, that of scattering flowers or sprays of willow and yew before the procession, as it advanced through the churchyard, seems to have been misinterpreted in course of time as a simple act of respect to the dead. Under this impression the practice of "flowering the graves" on Palm Sunday is maintained even to this day in many country districts of England and Wales. With regard to the form of the blessing of the palms, we have in the modern Roman Missal, as well as in most of the older books, what looks like the complete Proper of a Mass—Introit, Collects, Gradual, Preface, and other prayers. It is perhaps not unnatural to conjecture that this may represent the skeleton of a consecration Mass formerly said at the station from which the procession started. This view, however, has not much positive evidence to support it and has been contested (see Callewaert, loc. cit.). It is probable that originally the palms were only blessed with a view to the procession, but the later form of benediction seems distinctly to suppose that the palms will be preserved as sacramentals and carried about. The only other noteworthy feature of the present Palm Sunday service is the reading of the Gospel of the Passion. As on Good Friday, and on the Tuesday and the Wednesday of Holy Week, the Passion, when solemn Mass is offered, is sung by three deacons who impersonate respectively the Evangelist (*Chronista*), Jesus Christ, and the other speakers (*Synagoga*). This division of the Passion among three characters is very ancient, and it is often indicated by rubrical letters in early manuscripts of the Gospel. One such manuscript at Durham, which supposes only two readers, can hardly be of later date than the eighth century. In earlier times Palm Sunday was also marked by other observances, notably by one of the most important of the scrutinies for catechumens (see CATECHUMEN, III, 431) and by a certain relaxa-

tion of penance, on which ground it was sometimes called *Dominica Indulgentiæ*.

Tenebræ.—The proper Offices and Masses celebrated during Holy Week do not notably differ from the Office and Mass at other penitential seasons and during Passion Week. But it has long been customary in all churches to sing Matins and Lauds at an hour of the afternoon or evening of the previous day at which it was possible for all the faithful to be present. The Office in itself presents a very primitive type in which hymns and certain supplementary formulæ are not included, but the most conspicuous external feature of the service, apart from the distinctive and very beautiful chant to which the Lamentations of Jeremias are sung as lessons, is the gradual extinction of the fifteen candles in the "Tenebræ hearse", or triangular candlestick, as the service proceeds. At the end of the Benedictus at Lauds only the topmost candle, considered to be typical of Jesus Christ, remains alight, and this is then taken down and hidden behind the altar while the final Miserere and collect are said. At the conclusion, after a loud noise emblematical of the convulsion of nature at the death of Christ, the candle is restored to its place, and the congregation disperse. On account of this gradual darkening, the service, since the ninth century or earlier, has been known as "Tenebræ" (darkness). Tenebræ is sung on the evening of the Wednesday, Thursday, and Friday, the antiphons and proper lessons varying each day.

Maundy Thursday, which derives its English name from *Mandatum*, the first word of the Office of the washing of the feet, is known in the Western liturgies by the heading "In Cœna Domini" (upon the Lord's supper). This marks the central rite of the day and the oldest of which we have explicit record. St. Augustine informs us that on that day Mass and Communion followed the evening meal or supper, and that on this occasion Communion was not received fasting. The primitive conception of the festival survives to the present time in this respect at least, that the clergy do not offer Mass privately but are directed to Communicate together at the public Mass, like guests at one table. The Liturgy, as commemorating the institution of the Blessed Sacrament, is celebrated in white vestments with some measure of joyous solemnity. The "Gloria in excelsis" is sung, and during it there is a general ringing of bells, after which the bells are silent until the Gloria is heard upon Easter Eve (Holy Saturday). It is probable that both the silence of the bells and the withdrawing of lights, which we remark in the Tenebræ service, are to be referred to the same source—a desire of expressing outwardly the sense of the Church's bereavement during the time of Christ's Passion and Burial. The observance of silence during these three days dates at least from the eighth century, and in Anglo-Saxon times they were known as "the still days"; but the connexion between the beginning of this silence and the ringing of the bells at the Gloria only meets us in the later Middle Ages. In the modern celebration of Maundy Thursday attention centres upon the reservation of a second Host, which is consecrated at the Mass, to be consumed in the service of the Presanctified next day. This is borne in solemn procession to an "altar of repose" adorned with flowers and lighted with a profusion of candles, the hymn "Pange lingua gloriosi corporis mysterium" being sung upon the way. So far as regards the fact of the consecration of an additional Host to be reserved for the Mass of the Presanctified, this practice is very ancient, but the elaborate observances which now surround the altar of repose are of comparatively recent date. Something of the same honour used, in the later Middle Ages, to be shown to the "Easter Sepulchre"; but here the Blessed Sacrament was kept, most commonly, from the Friday to the Sunday, or at least to

the Saturday evening, in imitation of the repose of Christ's sacred Body in the Tomb. For this purpose a third Host was usually consecrated on the Thursday. In the so-called "Gelasian Sacramentary", probably representing seventh-century usage, three separate Masses are provided for Maundy Thursday. One of these was associated with the Order of the reconciliation of penitents (see the article ASH WEDNESDAY), which for long ages remained a conspicuous feature of the day's ritual and is still retained in the Pontificale Romanum. The second Mass was that of the blessing of the Holy Oils (q. v.), an important function still attached to this day in every cathedral church. Finally, Maundy Thursday has from an early period been distinguished by the service of the Maundy, or Washing of the Feet, in memory of the preparation of Christ for the Last Supper, as also by the stripping and washing of the altars (see MAUNDY THURSDAY).

Good Friday is now primarily celebrated by a service combining a number of separate features. We have first the reading of three sets of lessons followed by "bidding prayers". This probably represents a type of aliturgical service of great antiquity of which more extensive survivals remain in the Gallican and Ambrosian Liturgies. The fact that the reading from the Gospel is represented by the whole Passion according to St. John is merely the accident of the day. Secondly there is the "Adoration" of the Cross, equally a service of great antiquity, the earliest traces of which have already been noticed in connexion with Ætheria's account of Holy Week at Jerusalem. With this veneration of the Cross are now associated the Improperia (reproaches) and the hymn "Pange lingua gloriosi lauream certaminis". The Improperia, despite their curious mixture of Latin and Greek—*agios ô theos; sanctus Deus*, etc.—are probably not so extremely ancient as has been suggested by Probst and others. Although the earliest suggestion of them may be found in the Bobbio Missal, it is only in the Pontificale of Prudentius, who was Bishop of Troyes from 846 to 861, that they are clearly attested (see Edm. Bishop in "Downside Review", Dec., 1899). In the Middle Ages the "creeping to the cross" on Good Friday was a practice which inspired special devotion, and saintly monarchs like St. Louis of France set a conspicuous example of humility in their performance of it. Finally, the Good Friday service ends with the so-called "Mass of the Presanctified", which is of course no real sacrifice, but, strictly speaking, only a Communion service. The sacred ministers, wearing their black vestments, go to fetch the consecrated Host preserved at the altar of repose, and as they return to the high altar the choir chant the beautiful hymn "Vexilla regis prodeunt", composed by Venantius Fortunatus. Then wine is poured into the chalice, and a sort of skeleton of the Mass is proceeded with, including an elevation of the Host after the Pater Noster. But the great consecratory prayer of the Canon, with the words of Institution, are entirely omitted. In the early Middle Ages Good Friday was quite commonly a day of general Communion, but now only those in danger of death may receive on that day. The Office of Tenebræ, being the Matins and Lauds of Holy Saturday, is sung on Good Friday evening, but the church otherwise remains bare and desolate, only the crucifix being unveiled. Such devotions as the "Three Hours" at midday, or the "Maria Desolata" late in the evening, have of course no liturgical character. (See also GOOD FRIDAY.)

The service of Holy Saturday has lost much of the significance and importance which it enjoyed in the early Christian centuries owing to the irresistible tendency manifested throughout the ages to advance the hour of its celebration. Originally it was the great Easter vigil, or watch-service, held only in the late hours of the Saturday and barely terminating

before midnight. To this day the brevity of both the Easter Mass and the Easter Matins preserves a memorial of the fatigue of that night watch which terminated the austerities of Lent. Again the consecration of the new fire with a view to the lighting of the lamps, the benediction of the paschal candle (q. v.), with its suggestions of night turned into day and its reminder of the glories of that vigil which we know to have been already celebrated in the time of Constantine, not to dwell upon the explicit references to "this most holy night" contained in the prayers and the Preface of the Mass, all bring home the incongruity of carrying out the service in the morning, twelve hours before the Easter "vigil" can strictly speaking be said to have begun. The obtaining and blessing of the new fire is probably a rite of Celtic or even pagan origin, incorporated in the Gallican Church service of the eighth century. The magnificent "Præconium Paschale", known from its first word as "the Exsultet", was originally, no doubt, an improvisation of the deacon which can be traced back to the time of St. Jerome or earlier. The Prophecies, the Blessing of the Font, and the Litanies of the Saints are all to be referred to what was originally a very essential feature of the Easter vigil, viz., the baptism of the catechumens, whose preparation had been carried on during Lent, emphasized at frequent intervals by the formal "scrutinies", of which not a few traces are still preserved in our Lenten liturgy. Finally, the Mass, with its joyous Gloria, at which the bells are again rung, the uncovering of the veiled statues and pictures, the triumphant Alleluias, which mark nearly every step of the liturgy, proclaim the Resurrection as an accomplished fact, while the Vesper Office, incorporated in the very fabric of the Mass, reminds us once more that the evening was formerly so filled that no separate hour was available to complete on that day the usual tribute of psalmody. Strictly speaking, Holy Saturday, like Good Friday, is "aliturical", as belonging to the days when the Bridegroom was taken from us. Of this a memorial still remains in the fact that, apart from the one much anticipated Mass, the clergy on that day are not free either to celebrate or to receive Holy Communion.

HERBERT THURSTON.

Holywell, a town in North Wales, situated on the declivity of a hill overlooking a picturesque valley, through which flows a broad stream, the effluent from St. Winefride's Well, joining the River Dee at a distance of two miles from the town. It was once a flourishing place because of the lead and copper mines in its vicinity, but with the decay of the mining industry its commercial glory has fled, and at present the only attraction to visitors is St. Winefride's miraculous well.

I. *The Miraculous Well*.—For more than a thousand years this well has attracted numerous pilgrims. Two documents of the twelfth century, preserved in the British Museum, and printed by the Bollandists, give us its history, with the earliest record of the miraculous cures effected by its waters. These ancient cures included cases of dropsy, paralysis, gout, melancholia, sciatica, cancer, alienation of mind, blood spitting, obstinate cough, chronic pain and fluxion of the bowels, also deliverance from evil spirits. The concourse of pilgrims to the well continued in the sixteenth century during the days of

persecution, and Dr. Thomas Goldwell, Bishop of St. Asaph, who went into exile at the accession of Elizabeth, obtained from the sovereign pontiff the confirmation of certain indulgences granted by Martin V (1417-31) to pilgrims who visited the well. In the seventeenth century, in spite of the severe penal laws, pilgrims still resorted to the well, and the record has been kept of many remarkable cures, one being that of Venerable Father Oldcorne, S.J., the martyr, who was healed miraculously of a gangrene that had formed in the roof of his mouth.

II. *Origin and History of the Well*.—The stream is said to have burst from the ground more than 1200 years ago on the spot where St. Winefride (Gwenfrewi) was slain by Caradoc, son of an Armorican prince, about the year 634 (see WINEFRIDE, St.), and has flowed unceasingly ever since. The place where it rises was previously known as *Sechnant* or the "Dry Valley"; but the name was changed to Ffynnon Gwenfrewi (Winefride's Well), and later to Trefynnon (Holywell), the appellation which it retains to the present day. In 1093 the church at Holywell and the sacred fountain were given by Adeliza, Countess of Chester, to the monastery of St. Werburgh in that city. In 1115 Richard, Earl of Chester, her son, went on a pilgrimage to St. Winefride's Well. In 1240 David, son of Llewellyn, Prince of Wales, granted the church and well with extensive possessions to the monks of Basingwerk Abbey, who held them until 1537, the year of the dissolution. King Richard III ordered the sum of ten marks to be paid annually from the treasury for the support of the chapel of St. Winefride, and the stipend of the priest, and a few years later, probably before 1495, the beautiful buildings now surrounding the Well were erected.

III. *Description of the Well*.—The buildings referred to are in the perpendicular style, and were erected over the spring partly through the munificence of Margaret, Countess of Richmond and Derby, the mother of King Henry VII; but the armorial bearings introduced into the sculpture show that several noble Welsh families, including those of Stanley, Pennant, and Lewis, had a share in the work. Though time has dealt somewhat harshly with the stonework, sufficient remains to show that it was originally a most beautiful structure, abounding in delicate tracery and other carved work. The spring forms a basin enclosed by an octagonal parapet, from which rise eight delicately chiselled columns; these meet overhead in a beautiful traceried canopy, forming a crypt or vault. Above this stands what was once the chapel or oratory of St. Winefride, where pilgrims were wont to spend the night in vigil before bathing. Unfortunately it is now in Protestant hands, and used for the Welsh services of the parish church; but the Well itself, the property of the corporation of Holywell, has for a considerable time been held at an annual rent by the Jesuit Fathers of the Mission.

The water of the spring is of a pale bluish colour, and so clear that at the bottom of the basin, seven feet below the surface, even a pin may be seen. The stones at the bottom, as well as portions of the masonry, are marked with deep crimson or purple stains, which Catholic tradition loves to regard as the blood of the martyr, but which naturalists account for as a peculiar kind of moss, *Jungermannia asplenoides*. The spring sends forth eighty-one tons of water per minute, the water being very cold, never rising above 50° Fahrenheit in any weather, and never freezing. Chemical analysis has never detected any mineral or medicinal properties peculiar to it, that would account for the extraordinary cures, which are often instantaneous. The overflow from the octagonal basin passes into a long narrow piscina, which is entered by steps at either end. Those seeking a cure pass through this piscina, reverently kneeling in the cold water and kissing an ancient cross carved in the stonework. The

hard limestone steps are literally worn away by the bare feet of pilgrims. From this piscina the water passes under a low arch into a small swimming bath, with bathing cots on either side, and then flows onward through Greenfield Valley to join the River Dee, affording on its way motive power to several flannel and flour mills. In a corner opposite the entrance to the crypt where the spring rises, a statue of St. Winefride stands in a decorated niche. The pilgrims on emerging from the piscina throw themselves on their knees before this statue, earnestly imploring the saint's intercession.

Holywood, CHRISTOPHER (Latinized, A SACROBOSCO), Jesuit; b. at Artane, Dublin, in 1559; d. 4 September, 1626. His family, which draws its name from Holywood (*Saithne*), a village near Dublin, had long been distinguished both in Church and State. Christopher Holywood studied at Padua, entered the Society of Jesus at Dôle in 1579, was afterwards professor of Scripture and theology at Pont-à-Mousson, Ferrara, and Padua, and knew Bellarmine in the latter places. In 1598 he was sent to Ireland, but was arrested on his way and confined in the Gatehouse Prison, the Tower of London and Wisbech Castle, and was eventually shipped to the Continent after the death of Queen Elizabeth. He then resumed his interrupted journey and reached Ireland on St. Patrick's Eve, 1604. This same year he published two Latin controversial works at Antwerp. He was soon appointed superior of his brethren, a post of great importance in the absence of all bishops, for it had been impossible, during the fiery trial of Elizabeth's reign, even to preserve their succession. Holywood's letters and reports on the state of Ireland, of which over a score have been printed by Hogan, throw a vivid light on the history of the country. On the accession of King James, there had been a reaction in favour of Catholicism, and if this was strong even in England (see GUNPOWDER PLOT), it was far stronger in Ireland, leading in many cases to the reassumption of the old Catholic churches. Father Holywood and his fellow-Jesuits had their hands full of work, reconciling the lapsed, settling quarrels, and healing the numberless wounds which the barbarous persecution had inflicted on the country. Though there were only four Jesuits in Ireland when he landed, their number rapidly increased, and there were forty-two when he died, besides sixty others in training or occupied in teaching on the Continent. The times of peaceful progress soon passed away, and after the imposition of the Oath of Allegiance there followed a persecution as severe as that of Elizabeth, and far more systematic. By the enforced education of their children as Protestants, many noble and influential families were lost to the Faith, and the lands of Catholics were freely given to Protestant settlers from England. The prospect became ever more gloomy. Yet Holywood's reports show that here and there the Catholics continued to make substantial progress. At Kilkenny, for instance, a school which lasted till Cromwell's time was begun in 1619. Five "residences", or bases for Jesuit Fathers, were established, whence missionaries were sent out in all directions, who worked with great success. Father Galway, about the same time, was sent to the islands and sea-coast of the west of Scotland. These years were perhaps the most laborious and fruitful of the Irish Jesuit mission. Holywood's last extant report is for the year 1624.

J. H. POLLEN.

Holzhauser, BARTHOLOMEW, parish priest, ecclesiastical writer, and founder of a religious community; b. 24 Aug., 1613, at Laugna in the Diocese of Augsburg, Bavaria; d. 20 May, 1658. He was one of the eleven children of Leonard and Catherine Holzhauser—poor, pious, and honest people. His father plied the trade of a shoemaker, and was barely able to support his family. Young Holzhauser developed a great love for books and an earnest desire to enter the sacred ministry. At Augsburg he was admitted to a free school for poor boys, earning his living by singing at the doors and begging. He fell sick of an epidemic then raging, and after his recovery went home and for a time helped his father at work. Then, with the aid of kind friends and especially of the Jesuits, he continued his studies at Neuburg and Ingolstadt. His teachers were unanimous in praising his talents, his piety, and modesty, and entertained great hopes of his usefulness for the Church. On 9 July, 1636, he received the degree of Doctor of Philosophy, then studied theology, in which he merited the baccalaureate on 11 May, 1639. He was ordained priest by the Bishop of Eichstätt, and said his first Mass on Pentecost Sunday (12 June, 1639) in the church of Our Lady of Victory at Ingolstadt. He exercised his priestly functions at this place for some time, and was soon much sought after as a confessor. In the meantime he attended the lectures at the university and was declared licentiate of theology on 14 June, 1640. On 1 August of the same year he came into the Archdiocese of Salzburg, and was made dean and pastor of Tittmoning. On 2 Feb., 1642, the Bishop of Chiemees called him as pastor to St. John's at Leukenthal (then Leogenthal) in the Tyrol.

In the spring of 1655, on the invitation of Archbishop John Philip of Schönthal, he went to Mainz and was soon appointed pastor at Bingen on the Rhine, and in 1657 dean of the district of Algesheim. Here he died at the age of only forty-five, after a life well spent in the service of God and for the welfare of his people and of his fellow-priests. Many wonderful things are related of him, extraordinary cures and the like. Lately a petition has been drawn up at Rome for his canonization. On the occasion of the second centenary of his death a great celebration was held at Bingen in the presence of Bishop von Ketteler of Mainz; his remains were again found, and in 1880 a new monument was erected over his grave at the parish church.

HIS INSTITUTE.—He founded the Bartholomites (United Brethren), or, as they are officially called, the "Institutum clericorum sæcularium in communi viventium", also called Communists. Great and many were the evils caused by the Thirty Years War among the faithful. Faith had become lukewarm; morals and discipline had relaxed not only in the laity but also in the clergy. In consequence Holzhauser, even in the early days of his university course, had been planning the formation of a congregation of secular priests, who would lead an apostolic life in community and become models of priestly perfection and zealous leaders of the people. Such as excelled in science and virtue he intended to place as teachers in the seminaries to educate a new generation of priests willing to use all their energy for the honour of God and the salvation of souls. The priests thus educated he would induce to join the community. The members were expected to live in the seminaries, or in twos or threes in the parishes, and to follow out a set routine of daily prayers and exercises. Funds were to be in common, and all female servants were to be discarded. No vows were to be taken, but a simple promise of obedience to the superior was to be made, confirmed by an oath. Holzhauser tried to establish such a community in the Diocese of Eichstätt, but did not succeed, though several priests were found quite willing to join him. At Tittmoning, encouraged by John Chris-

topher von Lichtenstein, Bishop of Chiemsee, suffragan and principal adviser of the Archbishop of Salzburg, he made a good beginning. His first colleagues were George Kettner, a priest of noted piety who held a benefice at Ingolstadt, George Gündel, pastor of Mailing near Ingolstadt, and Michael Rottmayer, pastor of Leinting. Priests joined from the Diocese of Chiemsee and from other dioceses. At the death of Holzhauser the community had members at Chiemsee, Salzburg, Freising, Eichstätt, Würzburg, and Mainz.

In 1643 Holzhauser took control of the seminary at Salzburg, and placed it under the direction of Rottmayer; in 1649 it was transferred to Ingolstadt. The Seminary of St. Kilian and later many other seminaries were entrusted to the care of the community. In 1653 Dr. Rieger, one of the members, set out for Rome to obtain papal sanction for the institute and its rule. Pope Innocent X lauded the work, but gave no formal approbation. This was given 7 June, 1680, by Innocent XI at the request of Emperor Leopold I. After this the community spread in Poland, Sicily, and Spain. In Rome a house had been assigned them by the pope, but it was not long occupied. The institute had many enemies and did not meet with the appreciation it deserved, so that at the end of the eighteenth century it became extinct, after having had 1595 members (according to the necrology preserved in the archives of the cathedral of Mainz). After Holzhauser, the general directors of the institute were George Gündel, d. 1666; Michael Rottmayer, d. 1681; Stephen Hofer, d. 1693; John Appel, d. 1700; Sebastian Wittmann, d. 1725; Anthony Kippel, d. 1730; Matthew Kerschel, d. 1742; Lambert Gastel, d. 1769; John Christopher Hunold, d. 1770. During the last century the wish was frequently expressed that Holzhauser's institute might be revived or similar unions formed.

WRITINGS.—(a) "Constitutiones et exercitia spiritualia Clericorum sæcularium in communi viventium" (Cologne, 1662; Würzburg, 1669; Rome, 1680; Mainz, 1782, etc.). These constitutions, used in many seminaries during the seventeenth and eighteenth centuries, were of value also for the spread of primary education among the people (Katholik, XXXIX, 359). In the third chapter Holzhauser advises his disciples to be solicitous in immediately and extensively establishing schools in which the young are taught reading, writing, and the rudiments of religion. A new edition was published by Gaduel at Orléans and Paris in 1861 under the title "Venerabilis servi Dei Bartholomæi Holzhauser opuscula ecclesiastica". They contain: (1) "Constitutiones"

(2) "Constitutiones pro spirituali temporalique directione instituti cler. sæc. in communi viventium, ab Innocentio XI approb. die 17 Aug. 1684". (3) "Stationes quotidianorum exercitiorum spiritualium" (4) "De diversis orandi modis et de modo meditandi" (5) "Manipulus piarum precum". (6) "Instructiones de viâ perfectionis et principii practici pro statu clericali et pastorali". (7) "Instructiones concinatoribus catholicis valde utiles" (b) "Epistola fundamentalis", written in 1644 for the consolation and encouragement of his disciples in their heavy trials, when enemies tried to destroy the community. (c) "De humilitate". (d) "Tractatus de discretione spirituum" (e) "Documenta pro iis qui conversioni hæreticorum et infidelium se impendunt". (f) "Visiones".

The last-mentioned work contains the ten visions of Holzhauser, presented by him in 1646 to Emperor Ferdinand III and to Maximilian of Bavaria, together with the explanations given to Vairvaux, confessor of Maximilian. They are entitled: "De septem animalibus"; "De unâ monarchiâ et duabus sedibus"; "De s. Michaele archangelo et sedibus"; "De ecclesiâ sponsâ Dei"; "De propriâ personâ Jesu"; "De egressione Danubii"; "De verme grandi"; "De con-

versione Germaniæ"; "Exprobratio vitiorum, exprobratio impenitentia, quomodo revertatur?"; "De duabus personis" These visions, with a commentary showing their partial fulfilment, were published in German in 1849 by Ludwig Clarus. One of the prophetic visions is about England. Holzhauser foresees the execution of Charles I and the complete ruin of the Church in that kingdom, but also that, after the Holy Sacrifice has ceased for 120 years, England would be converted and do more for religion than it had done after its first conversion. This seems to have been fulfilled, for prohibition of Mass under penalty of capital punishment was enacted in 1658, and partially recalled in 1778 (Rhode Island, 1663-1683).

(g) "Interpretatio Apocalypsis usque ad cap. XV, v. 5." This commentary, which Holzhauser wrote at Leukenthal, exists in several manuscript copies; printed in 1784 at Bamberg; in German in 1849 at Ratisbon by Clarus; in 1850 at Vienna. Holzhauser's idea is: The seven stars and the seven candlesticks seen by St. John signify seven periods of the history of the Church from its foundation to its consummation at the final judgment. To these periods correspond the seven churches of Asia Minor, the seven days of the Mosaic record of creation, the seven ages before Christ, and the seven gifts of the Holy Ghost. Since, he says, all life is developed in seven stages, so God has fixed seven periods for regeneration. The first age of the Church, the *status seminativus*, from Christ and the Apostles to Pope Linus and Emperor Nero, is typified by the first day of creation "Spiritus Dei ferebatur super aquas", the gift of wisdom and the age from Noe. Similarly he treats (2) the *status irrigativus*, the days of persecution; (3) *status illuminativus* from Pope Sylvester to Leo III; (4) *status pacificus* from Leo III to Leo X; (5) *status afflictivus et purgativus* from Leo X to a strong ruler and holy pope; (6) *status consolativus* from that holy pope to the birth of Antichrist; (7) *status desolationis* from Antichrist to the end of the world. The central features of this commentary—the strong ruler and the holy pope, a favourite subject of medieval prophecy, as well as the division of church history into seven periods; the idea that the Holy Roman Empire is to be the last on earth, and Chosroes, the Persian king, the predecessor of Antichrist; the special significance of the 1260 days of Apoc., xii, 6, are borrowed from Joachim di Fiore (d. 1202; cf. "Hist.-pol. Blätter," CXVIII, 142). Still the commentary is considered an instructive and edifying book.

FRANCIS MERSHMAN.

Homes.—This term, when used in an eleemosynary sense, covers all institutions that afford the general comforts of domestic life to persons who are defective and dependent. Homes differ from hospitals, inasmuch as the primary object of the latter is medical treatment of the sick; and from hotels, because these do not, as a rule, aim at being a substitute in all respects for a natural home, and because the majority of their patrons are neither dependent nor defective. As here used, the word *home* has about the same general signification as *asylum*, except that the latter term still retains something of its original meaning of refuge, and the asylum sometimes includes, as an important part of its provisions, medical treatment of its inmates. Thus we speak of insane asylums and insane hospitals, but rarely of homes for the insane. Nevertheless, the term *homes* is extended to a great variety of institutions. There are homes for the blind, the deaf, the aged, the incurable, the fallen, soldiers, sailors, orphans, foundlings, and paupers. They may

be permanent or temporary, according to the period of time that the inmates are permitted to spend in them; but the general character of all the persons to whom they give shelter is defectiveness and, as a rule, inability to pay for their own support. A working-girls' home, or a workingmen's home, is a misnomer, since these places are merely a special kind of hotel or boarding-house.

The first homes of which we have any knowledge were included in the *xenodochia*, or hospitals, that arose under the auspices of the Church during the reign of Constantine the Great. These institutions gave shelter not only to the sick, strangers, and travelers, but to widows, foundlings, and the homeless generally. Within a short time after their origin, there was at least one hospital in every episcopal city, and they were not unknown in the smaller towns and even in the country places. The monastic hospitals had departments for the care of the blind, the deaf, and the insane. It was not until the twelfth century that distinct homes for defectives became of any importance. The first of these were the leper-houses. (See LEPROSY.) For a long time after that date the majority of homeless defectives were still cared for in some department of or in connexion with the hospitals. Indeed, the monastic hospitals and the municipal hospitals were the centres for the relief of all forms of distress during the later Middle Ages and down to the time of the Reformation. Their rich endowments formed the principal means of carrying on so many forms of charitable activity that are now taken care of by many different agencies. Among the decrees of the Council of Trent for the regulation and reformation of the system of poor-relief, we find several with special application to hospitals. In France no separate homes for defectives came into existence until the time of Louis XIV. This monarch founded several institutions in Paris and in some of the other large cities of his kingdom for the special care of the poor, foundlings, and other helpless classes. The magnificent work of St. Vincent de Paul naturally comes to mind here. In Germany defectives continued generally to be cared for in connexion with the hospitals until the middle of the eighteenth century. The same general condition prevailed long after the Reformation in Italy and Spain. At present there are homes under Catholic auspices for the care of all kinds of defectives in every country of Christendom. Most of them are in charge of religious communities, chiefly communities of women. The Little Sisters of the Poor and the Sisters of the Good Shepherd are merely two conspicuous examples of religious communities that manage institutional homes. In the United States, and in most of the countries of Europe, are to be found homes for the various forms of dependency, under the management of the public authorities. The system of almshouses, or workhouses, in the British Isles and in Germany affords typical instances. According to the volume of the United States Census on "Benevolent Institutions", the total number of homes (excluding insane asylums) in that country at the end of the year 1904 was 2392, of which 254 were public, 1264 private, and 874 ecclesiastical. The whole number of inmates was 212,782.

The question of the precise value of homes is so complex that it easily gives rise to a great variety of opinion. Extremists condemn them utterly or approve the principle of them without qualification. Probably the truth lies somewhere near the middle. An institutional home is obviously of great benefit to all persons who cannot obtain proper care elsewhere. It can supply all the purely physical comforts of the natural home, and thus meet the basic human needs. If it is properly managed it is capable of providing some resemblance to the conditions of family life, by fostering a bond of affection and a consciousness of community of interests. Obviously, however, this

basis can never fully take the place of community of blood. Most of the varied and rich relationships of the natural home and the natural family are impossible even in the ideally managed institution. The very size of the group in the latter is a serious obstacle to anything like the care and affection that is within the reach of the individual in a family. Moreover, the physical and mental inconveniences of following a uniform routine of daily life can rarely become a matter of indifference to the individual, and not infrequently will more than offset the more fundamental material comforts. Then there is always a lack of opportunity for that individual self-direction which is an essential part of normal education and self-development. This criticism applies more particularly to homes for children. On the other hand, life in an institutional home is often preferable to life in a family on the boarding-out plan. This is due to the absence of even that imitation of the paternal or maternal attitude which the former aims to provide. The person who is boarding a defective fellow-being is under a strong temptation to see in their mutual relationship only a business arrangement. Finally, it must be noted that institutional homes in charge of religious communities ought to be, and usually are, better substitutes on their human side for the natural home than those which are under the direction of secular persons. The directors of the latter cannot have, as a rule, the motive or the capacity for an equal degree of personal kindness and affection. Unfortunately, however, our Catholic homes are not infrequently inferior in the matter of material equipments and comforts. (See FOUNDLING ASYLUMS; GOOD SHEPHERD, SISTERS OF THE; ORPHANAGES; POOR, LITTLE SISTERS OF THE.)

JOHN A. RYAN.

Homicide (Lat. *homo*, man; and *cædere*, to slay) signifies, in general, the killing of a human being. In practice, however, the word has come to mean the unjust taking away of human life, perpetrated by one distinct from the victim and acting in a private capacity. For the purposes of this article, therefore, account is not taken of suicide, nor of the carrying out of the penalty of death by due process of law. (See PUNISHMENT, CAPITAL.) The direct killing of an innocent person is, of course, to be reckoned among the most grievous of sins. It is said to happen directly when the death of the person is viewed either as an end attractive in itself, or at any rate is chosen as a means to an end. The malice discernible in the sin is primarily chargeable to the violation of the supreme ownership of God over the lives of His creatures. It arises as well from the manifest outrage upon one of the most conspicuous and cherished rights enjoyed by man, namely the right to life. For the scope contemplated here, a person is regarded as innocent so long as he has not by any responsible act brought any hurt to the community or to an individual comparable with the loss of life. Homicide is said to be indirect when it is no part of the agent's plan to bring about the death which occurs, so that this latter is not intended as an end nor is it selected as a means to further any purpose. In this hypothesis it is, at most, permitted on account of a reason commensurate with so great an evil as is the destruction of human life. Thus, for instance, a military commander may train his guns upon a fortified place, even though in the bombardment which follows he knows perfectly well that many non-combatants will perish. The sufficient cause in the case is consideration of the highest public good to be subserved by the defeat of the enemy. When, however, the untoward death of a person is the outcome of an action which is prohibited

precisely because of the founded likelihood of its having this fatal result, then in the court of conscience the doer is held to be guilty in spite of his disclaimer of all intention in the matter. Hence, for example, one who fires a shotgun into the public thoroughfare, whilst protesting that he has no wish to work any mischief, is, nevertheless, obviously to be reproached as a murderer if perchance his bullet has killed anybody.

For the protection of one's own or another's life, limb, chastity, or valuables of some moment, it is agreed on all sides that it is lawful for anyone to repel violence with violence, even to the point of taking away the life of the unjust assailant, provided always that in so doing the limits of a blameless defence be not exceeded. It is proper to note (1) that the danger apprehended for oneself or another must be actual and even, so to speak, imminent, not merely prospective. Hence, the teaching here propounded cannot be adduced to justify the use of force for purposes of reprisal or vengeance by a private individual. This latter is a function belonging to the public authority. (2) No more violence may be employed than is required to safeguard sufficiently the goods already enumerated upon which an unwarranted assault has been made. The right of self-defence so universally attributed does not necessarily presuppose in the aggressor an imputable malice. It is enough that one's life or some other possession comparable with life should be threatened outside of the proper channels of the law. One might, for example, kill a lunatic, or one crazed with drink, although there is no malice on their part, if this were the only effective way to head off their onset. St. Thomas is careful to say that even in self-defence it is unlawful to kill another directly, that is, to intend immediately the death of that other. His mind is that the formal volition of the self-defender should entirely be to preserve his own life and repulse the onslaught, whilst as to the loss of life, which, as a matter of fact, ensues, he keeps himself in a purely permissive attitude. This contention is combated by De Lugo and some others, who believe it to be right to choose expressly the killing of another as the means to self-defence. In conformity with the Thomistic doctrine is the axiomatic utterance that a private individual may never lawfully kill anyone whatever, because in self-defence one does not, technically speaking, kill, but only endeavours to stop the trespasser. Hence, according to the Angelic Doctor, it would follow that only by due operation of law may a human being ever be directly done to death.

Unlike other instances of damage wrought, the murderer cannot offer an adequate indemnity. For one thing, he cannot restore the life he has destroyed. There is no doubt, however, but that he is obliged to make good whatever expenses may have been incurred for medical attendance or hospital care, and this to the surviving heirs. He is likewise bound to furnish to the immediate relatives of his victim, such as wife, children, parents, the sustenance for which they depended on the latter. Should the murderer die before being able to satisfy these claims they pass as a burden to be met by the inheritors of his estate. It is not easy to determine what obligation, if any, the slayer has to the creditors of the slain; but it seems equitable to say that he must at least reimburse them whenever it is clear that his aim in the perpetration of the deed of blood was to injure them.

One who has killed another under circumstances that show his act to be a mortal sin whether he directly or only indirectly intended the fatal result, and whether he was the physical or the moral cause, contracts the canonical impediment known as irregularity. In ancient times many penalties, such as censures and the like, were levelled against those who procured the assassination of others. By this crime

was meant the procedure of those who, by the payment or promise of a reward, explicitly commissioned abandoned men to put others to death. The text of the law denouncing this atrocity directly took cognizance of the case in which infidels were hired to do away with Christians. The excommunication imposed has since been removed, but other punishments remain in force. Thus, for example, a criminal of this sort could not invoke in his behalf the right of asylum; if he were a cleric he would be regarded as canonically degraded, and left to the disposition of the secular arm, so that he might be put to death without any actionable violation of the immunity proper to his state. Whether the actual assassin, who carries out the orders of his principal, is to be considered as included in the provisions of the law, is not certain.

JOSEPH F. DELANY.

II. IN CIVIL JURISPRUDENCE.—According to its signification in jurisprudence homicide is "the killing of a human being by a human being" (J. F. Stephen, "Digest of the Criminal Law", London and New York, 1894, 175; Wharton, "The Law of Homicide", 3rd ed., Rochester, N. Y., 1907, 1), and may be "free from legal guilt" (Serjeant Stephen, "New Commentaries on the Laws of England", 14th ed., London, 1903, IV, 37; Wharton, *op. cit.*, 1). The very ancient Latin language expressed the act of killing a human being by numerous terms, but not by the term *homicidium*, which came into use at a comparatively late period (T. Mommsen, "Le Droit pénal Romain", French tr., Paris, 1907, II, 324-5). That it did not necessarily import the deed of a criminal Horace's allusion to *homicidam Hectorem* (Epod., xvii, 12) indicates.

Homicide free from legal guilt was by the English law defined as either justifiable or excusable. Of justifiable homicide an instance is afforded by such "unavoidable necessity" as the execution of a criminal "pursuant to the death warrant and in strict conformity to the law" (Wharton, *op. cit.*, 9). Instances of excusable homicide would be killing in self-defence or an accidental killing by a person doing a lawful act without any intention to hurt (Idem, *op. cit.*). But contrary to the legal doctrine which Sir William Blackstone (Commentaries on the Laws of England, IV, 186) derives from Lord Bacon, modern English law does not seem to admit necessity of self-preservation as excuse for killing "an innocent and unoffending neighbour" (Queen vs. Dudley and Stephens, English Law Reports, 14 Queen's Bench Division, 286). Homicide under circumstances rendering the act neither justifiable nor excusable is a crime of the class denominated felonies (Bishop, "New Comment. on Crim. Law", Chicago, 1892, II, sec. 744). Felonious homicide, when imputed by law to the infirmity of human nature and deemed without malice, is termed manslaughter, being either a voluntary killing "in a sudden heat of passion", or an involuntary killing "in the commission of an unlawful act" (Wharton, *op. cit.*, 6). Felonious homicide when accompanied by malice constitutes murder, a crime committed "where a person of sound memory and discretion unlawfully kills any reasonable creature in being in the peace of the commonwealth or sovereign with malice prepense or aforethought, either express or implied" (Wharton, *op. cit.*, 2). "The King's peace", Blackstone deems proper to specify, is so comprehensive that to kill "an alien, a Jew or an outlaw" (except an alien enemy in time of war) "is as much murder as to kill the most regular born Englishman." But he adds that, "to kill a child in its mother's womb is now no murder, but a great misprision" (*op. cit.*, IV, 198).

Murder in its most odious degree, according to

Blackstone (op. cit., IV, 204), is what the former English law termed petit treason, the killing by an inferior of a superior to whom the slayer owed faith and obedience. This crime might, therefore, be committed by an ecclesiastic against his superior, by a wife against her husband, or by a servant against his master, acts which modern law does not distinguish from other homicides [op. cit., IV, 203, note to Lewis's edition (Phila., 1897), 204] (Bishop, op. cit., I, sec. 611). Suicide is felonious homicide by the English common law (Wharton, op. cit., 587). But the ancient forfeiture of goods being now abolished, this offence is beyond the reach of human tribunals (Bishop, op. cit., II, sec. 1187). That a person shall be legally guilty of criminal homicide death must have occurred within a year and a day after the occurrence out of which an accusation arises (Bishop, op. cit., sec. 640). Although the criminal law of the States of the United States (except Louisiana) is based on the English common law, yet statutory modifications are numerous and important.

CHARLES W. SLOANE.

Homiletics.—Homiletics is the science that treats of the composition and delivery of a sermon or other religious discourse. It includes all forms of preaching, viz., the sermon, homily, and catechetical instruction. Since the nineteenth century, homiletics has taken its place, especially in Germany, as a branch of pastoral theology. The "Standard Dictionary" defines Homiletics as "that branch of rhetoric that treats of the composition and delivery of sermons or homilies". Many differ from this definition, and maintain that homiletics as a science is distinct from rhetoric. Of this we shall be better able to judge after considering the origin and history of homiletics; and the question will be noticed towards the end of this article. As the first form of preaching was largely the homily, the reader is referred to the article thereon for much that will supplement what is here stated. Needless to say, Christ himself preached, and He commissioned His Apostles to do so. His preaching included two forms of sermon, the missionary and the ministerial (to which correspond the *magisterium* and the *ministerium* of the Church), the former to unbelievers, the latter to those already in the Faith. Of the latter we have a striking example in the discourse after the Last Supper, John, xiv-xvi. It cannot be said that His preaching took any definite, rounded form, in the sense of a modern sermon; His aim was to sow the seed of the word, which He scattered broadcast, like the sower in the parable. His commission to His Apostles included both kinds. For the former or missionary preaching, see Matt., xxviii, 19; Mark, xvi, 15; iii, 14; Luke, ix, 2. St. Paul's sermon referred to in Acts, xx, 7-11, is an example of the second kind of preaching. In this the Apostles were supported by assistants who were elected and consecrated for that purpose, for example, Timothy and Titus; as also by those who had been favoured with charismata. The homily referred to in Justin Martyr's "Apology" (cf. HOMILY) is an example of ministerial, as distinct from missionary, preaching. In missionary preaching the Apostles were also assisted, but in an informal way, by the laity, who explained the Christian doctrine to their acquaintances amongst unbelievers who, in their visits to the Christian assemblies, must have heard something of it, v. g., cf. I Cor., xiv, 23-24. This is particularly true of Justin Martyr, who, wearing his philosopher's cloak, went about for that purpose. The sermons to the faithful in the early ages were of the simplest kind, being merely expositions or paraphrases of the passage of Scripture that was read, coupled with extempore effusions of the heart. This explains why there is little or nothing in the way of sermons or homilies belonging to that period. It also explains the strange statement made by Sozomen

(Hist. Eccl., VII, xix), and by Cassiodorus in his "Tripartite History", which Duchesne (Christian Worship, p. 171, tr. London, 1903) apparently accepts, that no one preached at Rome. (Sozomen wrote about the time of Pope Xystus III.) Thomassin's explanation (Vetus et Nova Eccl. Disciplina, II, lxxxii, 503) of Sozomen's statement is that there was no preaching in the sense of an elaborate or finished discourse before the time of Pope Leo—with the exception, perhaps, of the address on virginity by Pope Liberius to Marcellina, sister of St. Ambrose, on the occasion of her taking the veil, which is regarded as a private discourse. And the reason for this he attributes to the stress of persecution. Neander (I, 420, note) says of Sozomen's statement: "The remark could not extend to the early times; but suppose it did, it meant that the sermon was only secondary. Or the fact may have been that this Eastern writer was deceived by false accounts from the West; or it may have been that the sermon in the Western Church did not occupy so important a place as it did in the Greek Church."

The office of preaching belonged to bishops, and priests preached only with their permission. Even two such distinguished men as St. Augustine and St. Chrysostom preached, as priests, only when commissioned by their respective bishops. Origen as a layman expounded the Scriptures, but it was by special permission. But this is quite different from saying (as is stated by "Chambers' Encyclopædia", the "Encyclopædia Metropolitana", the "Encyclopædia Britannica", older edition) that priests were not ordinarily allowed to preach before the fifth century. This is not tenable in the light of history. For instance, Felix, priest and martyr, preached in the third century, under two bishops, Maximus and Quintus. Of the latter it was said that his mouth had the tongue of Felix (Thomassin, *ibid.*, c. xiii, 505; Paulinus, "Poems"). Priests, indeed, were forbidden to preach in Alexandria; but that was on account of the Arian heresy. A custom springing from this had spread to the north of Africa; but Valerius, Bishop of Hippo, broke through it, and had Augustine, as yet a priest, to preach before him, because he himself was unable to do so with facility in the Latin language—"cum non satis expedite Latino sermone concionari posset". This was against the custom of the place, as Possidius relates; but Valerius justified his action by an appeal to the East—"in orientalibus ecclesiis id ex more fieri sciens". Even during the time of the prohibition in Alexandria, priests, as we know from Socrates and Sozomen, interpreted the Scriptures publicly in Cæsarea, in Cappadocia, and in Cyprus, candles being lighted the while—*accensis lucernis*. As soon as the Church received freedom under Constantine, preaching developed very much, at least in external form. Then for the first time, if, perhaps, we except St. Cyprian, the art of oratory was applied to preaching, especially by St. Gregory of Nazianzus, the most florid of Cappadocia's triumvirate of genius. He was already a trained orator, as were many of his hearers, and it is no wonder, as Bardenhewer (Patrology, p. 290) expresses it, "he had to pay tribute to the taste of his own time which demanded a florid and grandiloquent style". But, at the same time, he condemned those preachers who used the eloquence and pronunciation of the theatre. The most notable preachers of the century, St. Basil and the two Gregories (the "Clover-leaf of Cappadocia"), Sts. Chrysostom, Ambrose, Augustine, and Hilary, were all noted orators. Of the number the greatest was St. Chrysostom, the greatest since St. Paul, nor has he been since equalled. Even Gibbon, while not doing him justice, had to praise him; and his teacher of rhetoric, Libanius, is said to have intended John as his successor, "if the Christians had not taken him". It is a mistake, however, to imagine that they preached only

oratorical sermons. Quite the contrary: St. Chrysostom's homilies were models of simplicity, and he frequently interrupted his discourse to put questions in order to make sure that he was understood; while St. Augustine's motto was that he humbled himself that Christ might be exalted. In passing we might refer to a strange feature of the time, the applause with which a preacher was greeted. St. Chrysostom especially had to make frequent appeals to his hearers to keep quiet. Bishops commonly preached outside their own dioceses, especially in the great cities; polished sermons were evidently in demand, and a stipend was given, for we read that two Asiatic bishops, Antiochus and Severianus, went to Constantinople to preach, being more desirous of money than of the spiritual welfare of their hearers (Thomassin, *ibid.*, ix, 504).

After the age here described preaching was on the decline in the West, partly because of the decay of the Latin language (cf. Fénelon, "Dial.", 164), and in the East, owing to the controversies on Arianism, Nestorianism, Eutychianism, Macedonianism, and other heresies. But still preaching was regarded as the chief duty of bishops; for instance, Cæsarius, Bishop of Arles, gave charge of all the temporal affairs of his diocese to deacons, that he might devote all his time to the reading of the Scriptures, to prayer, and to preaching. The next great name in preaching is that of St. Gregory the Great, particularly as a homilist. He preached twenty homilies, and dictated twenty more, because, through illness and loss of voice, he was unable to preach them personally. He urged bishops very strongly to preach; and, after holding up to them the example of the Apostles, he threatened the bishops of Sardinia in the following words: "Si cuius libet Episcopi Paganum rusticum invenire potuero, in Episcopum fortiter vindicabo" (III, ep. xxvi). An edict was issued by King Guntram stating that the assistance of the public judges was to be used to bring to the hearing of the word of God, through fear of punishment, those who were not disposed to come through piety. The Synod of Trullo laid down that bishops should preach on all days, especially on Sundays; and, by the same synod, bishops who preached outside their own diocese were reduced to the status of priests, because being desirous of another's harvest they were indifferent to their own—"ut qui aliena messis appetentes essent, suæ incuriosi." At the Council of Arles, in 813, bishops were strongly exhorted to preach; and the Council of Mainz, in the same year, laid down that bishops should preach on Sundays and feast days either themselves (*suo Marte*) or through their vicars. In the Second Council of Reims (813), can. xiv, xv, it was enjoined that bishops should preach the homilies and sermons of the Fathers, so that all could understand. And in the Third Council of Tours (can. xvii), in the same year, bishops were ordered to make a translation of the homilies of the Fathers into the rustic Roman tongue, or *theodesque*—the rustic Roman tongue being a species of corrupt Latin, or patois, understood by the uneducated (Thomassin, "De Benef.," II, l. III, c. lxxxv, p. 510). Charlemagne and Louis the Pious were equally insistent on the necessity of preaching. The former went so far as to appoint a special day, and any bishop who failed to preach in his cathedral before that day was to be deposed. Pastors, too, were ordered to preach to their people as best they could; if they knew the Scriptures, they were to preach them; if not, they were at least to exhort their hearers to avoid evil and do good (Sixth Council of Arles, 813, can. x). The Homiliarium of Charlemagne is treated elsewhere (see HOMILIARUM).

We next come to the Middle Ages. It has been commonly said by non-Catholic writers that there was little or no preaching during that time. So popular was preaching, and so deep the interest taken in it, that preachers commonly found it necessary to travel

by night, lest their departure should be prevented. It is only in a treatise on the history of preaching that justice could be done this period. The reader is referred to Digby's "Mores Catholici", vol. II, pp. 158-172, and to Neale, "Mediæval Sermons". As to style, it was simple and majestic, possessing little, perhaps, of so-called eloquence as at present understood, but much religious power, with an artless simplicity, a sweetness and persuasiveness all its own, and such as would compare favourably with the hollow declamation of a much-lauded later period. Some sermons were wholly in verse, and, in their intense inclusiveness of thought, remind one of the Sermon on the Mount:—

Magna promisimus; majora promissa sunt nobis:

Servemus hæc; adspiremus ad illa.

Voluptas brevis; pœna perpetua.

Modica passio; gloria infinita.

Multorum vocatio; paucorum electio;

Omnium retributio.

(St. Francis, as quoted by Digby, *op. cit.*, 159.)

The characteristics of the preaching of the time might be summed up as follows: First, an extraordinary use of Scripture, not a mere introducing of the Sacred Text as an accretion, but such a use as comes from entwining with the preacher's own thought. It would almost appear as if many preachers knew the Scriptures by heart. In some cases, however, this admirable use was marred by an exaggerated mystical interpretation, which originated in the East and was much sought after by the Jews. Secondly, power on the part of the preachers of adapting their discourses to the wants of the poor and ignorant. Thirdly, simplicity, the aim being to impress a single striking idea. Fourthly, use of familiar maxims, examples, and illustrations from life—their minds must have been much in touch with nature. And, fifthly, intense realization, which necessarily resulted in a certain dramatic effect—they saw with their eyes, heard with their ears, and the past became present. For examples, the reader is again referred to the collection of "Mediæval Sermons" by Neale.

A few words as to the influence of scholastic philosophy. It supplied an almost inexhaustible store of information; it trained the mind in analysis and precision; whilst, at the same time, it supplied a lucidity of order and cogency of arrangement such as we look for in vain in even the great orations of Chrysostom. On the other hand, philosophy regards man only as an intellectual being, without considering his emotions, and makes its appeal solely to his intellectual side. And, even in this appeal, philosophy, while, like algebra, speaking the formal language of intellect, is likely to be wanting from the view-point of persuasiveness, inasmuch as, from its nature, it makes for condensation rather than for amplification. The latter is the most important thing in oratory—"Summa laus eloquentiæ amplificare rem ornando." Fénelon (Second Dialogue) describes it as portrayal; De Quincey, as a holding of the thought until the mind gets time to eddy about it; Newman gives a masterly analysis of it (*Idea of a Univ.*, 1899, p. 280); his own sermons are remarkable for this quality of amplification, as are those of Bourdaloue on the intellectual, and those of Massillon on the intellectual-emotional side, v. g. the latter's sermon on the Prodigal Son. Philosophy, indeed, is necessary for oratory; philosophy alone does not constitute oratory, and, if too one-sided, may have an injurious effect—"Logic, therefore, so much as is useful, is to be referred to this one place with all her well-couched heads and topics, until it be time to open her contracted palm into a graceful and ornate rhetoric" (Milton, "Tractate of Education"). What has been here stated refers to philosophy as a system, not to individual

philosophers. It is scarcely necessary to say that many Scholastics, such as Sts. Thomas and Bonaventure, were noted preachers. It is a pity, however, that St. Bonaventure did not treat a little more fully of *Dilatatio*, which forms the third part of his work "De Arte Concionandi".

In a sketch, however brief, of the history of preaching, a reference to the mystics is called for; but, as their preaching cannot be explained without an exposition of their system, the reader is referred to the article on MYSTICISM. Suffice it to say here that the tendency of mysticism is, in the main, the opposite to that of philosophy. Mysticism makes for warmth; philosophy, for coldness—"Cold as a mountain in its star-pitched tent stood high philosophy." The next noted period in the history of preaching is the Renaissance. This period, too, is treated in its proper place. As to preaching, Humanism contributed more to oratorical display than to piety in the pulpit. The motto of its two representative types, Reuchlin and Erasmus, was: "Back to Cicero and Quintilian." Erasmus on visiting Rome exclaimed: "Quam mellitas eruditorum hominum confabulationes, quot mundi lumina." Batiffol (Hist. of the Roman Breviary, p. 230) says: "One Good Friday, preaching before the pope, the most famous orator of the Roman Court considered that he could not better praise the Sacrifice of Calvary than by relating the self-devotion of Decius and the sacrifice of Iphigenia." Fortunately, this period did not last long; the good sense of ecclesiastics rebelled against it, and the religious upheaval that soon followed gave them something else to think of. In the Reformation and post-Reformation period the air was too charged with controversy to favour high-class preaching. The Council of Trent recommended preachers to turn aside from polemics; it also (Sess. V, cap. ii) pronounced that the primary duty of preaching devolved on bishops, unless they were hindered by a legitimate impediment; and ordered that they were to preach in person in their own church, or, if impeded, through others; and, in other churches, through pastors or other representatives.

The famous names of the French preachers of the classical seventeenth-century period—according to Voltaire, probably the greatest in pulpit oratory of all time—are fully dealt with in their proper place. It is sufficient to state here that the greatest were Bossuet, Bourdaloue, and Massillon; Fénelon, matchless, probably, for purity of style, burnt his sermons. The first was the most majestic; the second, the most logical and intellectually compelling; the third, the greatest searcher of hearts, the most like Chrysostom, and, taken all in all, the greatest of the three. We are told that Voltaire kept a copy of his "Grand Carême" on his table, side by side with the "Athalie" of Racine. In this age Chrysostom was the great model for imitation; but it was Chrysostom the orator, not Chrysostom the homilist. It would be a mistake at the present day to imitate their style, which was influenced not a little by the unhealthy stimulus of the admiring court of Louis XIV. Their majestic style, with its grand exordium and its sublime peroration, became the fashion in the succeeding age; but it was a case of ordinary men trying to don the armour, and to handle the weapons, of giants, or of the unskilful rider venturing on the horses of Achilles. The result was that the imitators became proficient only in mannerisms and affectation, and dropped into sickly sentimentality and mechanical formalism. The sensible "Dialogues" of Fénelon, however, remained as a great check, being in fact to preaching what Hamlet's address to the players has been to acting. Of these "Dialogues" Bishop Dupanloup has said: "If the precepts of Fénelon had been well understood, they would have long since fixed the character of sacred eloquence among us." Sound principles, too, were

laid down by Blaise Gisbert in his "L'Eloquence chrétienne dans l'idée et dans la pratique", by Amadeus Bajocensis in "Paulus Ecclesiastes, seu Eloquentia Christiana", and by Guido ab Angelis in "De Verbi Dei Prædicatione", all of which sounded a return to the simplicity of style of the Fathers.

In this brief historical sketch we are noticing only epochs, and the next important one is that of the so-called *conférences* in Notre-Dame in Paris, following the Revolution of 1830. The most prominent name identified with this new style of preaching was that of the Dominican Lacordaire, who, for a time, with Montalembert, was associate editor with de Lamennais of "L'Avenir". This new style of preaching discarded the form, the division, and analysis of the scholastic method. The power of Lacordaire as an orator was beyond question; but the *conférences*, as they have come down to us, while possessing much merit, are an additional proof that oratory is too elusive to be committed to the pages of a book. The Jesuit Père de Ravignan nobly shared with Lacordaire the honour of occupying the pulpit of Notre-Dame. For some years, other able but less eloquent men followed, and the semi-religious, semi-philosophic style was beginning to grow tiresome, when Monsabré, a disciple of Lacordaire, with a single stroke set it aside, and confined himself, in a masterly series of discourses, to an explanation of the Creed; whereupon it was sententiously remarked that the bell had been ringing long enough, it was time for Mass to begin (cf. Boyle, "Irish Eccl. Rec.", May, 1909).

As to preaching at the present day, we can clearly trace the influence, in many respects, of Scholasticism, both as to matter and form. In matter a sermon may be either moral, dogmatic, historical, or liturgical—by moral and dogmatic it is meant that one element will predominate, without, however, excluding the other. As to form, a discourse may be either a formal, or set, sermon; a homily (for different kinds see HOMILY); or a catechetical instruction. In the formal, or set, sermon the influence of Scholasticism is most strikingly seen in the analytic method, resulting in divisions and subdivisions. This is the thirteenth-century method, which, however, had its beginnings in the sermons of Sts. Bernard and Anthony. The underlying syllogism, too, in every well-thought-out sermon is due to Scholasticism; how far it should appear is a question that belongs to a treatise on homiletics. As to the catechetical discourse, it has been so much favoured by Pope Pius X that it might be regarded as one of the characteristics of preaching at the present day. It is, however, a very old form of preaching, as the name (from *κατά* and *ἡχθή*) implies, i. e. the instruction that was given by word of mouth to the catechumens. It was used by Christ Himself, by St. Paul, by St. Cyril of Jerusalem, by St. Clement and Origen at Alexandria, by St. Augustine, who wrote a special treatise thereon (*De catechizandis rudibus*), also, in later times, by Gerson, chancellor of the University of Paris, who wrote "De parvulis ad Christum trahendis"; Clement XI and Benedict XIV gave to it all the weight of their authority, and one of the greatest of all catechists was St. Charles Borromeo. There is the danger, however, from the very nature of the subject, of this form of preaching becoming too dry and purely didactic, a mere catechesis, or doctrinism, to the exclusion of the moral element and of Sacred Scripture. In recent days, organized missionary preaching to non-Catholics has received a new stimulus. In the United States, particularly, this form of religious activity has flourished; and the Paulists, amongst whom the name of Father Hecker is deserving of special mention, are to be mainly identified with the revival. Special facilities are afforded at the central institute of the organization for the training of those who are to impart catechetical instruction, and the non-controversial principles of the association

are calculated to commend it to all earnestly seeking after truth.

BIBLIOGRAPHY OF THE HISTORICAL DEVELOPMENT OF PREACHING.—Practice preceded theory. Certain ideas are to be found in the Fathers, and these have been collected by Paniel in the introduction to his work "Gesch. der christl. Beredsamkeit". The first to treat of the theory of preaching was St. Chrysostom, in his work "On the Priesthood" (*περὶ Ἱερωσύνης*). Inasmuch as this contains only reflections on preaching, St. Augustine's "De doctrinâ Christianâ" might be regarded as the first manual on the subject. It consists of four books. The first three deal with collecting the materials for preaching, "modus inveniendi quæ intelligenda sunt", and the last with the presentation thereof, "modus proferendi quæ intellecta sunt". He goes to Cicero for rules in the latter. He makes a distinction, in which he evidently follows Cicero, between *sapientia* (wisdom) and *eloquentia* (the best expression of it). *Sapientia* without *eloquentia* will do no good; neither will *eloquentia* without *sapientia*, and it may do harm; the ideal is *sapientia* with *eloquentia*. He adapts Cicero's *ut doceat, ut delectet, ut flectat*, changing them to *ut veritas pateat, ut placeat, ut moveat*; and lays down these as the rules by which a sermon is to be judged. This work of Augustine was the classic one in homiletics. In this connexion we are reminded of the three conditions which Hugh of St. Victor (d. 1141) in the Middle Ages laid down for a sermon; that it should be "holy, prudent, and noble" for which, respectively, he required sanctity, knowledge, and eloquence in the preacher; and of Fénelon's "must prove, must portray, must impress" (Second Dialogue). We might also mention St. Augustine's work "De rudibus catechizandis". St. Gregory the Great's work, "Liber regulæ pastoralis", is still extant, but is inferior to St. Augustine's; it is rather a treatise on pastoral theology than on homiletics. We have it on the testimony of Hincmar that a copy used to be given to bishops at their consecration. In the ninth century Rabanus Maurus (d. 856), Archbishop of Mainz, wrote a treatise "De institutione clericorum", in which he depends much on St. Augustine. In the twelfth century Guibert, Abbot of Nogent (d. 1124), wrote a famous work on preaching entitled "Quo ordine sermo fieri debet". This is one of the historical landmarks in preaching. It is replete with judicious instruction; it recommends that preaching should be preceded by prayer; it says that it is more important to preach about morals than on faith, that for moral sermons the human heart must be studied, and that the best way of doing so is (as Massillon recommended in later times) to look into one's own. It is more original and more independent than the work of Rabanus Maurus, who, as has been said, drew largely from St. Augustine. Guibert's work was recommended by Pope Alexander as a model to all preachers. St. Francis gave to his friars the same directions as are herein contained.

To the same period belongs the "Summa de arte prædicatoriâ" by Alain de Lille. He gives a definition of preaching: "Manifesta et publica instructio morum et fidei, informationi hominum deserviens, ex rationum semitâ et auctoritatum fonte proveniens". He lays stress on explanation and use of Scripture, and recommends the preacher to insert *verba commotiva*. The remarks of Casarius of Heisterbach (d. 1240) have been collected by Cruel; his sermons display skill in construction and considerable oratorical power. Conrad of Brundelshheim (d. 1321), whose sermons have come down to us under his cognomen of "Brother Soek" (Sermones Fratris Socci), was one of the most interesting preachers at this time in Germany. Humbert of Romans, General of the Dominicans, in the second book of his work, "De eruditione prædicatorum", claims that he can teach "a way of promptly producing a sermon for any set of men, and

for all variety of circumstances" (Neale, "Mediæval Sermons", Introd., xix). Linschmayer, in his history of preaching, gives information about Humbert, who was a severe critic of the sermons of his time. Trithemius quotes a work by Albertus Magnus, "De arte prædicandi", which is lost. St. Bonaventure wrote "De arte concionandi", in which he treats of *divisio, distinctio, dilatatio*, but deals extensively only with the first. St. Thomas's claim rests chiefly on the "Summa", which, of course, has principally influenced preaching since, both in matter and form. He insists very strongly (III, Q. lxvii, a. 2) on the importance of preaching, and says that it belongs principally to bishops, and baptizing to priests, the latter of whom he regards as holding the place of the seventy disciples. There is a treatise entitled "De arte et vero modo prædicandi" attributed to him, but it is simply a compilation of his ideas about preaching that was made by another. Henry of Hesse is credited with a treatise, "De arte prædicandi", which is probably not due to him. There is a monograph quoted by Hartwig which is interesting for the classification of the forms of sermon: *modus antiquissimus, i. e. postillatio*, which is purely the exegetic homily; *modus modernus*, the thematic style; *modus antiquus*, a sermon on the Biblical text; and *modus subalternus*, a mixture of homiletic and text sermon. Jerome Dungsheyem wrote a tract "De modo discendi et docendi ad populum sacra seu de modo prædicandi" (1513). He treats of his subject on three points: the preacher, the sermon, the listeners. He lays stress on Scripture as the book of the preacher. Ulrich Surgant wrote a "Manuale Curatorum" (1508), in which he also recommends Scripture. In his first book he gives for material of preaching the usual order—*credenda, facienda, fugienda, timenda, appetenda*. And he ends by saying: "Congrua materia prædicationis est Sacra Scriptura." He uses the figure of a tree in laying stress on the necessity of an organic structure (Kirchenlex., pp. 201–202).

In the works of the two humanists, Reuchlin (Liber congegstorum de arte prædicandi) and Erasmus (Ecclesiastes seu de ratione concionandi), the return is marked to Cicero and Quintilian. A masterwork on the art of preaching is the "Rhetorica Sacra" (Lisbon, 1576) of Luis de Granada, for modern use, perhaps, a little old. The work shows an easy grasp of rhetoric, founded on the principles of Aristotle, Demetrius, and Cicero. He treats the usual subjects of invention, arrangement, style, and delivery in easy and polished Latin. Of the same class is Didacus Stella in his "Liber de modo concionandi" (1576). Valerio, in Italy, also wrote on the art of preaching. We next come to another of the landmarks on preaching, the "Instructiones Pastorum" by St. Charles Borromeo (1538–84). At his request Valerio, Bishop of Verona, wrote a systematic treatise on homiletics entitled "Rhetorica Ecclesiastica" (1575), in which he points out the difference between profane and sacred eloquence, and emphasizes the two principal objects of the preacher, to teach and to move (*docere et commovere*). Laurentius a Villavicentio, in his work "De formandis sacris concionibus" (1565), does not approve of transferring the ancient modes of speaking to preaching. He would treat the truths of the Gospel according to I Tim., iii, 16. He also recommended moderation in fighting heresy. The same was the view of St. Francis Borgia, whose contribution to homiletics is the small but practical work: "Liber de ratione concionandi". Claudius Acquaviva, General of the Jesuits, wrote, in 1635, "Instructio pro superioribus" (in "Epistolæ præpositorum generalium ad patres et fratres S.J."). They were principally ascetic, and in them he regulated the spiritual training necessary for the preacher. Carolus Regius, S.J., deals, in his "Orator Christianus" (1613), with the whole field of homiletics under the grouping: "De

concionatore"; "De concione"; "De concionantis prudentiâ et industriâ". Much is to be found in the writings of St. Vincent de Paul, of St. Alphonsus Liguori, and in St. Francis de Sales, especially in his celebrated letter to Monsignor Fremiot, Archbishop of Bourges. Among the Dominicans we find Alexander Natalis with his "Institutio concionantium tripartita" (Paris, 1702). In the "Rhetorica ecclesiastica" (1627) of Jacobus de Graffii is contained a symposium of the instructions on preaching by the Franciscan Francis Panigarola, the Jesuit Francis Borgia, and the Carmelite Johannes a Jesu. The "Dialogues" of Fénelon, the work of Père Blaise Gilbert, that of Amadeus Bajocensis and of Guido ab Angelis have already been referred to. In the nineteenth century homiletics took its place as a branch of pastoral theology, and many manuals have been written thereon, for instance, in German, compendia by Brand, Labrenz, Zarbl, Fluck, and Schüch; in Italian, by Gotti and Audisio; and many in French and English, some of which are quoted in the bibliography at the end of this article.

The question as to how far homiletics should make use of profane rhetoric is often raised. Some assert its independent character, and say that it is independent in origin, in matter, and in purpose: in origin, because it has not grown out of profane rhetoric; in matter, because it has to deal not with natural, but with supernatural truths clearly defined in Revelation; and in purpose, because the aim is to lead souls to cooperate with the grace of the Holy Spirit. The upholders of this view point also to certain passages in Scripture and in the Fathers, notably to the words of St. Paul (I Cor., ii, 4): "And my speech and my preaching was not in the persuasive words of human wisdom, but in shewing of the Spirit and power"; also to I Cor., i, 17; ii, 1, 2; and II Cor., iv, 2; and to the testimony of Cyprian (Ep. ad Donat.), Arnobius (Adv. Nationes), Lactantius (Institutio divinarum), and to Sts. Gregory of Nazianzus, Augustine, Jerome, and Chrysostom. The last-named says that the great difference may be summed up in this: that the orator seeks personal glory, the preacher practical good. On the other hand St. Paul's own sermons are in many cases replete with oratory, e. g., his sermon on the Areopagus; and the oratorical element generally enters largely into Scripture. Lactantius, the Christian Cicero, regretted that there were so few trained preachers (Inst. Div., V, c. i), and we know that St. Gregory of Nazianzus, as well as Sts. Chrysostom and Augustine, made use of rhetoric in preaching. The writer of this article thinks that there would be no room for difference of opinion if oratory were defined not according to the style that prevails in any particular period, but according to that which constitutes its very essence, viz. persuasiveness. And he thinks it will be found that the Fathers, in speaking against oratory in preaching, had in mind the false style that then prevailed. For instance, St. Gregory of Nazianzus censured the use in the pulpit of the eloquence and pronunciation of the theatre; but surely that was not to oppose real oratory. Also we know that many unhealthy excrescences had grown by this time around Greek oratory, and it was probably such imperfections that those who spoke against it had in mind. Who, for instance, can read Demetrius "On Style" without feeling how petty are many of the tricks of speech and figures that are there found? Many extravagances are indulged in, in the name of oratory, but true oratory, as the art of persuasion, can never be out of place in the pulpit.

KEPPLER in *Kirchenlex.*, s. v. *Homiletik*, gives an extensive, especially German, bibliography; THOMASSIN, *Vetus et Nova Ecclesie Disciplina* (Paris, 1658); DIGBY, *Mores Catholici* (London, 1846); NEALE, *Medieval Sermons* (London, 1856); BARDENEWER, *Patrology*, tr. SHAHAN (St. Louis, 1908); DUCHESNE, *Christian Worship* (tr. London, 1903); SCHMID, *Manual of Patrology* (tr. St. Louis, 1899); SCHÜCH, *The Priest in the Pulpit* (tr. New York, 1905); POTTER, *Sacred Eloquence* (New York,

1891); MACNAMARA, *Sacred Rhetoric* (Dublin, 1882); BOYLE, *Instructions on Preaching* (New York, 1902); FEENEY, *Manual of Sacred Rhetoric* (St. Louis, 1901); COPPENS, *Oratorical Composition* (New York, 1885); FÉNELON, *Three Dialogues on Pulpit Eloquence* (tr. London and Philadelphia, 1897); HOGAN, *Clerical Studies* (Boston, 1898); STANG, *Pastoral Theology* (New York, 1897); MULLOIS, *The Clergy and the Pulpit* (tr. London, 1867). Many works on pastoral theology contain useful chapters on homiletics, amongst others: MANNING, *Eternal Priesthood* (London, 1884); GIBBONS, *The Ambassador of Christ* (Baltimore, 1896); OAKLEY, *The Priest on the Mission* (London, 1871); SMITH, *The Training of a Priest* (New York, 1899); HAMON, *Travail de la Prédication* (Paris, 1906); MONSABRÉ, *La Prédication, avant, pendant, et après* (Paris, 1900); BOUCHER, *L'Eloquence de la chaire* (Lille, 1894); ARNAULD, *Réflexions sur l'Eloquence des Prédicateurs* (Paris, 1695); MAURY, *Essai sur l'Eloquence de la chaire* (Paris, 1810); DUPANLOUP, *Entretiens sur la Prédication* (Paris, 1866); FONTAINE, *La Chaire et l'Apologétique au XIX^e siècle* (Paris, 1887); LONGHAYE, *La Prédication* (Paris, 1897); MOURRET, *Leçons sur l'Art de Prêcher* (Paris, 1909). Non-Catholic works in English: GRINFIELD, *History of Preaching* (London, 1880); PHILLIPS BROOKS, *Pastoral Theology* (London, 1903); HOPPIN, *Homiletics; Pastoral Theology* (New York, 1901); KER, *History of Preaching* (London, 1858); BEECHER, *Yale Lectures on Preaching* (New York, 1892); BURTON, *In Pulpit and Parish* (Boston, 1888); JAMES, *The Message and the Messenger* (London, 1898); DARGAN, *History of Preaching* (London, 1905); BROADUS, *Preparation and Delivery of a Sermon* (London, 1871); SHURTER, *The Rhetoric of Oratory* (New York, 1909).

P. A. BEECHER.

Homiliarium, a collection of homilies, or familiar explanations of the Gospels (see HOMILY). From a very early time the homilies of the Fathers were in high esteem, and were read in connexion with the recitation of the Divine Office (see BREVIARY; OFFICE). That the custom was as old as the sixth century we know from the fact that St. Gregory the Great refers to it, and that St. Benedict mentions it in his rule (Batiffol, "History of the Roman Breviary", 107). This was particularly true of the homilies of St. Leo I, very terse and peculiarly suited to liturgical purposes. As new feasts were added to the Office, the demand for homilies became greater, and by the eighth century, the century of liturgical codification, collections of homilies began to appear (Batiffol, op. cit., 108). Such a collection was called a *homiliarium*, or *homiliarius* (i. e. *liber doctorum*). In the early Middle Ages numerous collections of homilies were made for purposes of preaching. Many homiliaria have come down to us, and there are medieval references to many others. Mabillon (*De Liturgiâ Gallicanâ*) mentions a very old Gallican homiliarium. In a manuscript of the eighth century we find reference to a homiliarium by Agimundus, a Roman priest. Venerable Bede compiled one in England. In the episcopal library at Würzburg there is preserved a homiliarium by Bishop Burchard, a companion of St. Boniface. Alanus, Abbot of Farfa (770), compiled a large homiliarium, which must have been often copied, for it has reached us in several manuscripts. In the first half of the ninth century Smaragdus, Abbot of St. Michael's on the Meuse, compiled from the Fathers a book of homilies on the Gospels and Epistles for the whole year. Haymo, a monk of Fulda and disciple of Alcuin, afterwards Bishop of Halberstadt (841), made a collection for Sundays and feasts of the saints (Trithemius in Lingard, II, 313, note). Rabanus Maurus, another pupil of Alcuin, and Eric of Auxerre compiled each a collection of homilies. All these wrote in Latin.

Perhaps the most famous homiliarium is that of Paul Warnefrid, better known as Paul the Deacon, a monk of Monte Cassino. It was made by order of Charlemagne, and has been greatly misrepresented in recent times. Mosheim (*Ecl. Hist.*, II, p. 150, London, 1845) and Neander (V, 174), followed by various encyclopedias and many Protestant writers, assert that the great emperor had it compiled in order that the ignorant and slothful clergy might at least recite to the people the Gospels and Epistles on Sundays and holidays. As a matter of fact, this particular collection was not made for pulpit use but

for the recitation of the Breviary, as even a cursory reading of the royal decree would at once show. Its liturgical character is corroborated by the fact that copies were made only for such churches as were wont to recite the Office in choir. Manuscript copies of this homiliarium are still found at Heidelberg, Frankfurt, Darmstadt, Fulda, Giessen, Kassel. The manuscript mentioned by Mabillon, and rediscovered by Ranke, is in Carlsruhe, and is older than the tenth-century Monte Cassino copy. The earliest printed edition is that of Speyer in 1482. In the Cologne edition (sixteenth century) the authorship is ascribed to Alcuin, but the royal decree alluded to leaves no doubt as to the purpose or author. Alcuin may have revised it. Though not intended expressly for preachers, the homiliarium of Charlemagne no doubt exercised an indirect influence on the pulpit, and as late as the fifteenth or sixteenth century served for homiletic purposes. Translations of homilies were frequently ordered by the Church (v. g. Second Council of Reims, 813; Third Council of Tours, 813—cf. Thomassin, lxxxv, 510), and became common. Alfred the Great translated into Anglo-Saxon the homilies of Venerable Bede, and, for the clergy, the "Regula Pastoralis" of St. Gregory the Great. Ælfric selected and translated into the same language passages from St. Augustine, St. Jerome, Bede, St. Gregory, Smaragdus, and occasionally from Haymo. His aim was to work the extracts into a whole, and thus present them in an easy and intelligible style (Lingard, II, 313). These translations held a prominent place in early English literature. The first German translation of this kind was due to Otfried of Weissenburg. (See HOMILETICS; HOMILY.)

Collections of the homilies of the Greek and Latin Fathers will be found in Migne's "Patrology". For an account of the editions of their works, homilies included, the reader is referred to Bardenhewer's "Patrology" (tr. Shahan, St. Louis, 1908). The Irish homilies that have come down to us are found principally in "The Speckled Book" (*Leabhar Breac*), which is written partly in Latin and partly in Irish (see extract "Passions and Homilies", ed. Atkinson, Dublin, 1887). It is largely taken up with homilies and passions, and lives of the saints, etc. The "Book of Ballymote" contains, amongst miscellaneous subjects, Biblical and hagiological matter; and the "Book of Lismore" contains lives of the saints under the form of homilies (see Hull, "Text Book of Irish Literature", appendix).

The binding and illumination of gospels and homiliaria were both elaborate and artistic. They were frequently deposited in a highly wrought casket (*Ara Testamenti*), which in Ireland was called *cumdach* (shrine). Constantine the Great presented a text of the Gospels with costly binding to the church of St. John Lateran; and Queen Theodolinda made a similar presentation to the church at Monza (Kraus, "Geschichte der Christlichen Kunst", I, 528).

P. A. BEECHER.

Homily.—The word *homily* is derived from the Greek word *ὁμιλία* (from *ὁμιλεῖν*), which means to have communion or hold intercourse with a person. In this sense *ὁμιλία* is used in I Cor., xv, 33. In Luke, xxiv, 14, we find the word *ὁμιλοῦν*, and in Acts, xxiv, 26, *ὁμιλεῖ*, both used in the sense of "speaking with". In Acts, xx, 11, we meet the term *ὁμιλήσας*; here it is used, for the first time, to signify a sermon to the Christians in connexion with the breaking of bread: it was evidently an informal discourse, or exposition of doctrine, for we are told that St. Paul "talked a long time until daylight". Thereafter the word

was used as a sign of Christian worship (Justin, "Apol. I", c. lxxvii; Ignatius, "Ep. ad Polyc.", v). Origen was the first to distinguish between *λόγος* (*sermo*) and *ὁμιλία* (*tractatus*). Since Origen's time homily has meant, and still means, a commentary, without formal introduction, division, or conclusion, on some part of Sacred Scripture, the aim being to explain the literal, and evolve the spiritual, meaning of the Sacred Text. The latter, as a rule, is the more important; but if, as in the case of Origen, more attention be paid to the former, the homily will be called expository rather than moral or hortatory. It is the oldest form of preaching. Christ himself may be said, but with a difference to be noted later, to have preached in this style (cf. Luke, iv, 16–20). It was the kind of preaching that was used by the Apostles and Fathers in addressing the faithful. In the "First Apology" of Justin Martyr (c. lxxvii) we read: "On the day called Sunday all assembled in the same place, where the memorials [*ἀπομνημονεύματα*] of the Apostles and Prophets were read . . . and when the reader has finished, the bishop delivers a sermon", etc. In this connexion, the "Encyclopædia Britannica" (ninth edition) says: "The custom of delivering expositions or comments more or less extemporaneous on the lessons of the day at all events passed over soon and readily into the Christian Church" [i. e., from the Jewish synagogue]. From this the Catholic view differs, and maintains that the kind of homily referred to by Justin was not a continuation of the Jewish commentary on Scripture, but was an essential part of Christian worship, a continuation of the Apostolic sermon, in fulfilment of Christ's commission to His disciples. Both indeed had an external similarity (see Luke, iv, 16–20), but in essence one differed from the other as much as the Christian religion differed from the Jewish.

The oldest homily extant is the so-called Second Epistle of Clement to the Corinthians; it is now generally admitted, however, that it is not by Clement (see Bardenhewer, "Patrology", tr. Shahan, p. 29). We have a hundred and ninety-six by Origen; some from St. Athanasius, although he was more of a controversialist than a homilist; the brief and antithetic homilies of St. Leo the Great have also come down to us; and the more important ones of St. Gregory the Great. Also well-known homilists are: Hilary, Ambrose, Chrysostom, Jerome, Augustine, Fulgentius, Isidore, Bede, Bernard of Clairvaux; and there are many others. Even after the art of rhetoric was brought to bear on preaching, the homiletic form continued, so that there were recognized two styles of preaching, the extempore, unpolished, or familiar, and the polished, or carefully prepared, style. Fine examples of both may be seen in St. Chrysostom; also in St. Augustine, who, in referring to his homiletic preaching, said that he humbled himself that Christ might be exalted. The homiletic was the favourite style of preaching during the Middle Ages; and many of the sermons then preached might, from the frequent use of the Sacred Text, be called Scriptural mosaics (see Neale, "Mediæval Sermons"). At present there are four recognized ways of treating the homily, but not all to be equally commended. The first method consists in treating separately each sentence of the Gospel. This was the uniform method of St. Anselm, as we gather from the sixteen sermons that have come down to us. It is not to be recommended, for it gives, at best, but a fragmentary and scattered treatment. The second method is quite the opposite; it focuses the entire content of the Gospel in a single idea. It is usually called the "higher homily", and differs from the formal or set sermon only in the absence of introduction and peroration. It is clear that only certain Gospels can be treated in this way. The third kind selects some virtue or vice arising out of the Gospel, and treats one or the other to the exclusion of all else.

This kind of homily is commonly called a "prone". The fourth kind is that which first paraphrases and explains the entire Gospel, and then makes an application of it. This, the method of St. Chrysostom, seems, except where the "higher homily" applies, to be the best, because it can guard against the besetting defect of the homily, namely, a tendency to lack of unity and continuity. The advantages of the homily are that it is a form of preaching which was in use from the very beginning of Christianity; it is simple and easily understood; it affords a better opportunity than the formal sermon for interweaving Sacred Scripture. The most appropriate time for the homily is at the early Mass; for the formal sermon, at the principal Mass; and for the catechetical sermon (see HOMILETICS), at the evening devotions. As to its place in the Mass, the homily is usually preached after the first Gospel; but St. Francis de Sales would prefer that it come after the Communion, and in his letter to the Archbishop of Bourges he quotes the words of St. Chrysostom: "Quam os illud quod SS. Mysteria suscepit, dæmonibus terribile est"; also those of St. Paul (II Cor., xiii, 3): "in experimentum quæritis ejus, qui in me loquitur Christus."

Homologoumena. See CANON OF THE HOLY SCRIPTURES.

Homoousion (Gr. *ὁμοούσιον*—from *ὁμός*, same, and *οὐσία*, essence; Lat. *consubstantialium*, of one essence or substance), the word used by the Council of Nicæa (325) to express the Divinity of Christ. Arius had taught that the Son, being, in the language of Philo, the Intermediator between God and the world, was not eternal, and therefore not of the Divine substance, but a creature brought forth by the free will of God. Homoousion was indeed used by philosophical writers to signify "of the same or similar substance"; but, as the unity of the Divine nature was not questioned, the word carried the fuller meaning: "of one and the same substance". However, not only is *ὁμός* ambiguous; the word *οὐσία* itself was often taken as equivalent to *ὑπόστασις* (person), as apparently is the case in the anathema attached to the Nicene Symbol. And therefore the affirmation of the identity of nature might be taken in the heretical sense of the Sabellians, who denied the distinction of person. It was only after many years of controversy that the two words acquired their distinct meanings, and the orthodox were able to describe the Trinity as one in *ousia* and three in *hypostasis* or *persona*. Previously to the Council of Nicæa, Tertullian had already used the Latin equivalent of Homoousion, conceding to Praxeas the Sabellian that the Father and Son were *unius substantiæ*, of one substance, but adding *duarum personarum*, of two persons (Adv. Prax., xiii). And Dionysius of Alexandria used the actual word in a letter to Dionysius of Rome (Athanas., "De dec. Syn. Nic.", xxv, 26), and again in his letter to Paul of Samosata. On the other hand, Origen, who is, however, inconsistent in his vocabulary, expresses the anti-Sabellian sense of Dionysius of Alexandria by calling the Son "Heteroousion". The question was brought into discussion by the Council of Antioch (264-272); and the Fathers seem to have rejected Homoousion, even going so far as to propose the phrase *ἐτέρας οὐσίας*, that is, Heteroousion, "of other or different ousia". Athanasius and Basil give as the reason for this rejection of Hom-

VII.—29

oousion the fact that the Sabellian Paul of Samosata took it to mean "of the same or similar substance". But Hilary says that Paul himself admitted it in the Sabellian sense "of the same substance or person", and thus compelled the council to allow him the prescriptive right to the expression. Now, if we may take Hilary's explanation, it is obvious that when, half a century afterwards, Arius denied the Son to be of the Divine ousia or substance, the situation was exactly reversed. Homoousion directly contradicted the heretic. In the conflicts which ensued, the extreme Arians persisted in the Heteroousion Symbol. But the Semi-Arians were more moderate, and consequently more plausible, in their Homoousion (of like substance). When one considers how the four creeds formulated at Antioch (341) by the Semi-Arians approached the Nicene Creed as nearly as possible without the actual word Homoousion, there may be a temptation to think that the question was one of words only; and the Councils of Rimini and Seleucia (359) may seem to have been well advised in their conciliatory formula "that the Son was like the Father in all things, according to the teaching of Holy Writ". But this very formula was forced from the Fathers by the Emperor Constantius; and the force and fraud which the Semi-Arians used throughout the greater part of the fourth century, are proof sufficient that the dispute was not merely verbal. The dogma of the Trinity was at stake, and Homoousion proved itself to be in the words of Epiphanius "the bond of faith", or, according to the expression of Marius Victorinus, "the rampart and wall of orthodoxy." (See ARIANISM; NICÆA, COUNCIL OF; TRINITY.)

Ho-nan—SOUTHERN, NORTHERN, WESTERN—VICARIATES APOSTOLIC OF. See CHINA.

Honduras. See COMAYAGUA, DIOCESE OF.

Honduras, BRITISH, VICARIATE APOSTOLIC OF.—The territory of the vicariate is co-extensive with that of the British Crown Colony of the same name. It lies to the south of the peninsula of Yucatan, from which it is separated by the Rio Hondo; is bounded on the east by that part of the Caribbean Sea known as the Bay of Honduras, on the south and west by the Republic of Guatemala; and has a total area of 7562 square miles, being approximately equal in size to the State of New Jersey. Statistics concerning this part of the world are largely conjectural. According to a fairly careful estimate, the total population of the vicariate at present is some 40,000; of which the Catholics number about 23,500. Of this latter number, however, not more than 14,000 are with any regularity and frequency reached by the ministrations of the vicar Apostolic and his assistants. There are in the vicariate eight churches served by resident priests, and fifty-five chapels, in which, from time to time, priests from the residences say Mass and administer the sacraments. At present, under the vicar Apostolic, Right Reverend Frederick C. Hopkins, S. J., titular Bishop of Athribis, the vicariate is ministered to by 6 priests, all members of the Society of Jesus, under the immediate jurisdiction of the Missouri province, assisted by four clerics not priests, and by four lay brothers, all of the same society.

The territory long known as British Honduras was originally part of the Spanish claim, but in the first half of the seventeenth century was settled by English

adventurers, mostly of the buccaneering type, without even pretence of legal right. Later the English claimed possession by prescription, and, because of Spanish military inferiority, carried the claim. Naturally there were few, if any, Catholics amongst the early settlers. Hence the territory for many years was under no especial ecclesiastical jurisdiction; only towards the end of the eighteenth century was it considered as roughly included in the Vicariate of Trinidad. In 1836 it was named as part of the new Vicariate of Jamaica, with the Very Rev. Benito Fernández, a Franciscan, as first vicar Apostolic. In 1848 the mission received its first notable influx of Catholics; seven thousand of whom, driven from Yucatan by Indian outbreaks, took refuge in British Honduras. Some Jesuits, passing through the colony in 1850, were asked by these Catholics to have priests sent to them; and as a result of their representations, the Vicar Apostolic of Jamaica came in person, bringing with him two Jesuit missionaries, who built the first Catholic church in 1851. Very Rev. James Eustace Dupeyron, S.J., succeeded to the Vicariate of Jamaica, 27 September, 1855, and several times visited the mission up to 1871, when he resigned his office, and was succeeded by Very Rev. Joseph Woollett, S.J., as pro-vicar Apostolic. On 6 Sept., 1877, Very Rev. Thomas Porter, S.J., was named Vicar Apostolic of Jamaica, and held the office until his death, 29 Sept., 1888. Shortly before his death, it was determined, in view of the difficulty of communication between Jamaica and British Honduras, that the latter territory should be separated from the Vicariate of Jamaica and erected into a prefecture Apostolic. Very Rev. Salvatore di Pietro, a Sicilian Jesuit, who since 1869, with various interruptions, spent fifteen years in the mission, and who had three times been its superior, was named the first prefect Apostolic, 10 June, 1888.

At length, in 1893, in response to the general desire of the Catholics of the territory, British Honduras was made a vicariate, and the prefect Apostolic appointed vicar Apostolic. He was consecrated on 16 April of that year, in Belize, under the title of Bishop of Eureka. Bishop di Pietro laboured in his office with great energy and zeal. Under him, missionary work in the vicariate received a new impetus. At the erection of the vicariate there were nine priests in the mission; the Catholic population was about 12,000, with 1819 children in the Catholic schools. A few months after his consecration, the mission was removed from the care of the English province of the Society of Jesus, and attached to the Missouri province. More priests came to labour, and new residences were opened. Ten years previously, in January, 1883, some Sisters of Mercy had come to Belize from New Orleans, and had opened a convent for girls; which still exists, with an attendance of about one hundred. A select school for boys had been begun in 1887 by Rev. Cassian Gillett, an English Jesuit, to be replaced nine years later by the present St. John Berchmans's College, established in 1896 with sixty-one pupils. Both convent and college accommodate a small number of boarding-scholars, and were intended to serve as means of higher education for the surrounding republics. In May, 1898, the Sisters of the Holy Family (coloured) were brought from New Orleans, and began teaching in Stann Creek, the chief village of the Carib district. At present they number five, and have the care of some three hundred children.

Bishop di Pietro died in Belize, 23 August, 1898, and was succeeded by the present vicar Apostolic, Bishop Hopkins, who was consecrated 4 November, 1899, in St. Louis, Mo., U. S. A. Exceptional difficulties attend the work of the ministry. The Catholics of the vicariate are mostly scattered over the territory in small villages. There are no roads. Communication must be made by boat, or on horseback through

the dense tropical bush, often under necessity of cutting one's way with the *machete*. Diversity of language presents another obstacle, as the population is very heterogenous. It is almost impossible even to estimate with anything like accuracy the racial proportions of the population. Perhaps rather more than two-fifths are of more or less mixed Indian descent; another two-fifths negroes or the product of miscegenation; of the remainder, some three thousand are a mongrel black people, improperly styled Caribs; three hundred or so are whites; the rest are unclassified and unclassifiable. The Indians are chiefly Mayas, descendants of the ancient Toltecs, copper-coloured, with high cheekbones and almond eyes. Many of them speak Spanish—of a sort; amongst the blacks a barbarized English prevails, under the linguistic title of "Creole", quite unintelligible to English-speaking people. The Caribs speak an African dialect, into which, in a curious manner, many French words have crept.

Poverty is the universal condition; owing, in part, to native laziness and want of thrift; in part, to governmental neglect in opening up the superb resources of the colony, and to an almost total absence of local manufactures. There are comparatively few pagans, but pagan superstitions abound, and obeah rites are to some small extent carried on in secret. Concubinage obtains very widely, the percentages of legitimate and illegitimate births being nearly equal. Yet, in despite of these and many other hindrances, a great deal is accomplished yearly in the vicariate. In 1908, upon estimate, there were 1200 baptisms, 320 marriages, 500 confirmations, 40,000 confessions, 38,000 Holy Communions. There are, in the whole vicariate, twenty sodalities with a membership of about eight hundred. The League of the Sacred Heart was established in British Honduras in 1888, and has since grown steadily. In 1895 the associates numbered 1200, and at present are estimated at some 4500. There is absolute freedom of worship in the colony. Although formerly the Anglican Church was established by law, there is at present no established religion. The educational system, all things considered, is very good; Government grant-in-aid being divided impartially amongst public schools under the charge of various denominations, according to the class and attendance of each school, with full liberty of religious instruction accorded to each denomination in its proper schools. The grant to Catholic schools for 1908 was over \$7,500 gold. There are about 2300 children in the Catholic public schools. Except those of Belize, which are under the care of the Sisters of Mercy, and those of Stann Creek, these schools are taught by lay teachers, who have qualified in a government examination. The vicariate depends for its priests and religious teachers chiefly upon the United States. It has no seminary or novitiate of its own. The material support of the vicariate, since the contributions of its own people are entirely inadequate, is also derived from the outside world, principally from the benefactions of the Society for the Propagation of the Faith, and from various charities sent from the United States.

WILLIAM T. KANE.

Honestas Publica. See PUBLIC DECENCY.

Hong-Kong, VICARIATE APOSTOLIC OF.—The island of Hong-Kong was ceded by the Chinese Government to Great Britain in January, 1841, under some restrictions; the cession was completed by the Treaty of Nan-king of August, 1842. A prefect Apostolic under the Bishop of Macao was nominated by Gregory XVI (1846); a vicariate Apostolic was created in 1874, and intrusted (4 Oct.) to the Seminary of Foreign Missions of Milan, established in that city since 31 July, 1850 (see CHINA). The first vicar Apostolic was Giovanni Timoleone Raimondi, titular Bishop of Acan-

thus (22 Nov., 1874), who died at Mission House, Glenealy, Hong-Kong, 27 Sept., 1894. He was succeeded by Monsignor Luigi Piazzoli (b. 1849), titular Bishop of Clazomenæ, and Domenico Pozzoni (b. 1851), titular Bishop of Tavia, elected 26 May, 1905. This vicariate belongs to the fifth ecclesiastical region of China; it includes 12 European and 10 native priests and 14,195 Christians; there are 26 churches, 5 of them with resident priests; 40 schools for boys and 29 schools for girls; 12 Brothers of the Christian Schools; 35 Sisters of Canossa; 22 Sisters of St. Paul of Chartres; 54 native Sisters.

Besides the island of Hong-Kong, the vicariate includes the island of Lautau and adjacent islands and the three continental districts of Sa-non, Kwei-shing, and Hai-fung. The churches with resident priests are the cathedral (Glenealy), St. Joseph's (Garden Road), St. Francis (Wanchai), Church of the Sacred Heart (West Point), Church of St. Anthony (West Point). The Société des Missions Étrangères de Paris have a procurator, a sanatorium and a printing office at Hong-Kong (see CHINA); there is also a Dominican procurator.

HENRI CORDIER.

Honorarium. See MASS; OFFERINGS; SACRAMENTS; STIPEND.

Honoratus, SAINT, Archbishop of Arles; b. about 350; d. 6 (or, according to certain authors, 14 or 15) January, 429. There is some disagreement concerning his place of birth, and, as already seen, the date of his death is also contested. It is believed that he was born in the north of Gaul and that he belonged to an illustrious pagan family. Converted to Christianity with his brother Venantius, he embarked with him from Marseilles about 368, under the guidance of a holy person named Caprasius, to visit the holy places of Palestine and the *lauræ* of Syria and Egypt. But the death of Venantius, occurring suddenly at Methone, Achaia, prevented the pious travellers from going farther. They returned to Gaul through Italy, and, after having stopped at Rome, Honoratus went on into Provence and, encouraged by Leontius, Bishop of Fréjus, took up his abode in the wild island of Lérins with the intention of living there in solitude. Numerous disciples soon gathered around him and thus was founded the monastery, which has enjoyed so great a celebrity and which was during the fifth and sixth centuries a nursery for illustrious bishops and remarkable ecclesiastical writers. Honoratus's reputation for sanctity throughout the south-eastern portion of Gaul was such that in 426 after the assassination of Patroclus, Archbishop of Arles, he was summoned from his solitude to succeed to the government of the diocese, which the Arian and Manichæan heresies had greatly disturbed. He appears to have succeeded in re-establishing order and orthodoxy, while still continuing to direct from afar the monks of Lérins. However, the acts of his brief pontificate are not known. He died in the arms of Hilary, one of his disciples and probably a relative, who was to succeed him in the See of Arles. His various writings have not been preserved, nor has the rule which he gave to the solitaries of Lérins. Cassian, who had visited his monastery, dedicated to him several of his "Conferences".

LÉON CLUGNET.

Honoratus a Sancta Maria, Discalced Carmelite; b. at Limoges, 4 July, 1651; d. at Lille, 1729. Blaise Vauxelles took his vows under the above name at Toulouse, 8 March, 1671. On completing his course of studies he determined to devote himself to the mission-

ary life, and was accordingly sent to Malta to prepare for the East. But the superiors detained him there in the quality of sub-prior, and at the expiration of his term of office he returned to France without having been to the missions. He successively filled the posts of professor of philosophy and theology, prior, provincial, and visitor general. The interest of his life centres in his polemical writings. In his position as professor and superior he had to deal with the burning questions of his time, Quietism, Jansenism, Gallicanism, with Cartesianism in philosophy, and Rationalism in Scripture and history. Endowed with uncommon acumen and a faculty for painstaking research, he contributed much to the elucidation of abstruse questions on every one of these subjects, while the modesty of his diction and the moderation of his attack won him the esteem of his adversaries. It must, however, be acknowledged that the range of subject-matter was too wide for one man, with the result that, already during his life, he was accused of not always applying the rules of criticism he himself had established. His works may be divided into various classes. (a) Philosophical: "Disputationes philosophicæ" (Clermont, 1686) against Descartes and Gassendi. (b) Theological: "Propositiones theologicæ" (Perpignan, 1689), being an exposition of the Apostles' Creed from the dogmatic, scholastic, and historical point of view; "Dissertation on Grace and Predestination", unpublished; "A Treatise on Indulgences and the Jubilee" (Bordeaux, 1701), reprinted at Clermont and in Belgium in preparation for the Jubilee of 1725;—"Dissertation apologetique" (Bordeaux, 1701), in defence of the "Examen de la théologie mystique" of Jean Chéron, Calced Carmelite (1596-1673), which had been sharply attacked by a Franciscan; "On Contemplation" (Paris, 1708) from the dogmatic and practical point of view, giving a complete chain of utterances of the Fathers and ecclesiastical writers, in two volumes. This work was translated into Italian and Spanish; a continuation of it appeared in 1713 under the title "The Motives and Practice of Divine Love"; in "A Problem addressed to the Learned" (Paris, 1708) Honoratus examines the claims of Denis the Areopagite to the authorship of the works commonly attributed to him, pronouncing himself in the negative sense. (c) Polemical: His contributions to the Jansenistic controversy show him an uncompromising adversary of the sect; four volumes in defence of the Constitution "Unigenitus" (anonymous); the first two appeared in 1710, the others in 1722; Notes on the writings of Jansenius, Saint-Cyran, Arnauld, Quesnel, Petitpied and others (Ypres, 1724); "Reply to the 'Examen théologique' by a Jansenist" (anonymous, 1723); "Defence of the Encyclical of Benedict XIII of 1 Oct., 1724, on the teaching of Saints Augustine and Thomas (Brussels, 1725); two letters, one to show that a certain miracle said to have happened at the Corpus Christi procession in Paris (31 May, 1725) had not been wrought in favour of those who refused to sign the Bull "Unigenitus"; the other addressed to a certain abbé on the necessity of subscribing to the said Bull; a collection of dissertations on the same Constitution (Brussels, 1727). (d) Historical and critical.—"Theologia positiones" (Toulouse, 1706), containing the solution of chronological and other difficulties to be met with in Holy Scripture, a prelude to the author's great work on criticism (below); "Historical and critical dissertations on the orders of knighthood" (Paris, 1718, also in Italian, Brescia, 1761); the "Life of St. John of the Cross" (Tournai, 1727), written on the occasion of the canonization of the saint; a critical edition of a manuscript of Flodoardus, with notes and dissertations, which, however, the author did not live to carry through the press; "Réflexions sur les règles et l'usage de la critique", three volumes (Paris, 1712, 1717, and Lyons, 1720). This work has been several times reprinted, appeared also

in Latin, Italian, and Spanish, and is the one by which Honoratus will ever be known. It is unsurpassed in the theoretical part, but, as might be expected, the study of the sources of Church history, patristic literature, hagiography, etc., has made such strides within the last two centuries that the practical portion is antiquated; "Denuntiatio historiae ecclesiasticæ" (anonymous, 1726). While the "Réflexions" were chiefly directed against Tillemont, this work takes Fleury to task for his Gallicanism.—"A treatise on the so-called Mass of Flacius Illyricus", of which Honoratus had already spoken in the "Réflexions", remains unedited.

B. ZIMMERMAN.

Honorius, SAINT, Archbishop of Canterbury, fifth in succession from St. Augustine, elected 627; consecrated at Lincoln by St. Paulinus of York, 628; d. 30 Sept., 653 (the last date alone is certain; the others are those usually accepted); commemorated, by decree of the Sacred Congregation of Rites (1883), in the Supplement to the Breviary for England on 30 Sept. Little is known about the history of this saint before his elevation, and not much more of his long episcopate. From Bede we gather that he was a Roman monk, a disciple of St. Gregory, and probably a Benedictine. He either accompanied St. Augustine in 596 or was one of the second band of missionaries sent in 601. As a member of that apostolic company, he must have led that life of fervent piety, which, we are told, had so much effect in converting the inhabitants of Kent. When Honorius's predecessor, Justus, died, Paulinus, fresh from the conversion of Northumbria, was the only English bishop left to consecrate him. From two letters of Pope Honorius I, preserved in Bede, it appears that Honorius and his consecrator, in applying to Rome for their pallia, asked that, in order to avoid the delays and uncertainties then involved in a journey to Italy, whenever the occupant of one of the metropolitan sees should die, the survivor should have power to consecrate the successor, a request which the pope granted. The chief act of Honorius's episcopate was the mission of St. Felix, whom he consecrated and sent to convert the East Angles, an expedition which was crowned with complete success. He administered his own diocese with great zeal and energy. The pope's letter to him shows that his life was spent in the vigorous exercise of the duties of his office and in the faithful observance of the rule of his master, St. Gregory. On the overthrow of the flourishing Kingdom and Church of Northumbria by Cadwalla of Wales and Penda of Mercia in 633, he received Paulinus and appointed him to the vacant See of Rochester. On the death of Paulinus in 644, Honorius consecrated Ithamar, a native of Kent, as his successor. And some years later, he consecrated a deacon of Mercia, Thomas, to succeed Felix in East Anglia, and in or about 652 Berctgils or Boniface, a native of Kent, to succeed Thomas. Next year the archbishop himself died and was buried with his predecessors in the church of Saints Peter and Paul, founded by St. Augustine.

JOSEPH KEATING.

Honorius I, POPE (625—12 Oct., 638), a Campanian, consecrated 27 Oct. (Duchesne) or 3 Nov. (Jaffé, Mann), in succession to Boniface V. His chief notoriety has come to him from the fact that he was condemned as a heretic by the sixth general council (680).

THE LETTER OF SERGIUS TO HONORIUS.—The Monothelite question was raised about 634 in a letter to this pope from the Patriarch of Constantinople, Sergius. He related that Emperor Heraclius, when in Armenia in 622, in refuting a Monophysite of the Se-

verian sect, had made use of the expression "one operation" (energy, *ἐνέργεια*) of the Incarnate Word. Cyrus, Bishop of the Lazî, had considered this doubtfully orthodox, and had asked advice of Sergius. Sergius replied (he says) that he did not wish to decide the matter, but that the expression had been used by his predecessor Mennas in a letter to Pope Vigilius. In 630 Cyrus had become Patriarch of Alexandria. He found Egypt almost entirely Monophysite, as it had been since the Council of Chalcedon in 451. Cyrus, by the use of the expression for which Sergius had been able to produce such good authority, had formulated a series of propositions, which most of the Monophysites were willing to accept, and they were by this means reunited in large numbers to the Catholic Church, "so that those who formerly would not speak of the divine Leo and the great Council of Chalcedon now commemorated both with a loud voice in the holy mysteries." At this juncture Sophronius, a Palestinian monk, famed for holiness, came to Alexandria. He disapproved of the formulæ of Cyrus, and Sergius was evidently somewhat disquieted at this. The reunion of so many heretics was indeed glorious; but the ease with which it had been accomplished must have seemed suspicious. Sophronius was not ready at once with quotations from the Fathers to show that "two operations" was the only orthodox expression. But Sergius was ready to drop the expression "one operation" if Sophronius would do nothing that might destroy the union already accomplished at Alexandria. Sophronius agreed. Sergius, however, was not satisfied with recommending Cyrus for the future to refrain from all mention of either one or two operations, but thought it necessary to place the whole matter before the pope. Sergius has commonly been treated as a heretic who did his best to deceive the pope. It seems more fair and more accurate to say that he was rather a politician than a theologian, but that he acted in good faith. He naturally was anxious to defend an expression which the emperor had used, and he was unaware that the letter of Mennas to Vigilius was a Monophysite forgery. But Cyrus's large use of his formula and its denunciation by St. Sophronius caused him to take precautionary measures. His readiness to drop the expression shows modesty, if his wish that Sophronius's formula should also be dropped shows ignorance. Nothing could have been more proper, or more in accordance with the best traditions of his see, than to refer the whole matter to Rome, since the Faith was in question.

MONOTHELISM.—The Monothelite heresy is not in reality distinct from that of the Monophysites. The last few years have made us better acquainted with the writings of Timothy Ælurus, Severus of Antioch, and other Monophysites, and it is now plain that the chief points on which the various sections of the Monophysites were agreed against Catholicism were the assertions that there is but one Will in the Incarnate Word, and that the operations (activities, *ἐνεργείαι*) of Christ are not to be distinguished into two classes, the Divine and the human, but are to be considered as being the "theandric" (Divino-human) actions of the one Christ (see EUTYCHIANISM). Now these two formulæ, "one Will", and "one theandric operation", are characteristic of Monothelism. It was not perceived by the ancients that this Monothelism, when it arose, was no new heresy, but expressed the very essence of Monophysitism. This was because the war with the latter heresy had been a war of words. The Catholics, following St. Leo and the Council of Chalcedon, confessed two natures, *φύσεις*, in Christ, using the word *nature* to mean an essence without subject, i. e. as distinct from hypostasis; whereas the Monophysites, following St. Cyril, spoke of "one nature", understanding the word of a subsistent nature or subject, and as equivalent to *hypostasis*. They consequently accused the Catholics of Nestorian-

ism, and of teaching two Persons in Christ; while the Catholics supposed the Monophysites to hold that the human nature in Christ was so swallowed up in the Divine that it was non-existent. It does not appear that the Monophysite leaders really went so far as this; but they did undoubtedly diminish the completeness of the human nature of Christ, by referring both will and operation to the one Person and not to the two distinct natures. It followed that a human free will and a human power of action were wanting to Christ's human nature. But this real error of the heretics was not clearly detected by many Catholic theologians, because they spent their force in attacking the imaginary error of denying all reality to the human nature. Our new knowledge of the Monophysite theology enables us to perceive why it was that Cyrus succeeded so easily in uniting the Monophysites to the Church: it was because his formula embodied their heresy, and because they had never held the error which he supposed they were renouncing. Both he and Sergius ought to have known better. But Sergius, at the end of his letter, gets very near to accuracy, when he says that "from one and the same Incarnate Word proceeds indivisibly every human and Divine operation", for this does distinguish the human operations from the Divine operations, though it refers them rightly to a single subject; and Sergius proceeds to quote the famous words of St. Leo's dogmatic letter to Flavian: "Agit utraque forma cum alterius communione quod proprium est", which amount to a condemnation of "one energy".

THE REPLY OF HONORIUS.—It was now for the pope to pronounce a dogmatic decision and save the situation. He did nothing of the sort. His answer to Sergius did not decide the question, did not authoritatively declare the faith of the Roman Church, did not claim to speak with the voice of Peter; it condemned nothing, it defined nothing. Honorius entirely agrees with the caution which Sergius recommends. He praises Sergius for eventually dropping the new expression "one operation", but he unfortunately also agrees with him that it will be well to avoid "two operations" also; for if the former sounds Eutychian, the latter may be judged to be Nestorian. Another passage is even more difficult to account for. Following the lead of Sergius, who had said that "two operations" might lead people to think two contrary wills were admitted in Christ, Honorius (after explaining the *communicatio idiomatum*, by which it can be said that God was crucified, and that the Man came down from heaven) adds: "Wherefore we acknowledge one Will of our Lord Jesus Christ, for evidently it was our nature and not the sin in it which was assumed by the Godhead, that is to say, the nature which was created before sin, not the nature which was vitiated by sin." Other passages of the letter are orthodox. But it is plain that the pope simply followed Sergius, without going more deeply into the question. The letter cannot be called a private one, for it is an official reply to a formal consultation. It had, however, less publicity than a modern Encyclical. As the letter does not define or condemn, and does not bind the Church to accept its teaching, it is of course impossible to regard it as an *ex cathedra* utterance. But before, and even just after, the Vatican Council such a view was sometimes urged, though almost solely by the opponents of the dogma of Papal Infallibility. Part of a second letter of Honorius to Sergius was read at the eighth council. It disapproves rather more strongly of the mention of either one operation or two; but it has the merit of referring to the words of St. Leo which Sergius had cited.

THE ECTHESIS OF HERACLIUS.—Sergius, after receiving the pope's letter approving his recent cautiousness, composed an "Ecthesis", or exposition, which was issued by the emperor towards the end of 638. In conformity with the words of Honorius it

orders all the subjects of Heraclius to confess one Will in our Lord, and to avoid the expressions "one operation" and "two operations". Before Sergius died, in December, he assembled a great synod at Constantinople, which accepted the Ecthesis as "truly agreeing with the Apostolic preaching"; the letter from the Apostolic See was evidently the surety for this. Honorius was already dead, and had no opportunity of approving or disapproving the imperial document which had been based upon his letter. St. Sophronius, who had become Patriarch of Jerusalem even before Sergius wrote to the pope, also died before the end of the year, but not before he had collected a large number of testimonies of the Fathers to the "two operations", and had sent to all metropolitans of the world a remarkable disquisition, which admirably defines the Catholic doctrine. He also solemnly commissioned Stephen, Bishop of Doza, the senior bishop of his patriarchate, to go to Rome and obtain a final condemnation of the new error. The Roman envoys who came to Constantinople in 640 to obtain the emperor's confirmation of the new pope, Severinus, refused to accept the Ecthesis, on the ground that Rome was above all synodical law. Severinus only reigned two months, but condemned the Ecthesis, and so did his successor, John IV. Emperor Heraclius then wrote to the pope, laying the blame on Sergius, and disowning the Ecthesis. He died shortly afterwards (February, 641). To his elder son John IV addressed a letter known as the "Apology for Pope Honorius". He explains quite truly that both Sergius and Honorius asserted one Will only because they would not admit contrary wills; yet he shows by his argument that they were wrong in using so misleading an expression. St. Maximus of Constantinople, a monk and formerly secretary of Heraclius, now becomes the protagonist of orthodoxy and of submission to Rome. His defence of Honorius is based upon the statements of a certain abbot, John Symponus, the composer of the letter of Honorius, to the effect that the pope only meant to deny that Christ had not two contrary human wills, such as are found in our fallen nature. It is true that the words of Honorius are inconclusively though not necessarily, heretical. Unfortunately the Monophysites habitually argued in just the same inconclusive way, from the fact that Christ could have no rebellious lower will, to prove that His Divine and human will were not distinct faculties. No doubt Honorius did not really intend to deny that there is in Christ a human will, the higher faculty; but he used words which could be interpreted in the sense of that heresy, and he did not recognize that the question was not about the unity of the Person Who wills, nor about the entire agreement of the Divine Will with the human faculty, but about the distinct existence of the human faculty as an integral part of the Humanity of Christ.

THE TYPE OF CONSTANS.—Pyrrhus, the successor of Sergius, was condemned at Rome for refusing to withdraw the Ecthesis. Emperor Constans deposed him for political reasons, and set up a new patriarch, Paul. Pyrrhus recanted at Rome. Paul, on his appointment, sent the customary confession of faith to the pope. As it did not confess two wills, it was condemned by Pope Theodore. Paul first showed anger, but then prevailed on Constans to withdraw the Ecthesis, for which was substituted a *Τύπος*, or "Type", in which it was again forbidden to speak of one or two operations, but "one Will" was no longer taught; instead it was said that neither one nor two wills were to be spoken of, but no blame was to attach to any one who had used either expression in the past. The penalties for disobedience were to be: deposition for bishops and clergy, excommunication, loss of goods or perpetual exile for others. This edict was based upon a misinterpretation of the Apology of John IV, who had shown that "one Will" was an improper expres-

sion, but had declared that Honorius and Sergius had used it in an orthodox sense. But John IV had neither defended nor blamed Honorius and Sergius for wishing the expression "two operations" to be avoided. It was consequently assumed that Honorius was right in this, and it was quite logical to assimilate the question of one or two wills to that of one or two operations. The penalties were severe; but both patriarch and emperor declared that they forced no man's conscience. The Type, unlike the *Ecthesis*, was not an exposition of faith, but a mere prohibition of the use of certain words, for the avoidance of wrangling. The edict was issued about the first half of 649. Pope Theodore died in May, and was succeeded by St. Martin I, who in the great Lateran Council of 649 solemnly condemned the *Ecthesis* and the Type as heretical, together with Cyrus, Sergius, Pyrrhus (who had fallen back), and Paul. The emperor was furious. He had the pope dragged to Constantinople, loaded with chains, and exiled him to the Crimea, where he died a martyr for the Faith in 655. St. Maximus also suffered for his devotion to orthodoxy and his loyalty to the Holy See. The decrees of the Lateran Council which were sent to all bishops by St. Martin as papal dogmatic decisions, mark a new stage in the Honorius controversy. Honorius and Sergius must stand or fall together. John IV defended both. St. Martin condemns Sergius and Cyrus, and not a word is said in favour of Honorius. It was evidently felt that he could not be defended, if the Type was to be condemned as heretical because it forbade the orthodox expressions "two operations" and "two Wills", since in this it was simply following Honorius. But be it carefully noted that the Type of Constans is not Monothelite. Its "heresy" consists in forbidding the use of orthodox expressions together with their heretical contraries. A study of the Acts of the Lateran Council will show that the question was not as to the toleration of Monothelite expressions, for they were forbidden by the Type, but the prohibition of the orthodox formulæ. No doubt it was still held at Rome that Honorius had not intended to teach "one Will", and was, therefore, not a positive heretic. But no one would deny that he recommended the negative course which the Type enforced under savage penalties, and that he objectively deserved the same condemnation.

IN WHAT SENSE HONORIUS WAS CONDEMNED.—Constans was murdered in 668. His successor, Constantine Pogonatus, probably did not trouble to enforce the Type, but East and West remained divided until his wars against the Saracens were over in 678, and he began to think of reunion. By his desire Pope St. Agatho sent legates to preside at a general council which met at Constantinople on 7 Nov., 680. They brought with them a long dogmatic letter in which the pope defined the faith with authority as the successor of St. Peter. He emphatically declares, remembering Honorius, that the Apostolic Church of St. Peter has never fallen into error. He condemns the *Ecthesis* and the Type, with Cyrus, Sergius, Theodore of Pharan, Pyrrhus, Paul, and his successor Peter. He leaves no power of deliberation to the council. The Easterns are to have the privilege of reunion by simply accepting his letter. He sent a book of testimonies from the Fathers, which were carefully verified. The Monothelite Patriarch of Antioch, Macarius, had been allowed to present other testimonies, which were examined and found to be incorrect. The Patriarch of Constantinople, George, and all the council accepted the papal letter, and Macarius was condemned and deposed for not accepting it. Honorius, so far, had been thrice appealed to by Macarius, but had been mentioned by no one else. In the twelfth session, 12 March, 681, a packet was produced which Macarius had sent to the emperor, but which the latter had not opened. It proved to contain the letter of Sergius to

Cyrus and to Honorius, the forged letter of Mennas to Vigilius, and the letter of Honorius to Sergius. In the thirteenth session, 28 March, the two letters of Sergius were condemned, and the council added: "Those whose impious dogmas we execrate, we judge that their names also shall be cast out of the holy Church of God", that is, Sergius, Cyrus, Pyrrhus, Peter, Paul, Theodore, all which names were mentioned by the holy Pope Agatho in his letter to the pious and great emperor, "and were cast out by him, as holding views contrary to our orthodox faith; and these we define to be subject to anathema. And in addition to these we decide that Honorius also, who was pope of elder Rome, be with them cast out of the holy Church of God, and be anathematized with them, because we have found by his letter to Sergius that he followed his opinion in all things, and confirmed his wicked dogmas". These last words are true enough, and if Sergius was to be condemned Honorius could not be rescued. The legates made no objection to his condemnation. The question had indeed arisen unexpectedly out of the reading of Macarius's packet; but the legates must have had instructions from the pope how to act under the circumstances.

Some other writings of the condemned heretics were further read, including part of a second letter of Honorius, and these were all condemned to be burnt. On 9 Aug., in the last session, George of Constantinople petitioned "that the persons be not anathematized by name", that is, Sergius, Pyrrhus, Paul, and Peter. He only mentions his own predecessors; but Theodore of Pharan, Cyrus, and Honorius would evidently have been spared also, had the legates supported the suggestion. But there was no attempt to save the reputation of Honorius, and the petition of George was negatived by the synod. In the final acclamations, anathema to Honorius, among the other heretics, was shouted. The solemn dogmatic decree, signed by the legates, all the bishops, and the emperor, condemns the heretics mentioned by St. Agatho "and also Honorius who was pope of elder Rome", while it enthusiastically accepts the letter of St. Agatho. The council, according to custom, presented an address of congratulation to the emperor, which was signed by all the bishops. In it they have much to say of the victory which Agatho, speaking with the voice of Peter, gained over heresy. They anathematize the heretics by name, Theodore, Sergius, Paul, Pyrrhus, Peter, Cyrus, "and with them Honorius, who was Prelate of Rome, as having followed them in all things", and Macarius with his followers. The letter to the pope, also signed by all, gives the same list of heretics, and congratulates Agatho on his letter "which we recognize as pronounced by the chiefest head of the Apostles". The modern notion that the council was antagonistic to the pope receives no support from the Acts. On the contrary all the Easterns, except the heretic Macarius, were evidently delighted with the possibility of reunion. They had never been Monothelites, and had no reason to approve the policy of silence enforced under savage penalties by the Type. They praise with enthusiasm the letter of St. Agatho, in which the authority and inerrancy of the papacy are extolled. They themselves say no less; they affirm that the pope has indeed spoken, according to his claim, with the voice of Peter. The emperor's official letter to the pope is particularly explicit on these points. It should be noted that he calls Honorius "the confirmer of the heresy and contradictor of himself", again showing that Honorius was not condemned by the council as a Monothelite, but for approving Sergius's contradictory policy of placing orthodox and heretical expressions under the same ban. It was in this sense that Paul and his Type were condemned; and the council was certainly well acquainted with the history of the Type, and with the Apology of John IV for Sergius and Honorius, and the

defences by St. Maximus. It is clear, then, that the council did not think that it stultified itself by asserting that Honorius was a heretic (in the above sense) and in the same breath accepting the letter of Agatho as being what it claimed to be, an authoritative exposition of the infallible faith of the Roman Sec. The fault of Honorius lay precisely in the fact that he had not authoritatively published that unchanging faith of his Church, in modern language, that he had not issued a definition *ex cathedra*.

St. Agatho died before the conclusion of the council. The new pope, Leo II, had naturally no difficulty in giving to the decrees of the council the formal confirmation which the council asked from him, according to custom. The words about Honorius in his letter of confirmation, by which the council gets its œcumenical rank, are necessarily more important than the decree of the council itself: "We anathematize the inventors of the new error, that is, Theodore, Sergius, . . . and also Honorius, who did not attempt to sanctify this Apostolic Church with the teaching of Apostolic tradition, but by profane treachery permitted its purity to be polluted." This appears to express exactly the mind of the council, only that the council avoided suggesting that Honorius disgraced the Roman Church. The last words of the quotation are given above as in the Greek of the letter, because great importance has been attached to them by a large number of Catholic apologists. Pennacchi, followed by Grisar, taught that by these words Leo II explicitly abrogated the condemnation for heresy by the council, and substituted a condemnation for negligence. Nothing, however, could be less explicit. Hefele, with many others before and after him, held that Leo II by the same words explained the sense in which the sentence of Honorius was to be understood. Such a distinction between the pope's view and the council's view is not justified by close examination of the facts. At best such a system of defence was exceedingly precarious, for the milder reading of the Latin is just as likely to be original: "but by profane treachery attempted to pollute its purity". In this form Honorius is certainly not exculpated, yet the pope declares that he did not actually succeed in polluting the immaculate Roman Church. However, in his letter to the Spanish King Erwig, he has: "And with them Honorius, who allowed the unspotted rule of Apostolic tradition, which he received from his predecessors, to be tarnished." To the Spanish bishops he explains his meaning: "With Honorius, who did not, as became the Apostolic authority, extinguish the flame of heretical teaching in its first beginning, but fostered it by his negligence." That is, he did not insist on the "two operations", but agreed with Sergius that the whole matter should be hushed up. Pope Honorius was subsequently included in the lists of heretics anathematized by the Trullan Synod, and by the seventh and eighth œcumenical councils without special remark; also in the oath taken by every new pope from the eighth century to the eleventh in the following words: "Together with Honorius, who added fuel to their wicked assertions" (*Liber diurnus*, ii, 9). It is clear that no Catholic has the right to defend Pope Honorius. He was a heretic, not in intention, but in fact; and he is to be considered to have been condemned in the sense in which Origen and Theodore of Mopsuestia, who died in Catholic communion, never having resisted the Church, have been condemned. But he was not condemned as a Monothelite, nor was Sergius. And it would be harsh to regard him as a "private heretic", for he admittedly had excellent intentions.

MODERN CONTROVERSIES ON THE SUBJECT.—The condemnation of Pope Honorius was retained in the lessons of the Breviary for 28 June (St. Leo II) until the eighteenth century. Difficulties made themselves felt when, after the Great Western Schism, papal in-

fallibility began to be doubted. Protestantism and Gallicanism made vigorous attacks on the unfortunate pope, and at the time of the Vatican Council Honorius figured in every pamphlet and every speech on ecclesiastical subjects. The question has not only been debated in numerous monographs, but is treated by the historians and the theologians, as well as by the professed controversialists. Only a few typical views need here be mentioned.

Bellarmino and Baronius followed Pighius in denying that Honorius was condemned at all. Baronius argued that the Acts of the Council were falsified by Theodore, a Patriarch of Constantinople, who had been deposed by the emperor, but was restored at a later date; we are to presume that the council condemned him, but that he substituted "Honorius" for "Theodorus" in the Acts. This theory has frequently been shown to be untenable.

The more famous Gallicans, such as Bossuet, Dupin, Richer, and later ones as Cardinal de la Luzerne and (at the time of the Vatican Council) Maret, Gratry, and many others, usually held with all Protestant writers that Honorius had formally defined heresy, and was condemned for so doing. They added, of course, that such a failure on the part of an individual pope did not compromise the general and habitual orthodoxy of the Roman Sec.

On the other hand the chief advocates of papal infallibility, for instance, such great men as Melchior Canus in the sixteenth century, Thomassinus in the seventeenth, Pietro Ballerini in the eighteenth, Cardinal Perrone in the nineteenth, have been careful to point out that Honorius did not define anything *ex cathedra*. But they were not content with this amply sufficient defence. Some followed Baronius, but most, if not all, showed themselves anxious to prove that the letters of Honorius were entirely orthodox. There was indeed no difficulty in showing that Honorius was probably not a Monothelite. It would have been only just to extend the same kindly interpretation to the words of Sergius. The learned Jesuit Garnier saw clearly, however, that it was not as a Monothelite that Honorius was condemned. He was coupled with Sergius, Pyrrhus, Paul, the Ecthesis, and the Type. It is by no means clear that Sergius, Pyrrhus, and the Ecthesis are to be accounted as Monothelite, since they forbade the mention of "one operation"; it is quite certain that Paul and the Type were anti-Monothelite, for they prohibited "one Will" also. Garnier pointed out that the council condemned Honorius for approving Sergius and for "fomenting" the dogmas of Pyrrhus and Paul. This view was followed by many great writers, including Pagi.

A theory put forward by Pennacchi at the time of the Vatican Council attracted an unnecessary amount of attention. He agreed with the Protestants and Gallicans in proclaiming that the letter of Honorius was a definition *ex cathedra*; that the pope was anathematized by the council as a heretic in the strict sense; but the council, not being infallible apart from papal confirmation, fell in this case into error about a dogmatic fact (in this point Pennacchi was preceded by Turrecremata, Bellarmine, Assemani, and many others), since the letter of Honorius was not worthy of censure. Leo II, in confirming the council, expressly abrogated the censure, according to this view, and substituted a condemnation for negligence only (so also Grisar—see above). There is evidently no ground whatever for any of these assertions.

Bishop Hefele before 1870 took the view that Honorius's letter was not strictly heretical but was gravely incorrect, and that its condemnation by an œcumenical council was a serious difficulty against the "personal" infallibility of the popes. After his hesitating acceptance of the Vatican decrees he modified his view; he now taught that Honorius's letter was a definition *ex cathedra*, that it was incorrectly worded,

but that the thought of the writer was orthodox (true enough; but, in a definition of faith, surely the words are of primary importance); the council judged Honorius by his words, and condemned him simply as a Monothelite; Leo II accepted and confirmed the condemnation by the council, but, in doing so, he carefully defined in what sense the condemnation was to be understood. These views of Hefele's, which he put forth with edifying modesty and submission as the best explanation he could give of what had previously seemed to him a formidable difficulty, have had a surprisingly wide influence, and have been adopted by many Catholic writers, save only his mistaken notion that a letter like that of Honorius can be supposed to fulfil the conditions laid down by the Vatican Council for an *ex cathedra* judgment (so Jungmann and many controversialists).

(CHARACTER AND WORK OF HONORIUS.—Pope Honorius was much respected and died with an untarnished reputation. Few popes did more for the restoration and beautifying of the churches of Rome, and he has left us his portrait in the apsidal mosaic of Sant Agnese fuori le mura. He cared also for the temporal needs of the Romans by repairing the aqueduct of Trajan. His extant letters show him engaged in much business. He supported the Lombard King Adalwald, who had been set aside as mad by an Arian rival. He succeeded, to some extent, with the emperor's assistance, in reuniting the schismatic metropolitan See of Aquileia to the Roman Church. He wrote to stir up the zeal of the bishops of Spain, and St. Braulio of Saragossa replied. His connexion with the British Isles is of interest. He sent St. Birinus to convert the West Saxons. In 634 he gave the pallium to St. Paulinus of York, as well as to Honorius of Canterbury, and he wrote a letter to King Edwin of Northumbria, which Bede has preserved. In 630 he urged the Irish bishops to keep Easter with the rest of Christendom, in consequence of which the Council of Magh Lene (Old Leighlin) was held; the Irish testified to their traditional devotion to the See of Peter, and sent a deputation to Rome "as children to their mother". On the return of these envoys, all Southern Ireland adopted the Roman use (633).

JOHN CHAPMAN.

Honorius II (LAMBERTO SCANNABECCHI), POPE, b. of humble parents at Fagnano near Imola at an unknown date; d. at Rome, 14 February, 1130. For a time he was Archdeacon of Bologna. On account of his great learning he was called to Rome by Paschal II, became canon at the Lateran, then Cardinal-Priest of Santa Prassede, and, in 1117, Cardinal-Bishop of Ostia and Velletri. He was one of the

cardinals who accompanied Gelasius II into exile. In 1119 Callistus II sent him as legate to Henry V, German Emperor, with powers to come to an understanding concerning the right of investiture. In October of the same year he was present at the Synod of Reims where the emperor was solemnly excommunicated by Callistus II. A great part of the following three years he spent in Germany, endeavouring to bring about a reconciliation between the pope and the emperor. It was chiefly through his efforts that the Concordat of Worms, the so-called "Pactum Calixtinum" was effected on 23 September, 1123. In this concordat the emperor renounced all claims to investiture with staff and ring, and promised liberty of ecclesiastical elections. When the concordat was signed by the emperor, the cardinal sang a solemn high Mass under the open sky near Worms. After the *Agnus Dei* he kissed the emperor, who then received Holy Communion from the hands of the cardinal and was in this manner restored to communion with the Church. Callistus II died on 13 December, 1124, and two days later the Cardinal of Ostia was elected pope, taking the name of Honorius II.

Party spirit between the Frangipani and the Leoni was at its highest during this election and there was great danger of a schism. The cardinals had already elected Cardinal Teobaldo Boccardipecora who had taken the name of Celestine II. He was clothed in the scarlet mantle of the pope, while the *Te Deum* was chanted in thanksgiving, when the proud and powerful Roberto Frangipani suddenly appeared on the scene, expressed his dissatisfaction with the election of Teobaldo and proclaimed the Cardinal of Ostia as pope. The intimidated cardinals reluctantly yielded to his demand. To prevent a schism Teobaldo resigned his right to the tiara. The Cardinal of Ostia however doubted the legality of his election under such circumstances and five days later informed the cardinals that he wished to resign. Only after all the cardinals acknowledged him as the legitimate pope could he be prevailed upon to retain the tiara. Soon after Honorius II became pope, Henry V, the German Emperor, died (23 May, 1125). The pope at once sent to Germany two legates who, in conjunction with Archbishop Adalbert of Mainz, endeavoured to bring about the election of a king who would not encroach upon the rights of the Church. The subsequent election of Lothair, Count of Supplinburg, was a complete triumph for the Church. The new king acknowledged the supremacy of the pope even in temporal affairs, and soon after his election asked for the papal approbation, which was willingly granted. Concerning investiture he made concessions to the Church even beyond the Concordat of Worms. When Conrad of Hohenstaufen rose up in opposition to Lothair and was crowned King of Italy at Monza, by Archbishop Anselm of Milan, Honorius II excommunicated the archbishop as well as Conrad and his adherents, thus completely frustrating Conrad's unlawful aspirations.

Henry I, King of England, had for many years encroached on the rights of the Church in England and would not allow a papal legate to enter his territory on the plea that England had a permanent papal legate (*legatus natus*) in the person of the Archbishop of Canterbury. Callistus II had already experienced difficulties in that line. In 1125 Honorius II sent Cardinal John of Crema as legate to England, but the legate was detained a long time in Normandy by order of Henry I. He was finally permitted to proceed to England. He went thence to Scotland and met King David at Roxburgh, where he held a synod of Scottish bishops to inquire into the controversy between them and the Archbishop of York, who claimed to have metropolitan jurisdiction over them. On 8 September he convened a synod at Westminster at which the celibacy of the clergy was enforced and

decrees were passed against simoniacal elections and contracts. On his return to Rome he was accompanied by William, Archbishop of Canterbury who obtained legatine faculties for England and Scotland from Honorius II, but was unsuccessful in his attempt to prevail upon the pope to surrender his right of sending special legates to England. At the request of the King of Denmark, Honorius II also sent a legate thither to put a stop to the abuses of the clergy in that country.

The pope was less successful in his dealings with Count Roger of Sicily, who tried to gain possession of the lands which his deceased cousin William of Apulia had bequeathed to the Apostolic See. Honorius II placed him under the ban and took up arms against him in defence of the lawful property of the Church, but without avail. To put an end to a useless but costly war he made Roger feudatory Lord of Apulia in August, 1128, while Roger in his turn renounced his claims to Benevento and Capua. Shortly after his election to the papacy Honorius II excommunicated Count William of Normandy for having married a daughter of Fulco of Anjou within the forbidden degree. He likewise restored the disturbed discipline at the monasteries of Cluny and Monte Cassino where the excommunicated Abbots Pontius and Orderisius respectively retained possession of their abbatial office by force of arms. On 26 February, 1126, he approved the Premonstratensian Order which St. Norbert had founded at Prémontré six years previously. His letters and diplomas (112 in number) are printed in P. L., CLVI, 1217-1316.

MICHAEL OTT.

Honorius II (ANTIPOPE). See CADALOUS.

Honorius III (CENCIO SAVELLI), POPE, b. at Rome, date of birth unknown; d. at Rome, 18 March, 1227. For a time he was canon at the church of Santa Maria Maggiore, then he became papal chamberlain in 1188 and Cardinal-Deacon of Santa Lucia in Silice in 1193.

Under Pope Innocent III he became Cardinal-Priest of Santi Giovanni e Paolo and, in 1197, tutor of the future Emperor Frederick II, who had been given as ward to Innocent III by the Empress-widow Constantia. On 18 July, 1216, nineteen cardinals assembled at Perugia (where Innocent had died two days previously) with the purpose of electing a new pope. The troublous state of affairs in Italy, the threatening attitude of the Tatars, and the fear of a schism, induced the cardinals to agree to an election by compromise. Cardinals Ugolino of Ostia (afterwards Gregory IX) and Guido of Præneste were empowered to appoint the new pope. Their choice fell upon Cencio Savelli, who accepted the tiara with reluctance and took the name of Honorius III. He was consecrated at Perugia 24 July, was crowned at Rome 31 August, and took possession of the Lateran 3 September. The Roman people were greatly elated at the election, for Honorius III was himself a Roman and by his extreme kindness had endeared himself to the hearts of all.

Though already far advanced in age, his pontificate was one of strenuous activity. Like his famous predecessor Innocent III, he had set his mind on the achievement of two great things, the recovery of the Holy Land and a spiritual reform of the entire Church; but quite in contrast with him he sought these achievements by kindness and indulgence rather than by force and severity. Immediately upon his accession

to the papal throne he sent letters to the ecclesiastical and the temporal rulers of Europe in which he admonishes and encourages them to continue in their preparation for the general crusade which, as had been provided at the Lateran Council of 1215, was to be undertaken in 1217. To procure the means necessary for this colossal undertaking, the pope and the cardinals were to contribute the tenth part, and all other ecclesiastics the twentieth part, of their income for three years. The bishops under the supervision of the papal legates in the various countries were entrusted with the collection of these moneys. Honorius III ordered the crusade to be preached in all the churches of Christendom. Though the money thus collected was considerable, it was by no means sufficient for a general crusade as planned by Honorius III. Moreover, in preaching the crusade the great mistake was made of trying to gather as many crusaders as possible, without considering whether they were fit for war.

The result was that cripples, old men, women, also robbers, thieves, adventurers, and others composed a great part of the crusaders. In some instances the uselessness of such soldiers was not thought of until they had been transported to distant seaports at public expense. Most rulers of Europe were engaged in wars of their own and could not leave their country for any length of time. Andrew II of Hungary and, somewhat later, a fleet of crusaders from the regions along the Lower Rhine finally departed for the Holy Land, took Damietta and a few other places in Egypt; but lack of unity among the Christians, also rivalry between the leaders and the papal legate Pelagius, to some extent perhaps also the incompetency of the latter, resulted in failure.

Honorius III was aware that there was only one man in Europe who could bring about the recovery of the Holy Land, and that man was his former pupil Frederick II of Germany. Like many other rulers, Frederick II had taken an oath to embark for the Holy Land in 1217. As long as his rival Otto IV was living, the pope did not urge him to fulfil his oath; when, however, his rival had died on 19 May, 1218, Honorius III insisted that he embark as soon as possible and Frederick promised to set sail for the Holy Land on 24 June, 1219. He then obtained permission to postpone his departure repeatedly, first till 29 September, 1219, then successively till 21 March, 1220, 1 May, 1220, August, 1221, June, 1225, and finally, at the meeting of the pope and the emperor at San Germano on 25 July, 1225, till August, 1227. It must not be ascribed merely to weakness on the part of Honorius III that he allowed one postponement after the other.

He knew that without the co-operation of the emperor a successful crusade was impossible and feared that by using harsh measures he would cause a complete break with the emperor and indefinitely destroy the possibility of a crusade. For the same reason he yielded to the emperor in many things which under different circumstances he would have strenuously opposed. Thus he reluctantly approved the election of Frederick's son Henry as King of the Romans, which practically united the Sicilian kingdom and the empire in one person; a union which by its very nature was detrimental to the papacy and which Honorius III had every reason to oppose. Hoping to hasten the departure of Frederick for the Holy Land, he crowned him emperor at Rome on 22 November, 1220. Finally, however, seeing that his extreme indulgence was only abused by the emperor for selfish purposes, he had recourse to severer measures. The emperor's encroachment upon the papal rights in the appointment of bishops in Apulia, and his unworthy treatment of King John of Jerusalem, whom Honorius III had appointed governor over part of the papal patrimony, brought the tension between

ARMS OF
HONORIUS III

the pope and the emperor to its height; but the rupture between the emperor and the papacy did not take place until Honorius III had died.

Though the general crusade planned by Honorius III was never realized, he deserved the gratitude of the world as the great pacificator of his age. Knowing that the crusade was impossible as long as the Christian princes were at war with one another, he began his pontificate by striving to establish peace throughout Europe. In Italy there was scarcely a city or province at peace with its neighbour. Rome itself rebelled against the rule of Honorius, so that in June, 1219, he found it advisable to leave the city. He went first to Rieti, then to Viterbo, returning to Rome in September, 1220, after the Romans were reconciled to him through the intervention of Frederick II, then on his way to Rome to be crowned emperor. In the war that followed between the Conti and the Savelli, the Romans sided with the Conti, and the pope, being of the family of the Savelli, was again forced to flee to Rieti in June, 1225. He returned to Rome in January, 1226, after Angelo di Benincasa, a friend of Honorius III, was elected senator of Rome. Through his legate Ugolino (afterwards Gregory IX) Honorius effected the reconciliation of Pisa and Genoa in 1217, Milan and Cremona in 1218, Bologna and Pistoia in 1219, and through his notary Pandulf he prevailed upon the Duchy of Spoleto to become papal territory, and upon the cities of Perugia, Assisi, Foligno, Nocera, and Terni, to restore what had formerly belonged to the pope.

In England the authority of the pope was paramount ever since that country had become a fief of the Apostolic See under Innocent III. The cruel King John had died on 16 October, 1216, leaving his ten-year-old son Henry III as successor. The cruelty and faithlessness of King John may have justified the English barons in rebelling against him and offering the English crown to Louis, the son of King Philip of France, but now it became their duty to be loyal to the lawful king, Henry III. Honorius III ordered Gualo, his legate in England, to urge the recalcitrant barons to return to their natural allegiance and gave him power to excommunicate all who continued to adhere to Prince Louis of France. On 19 January, 1217, he wrote to William, Earl of Pembroke, who was the young king's guardian and the regent of England, to prepare for war against Prince Louis and the faithless English barons. It was due to the severe measures taken against the barons by the papal legate that peace was finally restored and that Henry III was acknowledged the undisputed King of England on 11 September, 1217. After the death of Pembroke in May, 1219, the regency of England was nominally in the hands of the king's ministers; actually, however, England was ruled by Honorius III through Pandulf, who had meanwhile succeeded Gualo as papal legate in England. The influence of Honorius III continued to be paramount in England during his entire pontificate, for Henry III was still in his minority, and he as well as the barons and the people acknowledged the pope as the suzerain of the kingdom.

The untiring activity of Honorius III in the interests of justice and peace was felt throughout the Christian world. In Bohemia he safeguarded the rights of the Church against the encroachments of King Ottocar, through his legate Gregorius de Crescentio in 1223. In Hungary he protected King Andrew II against his rebellious son Bela IV by threatening the latter with excommunication. For Denmark he effected in 1224 the liberation of its King Waldemar from the captivity in which he was held by Count Henry of Schwerin. In Sweden he protected the rights of the Church against the encroachments of King John, and urged celibacy upon the clergy. For the Latin Empire in the Orient he

crowned Peter of Courtenay as Emperor of Constantinople, in Rome on 12 April, 1217, and protected his successor Robert and King Demetrius of Thessalonica against Theodore Comnenus. In Cyprus he abated the quarrels between the Greeks and the Latins. In Spain he effected a lasting peace between King Ferdinand III and Alfonso IX of Leon, undertook a crusade against the Moors (1218-1219), and protected the boy-king Jaime of Aragon against Counts Sancho and Fernando. In Portugal he defended Archbishop Estevão Suarez against the excommunicated King Alfonso II (1220-1223). In France he induced King Louis VIII to undertake a crusade against the Albigenses in 1226. He also assisted Bishop Christian of Prussia in the conversion of the pagan Prussians, and at the bishop's suggestion called upon the ecclesiastical provinces of Mainz, Magdeburg, Cologne, Salzburg, Gnesen, Lund, Bremen, Trier, and Cambrin in 1222 to prepare a crusade against them.

Honorius III was also a liberal patron of the two great mendicant orders and bestowed numerous privileges upon them. He approved the Rule of St. Dominic in his Bull "Religiosam vitam", dated 22 December, 1216, and that of St. Francis in his Bull "Solet annuere", dated 29 November, 1223. Many authorities maintain that Honorius III had granted the famous Portiuncula indulgence to St. Francis as early as 1216, others hold [Kirsch in "Theologische Quartalschrift", LXXXVIII (Tübingen, 1906), fasc. 1 and 2] that this indulgence is of later origin and that the indulgence which Honorius granted to St. Francis is essentially different from the so-called Portiuncula indulgence. On 30 January, 1226, he approved the Carmelite Order in his Bull "Ut vivendi normam". He also approved the religious congregation "Val des Ecoles" (Vallis scholarium, Valley of scholars), which had been founded by four pious professors of theology at the University of Paris. The Bull of approbation "Exhibita nobis" is dated 7 March, 1219. The congregation was united with that of St. Genevieve by Innocent X in 1646. It is remarkable that four out of the six or seven saints that were canonized by Honorius III were English or Irish. On 17 May, 1218, he canonized William, Archbishop of Bourges (d. 1209); on 18 February, 1220, Hugh, Bishop of Lincoln (d. 1200); on 21 January, 1224, William, Abbot of Roschild in Denmark (d. 1203); on 18 March, 1226, William, Archbishop of York (d. 1154).

He also appointed a committee to investigate the alleged miracles of the Cistercian abbot, St. Maurice of Cornoët (d. 1191). The latter was never formally canonized, but his cult dates back to the pontificate of Honorius III. His feast is celebrated by the Cistercians on 13 October. Honorius III probably canonized also St. Raynerius, Bishop of Forconium, now Aquila, in Italy (d. 1077). Being a man of learning, Honorius insisted that the clergy should receive a thorough training, especially in theology. In the case of a certain Hugh whom the chapter of Chartres had elected bishop, he withheld his approbation because the bishop-elect did not possess sufficient knowledge, "quum pateretur in litteratura defectum", as the pope states in a letter dated 8 January, 1219 (Horoy, loc. cit. infra, III, 92). Another bishop he even deprived of his office on account of illiteracy (Raynaldus, *ad annum* 1221). He bestowed various privileges upon the Universities of Paris and Bologna, the two greatest seats of learning during those times. In order to facilitate the study of theology in dioceses that were distant from the great centres of learning, he ordered in his Bull "Super specula Domini" that some talented young men should be sent to a recognized theological school to study theology with the purpose of teaching it afterwards in their own dioceses.

Honorius III acquired some fame as an author. His letters, many of which are of great historical

ST. FRANCIS RECEIVING THE RULE FROM HONORIUS III

GIOTTO, S. FRANCESCO, ASSISI

value, and his other literary productions, were collected and edited by Horoy in "Medii ævi bibliotheca patristica", series I (5 vols., Paris, 1879-83). While he was papal chamberlain (whence his general appellation of Cencius Camerarius), he compiled the "Liber censuum Romanæ ecclesiæ", perhaps the most valuable source for the history of papal economics during the Middle Ages. It comprises a list of the revenues of the Apostolic See, a record of donations received, privileges granted, and contracts made with cities and rulers. It was begun under Clement III and completed in 1192 under Celestine III. Muratori inserted it in his "Antiquitates Italicæ mediæ ævi", V (Milan, 1739-43), 851-908. A new edition was prepared for the "Bibliothèque des écoles françaises d'Athènes et de Rome" by Fabre and Duchesne, fasc. i (Paris, 1889), fasc. ii and iii (1902), fasc. iv (1903). The original manuscript of the "Liber Censuum", which is still in existence (Vaticanus, 8486), concludes with a catalogue of the Roman pontiffs and the emperors from St. Peter to Celestine III in 1101. It was edited separately by Weiland in "Archiv der Gesellschaft für ältere deutsche Geschichtskunde", XII (Hanover, 1874), 60-77. Honorius III wrote also a life of Celestine III (Horoy, loc. cit., I, 567-592); a life of Gregory VII (ibid., I, 568-586); an "Ordo Romanus", which is a sort of ceremonial containing the rites of the Church for various occasions (ibid., I, 35-94, and Mabillon, in "Museum Italicum", II, 167-220); and 34 sermons (Horoy, I, 593-976). His collection of decretals known as "Compilatio quinta" has been treated under DECRETALS.

PRESSUTI, *Regesta Honorii III* (2 vols., Rome, 1888-95); CLAUSEN, *Papst Honorius III*. (Bonn, 1895). MICHAEL OTT.

Honorius IV (GIACOMO SAVELLI), POPE, b. at Rome about 1210; d. at Rome, 3 April, 1287. He belonged to the rich and influential family of the Savelli and was a grandnephew of Honorius III. Very little is known of his life before he ascended the papal throne.

ARMS OF
HONORIUS IV

He studied at the University of Paris, during which time he held a prebend and a canonry at the cathedral of Châlons-sur-Marne. Later he obtained the benefice of rector at the church of Berton, in the Diocese of Norwich. In 1261 he was created Cardinal-Deacon of Santa Maria in Cosmedin by Martin IV, who also appointed him papal prefect in Tuscany and captain of the papal army. By order of Clement IV he and three other cardinals invested Charles of Anjou as King of Sicily at Rome on 28 July, 1265. He was one of the six cardinals who elected Gregory X by compromise at Viterbo on 1 Sept., 1271. In 1274 he accompanied Gregory X to the Fourteenth General Council at Lyons, and in July, 1276, he was one of the three cardinals whom Adrian V sent to Viterbo with instructions to treat with King Rudolf I of Hapsburg concerning his imperial coronation at Rome and his future relations towards Charles of Anjou, King of Sicily. The death of Adrian V in the following month rendered fruitless the negotiations with Rudolf. Nothing further is known of the cardinal's doings until, nine years later, he was elected pope.

Martin IV died 28 March, 1285, at Perugia, and

three days after his death fifteen out of the eighteen cardinals who then composed the Sacred College had a preliminary consultation at the episcopal residence at Perugia, and appointed the following day, 2 April, 1285, for the election of the new pope. The election took place without the conclave, which had been prescribed by Gregory X, but suspended by John XXI. At the first vote taken, Giacomo Savelli was unanimously elected and took the name of Honorius IV. His election was one of the speediest in the history of the papacy. The reason for this great haste may be found in the Sicilian complications, which did not allow any interregnum, and especially in the fact that the cardinals wished to avoid the unjustifiable interference which occurred at the election of the preceding pope, when Charles of Anjou induced the inhabitants of Viterbo to imprison two cousins of the deceased Nicholas III, in order to effect the election of a pope of French nationality. On 19 May, 1285, the new pontiff was ordained priest by Cardinal Malabranca Orsini of Ostia, and the following day he was consecrated bishop and crowned pope in the basilica of St. Peter at Rome. Honorius IV was already advanced in age and so severely affected with the gout that he could neither stand nor walk. When saying Mass he was obliged to sit on a stool and at the Elevation his hands had to be raised by a mechanical contrivance.

Sicilian affairs required the immediate attention of the pope. By throwing off the rule of Charles of Anjou and taking Pedro III of Aragon as their king without the consent and approval of the pope, the Sicilians had practically denied his suzerainty over Sicily. The awful massacre of 31 March, 1282, known as the Sicilian Vespers, had precluded every possibility of coming to an amicable understanding with Martin IV, a Frenchman who owed the tiara to Charles of Anjou. Pope Martin demanded unconditional submission to Charles of Anjou and the Apostolic See and, when this was refused, put Sicily and Pedro III under the ban, deprived Pedro of the Kingdom of Aragon, and gave it to Charles of Valois, the son of King Philip III of France. He, moreover, assisted Charles of Anjou in his attempts to recover Sicily by force of arms. The Sicilians not only repulsed the attacks of Charles of Anjou but also captured his son Charles of Salerno. On 6 January, 1285, Charles of Anjou died, leaving his captive son Charles of Salerno as his natural successor. Such were the conditions in Sicily when Honorius IV ascended the papal throne. The Sicilians cherished the hope that the new pontiff would take a different stand from that of his predecessor in the Sicilian question, but their hopes were only partly realized. He was indeed less impulsive and more peaceably inclined than Martin IV, but he did not renounce the claims of the Church and of the House of Anjou upon the Sicilian crown. Neither did he set aside the severe ecclesiastical punishments imposed upon Sicily or restore to Pedro III the Kingdom of Aragon which Martin IV had transferred to Charles of Valois. On the other hand, he did not approve of the tyrannical government to which the Sicilians had been subject under Charles of Anjou. This is evident from his wise legislation as embodied in his constitution of 17 September, 1285 ("Constitutio super ordinatione regni Siciliae" in "Bullarium Romanum", Turin, IV, 70-80). In this constitution he inculcated that no government can prosper which is not founded on justice and peace, and he passes forty-five ordinances intended chiefly to protect the people of Sicily against their king and his officials. In case of any violation of these ordinances by the king or his officials, the people were free to appeal to the Apostolic See for redress. The king, moreover, was bound to observe the ordinances contained in this constitution under pain of excommunication. Martin IV had allowed King Philip III of France to tax the clergy in France, and in a few dioceses of Germany, one-

tenth of their revenues for the space of four years. The money thus collected was to be used for waging war against Pedro III with the purpose of conquering Aragon for Charles of Valois. Honorius IV approved this action of his predecessor. When Edward I of England requested him to use his influence to put an end to the war, he answered that Pedro III deserved to be punished and that Philip III should not be kept from reaping the fruits of a war which he had undertaken in the service and at the instance of the Church. The death of Pedro III on 11 November, 1285, somewhat changed the Sicilian situation. His two sons Alfonso and James succeeded him, the former as King of Aragon, the latter as King of Sicily. Honorius IV, of course, acknowledged neither the one nor the other. On 11 April, 1286, he solemnly excommunicated King James of Sicily and the bishops who had taken part in his coronation at Palermo on 2 February, 1286; but neither the king nor the bishops concerned themselves about the excommunication. The king even sent a hostile fleet to the Roman coast and destroyed the city of Astura by fire. Charles of Salerno, the lawful King of Sicily, who was still held captive by the Sicilians, finally grew tired of his long captivity and signed a contract on 27 February, 1287, in which he renounced his claims to the Kingdom of Sicily in favour of James of Aragon and his heirs. Honorius IV, however, who was asked for his approval, refused to listen to such an unprincipled act, which surrendered the rights of the Church and of the House of Anjou to refractory rebels. He declared the contract invalid and forbade all similar agreements for the future. While Honorius IV was inexorable in the stand he had taken towards Sicily and its self-imposed king, his relations towards Alfonso of Aragon became less hostile. Through the efforts of King Edward I of England, negotiations for peace were begun by Honorius IV and King Alfonso. The pope, however, did not live long enough to complete these negotiations, which finally resulted in a peaceful settlement of the Aragonese as well as the Sicilian question.

Rome and the States of the Church enjoyed a period of tranquillity during the pontificate of Honorius IV, the like of which they had not enjoyed for many years. He had the satisfaction of reducing the most powerful and obstinate enemy of papal authority, Count Guido of Montefeltro, who for many years had successfully resisted the papal troops. The authority of the pope was now recognized throughout the papal territory, which then comprised the Exarchate of Ravenna, the March of Ancona, the Duchy of Spoleto, the County of Bertinoro, the Mathildian lands, and the Pentapolis, viz. the cities of Rimini, Pesaro, Fano, Sinigaglia, and Ancona. The Romans were greatly elated at the election of Honorius IV, for he was a citizen of Rome and a brother of Pandulf, who had during the preceding summer been elected one of the two annual senators of Rome. The continuous disturbances in Rome during the pontificate of Martin V had not allowed that pope to reside in Rome, but now the Romans cordially invited Honorius IV to make Rome his permanent residence. During the first few months of his pontificate he lived in the Vatican, but in the autumn of 1285 he removed to the magnificent palace which he had just erected on the Aventine. With Northern Italy Honorius IV had few dealings beyond those that were of a purely ecclesiastical character. On 16 March, 1286, he removed the interdict which had been imprudently placed upon Venice by Martin IV because that city had refused to equip a fleet for the service of Charles of Anjou in his war against Pedro III of Aragon. At Florence and Bergamo he brought about the abolition of some newly-made laws that were hostile to the Church and the clergy.

The relations between Honorius IV and the German King Rudolf of Hapsburg were most cordial. The

negotiations for Rudolf's imperial coronation which had been begun during the pontificate of Adrian V (1276) and continued during that of Nicholas III (1277-1280) were entirely suspended during the pontificate of Martin IV (1281-1285) who had little love for the Germans. Immediately upon the accession of Honorius IV these negotiations were resumed and the feast of the Purification of the Blessed Virgin, 2 February, 1287, was determined as the day on which Rudolf should be crowned emperor in the Basilica of St. Peter at Rome. The pope requested the German prelates to contribute a share of their revenues to cover the expenses of his journey to Rome. He even sent Cardinal John of Tusculum, the only one who received the purple during the pontificate of Honorius, as legate to Germany, Sweden, Russia, and the other countries of the north to hasten the king's Italian expedition, but Rudolf's war with Count Eberhard of Württemberg and other dissensions in Germany prevented his departure. The same legate presided at the national council of Würzburg, which began its sessions on 16 March, 1287. The decrees which were passed at this council are practically the same as those of the general council of Lyons in 1274.

The two great mendicant orders which at that time exerted great influence, both as pastors of the faithful and as professors at the great seats of learning in Europe, received many new privileges from Honorius IV. He also approved the privileges of the Carmelites and the Augustinian hermits and permitted the former to exchange their striped habit for a white one. He was especially devoted to the Williamites, an order founded by St. William, Duke of Aquitaine (d. 1156), and added numerous privileges to those which they had already received from Alexander IV and Urban IV. Besides turning over to them some deserted Benedictine monasteries, he presented them with the monastery of St. Paul at Albano, which he himself had founded and richly endowed when he was still cardinal. On 11 March, 1286, he condemned the sect of the Apostolics (see APOSTOLIC) or false apostles, which had been started by a certain Gerard Segarelli at Parma in 1260. At the University of Paris he advocated the erection of chairs for the Oriental languages in order to give an opportunity of studying these languages to those who intended to labour for the conversion of the Mussulmans and the reunion of the schismatic churches in the East.

MICHAEL OTT.

Honorius, FLAVIUS, Roman Emperor, d. 26 August, 423. When his father, the Emperor Theodosius, divided up the government of the empire in the year 395, the western half was allotted to Honorius, while the eastern went to his brother Arcadius. The boundary line was drawn in such a manner that the provinces of Dalmatia, Pannonia, and Noricum still belonged to Western Rome. The eleven-year-old Honorius was under the guardianship of the able Vandal general Stilicho whom Theodosius had placed in command of the troops stationed in northern Italy. When the Arian Visigoths revolted under their young King Alaric, of the family of Balthe (i. e. the Bold), and invaded the Western Roman Empire, Stilicho first marched against them in northern Greece but was obliged to withdraw his troops from the territory of the Eastern Roman Empire by order of Arcadius. Not until the Goths overran the Peloponnesus was his help accepted. He surrounded Alaric's hordes with his legions but, when the Byzantine rulers sought to come to an understanding with Alaric, he suffered the Goths to retreat into Illyria.

As a consequence the division of the Roman Empire now led to positive hostility between its parts. Stilicho endeavoured to eradicate abuses in the administration, remained on good terms with the Senate and, in order to keep the young emperor under his influence, married him to his daughter Maria. When Honorius was menaced by Alaric in Milan early in 402, Stilicho hastened to his assistance from Rætia with legions summoned for that purpose from Britain and Germany; he rescued the emperor from his precarious situation and repulsed the Goths with great loss at Pollentia (4 April, 402) and Verona (403). Honorius marched with Stilicho under a triumphal arch erected in Rome in honour of the victories, and held brilliant festivals after the ancient Roman custom.

Meanwhile German tribes under the leadership of the Ostrogoth Radagais invaded Italy (405). Honorius and the court took refuge within the fastnesses of Ravenna, impregnable in its marshy surroundings, which now became the capital of the Emperor of Western Rome, and later of the Ostrogoth kings and the viceroys of Eastern Rome. Stilicho conquered the invaders in the mountains of Fæsulæ (Fiesole) near Florence, 12,000 Goths being impressed into the service of Rome. As the empire had no Roman legions to oppose them, the Vandals, Alani, and Suevi now poured over the Rhine into the interior of Gaul, followed by Franks, Burgundians, and Alemanni, who settled permanently on the left bank of the Rhine. Stilicho entered into negotiations with Alaric, holding out promises of Eastern Illyria to secure his aid. Thereupon the Roman general Constantine, who had crossed over from Britain, appeared in Gaul, and proclaimed himself emperor. The negotiations with Alaric failed and, when Alaric demanded an indemnity of 4000 pounds in gold, Stilicho who had twice saved Italy, was suspected by the court of entertaining treasonable plans. The weak emperor listened to the insinuations of the chancellor Olympius and had Stilicho put to death. Alaric now marched unopposed on Italy in 408, whilst the emperor tried to fortify himself in Ravenna. The Romans concluded a treaty and bought peace. The Senate also recommended that Honorius accept Alaric's terms. Upon his refusal Alaric made the senate declare him deposed and had Attalus, prefect of Rome, proclaimed emperor for the time being. As Honorius repeated his rejection of the demand for pay and quarters for the Goths, Alaric took the city of Rome by storm on 24 August, 410, leaving it to be sacked by his warriors for three days, but sparing the lives of the inhabitants and treating the churches with respect. Then he marched down into southern Italy in order to cross over to Africa, to found a Visigoth empire there and terrorize the emperor by cutting off the grain supplies. While carrying out this plan the warrior hero died at the age of thirty-four on the Busento, being buried in the bed of that river. His brother-in-law Ataulph was elected in his stead and, after negotiations with Honorius, led the Goths into Gaul. At the same time the Vandals, Suevi, and Alani crossed the Pyrenees into Spain and overran the peninsula.

During these campaigns Honorius had recognized Constantine as *imperator*, but the latter was besieged at Arelatum by his ambitious lieutenant, Gerontius. Honorius dispatched the valiant Illyrian Constantius, who defeated the usurper and drove him to suicide. Constantine was now forced to capitulate, but Honorius refused to accept this submission and had his rival put to death. Ataulph who had occupied Aquitania, subdued Jovinus, the third rival *imperator* in Gaul, who relied on the Germans on the Rhine for support. Ataulph then married Honorius's step-sister, Galla Placidia, at Narbonne in 414; she had been taken captive by Alaric. Thereby he aroused the bitter enmity of Honorius, in whose behalf Con-

stantius waged war against Ataulph, the latter being assassinated on account of a private feud at Barcelona. His successor, Wallia, surrendered Placidia to Honorius. Constantius, who had effected the outward reclamation of the Roman provinces that were occupied by Germans, was appointed co-ruler with the emperor in 420 and received the hand of Placidia. Their son, Flavius Placidus Valentinian III, whose energetic mother wielded the sceptre for him, was invested with the purple after a brief interregnum of the usurper John, following the death of Honorius on 26 August, 423.

KARL HOEBER.

Honorius of Autun (HONORIUS AUGUSTODUNENSIS), a theologian, philosopher, and encyclopedic writer who lived in the first half of the twelfth century. Honorius has been correctly described as one of the most mysterious personages in all the medieval period. All that can be stated with certainty is that he flourished between the years 1106 and 1135, that he spent the greater part of that time in Southern Germany, and that he wrote a very large number of works, most of which have come down to us. He is generally said to have been a native of Autun in Burgundy, and in one of his works (*De Luminaribus Ecclesiae*) he styles himself "priest and head of the school (*scholasticus*) of Autun". On the other hand, his references to contemporary events in Germany, the frequency of German glosses in his writings, and the possibility of reading "Augustodunensis" to mean "a native of Augst" (near Basle) or "of Augsburg" (in Swabia), have induced some historians to conclude that he was a German. In recent times it has been suggested that he was a monk of St. Augustine's at Canterbury, in which case "Augustodunensis" should be read "Augustinensis". Again, it is generally supposed that he was a Benedictine monk, and yet some of the oldest MSS. describe him as *solitarius*. This, of course, could mean "monk"; by some, however, it is taken literally to mean a hermit or *inclusus*, and one at least of the recent writers on the subject (Endres, "Honorius Augustodunensis", Munich, 1906) does not hesitate to associate Honorius with the Irish *inclusi* who were in the neighbourhood of Ratisbon in the twelfth century. It is interesting to find that Honorius is well acquainted with John the Scot (see ERIGENA, JOHN SCOTUS), imitates his style, borrows his definition of philosophy, writes a compendium of one of his books, and generally betrays the influence of a writer who was not considered worthy of study by the majority of Honorius's contemporaries. Curiously enough, he calls John the Scot "*Joannes Scotus vel Chrysostomus*", the latter name being probably a personal tribute to the eloquence of the great Irish philosopher.

The list of Honorius's writings is a very long one. In Pez's "Thesaurus" ("Diss. isagog." in vol. II, p. 4) we find as many as thirty-eight titles. Of these the most important are the following:—I. Philosophical works: "*Imago Mundi, de Dispositione Orbis*", a treatise on cosmography, astronomy, meteorology, and chronology; "*De Philosophiâ mundi*", which treats of God, the world, heaven and earth, the soul, education; "*Clavis Physicæ, de Naturis Rerum*", which, as the *incipit* of the MS. indicates, is a compilation "excerptus ab Honorio solitario de quinque libris cuiusdam *Chrisotomii*", that is from John the Scot; "*De libero arbitrio*" (two distinct works), and several short treatises on the soul. II. Theological works: "*Elucidarium*", a summary of all Christian theology in the form of a dialogue, which was translated into French in the thirteenth century by the Dominican Jeffrey of Waterford, and into German

some time before the fifteenth century; "Sigillum Beatæ Mariæ", an exposition of the Canticle of Canticles; "Gemma Animæ", a treatise on the Divine Office; "Eucharistion", a work on the Body and Blood of Christ; "Speculum Ecclesiæ", a book of sermons, and a work "De incontinentiâ clericorum seu officulorum" III. Works of general educational value, such as "De luminariis Ecclesiæ", "Summa totius Historiæ", "Series Romanorum Pontificum", etc. Honorius composed a commentary on the "Timæus" of Plato, of which unfortunately only a fragment has come down to us. This fragment is published in Migne's edition of Honorius's works (P. L., CLXXII) from Cousin's edition of it in the introduction to the "Ouvrages inédits d'Abélard".

Honorius does not pretend to observe a distinction between the province of philosophy and that of theology. In his work "Philosophia Mundi" he treats of the mystery of the Trinity, and in the treatise "De Hæresibus" he enumerates the "heretics of pagan times", Stoics, Pythagoreans, Platonists, etc. The distinction, which seems so natural to us, was not acknowledged generally until the time of St. Thomas. Honorius, as has been said, borrows his definition of philosophy from John the Scot. "Philosophy", he says, "is the comprehension of things visible and invisible" (eorum quæ sunt et non videntur et quæ sunt et videntur comprehensio). True to the inspiration of the Platonists, he begins with the invisible, uncreated, incorporeal, and proceeds to the consideration of the visible, created, corporeal. But, unlike the Platonists, he has a proper appreciation of the value of concrete knowledge. Consequently, he devotes much space in philosophy to the description of the actual world, and in his theological speculations he is far from overlooking the value of institutions, ceremonies, and the organization of religious truth in the life and career of the Church. He thus marks one of the first epochs in the history of the relation between speculative and positive teaching in the Middle Ages. At the same time he does not overlook the mystical element in Christian thought. In fact, he is an author whose importance has been too generally ignored in the history of Christian philosophy and theology.

WILLIAM TURNER.

Honour may be defined as the deferential recognition by word or sign of another's worth or station. Thus I show honour to another by giving him his title if he have one, and by raising my hat to him, or by yielding to him a place of precedence. I thereby give expression to my sense of his worth, and at the same time I profess my own inferiority to him.

It is right and proper that marks of honour should be paid to worth of any kind, if there be no special reason to the contrary, and we are obliged to honour those who stand in any relation of superiority to ourselves. First and foremost, we must honour God by worshipping Him as our first beginning and last end, the infinite source of all that we have and are. We honour the angels and saints on account of the gifts and graces bestowed on them by God. We honour our parents, from whom we received our earthly being, and to whom we owe our bringing-up and preparation for the battle of life. Our rulers, spiritual and temporal, have a just claim on our honour by reason of the authority over us which they have received from God. We honour the aged for their presumed wisdom, virtue, and experience. We should always honour moral worth wherever we find it, and we may honour the highly talented, those who have been en-

dowed with great beauty, strength, and dexterity, the well-born, and even the rich and powerful, for riches and power may, and should, be made the instruments of virtue and well-doing.

Among the goods which are external to man honour holds the first place, above wealth and power. It is that which we especially give to God, it is the highest reward which we can bestow on virtue, and it is what men naturally prize the most. The Apostle bids us give honour to whom honour is due, and so, to withhold it or to show dishonour to whom honour is due is a sin against justice, and entails the obligation of making suitable restitution. If we have simply neglected our duty in this respect, we must make amends by more assiduously cultivating the person injured by our neglect. If we have been guilty of offering a public insult to another, we must offer an equally public satisfaction; if the insult was private, we must make the suitable reparation in private, so that the person injured should be reasonably satisfied. Those who are placed in authority in Church or State, and have the bestowal of public honours, are bound by the special virtue of distributive justice to bestow honours according to merit. If they fail in this duty, they are guilty of the special sin of acceptance of persons. The public good of the Church specially requires that those who are more worthy should be promoted to such high dignities as the cardinalate or episcopate, and for the same reason there is a grave obligation to promote the more worthy rather than the less worthy to ecclesiastical benefices that have the cure of souls annexed to them. According to the more probable opinion, the same rule holds good concerning promotion to benefices to which the cure of souls is not attached, though St. Alphonsus allows that the contrary opinion is probable, provided that the favoured person is at least worthy of the honour, although less worthy than his rival. When an examination is held to decide who among many candidates is to be chosen for a post of honour, there is a still stricter obligation to choose the one whom all the tests show to be—other things being equal—the most worthy of the post. On the ground that, where this obligation is neglected, not only distributive justice is violated, as in the preceding cases, but commutative justice as well, the common opinion holds that if one who by examination is proved more worthy is passed over, he has a right to compensation for the injury which he has suffered. Many, however, deny the obligation to make restitution in the matter of benefices even in this case, on the ground that, though an examination to test fitness be held, yet no strict compact is entered into by which those who confer the benefice bind themselves in strict justice to grant it to the more worthy. It is plain that those who are responsible for the appointment of an unfit person to a post of superiority are also responsible for the harm which his unfitness causes. The foregoing principles have been formulated by divines for the settling of questions connected with the appointment to ecclesiastical benefices, but they are applicable to other similar appointments, both ecclesiastical and civil.

A question of great interest in the history of religion and morals, and of primary importance in Christian asceticism, must be treated of here. We have seen that honour is not only a good, but that it is the chief of those external goods which man can enjoy. St. Thomas Aquinas and Catholic divines agree in this with Aristotle. We have also seen that, according to Catholic doctrine, all are bound in justice to give honour to whom honour is due. It follows from this that it is not morally wrong to seek honour in due moderation and with the proper motive. And yet Christ severely blamed the Pharisees for loving the first places at feasts, the first chairs in the synagogues, salutations in the marketplace, and titles of honour. He told His disciples not to be called Rabbi,

Father, or Master, like the Pharisees; the greatest among His disciples should be the servant of all; and whosoever exalteth himself shall be humbled, and he that humbleth himself shall be exalted.

Here we touch upon the distinctive characteristic of Christian morality as distinguished from pagan ethics. The ideal type of manhood in the system of Aristotle is drawn for us in that philosopher's celebrated description of the magnanimous man. The magnanimous man is described as one who, being really worthy of great things, holds himself worthy of them. For he who holds himself thus worthy beyond his real deserts is a fool, and no man possessed of any virtue whatsoever can ever be a fool or show want of understanding. He, on the other hand, who holds himself worthy of less than his merits is little-minded, no matter whether the merits which he thus underrates be great, or moderate, or small. The merits, then, of the high-minded man are extreme, but in his conduct he observes the proper mean. For he holds himself worthy of his exact deserts, while others either overestimate or else underestimate their own merits. And since he is not only worthy of great things, but also holds himself worthy of them—or rather, indeed, of the very greatest things—it follows that there is some one object which ought most especially to occupy him. Now this object is honour, for it is the very greatest of all external goods. But the high-minded man, since his deserts are the highest possible, must be among the best of men; for the better a man is the higher will be his deserts, and the best man will have the highest deserts. True high-mindedness, therefore, cannot but imply virtue; or, rather, the criterion of high-mindedness is the conjoint perfection of all the individual virtues. High-mindedness, then, would seem to be the crown, as it were, of all the virtues; for it not only involves their existence, but it also intensifies their lustre. It is with honour, then, and with dishonour that the high-minded man is most especially concerned. And where he meets with great honour, and that from upright men, he will take pleasure in it; although his pleasure will not be excessive, inasmuch as he has obtained at the outside only what he merits, if not perhaps less—since adequate honour for perfect virtue cannot be found. He will, however, none the less receive such honour from upright men, inasmuch as they have no greater reward to offer him. But honour given by the common herd, and upon unimportant occasions, he will hold in utter contempt, for it will be no measure of his deserts. Now the high-minded man justly despises his neighbours, for his estimate is always right; but the majority of men despise their fellows upon insufficient grounds. He also loves to confer a favour, but feels shame at receiving one; for the former argues superiority, the latter inferiority. The high-minded would, moreover, seem to bear those in mind to whom they have done kindnesses, but not those from whom they have received them. For he who has received a kindness stands in a position inferior to that of him who has conferred it, whereas the high-minded man desires a position of superiority. And so he hears with pleasure of the favours he has conferred, but with dislike of those which he has received.

These are the chief traits in this celebrated portrait as far as they relate to the matter with which we are dealing. Aristotle fills in the details of the picture with minute accuracy; it is obvious that he dwelt upon it with loving care, as the highest ideal of his ethical system. And yet, as we read it now, the description has in it an element of the ridiculous. If the high-minded man of Aristotle appeared to-day in any decent society, he would soon be given to understand that he took himself a great deal too seriously, and he would be quizzed unmercifully until he abated something of his pretensions. It is, indeed, a con-

summate picture of a noble pride which the pagan philosopher paints for us, and Christianity teaches us that all pride is a lie. Human nature, even at its best and noblest, is, after all, a poor thing, and even vile, as Christian asceticism tells us. Was, then, Aristotle simply wrong in his doctrine concerning magnanimity? By no means. St. Thomas accepts his teaching concerning this virtue, but, to prevent it becoming pride, he tempers it with the doctrine of Christian humility. Christian doctrine joins all that is true and noble in Aristotle's description of magnanimity with what revelation and experience alike teach us concerning human frailty and sinfulness. The result is the sweetness, the truth, and the strength of the highest Christian character. Instead of a self-satisfied Aristides or Pericles, we have a St. Paul, a St. Francis of Assisi, or a St. Francis Xavier. The great Christian saint is penetrated with a sense of his own weakness and unworthiness apart from God's grace. This prevents him thinking himself worthy of anything except punishment on account of his sins and unfaithfulness to grace. He never despises his neighbour, but esteems all men more than he does himself. If left to himself, he prefers, with St. Peter of Alcantara, to be despised of men and to suffer for Christ. But if the glory of God and the good of his fellow-men require it, the Christian saint is prepared to abandon his obscurity. He knows that he can do all things in Him Who strengthens him. With incredible energy, constancy, and utter forgetfulness of self, he works wonders without apparent means. If honours are bestowed on him, he knows how to accept them and refer them to God if it be for His service. Otherwise he despises them as he does riches, and prefers to be poor and despised with Him Who was meek and humble of heart.

In opposition to the pagan doctrine of Aristotle and the selfish worldliness of the Pharisees, the Christian attitude towards honours may be stated in a few words. Honour, being the due homage paid to worth, is the chief among the external goods which man can enjoy. It may be lawfully sought for, but inasmuch as all worth is from God, and man of himself has nothing but sin, it must be referred to God and sought only for His sake or for the good of one's fellow-men. Honours, like riches, are dangerous gifts, and it is praiseworthy to renounce them out of love for Him who for our sakes was poor and despised.

T. SLATER.

Hontheim (FEBRONIUS), JOHANNES NICOLAUS VON, auxiliary Bishop of Trier; b. at Trier, 27 January, 1701; d. at Montquentin, near Orval, 2 Sept., 1790. The son of Karl Caspar von Hontheim and of Anna Margareta von Anethan, he received his early education from the Jesuits of Trier, with whom he subsequently had little sympathy. He afterwards attended the Universities of Trier, Louvain, and Leyden, where he devoted himself to the study of law and theology. The works of Van Espen, the Louvain professor, and his Gallican doctrine influenced him greatly. He became a doctor of law at Trier in 1724, and then made an educational tour through various countries—Holland, Belgium, Germany, and Italy—and spent three years in Rome. Having become a priest 22 May, 1728, he was received without delay among the Canons of St-Simeon at Trier, in the prebend which his uncle, Hugo Frederick von Anethan, had given him when he reached the age of twelve years, at which time he had received the tonsure. He also discharged other ecclesiastical functions, and in 1732 became professor of the Pandects at the University of Trier. In 1738 he went to Coblenz where he discharged the duties of official and president of the Grand Séminaire

of that city. He left Coblenz in 1747 on account of ill-health, and returned to Trier, where he became in 1748 dean of the chapter of St-Simeon, auxiliary bishop, and vicar-general. He received episcopal consecration at Mainz, 16 February, 1749, with the title of Bishop of Myriophytos (Greece) *in partibus infidelium*. To these already absorbing duties he added those of vice-chancellor of the university. In 1763 he published his famous work "Justini Febronii jurisconsulti de statu Ecclesie et legitima potestate Romani pontificis liber singularis", which aroused so much controversy (see FEBRONIANISM).

In 1778 he asked and received the nomination of a second auxiliary bishop, and in the next year, on 21 April, resigned his duties as dean of the collegiate church of St-Simeon. It was not until two years before he died that he renounced with complete sincerity his erroneous doctrines. He was a man of short stature, energetic, hard-working, pious, and generous. His great fault was to have upheld and propagated Gallican doctrines in Germany. Apart from several juridical dissertations and lectures—e. g., "De jurisprudentia naturali et summo imperio" (1724); "Normæ studiorum pro universitate Trevirensi et gymnasio Confluentino" (1751); "Argumenta psalmodum et canticorum" (1759)—his principal works are "Historia Trevirensis diplomatica et pragmatica" (3 vols., Augsburg, 1750); "Prodromus historie Trevirensis" (2 vols., Augsburg, 1757), and his works on the constitution of the Church: "De statu ecclesie", mentioned above, and its successive editions (1763-70) and supplements (II, III, IV, the last in 2 parts, 1770-74); "Justinus Febronius abbreviatus et emendatus" (Cologne and Frankfort, 1777); "Justini Febronii commentarius in suam retractionem" (Frankfort, 1781). The city of Trier possesses an unedited work by him, viz. the "Historie scriptorum et monumentorum Treviren. amplissima collectio".

A. VAN HOVE.

Hood, a flexible, conical, brimless head-dress, covering the entire head, except the face. It is either a separate garment or part of a cloak. In the first case it generally ends below in a sort of cape, sometimes open in front, and sometimes closed so that the only opening is that for the face. Among the Romans, the hood (*cucullus*, a word of Celtic origin) was worn as a separate garment especially by drivers, herdsmen, and labourers; and by all classes as part of the *lacerna*, the *birrus*, and particularly the *penula*, varieties of cloaks. The hood in both forms was very common in the Middle Ages, especially in France, Germany, and England, being worn by clerics and laymen, men and women, high and low. It was the ordinary head-dress of monks and mendicant friars and was prescribed as part of the religious habit. In the thirteenth and fourteenth centuries the hood usually ended in a long peak (*lirippium*) which extended down the back, and was used occasionally as a neck-cloth. Towards the close of the Middle Ages the hood, though not universally abandoned, was superseded by the hat, among both clerics and laymen; it was retained especially by the old Orders. In fact the Capuchins receive their name from their hood (*capuce*), which differs in form from that of the other Franciscans. From the hood was developed the coif or cap formerly worn by women. A form of head-dress derived from the hood was the almutia (*almutium*, *armutia*), used by members of the chapter in choir as early as the beginning of the thirteenth century. It was notable as a rule for its large-sized cape and two horn-like puffs resting on the temples, but without the *lirippium*. It was made preferably of fur, or at

least lined with fur, and the lower part was adorned with fur tassels. It was never a liturgical garment, but only part of the choir-dress, and a distinguishing mark of the canons. As a head-covering it gradually lost its significance when the biretta was adopted for the choir. As early as the sixteenth century the almutia was often carried on the arm. To-day it is used only in a few places (Arras, Amiens, Chartres, Lucerne, etc.).

Similar in form to the almutia is the mozzetta, a cape provided with a small hood. Though it properly belongs to the pope, cardinals, and bishops, its use is also granted to other prelates and to members of distinguished chapters. The pope's mozzetta is red; that of the cardinals red, rose-coloured, or violet; all others are violet, unless the prelate belongs to a religious order, in which case the colour of the mozzetta and of the religious habit is the same. It is open in front, but provided with buttons, and during Divine services is worn over the rochet. Bishops wear it within their dioceses, both inside and outside the church. Members of chapters do not wear it outside the church unless the chapter appears *corporaliter*. The mozzetta cannot be traced back farther than the fifteenth century. It is regarded either as a shortened cappa, or is derived, perhaps, and more correctly, from the almutia.

JOS. BRAUN.

Hoogstraten (also HOCHSTRATEN), JACOB VAN, theologian and controversialist, b. about 1460, in Hoogstraten, Belgium; d. in Cologne, 24 January, 1527. He studied the classics and theology with the Dominicans at Louvain, and in 1485 was among the first in the history of that institution to receive the degree of Master of Arts. He there entered the order, and after his ordination to the priesthood in 1496, he matriculated in the University of Cologne to continue his theological studies. The general chapter held in 1498 at Ferrara appointed him professor of theology in the Dominican college of Cologne. In 1500 he was elected prior of the convent in Antwerp, and on the expiration of his term of office returned to Cologne, where, in February, 1504, he received the degree of Doctor of Theology. At the general chapter of Pavia in 1507 he was made regent of studies, and thereby became professor of theology in the university. His vast theological attainments and his natural ability to impart knowledge made him an exceptionally successful teacher.

Hoogstraten began his controversial career by publishing in defence of the mendicant orders, who had been accused of abusing their privileges, his "Defensorium fratrum mendicantium contra curatos illos qui privilegia fratrum injuste impugnat" (Cologne, 1507). In the following year he published several works against the eminent Italian jurist, Pietro Tomasi of Ravenna, who was then lecturing in the German universities. During his controversy with the Italian jurist he was elected prior of the convent of Cologne, and thus became inquisitor general of the archbishops of Cologne, Mainz, and Trier. He played his principal rôle, however, in the controversy with Johann Reuchlin (q. v.) on the confiscation of Jewish books, in the course of which Reuchlin's opponents were satirized in the famous "Epistolæ obscurorum virorum." While he took no active part in the earlier stages of the controversy, his sympathies, nevertheless, as is evidenced by his relations with the converted Jew, Pfefferkorn, were with Reuchlin's opponents. Influenced no doubt, to some extent by the unfavourable attitude of the universities towards the Jewish books, Hoogstraten on September 15, 1513, in his capacity as inquisitor, summoned Reuchlin to appear within six

days before the ecclesiastical court of Mainz to answer to the charges, of favouring the Jews and their anti-Christian literature. The latter appealed to Rome; whereupon Leo X authorized the Bishop of Speyer to decide the matter. Meanwhile, Hoogstraten had Reuchlin's "Augenspiegel", a previously published re-tort to Pfefferkorn's "Handspiegel", publicly burned at Cologne. On 29 March, 1514, the Bishop of Speyer announced that the "Augenspiegel" contained nothing injurious to the Catholic Faith, pronounced judgment in favour of Reuchlin, and condemned Hoogstraten to pay the expenses consequent upon the process. The latter appealed to Rome, but the pope postponed the trial indefinitely. At the instance of Franz von Sickingen and others, the Dominicans deprived Hoogstraten of the office of prior and inquisitor, but in January, 1520, the pope annulled the decision of the Bishop of Speyer, condemned the "Augenspiegel", and reinstated Hoogstraten.

Although to us living in the twentieth century the attitude of Hoogstraten and his party may be censured as severe, yet when viewed in the light of the mediæval spirit we find much that will palliate the views then prevalent. Among the other works of Hoogstraten besides those already mentioned, the following are the more important: (1) "Defensio scholastica principum Alemanniæ in eo, quod scleratos detinent insepultos in ligno contra P. Ravennatem" (Cologne, 1508); (2) "Justificatorium principum Alemanniæ, dissolvens rationes Petri Ravennatis, quibus Principum judicia carpsit" (Cologne, 1508); (3) "Tractatus de cada-veribus maleficorum morte punitorum" (Cologne, 1508); (4) "Tractatus magistralis, declarans quam graviter peccent quærentes auxilium a maleficis" (Cologne, 1510); (5) "Apologia Fr. Jacobi Hoogstræten" (Cologne, 1518); (6) "Apologia altera" (Cologne, 1519); (7) "Destructio cabbalæ" (Cologne, 1519); (8) "Margarita moralis philosophiæ in duodecim redacta libros" (Cologne, 1521).

JOSEPH SCHROEDER.

Hooke, LUKE JOSEPH, b. at Dublin in 1716; d. at St. Cloud, Paris, 16 April, 1796, son of Nathaniel Hooke the historian. Owing to the penal laws which forbade the education of Catholics in Ireland, he was sent when young to Saint-Nicolas-du-Chardonnet, Paris, where he remained till he received the licentiate. He then entered the Sorbonne and graduated in 1736. In 1742 he was appointed to a chair of theology, and soon earned a high reputation for learning. On 18 November, 1751, he presided at the defence of the famous thesis of de Prades, which contained some dangerous errors and aroused violent protestations. Hooke, seeing the full force of the erroneous opinions, confessed that he had not read the thesis, withdrew his signature, and demanded the condemnation of the propositions. De Prades was suspended by the faculty which publicly censured the syndic, the grand-maitre, and Hooke, the three signatories. Cardinal de Tencin, visitor of the Sorbonne, in virtue of a *lettre de cachet* and of his own authority, deprived Hooke of his chair, 3 May, 1752, and forced him to leave the Sorbonne. In 1754 de Prades was pardoned by Benedict XIV, whereupon Hooke appealed to the cardinal and the papal secretary, but obtained only the recall of the *lettre de cachet*. Louis XV, however, granted him a pension. In 1762 he again presented himself for a chair and was appointed, in preference to a candidate of the archbishop De Beaumont, who refused his sanction and withdrew his students from Hooke's lectures. In consequence Hooke addressed to him his famous letter (1763), pleading for more lenient treatment

in view of the pardon granted to de Prades, and making a profession of faith on the points impugned in the thesis. The Sorbonne upheld him and appointed him one of the censors who condemned Rousseau's "Emile". But as the archbishop was firm, Hooke resigned his theological professorship and accepted the chair of Hebrew. Some years later he was made curator of the Mazarin library. He held this position till 1791, when the Directory dismissed him for refusing to take the oath of the civil constitution of the clergy. He then withdrew to Saint-Cloud where he died. His principal work is "Religionis naturalis et revelatæ principia" (Paris, 1752), which was edited for the third time and annotated by his friend Dom Brewer, O. S. B. (Paris, 1774), a treatise which is justly regarded as the foundation of the modern science of Christian apologetics. His other writings are "Lettre à Mgr. l'Archevêque de Paris" (Paris, 1763); "Discours et réflexions critiques sur l'histoire et le gouvernement de l'ancienne Rome" (Paris, 1770-84), a translation of his father's history of Rome; "Mémoires du Maréchal de Berwick" (Paris, 1778), which he edited with notes; "Principes sur la nature et l'essence du pouvoir de l'église" (Paris, 1791). His "Religionis principia" is contained in Migne's "Cursus Theologiae".

A. A. MACERLEAN.

Hope, in its widest acceptance, is described as the desire of something together with the expectation of obtaining it. The Scholastics say that it is a movement of the appetite towards a future good, which though hard to attain is possible of attainment. Consideration of this state of soul is limited in this article to its aspect as a factor in the supernatural order. Looked at in this way it is defined to be a Divine virtue by which we confidently expect, with God's help, to reach eternal felicity as well as to have at our disposal the means of securing it. It is said to be Divine not merely because its immediate object is God, but also because of the special manner of its origin. Hope, such as we are here contemplating, is an infused virtue; i. e., it is not, like good habits in general, the outcome of repeated acts or the product of our own industry. Like supernatural faith and charity it is directly implanted in the soul by Almighty God. Both in itself and in the scope of its operation it outstrips the limits of the created order, and is to be had if at all only through the direct largess of the Creator. The capacity which it confers is not only the strengthening of an existing power, but rather the elevation, the transforming of a faculty for the performance of functions essentially outside its natural sphere of activity. All of this is intelligible only on the basis, which we take for granted, that there is such a thing as the supernatural order, and that the only realizable ultimate destiny of man in the present providence of God lies in that order.

Hope is termed a theological virtue because its immediate object is God, as is true of the other two essentially infused virtues, faith and charity. St. Thomas acutely says that the theological virtues are so called "because they have God for their object, both in so far as by them we are properly directed to Him, and because they are infused into our souls by God alone, as also, finally, because we come to know of them only by Divine revelation in the Sacred Scriptures". Theologians enlarge upon this idea by saying that Almighty God is both the material and the formal object of hope. He is the material object because He is that which is chiefly, though not solely, aimed at when we elicit acts of this virtue; i. e., whatever else is looked for is only desired in so far as it bears a relation to Him. Hence according to the generally followed teaching, not only supernatural

helps, particularly such as are necessary for our salvation, but also things in the temporal order, inasmuch as they can be means to reach the supreme end of human life, may be the material objects of supernatural hope. It is worth while noting here that in a strict construction of the term we cannot properly hope for eternal life for someone other than ourselves. The reason is that it is of the nature of hope to desire and expect something apprehended precisely as the good or happiness of the one who hopes (*bonum proprium*). In a qualified sense, however, that is so far as love may have united us with others, we may hope for others as well as for ourselves.

By the formal object of hope we understand the motive or motives which lead us to entertain a confident expectation of a happy issue to our efforts in the matter of eternal salvation notwithstanding the difficulties which beset our path. Theologians are not of one mind in determining what is to be assigned as the sufficient reason of supernatural hope. Mazzella (*De Virtutibus Infusis*, disp. v, art. 2), whose judgment has the merit of simplicity as well as that of adequate analysis, finds the foundation of our hope in two things. It is based, according to him, on our apprehension of God as our supreme supernatural good. Whose communication in the beatific vision is to make us happy for all eternity, and also on those Divine attributes such as omnipotence, mercy and fidelity, which unite to exhibit God as our unfailing helper. These considerations, he thinks, motive our will or furnish the answer to the question why we hope. Of course it is taken for granted that the yearning for God, not simply because of His own infinite perfections but explicitly because He is to be our reward, is a righteous temper of soul; otherwise the spiritual attitude of hope in which such a longing is included would not be a virtue at all. Luther and Calvin were at one in insisting that only the product of the perfect love of God, i. e., the love of God for His own sake, was to be regarded as morally good. Consequently they rejected as sinful whatever was done only through consideration of eternal reward or, in other words, through that love of God which the Scholastics call "*amor concupiscentiæ*". The Council of Trent (Sess. vi, can. 31) stigmatized these errors as heresy: "If anyone says that a justified person sins when such a one does what is right through hope of eternal reward, let him be anathema". In spite of this unequivocal pronouncement of the council, Baius, the celebrated Louvain theologian, substantially reiterated the false doctrine of the Reformers on this point. His teaching on the matter was formulated in the thirty-eighth proposition extracted from his works, and was condemned by St. Pius V. According to him there is no true act of virtue except what is elicited by charity, and as all love is either of God or His creatures, all love which is not the love of God for His own sake, i. e. for His own infinite perfections, is depraved cupidity and a sin. Of course in such a theory there could not properly speaking be any place for the virtue of hope as we understand it. It is easy also to see how it fits in with the initial Protestant position of identifying faith and confidence and thus making hope rather an act of the intellect than of the will. For if we may not hope, in the Catholic sense, for blessedness, the only substitute available seems to be belief in the Divine mercy and promises.

It is a truth constantly acted upon in Catholic life and no less explicitly taught, that hope is necessary to salvation. It is necessary first of all as an indispensable means (*necessitate mediæ*) of attaining salvation, so that no one can enter upon eternal bliss without it. Hence even infants, though they cannot have elicited the act, must have had the habit of hope infused in Baptism. Faith is said to be "the substance of things hoped for" (Hebrews, ii, 1), and without it "it is im-

possible to please God" (*ibid.*, xi, 6). Obviously, therefore, hope is required for salvation with the same absolute necessity as faith. Moreover, hope is necessary because it is prescribed by law, the natural law which, in the hypothesis that we are destined for a supernatural end, obliges us to use the means suited to that end. Further, it is prescribed by the positive Divine law, as, for instance, in the first Epistle of St. Peter, i, 13: "Trust perfectly in the grace which is offered you in the revelation of Jesus Christ". There is both a negative and a positive precept of hope. The negative precept is in force ever and always. Hence there can never be a contingency in which one may lawfully despair or presume. The positive precept enjoining the exercise of the virtue of hope demands fulfilment sometimes, because one has to discharge certain Christian duties which involve an act of this supernatural confidence, such as prayer, penance, and the like. Its obligation is then said, in the language of the schools, to be *per accidens*. On the other hand, there are times when it is binding without any such spur, because of its own intrinsic importance, or *per se*. How often this is so in the lifetime of a Christian, is not susceptible of exact determination, but that it is so is quite clear from the tenor of a proposition condemned by Alexander VII: "Man is at no time during his life bound to elicit an act of faith, hope and charity as a consequence of Divine precepts appertaining to these virtues". It is, however, perhaps not superfluous to note that the explicit act of hope is not exacted. The average good Christian, who is solicitous about living up to his beliefs, implicitly satisfies the duty imposed by the precept of hope.

The doctrine herein set forth as to the necessity of Christian hope was impugned in the seventeenth century by the curious mixture of fanatical mysticism and false spirituality called Quietism. This singular array of errors was given to the world by a Spanish priest named Miguel Molinos. He taught that to arrive at the state of perfection it was essential to lay aside all self-love to such an extent that one became indifferent as to one's own progress, salvation, or damnation. The condition of soul to be aimed at was one of absolute quiet brought about by the absence of every sort of desire or anything that could be construed as such. Hence, to quote the words of the seventh of the condemned propositions taken from Molinos's "Spiritual Guide", "the soul must not occupy itself with any thought whether of reward or punishment, heaven or hell, death or eternity". As a result one ought not to entertain any hope as to one's salvation; for that, as a manifestation of self-will, implies imperfection. For the same reason petitions to Almighty God about anything whatever are quite out of place. No resistance, except of a purely negative sort, should be offered to temptations, and an entirely passive attitude should be fostered in every respect. In the year 1687 Innocent XII condemned sixty-eight propositions embodying this extraordinary doctrine as heretical, blasphemous, scandalous, etc. He likewise consigned the author to perpetual confinement in a monastery, where, having previously abjured his errors, he died in the year 1696. About the same time a species of pseudo-mysticism, largely identical with that of Molinos, but omitting the objectionable conclusions, was defended by Madame Guyon. It even found an advocate in Fénelon who engaged in a controversy with Bossuet on the subject. Ultimately twenty-three propositions drawn from Fénelon's "Explanation of the maxims of the Saints on the interior life" were proscribed by Innocent XII. The gist of the teaching, so far as we are concerned, was that there is in this life a state of perfection with which it is impossible to reconcile any love of God except that which is absolutely disinterested, which therefore does not contemplate the possession of God as our reward.

It would follow that the act of hope is incompatible with such a state, since it postulates precisely a desire for God, not only because He is good in Himself, but also and formally because He is our adequate and final good. Hope is less perfect than charity, but that admission does not involve a moral deformity of any kind, still less is it true that we can or ought to pass our lives in a quasi uninterrupted act of pure love of God. As a matter of fact, there is no such state anywhere identifiable, and if there were it would not be inconsistent with Christian hope.

The question as to the necessity of hope is followed with some natural sequence by the inquiry as to its certitude. Manifestly, if hope be absolutely required as a means to salvation, there is an antecedent presumption that its use must in some sense be accompanied by certainty. It is clear that, as certitude is properly speaking a predicate of the intellect, it is only in a derived sense, or as St. Thomas says *participative*, that we can speak of hope, which is largely a matter of the will, as being certain. In other words, hope, whose office is to elevate and strengthen our wills, is said to share the certitude of faith, whose abiding place is our intellects. For our purpose it is of importance to recall what it is that, being apprehended by our intellect, is said to do service as the foundation of Christian hope. This has already been determined to be the concept of God as our helper gathered from reflecting on His goodness, mercy, omnipotence, and fidelity to His promises. In a subordinate sense our hope is built upon our own merits, as the eternal reward is not forthcoming except to those who shall have employed their free will to co-operate with the aids afforded by God's bounty. Now there is a threefold certitude discernible. (1) A thing is said to be certain conditionally when, another thing being given, the first infallibly follows. Supernatural hope is evidently certain in this way, because, granted that a man does all that is required to save his soul, he is sure to attain to eternal life. This is guaranteed by the infinite power and goodness and fidelity of God. (2) There is a certainty proper to virtues in general in so far as they are principles of action. Thus for instance a really temperate man may be counted on to be uniformly sober. Hope being a virtue may claim this moral certainty inasmuch as it constantly and after an established method encourages us to look for eternal blessedness to be had by the Divine munificence and as the crown of our own merits accumulated through grace. (3) Finally, a thing is certain absolutely, i. e., not conditionally upon the verification of some other thing, but quite independently of any such event. In this case no room for doubt is left. Is hope certain in this meaning of the word? So far as the secondary material object of hope is concerned, i. e. those graces which are at least remotely adequate for salvation, we can be entirely confident that these are most certainly provided. As to the primary material object of hope, namely, the face-to-face vision of God, the Catholic doctrine, as set forth in the sixth session of the Council of Trent, is that our hope is unqualifiedly certain if we consider only the Divine attributes, which are its support, and which cannot fail. If, however, we limit our attention to the sum total of salutary operation which we contribute and upon which we also lean as upon the reason of our expectation, then, prescinding from the case of an individual revelation, hope is to be pronounced uncertain. This is plainly for the reason that we cannot in advance insure ourselves against the weakness or the malice of our free wills.

This doctrine is in direct antagonism to the initial Protestant contention that we can and must be altogether certain of our salvation. The only thing required for this end, according to the teaching of the Reformers, was the special faith or confidence in the promises which alone, without good works, justified a

man. Hence, even though there were no good works distinguishable in a person's earthly career, such an one might and ought, notwithstanding, cherish a firm hope, provided only that he did not cease to believe.

Assuming that the seat of hope is our will, we may ask whether, having been once infused, it can ever be lost. The answer is that it can be destroyed, both by the perpetration of the sin of despair, which is its formal opposite, and by the subtraction of the habit of faith, which assigns the motives for it. It is not so clear that the sin of presumption expels the supernatural virtue of hope, although of course it cannot coexist with the act. We need not be detained with the inquiry whether a man could continue to hope if his eternal damnation had been revealed to him. Theologians are agreed in regarding such a revelation as practically, if not absolutely, impossible. If, by an all but clearly absurd hypothesis, we suppose Almighty God to have revealed to anyone in advance that he was surely to be lost, such a person obviously could no longer hope. Do the souls in Purgatory hope? It is the commonly held opinion that, as they have not yet been admitted to the intuitive vision of God, and as there is nothing otherwise in their condition which is at variance with the concept of this virtue, they have the habit and elicit the act of hope. As to the damned, the concordant judgment is that, as they have been deprived of every other supernatural gift, so also knowing well the perpetuity of their reprobation, they can no longer hope. With reference to the blessed in heaven, St. Thomas holds that, possessing what they have striven for, they can no longer be said to have the theological virtue of hope. The words of St. Paul (Rom., viii, 24) are to the point: "For we are saved by hope. But hope that is seen, is not hope. For what a man seeth, why doth he hope for?" They can still desire the glory which is to be proper to their risen bodies and also, by reason of the bonds of charity, they can wish for the salvation of others, but this is not, properly speaking, hope. The human Soul of Christ furnishes an example. Because of the hypostatic union It was already enjoying the beatific vision. At the same time, because of the passible nature with which He had clothed Himself, He was in the state of pilgrimage (*in statu viatoris*), and hence He could look forward with longing to His assumption of the qualities of the glorified body. This however was not hope, because hope has as its main object union with God in heaven.

JOSEPH F. DELANY.

Hope-Scott (originally HOPE), JAMES ROBERT, parliamentary barrister, Q.C.; b. 15 July, 1812, at Great Marlow, Berkshire, England; d. in London, 29 April, 1873; third son of the Honourable Sir Alexander Hope, G.C.B., who was fourth son of John, second Earl of Hopetoun, a Scottish title dating from 1703. His mother was third and youngest daughter of George Brown of Ellerton, Roxburghshire. During early childhood his home was the Military College at Sandhurst, where his father was in command. Afterwards he went abroad with his parents, staying in succession at Dresden, Lausanne, and Florence, and thus gaining a mastery of the German, French, and Italian tongues. In 1825 he entered Eton, whence, in 1828, he matriculated at Christ Church, Oxford. After a visit to Paris in 1829 he went into residence at Oxford the same year. The degree of B.A. he took in 1832, coming out in the fourth class *in literis humanioribus*. Next year he was elected a Fellow of Merton. In 1835 he gave up his intention of entering the ministry of the Established Church,

and began to study law under conveyancers, his call to the Bar at the Inner Temple taking place in 1838. Meanwhile, in the latter year he graduated B.C.L. at Oxford, proceeding D.C.L. in 1843. In 1838, after publishing anonymously in pamphlet form a letter to the Archbishop of Canterbury, he saw through the press Gladstone's work entitled "The State considered in its Relations with the Church." Next year he and Roundell Palmer (the future Earl of Selborne) projected "The History of Colleges." In 1840, at Newman's request, Hope wrote in "The British Critic", a review, later published separately, of Ward's translation of "The Statutes of Magdalen College, Oxon." The same year, as junior counsel for the capitular bodies petitioning against the Ecclesiastical Duties and Revenues Bill, he delivered the remarkably able speech which moved Brougham to exclaim, "That young man's fortune is made." In 1840, moreover, he was appointed Chancellor of the Diocese of Salisbury, which post he held until 1845. About the same time he took part in the foundation of Glenalmond College, in Perthshire, for the education of the Scottish Episcopal youth. In 1840-41 he spent some eight months in Italy, Rome included, in company with his close friend Edward Louth Badeley. On his return he became, with Newman, one of the foremost promoters of the Tractarian movement at Oxford. His next publication was a pamphlet against the establishment of the Anglo-Prussian Protestant Soc of Jerusalem, of which a second edition appeared in 1842. In 1849 and 1850 there came the Gorham trial and judgment, and in the latter year the agitation against the so-called "Papal Aggression". These events finally determined him upon the course of joining the Catholic Church, into which, together with Archdeacon Manning, he was received in London in 1851 by the Jesuit Father Brownbill.

In 1852 he managed Newman's defence in the libel action brought against him by Achilli, and in 1855 he conducted the negotiations which ended in Newman's accepting the rectorship of the Catholic University of Ireland. As to Hope's professional work, within a few years of his call he devoted himself wholly to parliamentary practice, in which his success and emoluments became prodigious. This was the palmy period of railway construction, and eventually he became standing counsel to almost every railway in the realm. In 1849 he was appointed Q.C., with a patent of precedence.

His first wife, whom he married in 1847, was Charlotte Harriet Jane Lockhart, only daughter of John Gibson Lockhart and granddaughter of Sir Walter Scott. She soon followed her husband into the Catholic Church. A year later he became tenant of Abbotsford to his brother-in-law, and on the latter's death, in 1853, its possessor in right of his wife, thereupon assuming the name of Hope-Scott. Not long afterwards he added a new wing to Sir Walter's mansion. In 1855 he bought the Highland estate of Dorlin, whereon he built a new house, selling the whole to Lord Howard of Glossop in 1871. In 1858 he had to mourn the loss of his wife, who died in childbed, the newborn child dying shortly after, and Walter Michael, his infant son and heir, before the close of the year. His second wife, whom he wedded in 1861, was Lady Victoria Alexandrina Fitzalan-Howard, eldest daughter of the fourteenth Duke of Norfolk, of whose children Hope-Scott had been left guardian. In 1867 he had the honour of a visit from Queen Victoria at Abbotsford, and in the same year he bought a villa at Hyères, in Provence. Like her predecessor, his second wife died in childbed in 1870, after giving birth to James Fitzalan Hope, now (1909) M. P. Hope-Scott never overcame the grief and shock entailed by this last bereavement. He now withdrew from his profession, surviving his dead wife but little more than two years, and dying in 1873. His funeral sermon was preached

by his old and intimate friend Cardinal Newman in the same Jesuit church of Farm Street in which, two and twenty years back, Hope-Scott had made his submission to the Catholic Church. His charities and benefactions were wellnigh boundless. It is reckoned that from 1860 onwards he spent £40,000 in hidden charity. Among his innumerable good works, he built at a cost of £10,000 the Catholic church at Galashiels, near Abbotsford, and he was the chief benefactor of St. Margaret's Convent, at Edinburgh, wherein he lies buried.

C. T. BOOTHMAN.

Hopi Indians (from HOPITA, "peaceful ones" their own name; also frequently known as MOKI, or MOQUI, an alien designation of disputed origin), an interesting tribe of Pueblo Indians of Shoshonean stock, occupying seven communal *pueblo* towns situated upon high *mesas* within a reservation in north-east Arizona. One of these *pueblos*, Hano, is occupied by

WALPI, A HOPI PUEBLO

immigrants from the Tewa tribe of New Mexico, speaking a distinct language. Like all the Pueblos, they are sedentary and agricultural in habit, and although the entire surrounding country is a desert of shifting sand, they carry on successful farming with the aid of water supplied by numerous small springs which issue from the base of the *mesa*. Besides their abundant crops of corn, beans, squashes, tobacco, and peaches (the last an inheritance from the former missionaries), they manufacture a fine variety of pottery and basket-work, and excel in woodcarving and the weaving of native cotton. Many of them are also skilful metal-workers. Their houses are square-built and flat-roofed structures of stone or adobe, sometimes several stories in height, with a sufficient number of rooms to accommodate hundreds of persons, and with store-rooms filled with provisions sufficient to last for a year. For better protection from hostile attack, most of the outer walls are without doors, entrance and egress being through a hole in the roof by means of a ladder, other ladders being let down at the outside. In former times also the steep trails which constitute the only means of approach to the summit were effectually closed at night or when danger threatened, by removing the ladders which are necessary in the most difficult places.

The Hopi are of kind and peaceable disposition, with the possible exception of the more truculent Oraibi on the westernmost *mesa*. They are industrious, fond of amusement and pleasantry, and entirely lacking in the stern dignity common to the more eastern tribes. They have an elaborate system of clans and phratries, each with certain distinguishing ritual

forms, bearing out the tradition that the Hopi were originally a confederation of distinct tribes. They have many secret societies, with a well-organized priesthood, and a spectacular ritual. Living in an arid region, yet depending upon agriculture, their prayers are naturally addressed chiefly to the rain gods, of whom the snakes are the messengers. The celebrated Snake Dance, held once in two years by the initiates of the Snake Society, is intended as a propitiation to bring rain upon the crops. A principal feature of this ceremony is the carrying of living and venomous snakes in the mouths of the dancers. Elaborate masks of mythologic significance are worn in most of the dances, and many of them take place in underground chambers known as *kivas*.

HOPÍ MAIDEN

Monogamy is the rule and the woman is the mistress of the house. In person, the Hopi are of medium stature, but strongly built and of great endurance. Several albinos of blond skin with light hair and eyes are found among them. They may have numbered at one time 6000 souls, but by wars and frequent epidemics are now reduced to about 2200, of whom nearly one-half dwell in Oraibi *pueblo*.

The first white men to make acquaintance with the Hopi were a detachment from Coronado's expedition in 1540, accompanied by the Franciscan Father Juan de Padilla, afterwards murdered while preaching to the wild tribes of the plains. They were visited by Espejo in 1583, at which time they occupied five *pueblos*. In 1598, they were brought regularly under Spanish authority by Governor Oñate of New Mexico, who appointed a priest to take charge of their spiritual welfare, but no regular mission was attempted in the tribe until 1629, when the mission of San Bernardino was established at Awátobi by a party of four Franciscans headed by Father Francisco de Porras. Other missions were founded later at Shogópovi (San Bartolomé) and Oraibi (San Francisco) with *visitas* at Walpi and Mishóngnovi. The missions sustained an uncertain existence until the great revolt of the *Pueblos* in 1680, when the four resident missionaries were killed and the churches destroyed. The rising was put down twelve years later, but no attempt was made to re-establish the Hopi missions, excepting at Awátobi, with 800 souls, which was visited in the spring of 1700 by Father Juan Garaycochea, at the request of the inhabitants, but without permanent result. Later in the same year, on account of the evident friendship of Awátobi for the missionaries, the warriors of the other *pueblos* attacked it by night, setting fire to the *pueblo*, slaughtering all the men, many of whom were smothered in underground chambers, and carrying off all the women and children to be distributed among the other *pueblos*. Awátobi can still be traced in its ruins, including the walls of the old church. In 1726 permission was given to the Jesuits to undertake work in the tribe, but with no result, and in 1745 the field was again given over to the Franciscans, with as little success, the

Hopi stubbornly refusing to allow the establishment of a mission.

In 1778-1780 a three years drought with consequent famine and pestilence, almost extinguished the tribe for a time, the survivors scattering among the neighbouring tribes but still steadfastly refusing any help from the Spaniards. In 1850 they sent a delegation to the newly arrived representative of the American Government at Santa Fé, and in 1858 an American expedition under Lieutenant J. C. Ives visited their towns. In 1869 they were brought under agency control. While uniformly friendly to the Americans, they retain the old hatred for the Spaniards and their Mexican descendants, and, despite schools and some more recent evangelizing effort, hold fast to their ancient beliefs and ceremonies. In 1899, after an absence of a century and a quarter, visiting Franciscans from the Navaho mission were allowed to celebrate Mass in public near Walpi without molestation. In 1909 the resident Mennonite missionaries were obliged to withdraw from Oraibi on account of the hostility of the conservatives.

XVII of collected works, San Francisco, 1889); BOURKE, *The Snake Dance of the Moquis* (New York, 1884). For ceremonial and general ethnology of the Hopi the first authority is FEWKES, in numerous monographs and shorter papers, notably his *Journal of Am. Ethn. and Archeology* (4 vols., Boston, 1891-4), of which all but the first are almost entirely devoted to the Hopi, also his *Hopi Katsinas, Tusayan Flute and Snake Ceremonies*, etc. in the annual reports (15th, 16th, 19th, 21st, 22nd) of the Bureau of Am. Ethnology (Washington, 1897-1903); see also papers by DORSEY and VORH, in publications of the Field Columbian Museum, Chicago.

JAMES MOONEY.

Hôpital, GUILLAUME-FRANÇOIS-ANTOINE DE L', Marquis de Sainte-Mesme and Comte d'Entremont, French mathematician; b. at Paris, 1661; d. at Paris, 2 February, 1704. Being the son of the lieutenant-general of the king's armies he was intended for a military career, and served for some time as captain in a cavalry regiment. He had no talent for Latin, but early displayed extraordinary ability for mathematics. At the age of fifteen he had solved a number of problems proposed by Pascal, and while an army officer, he studied mathematics in his tent. Owing to extreme near-sightedness, he was forced to resign and then devoted himself entirely to his favourite studies. In 1692 he became acquainted with Jean Bernoulli, one of the three or four men of the day who understood the new methods of the differential calculus. During four months he studied with Bernoulli, whom he had invited to his estate of Oucques near Vendôme, and learned from him this branch of the science of numbers. In 1693 he was elected honorary member of the Academy of Sciences of Paris and soon rivalled Newton, Huyghens, Leibniz, and the Bernoullis in the propounding and solving of problems involving the calculus. He is remembered because he made it possible for others to learn this new system. His work on the analysis of the infinitesimal for the study of curves was published in 1696 and was received with great satisfaction by many who were trying to solve the mystery surrounding these advanced problems, for the book contained a clear and careful exposition of the methods employed. The rule for the evaluation of a fraction whose numerator and denominator both have a limit value of zero is named after L'Hôpital. His wife is said to have been associated with him in his work. His published works are: "Analyse des infiniment petits pour l'intelligence des lignes courbes" (Paris, 1696; last ed. by Lefèvre, Paris, 1781); "Traité analytique des sections coniques" (Paris, 1707; 2nd ed., 1720); several memoirs and notes inserted in the "Recueil de l'Académie des sciences" (Paris, 1699-1701), and in "Acta Eruditorum" (Leipzig, 1693-1699).

WILLIAM FOX.

Hopkins, FREDERICK C. See HONDURAS, BRITISH, VICARIATE APOSTOLIC OF.

Horeb. See SINAI.

Hormisdas, SAINT, POPE; date of birth unknown, elected to the Holy See, 514; d. at Rome, 6 August, 523. This able and sagacious pontiff belonged to a wealthy and honourable family of Frosinone (Frusino) in the Campagna di Roma (Latium). Before receiving higher orders he had been married; his son became pope under the name of Silverius (536-537). Under Pope Symmachus (498-514) Hormisdas held the office of deacon of the Roman Church and during the schism of Laurentius he was one of the most prominent clerical attendants of Symmachus. He was notary at the synod held at St. Peter's in 502, and Ennodius of Pavia, with whom he was on friendly terms, expressed the conviction that this Roman deacon, so eminent for piety, wealth, and distinguished birth, would occupy the See of Rome [Ennodii opera, ed. Vogel (Berlin, 1885), 287, 290]. The day after the funeral of Symmachus (20 July, 514) Hormisdas was chosen and consecrated his successor; there is no mention of divisions or disturbances at his election. One of the new pope's first cares was to remove the last vestiges of the Laurentian schism in Rome, receiving back into the Church such of its adherents as had not already been reconciled. From the beginning of his pontificate the affairs of the Greek Church occupied his especial attention. At Constantinople the Acacian schism, which had broken out in consequence of the "Henoticon" of the Emperor Zeno, and which had caused the separation of the Greek and Roman Churches, still held sway (see ACACIUS, PATRIARCH OF CONSTANTINOPLE). The Emperor Anastasius (491-518), Zeno's successor, maintained the "Henoticon"; he became more and more inclined towards Monophysitism, and persecuted the bishops who refused to repudiate the Council of Chalcedon. The three patriarchs, Macedonius of Constantinople, Elias of Jerusalem, and Flavianus of Antioch had been driven from their sees.

In the midst of this confusion a number of Eastern bishops appealed to Rome during the pontificate of Symmachus, in order that, by the restoration of unity in the Church, their positions might be strengthened and the progress of Monophysitism checked. Symmachus had required them to submit to the condemnation of Acacius, but the Orientals were not ready for this step. Taking advantage of the discontent aroused against Anastasius by his Monophysite tendencies, Vitalian of Lower Mœsia, a commander in the army, led a revolt against him. Vitalian demanded, on the one hand, that his office of distribution of the grain for the troops should be restored to him, and, on the other, that the Council of Chalcedon should be recognized and the unity with Rome be re-established. He gained numerous adherents and appearing before Constantinople at the head of a large army, defeated the emperor's nephew, Hypatius; upon this Anastasius was obliged to negotiate with him. One of the terms of Vitalian's submission was that the emperor should take an oath to convene a synod at Heraclea in Thrace, invite the pope to attend it, and submit to his arbitration the dispute about the See of Constantinople and the other bishoprics in order by this means to restore the unity of the Church. Anastasius accordingly wrote to Hormisdas, 28 Dec., 514, inviting him to the synod on the first of July following. The letter had first to be submitted to Vitalian, whose representative accompanied the bearer to

Rome. A second, less courteous communication, dated 12 Jan., was sent by Anastasius to the pope; this merely requested his good offices in the controversy. The emperor evidently wished to prolong the negotiations as he was not really willing to fulfill the promises he had made to Vitalian. The second letter reached Rome before the first one, and on 4 April Hormisdas answered it, expressing his delight at the prospect of peace, but at the same time defending the memory of his predecessors. The bearers of the emperor's first letter arrived on 14 May. The pope guardedly carried on negotiations, convened a synod at Rome and wrote a letter to the emperor, dated 8 July, in which he announced the departure of an embassy for Constantinople. Meanwhile the two hundred bishops who had assembled on 1 July at Heraclea, separated without accomplishing anything.

The pope's embassy to the imperial court consisted of two bishops, Ennodius of Pavia and Fortunatus of Catina, the priest Venantius, the deacon Vitalis, and the notary Hilarius. The letter of Hormisdas to the emperor, dated 1 Aug., 515, is still preserved; so also are the minute instructions given the legates with regard to the position they were to take. If the emperor agreed to the proposals made to him, the pope was ready, if necessary, to appear in person at a council. The pope further sent the formula of a confession of faith (*regula fidei*) for the Eastern bishops to sign. The embassy brought about no real results; Anastasius, without breaking off the negotiations, gave the envoys an evasive letter for Hormisdas. A new revolt of Vitalian was suppressed, and an imperial embassy, consisting of two high civil officials, came to Rome bringing a letter dated 16 July, 516, for the pope, and one dated 28 July, for the Roman Senate; the aim of the latter was to induce the senators to take a stand against Hormisdas. The senate, however, as well as King Theodoric, remained true to the pope, who saw through the emperor's crafty manœuvres. The answer of Hormisdas to the imperial letter was dignified and definite. Meanwhile an additional number of Scythian, Illyrian and Dardanian bishops had entered into relations with Rome, and several of them had also conferred with the papal legates in Constantinople upon the question of the reunion of the Churches. They now submitted to the condemnation of Acacius and signed the confession of faith (*regula fidei*) of Hormisdas, as did also the bishops of the province of Epirus, who were persuaded thereto by the Roman subdeacon Pullio. This confession of faith, which the pope sent to Constantinople to be signed by all bishops who reunited with the Latin Church, is known as the "Formula Hormisdæ" and was repeatedly mentioned at the Vatican Council. It begins with the words: "Prima salus est, regulam rectæ fidei custodire et a constitutis Patrum nullatenus deviare. Et quia non potest Domini Nostri Jesu Christi prætermitti sententia dicentis: Tu es Petrus et super hanc petram ædificabo ecclesiam meam. Hac quæ dicta sunt rerum probantur effectibus, quia in sede apostolica immaculata est semper Catholica conservata religio" (The first means of safety is to guard the rule of strict faith and to deviate in no way from those things that have been laid down by the Fathers. And indeed the words of Our Lord Jesus Christ: "Thou art Peter; and upon this rock I will build my church" [Matt., xvi, 18], cannot be disregarded; these things which were spoken are demonstrated by the results, for the Catholic religion has been preserved ever immaculate in the Apostolic See). Then follows the condemnation of Nestorius and the other heresiarchs and also of Acacius.

A second papal embassy consisting of Ennodius of Pavia and Bishop Peregrinus of Misenum had no better success. Anastasius even attempted to bribe the legates, in which, however, he was unsuccessful. They sought on the contrary to circulate secretly the pope's

letters summoning the people to reunite with the Roman Church. When the emperor heard of it he had them brought out of the city by a private gate to the seashore, put on shipboard, and sent back to Italy. Then Anastasius, who had momentarily nothing to fear from Vitalian, wrote an insolent letter to Hormisdas dated 11 July, 517, breaking off the negotiations, and continued to persecute the advocates of union with Rome. On 9 July, 518, he died very suddenly in the midst of a terrible storm. Shortly before that date Timotheus, the heretical Patriarch of Constantinople, had also passed away. The Emperor Justin I (518-527), who succeeded, was an orthodox Christian. The people of Constantinople insisted that the new Patriarch John should anathematize the Monophysite heresy, recognize the definition of Chalcedon, and reunite the Greek Church with Rome. A synod, held at Constantinople, concurred in these views and an imperial envoy departed for Rome to entreat the pope on behalf of the emperor, the latter's nephew Justinian, and the patriarch to come in person to the Orient, or send a legate for the purpose of re-establishing the unity of the Church. Hormisdas appointed the Bishops Germanus and John, a priest Blandus, two deacons, Felix and Dioscurus, and a notary, Peter. They had the same instructions and confession of faith which were given the legates of 515. The embassy was received in Constantinople with great splendour. All the demands of the pontiff were conceded; the name of the condemned Patriarch Acacius as well as the names of the Emperors Anastasius and Zeno were stricken from the church diptychs, the Patriarch John accepted the formula of Hormisdas. On Holy Thursday, 28 March, 519, in the cathedral of Constantinople in presence of a great throng of people, the reunion of the Greek Church with Rome was ratified in the most solemn manner. The greater number of the Eastern and Greek bishops approved and signed the formula of Hormisdas. At Antioch an orthodox patriarch was chosen to replace the heretical Severus.

In the midst of all this activity for the establishment of peace a new quarrel broke out, which turned upon the formula: "One of the Trinity was crucified". It was promulgated at Constantinople in 519 by John Maxentius and numerous Scythian monks who were upheld by Justinian (Theopaschite controversy). The patriarch and the pope's legates opposed the demand that this formula should be embodied as a dogma of the Church. The monks then proceeded to Rome where they caused some trouble; they also addressed the African bishops then residing in Sardinia. In 521 Hormisdas pronounced that the formula in question, although not false, was dangerous because it admitted of a false interpretation; that the Council of Chalcedon needed no amendment. About this time the African Bishop Possessor, at the instigation of some African monks, appealed to the pope for information regarding the Church's attitude towards the Bishop of Riez, Provence, whose Semi-pelagian views coloured his writings. In his reply Hormisdas severely rebuked the quarrelsome spirit of these monks. He did not forbid the reading of the works of Faustus, but decided that what was good in them should be preserved and what was contrary to the doctrine of the Church should be rejected.

Hormisdas caused a Latin translation of the canons of the Greek Church to be prepared by Dionysius Exiguus and issued a new edition of the Gelasian "Decretum de recipiendis Libris". He sent letters to several bishops in Spain and Gaul on ecclesiastical matters and gave directions regarding church administration. His relations with Theodoric were amicable. The "Liber Pontificalis" enumerates valuable gifts presented to St. Peter's by this king as well as by the Emperor Justin.

Shortly before his death the pope received tidings that Thrasamund the Vandal King of Northern

Africa had died (523), and that the severe persecution of Catholics in that region had consequently ceased. Hormisdas was buried at St. Peter's. The text of his epitaph has been preserved (De Rossi, "Inscriptiones Christianæ urbis Romæ", II, 130).

Horner, NICHOLAS, layman and martyr, born at Grantley, Yorkshire, England, date of birth unknown; died at Smithfield, 4 March, 1590. He appears to have been following the calling of a tailor in London, when he was arrested on the charge of harbouring Catholic priests. He was confined for a long time in a damp and noisome cell, where he contracted blood-poisoning in one leg, which it became necessary to amputate. It is said that during this operation Horner was favoured with a vision, which acted as an anodyne to his sufferings. He was afterwards liberated, but when he was again found to be harbouring priests he was convicted of felony, and as he refused to conform to the public worship of the Church by law established, was condemned. On the eve of his execution, he had a vision of a crown of glory hanging over his head, which filled him with courage to face the ordeal of the next day. The story of this vision was told by him to a friend, who in turn transmitted it by letter to Father Robert Southwell, S.J., 18 March, 1590. Horner was hanged, drawn and quartered, because he had relieved and assisted Christopher Bales, seminary priest and martyr, b. at Cunsley, Durham, 1564; d. on the scaffold at Fetter Lane, London, 4 March, 1590. Father Bales was cruelly tortured in prison, although he was a consumptive; and was condemned merely for being a priest.

Hornyold, JOHN JOSEPH, titular Bishop of Philomelia, Vicar Apostolic of the Midland District, England; b. 19 February, 1706; d. at Longbirch, Staffordshire, 26 December, 1778. He was descended from two ancient Catholic families, his father being John Hornyold, of Blackmore Park and Hanley Castle, Worcestershire; his mother, Mary, daughter of Sir Pyers Mostyn, Baronet, of Talacre, Flintshire. At the age of twenty-two, on 7 August, 1758, he entered the English College at Douai to study for the priesthood. After his ordination he returned to England and served the mission at Grantham for some time, meeting with much persecution and more than once narrowly escaping arrest as a priest. In 1739 he went as chaplain to Longbirch near Wolverhampton, the seat of "the good Madam Giffard", a widow remarkable for piety and charity. While there he published his first work, "The Decalogue Explained", published in London in 1744, and afterwards running through many editions. Bishop Milner, in a Memoir of him in the "Laity's Directory" (1818), says: "This was so generally approved of, that he received something like official thanks from Oxford for the publication. It was not to be expected, however, that he should be thanked from that quarter for his other works, which appeared in succession, on the Sacraments and on the Creed." In the former of these, "The Sacraments Explained" (London, 1747), he included several discourses written by his predecessor at Longbirch, the Rev. John Johnson. The book on the Creed was called "The Real Principles of Catholics or a Cate-

chism for the Adult" (London, 1749). One of the later editions appeared as "Grounds of the Christian Belief or the (Apostles') Creed Explained" (Birmingham, 1771). In this book, according to Charles Butler, he made large use of Corker's "Roman Catholic Principles in Reference to God and the King", but this was denied by Milner.

In 1751 the aged Vicar Apostolic of the Midland District, Bishop Stonor, applied for a coadjutor and Hornvold was selected. He was consecrated 10 Feb., 1752, but continued to act as Mrs. Giffard's chaplain until her death, 13 Feb., 1753. Her house was then rented for the use of the vicar Apostolic and Dr. Hornvold resided there for the rest of his life. On Bishop Stonor's death, 29 March, 1756, he succeeded as Vicar Apostolic of the Midland District and ruled zealously for twenty-two years. In 1766, as his health was failing, he obtained the Hon. and Rev. Thomas Talbot as his coadjutor, and consecrated him in 1767 (not in 1776 as has been erroneously asserted, in consequence of a misprint in Milner's "Memoir"). In 1768 he undertook the responsibility of carrying on Sedgley Park School, which had been founded, on the initiative of his intimate friend Bishop Challoner, six years previously, and thus preserved it for the Church. He lived just long enough to see the first Catholic Relief Act of 1778, and on his death was buried in Brewood Churchyard, Staffordshire. There is an oil painting of the bishop at the family seat, Blackmore Park, Worcestershire.

Cath.*, s. v.; KIRK, *Biographies of English Catholics*, s. v., contains reprint of *Memoir* by MILNER (London, 1909); BURTON, *Life and Times of Bishop Challoner*, with the Blackmore Park portrait (London, 1909).

EDWIN BURTON.

Hortulus Animæ (LITTLE GARDEN OF THE SOUL), a prayer book which both in its Latin and German forms was exceedingly popular in the early years of the sixteenth century. The first known edition was printed at Strasburg by William Schaffener of Rappoltswiler, and is dated 13 March, 1498. After that date new editions with various supplements and modifications were constantly issued by other printers both in Strasburg and other German cities, and even at Lyons. Many of them, though small in size, were illustrated with beautifully designed woodcuts. Mr. C. Dodgson gives a list of eighteen editions between 1516 and 1521, all of which contained cuts by the well-known engravers Hans Springinklee and Erhard Schön. The earliest German edition appeared in 1501, but the Latin editions on the whole predominate. With regard to its contents, the "Hortulus" bears a general resemblance to the *Horæ* and *Primers* which were then the form of prayer book most familiar in France and England. As in these latter, the Little Office of our Lady always occupies the place of honour, but the "Hortulus" contains a greater variety of popular prayers, many of them recommended by curious and probably spurious indulgences. The name "Hortulus Animæ" was derived not from the æsthetic but from the utilitarian aspects of a garden, as is shown by the three Latin distichs prefixed to most copies of the work. The first two lines run:—

Ortulus exiguus varius ut sæpe salubres

Herbas producit, quas medicina probat.

(A tiny garden will often produce a variety of salutary herbs of which medicine knows the value). The contents of the volume are further described as "mentis pharmaca sacræ" (the simples of the devout mind). The popularity of the book is further shown by the extreme beauty of the miniatures in some existing manuscript examples. One of these at Vienna (Bibl. Pal. 2706) has recently been produced in exquisite facsimile by Dörnhöffer.

The title in particular was found attractive. Another German prayer book, "Das Würtzgärt linder andächtigen Uebung" (the herb garden of devout practices) was edited by an Observantine Franciscan friar at Augsburg in 1513, but it is a quite different work. So a Lutheran adaptation of the "Hortulus" was produced in 1569 which was called the "Lustgarten der Seelen" (the pleasure garden of the soul)—though this perhaps corresponds better to the other famous Catholic prayer book the "Paradisus Animæ" It should be noted also that yet another well-known work of devotion, which was not a prayer book but a volume of moral instruction richly illustrated with stories, bore a similar title. This was "Der Selen Würtzgart," of which the first edition was printed at Ulm in 1483. The title, "Garden of the Soul", is of course very familiar to English readers from the popular prayer book which was compiled by Bishop Challoner about the year 1740, and which has since been reprinted and re-edited in countless editions.

HERBERT THURSTON.

Hosanna.—"And the multitudes that went before and that followed, cried, saying: Hosanna to the son of David: Blessed is he that cometh in the name of the Lord: Hosanna in the highest" (Matt., xxi, 9; cf. Matt., xxi, 15, Mark, xi, 9, 10, John, xii, 13). Thayer's contention in Hastings' "Dict of the Bible" that the word *hosanna* was derived from Psalm lxxxvi, 2, does not seem to have much to support it. The general opinion is that of St. Jerome, that the word originated from two Hebrew words of Psalm cxvii (cxviii), 25. This psalm, "Confitemini Domino quoniam bonus", was recited by one of the priests every day during the procession round the altar, during the Feast of Tabernacles, when the people were commanded to "rejoice before the Lord" (Lev., xxiii, 40); and on the seventh day it was recited each time during the seven processions. When the priest reached verses 25-26, the trumpet sounded, all the people, including boys, waved their branches of palms, myrtles, willows, etc., and shouted with the priest the words: "O Domine, salvum (me) fac; o Domine, bene prosperare. Benedictus qui venit in nomine Domini!" The Hebrew for *salvum fac* or *serva nunc* was *hoshi'a na*. This was repeated so frequently that it became abbreviated into *hosanna*; the seventh day of the feast was called the Great Hosanna; and the palm-branches of willow, myrtles, etc., received the name of *hosannas*.

The Feast of Tabernacles was a season of great rejoicing, and it was a saying amongst the Jews that those who had not witnessed it did not know what joy meant. In this way *hosanna* became associated with rejoicing. The same has to be said of the use of palm-branches. In I Mach., xiii, 51-52, we read: "And they entered . . . with thanksgiving, and branches of palm-trees, and harps, and cymbals, and psalteries, and hymns, and canticles, because the great enemy was destroyed out of Israel; and he ordained that these days should be kept every year with gladness." In II Mach., x, 6, 7: "And they kept eight days with joy, after the manner of the feast of tabernacles." On these occasions *hosanna* was, doubtless, exclaimed in tones of joy and triumph. Like all acclamations in frequent use it lost its primary meaning, and became a kind of *virat* or hurrah of joy, triumph, and exultation. It is clear from the Gospels that it was in this manner it was uttered by the crowd on Palm Sunday. St. Luke has instead of *hosanna in excelsis* "peace in heaven and glory on high".

It was with this indefinite meaning that the word *hosanna* passed, at a very early date, into the litur-

gies of the Church; a position which it has ever since retained both in the East and the West. It is found in the "Didache", and the "Apostolic Constitutions" Eusebius (H. E., II, xxiii), quoting the account given by Hegesippus of the death of St. James, has: "And as many as were confirmed and gloried in the testimony of James, and said Hosanna to the Son of David", etc. St. Clement of Alexandria says it meant "light, glory, praise". St. Augustine (in 2nd Lesson for Saturday before Palm Sunday) says: "Vox autem obsecrantis est, hosanna, sicut nonnulli dicunt qui hebræam linguam noverunt, magis affectum indicans, quam rem aliquam significans, sicut sunt in lingua latina, quas interjectiones vocant." (According to some who are versed in Hebrew, hosanna is a word of supplication, used like the interjections in Latin, to express feeling and other than to signify a thing.) In every Mass the word *hosanna* is said twice during the Sanctus at the end of the Preface. It is sung by the choir at high Mass. It is also repeatedly sung during the distribution of the palms, and the solemn procession on Palm Sunday. We gather from St. Jerome (Matt., xxi, 15) etc. that the faithful, in some places, were accustomed to salute bishops and holy men with cries of hosanna. Modern Jews have a procession of palm-branches, in the synagogue, every day during the Feast of Tabernacles, in September, while prayers called hosannas are recited. The joyous character of the festival receives its fullest expression on the seventh day, the popular name of which is The Great Hosanna (*Hosha'na Rabba*) (Oesterley and Box, "Religion and Worship of the Synagogue", and the Mishna tract Sukkah, III, 8).

C. AHERNE.

Hosea. See OSEE.

Hosius (Hos, Hosz), STANISLAUS, cardinal and Prince-Bishop of Ermland; b. of German parents at Cracow, 5 May, 1504; d. at Capranica, near Rome, 5 August, 1579. He spent his early youth at Cracow and Wilna; and at the age of fifteen, when he was already well versed in German, Polish, and Latin, entered the University of Cracow, from which he graduated as Bachelor of Arts in 1520. The pious and talented youth found a patron in Peter Tomicki, Bishop of Cracow and Vice-Chancellor of Poland, who employed him as private secretary and entrusted to him the education of his nephews. A few years later the bishop furnished him with the means to continue his studies at the then famous Universities of Padua and Bologna, where, besides perfecting himself in the humanities, he pursued the studies of theology and jurisprudence. Among his professors at Padua was the famous humanist, Lazaro Buonamico; Reginald Pole was one of his fellow-students. At Bologna he pursued the humanities under Romulo Amasio, and jurisprudence under Hugo Buoncompagni, the future Gregory XIII. Among his fellow-students here were the future Cardinals Otto Truchsess von Waldburg and Cristoforo Madruzzo. After graduating as doctor of canon and civil law at the University of Bologna on 8 June, 1534, he returned to Cracow and became secretary in the royal chancery. On the death of Bishop Tomicki (1535) he continued as secretary under the new vice-chancellor, Bishop Choinski of Plock.

About this time begins his intimate friendship with the great neo-Latin poet Dantiscus, then Bishop of Culm. After the death of Bishop Choinski in 1538, Hosius was appointed royal secretary. In this position he had the entire confidence of King Sigismund, who bestowed various ecclesiastical benefices upon him as reward for his faithful services. He already held a provostship at Wielun, and another at Vislica. To these the king added a canonry at Frauenburg in

1538, at Cracow in 1540, and at Sandomir in 1542. In 1543 Hosius was ordained priest and in addition to the above-mentioned benefices, received the parishes of Golombie and Radlow in 1546. King Sigismund died in 1548, but before his death he had instructed his son and successor, Sigismund II, to nominate Hosius for the next vacant episcopal see. When, therefore, in 1549, Bishop Giese of Culm was transferred to the See of Ermland, the young king nominated Hosius for the See of Culm. Hosius had not sought after this dignity and accepted it only with reluctance. The papal approbation arrived in September, 1549; but, before taking possession of his see, Hosius was sent by Sigismund on an important mission to the courts of King Ferdinand I at Prague, and Emperor Charles V at Brussels and Ghent. The mission resulted in an offensive and defensive alliance between Poland and these two monarchies. Upon his return to Poland he received episcopal consecration at Cracow on 23 March, 1550, and immediately took possession of his see. On 25 July, 1550, Pope Julius III appointed him "Inquisitor hæreticæ pravitatis" for the neighbouring Diocese of Pomesania, which was rapidly turning Protestant. The enticing doctrines of Protestantism were also making alarming headway in the Diocese of Culm, and it was with great difficulty that Hosius succeeded in stemming their progress. His first pastoral letters show his deep concern for the preservation of the Catholic Faith among his flock; and his religious colloquies with some of the reformers at Thorn give testimony of his untiring zeal for the conversion of those who had already left the true fold. But the field of his activities was soon to be changed. The king nominated him for the more important Diocese of Ermland in January, 1551, whereupon the cathedral chapter of Ermland postulated him on 2 March, 1551, and Julius III transferred him to that see on 27 April, 1551. Upon receiving the papal Bulls he left Löbau, where he had resided while Bishop of Culm, and took possession of the Diocese of Ermland on 21 July.

As Bishop of Ermland Hosius devoted all his efforts to the maintenance of the Catholic religion in Poland. His great learning and wide experience, coupled with deep piety, made him the natural leader of the Polish episcopate in its struggle against Protestantism, which was making deep inroads into Poland during the rule of the weak and vacillating King Sigismund II. For the first seven years of his episcopate he served the Catholic cause chiefly by his numerous polemical writings in defence of Catholic truth. He had already in his youth given proof of his literary ability by composing various Latin poems; and as early as 1528 he had published, in the original and with a Latin translation, the short treatise of St. Chrysostom in which a parallel is drawn between a king and a monk. In 1535 he had also written a lengthy biography of his deceased patron, Bishop Tomicki. All these writings have been published by Hipler in the first volume of his collection of the letters of Hosius (Cracow, 1879). Shortly after his appointment to the See of Ermland he took part in the provincial Synod of Piotrkow, in June, 1551. On this occasion the assembled bishops entrusted him with the drawing up of a Profession of the Catholic Faith, to which they all subscribed and which they agreed to publish. Afterwards Hosius expanded these articles into an elaborate exposition of Catholic doctrine "Confessio fidei catholicæ christianæ", part of which was published at Cracow in 1553, the remainder at Mainz in 1557. The work is one of the best pieces of polemical literature produced during the period of the Reformation. In faultless Latin the author places the whole array of Catholic doctrines in contrast with the opposing doctrines of the reformers, and proves by means of irresistible arguments, drawn from Holy Scripture and patristic literature, that Catholicity is strictly identical with

Christianity. The work became so popular that more than thirty editions of it were printed during the lifetime of the author, and translations were made into German, Polish, English, Scotch, French, Italian, Flemish, Moravian, Arabic, and Armenian. About the same time he completed another work of a similar nature. His friend Blessed Peter Canisius wrote its preface and entitled it: "Veræ, christianæ catholicæque doctrinæ solida propugnatio una cum illustri confutatione prolegomenorum, quæ primum Jo. Brentius adversus Petrum a Soto theologum scripsit, deinde vero Petrus Paulus Vergerius apud Polonos temere defendenda suscepit" (Cologne, 1558). As its title indicates, it was chiefly a refutation of the Suabian reformer, John Brenz, whose "Confessio Wirtembergica", with a dedication to the King of Poland, had recently been republished at Cracow by the Italian apostate, Bishop Vergerio. About twelve editions of this work were printed. In the same year two other works of Hosius were published at Dillingen, viz. "Dialogus de communione s. eucharistiæ sub utraque specie; de conjugio sacerdotum et de sacro in vulgari lingua celebrando", which was immediately translated into German; and "De expresso verbo Dei", in which he reproves the reformers for their abuse of Holy Scripture. It was re-edited in Louvain, Antwerp, Rome, etc., and translated into German and Polish. A year later he published a work of similar nature, which he entitled: "De oppresso verbo Dei". Besides writing these learned treatises in defence of Catholicity, Hosius left nothing undone to gain the co-operation of the king and the bishops of Poland for concerted action against the tide of Protestantism. The king, however, as well as many of the Polish bishops, remained inactive.

The fame of Hosius had meanwhile spread throughout Europe, and Paul IV wished to enlist the pious and learned bishop among his advisers during those troublous times of the Church. In May, 1558, he was called to Rome, and at once became one of the most influential members of the Curia. During his absence from Ermland he left the administration of his diocese in the hands of the cathedral chapter. Paul IV died on 18 August, 1559, and his successor, Pius IV, sent Hosius as legate to the imperial court of Vienna, with instructions to make arrangements with Emperor Ferdinand I for the reopening of the Council of Trent, and, if possible, to bring back to the Church the emperor's son, Prince Maximilian of Bohemia, who had become an open adherent of Protestantism. Hosius easily gained the co-operation of the emperor for the council, but the conversion of Maximilian was more difficult. John Sebastian Pfauzer, a reformer at the imperial court, had trained the prince in the doctrines of Luther and Melancthon, and had put him in correspondence with the apostate Vergerio, who had engendered in him a deep hatred for the papacy and everything Catholic. For two months Hosius tried in vain to have a conference with Maximilian. When, finally, in the early part of June (1560) he procured an audience, the prince remained obdurate in his heresy, but the clear reasoning of Hosius made a deep impression upon him. He began to read the writings of Hosius and willingly listened to him until finally the logical reasoning and the edifying example of Hosius won him back to the Church. In recognition of these services Pius IV created Hosius cardinal on 26 February, 1561. The cardinalate had been offered him before but he persistently refused the dignity, and would have refused it again had not the emperor as well as the pope insisted on his accepting it. The pope, moreover, on 10 March, 1561, appointed him one of the five papal legates who were to preside over the Council of Trent, which was to reopen in April. At the council he was a strenuous defender of papal authority, and used his great influence to bring the council to a successful close.

Immediately after the termination of the council, on 4 December, 1563, he returned to Ermland, where Protestantism had made considerable progress during his absence. In union with the papal legate Comendone he brought about the acceptance of the Tridentine decrees at the royal Diet of Parczow on 7 August, 1564. After making a general visitation of his diocese he convened a synod at Heilsberg in August, 1565, where the Tridentine decrees were promulgated and measures taken concerning a better Catholic education of the clergy as well as the laity. During the same year he gave over to the Jesuits the direction of the educational institutions which he had founded at Braunsberg. These institutions, viz. the ecclesiastical seminary, the gymnasium, and the Lyceum Hosianum are still in existence. About this time he also composed two more polemical treatises which were published at Cologne. The first one is entitled: "Judicium et censura de judicio et censura Heidelbergensium Tigurinorumque ministrorum de dogmate contra adorandam Trinitatem in Polonia nuper sparso" (1564). In this work Hosius acknowledges the force of the arguments of the Swiss theologians against the Trinitarians, but informs them that the same arguments may be used against themselves, and that the errors of the Trinitarians have their ultimate foundation in the heresy of Calvin. The second, "De loco et autoritate Romani Pontificis", is an able defence of papal authority. In 1567 he wrote "Palinodiæ Quadrantini" or the recantations of Fabian Quadrantinus, a convert to the Catholic Church who afterwards became a Jesuit. After the death of Pius IV, on 9 December, 1565, some of the cardinals cast their vote for Hosius as his successor, but Pius V was the successful candidate. In December, 1566, the new pope appointed Hosius papal legate *a latere* for Poland, and in 1569 Sigismund Augustus made him his resident representative at Rome. With the consent of the pope and the king, Hosius appointed his friend Martin Cromer as his coadjutor, and entrusted him with the administration of Ermland, while he himself left for Rome on 20 August, 1569.

During the ten succeeding years he managed the affairs of Poland in the Roman Curia, and was one of the most influential advisers of the saintly Pope Pius V and his successor, Gregory XIII, in their movement for a Catholic reform; he also took an active part in the papal efforts to restore Catholicity in England, and especially in Sweden. In 1572 Gregory XIII made him a member of the new Congregatio Germanica, and a year later appointed him grand penitentiary. Hosius was one of the greatest men of his time. He did more for the preservation of the Catholic religion in Poland than all the other Polish bishops combined. He was withal, a man of prayer, mortification, and great liberality towards the poor. Both clergy and laity looked upon him as a saint. Blessed Peter Canisius styles him "the most brilliant writer, the most eminent theologian and the best bishop of his times" (Hipler, *Hosii Epistolæ*, I, 422). Editions of his works were published at Paris (1562), Lyons (1564), Antwerp (1566 and 1571), Venice (1573), and (best edition) Cologne (1584). His German sermons were edited by Hipler: "Die deutschen Predigten und Katechesen der ermländischen Bischöfe Hosius und Cromer" (Cologne, 1885). The publication of his numerous letters has been begun by Hipler and Zakrzewski, vols. I and II (Cracow, 1879 and 1888). The letters in these two volumes cover a period of 33 years (1525-1558). Other letters are found among those of Peter Canisius, edited by Braunsberger (Freiburg, 1897-1905).

MICHAEL OTT.

Hosius of Cordova, the foremost Western champion of orthodoxy in the early anti-Arian struggle; b. about 256; d. about 358, either at Sirmium or in Spain. In early life he was a confessor of the Faith in the persecution of Maximian (Morse) or of Diocletian (Hefele), and became Bishop of Cordova in Southern Spain about 295. His name is mentioned amongst the nineteen bishops present at the provincial Council of Elvira (c. 300). Leclercq enumerates certain facts which show Hosius to have been in close personal relations with the Emperor Constantine on several occasions between 313 and 324, and he is known to have been his chief adviser in dealing with the Donatists. We have nothing to explain the origin of the connexion between them. When the Arian troubles began, Constantine charged Hosius with the delivery of his letter to Arius and Alexander, in which he urged them to reconciliation. We know little of Hosius's action during this mission (323-324). When the Council of Nicæa met, Hosius presided, together with the two Roman priests Vitus and Vincent. In what capacity he presided is a matter much discussed; Gelasius of Cyzicus is categorical in declaring that it was in the name of the pope (Hist. Nic. Conc., Bk. II, c. v). Hefele is of the same opinion. Chapman holds that he was nominated by Constantine. Leclercq inclines to the same opinion, but leaves the question open. After the council, Hosius probably returned to Spain. Constantine dying, 22 May, 337, Athanasius was recalled from his first exile in 338, only to be expelled by the Arians in 340. After passing three years in Rome, Athanasius went in 343 into Gaul to confer with Hosius, and thence to Sardica, where the council began in the summer, or, at latest, in the autumn of 343. Hosius presided, proposed the canons, and was the first to sign the Acts of the council.

In the letter of the Council of Sardica, given in Athanasius, "Apologia contra Arianos", c. xlv, Hosius is spoken of as "one who on account of his age, his confession, and the many labours he had undergone, is worthy of all reverence". The suggested explanation of the symbol of Nicæa did not meet the approval of the council (Hefele, p. 758). After Sardica we lose sight of him for ten years, until Pope Liberius's letter to him (c. 353), after the fall of Vincent of Capua. The prestige given to the orthodox cause by the support of the venerable Hosius led the Arians to bring pressure to bear upon Constantius II, who had him summoned to Milan (Gwatkin, p. 292). He declined to condemn Athanasius or to hold communion with Arians. He so impressed the emperor that he was authorized to return home. More Arian pressure led to Constantius writing a letter demanding whether he alone was going to remain obstinate. In reply Hosius sent his brave letter of protest against imperial meddling in Church affairs, preserved for us by St. Athanasius (Hist. Arianorum, 42-45, cf. Migne, P. L., VIII, 1327-1332), which led to his summons (end of 353) to Sirmium.

The facts relating to the end of his life are far from clear; under pressure, he signed the declaration known as the second Sirmian formula (the first being the profession of faith of 351), which was published as the formula of Hosius. The original Latin text is preserved in St. Hilary's "De Synodis", c. XI (Migne, P. L., X, 598), the Greek, in Athanasius: "De Syn.", 28. He refused, however, to renounce Athanasius, who speaks of him as lapsing "for a moment"; having served the purpose for which the Arians brought him to Sirmium, he was probably taken back to Spain, and there died. A later addition to Athanasius declares that he recanted on his death-bed. The defenders of Hosius contend that the concession wrung from him

has been much magnified and misrepresented. But it is contended that Athanasius cannot have had all the facts before him when he wrote, and that the second Sirmian formula is clearly heterodox.

EDWARD MYERS.

Hospice (Lat. *hospitium*, a guest-house).—During the early centuries of Christianity the hospice was a shelter for the sick, the poor, the orphans, the old, the travellers, and the needy of every kind. It dates back to the reign of Constantine. Originally all hospices were under the supervision of the bishops, who designated priests to administer the spiritual and temporal affairs of these charitable institutions. The fourteenth statute of the so-called Fourth Council of Carthage, held about 436, enjoins upon the bishops to have hospices in connexion with their churches: "Ut episcopus non longe ab ecclesiâ hospitium habeat" (Mansi, III, 952). In course of time these hospices of general character ceased, and special establishments were erected for the particular needs of the people. The term *hospice* began to be applied only to institutions in which travellers were harboured. Such hospices were erected in impassable and uninhabited regions and on mountain passes. They were generally in charge of hermits or monks. Their number greatly increased when it became customary to make pilgrimages to the Holy Land, to Rome, Compostela, Amalfi, and other sacred places. They were supported either by pious foundations or the liberality of the people, and gave food and shelter gratuitously, for a limited period of time. In many cities hospices were erected for the entertainment of pilgrims of particular nations. The most famous hospice in the world is that of the Great St. Bernard in Switzerland, which was founded by St. Bernard of Menthon in 962. It is situated on the summit of the mountain of the same name, 8110 feet above the level of the sea, and harbours gratuitously 20,000 to 25,000 travellers every year. It is in charge of Canons Regular of St. Augustine, who are generally known as the Monks of St. Bernard. At present it is occupied by eighteen monks, eight being priests. On all the neighbouring mountains they have recently erected small huts, which are connected with the hospice by telephone or electric bells. At the risk of their lives these monks, accompanied by their famous dogs, tour the mountains, which during nine months of the year are covered with deep snow, and search for travellers who may have lost their way or otherwise stand in need. Two canons regular, Contard and Glassey, together with six attendants, lost their lives on one of these tours on 19 November, 1874. The hospice which Napoleon founded on Mount Simplicon in 1805 is also in charge of the monks of the Great St. Bernard. The hospice on the Little St. Bernard is since 1752 in charge of Italian monks.

MICHAEL OTT.

Hospitality.—The Council of Trent in its twenty-fifth session, cap. viii, De Ref., enjoins "all who hold any ecclesiastical benefices, whether secular or regular, to accustom themselves, as far as their revenues will allow, to exercise with alacrity and kindness the office

of hospitality, so frequently commended by the holy Fathers; being mindful that those who cherish hospitality receive Christ in the person of their guests." This sums up the teaching and tradition of the Church with regard to hospitality. The onus of this duty falls especially on two classes of persons—upon bishops as being in the fullest sense the pastors (i. e. shepherds) of the people and as being primarily vested, according to the ancient canons, with the administration of the contributions of the faithful (see COLLECTIONS); and secondly upon religious, and in particular the monastic orders, as having made their renunciation of the goods of this world the better to perform the works of mercy towards others.

With regard to the hospitality of bishops, we may note that St. Gregory writing to St. Augustine in England and directing that the offerings of the faithful should be subjected to a fourfold division, assigns the first portion "to the bishop and his household on account of hospitality and entertainment". It seems from this and other passages that in the earliest period bishops commonly maintained a sort of hospice. No doubt the functionaries known as bishops' deacons had some connexion with this, and the original institution of canons regular may be regarded as a development of this bishop's household, the canons sharing a common table which was provided and presided over by the bishop. In the "Didascalia Apostolorum" (ii, 3-4), a work of the second half of the third century, much stress is laid upon generous and hospitable instincts as desirable qualities in a bishop-elect. But the details of episcopal duty and practice will best be studied in the pages of Thomassin.

In the religious orders the duty of hospitality was insisted upon from the beginning both in East and West. Even among the communities of Nitria in Egypt, as we learn from Palladius (Lausiac Hist., cap. vii; ed. Butler, ii, 25), we find that a *ξενοδοχεῖον*, or hospice, was wont to be erected for their visitors in these remote regions. There the traveller might remain for a week, but if his stay exceeded that limit he was supposed to return some sort of equivalent in the form of work. No doubt the duty of hospitality so strongly insisted upon both in the Old and New Testaments (e. g. Judges, xix, 20; Gen., xviii, 4; xix, 7 sq., etc.; Matt., x, 40 sqq.; Rom., xii, 13, etc.) was felt to be specially incumbent on those who aspired to perfection, and the narratives of the early pilgrims to the Holy Land (for example that of *Etheria*) reveal how widely it was practised throughout the East. For Western monachism, the most striking evidence is to be found in chap. liii of the Rule of St. Benedict: "Let all guests that come", it directs, "be received like Christ Himself, for He will say 'I was a stranger and ye took Me in.' And let fitting honour be shown to all, especially such as are of the household of the faith and to wayfarers (*peregrinis*). When, therefore, a guest is announced, let him be met (*occurratur ei*) by the superior or the brethren, with all due charity. Let them first pray together, and thus associate with one another in peace . . . At the arrival or departure of all guests, let Christ, Who indeed is received in their persons, be adored in them by bowing the head or even prostrating on the ground . . . Let the abbot pour water on the hands of the guests, and himself as well as the whole community wash their feet. Let special care be taken in the reception of the poor and of wayfarers (*peregrinorum*) because in these Christ is more truly welcomed." So important was the duty of hospitality that it was always to be considered in the construction of the monastery. "Let the kitchen for the abbot and guests be apart by itself, so that strangers (*hospites*), who are never wanting in a monastery, may not disturb the brethren by coming at unlooked for hours." This primitive text has left its stamp upon all the subsequent developments of the monastic rule, from Benedict of Aniane downwards,

while the prominence of the guest-house in all monastic buildings, beginning with the famous plan of St. Gall in the ninth century, attests indirectly how scrupulously this tradition was respected. (See Lenoir, "Architecture Monastique", II, 396-402.)

It would be impossible to go into details here, but we may notice how this aspect of religious life was emphasized among the Cistercians, the most important of the Benedictine reforms. Giraldus Cambrensis, the enemy of the monks, admits that if their establishments had departed from primitive Cistercian simplicity, by great expenditure and extravagance, it was their generous hospitality which was to blame. The very arrangement of their houses seemed designed primarily for the entertainment of pilgrims and the poor. The lodging of both the abbot and the porter was near the main entrance, apart from the rest of the monks. The monastery gate being always kept shut, the porter lived near "that the guest on his first arriving might find someone to welcome him". The "Liber Usuum" directs that the porter should open the door saying *Deo gratias*, and, after a *Benedicite* as a salutation, should ask the stranger who he is and what he requires. "If he wishes to be admitted, the porter kneels to him and bids him enter and sit down near the porter's cell while he goes to fetch the abbot." It was the abbot's duty to dine with his guests rather than with his monks. The same traditions obtained in the older Benedictine and Cluniac houses; and at all periods a wonderful example has been set by the monasteries during times of famine, pestilence, etc. For the charity of the Cluniacs, e. g. in the great famine of 1029, see Sackur, "Die Cluniacenser", II, 213-216. To this ideal the monks seem to have remained faithful to the last. In that remarkable record of monastic life at the Reformation period known as the "Rites of Durham" we find a glowing account of the splendour of their guest-house and of the hospitality they practised. The usual period during which hospitality was freely provided was two complete days; and some similar restriction upon the abuse of hospitality seems to have been prescribed by most of the orders, friars as well as monks. There were of course certain orders, e. g. the Knights Hospitallers of St. John of Jerusalem, which were largely given up to works of charity and hospitality. But the duty of harbouring pilgrims was secondary to that of nursing the sick.

The most useful general discussion of the subject will be found in certain chapters of THOMASSIN'S great work, *Vetus et Nova Ecclesie Disciplina*, which exists in French as well as in Latin. See also RATZINGER, *Geschichte d. christ. Armenpflege* (Freiburg im Br., 1884); UHLHORN, *Die christ. Liebestätigkeit d. alt. Kirche* (Stuttgart, 1882); SCHWIETZ, *Das morgenländische Monchtum* (Mainz, 1904); GASQUET, *Eng. HERBERT THURSTON.

Hospitallers.—During the Middle Ages, among the hospitals established throughout the West (*Maisons-Dieu* or *Hôtels-Dieu*), in which religious of both sexes lived under one roof, following the Rule of St. Augustine, and vowed to perpetual chastity and the service of the sick and poor, the most famous was the Hôtel-Dieu of Paris. Early in the seventeenth century Mère Geneviève Bouquet established a novitiate to replace the system by which each religious trained a certain number of postulants, and introduced the custom of taking a saint's name. Up to the Revolution twelve resident canons recited the canonical hours. The congregation survived both the Revolution and the disorders of 1830.

The military orders organized at the time of the

Crusades did not overlook the care of the sick, and found auxiliaries in the communities of women instituted for this work, under the same rules and patronage. Thus the labours of the Lazarists in tending those afflicted with leprosy were shared by the *Hospital Sisters of St. Lazarus*.

The *Hospitaller Sisters of St. John of Jerusalem*, early in the twelfth century, were established in the hospital of St. Mary Magdalen, Jerusalem, for the care of pilgrims. The year after the fall of Jerusalem (1188) a community was established at Sixena, Spain, by Sancha, wife of Alfonso II of Aragon, for the care of poor ladies of noble families, and the rule was confirmed by Celestine III in 1193. Except from 1470 to 1569, when they were under the immediate jurisdiction of the pope, the sisters were subject to the Grand Master of the Hospitallers. Other communities were soon founded throughout Spain, Italy, Portugal, and England. A reform was instituted in the hospital of Beaulieu in the first years of the seventeenth century; new constitutions were drawn up in 1636, and approved in 1644. After the fall of Rhodes the original habit of red, with a black mantle, embroidered with the cross of St. John of Jerusalem, was exchanged for one of black. On the suppression of the Templars, the few houses of sisters of that order were united with those of St. John of Jerusalem.

The first house of the *Hospitaller Sisters of the Teutonic Order* in Germany was founded in 1299 at Kunitz near Bern, soon followed by others, none of which survived the secularization of 1803. The order was revived in 1841 by Maximilian III Joseph, Duke of Austria-Este. Besides the care of the sick, the sisters devote themselves to the work of teaching. There are four mother-houses: Troppau, with 2 filial convents and 123 sisters; Lana, 15 filial houses, 89 sisters; Freudenthal, 3 filial houses, 67 sisters; Friesach, 1 filial house, 29 sisters.

The *Hospitallers of the Holy Ghost* were a branch of the male order of the same name, founded in 1180 at Montpellier; established at Neufchâteau, they were driven thence in 1842 to Rouceux, which was made the mother-house, under a superior-general. In Germany the houses at Memmingen and Wimpfen, in Swabia, survived until the secularization of 1803. There is still a house at Cracow, founded in 1618, with 27 sisters, conducting a boarding-school. The convent at Poligny was revived after the Revolution, the religious devoting themselves chiefly to children, especially foundlings.

Among the foundations of more recent times are the following: The *Hospitallers of Loches*, founded in 1621 by Susanne Dubois, a religious of the Hôtel-Dieu of Paris; some seventeen convents were founded at Clermont, Riom, and other cities of France. The *Hospitallers of St. Thomas of Villanova* were instituted in 1660 by Ange Le Proust, prior of the Hermits of St. Augustine at Lamballe. During the Revolution their house in Paris was not closed. The congregation was re-established in 1804 and in 1903 had 100 institutions in France, under the mother-house at Aix, having received papal approbation in 1878. The *Hospitallers of Dijon and Langres* were founded by Père Joly in 1685. The *Hospitallers of Ste-Marthe*, established in 1687 at Pontarlier, for the care of the sick and poor and the education of girls, soon spread over France and Switzerland. The *Hospitallers of Ernemont*, also known as Sisters of the Christian Schools and Bonnes Capotes, owed their foundation (1698) to Archbishop Jacques-Nicolas Colbert, their aim being gratuitous teaching and the care of the sick. The mother-house was reopened in 1803 after the Revolution. Since 1903 the sisters have confined themselves chiefly to the care of the sick in hospitals and their own homes.

The *Hospitallers of St. Joseph* were founded at Lafèche, France, in 1636, by Marie de la Ferre, under

the direction of the Bishop of Angers. Convents were soon established at Laval, Baugé, and Beaufort, in all of which Mlle de Melun, Princesse de l'Épinoy, and a member of the order, took an important part. The religious were first bound by simple vows only, but the custom inaugurated at Laval in 1663 of taking solemn vows was soon followed at Moulins, Baugé, and Montreal. The congregation was approved by Alexander VII in 1666 and recognized by the Parlement of Paris in 1667. The constitutions were revised in 1685 by Henri Arnaud, Bishop of Angers. In addition to the three vows, the sisters were bound by a fourth to the service of the poor. Besides the choir and lay sisters, associate sisters are received, who, through some cause unable to take upon themselves the full obligations of the professed, desire to pass the rest of their life under simple vows. The Laval sisters survived the Revolution, and on the reorganization, regained their convent and boarding school. The founders of Montreal were accompanied to the New World by Mlle Mance, who after carrying on the work of caring for the sick for seventeen years in the Hôtel-Dieu, in 1659 brought over the Hospitallers of Lafèche, who in spite of three serious conflagrations and the deprivation of their income from France after the Revolution have now 132 sisters caring annually for 3205 patients. In 1845 the first filial foundation was made at Kingston, and now numbers 54 religious, 60 patients, and 32 orphans. The Kingston house also opened convents at Cornwall, Ontario, in 1897 (27 sisters, 30 patients), and Englewood, a suburb of Chicago, in 1903 (11 sisters, 300 patients); in connexion with the latter is a training school for nurses. From Montreal were founded in 1869 the Hôtel-Dieu at Chatham, N. B. (44 sisters, 25 patients, and an academy, with 42 pupils); that of St-Basile (1873), where there are also a boarding-school, academy, and orphanage (54 sisters, 150 pupils, 50 orphans); Windsor, in 1889 (20 sisters, 35 patients); Tracadie, New Brunswick, 1868 (30 sisters, 38 orphans), where since 1820 leprosy had been rampant, and where were later established a general hospital, an orphanage, and a dispensary, treating 2000 patients annually; Athabaskaville, in 1881 (23 sisters, 60 patients); Campbellton, in 1889 (14 sisters); Burlington, Vermont, in 1894 (28 sisters, 45 patients).

F. M. RUDGE.

Hospitallers of St. John of Jerusalem, the most important of all the military orders, both for the extent of its area and for its duration. It is said to have existed before the Crusades and is not extinct at the present time. During this long career it has not always borne the same name. Known as Hospitallers of Jerusalem until 1309, the members were called Knights of Rhodes from 1309 till 1522, and have been called Knights of Malta since 1530.

The origins of the order have given rise to learned discussions, to fictitious legends and hazardous conjectures. The unquestionable founder was one Gerald, or Gerard, whose birth-place and family-name it has been vainly sought to ascertain. On the other hand, his title as founder is attested by a contemporary official document, the Bull of Paschal II, dated 1113, addressed to "Geraudo institutori ac præposito Hierosolimitani Xenodochii". This was certainly not the first establishment of the kind at Jerusalem. Even before the Crusades, hostleries were indispensable to shelter the pilgrims who flocked to the Holy Places, and in the beginning the *hospitia* or *xenodochia* were nothing more. They belonged to different nations: a Frankish hospice is spoken of in the time of Charlemagne; the Hungarian hospice is said to date from King St. Stephen (year 1000). But the most famous was an Italian hospice founded about the year 1050

by the merchants of Amalfi, who at that time had commercial relations with the Holy Land. Attempts have been made to trace the origin of the Hospitallers of St. John to this foundation, but it is obvious to remark that the Hospitallers had St. John Baptist for their patron, while the Italian hospice was dedicated to St. John of Alexandria. Moreover, the former adopted the Rule of St. Augustine, while the latter followed that of the Benedictines. Like most similar houses at that time, the hospice of Amalfi was in fact merely a dependency of a monastery, while Gerard's was autonomous from the beginning. Before the Crusades, the Italian hospital languished, sustained solely by alms gathered in Italy; but Gerard profited by the presence of the crusaders, and by the gratitude felt for his hospitality, to acquire territory and revenues not only in the new Kingdom of Jerusalem, but in Europe—in Sicily, Italy, and Provence. In the acts of donation which remain to us, there is no mention of the sick, but only of the poor and strangers. In this respect the hospice of Gerard did not differ from others, and his epitaph defines his work:—

Pauperibus servus, pius hospitibus
Undique colligit pasceret unde suos.

Thanks to the resources accumulated by Gerard, his successor, Raymond of Provence (1120–60), caused the erection of more spacious buildings near the church of the Holy Sepulchre, and henceforth the hospice became an infirmary served by a community of hospitallers in the modern sense of the word.

Strictly speaking, therefore, the Hospitallers of Jerusalem only began with Raymond of Provence, to whom they owe their rule. This rule deals only with their conduct as religious and infirmarians, there being no mention of knights. It especially sets forth that the hospital shall permanently maintain at its expense five physicians and three surgeons. The brothers were to fulfil the duties of infirmarians. A pilgrim, about the year 1150, places the number of sick persons cared for at 2000, a figure evidently exaggerated, unless we make it include all the persons harboured in a whole year. Raymond continued to receive donations, and this permitted him to complete his foundation by a second innovation. To accompany, and defend at need, the arriving and departing pilgrims, he defrayed the cost of an armed escort, which in time became a veritable army, comprising knights recruited from among the crusaders of Europe, and serving as a heavy cavalry (see CHIVALRY), and Turcoples recruited from among the natives of mixed blood, and serving as a light cavalry armed in Turkish fashion. With this innovation originated the most ancient military dignities in the order: the marshal, to command the knights, the turcopolier, for the Turcoples. Later the grand masters themselves went into battle. Gosbert (c. 1177), the fifth successor of Raymond, distinguished himself, and Roger de Moulins perished gloriously on the field of battle (1187). Thus the Order of St. John imperceptibly became military without losing its eleemosynary character. The statutes of Roger de Moulins (1187) deal only with the service of the sick: the first mention of military service is in the statutes of the ninth grand master, Alfonso of Portugal (about 1200). In the latter a marked distinction is made between the secular knights, externs to the order, who served only for a time, and the professed knights, attached to the order by a perpetual vow, and who alone enjoyed the same spiritual privileges as the other religious. Henceforth the order numbered two distinct classes of members: the military brothers and the brothers infirmarians. The brothers chaplains, to whom was entrusted the divine service, formed a third class.

While the Order of St. John became a mixed order, that of the Templars was purely military from the beginning, and on this point it can claim priority, despite

the contrary assertions of the Hospitallers. The Templars followed a different monastic rule and wore a different habit—the white habit of the Cistercians, whose rule they followed, with a red cross, while the Hospitallers had a black mantle with a white cross. In war the knightly brothers wore above their armour a red surcoat with the white cross. Mutually emulous from the outset, they soon became rivals, and this rivalry had much to do with the rapid decline of the Kingdom of Jerusalem. In other respects the two orders held the same rank in Church and State, both being recognized as regular orders and endowed by the papacy with most extensive privileges, absolute independence of all spiritual and temporal authority save that of Rome, exemption from tithes, with the right to have their own chapels, clergy, and cemeteries. Both were charged with the military defence of the Holy Land, and the most redoubtable strongholds of the country, the splendid ruins of which still exist, were occupied by one or the other (Rey, "Monuments de l'architecture militaire des Croisés", Paris, 1865). On the battlefield they shared between them the most perilous posts, alternately holding the van and rear guard. The history of the Hospitallers of Jerusalem is involved in that of the Latin kingdom of the same name, with which the order was associated in prosperity and adversity. When the kingdom was at the height of its glory, the Hospitallers possessed no fewer than seven strongholds, some situated on the coast, others in the mountains; of these Margat and Krals, in the territory of Tripoli, are the most famous. They enjoyed the revenues of more than one hundred and forty estates (*casalia*) in the Holy Land. As to their European possessions, a writer of the thirteenth century credits them with about nineteen thousand manse or manors. It was necessary to organize a financial administration in order to assure the regular payment of the revenues of these widely scattered possessions. This was the task of Hugh of Ravel, seventeenth Grand Master of the Holy Land (c. 1270). The lands attached to a single house were placed under the command of a knight of the order, who formerly was called a preceptor, but afterwards took the title of commander. This official was charged with collecting the revenues, one portion of which was devoted to the support of his community, formed of a chaplain and some brothers, the other portion being destined for the houses of the Holy Land. This latter portion consisted of an annual and invariable impost called "Responsions".

Thanks to these resources, drawn from Europe, the order was able to survive the fall of the Kingdom of Jerusalem, which involved the loss of all its possessions in Asia. After the capture of Jerusalem by Saladin (1187), the Hospitallers retained only their possessions in the Principality of Tripoli, and these they lost a century later by the fall of Acre (1291). They were obliged to seek refuge, under their grand master, Jean de Villiers, in the Kingdom of Cyprus, where they already had some possessions. King Amaury assigned them as a place of residence the town of Limassol on the coast. Having become islanders, the Hospitallers were obliged to modify their manner of warfare. They equipped fleets to fight the Mussulmans on the sea and to protect the pilgrims, who had not ceased to visit the Holy Places. But it was chiefly the conquest of the island of Rhodes, under the Grand Master Foulques de Villaret, that brought about a complete transformation of the order.

The *Knights of Rhodes* (1309–1522), the successors of the Hospitallers of St. John, were distinguished from the latter in many ways. In the first place, the grand master of the order was thenceforward a temporal sovereign in that island, which constituted a true ecclesiastical principality, under the nominal suzerainty of the Emperors of the East. Secondly,

although Villaret's first care was to build a new infirmary, the care of the sick took a secondary place, as the members of the order had scarcely occasion to devote themselves to any save the members of the community. The name *knights* then prevailed over that of *hospitallers*. This character was accentuated by the fusion of the Hospitallers with the remaining Knights Templars subsequent to the suppression of the latter (1312). This fusion at the same time increased the wealth of the order, to which the pope assigned the property of the Templars in every country except Aragon and Portugal. In France, where Philip the Fair had sequestered this property, the order obtained restitution only by paying large indemnities to the king. From this time its organization took its definitive form, the whole body being divided into tongues, priories, and commanderies. The tongues, or nations, were eight in number, each having its own bailiff; and one of the eight supreme dignities was reserved to each tongue—to Provence, that of grand commander; to Auvergne, that of marshal; to France, grand hospitaller; to Italy, admiral; to Aragon, standard-bearer; to Castile, grand chancellor; to Germany, grand bailiff; to England, turcopolier. (On these dignities see MILITARY ORDERS.) The grand master might be elected from any of the various tongues; he exercised supreme authority, but under the control of a grand chapter and with the aid of several councils. Each tongue was subdivided into priories, and the head of each priory had the right to receive new knights and to visit the commanderies. The priories numbered twenty-four, and the commanderies, which were subdivisions of the priories, 656. All these posts were held according to seniority, the commanderies, after three campaigns, which were known as "caravans".

A most important change in the character of the order was the transformation of the knights into corsairs. The piracy practised by the Mussulmans was the scourge of the Mediterranean and especially of Christian commerce. The Knights of Rhodes, on their side, armed cruisers not only to give chase to the pirates, but to make reprisals on Turkish merchantmen. With increasing audacity they made descents on the coast and pillaged the richest ports of the Orient, such as Smyrna (1341) and Alexandria (1365). However, a new Mussulman power arose at this period—the Ottoman Turks of Iconium—and took the offensive against Christianity. After the fall of Constantinople, Mahomet II directed his attention to the task of destroying this den of pirates which made Rhodes the terror of the Mussulman world. Henceforth the order, thrown on the defensive, lived perpetually on the alert. Once, under its grand master, Pierre d'Aubusson, it repulsed all the forces of Mahomet II in the siege of 1480. In 1522 Solyman II returned to the attack with a fleet of 400 ships and an army of 140,000 men. The knights sustained this great onslaught with their habitual bravery for a period of six months under their grand master, Villiers de l'Isle Adam, and only capitulated when their

supplies were completely exhausted. Their lives were spared, and they were permitted to withdraw. Solyman II, in homage to their heroism, lent them his ships to return to Europe. They dispersed to their commanderies and begged Charles V to grant them the island of Malta, which was a dependency of his kingdom of Sicily, and this sovereignty was granted them in 1530, under the suzerainty of the kings of Spain.

The Knights of Malta (1530–1798) at once resumed the manner of life they had already practised for two centuries at Rhodes. With a fleet which did not number more than seven galleys they resisted the Barbary pirates who infested the western basin of the Mediterranean. They formed a valuable contingent during the great expeditions of Charles V against Tunis and Algiers and at the memorable victory of Lepanto. The Knights of Malta were also permitted to equip galleys at their own expense to give chase to the Turkish galleys. These enterprises did not fail to draw upon them fresh attacks from the Ottomans. Solyman II, regretting his generosity, gathered a second time all the forces of his empire to dislodge the

CRAC DES CHEVALIERS
A Stronghold of the Hospitaliers, near Tripoli, in Anatolia
(Reconstruction by Rey in "Mon. de l'archit. militaire des Croisés")

Christian corsairs from their retreat. The siege of Malta, quite as famous as that of Rhodes, lasted for four months (1565). The Turks had already taken possession of a part of the island, destroyed nearly the whole of the old city, slaying half the knights and almost 8000 soldiers, when Malta was delivered by an army of relief from Spain. In retreating, the Turks, it is said, left 30,000 slain. A new city had to be built—the present city of La Valette, so named in memory of its valiant

grand master who had sustained this siege. Malta, however, was not rid of its most dangerous adversary until the battle of Lepanto (1571), which dealt the Ottoman fleet a fatal and final blow.

From this time the history of Malta is reduced to a series of encounters by sea with the Barbary corsairs which have only a local interest. The struggle was carried on chiefly by young knights who were in haste to accomplish their three "caravans" in order to merit some vacant commandery. It was an existence filled with perils of every kind, sudden attacks, adventures, successes, and defeats. There was constant risk of life, or of liberty, which could be regained only at the cost of enormous ransoms. But when success came, the undertaking proved lucrative, not only defraying all costs but also enriching the captain. The best result was the deliverance of hundreds of Christian slaves, chained as rowers on the Turkish galleys. In requital the vanquished Turks were in turn reduced to slavery and sold to the Christian galleys which had need of rowers. In this respect Malta remained a veritable slave-market until well into the eighteenth century. It required a thousand slaves to equip merely the galleys of the order, which were a hell for these unfortunates. It will be readily understood that the habit of living in the midst of these scenes of violence and brutality exercised a bad influence on the morals of the knights of the order. Discipline became relaxed, and the grand mastership became a more

and more perilous honour. Revolts were frequent. In 1581 the grand master, Jean de la Cassière, was made prisoner by his own knights, whose principal grievance was the expulsion from the city of lewd women. The vow of obedience was little better observed than that of celibacy. Once in possession of some commandery situated on the Continent, a knight would become indeed independent of the grand master's authority and maintain only the most remote relations with the order. As to the vow of poverty, the knights were recruited solely from among the nobility, proofs of noble descent being more severely scrutinized than religious dispositions, and, naturally, the wealth of the order formed the only motive of these vocations. Its decay began, too, with the confiscation of its possessions. One effect of Protestantism was the alienation of a large group of commanderies, to be thenceforward appropriated to the Protestant nobility, as, for instance, the Bailiwick of Sonnenburg in Prussia. In other Protestant countries the order was simply suppressed. In Catholic countries the sovereigns themselves assumed more and more the right to dispose of the commanderies within their jurisdiction. At last Malta, the very centre of the order, was treacherously surrendered under the grand master, the Count von Hompesch, to General Bonaparte when he made his expedition to Egypt (12 June, 1798).

Present State of the Order.—The secularization of the property of the order in Protestant countries was extended by the French Revolution to the greater number of Catholic countries. On the other hand, Czar Paul of Russia assigned them considerable property in his domains (1797), and in return was elected grand master, but his election was not recognized by the pope. From that time forward the pope has named the grand master or the bailiff who takes his place. From 1805 to 1879 there was no grand master, but Leo XIII re-established the dignity, bestowing it on an Austrian, Geschi di Sancta Croce. It is now (1910) held by Galeazzo von Thun und Hohenstein. The actual conditions for admission to the order are: nobility of sixteen quarterings, the Catholic Faith, attainment of full legal age, integrity of character, and corresponding social position. There are now in existence only four great priories, one in Bohemia and three in Italy. There are still commanders and several classes of knights, with different insignia, but all wear the same eight-pointed Maltese cross (see DECORATIONS, PONTIFICAL).

To the Order of the Knights of Malta belong the Convent of S. Maria del Priorato on the Aventine in Rome, overlooking the Tiber, and commanding from its gardens one of the most delightful views of the city. The walls of the convent are adorned with portraits of the knights, and the archives are rich in records of the order. The tombs of the knights in the convent church are interesting. The order was summoned to attend the Convention of Geneva (1864), on the same footing as the great powers.

The Protestant Bailiwick of Sonnenburg in Prussia disappeared after the secularization of its property in 1810. Nevertheless Frederick William IV created a new confraternity of "Evangelical Johannites" (1852), under a master (*Herrenmeister*) always chosen from the royal family, and with a great number of other dignitaries. Admission to the order is subject to numerous conditions, ancient nobility, corresponding social position, an entrance fee of 900 marks, a probation of at least four years as knight of honour before admission to the accolade which confers the title of *Knight of Justice*. Their first obligation is to collect contributions for the support of hospitals. Thus this Protestant branch of the order has returned to the ideal of its first founder in the time of the First Crusade. Moreover, in times of war, since 1870, the order has been devoted to ambulance service on the field of battle.

Hospitals (Lat. *hospes*, a guest; hence *hospitalis*, hospitable; *hospitium*, a guest-house or guest-room). Originally, *hospital* meant a place where strangers or visitors were received; in the course of time, its use was restricted to institutions for the care of the sick. This modification is incidental to the long development through which the hospital itself has passed under the varying influences of religious, political, and economic conditions, and of social and scientific progress. Viewed in a large way the typical modern hospital represents natural human solicitude for suffering, ennobled by Christian charity and made efficient by the abundant resources of medical skill.

PAGAN ANTIQUITY.—While among savage tribes, e. g. the ancient Germans, the sick and feeble were often put to death, more humane practices are found among civilized peoples. One of the earliest hospitals on record was founded in Ireland, 300 B. C., by Princess Macha. It was called "Broin Bearg" (house of sorrow), and was used by the Red Branch Knights and served as the royal residence in Ulster until its destruction in A. D. 332 ("Seanchus Mór", 123; cf. Sir W. Wilde, "Notes on Ancient Ireland", pt. III). In India, the Buddhist King Azoka (252 B. C.) established a hospital for men and animals. The Mexicans in pre-Columbian times had various institutions in which the sick and poor were cared for (Bancroft, "Native Races", II, 596). In a general way the advance in medical knowledge implies that more was done to relieve suffering; but it does not necessarily prove the existence of hospitals. From the Papyri (notably Ebers) we learn that the Egyptians employed a considerable number of remedies and that the physicians held clinics in the temples. Similar customs prevailed in Greece; the sick resorted to the temple of Æsculapius where they spent the night (*incubatio*) in the hope of receiving directions from the god through dreams which the priests interpreted. Lay physicians (*Æsculapiades*) conducted dispensaries in which the poor received treatment. At Epidaurus the Roman senator Antoninus erected (A. D. 170) two establishments, one for the dying and the other for women lying-in; patients of these classes were not admitted in the Æsculapium.

The Romans in their treatment of the sick adopted many Greek usages. Æsculapius had a temple on the island in the Tiber (291 B. C.), where now stand the church and monastery of St. Bartholomew, in which the same rites were observed as among the Greeks. Municipal physicians were appointed to treat various classes of citizens, and these practitioners usually enjoyed special privileges and immunities. Provision was made in particular for the care of sick soldiers and slaves, the latter receiving attention in the *valeudinaria* attached to the estates of the wealthier Romans. But there is no record of any institution corresponding to our modern hospital. It is noteworthy that among pagan peoples the care of the sick bears no proportion to the advance of civilization. Though Greece and Rome attained the highest degree of culture, their treatment of the sick was scarcely equal, certainly not

superior, to that which was found in the oriental nations. Both Greeks and Romans regarded disease as a curse inflicted by supernatural powers and rather sought to propitiate the malevolent deity than to organize the work of relief. On the other hand the virtue of hospitality was quite generally insisted on; and this trait, as will presently appear, holds a prominent place in Christian charity.

EARLY CHRISTIAN TIMES.—Christ Himself gave His followers the example of caring for the sick by the numerous miracles He wrought to heal various forms of disease including the most loathsome, leprosy. He also charged His Apostles in explicit terms to heal the sick (Luke, x, 9) and promised to those who should believe in Him that they would have power over disease (Mark, xvi, 18). Among the "many wonders and signs done by the Apostles in Jerusalem" was the restoration of the lame man (Acts, iii, 2-8), of the palsied Æneas (ix, 33, 34), and of the cripple at Lystra (xiv, 7, 9), besides the larger number whom the shadow of St. Peter delivered from their infirmities (v, 15, 16). St. Paul enumerates among the charismata (q. v.) the "grace of healing" (I Cor., xii, 9), and St. James (v, 14, 15) admonishes the faithful in case of sickness to bring in the priests of the Church and let them pray over the sick man "and the prayer of faith shall save him." The Sacrament of Extreme Unction was instituted not only for the spiritual benefit of the sick but also for the restoration of their bodily health. Like the other works of Christian charity, the care of the sick was from the beginning a sacred duty for each of the faithful, but it devolved in a special way upon the bishops, presbyters, and deacons. The same ministrations that brought relief to the poor naturally included provision for the sick who were visited in their homes. This was especially the case during the epidemics that raged in different parts of the Roman Empire, such as that at Carthage in 252 (St. Cyprian, "De mortalitate", XIV, in Migne, P. L., IV, 591-593; "S. Cypriani Vita" in "Acta SS.", 14 Sept.), and that at Alexandria in 268 (Eusebius, "Hist. Eccl.", VII, xxii; "Acta SS.", VI, 726). Valuable assistance was also rendered by physicians, slaves, or freedmen, who had become Christians and who like Cosmas and Damian were no less solicitous for the souls than for the physical needs and bodily comfort and well-being of their patients.

Another characteristic of Christian charity was the obligation and practice of hospitality (Rom., xii, 13; Heb., xiii, 2; I Peter, iv, 9; III Ep. St. John). The bishop in particular must be "given to hospitality" (I Tim., iii, 2). The Christian, therefore, in going from place to place, was welcomed in the houses of the brethren; but like hospitality was extended to the pagan visitor as well. Clement of Rome praises the Corinthians for their hospitality (Ep. ad. Cor., c. i) and Dionysius of Corinth for the same reason gives credit to the Romans (Eusebius, "Hist. Eccl.", iv, 23). The bishop's house above all others was open to the traveller who not only found food and shelter there but was provided in case of need with the means to continue his journey. In some cases the bishop was also a physician so that medical attention was provided for those of his guests who needed it (Harnack, "Medicinisches aus d. ältesten Kirchengesch." in "Texte u. Untersuchungen" VIII, Leipzig, 1892). The sick were also cared for in the *valetudinaria* of the wealthier Christians who in the spirit of charity extended hospitality to those who could not be accommodated in the bishop's house. There was thus from the earliest times a well organized system of providing for the various forms of suffering; but it was necessarily limited and dependent on private endeavour so long as the Christians were under the ban of a hostile State. Until persecution ceased, an institution of a public character such as our modern hospital was out of the question. It is certain that after the conver-

sion of Constantine, the Christians profited by their larger liberty to provide for the sick by means of hospitals. But various motives and causes have been assigned to explain the development from private care of the sick to the institutional work of the hospital (Uhlhorn, I, 317 sq.). It was not, at any rate, due to a slackening of charity as has been asserted (Moreau-Christophe, "Du problème de la misère", II, 236; III, 527), but rather to the rapid increase in the number of Christians and to the spread of poverty under new economic conditions. To meet these demands, a different kind of organization was required, and this, in conformity with the prevalent tendency to give all work for the common weal an institutional character, led to the organization and founding of hospitals.

When and where the first hospital was established is a matter of dispute. According to some authorities (e. g. Ratzinger, p. 141), St. Zoticus built one at Constantinople during the reign of Constantine, but this has been denied (cf. Uhlhorn, I, 319). But that the Christians in the East had founded hospitals before Julian the Apostate came to the throne (361) is evident from the letter which that emperor sent to Arsacius, high-priest of Galatia, directing him to establish a xenodochium in each city to be supported out of the public revenues (Soxomen, V, 16). As he plainly declares, his motive was to rival the philanthropic work of the Christians who cared for the pagans as well as for their own. A splendid instance of this comprehensive charity is found in the work of St. Ephraem who, during the plague at Edessa (375), provided 300 beds for the sufferers. But the most famous foundation was that of St. Basil at Cæsarea in Cappadocia (369). This "Basiliad", as it was called, took on the dimensions of a city with its regular streets, buildings for different classes of patients, dwellings for physicians and nurses, workshops and industrial schools. St. Gregory of Nazianzus was deeply impressed by the extent and efficiency of this institution which he calls "an easy ascent to heaven" and which he describes enthusiastically (Or. 39, "In laudem Basili"; Or. fun. "In Basil.", P. G., XXXVI, 578-579). St. Basil's example was followed throughout the East: at Alexandria by St. John the Almsgiver (610); at Ephesus by the bishop, Brassianus; at Constantinople by St. John Chrysostom and others, notably St. Pulcheria, sister of Theodosius II, who founded "multa publica hospitium et pauperum domicilia" i. e. many homes for strangers and for the poor (Acta SS., XLIII). In the same city, St. Samsonearly in the sixth century, founded a hospital near the church of St. Sophia (Procopius, "De ædif. Justiniani", I, c. 2); this was destroyed but was restored under Justinian who also built other hospitals in Constantinople. Du Cange (Historia Byzantina, II, "Constantinopolis Christiana") enumerates 35 establishments of the kind in this city alone. Among the later foundations in Constantinople, the most notable were the orphanotrophium established by Alexius I (1081-1118), and the hospital of the Forty Martyrs by Isaac II (1185-1195).

The fact that the first hospitals were founded in the East accounts for the use, even in the West, of names derived from the Greek to designate the main purpose of each institution. Of the terms most frequently met with the *Nosocomium* was for the sick; the *Brephrotrophium* for foundlings; the *Orphanotrophium* for orphans; the *Ptochium* for the poor who were unable to work; the *Gerontochium* for the aged; the *Xenodochium* for poor or infirm pilgrims. The same institution often ministered to various needs; the strict differentiation implied by these names was brought about gradually. In the West, the earliest foundation was that of Fabiola at Rome about 400. "She first of all", says St. Jerome, "established a nosocomium to gather in the sick from the streets and

to nurse the wretched sufferers wasted with poverty and disease" (Ep. LXXVII, "Ad Oceanum, de morte Fabiolæ", P. L., XXII, 694). About the same time, the Roman senator Pammachius founded a xenodochium at Porto which St. Jerome praises in his letter on the death of Paulina, wife of Pammachius (Ep. LXVI, P. L., XXII, 645). According to De Rossi, the foundations of this structure were unearthed by Prince Torlonia ("Bull. di Arch. Christ.", 1866, pp. 50, 99). Pope Symmachus (498-514) built hospitals in connexion with the churches of St. Peter, St. Paul, and St. Lawrence (Lib. Pontif. I. no. 53, p. 263). During the pontificate of Vigilius (537-555) Belisarius founded a xenodochium in the Via Lata at Rome (Lib. Pontif. I. c. 296). Pelagius II (578-590) converted his dwelling into a refuge for the poor and aged. Stephen II (752-757) restored four ancient xenodochia, and added three others. It was not only in countries that retained the traditions of pagan culture and civilization that Christianity exerted its beneficent influence; the same spirit of charity appears wherever the Christian Faith is spread among the fierce and uncultured peoples just emerging from barbarism.

The first establishment in France dates from the sixth century, when the pious King Childebert and his spouse founded a xenodochium at Lyons, which was approved by the Fifth Council of Orléans (549). Other foundations were those of Brunehaut, wife of King Sigibert, at Autun (close of sixth century); of St. Radegonda, wife of Clotaire, at Athis, near Paris; of Dagobert I (622-638), at Paris; of Cæsarius and his sister St. Cæsaria at Arles (542); and the hospice to which Hincmar of Reims (806-882) assigned considerable revenues. Regarding the origin of the institution later known as the Hôtel-Dieu, at Paris, there is no little divergence of opinion. It has been attributed to Landry, Bishop of Paris; Häser (IV, 28) places it in 660, De Gérando (IV, 248) in 800. According to Lallemand (II, 184) it is first mentioned in 829 (cf. Coycque, "L'Hôtel-Dieu de Paris au Moyen Age", I, 20). As the name indicates, it belongs to that group of institutions which grew up in connexion with the cathedral or with the principal church of each large city and for which no precise date can be assigned. The same uncertainty prevails in regard to other foundations such as the *hospitalia Scythorum*, established on the Continent by Irish monks, which had fallen into decay and which the Council of Meaux (845) ordered to be restored. In Spain the most important institution for the care of the sick was that founded in 580 by Bishop Masona at Augusta Emerita (Mérida), a town in the Province of Badajoz. From the account given by Paul the Deacon we learn that the bishop endowed this hospital with large revenues, supplied it with physicians and nurses, and gave orders that wherever they found a sick man, "slave or free, Christian or Jew", they should bring him in their arms to the hospital and provide him with bed and proper nourishment (*cibus delicatos eosque preparatos*). See Flórez, "España Sagrada", XIII, 539; Heusinger, "Ein Beitrag", etc. in "Janus", 1846, I.

MIDDLE AGES.—During the period of decline and corruption which culminated under Charles Martel the hospitals, like other ecclesiastical institutions, suffered considerably. Charlemagne, therefore, along with his other reforms, made wise provision for the care of the sick by decreeing that those hospitals which had been well conducted and had fallen into decay should be restored in accordance with the needs of the time (Capit. duplex, 803, c. iii). He further ordered that a hospital should be attached to each cathedral and monastery. Hincmar in his "Capitula ad presbyteros" (Harduin, V, 392) exhorts his clergy to supply the needs of the sick and the poor. Notwithstanding these measures, there followed, after Charle-

agne's death (814), another period of decadence marked by widespread abuse and disorder. The hospitals suffered in various ways, especially through the loss of their revenues which were confiscated or diverted to other purposes. In a letter to Louis the Pious written about 822, Victor, Bishop of Chur, complains that the hospitals were destroyed. But even under these unfavourable conditions many of the bishops were distinguished by their zeal and charity, among them Ansgar (q. v.), Archbishop of Hamburg (d. 865), who founded a hospital in Bremen which he visited daily. During the tenth century the monasteries became a dominant factor in hospital work. The famous Benedictine Abbey of Cluny, founded in 910, set the example which was widely imitated throughout France and Germany. Besides its infirmary for the religious, each monastery had a hospital (*hospitale pauperum*, or *eleemosynaria*) in which externs were cared for. These were in charge of the *eleemosynarius*, whose duties, carefully prescribed by the rule, included every sort of service that the visitor or patient could require. As he was also obliged to seek out the sick and needy in the neighbourhood, each monastery became a centre for the relief of suffering. Among the monasteries notable in this respect were those of the Benedictines at Corbie in Picardy, Hirschau, Braunweiler, Deutz, Ilsenburg, Liesborn, Prüm, and Fulda; those of the Cistercians at Arnsberg, Baumgarten, Eberbach, Himmenrode, Herrnalb, Volkenrode, and Walkenried. No less efficient was the work done by the diocesan clergy in accordance with the disciplinary enactments of the councils of Aachen (817, 836), which prescribed that a hospital should be maintained in connexion with each collegiate church. The canons were obliged to contribute towards the support of the hospital, and one of their number had charge of the inmates. As these hospitals were located in cities, more numerous demands were made upon them than upon those attached to the monasteries. In this movement the bishop naturally took the lead, hence the hospitals founded by Heribert (d. 1021) in Cologne, Godard (d. 1038) in Hildesheim, Conrad (d. 975) in Constance, and Ulrich (d. 973) in Augsburg. But similar provision was made by the other churches; thus at Trier the hospitals of St. Maximin, St. Matthew, St. Simeon, and St. James took their names from the churches to which they were attached. During the period 1207-1577 no less than one hundred and fifty-five hospitals were founded in Germany (Virchow in "Gesch. Abhandl.", II).

The *Hospital Orders*.—The establishment of confraternities and religious orders for the purpose of ministering to the sick is one of the most important phases in this whole development. The first of these appeared at Siena towards the end of the ninth century, when Soror (d. 898) founded the hospital of Santa Maria della Scala and drew up its rules. The management was largely in the hands of the citizens, though subject to the bishop's control until 1194, when Celestine III exempted it from episcopal jurisdiction. Similar institutions, for the most part governed by the Rule of St. Augustine, sprang up in all parts of Italy; but by the beginning of the thirteenth century they had passed from the bishop's control to that of the magistrate. In the northern countries—Belgium, France, and Germany—the Beguines and Beghards (q. v.), established in the latter part of the twelfth century, included in their charitable work the care of the sick. St. Elizabeth of Hungary founded two hospitals at Eisenach and a third on the Wartburg. The origin and work of the Alexians and Antonines have been described in the articles ALEXIANS and ANTHONY, SAINT, ORDERS OF, sub-title *Antonines*. But the most important of the orders established during this period was that of the Holy Ghost. About the middle of the twelfth cen-

tury (c. 1145) Guy of Montpellier had opened in that city a hospital in honour of the Holy Ghost and prescribed the Rule of St. Augustine for the brothers in charge. Approved 23 April, 1198, by Innocent III, this institute spread rapidly throughout France. In 1204 the same pontiff built a hospital called S. Maria in Sassia, where King Ina, about 728, had founded the *schola* for English pilgrims. By the pope's command, Guy de Montpellier came to Rome and took charge of this hospital, which was thenceforward called Santo Spirito in Sassia. (Cf. Morichini, "Istituti di carità . . . in Roma", Rome, 1870.) The pope's example was imitated all over Europe. Nearly every city had a hospital of the Holy Ghost, though not all the institutions bearing this name belonged to the order which Guy of Montpellier had founded. In Rome itself Cardinal Giovanni Colonna founded (1216) the hospital of S. Andrea, not far from the Lateran; and in accordance with the will of Cardinal Pietro Colonna the hospital of S. Giacomo in Augusta was founded in 1339. Querini ("La Beneficenza Romana", Rome, 1892) gives the foundations in Rome as follows: eleventh century, four; twelfth, six; thirteenth, ten; fourteenth, five; fifteenth, five, i. e. a total of thirty hospitals for the care of the sick and infirm founded in the city of the popes during the Middle Ages.

The Military Orders.—The Crusades (q. v.) gave rise to various orders of chivalry which combined with military service the care of the sick. The earliest of these was the Order of St. John. Several hospitals had already been founded in Jerusalem to provide for pilgrims; the oldest was that connected with the Benedictine Abbey of S. Maria Latina, founded according to one account by Charlemagne in 800; whether the Order of St. John grew out of this or out of the hospital established (1065-70) by Maurus, a wealthy merchant from Amalfi, is uncertain. At all events, when the First Crusade reached Jerusalem in 1099, Gerhard the superior of the latter hospital, gave the establishment a new building near the church of St. John the Baptist, whence apparently the order took its name. It also spread rapidly in the Holy Land and in Europe, especially in the Mediterranean ports which were crowded with crusaders. Its original purpose was hospital work and according to the description given (e. 1160) by John of Wisburg (Pez, "Anecdota", I, 3, 526) the hospital at Jerusalem cared for over 2000 patients. The military feature was introduced towards the middle of the twelfth century. In both respects the order for a time rendered excellent service, but during the thirteenth century increasing wealth and laxity of morals brought about a decline in Christian charity and zeal and the care of the sick was in large measure abandoned.

The Teutonic Order developed out of the field hospital under the walls of Acre, in which Count Adolf of Holstein with other German citizens (from Bremen and Lübeck) ministered to the sick and wounded. Under the name of "domus hospitalis S. Mariæ Teutonicorum in Jerusalem", it was approved by Clement III in 1191. The members bound themselves by vow to the service of the sick, and the rule prescribed that wherever the order was introduced it should build a hospital. The centre of its activity, however, was soon transferred from the Holy Land to Europe, especially to Germany where, owing to its strict organization and excellent administrative methods, it was given charge of many already existing hospitals. Among its numerous establishments those at Elbing and Nuremberg enjoyed the highest repute. In spite, however, of prudent management and of loyalty to its original purpose, the Teutonic Order suffered so severely through financial losses and war that by the end of the fifteenth century its pristine vigour was almost spent.

City Hospitals.—The Crusades, by opening up freer communication with the East, had quickened the spirit of commercial enterprise throughout Europe, and in consequence, the city, as distinct from the feudal estate and the village, came into existence. The resulting economic conditions affected the hospital development in two ways. The increasing population of the cities necessitated the construction of numerous hospitals; on the other hand, more abundant means were provided for charitable work. Foundations by the laity became more frequent. Public-spirited individuals, guilds, brotherhoods, and municipalities gave freely towards establishing and endowing hospitals. In this movement the Italian cities were foremost. Monza in the twelfth century had three; Milan eleven; Florence (fourteenth century) thirty. The most famous were: La Casa Santa di Santa Maria Annunziata at Naples, founded in 1304 by the brothers Niccolo and Giacomo Scondito; Santa Maria Nuova at Florence (1285) by Falco Portinari, the father of Dante's Beatrice; and the Ospedale Maggiore at Milan (1456) by Duke Francesco Sforza and his wife Bianca Maria. The German towns were no less active; Stendal had seven hospitals; Quedlinburg, four; Halberstadt, eight; Magdeburg, five; Halle, four; Erfurt, nine; Cologne, sixteen (cf. Uhlhorn, II, 199 sq.).

As to the share which the municipalities took in this movement, opinions differ. Some authors (Uhlhorn, Ratzinger) hold that in most cases the city hospital was founded and endowed by the city authorities; while others (Lallemand, II, 51) declare that between the twelfth and the sixteenth centuries, comparatively few foundations were made by the municipality, though this often seconded private initiative with lands and subventions and willingly took over the direction of hospitals once they were established. It is however beyond question that the control of the hospitals passed quite generally into the hands of the municipality especially in Italy and Germany. As a rule the transfer was easily effected on the basis of an agreement between the superior and the civil authorities, e. g. Lindau, 1307; Lucerne, 1319; Frankfurt, 1283; Cologne, 1321. In certain cases where dispute arose as to the observance of the agreement, the matter was referred to high ecclesiastical authority. Thus the Holy Ghost hospital at Göttingen was given over to the municipality by order of the Council of Basle in 1470 (Uhlhorn, loc. cit.). Such transfers, it should be noted, implied no opposition to ecclesiastical authority; they simply resulted from the general development which obliged the authorities in each city to intervene in the management of institutions on which the public weal in large measure depended. There was no question of secularization in the modern sense of the term. Much less can it be shown that the Church forbade clerics any share in the control of hospitals, though some modern writers have thus interpreted the decree of the Council of Vienne in 1311. In reply to Frère Orban (pseud., Jean Vaudamme, "La mainmorte et la charité", Brussels, 1857), Lallemand points out (II, 106 sq.) that what the council did prohibit was the conferring of hospitals and their administration upon clerics as benefices ("nullus ex locis ipsius sæcularibus clericis in beneficium conferatur"). The decree was aimed at an abuse which diverted hospital funds from their original charitable purpose to the emolument of individuals. On the other hand, the Council of Ravenna in the same year (1311), considering the waste and malversation of hospital revenues, ordered that the management, supervision, and control of these institutions should be given exclusively to religious persons.

In France, the movement in favour of secular control advanced much more slowly. King Philip Augustus in 1200 decreed that all hospitals and

hospital funds should be administered by the bishop or some other ecclesiastic. The Council of Paris (1212) took measures to reduce the number of attendants in the hospitals which, the bishops declared, were meant for the service of the sick and not for the benefit of those in good health. At the Council of Arles (1260) it was enacted, in view of prevalent abuses, that hospitals should be placed under ecclesiastical jurisdiction and conducted by persons who would "lead a community life, present annual reports of their administration and retain for themselves nothing beyond food and clothing" (can. 13). Similar decrees were issued by the Council of Avignon (1336). But the protests of synods and bishops were of little avail against growing disorders. Even the Hôtel-Dieu at Paris, which in the main had been well managed, began in the fifteenth century, to suffer from grave abuses. After various attempts at reform, the chapter of Notre-Dame requested the municipal authorities to take over the administration of the hospital (April, 1505). Accordingly a board composed of eight persons, delegates of the municipality, was appointed and, with the approval of the court, assumed charge of the Hôtel-Dieu (Lallemand, II, 112).

Great Britain and Ireland.—In these countries the care of the sick, like other works of charity, was for a long time entrusted to the monastic orders. Each monastery, taking its pattern from those on the Continent, provided for the treatment both of its own inmates who fell ill and of infirm persons in the neighbourhood. In the Penitential of Theodore (668-690) we read (VI, 15): "in potestate et libertate est monasterii susceptio infirmorum in monasterium", i. e. the monastery is free to receive the sick. According to Harduin (IV, 864) a large hospital was founded at St. Albans in 794. A little later (796) Alcuin writing to Eanbald II, Archbishop of York, exhorts him to have in mind the foundation of hospitals where the poor and the pilgrims may find admission and relief (Had- dan and Stubbs, "Councils", Oxford, 1871, III, 504). The temporal rulers also were generous in this respect. In 936 King Athelstan returning from his successful campaign against the Scots, made certain grants to the Culdees or secular canons of St. Peter's Cathedral, York, which they employed to found a hospital. This was known at first as St. Peter's, afterwards as St. Leonard's from the name of the church built in the hospital by King Stephen. It provided for 206 bedesmen and was served by a master, thirteen brethren, four seculars, eight sisters, thirty choristers, and six servites. Archbishop Lanfranc in 1084 founded the hospital of St. Gregory outside the north gate of Canterbury and endowed it with lands and other revenues. It was a large house, built of stone and divided into two sections, one for men and the other for women.

During the first quarter of the twelfth century (1123 ?), St. Bartholomew's hospital was founded by Rahere, who had been jester of Henry I, but had joined a religious community and secured from the king a grant of land in Smoothfield near London. This continued to be the most prominent hospital of London until its confiscation by Henry VIII. The Holy Cross hospital at Winchester was founded in 1132 by Henry of Blois, half-brother to King Stephen; St. Mary's Spital, in 1197 by Walter Brune, citizen of London, and his wife Roesia. The latter, at the Dissolution, had 180 beds for sick persons and travellers. In 1215 Peter, Bishop of Winchester, established St. Thomas's hospital in London. This also was confiscated by Henry VIII but was re-established by Edward VI. At the present time St. Bartholomew's and St. Thomas's are among the most important hospitals in London. The list of foundations in England is a long one; Tanner in his "Notitiæ" mentions 460. For their charters and other documents see

Dugdale, "Monasticon Anglicanum", new ed., London, 1846, VI, pt. 2. That these institutions were under episcopal jurisdiction is clear from the enactment of the Council of Durham (1217): "those who desire to found a hospital must receive from us its rules and regulations" (Wilkins, I, 583). Nevertheless, abuses crept in, so that in the "Articles on Reform" sent by Oxford University to Henry V in 1414, complaint is made that the poor and sick are cast out of the hospitals and left unprovided for, while the masters and overseers appropriate to themselves the revenues (Wilkins, III, 365).

In Scotland, 77 hospitals were founded before the Reformation; Glasgow had two, Aberdeen four, Edinburgh five. St. Mary Magdalen's at Roxburgh was founded by King David I (1124-1153); Holy Trinity at Soltre by King Malcolm IV (1153-1163); the one at Rothean by John Bisset about 1226; Hollywood in Galloway by Robert Bruce's brother Edward (d. 1318); St. Mary Magdalen's at Linlithgow by James I (1424-1437). To the three existing hospitals at Aberdeen, Bishop Gavin Dunbar (1518-1532) added a fourth. The foundations at Edinburgh have already been mentioned under EDINBURGH (vol. V., 286). "The form of the hospital was generally similar to that of the church; the nave formed the common room, the beds were placed in the transepts, and the whole was screened off from the eastern end of the building, where was the chapel The hospitals were usually in charge of a warder or master, assisted by nurses. There was a chaplain on the staff, and the inmates were bound to pray daily for their founders and benefactors." (Bellesheim, "History of the Catholic Church in Scotland", Edinburgh, 1887, II, 185, 417; cf. Walcott, "The Ancient Church of Scotland", London, 1874).

The existence of numerous hospitals in Ireland is attested by the names of towns such as Hospital, Spital, Spiddal, etc. The hospital was known as *forus tuaithe* i. e. the house of the territory, to indicate that it cared for the sick in a given district. The Brehon Laws (q. v.) provide that the hospital shall be free from debt, shall have four doors, and there must be a stream of water running through the middle of the floor (Laws, I, 131). Dogs and fools and female scolds must be kept away from the patient lest he be worried (*ibid.*). Whoever unjustly inflicted bodily injury on another had to pay for his maintenance either in a hospital or in a private house. In case the wounded person went to a hospital, his mother, if living and available, was to go with him (*ibid.*, III, 357; IV, 303, 333; see also Joyce, "A Social History of Ancient Ireland", London, 1903, I, 616 sq.). In the later development, the Knights of St. John had a number of hospitals, the most important of which was Kilmainham Priory founded about 1174 by Richard Strongbow. Other commanderies were located at Killhill, at Hospital near Emly in Co. Limerick, at Kilsaran in Co. Louth, and at Wexford. Towards the end of the twelfth century, the establishments of the Crutched Friars or Cross-bearers, were to be found in various parts of Ireland; at Kells was the hospital of St. John Baptist founded (1189-1199) by Walter de Lacie, Lord of Meath; at Ardee, the one founded in 1207 by Roger de Pippard, Lord of Ardee, the charter of which was confirmed by Eugene, Archbishop of Armagh; at Dundalk, the priory established by Bertrand de Verdon, which afterwards became a hospital for both sexes. The hospital of St. John Baptist at Nenagh, Co. Tipperary, known as "Teach Eoin" was founded in 1200 by Theobald Walter, First Butler of Ireland. St. Mary's hospital at Drogheda, Co. Louth, owed its origin (thirteenth century) to Ursus de Swemele, Eugene, Archbishop of Armagh, being a witness to the charter. The hospital of St. Nicholas at Cashel with fourteen beds and three

chaplains was founded by Sir David Latimer, Seneschal to Marian, Archbishop of Cashel (1224-1238). In 1272 the hospital was joined to the Cistercian Abbey in the neighbourhood. In or near Dublin ample provision was made for the care of the sick. About 1220, Henry Loundres, Archbishop of Dublin, founded a hospital in honour of God and St. James in a place called the Steyne, near the city of Dublin, and endowed it with lands and revenues. The Priory of St. John Baptist was situated in St. Thomas Street, without the west gate of the city. About the end of the twelfth century, Ailred de Palmer founded a hospital here for the sick. In 1361, it appearing that the hospital supported 115 sick poor, King Edward III granted it the *deadanda* for twenty years. This grant was renewed in 1378 and in 1403. About 1500, Walter, Archbishop of Dublin, granted a void space of ground to build thereon a stone house for ten poor men. On 8 June, 1504, John Allen, then dean of St. Patrick's Cathedral, founded the said hospital for sick poor, to be chosen principally out of the families of Allen, Barret, Begge, Hill, Dillon, and Rodier, in the Dioceses of Meath and Dublin; and to be faithful Catholics, of good fame, and honest conversation; he assigned lands for their support and maintenance, and further endowed the hospital with a messuage in the town of Duleek, in the County of Meath (Archdall, "Monasticon Hibernicum", London, 1786). At the Reformation all these funds and charities became the property of the Protestant Church of Ireland.

The famines and pestilences which scourged these countries during the Middle Ages called into existence a considerable number of institutions, in particular the leper-houses. This name, however, was often given to hospitals which cared for ordinary patients as well as for those stricken with the plague. What was originally opened as a leper-house and, as a rule, endowed for that purpose, naturally became, as the epidemic subsided, a general hospital. There were some leper-hospitals in Ireland, but it is not easy to distinguish them in every case from general hospitals for the sick poor. Thus the hospital built by the monks of Innisfallen in 869 is merely called nosocomium although it is usually reckoned an early foundation for lepers in Ireland. A hospital at Waterford was "confirmed to the poor" by the Benedictines in 1185. St. Stephen's in Dublin (1344) is specially named as the residence of the "poor lepers of the city", in a deed gift of about 1360-70; a locality of the city called Leper-hill was perhaps the site of another refuge. Lepers also may have been the occupants of the hospitals at Kilbixy in Westmeath (St. Bridget's), of St. Mary Magdalene's at Wexford (previous to 1408), of the house at "Hospital", Lismore (1467), at Downpatrick, at Killelief in County Down, at Cloyne, and of one or more of four old hospitals in or near Cork. The hospital at Galway built "for the poor of the town" about 1543, was not a leper-house, nor is there reason to take the old hospital at Dungarran as a foundation specially for lepers" (Creighton, "A History of Epidemics in Britain", Cambridge, 1891, p. 100).

Action of the Papacy.—Innumerable pontifical documents attest the interest and zeal of the popes in behalf of hospitals. The Holy See extends its favour and protection to the charitable undertakings of the faithful in order to ensure their success and to shield them against molestation from any source. It grants the hospital permission to have a chapel, a chaplain, and a cemetery of its own; exempts the hospital from episcopal jurisdiction, making it immediately subject to the Holy See; approves statutes, intervenes to correct abuses, defends the hospital's property rights, and compels the restitution of its holdings where these have been unjustly alienated or seized. In particular, the popes are liberal in granting indulgences, e. g. to

the founders and patrons, to those who pray in the hospital chapel or cemetery, to all who contribute when an appeal is made for the support of the hospital, and to all who lend their services in nursing the sick (Lallemand, op. cit., III, 92 sq.; Uhlhorn, op. cit., II, 224).

Character of the Medieval Hospitals.—It is not possible to give any account in detail that would accurately describe each and all these institutions; they differed too widely in size, equipment, and administration. The one common feature was the endeavour to do the best possible for the sick under given circumstances; this naturally brought about improvement, now in one respect now in another, as time went on. Certain fundamental requisites, however, were kept in view throughout the Middle Ages. Care was taken in many instances to secure a good location, the bank of a river being preferred: the Hôtel-Dieu at Paris was on the Seine, Santo Spirito at Rome, on the Tiber, St. Francis at Prague, on the Moldau, the hospitals at Mainz and Constance, on the Rhine, that at Ratisbon, on the Danube. In some cases, as at Fossanova and Beaune, a water-course passed beneath the building. Many of the hospitals, particularly the smaller ones, were located in the central portion of the city or town within easy reach of the poorer classes. Others again, like Santa Maria Nuova in Florence and a good number of the English hospitals, were built outside the city walls for the express purpose of providing better air for the inmates and of preventing the spread of infectious and contagious diseases of all kinds.

As regards construction, it should be noted that many of the hospitals accommodated but a small number of patients (seven, fifteen, or twenty-five), the limit being usually determined by the founder or benefactor: in such cases a private dwelling sufficed or at most a building of modest dimensions. But where ampler endowment was provided the hospital was planned by able architects and constructed on a larger scale. The main ward at Santo Spirito, Rome, was 409 ft. in length by 40 ft. in width; at Tonnerre, 260 ft. by 60; at Angers, 195 ft. by 72; at Ghent, 180 ft. by 52; at Frankfort, 130 ft. by 40; at Chartres, 117 ft. by 42. In hospitals of this type, an abundant supply of light and air was furnished by large windows, the upper parts of which were immovable while the lower could be opened or closed. To these, in some cases (Santo Spirito, Rome), was added a cupola which rose from the middle of the ceiling and was supported by graceful columns. The interior was decorated with niches, paintings, and armorial bearings; in fact the same artistic skill that so richly adorned the churches was employed to beautify the hospital wards. The hospital at Siena "constitutes almost as striking a bit of architecture as any edifice of the period and contains a magnificent set of frescoes, some of them of the fourteenth century, many others of later centuries" (Gardner, "Story of Siena", London, 1902). The hospital founded (1293) at Tonnerre in France by Margaret of Burgundy, a sister-in-law of St. Louis, combined many advantages. It was situated between the branches of a small stream, and its main ward, with arched ceiling of wood, was lighted by large pointed windows high up in the walls. At the level of the window sills, some twelve feet from the floor, a narrow gallery ran along the wall from which the ventilation might be regulated and on which convalescent patients might walk or be seated in the sun. The beds were separated by low partitions which secured privacy but could be moved aside so as to allow the patients to attend Mass said at an altar at the end of the ward. This arrangement of a chapel in connexion with the principal ward was adopted in many establishments; but the alcove system was not so frequently met with, the beds being placed, as a rule, in several rows in the one large open hall.

Hospital construction reached a high degree of perfection about the middle of the fifteenth century. Probably the best example of it is the famous hospital at Milan, opened in 1445, though not completed until the close of the fifteenth century. Dr. W. Gill Wylie in his Boylston Prize Essay on Hospitals says of it: "In 1456 the Grand Hospital of Milan was opened. This remarkable building is still in use as a hospital and contains usually more than 2000 patients. The buildings stand around square yards, the principal one being much larger than the others, and separating the hospital into two parts. The main wards on either side of this large court form a cross, in the centre of which was a cupola, with an altar beneath it, where divine service is performed daily in sight of the patients. These wards have corridors on both sides which are not so lofty as the ceilings of the wards, and consequently there is plenty of room for windows above these passages. The ceilings are thirty or forty feet high, and the floors covered with red bricks or flags. The outside wards are nothing but spacious corridors. The wards are first warmed by open charcoal brasiers. . . . This Hospital built at the time when the Church of Rome was at the height of her power, and but a short time before the Reformation, is a good example of what had been attained toward the development of hospitals and it shows how much a part of the Church the institution of hospitals was."

The administration of the hospital when this formed part of a monastery, was naturally in the hands of the abbot or prior and the details were prescribed in the monastic rule. The statutes also of the hospital orders (knights) regulated minutely the duties of the "Commander", who was at the head of each hospital. In other institutions, the official in charge was known as *magister*, *provisor*, or *rector*, this last title being given in Germany to the superior in case he was a priest, while in Italy he was called *spedalingo*. These officials were appointed by the bishop, the chapter, or the municipality, sometimes by the founder or patron. Laymen as well as clerics were eligible; in fact, legacies were sometimes made to a hospital on condition that only lay directors should have control, as, for instance, in the case of St. Matthew's at Pavia.

The regulations most generally adopted were those of the Order of St. John of Jerusalem; the Rule of St. Augustine and that of the Dominicans were also observed in many institutions. The first duty of the rector or magister was to take an inventory of the hospital holdings and appurtenances; he was obliged to begin this within a month after his appointment and to finish it within a year. Besides the general superintendence of the hospital, he was responsible for the accounts and for the whole financial administration, including the properties of the hospital itself and the deposits of money which are often entrusted to him for safekeeping. It was also his duty to receive each patient and assign him to his proper place in the hospital.

The brothers and sisters were bound by the vows of poverty, chastity, and obedience which they took at the hands of a priest, or, as at Coventry (England), at the hands of the prior and chapter. As in all religious establishments, the schedule of duties was strictly prescribed, as were also the details of dress, food, and recreation. No one employed in the hospital was allowed to go out unaccompanied, to spend the night, or take any refreshment other than water outside the hospital. Penalties were inflicted for violation of these rules.

In the reception of patients, the broadest possible charity was shown. As Coyecque (op. cit., I, p. 63) says of the Hôtel-Dieu at Paris: "soldiers and citizens, religious and laymen, Jews and Mohammedans, repaired in case of need to the Hôtel-Dieu, and all

were admitted, for all bore the marks of poverty and wretchedness; there was no other requirement." Moreover, the hospital attendants were obliged at stated times to go out into the streets and bring in those who needed treatment. On entering the hospital, the patient, if a Christian, went to confession and received Holy Communion, in order that peace of mind might benefit bodily health. Once admitted, he was to be treated as the master of the house—*quasi dominus secundum posse domus*, as the statutes enact. According to their ability, the sick performed the duties of prayer, attendance at Mass, and reception of the sacraments. They were especially recommended to pray for their benefactors, for the authorities, and for all who might be in distress. At night-fall a sort of litany was recited in the wards, each verse of which began: "Seignors malades, proies por", etc. They were often cheered by the visits of persons in high station or of noble rank and charitable disposition, like Catherine of Sweden, Margaret, Queen of Scotland, Margaret, Duchess of Lorraine, King Louis IX of France.

The regulations concerning the physical well-being of the inmates prescribed that the sick should never be left without an attendant—*infirmi autem nunquam sint sine vigili custodia* (Amiens, XXXV); that nurses should be on duty at all hours of the day and night; that when the illness became serious the patient should be removed from the ward to a private room and receive special attention (Paris, XXII; Troyes, I, XXXIII; Vernon, XI). Santa Maria Nuova at Florence had a separate section (*pazzeria*) for delirious patients. Similar provision was made for maternity cases, and the patients were kept in the hospital for three weeks after parturition. That due attention was paid to cleanliness and comfort is evident from what the records tell of baths, bed-linens, ventilation, and heating by means of fire-places or braziers.

The medical treatment was given by monks or other ecclesiastics—at least during the earlier period. From the twelfth century onward restrictions were placed on the practice of medicine by clerics, especially in regard to surgical operations, and with still greater severity, in regard to the acceptance of fees for attendance on the sick; see the decrees of the councils: Clermont (1130), can. v; Reims (1131), can. vi; Second Lateran (1139), can. ix; Fourth Lateran (1215), can. xviii. At times a physician or surgeon was called in to render special assistance in certain cases; and this became more general as the medical schools in the universities developed, as at Salerno and Montpellier. An important document is the report sent in 1524 from Santa Maria Nuova in Florence to Henry VIII, who, with a view to reorganizing the London hospitals, had sought information regarding the famous Florentine institution. From this it appears that three young physicians were resident (*adstantes*) in the hospital, in constant attendance on the sick and made a daily report on the condition of each patient to six visiting physicians from the city who gave prescriptions or ordered modifications in the treatment. Attached to the hospital was a dispensary (*medicinarium*) for the treatment of ulcers and other slight ailments. This was conducted by the foremost surgeon of the city and three assistants, who gave their services gratuitously to the needy townfolk and supplied them with remedies from the hospital pharmacy. An interesting account of the apothecary's duties, with a list of the drugs at his disposal, is given by Lallemand in his interesting work, "L'Histoire de la Charité" (II, 225).

To meet its expenses, each hospital had its own endowment in the shape of lands, sometimes of whole villages, farms, vineyards, and forests. Its revenues were often increased by special taxes on such products

as oil, wheat, and salt; by regular contributions from charitable associations; and by the income from churches under its control. In many instances the diocesan laws obliged each of the clergy, especially the canons, to contribute to the support of the hospital. The laity also gave liberally either to the general purposes of the hospital or to supply some special need, such as heating, lighting, or providing for the table. It was not uncommon for a benefactor to donate one or more beds or to establish a life-annuity which secured him care and treatment. The generosity of the hospital and its patrons was frequently abused, e. g. by malingerers or tramps (*validi vagrantes*), and stricter rules concerning admission became necessary. In some cases the number of attendants was excessive, in others the hospital was unable to provide a separate bed for each patient. In spite of these drawbacks, "we have much to learn from the calumniated Middle Ages—much that we, with far more abundant means, can emulate for the sake of God and of man as well" (Virechow, "Abhandl.", II, 16).

POST-REFORMATION PERIOD.—The injury inflicted upon the whole system of Catholic charities by the upheaval of the sixteenth century, was disastrous in many ways to the work of the hospitals. The dissolution of the monasteries, especially in England, deprived the Church in large measure of the means to support the sick and of the organization through which those means had been employed. Similar spoliations in Germany followed so rapidly on the introduction of the new religion that the Reformers themselves found it difficult to provide anything like a substitute for the old Catholic foundations. Even Luther confessed more than once that under the papacy generous provision had been made for all classes of suffering, while among his own followers no one contributed to the maintenance of the sick and the poor (Sämmtl. Werke, XIV, 389–390; XIII, 224–225). As a result, the hospitals in Protestant countries were rapidly secularized, though efforts were not wanting, on the part of parish and municipality, to provide funds for charitable purposes (Uhlhorn, III).

The Church meanwhile, though deprived of its necessary revenues, took energetic measures to restore and develop the hospital system. The humanist J. L. Vivès (De subventione pauperum, Bruges, 1526) declared that by Divine ordinance each must eat his bread after earning it by the sweat of his brow, that the magistrates should ascertain by census who among the citizens are able to work and who are really helpless. For the hospitals in particular, Vivès urges strict economy in their administration, better provision for medical attendance and a fairer apportionment of available funds whereby the surplus of the wealthier institutions should be assigned to the poorer. Vivès's plan was first put into execution at Ypres in Belgium and then extended by Charles V to his entire empire (1531).

Still more decisive was the action taken by the Council of Trent which renewed the decrees of Vienne and furthermore ordained that every person charged with the administration of a hospital should be held to a strict account and, in case of inefficiency or irregularity in the use of funds, should not only be subject to ecclesiastical censure but should also be removed from office and obliged to make restitution (Session XXV, c. viii, De Reform.). The most important, however, of the Tridentine decrees was that which placed the hospital under episcopal control and proclaimed the right of the bishop to visit each institution in order to see that it is properly managed and that every one connected with it discharges his duties faithfully (Session XXII, c. viii, De Reform.; Session VII, c. xv, De Reform.). These wise enactments were repeated by provincial and diocesan synods throughout Europe. In giving them practical

effect St. Charles Borromeo set the example by founding and endowing a hospital at Milan and by obliging hospital directors to submit reports of their administration. He also determined the conditions for the admission of patients in such wise as to exclude undeserving applicants (First Council of Milan, part III, c. i, in Harduin, X, 704). At Rome, the principal foundations during this period were: the hospital established by the Benfratelli in 1581 on the island in the Tiber where the Æsculapium of pagan Rome had stood; the hospital for poor priests founded by a charitable layman, Giovanni Vestri (d. 1650); that of Lorenzo in Ponte (1624) for persons who had spent at least fourteen years in the service of the popes, cardinals, or bishops; that of San Gallicano for skin diseases, erected by Benedict XIII in 1726.

In France the control of the hospitals had already passed into the hands of the sovereign. Louis XIV established in Paris a special hospital for almost every need—invalids, convalescents, incurables etc., besides the vast "hospital general" for the poor. But he withstood the efforts of the episcopate to put in force the Tridentine decrees regarding the superintendence and visitation of the hospitals. On the other hand, this period is remarkable for the results accomplished by St. Vincent de Paul, and especially by the community which he founded to care for the poor sick, the Sisters of Charity (q. v.). Since the Reformation, indeed, women have taken a more prominent part than ever in the care of the sick; over a hundred female orders or congregations have been established for this purpose (see list in André-Wagner, "Diet. de droit canonique", Paris, 1901, II, s. v. Hospitaliers; also articles on the different orders in THE CATHOLIC ENCYCLOPEDIA).

A noteworthy attempt at reform during the eighteenth century was that of the Hôtel-Dieu at Paris under Louis XVI. This hospital, which usually had 2400 patients and at times 5000, had long suffered from overcrowding, poor ventilation, and neglect of the patients. To remedy these defects, a commission was appointed including Tenon, Lavoisier, and Laplace. The principal recommendation contained in their report (1788) was the adoption of the pavilion system modelled on that of the hospital at Plymouth, England (1764). The French Revolution, however, intervened and it was only during the nineteenth century that the needed improvements were introduced. In the other European countries, meanwhile, there had been many new foundations: in England, Westminster (1719), Guy's (1722), St. George's (1733); in Germany, the Charité at Berlin established by Frederick I (1710) and the hospital at Bamberg, by Bishop Franz Ludwig von Erthal (1789); in Austria the General Hospital at Vienna, promoted by Joseph II, 1784.

America.—The first hospital was erected before 1524 in the City of Mexico by Cortés, in gratitude, as he declared in his will, "for the graces and mercies God had bestowed on him in permitting him to discover and conquer New Spain and in expiation or satisfaction for any sins he had committed, especially those that he had forgotten, or any burden these might be on his conscience for which he could not make special atonement". It was called the Hospital de la Purísima Concepción, later of Jesus Nazareno, after a neighbouring shrine. It is still in existence and its superintendents are appointed by the descendants of Cortés, the Dukes of Terranova y Monteleon. Clement VII by Bull of 16 April, 1529, conferred on Cortés the perpetual patronage of this and other similar institutions to be founded by him. Within the first decade after the Conquest, the Hospital of San Lazaro was founded with accommodation for 400 patients, and the Royal Hospital, also in the city of Mexico, was established by a decree of 1540. The law of 1541 ordered hospitals to be erected in all

Spanish and Indian towns (Bancroft, "Hist. of Mexico", II, 169; III, 759). The First Provincial Council of Lima (1583) and the Provincial Council of Mexico (1585) decreed that each priest should contribute the twelfth part of his income to the hospital (D'Aguirre, "Concil. Hispan.", IV, 246, 355). The Brothers of St. Hippolytus—a congregation established in 1585 by Bernardin Alvarez, a citizen of Mexico, and approved by Clement VIII in 1594—devoted themselves to the care of the sick and erected numerous hospitals. The Bethlehemites (q. v.), founded by Pedro de Betancourt (d. 1667) and approved by Clement X in 1673, spread from Guatemala over nearly the whole of Latin America, and rendered excellent service by their hospital work until their suppression, as well as all other religious in Mexico, in 1820.

In Canada (q. v.), the earliest foundation was that of the Hôtel-Dieu by the Duchess of Aiguillon (q. v.). This was established in 1639 at Sillery, and later transferred to Quebec, where it is still in charge of the Hospitalières de la Miséricorde de Jésus. The Hôtel-Dieu at Montreal was founded in 1644 by Jeanne Mance; the General Hospital at Quebec in 1693. There are at present eighty-seven hospitals in Canada under the control and direction of various Catholic religious communities.

The first hospital in the United States was erected on Manhattan Island about 1663 "at the request of Surgeon Hendrickson Varrevanger for the reception of sick soldiers who had been previously billeted on private families, and for the West India Company's negroes" (Callaghan, "New Netherland Register"). Pesthouses for contagious diseases were established at New York, Salem (Mass.), and Charleston early in the eighteenth century. In 1717 a hospital for infectious diseases was built at Boston. A charter was granted for the Pennsylvania Hospital in 1751: the cornerstone was laid in 1755, but the structure was not completed until 1805. The first hospital established by private beneficence was the Charity Hospital at New Orleans, for the founding of which (about 1720) Jean Louis, a sailor, afterwards an officer in the Company of the Indies, left 12,000 livres. This was destroyed by the hurricane of 1779. The New Charity Hospital (San Carlos) was founded in 1780 and endowed by Don Andres de Almonester y Roxas: it became the City Hospital in 1811. Still in charge of the Sisters of Charity, it is one of the most important hospitals in the country, receiving annually about 8000 patients. The oldest hospital in the City of New York is the New York Hospital, founded in 1770 by private subscriptions and by contributions from London. It received from the Provincial Assembly an allowance of £800 for twenty years, and from the State Legislature (1795) an annual allowance of £4000, increased in 1796 to £5000. Bellevue Hospital, originally the infirmary of the New York City Alms House, was erected on its present site in 1811. St. Vincent's Hospital was opened in 1849; the present buildings were erected 1856-60, and accommodation provided for 140 patients. The average annual number of patients exceeds 5000. There are now more than four hundred Catholic hospitals in the United States, which care for about half a million patients annually.

The multiplication of hospitals in recent times, especially during the nineteenth century, is due to a variety of causes. First among these is the growth of industry and the consequent expansion of city population. To meet the needs of the labouring classes larger hospital facilities have been provided, associations have created funds to secure proper care for sick members, and in some countries (e. g. Germany and England) the insurance of workmen, as prescribed by law, enables them in case of illness to receive hospital treatment. Another important factor is the

advance of medical science, bringing with it the necessity of clinical instruction. In this respect the universities have exerted a wholesome influence: no course in medicine is possible at the present time without that practical training which is to be had in the hospital. Conversely, the efficiency of the hospital has been enhanced by numerous discoveries pertaining to hygiene, anæsthetic and antiseptic measures, contagion and infection. The experience of war has also proved beneficial. The lessons learned in the Crimea and in the American Civil War have been applied to hospital construction, and have led to the adoption of the pavilion system. The modern battlefield, moreover, has been the occasion of bringing out in new strength and beauty the spirit of self-sacrifice which animates the hospital orders of the Catholic Church. The services rendered by the sisters to the wounded and dying are conspicuous proof of that Christian charity which from the beginning has striven by all possible means to alleviate human suffering. The hospital of to-day owes much to scientific progress, generous endowment, and wise administration; but none of these can serve as a substitute for the unselfish work of the men and women who minister to the sick as to the Person of Christ Himself.

JAMES J. WALSH.

Hospital Sisters of the Mercy of Jesus.—These sisters are established in religion under the Rule of St. Augustine (q. v.), the institute being dependent on the pope represented by the bishop. Before the end of the thirteenth century the Hôtel-Dieu of Dieppe (Diocese of Rouen) was served by Hermit Sisters of St. Augustine. They formed a secular congregation, lived on goods held in common and on alms, and observed constitutions drawn up for their use. Apart from the services they rendered to the Hôtel-Dieu, they were also employed in assisting the sick poor in all quarters of the city. To these primitive hospitaliers is connected, by an unbroken chain of credible traditions, the Institute of the Mercy of Jesus, a branch of the order founded by the Bishop of Hippo. The constitution establishes two classes of religious: lay sisters and choir sisters. The former are employed at the manual tasks of the community, in order to relieve the choir religious. They are not obliged to recite the Divine Office, neither do they nurse the sick. The choir religious are obliged to recite the Divine Office in common, and daily employed in attendance on the sick. They are obliged as far as health will permit to go at least once a day to the hospital to render some service to the poor. Two of their number take in turn the night-watch in the wards.

The chapter is composed of all who are ten years professed. They elect a superior triennially, but her charge may not be prolonged beyond six years. They also elect the assistant, the mistress of novices, the treasurer, and four other advisers, thus forming the council of eight principal officers. The same officers may be retained as long as they have the majority of votes in the chapter. The costume of the sisters is entirely white with a black veil for the

professed and a white veil for the novices. This costume is the same as that formerly worn by the Canonesses of St. Augustine. A gown and a leather girdle, a gimp, a bandeau, and a veil compose the different parts, to which is added a black serge cape for choir duties. To-day the Hospitallers of the Mercy of Jesus have communities in France at Dieppe, Rennes, Eu, Vitré, Château-Goutier-St-Julien, Château-Goutier-St-Joseph, Malestroit, Auray, Tréguier, Lannion, Guingamp, Morlaix, Pont-l'Abbé, Gouarec, Fougères, Harcourt, and Bayeux; in England, at Waterloo (Liverpool); in Canada, at Quebec (3 communities), Lévis, and Chicoutimi; in Africa, at Estcourt (Natal), Durban, Ladysmith, and Pietermaritzburg; in Holland, at Maasbracht; and in Italy, at Turin.

MOTHER M. JACQUES.

Hospitius (SOSPIS), SAINT, recluse, b. according to tradition in Egypt, towards the beginning of the sixth century; d. at San-Sospis, near Villefranche, in the Department of Alpes-Maritimes, France, on 21 May, 581. The saint, who is popularly known as Saint Sospis, is said to have been a monk in his native land. Coming to Gaul, he became a recluse, and retired to a dilapidated tower, situated on the peninsula of Cap Ferrat (or San-Sospis), a few miles east of Nice. The people of the environs frequently consulted him; he forewarned them on one occasion, about the year 575, of an impending incursion of the Lombards. Hospitius was seized by these raiders, but his life was spared. He worked a miracle in favour of one of the warriors, who became converted, embraced the religious life, and was known personally to St. Gregory of Tours. It was from him that Gregory, to whom we are indebted for the meagre details of the saint's life, learnt the austerities and numerous miracles of the recluse. Hospitius foretold his death and was buried by his friend, Austadius, Bishop of Cimiez. He is still venerated in the Diocese of Nice. The cathedral church possesses a small bone of his hand; other relics are at Villefranche, La Turbie, and San-Sospis.

A. A. MACERLEAN.

Hossche (Lat. HOSSCHIUS), SIDRON DE, poet and priest; born at Mercken, West Flanders, in 1596; died at Tongres in 1653. In his early youth he followed his father's occupation as a shepherd, and at the age of twenty he entered the Jesuit novitiate at Tongres (Belgium). He soon showed wonderful facility in Latin versification, and his first work "De Christo Patiente" in elegiac verse was published in 1635. The chorus of praise with which the work was received brought its author to the notice of Leopold William, Governor General of the Netherlands, who appointed him tutor to his two sons, which post he filled for two years. Life at court not appealing to him Hosschius retired to Tongres and remained there until his death. Among the more famous of his works, besides the "De Christo Patiente" there have come down to us, the "De Cursu vitæ humanæ" which was translated into French verse in 1756 by L. Deslandes; the "De lacrymis S. Petri" and many other elegies, allegories, and occasional verses. His contemporaries held him in great esteem, and acclaimed him as worthy of the Augustan age of Latin poetry. While his Latin is very pure and his style modelled on the classical authors, he himself is by no means a classic. The verdict of unbiased criticism pronounces his works to be examples of elegant versification. They were published at Antwerp in 1656, and have often been reprinted; they form two volumes of the Barbou collection, printed in Paris in 1723.

Two anonymous collections of Latin verses pub-

lished in Bruges in 1630 and 1634, have within recent years been identified as forming part of Hossche's output.

The township of Mercken, in 1844, dedicated a fountain in honour of Hossche, and surmounted it with a bust of the poet.

J. C. GREY.

Host, JOHANN, one of the seven Dominicans, who distinguished themselves in the struggle against Luther in Cologne. The others were Jacob van Hoogstraten, Conrad Collin, Bernard von Luxemburg, Johann Pesselius, Tillman Smeling, and Johann Slotanus. Johann Host was born on a farm at Romberg, or Romberch, in Westphalia about 1480, and died at the close of 1532 or the beginning of 1533. At the age of sixteen he entered the Dominican Order, and we find him studying at the University of Bologna from 1516 to 1519. In 1520 he was appointed to the theological faculty of the University of Cologne, and despite the many religious controversies he was engaged in, he found time for considerable literary activity. Among the works he edited are Burchard von Barby, "Descriptio Terræ Sanctæ"; Fabri, "Antilogiarium Lutheri Babylonia"; and the "Commentarium in Psalmos" of Dionysius the Carthusian. He has moreover left many controversial works. The fact of his being appointed to the faculty of Cologne University is proof of the orthodoxy of his theology, as that university held a sort of censorship over all the theological faculties of Germany. Host's last work was the "Enchiridion Sacerdotum" which was published at Cologne in 1532. His fellow members on the University faculty, Hoogstraten and Collin, besides being distinguished churchmen were eminent among later German Humanists.

Host (ARCHÆOLOGICAL AND HISTORICAL).—The bread destined to receive Eucharistic Consecration is commonly called the host, and though this term may likewise be applied to the bread and wine of the Sacrifice, it is more especially reserved to the bread.

According to Ovid the word comes from *hostis*, enemy: "Hostibus a domitis hostia nomen habet", because the ancients offered their vanquished enemies as victims to the gods. However, it is possible that *hostia* is derived from *hostire*, to strike, as found in Pacuvius. In the West the term became general chiefly because of the use made of it in the Vulgate and the Liturgy (Rom., xii, 1; Phil., iv, 18; Eph., v, 2; Heb., x, 12; Mabillon, "Litur. Gall. vetus", pp. 235, 237, 257; "Missale Mozarab.", ed. Leslie, p. 39; "Missale Gothicum", p. 253). It was applied to Christ, the Immolated Victim, and, by way of anticipation, to the still unconsecrated bread destined to become Christ's Body. In the Middle Ages it was also known as "hoiste", "oiste", "oite". In time the word acquired its actual special significance; by reason of its general liturgical use it no longer conveyed the original idea of victim. Many other names were given to the host, e. g. "bucellæ", "circuli", "coronæ", "crustulæ farracæ", "denaria", "fermentum", "formatæ", "formulæ", "panes altaris, eucharistici, divini, dominici, mysteriorum, nummularii, orbiculares, reticularii, sancti, sanctorum, tessellati, vitæ"; "nummi", "particulæ", "placentæ", "placentulæ orbiculares", "portiones", "rotulæ", "sensibilia", etc.

The Greeks call host *ἄρτος* (bread), *δῶρα* (gifts), *μερίδια* (particles), and *προσφορά* (oblations). After Con-

secration the particles take the name of *μαργαρίται* (pearls). Prior to its consecration the Copts call the host "baraco"; the Syrians "paristo" (bread), "burschan" (first-fruits), and "kourbano" (oblation); the Nestorians "xatha" (first-born) or "agnus" (lamb), and the Mingrelians "sabisquiri". After consecration the Copts call the Host "corban" (oblation); the Jacobites "tabho" (seals); the Syrians "gamouro" (burning coals), and, by anticipation, these names are sometimes applied to the bread even before its consecration.

MATERIAL.—The valid material of the Eucharistic host is unadulterated wheat reduced to flour, diluted with natural water, and baked with fire. Some theologians have discussed the use of various flours, but if we except Paludanus, who considers as valid bread made with starch, and Cajetan, who allows bread made with any kind of grain and diluted with milk, we may say that theologians agree upon the rejection of buckwheat, barley, oats, etc. St. Thomas authorizes the use of siligo, but this term seems obscure. In Pliny and Celsus it signifies wheat flour, but St. Thomas does not invest *siligo* with the same meaning, else why should there be question of tolerating it? Moreover, had he alluded to rye, he would have used the word *secale*. Perhaps by *siligo* he intended to designate an inferior kind of wheat grown in bad soil.

ELEMENTS.—The preparation of the host gave rise among certain Gnostic sects to abominable and shocking practices, of which there is a detailed account in the writings of St. Epiphanius. Sometimes the flesh of a foetus was ground and mixed with aromatics; sometimes flour was kneaded with the blood of a child, and there were other proceedings too obnoxious to mention. But these horrors were perpetrated only by a few degraded groups (Epiphanius, "Hær.", c. xxvi, 5; Augustinus, "Hær.", xxvi, xxvii). Less offensive were the Artotyrites and those who, like them, compounded a mixture of bread and cheese, or, after the fashion of the Barsanians, used a pinch of undiluted flour.

All the Oriental communions, with the exception of the Armenians and Maronites, use leavened bread. We know how seriously the Greeks have considered the question of unleavened bread (see AZYMES). But whether leavened or unleavened, bread is the element, and a large number of Greeks admit that both kinds constitute valid material for the sacrament. In the Western Church it is the uniform practice to use unleavened bread. Properly speaking, Lutherans attach but little importance to whether the bread is leavened or not, but generally they use it unleavened. The Calvinists use only common bread, although, when their sect was in its infancy, there was some indecision on this point. At Geneva leavened bread was used exclusively for several years and Theodore Beza maintained that any kind of bread, no matter what its origin, was suitable for the Eucharist. The Anglican Liturgy of 1549 prescribes the use of unleavened bread. In the East the Syrian Jacobites and the Nestorians knead their altar-bread with a paste of oil and salt, a custom censured by the Egyptians. The Sabaites or Christians of St. John make their hosts out of flour, wine, and oil; the Copts and the Abyssinians consecrate with leavened bread except on Holy Thursday and the twelfth day of June, and the Mingrelians use all kinds of bread, their hosts being usually made of flour mixed with water and wine.

PREPARATION.—There is nothing to indicate that the first Christians thought of reproducing the appearance of the "loaves of proposition" of the Jewish Liturgy; they simply used the bread that served as food. It seems that the form differed but little from what it is in our day. The loaves discovered in the oven of a bakery at Pompeii weighed about a pound each. One of these, being perfectly preserved, measured about seven inches in diameter and was creased

with seven ridges which facilitated the breaking of the loaf without the aid of a knife. Other loaves represented on bas-reliefs, chiefly in the Lateran museum, bore an incision in the form of two crossed lines and, for this reason, were called *quadra*. Loaves of this kind must have been preferred for the Eucharistic oblation because the sign of the cross was already traced on them; indeed, the most ancient Christian monuments show us loaves marked thus. Paintings in the catacombs and some very antique bas-reliefs represent loaves marked with this sign and others simply marked with a point. The ridges were intended to facilitate the breaking of the loaf and it is probable that their number was regulated by the size of the loaf in common use. A fresco in the cemetery of Lucina represents a fish, the symbol of Christ, and on its back a basket containing the Eucharistic wine and loaf, the latter marked with a point. A Modena marble shows five loaves marked with a cross.

Out of respect for the sacrament, some of the faithful would not consent to having the bread made by bakers, and took charge of it themselves. Several ancient examples are cited, notably that of Candida, the wife of one of Valerian's generals, who laboured all night kneading and moulding with her own hands the loaf of the oblation. In the Rule of St. Pachomius, religious are recommended to devote themselves to meditation while kneading the sacrificial loaf. Queen Radegunde is mentioned for the reverence with which she attended to the preparation of the hosts intended to be consumed in her monastery of Poitiers and in many surrounding churches. Theodulph, Bishop of Orléans, commanded his priests either to make the altar-breads themselves or to have the young clerics do so in their presence. Many facts go to show the prevalence and extent of this custom. In monasteries hosts were made principally during the weeks preceding the feasts of Christmas, Easter, and Pentecost, and the process assumed a very solemn character. At Cluny three priests or three deacons fasting and having recited the Office of Lauds, the seven penitential psalms, and the litanies, took one or two lay brothers as their assistants. Novices had picked, sorted, and ground the grains of wheat, and the flour thus obtained was placed on a rimmed table. It was then mixed with cold water, and a lay brother, whose hands were gloved, put this preparation in the iron used for making hosts and baked it at a large fire of vine branches. Two other operators took the hosts as they were baked, cut, and pared them, and, if necessary, rejected those that were either soiled or cracked.

In the Abbey of Saint-Denis those who made altar-breads were fasting. They took some of the best wheat, selected grain by grain, washed it, and turned it into a sack to be taken to the mill, the millstones being washed for the occasion. A religious then donned an alb and ground the wheat himself while two priests and two deacons, vested in albs and amices, kneaded the dough in cold water and baked the hosts. At Saint-Etienne de Caen the religious employed in this work dined together on that day, their table being served as was that of the abbot. Some monasteries cultivated the Eucharistic wheat in a special field which they called the field of the "Corpus Domini". Du Cange mentions a charter dated 1406 by which it would seem that women, even nuns, were forbidden to make hosts; but it is doubtful whether this measure was ever generally enforced. St. Radegunde certainly had many imitators, despite the prejudice against the making of hosts by laymen or women, a prejudice so rooted that in the Middle Ages there were in the Diocese of Narbonne people who believed that hosts made by women were not qualified for transubstantiation.

An echo of this is found in official acts. The Council of Milan, 1576, prescribes the making of hosts in monasteries and forbids it to laymen. A council of

Cambrai in 1631 ordains that "in each city there shall be a person charged with making the altar-breads from the best and purest wheat and after the manner indicated to him. He must previously take an oath to discharge faithfully the duties of his office. He shall not be permitted to buy from others the bread to be used in the Holy Sacrifice." As early as the fourteenth century the making of hosts had become a business. The confraternity of the *oblayers* (host-makers) had a special ecclesiastical authorization to carry on that work. The liturgist Claude de Vert mentions a sign used by them in the eighteenth century in the city of Puy: "Céans se font de belles hosties avec la permission de M. l'évêque du Puy." Before the French Revolution, in many dioceses, each *curé* made the hosts used in his own church. At present many parishes apply to religious communities which make a speciality of altar-breads. This offers a guarantee against the falsifications always to be feared when recourse is had to the trade; unscrupulous makers have been guilty of adulterating the wheaten flour with alum, sulphates of zinc and copper, carbonates of ammonia, potassium, or magnesia, or else of substituting bean flour or the flour of rice or potatoes for wheaten flour.

In the Middle Ages, as stated, the baking of hosts took place at three or four principal feasts of the year. This practice was abandoned later on account of the possible chemical change in the substance of the bread when kept for so long a time. St. Charles Borromeo ordered all the priests of his diocese to use for the Holy Sacrifice only hosts made less than twenty days previously. The Congregation of Rites condemned the abuse of consecrating hosts which, in winter, had been made three months and in summer six months ahead of time.

Some prescriptions of the Oriental Churches are worthy of notice; moreover, some of them are still in use. The Constitutions ascribed to St. Cyril of Alexandria prescribe that the Eucharistic bread be baked in the church oven (Renaudot, "Liturg. orient. coll.", I, 189); among the Copts, Syrians, Jacobites, Melchites, Nestorians, and Armenians the altar-breads must be baked on the very day of their consecration. In the "Canonical Collection" of Bar-Salibi there are prescriptions concerning the choice of wheat which differ but slightly from those of the West. In Ethiopia each church must have a special oven for the making of hosts. In Greece and Russia the altar-breads are prepared by priests, widows, the wives or daughters of priests, or by the so-called *calogerae*, i. e. nuns, whereas, in Abyssinia, women are excluded. The Nestorians of Malabar, after kneading the flour with leaven, are accustomed to work in some of the leaven left from the preceding baking. They believe that this practice dates from the earliest Christian times and that it preserves the leaven brought to Syria by Saints Thomas and Thaddeus, for, according to another Nestorian tradition, the Apostles, prior to their separation celebrated the Liturgy in common and each carried away a portion of the bread then consecrated.

MOULDS FOR HOSTS.—The moulds used for hosts are iron instruments similar to waffle-irons, composed of two palettes which come together with the aid of two bent handles acting as a lever. Abbé Corblet says that their existence is established as early as the ninth century, although no specimen older than the twelfth century was known to exist in recent times. The discovery some time ago, however, of one of these moulds at Carthage carries us back probably to the sixth or seventh century, before the destruction of that city by the Arabs. On this mould around the monogram of Christ is the inscription: *HIC EST FLOS CAMPI ET LILLIUM* (Delattre, "Un pèlerinage aux ruines de Carthage", 31, 46). Unfortunately this precious relic of Christian antiquity is incomplete.

The lower plate of a mould for hosts is engraved with two, four, or six figures of hosts which, by means of pressure, are reproduced on the paste and fixed there by baking. From the ninth to the eleventh century the irons moulded very thick hosts about as large as the palm of the hand. Towards the end of the eleventh century the dimensions were considerably reduced so that, with the same instrument, four hosts, two large and two small, could be moulded. With a thirteenth-century iron preserved at Sainte-Croix de Poitiers, two large hosts and three small ones can be made simultaneously, and an iron at Naintré (Vienne) moulds five hosts at once, all varying in size. A certain number of host-irons bear the date of making, the initial of the engraver's name, and the donor's coat-of-arms. A fourteenth-century mould at Saint-Barban (Haute-Vienne) makes hosts of different types for Lent and Easter time. The larger ones measure $2\frac{1}{8}$ inches in diameter and the smaller ones $1\frac{1}{2}$ inches; at the same period some large hosts had a diameter of $2\frac{3}{4}$ inches. A fifteenth-century iron at Béthine (Vienne) makes hosts bearing the figure of the triumphant Lamb, of the Holy Face surrounded with fleurs-de-lis, also of the Crucifixion and the Resurrection. In the sixteenth century at Lamenay (Nièvre) hosts were made representing Jesus Christ seated on His throne and imparting His blessing, the background being studded with stars; at Montjean (Maine-et-Loire) they were stamped with the image of Christ Crucified and Christ Risen, delicately framed in lilies and roses and heraldic in aspect. At Rouez (Sarthe) is an iron that moulds two hosts; the one represents Christ carrying His cross and bears the inscription: *QUI VEULT VENIRE. POST. ME. TOLLAT. CRUCEM. SUAM. ET. SEQUATUR. ME.*; the other represents the Crucifixion and is thus inscribed: *FODERUNT. MANUS. MEAS. ET. PEDES. MEOS. DINUMERAVERUNT. OMNIA. OSSA. MEA.*

Seventeenth- and eighteenth-century host-irons have been preserved in large numbers, and are quite similar to those now in use, being stamped with the Lamb lying on the book, Christ upon the Cross, or the letters *IHS* emitting rays and encircled with grapes and thorns. Among the remarkable host-irons that have escaped destruction we may mention those of Beddes, Azy, Chassy, and Vailly (Cher), all four belonging to the thirteenth century; those of Palluau (Indre) and of Crouzilles and Savigny (Indre-et-Loire), etc. Notable among the collections of the imprints of host-irons are those of M. Dumontet at Bourges, of M. Barbier de Montault at Limoges, of the Cluny museum, and of the Eucharistic museum of Paray-le-Monial. The Eastern Churches generally use a wooden mould. To make the hosts baked in the mould quite round they are cut with scissors, a punch, or a compass, one of the legs of which terminates in a knife.

FORM AND DIMENSIONS.—The first mention of the form of hosts is found in St. Epiphanius in the fourth century when he says: "*hoc est enim rotundæ formæ*", but the fact had already been placed on record by catacomb paintings and by very ancient bas-reliefs. Unity of form and size was only slowly established, and different customs prevailed in different provinces. At an early date the councils attempted to introduce uniformity on this point; one held at Arles in 554 ordered all the bishops of that province to use hosts of the same form as those used in the church of Arles. According to Mabillon, as early as the sixth century hosts were as small and thin as now, and it is stated that from the eighth century it was customary to bless small hosts intended for the faithful, an advantageous measure which dispensed with breaking the host and consequently prevented the crumbling that ensued.

As late as the eleventh century we find some opposition to the custom, then growing general, of reservation

ing a large host for the priest and a small one for each communicant. However, by the twelfth century the new custom prevailed in France, Switzerland, and Germany; Honorius of Autun states in a general way that the hosts were in the form of "denarii". The monasteries held out for a longer time, and as late as the twelfth century the ancient system was still in force at Cluny. In 1516 the Missal of Rouen prescribed that the celebrant break the host into three parts, the first to be put into the chalice, the second to be received in Holy Communion by the celebrant and ministers and the third to be kept as Viaticum for the dying. The Carthusians reserved a very large host, a particle of which they broke off for each Viaticum. Eventually all hosts were made round and their dimensions varied but little. However, some very large ones were at times consecrated for monstrances, on occasion of the Exposition of the Blessed Sacrament. To-day in Rome the large hosts are nine centimetres in diameter and the small ones four centimetres. In other countries they are usually not so large. In 1865 Pius IX authorized the priests exiled to Siberia to consecrate the Eucharist with wheat bread that had not the form of a round host.

FIGURES.—From ancient monuments in painting, sculpture, and epigraphy we have seen the general usage of tracing a cross on the Eucharistic loaves which were thence called *decussati* (Lat. *decussis*, a coin marked X). For the early Greek-speaking Christians the cross (X), being the initial of the name of Christ (Χριστός), was constantly in evidence; soon the idea was conceived of replacing the plain cross by the monogram, and finally there were added on either side the letters Α and Ω (Alpha and Omega, i. e. the beginning and the end) as on the Carthaginian moulds. In certain countries the plain cross continued to exist for a long time; in the Diocese of Arles no other sign was tolerated until the Revolution. Beginning with the twelfth century, however, the crucifix was almost universally substituted for the cross, though this iconographic form was never made obligatory. Besides the Crucifixion we find the Resurrection, Christ at the pillar, the angel holding a chalice, the Lamb either lying down or standing, Our Lady at Bethlehem, at Calvary, or being assumed into heaven, the Last Supper, the Ascension, the Holy Face, St. Martin dividing his cloak, St. Clare carrying the ciborium, the symbols of the Evangelists, etc.

INSCRIPTIONS.—The bread made by Roman bakers bore the maker's name or initials, and it would seem that this practice extended even to Eucharistic bread, but on this subject our information is rather vague. We often read an inscription of a symbolical or mystical character such as that found on the host-moulds of Carthage. Here are some of the commonest examples: "I H S" (Jesus); "I H S X P S" (i. e. Jesus Christus); "Hoc est corpus meum"; "Panis quem ego dabo caro mea est"; "Ego sum panis vivus qui de cœlo descendi"; "Si quis manducaverit ex hoc pane vivet in æternum"; "Ego sum via veritas et vita"; "Ego sum resurrectio et vita"; "Plectentes coronam de spinis imposerunt in capite ejus"; "Foderunt manus meas et pedes meos; dinumeraverunt omnia ossa mea"; "Et clamans Jesus voce magna emisit spiritum"; "Resurrectio Domini"; "In hoc signo vinces, Constantine".

LEAVENED BREAD.—The leavened hosts of the Greeks are of a large size, sometimes round, triangular, or in the form of a cross, but oftener square. On the under side they have a quadrangular imprint divided into four equal parts by a Greek cross and bearing the inscription ΙC ΧC ΝΙ ΚΑ (Ἰησοῦς Χριστός νικῶ), i. e. "Jesus Christ is victor".

The *corban* of the Copts is a white, round, leavened loaf, flat underneath, convex on the top, and as large as the palm of the hand. It is stamped with

twelve little squares each containing a cross in honour of the Twelve Apostles. In the centre a larger square *isbodian* is marked with a large cross divided by four small ones; it is the symbol of Christ. This central portion is used for the Communion of the celebrant, the other parts ("pearls") being distributed among the faithful. The inscription reads: "Agios, agios, agios Kurios"; or else "Kurios Sabaoth" or "agios iskuros, agios athanatos, agios o theos". The schismatic Armenians use an unleavened host about the size and thickness of a five-franc- or dollar-piece and bearing the stamp of a crucifix having on the right a chalice surmounted by a host and on the left a spear or a cross. The Mingrelians have a small, round host weighing a little over an ounce with a square stamp, the inscription signifying: "Jesus Christ is victor." The Confession of Augsburg maintained the use of small round hosts which the Calvinists rejected under pretext that they were not bread. In Germany the Evangelical Churches use round, white breads eight centimetres in diameter by nine in thickness. Christian antiquity has transmitted to us pyxes or boxes intended to hold the Eucharist, but as these should be considered in connexion with sacred vessels, it is not necessary here to dwell upon them but simply upon the boxes in which the altar-breads are kept prior to consecration and which are generally very plain. In the Middle Ages and during the Renaissance these boxes were very rich, being made of silver, ivory, and enamel. Ancient host-boxes are very rare, but those now in use are of tin-plate or pasteboard, generally with some trimming.

MIRACULOUS HOSTS.—The Eucharist has been the object of a great many miracles often referred to in ecclesiastical history; not all, however, have been well enough authenticated to place them beyond doubt. In some of the miracles the host appears as transformed into a new substance; sometimes it has remained intact during a considerable period; sometimes blood has flowed from it, etc. In the third century St. Cyprian mentions that a man was preparing to Communicate in mortal sin; for this purpose he received the Eucharist in his hands when instantly the bread turned to ashes. Sozomen, a fifth-century historian, relates a miracle that took place at Constantinople where a heretic had undertaken to convert his wife. Simulating a change of life she went to Communion, but had barely attempted to eat a piece of bread, which she had substituted for the Eucharist, when she perceived that the said piece had changed to stone. About the ninth century, when anti-Eucharistic heresies began to appear, accounts of miracles multiplied in a way to convince even the most obstinate. John the Deacon ascribed a most extraordinary act to Gregory the Great when he related that, with the point of a knife, this pope had caused blood to issue from a corporal. In the ninth century Paschasius Radbertus, writing of the Body and Blood of the Saviour, recounts that a priest named Plegilus beheld, instead of the Host, Jesus Christ under the sensible form of a child, and pressed Him to his heart. At his request the Lord again veiled Himself under the appearance of wine. At Fécamp a legend dating back to the tenth century related that the priest of a little chapel situated about three miles from the abbey found at the moment of Communion neither bread nor wine but the Flesh and Blood of Christ. Appalled, he reported the fact at the abbey, the miracle was confirmed, and the chalice and paten, together with the species, were enclosed beneath the high altar of the church.

Occasionally hosts have been preserved for a very long time. It is related that St. Norbert deposited in the church of St. Michael at Antwerp hosts that had remained intact for fifteen years, notwithstanding the fact that, through contempt, they had been left in damp places by partisans of the heretic Tanchelin.

The feast called "Saint-Sacrement du Miracle" was for centuries solemnly celebrated at Douai where, from Easter Tuesday, 14 April, 1254, until the time of the Revolution, an annual procession took place in commemoration of the host in which the people declared that they distinctly beheld the Body of the Lord. In 1792 the miraculous host disappeared; it was believed to have been found again in a bequest made by one of the faithful but, for want of certainty, no honour was afterwards paid it. The collegiate church of Sainte-Gudule at Brussels preserves miraculous hosts which, after the perpetration of many outrages by the Jews in 1370, were collected and, subsequently to 1529, became the occasion of an annual procession still celebrated.

It is said that, in the thirteenth century, miraculous blood issued from a Host and that for a long time afterwards it lasted without the slightest alteration. Miracles of bleeding Hosts are reported to have occurred in many places during the Middle Ages, and both the miracle and the sacrilege that occasioned it were sometimes commemorated by processions or monuments. In 1290 a Parisian Jew committed a series of outrages upon a Host and he was put to death. An expiatory chapel was erected over his house, and this sanctuary was successively named: "La maison où Dieu fut bouilli", "L'église du Sauveur bouillant", "La chapelle du miracle", and finally "L'église des billettes". In 1444 this episode was dramatized, and in 1533, on the feast of Corpus Christi, "The Mystery of the Holy Host" was played at Laval. We might also mention the miraculous Host that bled when touched by profane hands and was carried, in 1317, to the Abbey of Herckenrode in the County of Loos, where it was venerated until the time of the Revolution, and the miracle of Blanot that occurred in 1331 in the Diocese of Autun (now the Diocese of Dijon), when a Host left a bloody impress upon a cloth.

In olden times many cities possessed a miraculous Host, but the French Revolution destroyed a certain number of them, especially the one at Dijon where each year a Mass of expiation is yet celebrated in the church of St. Michael. In other places the miraculous Hosts have disappeared, but their ancient feast is still commemorated. In the seventeenth century the Benedictine abbey at Faverney (Haute-Saône) was the scene of a noted miracle. On the night of 23 May, 1608, while the Exposition of the Blessed Sacrament was in progress, a fire consumed the tabernacle, the linens, and the entire altar; but the ostensorium remained stationary, being suspended in the air without any support. This prodigy lasted for thirty-three hours, was well authenticated by thousands of persons, and was made the object of an investigation, the documents of which have been preserved. The ostensorium contained two Hosts, so that the crucifix could be seen from both sides. One of the Hosts was given to the city of Dôle, where it was destroyed in 1794, and the other is preserved in the parish church of Faverney, where the anniversary is celebrated annually on the Monday after Pentecost. These miracles have been selected from among a multitude of others, and we have not pretended to emphasize either the most authentic or the most marvellous. Moreover, the subject we have just treated is so vast that it would be easy to compile from the historical material a work of great theological interest, both conclusive and detailed.

The most complete work on this subject, in spite of a few gaps and occasionally weak criticism, is CORBLER, *Histoire dogmatique et archéologique du sacrement de l'Eucharistie* (Paris, 1886); Vol. II, 556-88 gives a very exhaustive bibliography, to which might be added a few recent works: DE SARACHAGA, *Les collections d'histoire et d'art du musée eucharistique de Paray-le-Monial* (Lyons, 1866), containing a bibliography of the *Monographie sur les hosties de miracles*; ROHAULT DE FLEURY, *La messe, études archéologiques*, IV (Paris, 1887), 21-40.

H. LECLERCQ.

Host (CANONICO-LITURGICAL).—The name *host* in liturgy is given to the bread used in the celebration of the Holy Eucharist—*Panis ad sacrificium Eucharisticum destinatus* (Du Cange, "Glossarium"). Christ at the Last Supper consecrated bread and wine, and prescribed their use in the Eucharistic Sacrifice for all future times. Hence bread (of wheat) and wine (of the grape) have always been considered in the Church the sole legitimate matter for the celebration of Mass. The Scholastics, especially St. Thomas (Summa Theol., III, Q. lxxiv, art. 1) and Denys the Carthusian (IV, dist. xi, q. 3), point out the peculiar fitness of these elements which constitute the remote matter of the sacrament. Their use is universal, and hence they render the Eucharistic worship possible anywhere. Furthermore, there are reasons of analogy. As bread is the ordinary food of the body, so the Divine Victim is the nourishment of our souls; just as it is necessary that the wheat be ground, mixed with water, and subjected to fire in order to become bread, so the faithful, in order that they may be united to Christ and live by His spirit, must by mortification die to themselves. Bread is likewise a figure of the Church. The many grains of wheat converted

GREEK HOST

into one loaf symbolize the various members united in one body. Alluding to this symbolism, so natural and expressive, the "Teaching of the Twelve Apostles" (ch. ix) places on the lips of the faithful the following words of thanksgiving before partaking of the Holy Eucharist: "As this fragment (*of bread*) was scattered over the hills, and was gathered together, and became one, so let Thy Church be gathered together from the ends of the earth into Thy kingdom", and the "Constitutions of the Holy Apostles" (Book VII, n. 25) in the Eucharistic thanksgiving enjoins the faithful to say: "Do Thou, O Lord Almighty, everlasting God, so gather together Thy Church from the end of the earth into Thy kingdom, as this *corn* was once scattered, and is now become one loaf."

VALID MATTER.—It is required that the matter used for the Consecration be not only valid and as far as possible genuine, but also that it be licit and as far as possible perfect, i. e. new, fresh, and pure. Hence the Eucharistic host must be bread, made of fine wheat flour, mixed with natural water and baked. It must be bread, as it was the typical food used by Christ (Matt., xxvi, 26—cf. Acts, ii, 42; I Cor., x, 16). The Fathers of the Church with one accord teach that bread is changed into the Body of Christ by the words of Consecration; and all the councils that treat of this subject define the same (Fourth Lateran, ch. "Firmiter"; Florence, "Decr. Unionis"; Trent, Sess. XIII, XXI, and XXII). It must be made of wheat flour, because, according to sacred tradition, such was used by Christ at the institution of this sacrament. History attests that the Jews used only wheat bread at the Passover, and in Palestine the word *bread*, without a qualifying term, signifies wheat bread. Hence both the Eastern and Western Churches have always used this kind of bread. Some sectaries introduced at times foreign matter in its composition; thus, St. Augustine (Lib. de Hæres., c. xxvi) tells us that the Cataphrygians mixed with the wheat flour the blood of infants, extracted from them through minute punctures made in their bodies. The Council of Florence (Decr. pro Armenis) says that the third sacrament is that of the Eucharist, whose matter is wheat bread and wine of the grape. Moreover, in the rubrics of the Missal (De Defectibus, III, 3) we read: "If the bread is not wheat, or if it is wheat yet mixed with flour of another kind in such quantity that it is no longer considered wheat

bread, the sacrament is not effected." Hence hosts made of the flour of barley, oats, rice, beans, millet, chestnuts, etc., are not permitted, because such flour differs specifically from wheaten flour. Authors differ in their opinion with regard to the use of siligo (St. Thomas, III, Q. lxxiv, art. 3, ad 2^{um}) and spelt, which are inferior kinds of wheat.

LARGE HOST USED AT MONTJEAN (MAINE-ET-LOIRE), FRANCE, XVI CENTURY

As a rule these are considered doubtful matter, and their use is unlawful when there is question of administering sacraments which are not *hic et nunc* necessary for salvation. Scavini (III, n. 227), depending on the authority of Gobat, Laymann, and others, says that spelt is not only valid but also licit matter for this sacrament. Lehmkühl (pt. II, lib. I, tr. iv, c. ii, §1, n. 3) holds that in this matter the opinion of experts and that of the diocese and region should be followed. For the validity of the sacrament it is, moreover, necessary that natural water be used to temper the wheat flour, and that the dough be baked. The baking is usually done between heated irons which resemble a large forceps. If the flour is in a notable quantity mixed with eggs, butter, milk, honey, oil, or any liquor other than natural water, it becomes invalid matter, for it is then something really different from ordinary bread. Likewise flour fired in a pan, dried by the sun, stewed, or boiled, or a crude mass of dough, cannot be consecrated, because although physically it does not differ from ordinary bread, yet it is not such as is commonly used and as was consecrated by Christ at the Last Supper. The S. Congr. of the Holy Office (23 June, 1852) permitted the priests of the Diocese of Coimbatore, India, to make hosts out of broken grains of wheat, steeped in water, pressed so as to form a pulp, and then baked between two heated irons, but imposed upon the vicar Apostolic the obligation of introducing the custom of preparing the hosts in the customary manner.

LEAVENED AND UNLEAVENED BREAD.—The question regarding the use of leavened and unleavened bread gave rise to much dispute among Catholics. From the very beginning both the Eastern and Western Churches looked upon this as a matter of discipline, and held that consecration takes place under either kind. Michael Cærularius, Patriarch of Constantinople (1043), made it, however, a dogmatic issue. In a letter to John, Bishop of Trani, Apulia, he accused the Roman Church of holding doctrines and adopting practices condemned by the rest of Christianity: in it among other reproaches he imputes it to her as a crime that she uses at the Lord's Supper unleavened bread, which he held to be invalid matter, and consequently he maintained that the Church of Rome was heretical. Thus, after eleven centuries of undisputed tranquillity on this point in both Churches, Cærularius, to make the rupture between the two Churches as great as possible, first broached this accusation against the Church of Rome, despite the fact that many writers had before him searched traditional documents without finding even the slightest indication of a dogmatic error. Three different views prevail concerning the kind of bread used in the Western Church during the first ten centuries. Simond, S.J. (d. 1651, "Disq. de Azymo"), maintained that it consecrated exclusively leavened bread. Ma-

billon, O.S.B. (d. 1707, "Diss. de Pane Eucharistico"), asserted that unleavened bread was used from the time of the Apostles, but that the Apostles sometimes used leavened bread. Cardinal Bona, O.Cist. (d. 1674, "Rerum Liturg., lib. I, c. xxiii), held it as probable that both kinds were used indiscriminately until late in the ninth century. The Council of Florence (1439) decided that either kind was sufficient for the validity of the sacrament, and that unleavened bread must, under grave precept, be used in the Western Church and leavened in the Eastern; but even at present in the East the Armenians, both Catholics and Eutychians, and the Maronites use unleavened bread. This precept is so strict that were a priest to consecrate in a rite not his own he would sin grievously. It would not be lawful to do so even if thereby sole opportunity were given to fulfil the precept of hearing Mass on Sunday or of administering Holy Viaticum to the dying. The only exception to this rule that could occur would be if after the consecration the Sacred Host were to disappear, or the celebrant adverted to the fact that it had a substantial defect, and only bread peculiar to the other rite were at hand, in order thereby to complete the sacrifice. Even in places in which there are churches of both rites, a Greek cannot consecrate in unleavened bread or a Latin priest in leavened bread (Pius V, Bull "Providentia", 1566; Benedict XIV, Const. "Etsi pastoralis"). If, whilst travelling, a priest should be in a place in which there is no church of his own rite, he may celebrate according to the rite of the church which exists there, or preferably according to his own rite (S. Lig., "Mor. Theol.", Lib. VI, n. 203; Lehmkühl, vol. II, n. 121, 3). If a priest has a domicile in a place in which there is no church of his own rite, he may celebrate according to the rite of the church of his domicile, because he is then considered a member of said church (Hilarius a Sexten, pt. II, c. iii, §28, n. 3).

KINDS OF HOST.—In the early Latin Church the host used by the priest at Mass was larger than it is at present. The custom then prevailed of giving Communion to the laity with Particles of the priest's Host. During the twelfth century small hosts for the laity were introduced and the priest's host assumed the

SMALL HOSTS USED AT MONTJEAN (MAINE-ET-LOIRE), FRANCE, XVI CENTURY

size it has at present (Benedict XIV, "De SS. Missæ Sacrif.", sect. I, §xxxvii). When a large host is not at hand Mass may be celebrated in private with a small host. In cases of necessity a small host may be used in public also, but, as liturgists remark, the faithful should be advised thereof in order to avoid scandal (De Herdt, II, n. 137). From the earliest days the hosts in the Latin Church were of a circular form. Pope St. Zephyrinus calls the host "*corona sive oblata sphericæ figuræ*". This form was adopted both because the hosts could be more easily handled, and because the circle, being the most perfect figure and a symbol of infinity, most suitably represents the presence of Him who, by His eternity, immensity, love, and the merits of His sacrifice, is infinite. As a rule, since the middle of the twelfth century, the image of Christ Crucified is impressed on the large host,

although the figure of the Sacred Heart or the monogram of the Holy Name may be used [see ALTAR (IN LITURGY), sub-title, *Altar-Breads*]. The sacrificial host of the Greeks is a square loaf to express mystically that by the Sacrifice of the Cross redemption is granted to the four quarters of the globe. Two lines divide the upper part of the loaf into four squares in which usually the following letters are impressed, reading from left to right in the upper portion: IC-XC, and in the lower: NI-KA, i. e. "Jesus Christ conquers." Like the

HOST OF THE NON-UNIAT ARMENIANS AT BETHLEHEM

the altar by passing them lightly between the thumb and index finger.

OBULATION.—For the valid Consecration of hosts it is necessary that they be morally and sensibly present to the consecrator and individually specified by him, so that the demonstrative pronoun *hoc* be verified at the Consecration. Ordinarily both the large host used for the Mass and the particles intended for distribution of Communion should be on the altar at the beginning of the Mass, or at least before the Offertory when they are placed on the corporal. If particles are brought to the altar after the Offertory, but before the beginning of the Preface, Mass is interrupted and the oblation of the particles is made either mentally or vocally, after which Mass is continued from the place at which it was interrupted. After the Preface has been begun, down to the Consecration, particles should not be brought to the altar to be consecrated unless there be special reasons, e. g. so as not to deprive of Communion a large number of people, or on special occasions, e. g. First Communion, general Communion at the end of a mission, during the paschal season to give persons a chance to fulfil their Easter duty (Benedict XIV, "De SS. Miss. Sacr.", sect. II, §clviii; Bernard, "Cours de lit. rom.", I, 98). The sacrificial host is at present placed after its oblation on the corporal in front of the chalice, because it is the first element to be consecrated. Formerly it was placed at the left side of the chalice, as if the latter were to receive the blood which flowed from the right side of Christ hanging on the cross (Innocent III, "De Sacro Altaris Mysterio", lib. II, c. Iviii). If the particles be few, they are offered with the sacrificial host on the paten, and then placed on the corporal near the sacrificial host towards the Gospel side. If they be many, they may be placed on the corporal at the beginning of Mass towards the Gospel side, where they remain during the Mass; or they may be put in a ciborium covered with its lid, but without its veil until after the Communion; or in a chalice covered with a pall. During Mass the ciborium or chalice containing the particles is placed behind, or, if space will not permit, on the left side of the sacrificial chalice. At the Offertory and Consecration it is uncovered. The large host used for Exposition may be offered on the paten and then placed on the corporal between the chalice and the sacrificial host, or near the latter towards the Gospel side, where it remains throughout the Mass. If it be prepared in the lunula

the latter should be open at the Offertory and the Consecration.

CONSECRATION.—At the Consecration all the hosts, or the vessel which contains them, should be on the corporal and if possible on the altar-stone. If by chance the vessel containing the particles is not uncovered at the Consecration, they are nevertheless validly consecrated (Benedict XIV, loc. cit., §clv). If the ciborium is not on the corporal at the time of Consecration it is doubtful whether they were consecrated, unless the celebrant had distinctly the intention of consecrating the contents of the vessel before him, not adverting to the fact that it rests outside the corporal (D'Annibale, III, n. 388). Benedict XIV (loc. cit., §clix) holds that they should be consecrated *absolutely* during another Mass, but St. Liguori (lib. VI, n. 217) is of opinion that they should be consumed after the first ablution. The celebrant holds and looks at the sacrificial host only whilst he utters the words of Consecration and makes over it the sign of the cross, but directs his intention of consecrating to all the hosts on the corporal. Only the sacrificial Host is elevated for the adoration of the faithful, the consecrated particles remaining on the corporal.

FRACTION OF THE HOST.—Shortly before Communion the Host is broken into parts, a ceremony found in all liturgies and which was introduced by Christ at the Last Supper. The object of the breaking of the Host is to indicate by this symbolical action the partaking of Communion by which the faithful are to become one body with Christ. The breaking of bread, symbolizing the Communion, is in reality the preparation of the sacrifice for the sacrificial feast: "The bread, which we break, is it not the partaking of the body of the Lord? For we, being many, are one bread, one body, all that partake of one bread" (I Cor., x, 16, 17). Hence, "to break the bread" is to prepare it for food and to distribute it for participation. In the Western Church the Host is divided into three parts. The celebrant holds the Host over the chalice and breaks it in half, one half of which he lays with his right hand on the paten, then breaks from the other half *from below* (*Pars inferior præcidi debet*—S.R.C., 4 Aug., 1663) a particle which he afterwards drops into the chalice, and joins the other half in the left hand with that on the paten. Formerly one part

HOST OF THE UNIAT ARMENIANS AT CONSTANTINOPLE

was put into the chalice, another part was consumed by the celebrant, and the third part, which was the largest, was broken into particles for the Communion of the faithful who were present, and of the sick. Traces of this ancient usage are still found in the solemn Mass celebrated by the Roman pontiff, who divides the third part into two particles, with which he Communicates the deacon and subdeacon of his Mass. A similar practice is observed in the Mass of the consecration of a bishop, who receives in Communion the third part from the consecrator. The Greeks break the Host into four parts, one of which is received by the celebrant, another is distributed to the faithful, the third is reserved for the sick, and the fourth is put into the chalice. In the Mozarabic Liturgy the Host is broken into nine parts, each having its special designation corresponding to a mystery in the life of Christ: (1) Incarnation; (2) Nativity; (3) Circumcision; (4) Apparition; (5) Passion; (6)

Death; (7) Resurrection; (8) Glorification; (9) Kingdom. The first seven parts are placed in circles formed on the paten in the shape of a cross, the remaining two portions are placed on the right side at the foot of the cross outside the circles (Duchesne, "Christian Worship", p. 219). The transverse beam is formed by nos. 2, 6, and 7, which represent the principal mysteries: Birth, Death, and Resurrection. (See accompanying figure.)

In other Churches the Host was in former times divided in various ways. Thus in Ireland it was divided in seven different man-ners, according to the rite of the Mass or the dignity of the festival: at ordinary Masses into five particles; on the feasts of confessors and virgins into seven; on the festivals of martyrs into eight; on Sundays into nine; on the festivals of Apostles into eleven; on the feast of the Circumcision and on Maundy Thursday into twelve; on Low Sunday and the feast of the Ascension into thirteen; on Christmas, Easter, and Pentecost into sixty-five. They were arranged in the form of a cross with certain additional complications when they were numerous, and at the Communion each of the parts of the cross, or of its additions, was distributed

LATIN HOST

to a special group of persons, that is, priests, monks, etc. (Duchesne, *ibid.*, p. 220). The breaking of the Host is not an essential or even an integral part of the Mass, and was in former times occasioned by natural reasons and considerations, but it has high symbolical meanings. It symbolizes Christ's violent death on the Cross, as it indicates the wounding and lacerating which caused the separation of His Soul from His Body. The breaking of the Bread over the chalice is to remind us that the Blood contained in the chalice proceeds from His wounded and mangled Body, although thereby also caution is taken that no loose particles be lost.

MINGLING OF THE EUCHARISTIC SPECIES.—Probably down to the ninth century the Body and Blood of Christ were twice united in the chalice during Mass: the first time after the Pater Noster, when a previously consecrated Host, or a Host received from another place, was used; the second time at the Communion, for which a particle broken from the Host of the Mass that was being celebrated was used. When the custom of sending the Eucharist to other Churches as a sign of union ceased, the former was retained, except when the pope officiated, in which case the latter was used and the former omitted. This custom was retained down to the fifteenth century, when the rite of mingling only after the Pater Noster, even at the pope's Mass, came into use. The celebrant, having broken the large Host into two equal parts, breaks a small particle from the part which he holds in his left hand. With this particle he makes three signs of the cross over the chalice, saying, "Pax Domini sit semper vobiscum", and then drops it into the Precious Blood, saying: "Hæc commixtio et consecratio Corporis et Sanguinis Domini nostri Jesu Christi fiat accipientibus nobis in vitam æternam. Amen." Just as the fraction of the Host indicates the wounding which caused Christ's death, so this mingling of the Eucharistic species symbolically expresses that on the altar the living Body of Christ is present. The fraction represents His bloody sacrificial Death, and the mingling His glorious Resurrection, in which His

Body and Blood were again united and vivified. The threefold sign of the cross with the Particle over the chalice and the salutation of peace made between the fraction and mingling signify that Christ by His redeeming Death and glorious Resurrection has become the author and source of true peace, which was purchased and negotiated for us by the holy Cross and the Blood shed thereon (Gihir, "The Holy Sacrifice of the Mass", II, 67, 2 and 3).

COMMUNION.—Although Communion is not an essential part of the Sacrifice, yet it belongs to its integrity, and for this reason the celebrant at least must partake in both species of the sacrifice which he is offering. An exception to this rule will be allowed if the celebrant should become so ill that he cannot consume the Species. In this case another priest must consume them, though he has already broken his fast, if no other, still fasting, be present. In the Latin Rite at present the three parts of the sacrificial Host are consumed by the celebrant, who takes first the two larger pieces and then, together with the Precious Blood, the smaller piece dropped into the chalice. He is not permitted to keep the sacrificial Host of the Mass for Exposition and to consume in its stead the large Host reserved in the tabernacle. The latter may be consumed either together with the sacrificial Host or after the partaking of the Precious Blood. It should not, without necessity, be given to the faithful Communicating. For the latter use there are to be smaller Hosts, round in form, one of which is to be given to each communicant. In case of necessity it is lawful to divide the particles (S.R.C., 16 March, 1833). Newly consecrated particles may never be mixed with those consecrated previously, and the ciborium in which they are put should be thoroughly purified before the new particles are placed in it.

DEFECTS AND ACCIDENTS.—Since the Host belongs to the essence of the Sacrifice of the Mass it is not surprising that the Church should have legislated for any defect or accident that may happen in regard to it. Hence at the beginning of the Roman Missal is found a chapter on the defects (*De Defectibus*) that may occur. If during the Mass the celebrant ascertains that the bread is defective, i. e. not of wheat, or not unleavened (in the Roman Rite), or corrupted, in order to complete the sacrifice the following is to be observed:

(1) *Before the Consecration.*—Mass is interrupted, the invalid or doubtful matter is put aside and replaced by matter certainly valid. If the oblation of the invalid matter has already taken place, the celebrant places a valid host on the corporal and, folding his hands on his breast, offers it by reciting vocally or mentally the prayer "Suscipe sancte Pater". He then continues the Mass from the point at which it was interrupted. The prayer "Qui pridie quam pateretur", though he may have already said it, is to be repeated over the new host. If the first host was defective because it was not of wheat, the celebrant consumes it after the ablutions; if it was corrupt, he throws it into the sacrum.

(2) *After the Consecration of the defective host.*—Mass is interrupted, the defective host is placed on the corporal, and a new host is offered, as above. After the oblation the celebrant holds the new host between the thumb and index finger of both hands and begins the consecration at the words "Qui pridie quam pateretur". Then he places the Host on the corporal without genuflecting, or elevating it, and continues Mass from the point at which Mass was interrupted. But if the first host has already been broken, the new Host, immediately after its consecration, is broken in half and both parts are placed on the paten. The dropping of a small particle of the larger Host in this instance is not of obligation; it may be done, but without words or ceremonies. The defective host

may be either (1) consumed by the celebrant before the ablutions, or (2) given to another who is still fasting and in the state of grace, to be consumed, or (3) put in a proper place until it is corrupt and then thrown into the sacrum.

(3) *After the consumption of the defective host.*—Although the celebrant has already broken his fast, he offers and consecrates a new host, as above. Immediately after the Consecration he breaks it into two parts over the paten without pronouncing a word or performing any ceremony, and, having made the sign of the cross with it and said "Corpus Domini", etc., he reverently consumes it, and continues the Mass as usual.

(4) *After the consumption of the Precious Blood.*—Mass is interrupted and a new host offered, as above. Having placed the chalice on the corporal, the celebrant pours into it wine and a few drops of water, after having blessed the latter, unless it be in a requiem Mass. Joining his hands on his breast, he mentally or vocally recites the prayer "Offerimus tibi". He then consecrates the Host, as above, beginning with the words "Qui pridie". Having placed the Host on the corporal he consecrates the chalice in the customary manner, reciting the words "Simili modo" down to "Hæc quotiescunque" inclusively, after which he places the chalice on the corporal without genuflecting, or elevating the chalice. He then breaks the Host into two parts, and reverently consumes it, as above. After a brief pause of meditation, the celebrant collects the fragments that may be on the corporal, drops them from the paten into the chalice, makes the sign of the cross with it, recites the prayer "Sanguis Domini", etc., and reverently consumes the Precious Blood. Mass is then continued as usual.

(5) *If the consecrated Host should disappear,* either mysteriously or by a natural cause, the celebrant offers, mentally or vocally, a new host, and then consecrates it, beginning with the words "Qui pridie"

(6) *In case where an essential defect is discovered in the host,* and valid matter cannot be easily procured, the following rules are to be observed.—If the error is ascertained (i) *before* the consecration, Mass is discontinued, or (ii) *after* the consecration, a delay of one hour or more may be made to procure, if possible, valid matter. If such be available, the order given above (2) is observed. If valid matter cannot be obtained Mass is continued, but the prayers and ceremonies that refer to the host are omitted.

(7) *If by accident the Host falls into the chalice* the dry part is broken off, the rest being left in the chalice, whilst the usual ceremonies are performed with the former. If the whole Host remains in the chalice, the signs and ceremonies usually performed with the Host are omitted, but all the prayers are recited, and at Communion the Host and Precious Blood are consumed at the same time after having made the sign of the cross with the chalice, saying: "Corpus et Sanguis Domini nostri Jesu Christi custodiant animam meam", etc.

(8) If any object that has not been sanctified for the purpose of coming in contact with the consecrated Host (altar, or communion-cloths, alb, etc.) touches it, this object must be washed three times with water, and the latter is afterwards poured into the sacrum. If the Host falls to the floor, the celebrant lifts the sacred particle, covers the spot on which it fell with a pall or purificator, and after the service washes the spot with water, which he afterwards throws into the sacrum. If the Host falls into the folds of a woman's dress, she herself is to take it up and consume it; if it falls outside, the priest communicates her with it, without requiring that the dress be specially purified.

(9) If it should happen that the celebrant or communicant cannot retain the Host, it should be taken up and again consumed by himself, unless to do so

would cause nausea. In the latter case it is put in a vase containing water and left therein, in a suitable place, until disintegration takes place, when the matter is thrown into the sacrum. If the Host cannot be distinguished from the other matter, the whole mass is consumed by fire and the ashes are thrown into the sacrum.

(10) If any poisonous substance should defile the consecrated Host another host is taken, and the order given above (2) is observed. The poisoned Host is then placed in the tabernacle and left there until it loses the species of bread, when it is thrown into the sacrum.

(11) Before the oblation a broken host should be replaced by one that is whole and entire. If the break be noticed between the Oblation and Consecration, the broken host may be used for Mass, unless doing so would scandalize the people. In the latter case another host, whole and entire, is taken, Mass is interrupted, the host is offered mentally or vocally, and then Mass is continued from the point at which it was interrupted. The broken host is consumed at the same Mass after the ablation.

(12) If the celebrant becomes seriously ill after the Consecration another priest must supply his place and complete the sacrifice. In this case if the sick priest is able to receive Communion and there is no other consecrated particle beside the large Host of the Mass on the altar or in the tabernacle, one half of it is given to the sick priest at Communion.

A. J. SCHULTE.

Hottentots.—Popularly the Hottentot is considered a man-monkey, or as Gibbon said "the connecting link between the rational and the irrational creation". But he is not even the lowest of the three chief races into which the aboriginal tribes of South Africa may be divided—Bantus, Hottentots, and Bushmen. The Bushmen are usually placed lowest in the scale. When the first Europeans (the Portuguese) came to South Africa, they found what is now Cape Colony divided between Bushmen and Hottentots. The Bantu tribes were chiefly north of the Zambesi, and were finer in physique than the Hottentots, but possessed of less brain power and imagination. The Bushmen were smaller than the Hottentots and altogether on a lower plane—physical and moral. There is nothing to show that the Hottentot was incapable of assimilating European civilization. It is a curious fact, worth mentioning here, that skull measurements show that of these three races the greatest affinity with the European lies with the Bushman, i. e. with the lowest type.

The origin of the Hottentots is a question which has given rise to much discussion. Efforts have been made, with small success, to connect them with the Troglodytes or cave-dwellers. Several writers have suggested a North African origin; and Dr. Bleek has detected important points of similarity between the Hottentot language and those of North Africa; but it is too soon to build on these slight indications. Dr. Theal appears to suggest that the first Hottentots were a mixed race. "The probability seems to be that a party of intruding males of some slight brown

or yellow race took to themselves women of Bushman blood, and thus gave origin to the people whom Europeans term Hottentots." This suggestion merely puts this question among the insoluble problems.

For the description of the pure Hottentot we are dependent on ancient writers like Kolben; because the pure Hottentot cannot be said to exist to-day. He was slightly below the average European: the upper limbs undeveloped and the lower muscular, high cheek bones, thick lips, nose flat, eyes wide apart, hair black and crisp in tufts, colour yellowish brown. To-day the so-called Hottentots are of every colour, size, and character, through mixture with other races. Even the language which they principally speak is a patois of the Dutch dialect of the Cape.

The language of the Hottentots is monosyllabic; having four known dialects—the Namaqua, which is still spoken by some of the natives; the Kora and Cape Hottentot, which are practically extinct; and the Eastern Hottentot, which exists only in a few meagre vocabularies, and has been extinct for some time.

The most striking characteristic of the Hottentot language for the European lies in the "clicks". Something similar is thought to be found in the Galla language of Abyssinia, in the Circassian tongue, and in the ancient speech of Guatemala. But three-fourths of the words in the Hottentot dialects begin with a click. Clicks are of four kinds, and are difficult to describe to those who have not heard them. The drawing of a cork, and the gurgling sound of water in the narrow neck of a bottle, the sound made in urging a horse to trot or run, and other sounds have been used to illustrate their nature; but at least one of them, the palatal click, defies description.

The grammatical system of the Hottentots is built almost exclusively on sex-denoting suffixes, and it is the most complete of this small group of languages. The liquid L is entirely wanting, and it has a small variety of clear nasal consonants. The only native literature that exists in these dialects consists of folk-lore tales, such as mark the beginning of all European literature. Translations of parts of the Scriptures have been made by missionaries in Namaqualand.

The religion of the Hottentots is a congeries of superstitious observances, of which travellers and folklorists have never been able to obtain a full explanation from the natives. They appear to believe in a superior being whom they call Tsuikwap; but the antiquity and the meaning of this word are open to some doubt. The most elaborate ceremonies of the Hottentots are in honour of the moon, and they pay great reverence to cairns of stones and wood, where they believe a mythical personage named Heitsi-Eibib to reside.

The Hottentots called themselves Khoikhoin—men of men. The most curious of their customs is that on attaining manhood the Hottentot makes himself a monochis. Polygamy was not general, but permitted to the wealthy. They never seem to have made boats of any kind, and abhor the oil of fish, although fond of smearing their skin with oil. Witchcraft was common among them. Their government was carried on by chiefs, who administered a well-defined native law. The doctors were in high esteem, and next to them the priests, who combined the duties of masters of ceremonies and surgeons in the monochist rites.

Hottentots are now found chiefly in German South-west Africa and in Cape Colony. For the former territory there are no official figures as to their number; but they do not exceed thirty thousand. During the recent rebellion against the Germans, the Hottentots gave more trouble than all the other races together.

In the time of the first Dutch governor (van Riebeeck) the Hottentots at the Cape were estimated at

150,000. But the smallpox epidemic in 1713 reduced their numbers enormously. In 1904 the census put them at 85,892. Their destiny seems to be absorption into the more virile native races.

Missionary work among the Hottentots and allied tribes has been undertaken by the Oblates of St Francis de Sales in Cape Colony, and the Oblates of Mary Immaculate in German South-west Africa. The Orange River Vicariate is composed chiefly of a species of Hottentot called Griquas or Bastards. In German territory, in the Prefecture Apostolic of Lower Cimbabasia, Catholic missionary work among the native tribes is in its infancy.

The GREY Collection of the South African Public Library contains many useful books and pamphlets in the Hottentot dialects.

SIDNEY R. WELCH.

Houbigant, CHARLES-FRANÇOIS; b. in Paris, 1686; d. there 31 October, 1783. He entered the Congregation of the Oratory in 1704 and, after his studies, taught successively the classics at Juilly, rhetoric at Marseilles, and philosophy at Soissons. Returning to Paris, he was in 1722 at the head of the Conference of Church Antiquities and Discipline of St-Magloire. Overwork brought upon him a severe sickness, from which he lost in a very peculiar way the sense of hearing: while unable to hear the noise of the cannon of the Bastille, he could hear the scratching of his pen on the paper. In consequence of this infirmity he availed himself of the scholarship founded by L. de Carrières to promote Biblical studies in the Oratory and thenceforth devoted his talents to mastering Oriental languages.

His first work, issued in 1732 (Paris), was a vocabulary of Hebrew roots, "Racines hébraïques sans points-voyelles", compiled after the manner of Lancelot's long famous "Jardin des racines grecques". In 1746 he published his "Prolegomena in Scripturam Sacram" (2 vols., 4to) and a Latin translation of the Psalms, "Psalmorum versio vulgata et versio nova ad hebraicam veritatem facta" (16mo), followed two years later (1748) by a critical edition of the Hebrew Psalter, "Psalmi hebraici mendis quam plurimis expurgati" (Leyden, 16mo). These volumes were but the forerunners of his great work, "Biblia hebraica cum notis criticis et versione latinâ ad notas criticas factâ; accedunt libri græci qui deuterocanonici vocantur in tres classes distributi" (4 vols., folio, Paris, 1753-54). This important publication, to the preparation of which he had devoted twenty years of labour, in itself a masterpiece of typography, was based on the text of Van der Hooght (edit. of 1705), which it reproduced without vocal signs and with many corrections suggested either in the margin or in tables at the end of each volume. The Latin translation was also published separately in eight octavo volumes under the title, "Veteris Testamenti versio nova ad hebraicam veritatem facta" (Paris, 1753). From Houbigant's versatile pen later on proceeded French translations of some English books, as Forbes's "Thoughts", Sherlock's "Sermons" (1768), and Lesley's "Method against Deists and Jews" (1770). Other works published during the same period, as the "Examen du Psautier français des RR. PP. Capucins" (The Hague, 1764), the "Conférence entre un Juif, un protestant et un docteur de Sorbonne" (Leyden, 1770), the "Notæ criticae in universos Veteris Testamenti libros tum hebraice tum græce scriptos, cum integris Prolegomenis ad exemplar Parisiense denuo recensæ" (2 vols., 4to, Frankfurt, 1777), are evidence that Houbigant

had not at this period abandoned his favourite studies. Some time before his death, however; he had lost his eyesight and fallen into dotage. Among the papers found after his death were a life of Cardinal de Bérulle, a treatise on the coming of Elias, a Hebrew grammar, and notes on the theory of Astruc touching the composition of Genesis.

Houbigant's piety was on a par with his learning; his conversation was most amiable, without the slightest trace of the sarcasm pervading some pages of his writings, and his patience and tireless energy are highly commended by all those who knew him. He had founded at Avilly a school for girls, in which he set up a complete outfit for the printing of his books, himself acting as typesetter. His works on Hebrew philology have fallen into oblivion; the deliberate discarding of vocal signs and the unlikely and unwarranted pronunciation adopted foredoomed them to failure. On the other hand, his Latin translation of the Bible is, for the clearness, energy, and polish of the language, deservedly praised; not so, however, all the rules of textual criticism laid down in the "Prolegomena", and the application of these rules in the "Biblia hebraica" marred by too many unnecessary and conjectural corrections of the Massoretic text. The work nevertheless contains abundant valuable suggestions which modern critics have ratified, and on this score full justice is not always rendered to the learned Oratorian, who was doubtless one of the ablest Biblical scholars of his time.

CHARLES L. SOUVAY.

Houdon, JEAN-ANTOINE, b. at Versailles, 1741; d. 16 July, 1828; the most distinguished sculptor of France during the latter half of the eighteenth century.

JEAN-ANTOINE HOUDON

He was trained under Slodtz and Pigalle and won the coveted Prix de Rome before he was twenty. In Italy he found a second Renaissance, due to the rediscovery of antiquities and to the influence of Winckelmann. One of Houdon's first efforts, a work he never surpassed, was the heroic statue of St. Bruno for the church of Sta Maria degli Angeli. Its austere simplicity and strength drew from Clement XIV the famous words, "He would even speak, did not the Rule of his Order compel silence". On his return to Paris, Houdon sent his "Morpheus" to the Salon of 1771 and, owing to it, was made an associate of the Academy, becoming a full member in 1775. He also began that striking series of busts that brought the entire age before his modelling stool—Prince Gallitzin, Prince Henry of Prussia, the Dukes of Saxe-Gotha, Catherine II of Russia, the actress Sophie Arnould as Iphigenia, and that wonderful terra-cotta of Gluck, the composer, in the Royal Museum, Berlin. Appointed teacher at the Academy, Houdon presented to it, for the use of the students, his well-known "Ecorché", the human figure stripped of its skin to show the muscles and tendons uncovered; this is still used in

most art schools. Diderot, D'Alembert, Gerbier, Turgot, Buffon, Palissot, Mirabeau, Barnave sat in turn for their portraits. Hearing of the death of Rousseau (1778), the sculptor hastened to Ermenonville to take a mask of the face; from this he modelled the remarkable head in the Louvre. In 1780 he made the portrait of Lafayette which is now in the State House, Richmond, Virginia, and in 1781 the draped statue of Voltaire at the Théâtre Français, with its antique air and curiously modern visage. The Maréchal de Tourville is of about the same period. The noted bronze "Diana" of the Louvre dates from 1783; the marble original, "twin sister of the Apollo Belvedere", was refused at the Salon on account of its scanty raiment (Hermitage, St. Petersburg). On 22 July, 1785, Houdon sailed for America with Franklin, whose bust he had previously made. He was received at Philadelphia and spent two weeks at Mount Vernon making studies of Washington, which he took back at once to Paris, and from which he produced the bust now in the collection of Mr. Hamilton Fish, New York, and the statue for the State House, Richmond, Virginia. It was proposed to put Washington in classic garb, but he chose to be in uniform. The same year, 1785, Houdon modelled the "Frileuse" (Musée de Montpellier), a female figure shivering with cold, as a companion piece for his "Summer". Among his most charming works are the Boignart children (Louvre) and his daughter Sabine in adolescence—delicate heads, instinct with life, and so fresh they might have emerged yesterday from the clay. In the private park at Bagatelle is an admirable "Baigneuse" in stone, set in a grotto, one foot touching the water. The bust of "Minerva", in the hall of the Institut de France, is also Houdon's. The "Apollo", 1790, is a companion to the "Diana" replica of that year. The Revolution brought an end to all work and commissions. To pass the time, Houdon was retouching an old "St. Scholastica"; this caused him to be denounced to the Convention, and he only saved his life by changing the saint into a figure of "Philosophy". In the early days he had made portraits of Du Barry, Louis XVI, Marie Antoinette, the Princesses Adelaide and Elisabeth, and the Court, not to mention the Encyclopedists and the noted men of the Revolution. He lived to add Napoleon and the Empress Josephine to the collection. In the end his mind clouded, and he slept away the last measure of his life. Possessed of great simplicity and openness of mind, and of a happy spirit, Houdon had been much sought after for the charm of his conversation, and his recollections of illustrious personages. In technic he is direct and simple; his paramount qualities are lifelikeness and spontaneity.

M. L. HANDLEY.

Houdry, VINCENT, preacher and writer on ascetics; b. 22 January, 1631, at Tours; d. 21 March, 1729, at Paris. According to the catalogues of the Society of Jesus, the principal details of Houdry's biography are as follows: On 10 October, 1647, he entered the Society of Jesus at Paris and after his novitiate followed the regular course of studies (three years philosophy and four years theology). For a considerable while he was engaged in teaching: classics, six years; rhetoric, one year; philosophy, four years. After this he became a celebrated pulpit orator, preaching for the next twenty-five years in the more important cities of France. During the remainder of his life he was principally occupied in writing sermons. His obituary in the archives of the Society, besides his talent as an orator, praises his never-tiring industry, both as a speaker and a writer. Among his virtues, his faithful observance of the rules, even to the ninety-ninth year of his life, is especially mentioned.

Houdry left two important homiletic works: his collected sermons, under the title of "Sermons sur tous les sujets de la morale chrétienne", and a collection of materials for sermons, "La bibliothèque des prédicateurs". The first-named, which appeared in Paris, 1696-1702, comprises five parts in twenty-two volumes, and has run through several editions; it was also printed in part in a German translation at Augsburg in 1739. With his wonted scrupulous care, he supplemented it by an index volume, together with a treatise on the imitation of famous preachers. (A selection from the large work can be found in Migne, "Collection des orateurs sacrés", XXXVI, XXXVII.) Houdry's second great literary work consists of an ambitiously planned collection of material for preachers, which he called a "library", and which was published, 1712-25, in twenty-three volumes at Lyons. Two translations of this work in Latin and one in Italian have been completed; and as recently as 1862 a "Biblical Patristic Concordance for Preachers and Catechists" was compiled from it. In the introductions to both works, Houdry sets forth his views on the functions of a preacher and criticizes the style of preaching in vogue in his time. In 1702 the famous preacher published a small ascetic treatise in two volumes, on the exercises of St. Ignatius, addressed to priests and accordingly written in Latin.

N. SCHELD.

Houghton, WILLIAM (variously called **DE HOTHUM, DE HOTHUM, DE HOZUM, BOTHUM, DE HONDEN, HEDDON, HEDDONEM**, according as his name was pronounced by those of different nationalities—in the ancient manuscripts of his order it is invariably written **DE ODONE**), Archbishop of Dublin, date and place of birth unknown; d. at Dijon, 1298. His great learning united to solid piety made him illustrious among the savants of his time, while his rare prudence in the management of affairs gave him no small distinction among the statesmen of the thirteenth century. It is not known in which convent in England he received the habit of St. Dominic—it is certain that he made his higher studies in the Convent of St. James in Paris—there he took his degrees and lectured with great success. In the general chapter of the order held in Vienna in 1282, he was chosen Provincial of England, and discharged the duties of this office with zeal and ability. His contemporaries all speak of a uniform sweetness and a singular charm and distinction of manner which won for him at once love and respect. He governed the English province for five years, when he was recalled to Paris to resume his public lectures on theology. His ability was recognized by the court of France, especially by the king, Philip IV. But the English Dominicans wished him to return home, and they elected him provincial, which office he filled for a term of seven years. He became a favourite of King Edward I, and received many marks of royal affection and esteem.

Edward I sent Houghton to Rome as ambassador to propose to the Holy Father his royal desire to assist his Holiness in affording help to the Christians in the Holy Land. The king proposed the conditions of the Holy Siege and he did this through his minister, William Houghton, who was favourably received at Rome and obtained nearly all that he desired. He returned to England with a Brief from Nicholas IV, dated Rome, 10 Nov., 1289.

The See of Dublin had become vacant by the death of Archbishop John de Sandford. Thomas Chatworth, the successor named by the chapter, was not acceptable to the king, so the see remained vacant from Oct., 1294, to June, 1297. Edward I appealed to Pope Boniface VIII requesting the appointment of William Houghton. This wish was granted and Houghton was consecrated at Ghent by Anthony Beck, Bishop of Durham, in 1297.

A bloody war was raging between France and England and the two monarchs, Philip IV of France and Edward I of England, were brought by the prudent mediatorship of Houghton to conclude a treaty of peace for two years. In 1298, Edward I sent Houghton to Boniface VIII as a legate to acquaint his Holiness with the conclusion of the treaty of peace. Having been received by the sovereign pontiff (20 June, 1298) Houghton set out for England but on the way fell sick at Dijon (France) and died there 28 August, 1298. By command of Edward I the remains were brought to London and laid in the Church of the Friars Preachers. Notwithstanding the important public offices Houghton filled, he found time to write the following works: "Commentarii in Sententiarum Libros", "De immediata visione Dei tractatus", "De unitate formarum Tractatus", "Lecturæ Scholasticæ", and a speech in French on the rights of the English king.

ALBERT REINHART.

Hours, CANONICAL.—I. IDEA.—By canonical hour is understood all the fixed portion of the Divine Office which the Church appoints to be recited at the different hours. The term was borrowed from the custom of the Jews, and passed into the speech of the early Christians. In the Acts of the Apostles we see that prayer was designated by the hour at which it was said (Acts, iii, 1). The observance from being optional having become obligatory for certain classes of persons in virtue of canons or ordinances promulgated by the Church, each portion of the Divine Office was called a canonical hour, and the whole of the prayers fixed for a certain day took the name of canonical hours. This term was extended to apply to the book or collection which contained these prayers, hence the expression "book of hours". The Rule of St. Benedict is one of the most ancient documents in which the expression, canonical hours is found; in chapter lxvii we read "ad omnes canonicas horas". It passed into common speech about the next century as may be judged from St. Isidore of Seville ("De ecclesiasticis officiis", I, xix, in P. L. LXXXIII, 757), etc. The article **BREVIARY** treats the various parts which compose the Divine Office, together with their origin and the history of their formation; under each of the words designating them details will be found concerning their composition the modifications they have undergone, and the questions raised with regard to their origin (see **COMPLINE**); here we shall deal only with the obligation of reciting them imposed by the Church on certain classes of people, an obligation which recalls, as has been said, the very qualification of canonical.

II. OBLIGATION OF RECITING.—After having devoted a few lines to the present discipline of the Church on this point, the origin and successive development of the obligation will be treated at length.

A.—*Present Discipline of the Church.*—This is set forth by all moral theologians and canonists. They treat more or less extensively of the character of this obligation, the conditions required for complying with it, and practical instances of infraction or negligence. All modern authors derive their inspiration from St. Alphonsus Liguori (*Theologia Moralis*, VI, n. 140 sqq.). The general thesis on the existence of this obligation and the persons whom it concerns may be formulated thus: the following are bound each day to the recitation, at least private, of the canonical hours: (a) all clerics in Holy orders; (b) all beneficiaries; (c) religious men and women, who are bound by their rule to the office of choir (Deshayes, "Memento juris ecclesiastici", n. 430). According to the terms of this

pronouncement there must be considered (1) the obligatory character of this recitation; it deals with a precept of the Church which aims at binding to this duty certain classes of persons whom she makes her representatives with God. The obligation is founded on the virtue of religion; its infraction may be a mortal sin if the omitted part is notable. (2) The validity of private recitation, but in this case the person who recites it must actually pronounce the words, for it is something more than mental prayer. (3) The persons obliged to recite the hours: (a) All clerics in Holy orders, that is, all who have received the subdiaconate or one of the superior orders, for, since the twelfth century, the subdiaconate has been incontestably ranked among Holy orders; (Innocentius III, cap. "Miramur", 7, "de servis non ordinandis"). All are bound unless legitimately dispensed by the sovereign pontiff even though they are excommunicated, suspended, or interdicted. (b) All beneficiaries, that is, all who enjoy a perpetual right to derive revenue from the goods of the Church, by reason of a spiritual charge with which the Church has invested them, even though they are merely tonsured; this obligation binds under pain of losing their right to the benefice, in proportion to the extent of their omission, conformably to the statute of the Fifth Council of the Lateran (1512-17). (c) Lastly, religious, both men and women, bound by their rule to the office of choir, from the instant they have made solemn profession in an order approved by the Church.

As for the solemnly professed, everyone agrees that they are bound to recite the Office whether in choir, or in private (if they cannot assist at choir), even when they are not yet in Holy orders; this is the meaning of the ancient custom observed in religious orders, and a reply of the Penitentiary has definitively consecrated this interpretation (26 November, 1852). But Pope Pius IX having (17 March, 1857) decreed through the Congregation of Regulars that, in future, solemn vows should be preceded by a trienniate of simple vows the question arose whether during this trienniate the religious are bound to the recitation of Divine Office. The doubt submitted by the general of the Dominicans to the Sacred Congregation on the condition of regulars received a negative reply. This reply, nevertheless, maintained for these religious the obligation of assisting at choir (6 August, 1858). Whence it follows that for religious with simple vows exemption from Office bears simply on private recitation when they cannot assist at choir. Such is, in brief, the condition of canonical legislation on the obligation of reciting the canonical hours in as far as concerns persons.

B.—Origins and Successive Development of this Obligation. (1) The official prayer of the Church called in the Bible "the sacrifice of the lips" was from the early times of Christianity confided to persons charged with praying for the whole Christian people. It may be said that the obligation imposed on a class of persons is found in germ in the confiding by the Apostles (Acts, vi, 4) to the deacons of the external care of the community, the Apostles themselves reserving the duties of prayer and evangelical preaching. (2) We will summarize here the chapters in which Thomassin gives the history of prayer and the development of this obligation ("Vetus et nova ecclesiæ disciplina", Part I, II, lxxii sqq.; Roskovany has treated the same subject in "Cœlibatus et Breviarium", v, viii, xi, xii). During the first five centuries, although the Christian body under the presidency of the bishop and priests took part daily in the Divine Offices, clerics were under a stricter obligation to assist thereat; if they were prevented by some other duty they were under obligation to supply the omission by private recitation. Witness for the Church of the Orient in the fourth century this text of the Apostolic Constitutions: "Precationes facite mane et tertia hora, ac sexta et nona vespera atque in gallicinio" (VIII,

xxxiv, P. G., I, 1135). The same chapter adds that if the assembly could not take place in the Church because of the infidels, the bishop should assemble his flock in some private house, and if he could not, each one should discharge this pious duty either alone or with two or three of his brethren. Thus, says Thomassin, from the infancy of the Church there has been a Divine Office composed of psalms, prayers, and lessons, this office has been publicly chanted in the churches or oratories, the ecclesiastics were charged with presiding at the prayer in union with the bishop, the faithful were included in the same obligation of piety, and if prevented from assembling these prayers had to be said in private. The liturgical prescriptions of the Council of Laodicea (c. 387) which appear to be borrowed from the Liturgy of Constantinople are an echo of these practices (Hefele-Leclercq, "Histoire des conciles", I, 994). The anchorites, disciples of St. Pachomius, the monks of Egypt and the Thebaid derived inspiration from this legislation of the Church regarding prayer (see Sozomen, "Hist. Eccles.", P. G., LXVII, c. 1071; Cassian, "De coenobiorum institutione", P. L., XLIX, c. 82-7).

In this way the idea of the Church is manifested; if she no longer formulates in precise terms the law of prayer for clerics and monks she lets it be understood to what extent she holds them bound. Clerics are by their ordination attached to the service of a church; the principal function of the ministers in each church is the Mass and public prayer; this public prayer consists in the recitation of the Divine Office. It must be remarked further that the material subsistence of clerics is assured them by the Church as a consequence of their ordination, but on condition that they assist at Divine Office; those who fail will have no part in the daily distributions. For the Western Church the same conclusion is drawn from the manner in which the Fathers express themselves when they speak of public prayer (see some of their testimony in this respect under BREVIARY). In their eyes, in the measure in which they are formed and developed, the canonical hours are as the attestation and result of the continual prayer of the Church; clerics have so many more reasons for taking an active part, as they have more liberty and leisure, and it is in great measure to this end that an honest livelihood is assured them. From the fifth century councils formulated laws on this subject with sanctions and penalties; such is the fourteenth canon of a provincial council of the province of Tours held at Vannes, in Brittany, in 465. (Hefele-Leclercq, "Histoire des conciles", II, 905; see also Baumer, "Histoire du Bréviaire", I, 219. For Spain may be mentioned various decisions of a council held at Toledo about 400. Hefele-Leclercq, op. cit., II, 123.)

(3) Sixth to eighth century.—Decisions multiplied especially in the West obliging clerics to celebrate publicly the Divine Office. To-day the "statuta ecclesiæ antiqua" are most commonly ascribed to the sixth century and the Church of Arles in Gaul, though long attributed to the fourth Council of Carthage (398); canon xlix ordains "that a cleric who without being sick fails in the vigils should be deprived of his benefice (Hefele-Leclercq, "Histoire des conciles", II, 105). Particular councils followed in great numbers and, while displaying solicitude in establishing uniformity in the order of psalmody and the Office, made regulations for their worthy celebration by priests, deacons, and the other members of the clergy. The monks, called upon to supply the insufficiency of the clergy in the accomplishment of this duty, had likewise to abide by these decisions; indeed, on many occasions they were instrumental in their preparation. Among these councils may be quoted that of Agde in 506, that of Tarragona in 516, that of Epaon in 517, etc. In these councils the aim was to follow the Eastern and the Roman usages. The

monastic rules had not waited for these rules to promote the worthy celebration of the hours; it is known what importance St. Benedict attached to what he called the Divine work *par excellence*: "Nihil operi Dei præponatur", we read in ch. xliii. This sketch of the obligation of priests and clerics to take part in the celebration of the Divine Office may be concluded by citing the decree promulgated by Emperor Justinian I in 528: "Sanctimus ut omnes clerici per singulas ecclesias constituti per seipsos nocturnas et matutinas et vespertinas preces canant" (Kriegel and Hermann, "Corpus juris civilis", Leipzig, II, 39).

As to the private recitation of the Divine Office, Thomassin ("Vetus et nova ecclesiae disciplina", part I, II, lxxiii sqq.) gives the proofs which establish its obligatory character as early as the fifth century for priests and clerics; Grancolas in "Commentarius historicus in Breviarum romanum" relies on the testimony of St. Jerome. For what concerns monks, we have a more certain testimony in the Rule of St. Benedict. Ch. I prescribes that those who work outdoors or who are travelling should accomplish God's work at the hour appointed, and in whatever place they are, to the best of their ability. Therefore, they were merely dispensed from the lessons, but recited by heart the psalms, hymns, and shorter prayers. Dom Ruinart (Preface to works of Gregory of Tours, P. L., LXXI, 36-40) assures us that in the works of Gregory of Tours proofs are to be found attesting the fidelity of ecclesiastics of every degree to the recitation of the hours in private when they could not assist at public Office. These persons did not consider themselves free to omit this recitation.

Howe, PETER VAN, Friar Minor, lector in theology and exegete; b. at Rethy, in Campine (Belgium); d. at Antwerp, in 1793. He was a pupil of William Smits, O.F.M., founder and first prefect of the "Museum Philologico-Sacrum", a Franciscan Biblical institute at Antwerp, which had for its scope the training of Franciscan students in the languages appertaining to Biblical study, in Biblical history, geography, chronology, and other subsidiary branches, such as are requisite for a critical and literal interpretation of the Sacred Text. Upon his master's death, in 1770, Van Hove was entrusted with the direction of this flourishing school, which, unfortunately, in the prime of its activity, fell a prey to the fury of the French Revolution. Prior to his appointment as prefect, Van Hove had published several noteworthy historical and archaeological theses, the first of which, "Imago polemico-sæcra primi sæculi religionis Christi seu fidei, doctrinæ et morum disciplinæ Ecclesiæ Apostolicæ" (Brussels, 1765), is based chiefly upon the writings of St. Paul. Then followed: "Sacra Iconographia a pictorum erroribus vindicata" (Antwerp, 1768); "Chanaan seu Regnum Israelis Theocraticum, in XII Tribus Divisum" (Antwerp, 1770); and "Messias seu Pascha nostrum immolatus Christus" (Antwerp, 1771). The author devoted much space to exegetical and critical digressions which have a special value. In the last of these works he gives us an excellent chronology of the Gospels. Sixteen folio volumes of Smits's Flemish translation of the Vulgate and his famous commentary had already been edited when, on the death of the indefatigable author, the immense task devolved upon his pupil. Van Hove first completed and edited "Liber Numeri Vulgatæ Editionis", I (Antwerp, 1772), II (Antwerp, 1775), twelve chapters of which had been prepared by Smits. Following the plan adopted by his predecessor, Van Hove added, of his own, "Prolegomena ac Tentamen Philologico-Sacrum de tempore celebrandi Paschatis Veteris Testamenti", etc. To him we are also indebted

for the "Liber Deuteronomii" (Antwerp, 1777-80), in 2 vols., of the same series. This work brought to a close the publication of this valuable translation and commentary, which, however, comprises only the Psalms, the Sapiential Books, and the Pentateuch. Lastly, Van Hove took up his pen in defence of the Faith. He wrote the "Apologismus Polemicus ad Deut. XVII." (Antwerp, 1782), which is a compilation of arguments, such as had been put forward by Bergier and other French apologists of the eighteenth century, in favour of the truth of revealed religion and the infallibility of the Church.

THOMAS PLASSMANN.

Howard, MARY, OF THE HOLY CROSS, Poor Clare, b. 28 Dec., 1653; d. at Rouen, 21 March, 1735, daughter of Sir Robert Howard, younger son of Thomas, Earl of Berkshire, in whose home Mary's early youth was spent. At the age of eighteen, to escape the admiration of Charles II, she went to Paris, under the assumed name of Talbot, and was placed in the Benedictine convent of Val de Grace to learn French; here she was received into the Church, a step which brought her into disfavour with Lady Osborne, her guardian in Paris. Remaining staunch in the face of persecution, she was finally permitted to retire to the convent of the Canonesses of St. Augustine at Chaillot, near Paris, where she remained several years, until her admission into the English convent of Poor Clares at Rouen, under the name of Parnel, to safeguard further the secret of her identity. Here she was made successively mistress of the choir, second and first portress, the latter a position involving the management of the temporal affairs of the convent, and in 1702, on the resignation of Mother Winefrid Clare Giffard, abbess since 1670, she became abbess of the community, which she governed with rare zeal and prudence till her death. Her profound piety and salutary instructions were never tainted by the errors of the false mysticism so widespread at the time. Her "Chief Points of our Holy Ceremonies" was published in 1726. Her other works, all in MS., are chiefly books of spiritual exercises, litanies, and other devotions.

F. M. RUDGE.

Howard, PHILIP THOMAS, Dominican and cardinal, commonly called the "Cardinal of Norfolk"; b. at Arundel House, London, 21 September, 1629; d. at Rome, 17 June, 1694. He was the third son of Henry Frederick Howard, afterwards Earl of Arundel and Surrey and head of the House of Norfolk (the dukedom of Norfolk being forfeited, though restored in 1660). The mother of Philip was Elizabeth, daughter of the Duke of Lennox; he was thus allied to the reigning sovereign of England. At the age of sixteen he joined the Dominican Order in Italy, was professed at Rome, 1646, and took the name of Thomas in religion. Residing at Naples for his studies, he was chosen to deliver a Latin address to the general chapter of his order in Rome. He justified the choice by delivering a fervent address on the conversion of England, which led to a decree being passed by the chapter, urging provincials and priors to do all they could to receive English, Irish, and Scotch novices into the order, with a view to its preservation in those countries. He was thenceforth wholly devoted to the conversion of England and to the progress of his order in that country. He was ordained priest in 1652, and with the sanction of his superiors set himself to carry out the ideas he had matured in his mind. He founded the priory of Bornhem in Flanders, with a

college for English youths attached to it, and was himself the first prior and novice master. He also founded at Vilvorde a convent of nuns of the Second Order of St. Dominic, now at Carisbrooke.

In the reign of Charles II. Father Howard was made grand almoner to Queen Catharine of Braganza. He resided at St. James's Palace, with a salary of £500 a year, and had a position of influence at Court. An outbreak of Puritan violence compelling him to leave England, he resumed his position as prior at Bornhem. He was made cardinal in 1675, by Pope Clement X, being assigned the title of S. Cecilia trans Tiberim, exchanged later for the Dominican church of S. Maria supra Minervam. He now took up his residence at Rome and entered into the service of the Universal Church, especially watching over the interests of the Catholic faith in England. In 1672 he was nominated by the Holy See as Vicar Apostolic of England with a *see in partibus*, but the appointment, owing to the opposition of the "English Chapter" to his being a vicar Apostolic, and the insistence that he should be a bishop with ordinary jurisdiction, was not confirmed. He was to have been Bishop of Helenopolis. In 1679 he was made Protector of England and Scotland. At his instance the Feast of St. Edward the Confessor was extended to the whole Church. He rebuilt the English College in Rome, and revised the rules of Douai College.

Cardinal Howard co-operated later with James II in the increase of vicars Apostolic in England from one to four, an arrangement which lasted till 1840, when the number was increased to eight by Gregory XVI. Burnet shows in his "History" that Cardinal Howard regretted the steps which led to the crisis in the reign of James II and which his counsels sought to avert. The cardinal's plans were thwarted, and the ill-starred mission of the Earl of Castlemaine to Rome showed the rise of another spirit which he did not share. When the crisis he foresaw came, he had the consolation at least of knowing that his foundation at Bornhem was beyond the grasp of the new persecutors. Cardinal Howard assisted at three conclaves, for the election of Innocent XI in 1676, Alexander VIII in 1689, and Innocent XII in 1691. He died in the twentieth year of his cardinalate, at the age of 64, and was buried in his titular church of S. Maria supra Minervam at Rome.

His foundations in Flanders flourished till the French Revolution, when they were despoiled to a great extent, and were eventually transferred to England. The English Dominican Province looks to him as its father and restorer, and the American Province also regards him to a great extent in the same light. After his death the Master General, Father Antoninus Cloche, addressed a letter to the whole order, lamenting the loss of one who had done so great a work for the English Church and the order.

WILFRID LESCHER.

Howard, PHILIP, VENERABLE, martyr, Earl of Arundel; b. at Arundel House, London, 28 June, 1557; d. in the Tower of London, 19 October, 1595. He was the grandson of Henry, Earl of Surrey, the poet, executed by Henry VIII in 1547, and son of Thomas, Duke of Norfolk, executed by Elizabeth, 1572. Philip II of Spain, then King of England, was one of his godfathers. His father, who had conformed to the State religion, educated him partly under John Foxe, the Protestant martyrologist, and he was afterwards sent to Cambridge. His father, having married as his third wife Elizabeth, widow of Lord Dacre of Gillesland, matched her three daughters, who were heiresses, to his three sons. Anne, Philip's wife, Countess of Arundel and Surrey, who survived to

1630, was a woman of remarkable generosity and courage, and became after her conversion the patroness of Father Southwell and of many priests, and eventually founded the novitiate of the Jesuits at Ghent. Philip succeeded, 24 February, 1580, *jure matris*, to the Earldom of Arundel, and this may be considered the highest point of his worldly fortunes. He frequented the Court, entertained the queen, and was restored in blood, 1581, though not to his father's dukedom. Towards the close of the year he was present at the disputations of Blessed Edmund Campion in the Tower, and this proved the first step in his conversion, though, like most of Elizabeth's courtiers, his life was then the reverse of virtuous, and for a time he deserted his wife. But the Howards had many enemies, and Elizabeth was of their number. As the Catholic revival gained strength, the earl found himself suspected and out of favour, and his difficulties were increased by his wife's conversion. He was now reconciled, indeed devoted, to her, and 30 September, 1584, was received into the Church by Father William Weston, S.J., and became a fervent Catholic. The change of life was soon noticed at Court; on which Philip, seeing the queen more and more averse and dangers thickening, resolved to fly, which he did (14 April, 1585), after composing a long and excellent letter of explanation to Elizabeth. But he was captured at sea, probably through treachery, and confined in the Tower of London (25 April) where he remained till death. He was at first sentenced to a fine of £10,000, and imprisonment at the queen's pleasure. Later on (14 March-14 April, 1589), during the bloodthirsty mood which caused the death of so many English martyrs after the Armada, he was tried for having favoured the excommunication of the queen, and for having prayed for the invaders. As usual at that time, the trial was a tirade against the prisoner, who was of course condemned. One example of the hypocrisy of the prosecution may be mentioned. While they professed to quote the very words of the Bull of excommunication, "published 1 April", no such Bull was published at all. If the Armada had been successful, a Bull would of course have been issued, and Elizabeth's spies had in fact got hold of an explanation written by Allen in preparation for that event (printed in Dodd-Tierney, iii, Ap. 44). From a letter of Attorney-General Popham (R. O., State Papers, Dom. Eliz., cccxiii, 77) we see that he was aware of the fraudulent character of the evidence. Philip was left to die in prison. His last prayer to see his wife and only son, who had been born after his imprisonment, was refused except on condition of his coming to the Protestant Church, on which terms he might also go free. With this eloquent testimony to the goodness of his cause he expired, at the early age of thirty-eight, and was buried in the same grave in the Tower Church that had received his father and grandfather. In 1624 his bones were translated by his widow to Long Horsley, and thence to Arundel, where they still rest. A portrait by Zuccheri is in the possession of the Duke of Norfolk. His "Epistle of Christ to the Faithful Soul", translated from Lanspergius (Johann Justus of Lansberg), was printed at Antwerp, 1595; St-Omer, 1610; London, 1867; his "Fourfold Meditations of Four Last Things" (once attributed to Southwell), London, 1895; his "Verses on the Passion", by the Cath. Record Soc., VI, 29.

Howard, WILLIAM, VENERABLE, Viscount Stafford, martyr; b. 30 November, 1614; beheaded Tower-Hill, 29 Dec., 1680. He was grandson of the Venerable Philip Howard, Earl of Arundel, mentioned above, fifth son of Earl Thomas (the first great art-collector of England), and uncle of Thomas Philip, Cardinal Howard. Brought up as a Catholic, he was made a knight of the Bath, at the coronation of Charles I, 1 February, 1626, and married Mary, sister of the last Baron Stafford, October, 1637; the title was revived for him 12 September, 1640, and he was immediately afterwards created a viscount. He is said to have joined the royal army during the Civil War, but perhaps erroneously, for in 1642 he was in Holland, attending the exiled royal family and his mother and father. He was also employed by the Emperor Ferdinand in missions to Flanders and Switzerland. After his father's death, 4 October, 1646, many painful quarrels with his nearest relatives ensued. The Howard properties in England having been sequestered by Parliament, the family was much impoverished, and William's eldest surviving brother, Earl Henry Frederick, was induced to commence a series of unjust and vexatious suits against his mother, and practically robbed her of her dowry (Tierney, below, pp. 501-10). William, as her representative, was involved in these painful and prolonged quarrels, and even after both mother and brother had passed away, his cousins and their agents continued against him a quasi-persecution for several years.

The details of these transactions are obscure, but it would seem that the viscount was, under foreign law, twice actually arrested, at Heidelberg, July to September, 1653, and at Utrecht in January, 1656; in the latter case he was acquitted with honour, though the charges, of which the particulars are not now known, were insulting and vexatious (Stafford Papers, 15 January, 1656, see below). In these troubles his most dangerous opponents were perhaps Junius and other literary adherents of his father, who were claiming MSS. and rarities from the Arundel Collections in payment of their debts, while Lord William successfully proved that those collections were not liable to such charges. Though they lost, they continued to write bitterly of him, and these complaints have found a permanent record in the diaries and other writings of Evelyn, Burnet, Dugdale, etc. After the Restoration, 1660, his rights were firmly established, and his life within his large family circle must have been extremely happy. The brightest hours were perhaps those spent in conducting his nephew Philip to receive the cardinal's hat in Rome (1675).

Three years later Oates (q. v.) and his abettors included Lord Stafford in their list of Catholic lords to be proscribed, and eventually he was put first upon the list. It has been supposed that this was done because his age, simplicity, and the previous differences with other members of his family suggested that he would prove comparatively easy prey. On 25 October, 1678, he was committed to the Tower, and it was more than a year before it was decided to try him. Then the resolution was taken so suddenly that he had little time to prepare. The trial, before the House of Lords, lasted from 30 November to 7 December, and was conducted with great solemnity. But no attempt was made to appraise the perjuries of Oates, Dugdale, and Tuberville, and the viscount was of course condemned by 55 votes to 31. It is sad to read that all his kinsmen but one (that one, however, the Lord Mowbray with whom he had had many of the legal conflicts above noticed) voted against him. His last letters and speeches are marked by a quiet dignity and a simple heroism, which give us a high idea of his character and his piety. His fellow-prisoner and confessor, Father Corker, O.S.B., says: "He was ever held to be of a generous dis-

position, very charitable, devout, addicted to sobriety, inoffensive in words, a lover of justice." A portrait of him by Van Dyck belongs to the Marquess of Bute.

J. H. POLLEN.

Howley, MICHAEL FRANCIS. See ST. JOHN'S, ARCHDIOCESE OF.

Hroswitha, a celebrated nun-poetess of the tenth century, whose name has been given in various forms, ROSWITHA, HROTSWITHA, HROSVITHA, and HROTSUIT; b. probably between 930 and 940; d. about 1002. The interpretation of the name as *clamor validus* contains no doubt a reference to the bearer herself; this accounts for her being also called "the mighty voice", and sometimes even the "Nightingale of Gandersheim". In all probability she was of aristocratic birth; her name appears on an old wood engraving as "Helena von Rossow". She seems to have been still in her earliest youth when she entered the convent of Gandersheim, then highly famed for its asceticism and learned pursuits. Her extraordinary talents found here wise and judicious cultivation, first under guidance of her teacher Rikkardis, then under the special care and direction of Gerberg, a niece of Otto I and the most accomplished woman of her time, who was later to become her abbess (959-1001). The latter took particular interest in the development of her muse, by the training of which she hoped "to contribute something to the glory of God".

This is about all that is known of the external life of the first German poetess. Hroswitha shares the lot in this respect of all the poets of older time: we are far better acquainted with her works than with her personality. Furthermore, the Latin poems of this unassuming nun have had a curious history. After centuries of neglect, they were rediscovered, as is well known, by the poet laureate Conrad Celtes in the Benedictine monastery of St. Emmeram at Ratisbon, and were published in 1501 to the great delight of all lovers of poetry. The poetic work of the childlike, pious religious took at first the epic form; there appeared two Biblical poems and six legends. For these she drew upon Latin sources, and used her poetic freedom in the psychological treatment of her characters and their actions. The material of her "Leben Mariens" (859 hexameters) was taken from Holy Writ, and from the apocryphal Gospel of St. James. This life of Mary was rather closely connected with her poem "Von der Himmelfahrt des Herrn" (150 hexameters). On the other hand the themes of her six legends are quite varied: "The Martyrdom of St. Gangolf" (582 distichs), a Burgundian prince; "The youthful St. Pelagius" of Cordoba, whose recent martyrdom she relates in 414 verses in accordance with reports gathered from eyewitnesses, was a contemporary of hers, hence the realism and impressiveness of the picture; the legend of "Theophilus" (455 verses) is the earliest poetical treatment of the medieval legend of Faust; of a similar tenor is the legend of St. Basil (259 verses), in which an unhappy youth is saved from a diabolical pact; the list closes with the martyrdom of St. Dionysius (266 verses) and that of St. Agnes (459 verses). This last poem, which is based on the biography of the saint ascribed to St. Ambrose, is written with great fervour. The language is simple but smooth, and frequently even melodious.

But her poetical reputation rests, properly speaking, on her dramatic works. As regards her motives

in adopting this form of literary expression she herself gives sufficient explanation. "Lamenting the fact that many Christians, carried away by the beauty of the play, take delight in the comedies of Terence and thereby learn many impure things, she determines to copy closely his style, in order to adapt the same methods to the extolling of triumphant purity in saintly virgins, as he has used to depict the victory of vice. A blush often mounted to her cheeks when, in obedience to the laws of her chosen form of poetical expression, she was compelled to portray the detestable madness of unholy love." This last remark applies peculiarly to the case of five of her dramas, the theme of which is sensual love. The pious nun's treatment of her subject is of course on a higher moral plane, and she is skilled in demonstrating the principle, in the midst of rather bold situations, that the greater be the force of tempta-

tion, the more admirable is the final triumph of virtue. The most popular work, judging at least from the numerous transcripts thereof, is the "Gallicanus". This general of Constantine the Great, while still a pagan, seeks in marriage the emperor's daughter, Constantia, who however has long since consecrated herself as a spouse to the Lord; the suitor becomes converted and suffers a martyr's death. Her second drama is a most singular composition, in which humour and gravity are strangely compounded. "Dulcitius", a prefect under Diocletian, wishes to force three unwilling Christian maidens into marriage with high dignitaries of the Court; he has his victims imprisoned in a kitchen and with evil intention makes his silent way towards them under cover of the night; but God punishes him with blindness, and the prefect embraces that sooty pots and pans. Though he does not know it, his appearance as he emerges is that of a charcoal burner, and his utter discomfort is led up to in the merriest of scenes; the three maidens win the palm of martyrdom. In "Callimachus" the violence of passion is carried to a threatened profanation of the dead, which however is miraculously averted. Here indeed is the boldest situation of all, which reminds one of Goethe's "Braut von Korinth". The two succeeding plays, "Abraham" and "Paphnutius", tell in a touching manner of a fallen woman's conversion. Finally, the last drama relates in a plain and simple way the legend of the martyrdom of the three sisters, Faith, Hope, and Charity, daughters of Wisdom.

The literary significance of Hroswitha's dramas has been expressed in a comparison which likens them to snowdrops: "In the very midst of winter they lift their white heads, but they die long ere the advent of spring, and there is none to remember them."

Her prolific career as a poetess closed with two greater epics, the one singing the achievements of Otto I (Taten Ottos I) down to the year 962, and the other celebrating the foundation of the monastery of Gandersheim (Die Gründung des Klosters Gandersheim). Quite a romantic touch is given to this last composition by the number of legends which the author has skilfully woven into it. The eulogy of

Otto I, on the other hand, is highly prized by historians, who "find the account given by the poetess of direct assistance in historical work" The poem was written in 967 and was dedicated to the emperor. In addition to that of Celtes, the following are the chief editions of Hroswitha's works: Barack, "Die Werke der Hroswitha" (Nuremberg, 1858); Schurzfleisch (Wittenberg, 1707); Migne, P. L., CXXXVII, 939-1196; de Winterfell, "Hrosvitha opera" (Berlin, 1902).

Huajuápam de León, DIOCESE OF (HUAJUAPATAMENSIS), in the State of Oaxaca, Mexico, erected by

Bull of Leo XIII, "Sedes Apostolica" of 25 April, 1902, from parts of the Archdiocese of Oaxaca and the former Diocese (now Archdiocese) of Puebla de los Angeles. The Bull was forwarded on 17 March, 1903, and Dr. Próspero María Alarcón, Archbishop of Mexico, delegated as executor of the Bull, in turn appointed Dr. Francisco Plancarte y Navarrete, Bishop of Cuernavaca, as subdelegate. The canonical erection of the new diocese took place on 12 May, 1903, Dr. Rafael Amador having been named bishop on 8 March. Bishop Amador was born at Chila, 4 February, 1856, and studied at Puebla and in the South American Colegio Pio, Rome, where he took the degree of Doctor of Theology. He held various offices in the seminary at Puebla, was pastor and dean (*vicario foraneo*), and was consecrated bishop, 29 June, 1903, in the cathedral of Oaxaca by the archbishop of that see. At first the diocese was under the immediate jurisdiction of the Holy See, under the title of Mixtecas taken from the territory of that name, embraced within its

HROSWITHA PRESENTING OTTO THE GREAT AND ARCHBISHOP WILHELM OF MAINZ WITH HER WORKS After a woodcut by Dürer in the first printed edition of Hroswitha's works, published by Conrad Celtes in 1501

limits. When by Bull of Pius X, "Prædecessoris Nostri" of 9 August, 1903, the Diocese of Puebla de los Angeles was raised to the rank of an archdiocese, the Diocese of Mixtecas was assigned to it as suffragan, and by decree of the "Congregatio Concilii" of 28 November of the same year, the diocese was given the name of the residential seat, Huajuápam de León, in place of Mixtecas. On 4 November, 1905, the new bishop erected the cathedral chapter, consisting of one dignitary (*arcediano*), a *personatus (lectoral)*, three canons, and four chaplains; the first diocesan synod was held in December, 1906, for the enactment of synodal statutes.

According to information given by the bishop's secretary, dated 10 September, 1909, the diocese contains a Catholic population of about 200,000, 36 parishes, 220 churches with about 20 mission chapels, 57 secular and 3 regular priests (2 Dominicans and 1 Carmelite). The episcopal seminary has an attendance of 60, about equally divided between interns and externs; 12 are ready for ordination. In the city of Huajuápam are two communities of Carmelite Sisters numbering 11, one in charge of a hospital, the other occupied with the work of teaching.

Acta Pontificia, IV (Rome, 1906), 15 sqq.; special information has also been obtained from the episcopal curia.

GREGOR REINHOLD.

Huánuco, DIOCESE OF (HUANUCENSIS), suffragan of Lima in Peru. The department of Huánuco contains an area of 14,027 sq. miles, and a population of 145,309 (1896). The capital of the same name (also called San León de Huánuco), situated on the left bank of the upper course of the Huallaga, a tributary entering the Amazon on its right, is 5945 feet above sea-level and has a population of about 7500. Huánuco is one of the oldest Spanish colonies of Peru, having been founded as early as 1539 (four years after the foundation of Lima) by Gómez de Alvarado at the instance of Francisco Pizarro. Soon after the erection of the first houses, however, they were levelled to the ground during an insurrection of the Indians. After the assassination of Pizarro (1541), Pedro de Puelles was empowered by the governor, Cristóbal Vaca de Castro, to lead a new colony into the Huallaga valley. In the course of time the city attained a high degree of prosperity, counting at one time, it is said, as many as 70,000 inhabitants. The city owed its rapid rise chiefly to the rich silver mines of the neighbouring Cerro de Pasco; the wars of the nineteenth century, however, wrought such ravages that at present it is nothing but a wretched town of scattered houses, relying for its support chiefly on the cultivation of fruits, coffee, and sugar-cane. The city contains besides the cathedral on the Plaza, fourteen churches, including those formerly in charge of the Mercedarians, Dominicans (Santo Domingo, not completed), and Franciscans (San Francisco with a gilded altar).

The Diocese of Huánuco was created by Pius IX on 17 March, 1865. He decreed that the (former) department of Junín, consisting of the provinces of Huánuco, Huamalíes, Pasco, Taúta, and Tarma, be separated from the Archdiocese of Lima and established as a new diocese, with the seat at Huánuco. The Government undertook to provide for the episcopal mensal revenue, and to erect a diocesan seminary and an episcopal palace. With regard to the chapter to be formed, the Bull stipulated that, owing to the dearth of priests, it should consist of only one dignitary and six canons. Mgr Sebastiano Goyeniche Darreda, Archbishop of Lima, was named executor of the Bull, which received government ratification on 5 July, 1865, the erection of the bishopric being authorized on 20 November, 1868. The first bishop, Manuel Teodoro del Valle, presented for nomination on 5 June, 1866, was preferred to the Archdiocese of Lima, 29 August, 1872, and on 19 November of the same year named titular Archbishop of Berytus, in which capacity he was vested with the administration of his former Diocese of Huánuco (11 January, 1873). He was succeeded by Alfonso María de la Cruz Sardinias, O. F. M., who was appointed on 31 October, 1889, preconized 12 August, 1890, and died in June, 1902. The third and present (1909) bishop is Mgr Pedro Pablo Drinot y Piérola of the Congregation of the Sacred Heart (Piepus Society), born at Callao, 26 November, 1859, presented by the Government for nomination, 27 February, 1904, preconized 19 August, and consecrated at Lima on 24 August of the same year.

Statistics.—According to its present delimitation, the Diocese of Huánuco embraces the two departments of Huánuco and Junín, comprising about 37,380 (according to other authorities 41,586) square miles and 539,702 inhabitants, of whom 288,100 are Catholics and the rest for the most part uncivilized Indians. It contains 45 parishes, 210 churches and chapels, and 75 priests. West of the present city of Huánuco is Huánuco Viejo (Old Huánuco), an ancient Inca settlement with the ruins of old Peruvian monuments. These include a temple con-

structed out of massive square blocks of stone, called El Castillo, a royal palace, and extensive ruins of dwellings, with which are connected a series of singular towers along the slope of the hill, used by the early inhabitants as store or provision-houses. Farther inland on the River Pozuzo, but within the limits of the department of Huánuco, is the German colony of Pozuzo, established in 1859 by Freiherr von Schütz-Holzhausen; it has about 600 Catholics from the Rhineland and the Tyrol, with their own German pastor.

GREGOR REINHOLD.

Huaraz, DIOCESE OF (HUARAZIENSIS), suffragan of Lima. It comprises the entire department of Ancachs in the Republic of Peru. Originally, Huaraz formed part of the Archdiocese of Lima, but on 15 May, 1899, it was erected into a separate diocese by the Bull "Catholicæ Ecclesiæ gubernio" of Leo XIII. Mgr Francisco de Sales Soto was made its first bishop (February, 1901), and upon his death (April, 1903) Mgr Mariano Holguin succeeded to the episcopal chair (October, 1904). In July, 1906, Bishop Holguin was transferred to Arequipa, and the present incumbent, Mgr Pedro Pascual Farfán, was installed in 1907.

The Diocese of Huaraz is divided into 51 parishes, with the episcopal see located in the city of Huaraz, which is the capital of the department of Ancachs. The chapter consists of one dean, one canon theologian, one canon penitentiary, and one honorary canon. Ancachs is in the northern part of Peru and extends from the Andes to the coast. The chief occupations are agriculture and cattle raising, although silver-mining is carried on, intermittently, in the mountains. It is 17,405 square miles in area and contains a population estimated at 428,000, almost entirely Catholic. The Catholic religion is the state religion, although other forms of worship are not interfered with, and education is compulsory for both sexes.

The city of Huaraz contains a high school, college, and seminary, as well as a hospital which is administered by the Franciscan Fathers. One of the most interesting landmarks in Huaraz is the cemetery wall, which is inlaid with a collection of sculptured stones, known to have been the handiwork of the ancient Peruvians.

STANLEY J. QUINN.

Huber, ALPHONS, historian; b. 14 October, 1834, at Fügen, Zillerthal (Tyrol); d. 23 November, 1898, at Vienna. After finishing the humanities at the colleges of Hall and Innsbruck, he studied history under Ficker at the University of Vienna. While still very young he had become deeply interested in that branch of learning through the perusal of Annegarn's "Weltgeschichte". In 1859 he was appointed lecturer on history at Innsbruck, became professor in 1863, Corresponding Member of the Academy of Sciences in 1867, full member in 1872, and in 1887 professor at the University of Vienna, succeeding Ottokar Lorenz. Under Ficker he had learned critical accuracy, purity of style, and the importance of strictly impartial investigation. He had also acquired a comprehensive knowledge of diplomatics. His training was shown not only in his writing, but in his life. He was a man of sobriety; an enemy of claptrap; in politics a liberal, but deeply religious. His earliest writings, "Ueber die Entstehungszeit der österreichischen Freiheitsbriefe" (Vienna, 1860) and "Die Waldstädte Uri, Schwyz und Unterwalden bis

zur festen Begründung ihrer Eidgenossenschaft" (Innsbruck, 1861), deal with territorial history. For the celebration of the five-hundredth anniversary of the union of Austria and the Tyrol, he wrote, in 1864, "Geschichte der Vereinigung Tirols mit Oesterreich" and, as a sequel, "Geschichte Herzogs Rudolf IV. von Oesterreich" (Innsbruck, 1865). After the death of Böhmer, the first publisher of the German imperial "Regesta", who had provided Huber with the means of making several scientific journeys, Ficker, on whom had fallen the responsibility of completing Böhmer's work, called upon his former pupil to co-operate with him. Huber accepted the task and finished the fourth volume of the "Fontes rerum Germanicarum", containing the most important records of the fourteenth century. He then worked on the "Regesta" of Charles IV, which appeared between 1874 and 1877 with a learned introduction on the imperial diplomacy of the later Middle Ages. This was followed by a supplement published in 1889. His masterpiece is a "Geschichte Oesterreichs" in five volumes (1885-96), brought down to 1648, and considered an authority on the subject. The last years of Huber's life were devoted to research on the constitutional and administrative history of Austria, the result of which appeared in his "Oesterreichische Reichsgeschichte" (Vienna, 1895).

PATRICIUS SCHLAGER.

Hubert, SAINT, confessor, thirty-first Bishop of Maastricht, first Bishop of Liège, and Apostle of the Ardennes, b. about 656; d. at Fura (the modern Tervueren), Brabant, 30 May, 727 or 728. He was honoured in the Middle Ages as the patron of huntsmen, and the healer of hydrophobia. He was the eldest son of Bertrand, Duke of Aquitaine, and grandson of Charibert, King of Toulouse, a descendant of the great Pharamond. Bertrand's wife is variously given as Hugbern, and as Afre, sister of Saint Oda. As a youth, Hubert went to the court of Neustria, where his charming manners and agreeable address won universal esteem, gave him a prominent position among the gay courtiers, and led to his investment with the dignity of "count of the palace". He was a worldling and a lover of pleasure, his chief passion being for the chase, to which pursuit he devoted nearly all his time. The tyrannical conduct of Ebroin caused a general emigration of the nobles and others to the court of Austrasia. Hubert soon followed them and was warmly welcomed by Pepin Heristal, mayor of the palace, who created him almost immediately grand-master of the household. About this time (682) he married Floribanne, daughter of Dagobert, Count of Louvain, and seemed to have given himself entirely up to the pomp and vanities of this world. But a great spiritual revolution was imminent. On Good Friday morn, when the faithful were crowding the churches, Hubert sallied forth to the chase. As he was pursuing a magnificent stag, the animal turned, and, as the pious legend narrates, he was astounded at perceiving a crucifix between its antlers, while he heard a voice saying: "Hubert, unless thou turnest to

the Lord, and leadest an holy life, thou shalt quickly go down into hell". Hubert dismounted, prostrated himself, and said, "Lord, what wouldst Thou have me do?" He received the answer, "Go and seek Lambert, and he will instruct you."

Accordingly, he set out immediately for Maastricht, of which place St. Lambert was then bishop. The latter received Hubert kindly, and became his spiritual director. Hubert, losing his wife shortly after this, renounced all his honours and his military rank, and gave up his birthright to the Duchy of Aquitaine to his younger brother Eudon, whom he made guardian of his infant son, Floribert. Having distributed all his personal wealth among the poor, he entered upon his studies for the priesthood, was soon ordained, and shortly afterwards became one of St. Lambert's chief associates in the administration of his diocese. By the advice of St. Lambert, Hubert made a pilgrimage to Rome and during his absence, the saint was assassinated by the followers of Pepin. At the same hour, this was revealed to the pope in a vision, together with an injunction to appoint Hubert bishop, as being a worthy successor to the see. Hubert was so much possessed with the idea of himself winning the martyr's crown that he sought it on many occasions, but unsuccessfully. He distributed his episcopal revenues among the poor, was diligent in fasting and prayer, and became famous for his eloquence in the pulpit. In 720, in obedience to a vision, Hubert translated St. Lambert's remains from Maastricht to Liège with great pomp and ceremonial, several neighbouring bishops assisting. A church for the relics was built upon the site of the martyrdom, and was made a cathedral the following year, the see being removed from Maastricht to Liège, then only a small village. This laid the foundation of the future greatness of Liège, of which Lambert is honoured as patron, and St. Hubert as founder and first bishop.

ST. HUBERT AND ST. ELIZABETH—F. ITTENBACH

Idolatry still lingered in the fastnesses of the forest of Ardennes—in Toxandria, a district stretching from near Tongres to the confluence of the Waal and the Rhine, and in Brabant. At the risk of his life Hubert penetrated the remote lurking places of paganism in his pursuit of souls, and finally brought about the abolishment of the worship of idols in his neighbourhood. Between Brussels and Louvain, about twelve leagues from Liège, lies a town called Tervueren, formerly known as Fura. Hither Hubert went for the dedication of a new church. Being apprised of his impending death by a vision, he there preached his valedictory sermon, fell sick almost immediately, and in six days died with the words "Our Father, who art in Heaven" on his lips. His body was deposited in the collegiate church of St. Peter, Liège. It was solemnly translated in 825 to the Abbey of Amdain (since called St. Hubert's) near what is now the Luxembourg frontier; but the coffin disappeared in the sixteenth century. Very many miracles are recorded of him in the *Acta SS.*, etc. His feast is kept on 3 November, which was probably the date of the translation. St. Hubert was widely venerated in the Middle Ages, and many military orders were named after him.

The principal authority for the life was an anonymous author who was a personal acquaintance of the Saint. This is given by SURITS, 3 Nov., VI, 50 sqq.; ARNDT, *Kleine Denkmäler aus der Merovingenzeit* (Hanover, 1874); DE SMEDT, *La Vie de St-Hubert, écrite par un auteur contemporain in Bulletin de la Commission royale d'histoire*, V (4th series, Brussels, 1878), no. 3. Also see ROBERTI, *Hist. S. Huberti* (Luxemburg, 1721), 20 sqq.; BENNETT in *Dict. Chr. Biog.*, s. v. *Hubertus* (2); BUTLER, *Lives of the Saints*, 3 Nov.; Acta SS., 3 Nov.; KESSEL in *Kirchenlex.*, s. v. For further bibliography see CHEVALIER, s. v. C. F. WEMYSS BROWN.

Hubert, JEAN-FRANÇOIS, ninth Bishop of Quebec, b. at Quebec, 23 February, 1739; d. 17 October, 1799; son of Jacques-François, a baker, and Marie-Louise Maranda. After studying classics and theology at the seminary of Quebec, he waited six years before ordination, owing to the vacancy of the see, after Bishop Pontbriand's death (1760). When the Americans besieged Quebec (1775), he urged several students to join the defenders, and harboured and fed both wounded and prisoners of war. In 1781 he solicited the Huron Mission at Detroit. There, after four years of ministry, the news of his choice for the coadjutorship reached him. He was consecrated in 1786. In 1789 a group of English loyalists emigrated from the United States, planned the scheme of a mixed university, under the name of Royal Institution, for Catholics and Protestants alike, to be subsidized out of the revenues of the Jesuits' estates, an organization investing the State with the entire control of education and destined to destroy the faith and nationality of French Canadians. Bishop Hubert, in spite of opposition from unexpected quarters, successfully thwarted the plan. Of his two coadjutors, the first, Mgr Bailli de Messein, died in 1794, and was replaced by Mgr Pierre Denaut (1795). To supply the dearth of priests caused by the change of regime, Bishop Briand had, for thirty years, vainly begged the British Government for permission to recruit the clergy in France. When the Revolution cast numerous Frenchmen on England's hospitality, several exiled priests were allowed to enter Canada. Bishop Hubert warmly greeted these saintly auxiliaries, who replaced providentially the fast disappearing survivors of the Jesuit and Récollet Orders. In his report to the Propaganda (1794), Bishop Hubert mentions 160 priests, of whom 9 were in Nova Scotia and vicinity, and 4 in Upper Canada, and 160,000 Catholics, including Indians. While not more than 5 Catholics had apostatized since the conquest of the country, nearly 300 Protestants had joined the Church during the same period. Besides his two coadjutors, he had consecrated the first Vicar-Apostolic of Newfoundland, Bishop James O'Donel, O.S.F.; he had ordained 53 priests and confirmed over 45,000 souls. He was the first to suggest the division of his diocese, at the time vaster than the whole of Europe.

LIONEL LINDSAY.

Hubert, MILITARY ORDERS OF SAINT.—I. The highest order of Bavaria, founded in 1414 or 1415 by Gerhard V, Duke of Jülich, in commemoration of a victory gained on St. Hubert's day (3 Nov.); some, however, date the establishment as late as 1473 and 1475. After being held by collateral branches of the family, and passing through many political changes, the Duchy of Jülich, at the beginning of the eighteenth century, was under the jurisdiction of the Electoral Prince Johann Wilhelm, Duke of Neuberg. In 1708 he restored the Order of St. Hubert, which had fallen into desuetude, vesting the grandmastership in his own person, and conferred the cross of the order on a number of his courtiers, together with generous pensions, on condition that a tenth part of these moneys be set aside for the poor, and a goodly sum be distributed on the day of their reception into the order. The order was confirmed (30 March, 1800), by Maximilian, King of

Bavaria, who stipulated that each capitular should have filled for at least six years the post of commander in the Order of the Crown of Bavaria, which he himself had instituted. The chapter was assigned for 12 October, and the number of capitulars fixed at twelve. According to Schoonebeck the original collar of the order was composed of small horns obtained in the chase; later it was of gold, the forty-two links bearing alternately the representation of the conversion of St. Hubert and I. T. V., the initials of the device of the order. The cross is of gold enamelled in white and surmounted by a crown; on one side is represented the conversion of St. Hubert, with the Gothic legend *In traw vast* (firm in fidelity); on the other the imperial orb and the inscription *In memoriam recuperatæ dignitatis avitæ 1708*.

II. An order instituted in 1416 under the name of the Order of Fidelity by the principal lords of the Duchy of Bar, for the purpose of putting an end to the perpetual conflicts between the Duchies of Bar and Lorraine, and uniting them under René of Anjou. The order, which was to last for five years, was made perpetual in 1422 and placed under the patronage of St. Hubert. On the cession of the Duchies of Bar and Lorraine to France, Louis XV confirmed the knights in their ancient privileges. During the Revolution the order was maintained at Frankfort, but was reorganized in France in 1815, and formally recognized by Louis XVIII the following year. It did not survive the Revolution of 1830. The cross of the order bore on one side the image of St. Hubert kneeling before a cross visible between the horns of a stag; and on the other the insignia of the Duchy of Bar, with the inscription: *Ordo nobilis s. Huberti Barcensis, institutus anno 1416*.

Almanach de Gotha (—1837); HÉLYOT, *Dict. des ordres relig.* F. M. RUDGE.

Hubert Walter, Archbishop of Canterbury (1193–1205); d. 13 July, 1205; son of Hervey (Herveus) Walter and Matilda de Valoines, whose sister married the celebrated Ranulf de Glanville. The family, which was of Norman descent, held lands in Lancashire and Norfolk. Hubert's elder brother, Theobald Fitz-Walter, accompanied Henry II and John to Ireland, and became ancestor of the Butlers of Ormonde. We first hear of the archbishop as a chaplain in the household of Ranulf de Glanville, and a contemporary writer speaks of him as sharing with his master in the government of England. In 1184 and 1185 he appears as baron of the exchequer, and in 1186 his name was one of the five submitted to Henry II by the Chapter of York for the vacant archbishopric. The king rejected all five. In 1189 Hubert was acting as chancellor in Maine and was that year chosen by Richard I as Bishop of Salisbury. He was consecrated on 22 October by Archbishop Baldwin of Canterbury. Accompanying Richard on the Third Crusade, he was made, on Baldwin's death, chief chaplain to the whole crusading host. He was, moreover, one of the chief military commanders of the English contingent and acted as intermediary between Richard and Saladin. His firmness in putting down disorder and licentiousness in the crusading army, the care he took of the sick and wounded, and his succour of the poorer pilgrims, won him the esteem of the other leaders. He represented the English army when the first pilgrims were admitted to the Holy Sepulchre, and it was to him that Saladin spoke his famous eulogy of Richard. Through his prompt help, an attack of the Saracens on the French while marching on Jerusalem was repulsed, and it was he who prevented the crusade from failing utterly, by concluding a long truce with Saladin during Richard's illness. By his efforts, Saladin was induced to allow pilgrimages to the Holy Places, and when the Crusade was ended, it was under his leadership that the army was

conducted in safety as far as Sicily. He visited his king in prison at Durrenstein and returned to England in 1193, in time to suppress Prince John's attempt on the crown. By imposing a heavy tax, he succeeded in raising a ransom for the king.

The primatial see had been vacant since Baldwin's death in 1190. Richard ordered the bishops to procure the election of Hubert Walter. The monks of Canterbury, threatened in their freedom of election, chose the king's nominee, before the bishops had had time to confer with them. Hubert was enthroned in his cathedral and received the pallium on 7 November, 1193. By the end of the year he had been made justiciar. He performed the king's second coronation at Winchester in April, 1194, and when Richard left England for good the same year, Hubert became virtual ruler in his stead. Incessant demands from the king for money provoked an insurrection, which the justiciar put down with a firm hand, even violating sanctuary to punish its leader, William Fitz Osbert. In 1197 he negotiated, in Normandy, an alliance with Flanders, and a truce between Richard and Philip of France. Returning to England, he convened a council at Oxford in November, before which he put Richard's demand for three hundred knights for service abroad, or money sufficient to hire as many mercenaries; each of the barons and bishops was to contribute his share. St. Hugh of Lincoln and Herbert of Salisbury refused, on the ground that their churches were not bound to raise knights or money for foreign service. The archbishop dismissed the council in great indignation. Scarcely had Innocent III become pope when he requested Richard to allow Hubert to lay aside his secular offices. This the archbishop promptly did, and joined the king in Normandy, staying with him till his death in 1199. King John immediately sent him to England to help to keep the peace till his own arrival. On 27 May he officiated at the coronation at Westminster and is said to have laid stress in his speech on the old English theory of election to the crown. Next day he set the pope's prohibition at naught, and reassumed the chancellorship, yet acting, no doubt, as he thought right, knowing himself to be the one man who could keep the king in check.

He crowned John and his queen, Isabel, at Westminster on 8 October, and was present at the Scotch king's homage at Lincoln in November. In December he went to France on a fruitless diplomatic mission, and in the spring of 1203 went on another mission, which also proved a failure, through no fault of his. A quarrel between him and John about this time caused him to be deprived of office, to which he was soon, however, restored. In May, 1205, the king brought together a great fleet and army to cross to the Continent, with hope of regaining something of the prestige and power which the loss of his Norman and French possessions had occasioned. Hubert Walter and William Marshal, seeing the futility of the project, prevailed upon him to abandon it. This was the archbishop's last public political act. On 10 July, while journeying from Canterbury to Boxley to restore peace between the monks of Rochester and their bishop, he was attacked with fever and a carbuncle. He died three days later at his manor of Teynham.

Hubert was accused, even in his own day, of forgetting, in his capacity as statesman, his duties as archbishop. The accusation was no doubt just, and the first to make it was his saintly colleague, Hugh of Lincoln. For the first five years of his episcopate he and his chapter, the monks of Christ Church, Canterbury, were at bitter strife with one another. One of the principal causes of dispute between the two parties was the attempt made by Hubert to maintain at Lambeth a college of secular canons which had been founded and endowed by Archbishop Baldwin out of the enormous superfluous wealth of the

primatial see. The college had been founded as a centre of learning—a rare thing in those days—and its church was to have no privileges prejudicial to Canterbury; but the prior and convent appealed, and finally carried the day. Hubert was ordered by papal Brief to pull down his college. He was a zealous guardian of the temporalities of his see, and recovered the manors of Saltwood and of Hythe, and the castles of Rochester and Tunbridge, lost under Henry II. The ancient privilege of coining money at Canterbury was restored to him and his successors by Richard I, and he was a great benefactor to his cathedral. Invested with legatine powers in 1195, he made a visitation of the Province of York and ordered important measures of reform. Similar measures were made for the Province of Canterbury in a synod convened by him at London. His struggle with Giraldus Cambrensis and vindication of the primacy of Canterbury over the Welsh churches is regarded by Gervase of Canterbury as his chief merit.

R. URBAN BUTLER.

Hübner, ALEXANDER, Count, an Austrian statesman, b. 26 Nov., 1811; d. 30 July, 1892. He was educated at Vienna, and began his diplomatic service in the Chancery of State, under Prince Metternich. The whole life and work of this great statesman made an indelible impression on his mind and became the ideal of his life. His great talents soon attracted the notice of the keen-eyed Chancellor of State, who sent him on an extraordinary mission to Paris, and rapidly promoted him to the position of attaché of legation in that city (1837), then named him secretary of legation at Lisbon (1841) and finally consul general for Saxony at Leipzig. We may learn from the following lines addressed to him by the prince after the death of Princess Melanie (1854), in what favour he stood in Metternich's household: "You, my dear Hübner, have personally lost in the deceased princess, who was endowed with the noblest gifts of mind and heart, a friend—I might almost say a second mother." When subsequently Metternich's son published his father's life from document (in 8 volumes), it was Hübner who contributed the account of his last days and death.

In the year 1848, a critical period for Austria, we find Hübner always occupying the most dangerous posts. In February he was sent by Metternich to Milan, where he was arrested at the outbreak of the revolution and remained a prisoner for three months. In October, by order of Prince Felix Schwarzenberg, he followed the imperial family to Olmütz, where he was secretary to the prime minister. He prepared the manifestos on occasion of the accession of Emperor Francis Joseph to the Crown. His journal "Ein Jahr meines Lebens" (18 Feb., 1848, to 19 March, 1849) is the best authority on the most momentous happenings of that period. In March, 1849, Hübner was sent to Paris to negotiate with Prince Louis Napoleon, President of the Republic, about Italian affairs. In 1851 he became ambassador at Paris, and remained so until 3 May, 1859. In the two volumes of his journal dealing with this period we find accounts of Napoleon's *coup d'état*, the rise of the Second French Empire, the Crimean War, the predominance of France in Europe, which in consequence of the Anglo-French Alliance was felt even in China and Japan, and finally the unification of Italy. In 1854 he became baron and in 1857 ambassador to the court of Napoleon. His mission from 1848 to

1859 ended in the famous New Year's greeting of Napoleon III in 1859, so fateful to Hübner and to Austria: "I deplore that our relations with Austria are not as good as I should desire. I beg you, nevertheless, to convey the message to Vienna that my personal regard for the emperor remains always the same." It is true that Rogge (Oesterreich von Vilagos bis zur Gegenwart, I, 539) asserts that Hübner had led so retired a life that he took this greeting for a cordial outpouring of the heart. But as early as 1854 Hübner had written: "How can one sleep with a sense of security when one has to deal with a man who desires to change the map of Europe from day to day, and who, when in a bad humour threatens one with revolution?" For Hübner was well aware that the emperor in his youth had made common cause with the revolutionists in Italy, and that he was under obligations to the sects. Hübner's aim was to render the fulfilment of these obligations difficult, and even impossible, for the emperor.

For a short time only (21 August to 22 October, 1859) Hübner was minister of police. From 1865 to 1867 he served as ambassador at Rome. His "Sixtus V" was the fruits of his Roman studies. He sought his material exclusively in official sources, preferably in embassy records. The pope who from the humblest condition in life had risen to the highest of dignities, who had completed the organization of the papal Curia, and finished the dome of St. Peter's, and who had proven himself a great diplomat, specially interested Hübner. In 1871 Hübner made a voyage round the world for the purpose of studying "the struggle between nature and civilization on the other side of the Rocky Mountains, the attempt of remarkable men in the Land of the Rising Sun suddenly to propel their nation along the paths of progress, and the secret but obstinate resistance in the Middle Kingdom [China] to the entrance of European culture". As Hübner, owing to his social standing, had every opportunity to see what he desired, while his penetration enabled him to perceive the significance of what he saw, the diary of his travels makes most interesting reading. In 1879, on his return home, he became a member of the Upper House, in which he often spoke on the conservative side. He was seventy-two years of age when he set out for India, not, however, by way of usual route through the Suez canal, but around the Cape of Good Hope. His return journey was made by way of Canada. On his return he was raised to the dignity of count (1888). The last years of his life he gave to recollections of the past and to the arrangement of his papers. At last, on 30 July, 1892, he followed into eternity the wife whom he had so greatly mourned, Maria, *née* von Pilat. His principal works are: "Ein Jahr meines Lebens, 1848-1849" (Leipzig, 1891; tr. Fr., Paris, 1891; tr. It. Milan, 1898); "Neun Jahre der Erinnerungen eines österreichischen Botschafters in Paris unter dem zweiten Kaiserreich, 1851-1859" (2 vols., Berlin, 1904); "Life and Times of Sixtus V" (2 vols., Leipzig, 1871; tr. Fr., 3 vols., Paris, 1870; 2nd ed., 1883; tr. London, 1872; tr. It., Rome, 1887); "Spaziergang um die Welt" (2 vols., Leipzig, 1874; 7th ed., 1891; Fr. tr., 2 vols., Paris, 1873, 5th ed., 1877; Italian, Turin, 1873; Milan, 1877); "Through the British Empire" (2 vols., Leipzig, 1886; 2nd ed., 1891; tr. 2 vols., London, 1886; tr. Fr., 2 vols., Paris, 1886; 2nd ed., 1890).

(C. WOLFSGRUBER.)

Huc, EVARISTE RÉGIS, French Lazarist missionary and traveller; b. at Caylus (Tarn-et-Garonne), 1 June, 1813; d. at Paris, 26 March, 1860. He entered the seminary of the Congregation of the Mission (Lazarists) 5 Sept., 1836, was sent to China in 1839, and

landed at Macao, whence he proceeded to the newly created (1840) Vicariate of Tartary-Mongolia, where he resided until 1844. During this year Bishop Martial Mouly, Vicar Apostolic of Mongolia, ordered Huc and his brother missionary Joseph Gabet, his senior by five years (b. 4 Dec., 1808), to make a journey of exploration through the territory included in the mission in order to study the customs of the nomadic Mongol tribes to be evangelized.

Accordingly, on 3 Aug., 1844, the two missionaries left their home, called by them Vallée-des-Eaux-Noires (Valley of the Black Waters), a Christian station about three hundred miles north of Peking, a young lama being the only companion of their long and adventurous expedition. They passed through Dolon-nor, Kwei-hwa-ch'eng, the Ordo country, Ning-hia, Ala-shan, crossed the Great Wall, and reached Si-ning, in the Kan-Su Province; they visited the celebrated Buddhist monastery at Kun-Bum, and having joined on 15 October a Tibetan embassy on its return journey from Peking, they finally arrived by the way of Ku-ku-nor, Tsaidam, and the mountains Bayan-Kara, at Lhasa, the capital of Tibet, 29 Jan., 1846, the journey having taken eighteen months. Huc and Gabet were well treated by the Tibetans, but, unfortunately, the Chinese imperial commissioner, Ki-shan, was hostile to them. Ki-shan had been governor-general of the Chi-li province and had entered into negotiations with Captain Charles Elliot during the Opium War, first at Ta-ku, then at Canton; his action being disapproved, he was degraded, sentenced to death, reprieved, as is often the case in China, and sent to Tibet as imperial commissioner. Through his influence Huc and Gabet were expelled from Lhasa, 26 February, 1846, under the charge of a Chinese escort, and were conducted to Ta-Tsien-lu; well received by the Viceroy of Ch'eng-tu, they had to endure severe treatment through the Hu-Pe and Kiang-si provinces. The end of September, 1846, they arrived at Canton, where they were received by the Dutch consul, who advised the French consul at Macao of the return of his countrymen. Since the travels of the Englishman, Thomas Manning, in Tibet (1811-1812), no foreigner had visited Lhasa. The authenticity of Huc's journey was disputed with some appearance of jealousy by the Russian traveller, Prjevalsky, but the Lazarist's veracity has been fully vindicated by Col. Henry Yule (in translation of Prjevalsky, "Mongolia", London, 1876), and especially by Prince Henri d'Orléans, who travelled over part of the same ground.

It must be borne in mind that both Huc and Gabet had written relations printed in the "Annales de la Propagation de la Foi" and the "Annales de la Congrégation de la Mission" before the now-famous "Souvenirs d'un voyage dans la Tartarie et le Tibet" was published at Paris in 1850. The writer of this article collected a number of official papers from the Macao consulate which leave no doubt as to the veracity of the travellers. The success of the "Souvenirs" was great, and the work was translated into English, German, Dutch, Spanish, Italian, Swedish, and Russian. Huc was induced to publish a sequel under the title of "L'Empire Chinois" (Paris, 1854), of no value whatever; a later and more useful book is his "Le Christianisme en Chine, en Tartarie et au Tibet" (Paris, 1857-8). Huc left his congregation 26 Dec., 1853. He took an active part in the negotiations that led to the war against Cochinchina in 1858.

HENRI CORDIER.

Hucbald of St-Amand (HUGBALDUS, UBALDUS, UCHUBALDUS), a Benedictine monk; b. in 840; d. in 930 or 932. The place of birth of Hucbald is unknown. From the few data we have concerning his career we learn that he entered the Benedictine Order in the monastery of St-Amand-sur-l'Elmon, near Tournai,

and that he added music to the other branches of study. Later he entered the Abbey of St-Germain-d'Auxerre, where he completed his general and artistic education. In 883 we find him teaching in the Abbey of St-Bertin. In conjunction with Rémi d'Auxerre, he re-established, in 892, in the Diocese of Reims, the old church schools for singing. Hucbald made successful efforts to improve and supplement the neumatic notation in use in his time, which indicated the rhythm of the melody, but left the singer dependent on tradition for its intervals. After an attempt to make use once more of the Greek notation, he invented the so-called Dazia signs, which both designate the intervals of the melody and also serve to indicate definitely the character of the various church modes. But these signs, being clumsy and cumbersome, did not attain lasting favour as a system of notation. Hucbald later used lines and the first letters of the Latin alphabet as a means of fixing the intervals of the scale, and in this way became an important forerunner of Guido of Arezzo. Hucbald's principal achievement, however, consists in having given a theoretic basis to the custom of adding another melody to the chant of the Church, which custom he called *organum*, or *diaphonia* (see COUNTERPOINT; HARMONY), thereby laying the foundation for polyphony which developed from it. Hucbald's genuine works (Gerbert, "Scriptores", I) are "De harmonicâ institutione", "Musica enchiriadis", "Scholia enchiriadis", and "Commemoratio brevis de tonis et psalmis modularis". On account of the discrepancy between some of the theories contained in the first-named treatise and those taught in the "Musica enchiriadis" and the "Scholia enchiriadis", which belong to a much later date in the long life of the author, Hucbald's authorship of the last two works has been called in question, without good reason, however, since it has been pointed out that the "Scholia enchiriadis" is written as a sort of commentary or glossary on the author's first treatise and records the points wherein he had modified his theories.

II.

JOSEPH OTTEN.

Huddleston, JOHN, monk of the Order of St. Benedict; b. at Farington Hall, Lancashire, 15 April, 1608; exact date of death unknown; buried at London, 13 September, 1698. He was the second son of Joseph Huddleston of Farington Hall, Lancashire, and Hutton John, Cumberland. All that is known of his youth is contained in his statement made on applying for admission to the English College, Rome, in 1632. This document is given in full in Foley's "Records of the English Province S.J.", but Foley, following Dr. Oliver, confuses Dom John Huddleston *alias* Sandford, O.S.B., with Father John Stafford, S.J., and has accordingly largely reconstructed the Huddleston pedigree to fit in a "Fr. John Huddleston *alias* Sandford S.J." who never existed; for the true pedigree see Jackson, "Papers and Pedigrees relating to Cumberland and Westmoreland" (2 vols., Kendal, 1892). In his statement Father Huddleston mentions that he was educated at the school of Great Blencow, near Hutton John, until his fifteenth year. In his twentieth year he was sent to St. Omer's College, and on 17 October, 1632, entered the English College at Rome. It has been stated that he served for some time in the royalist army as a volunteer; in reality it was another John, his second cousin, the son of Ferdinando Huddleston of Millom Castle, Cumberland, who served under King Charles. On 22 March, 1637, Dom John was ordained priest in St. John Lateran's, and left Rome for England on 28 March, 1639. Dodd declares that he was educated and ordained

priest at Douai College, Flanders; but his name does not appear in the "Douai Diaries".

There is a tradition that on arriving in England he acted as chaplain at Grove House, Wensleydale, Yorkshire (Barker, "Three Days of Wensleydale", 96). In 1651 he was residing at Moseley, Staffordshire, as chaplain to the Whitgreave family. After the defeat at Worcester on 3 September, 1651, Charles II was conducted by Colonel Gyfford to Whiteladies, where he was sheltered by the Penderell family, and it was while seeking for some safer hiding place for the king that John Penderell happened to meet Father Huddleston. Accordingly Charles was disguised as a peasant and removed to Moseley during the night of Sunday, 7 September. To guard against surprise Huddleston was constantly in attendance on the king; his three pupils were stationed as sentinels at upper windows and Thomas Whitgreave patrolled the garden. On Tuesday, 9 September, Cromwell's soldiers came to search the house. The king and Huddleston were hurriedly shut away in the priest's hiding place, and the troops, after first seizing Whitgreave as a fugitive cavalier from Worcester, were eventually convinced that he had not left the house for some weeks and were persuaded to depart without searching the mansion. That night the king left for Bentley, after promising to befriend Huddleston when restored to his throne. Some time after this Huddleston joined the Benedictines of the Spanish Congregation, being professed while on the mission in England. This event took place before 1661, in which year he was elected to the titular dignity of cathedral prior of Worcester by the General Chapter of the English Benedictines held at Douai. In the next general chapter, held also at Douai, in 1666, he acted as secretary. At the Restoration in 1660, Huddleston was invited to live at Somerset House, London, under the protection of the Queen Dowager, Henrietta Maria, shortly after whose death in 1669 he was appointed chaplain to Queen Catherine, with a salary of £100 a year besides a pension of like amount. In 1671, with Dom Vincent Sadler, O.S.B., he visited Oxford, where he made the acquaintance of the eminent antiquary Anthony à Wood. During the disturbances produced by Titus Oates's pretended revelations the House of Lords, by a vote on 7 December, 1678, ordered that Huddleston, Thomas Whitgreave, the brothers Penderell, and others instrumental in the preservation of his Majesty's person after the battle of Worcester, should for their said service live as freely as any of the king's Protestant subjects, without being liable to the penalties of any of the laws relating to Popish recusants. Barillon and Burnet state that Huddleston was exempted by name from all Acts of Parliament against priests, but this is a mistake, though such an exemption is found in a bill drafted at this period, which, however, never became law.
